## Weed Bucker

weedbucker.com

weedbucker420@gmail.com

### **For Producers**

When its time to harvest, it's always a balancing act. You want maximum cannabinoids, but you are also worrying about impending rain, and the resulting mold that can ruin your crop. A big relief occurs when the crop is finally harvested and inside to dry.

### **Drying**

Once the plants are indoors, the stems are removed from the main trunk for drying.

### **Bucking Begins**

At about 20 % or lower, moisture content, Bucking begins. This is where the Farm Tech Pro Weedbucker really pays off. The Weedbucker removes buds, leaves and trim in about one second from the stem. This continues at a constant alarming rate.

### **Savings in time and money**

One operator on the FTP Weed Bucker will do as much as 5 people bucking by hand. The savings in time and money is impressive.

### **Quality Construction**

The Weedbucker is completely built of aluminum for light weight and corrosion resistance. We expect this is a serious investment for your farm, so we build these to last a long time. Maintenance and cleaning are extremely easy. Because most workers prefer to sit down during the bucking work, it is most often mounted on a typical folding table. Due to its light weight, yet sturdy construction, a single folding table can easily hold up to two Weedbuckers.

### **Maintenance**

If repairs are needed, for best protection, we send you a shipping box. That way you can safely ship it to us by UPS. Because of the 2 year warranty, any repairs that are needed within that period are covered at no charge. Normal “wear and tear” is not covered.

### **Multiple Units**

Some larger Cannabis or Hemp Farms order multiple units for higher production needs. The units fit tightly next to each other in a straight line for conveyor delivery to containers or trimmers.

### **Price (Free Shipping)**

Single Unit: \$4,450

Two or More Units: \$ 3,995 ea.
