

FIL-120 Filter

Water Catch-Pot & Shut-Off Valve Housing

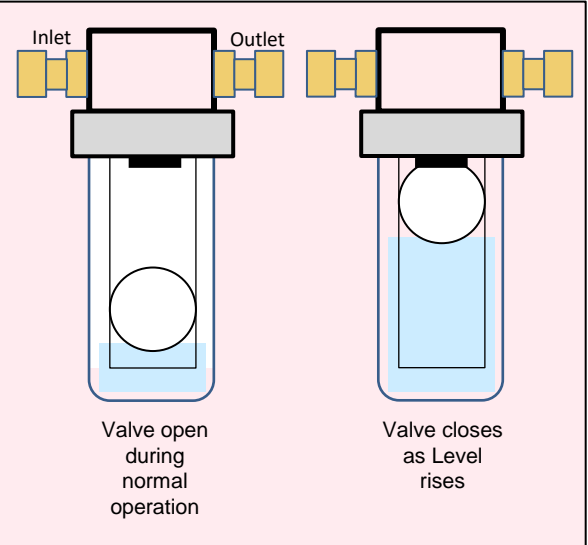

The FIL120 Filter is a low-cost housing for almost any gas analyser's protection.

Analyser protection often means using a 'particulate' type of filter to remove liquids and solids. However, when using particulate technology, the filter can overflow and contaminate the sensitive and expensive electronics of the instrument. By using the FIL120, any surplus liquid is collected in the bowl. As the liquid level rises so does the float until it shuts off the flow to the analyser and any possibilities of analyser damage are avoided, ensuring continued use without damage and costly repairs.

Main Benefits

- Low-Cost Enhancement
- Helps Avoid Costly Repairs
- Protects Gas Analyser
- Avoids Liquid Overflows
- Automatically Shuts Off Flow
- Overflow Concerns Eliminated
- Easily and Quickly Fitted

ADC Gas Analysers UK
