PROFESSIONAL PROFILE

Chemical engineer with extensive experience in bulk solids handling and processing, including drying, fluidizing, feeding, dispersing, conveying, storage, extrusion, reacting, blending, granulating, testing, and mixing with fluids. Expert on handling and processing challenging materials such as carbon black and fumed silica. Professional experience includes manufacturing, research and development, consulting, and training. Spray drying knowledge includes bench, laboratory, pilot, and commercial equipment. Author of subsection on powder flow and hopper and chute design in Perry's Chemical Engineers' Handbook, 9th edition. Registered Professional Engineer.

QUALIFICATION SUMMARY

Powder handling and processing

- Developed new surge tank design for feeding fluffy carbon black into pelletizing equipment; steady, uninterrupted discharge improved pellet quality and reduced dust levels.
- Designed innovative moving bed reactors, heaters, and dryers for processing powders.
- Designed, fabricated, and installed moving bed conditioner for removing static charge from fumed metal oxides.
- Optimized flow properties of pharmaceutical formulations.
- Optimized wet granulation process to produce high-strength agglomerates.
- Determined causes of caking of pharmaceutical and food powders and provided remedies.
- Designed air-assisted hopper for handling powdered metals.

Process development

- Designed moving bed induction heater process for manufacturing highly conductive grades of carbon black.
- Designed, fabricated, and installed moving bed conditioner for preventing accumulation of static charge when handling fumed metal oxides.
- Improved method for introducing activated carbon into extrusion process.
- Scaled-up spray dryer based process for attaching polymers onto inkjet pigments, key accomplishment in the launch of new products for printing companies.
- Developed and implemented continuous granulation process at contract manufacturing organization (CMO).
- Designed and implemented pilot plant process for surface modification of fine particles.
- Reduced the cost of spray drying at toll manufacturer by stretching capacity of existing process equipment.
- Evaluated and installed in-line and batch emulsifying equipment.

Project management

- As project engineer, managed testing programs and designed or recommended equipment for storage, handling, and processing of bulk solids.
- Successfully completed solids handling projects for the chemicals, pharmaceutical, plastics, biotechnology, food, and energy industries.
- Executed research and development activities through stage-gate process.
- Evaluated CMO options and managed projects at selected organizations.

Spray drying

- Managed pilot plant for scaling up spray drying processes for isolating emulsified solids.
- Established operating conditions for Buchi, GEA/Niro, and Roberts Box spray dryers with evaporative capacities ranging from 1 – 1,000 kg/hr.
- Developed novel method for improving flowability of spray-dried powders.

Materials science

- Established testing laboratory for measuring fundamental flow properties of bulk solids.
- Evaluated and authored operating procedures for Schulze, Peschl, Brookfield, and Freeman shear cell testers.
- Fabricated bulk solids permeability and wall friction testers.
- Interpreted inverse gas chromatography (surface energy) and sorption test results.

PROFESSIONAL EXPERIENCE

GREG MEHOS & ASSOCIATES LLC

Greg Mehos & Associates provides testing, training, consulting, and DEM (discrete element method) modeling services for pharmaceutical, biotechnology, plastics, chemical, and other industries that handle bulk solids. Owner, 2017 - present.

JENIKE & JOHANSON, INC., TYNGSBORO, MASSACHUSETTS

Jenike & Johanson is a material testing and engineering consulting company that specializes in the storage, handling, and processing of bulk solids.

- Senior Project Engineer, 2014 – 2017
- Project Engineer, 2006 – 2011

CABOT CORPORATION, BILLERICA, MASSACHUSETTS

Cabot is a specialty chemical company that manufactures fine particles and inkjet colorants.

- Lead Engineer, 2011 – 2014
- Senior Process Development Engineer, 1996 – 2006

ROHM AND HAAS COMPANY, BRISTOL, PENNSYLVANIA

Rohm and Haas is a specialty chemical company that produces acrylic monomers and polymers, ion exchange resins, and agricultural products. It is now wholly owned by the Dow Chemical Company.

- Senior Process Development Engineer, 1992 – 1996
- Process Development Engineer, 1989 – 1992

MASSACHUSETTS INSTITUTE OF TECHNOLOGY SCHOOL OF CHEMICAL ENGINEERING PRACTICE ALBANY STATION, ALBANY, NEW YORK, BOULDER, COLORADO, AND CAMBRIDGE, MASSACHUSETTS

The MIT Practice School is a program in which chemical engineering graduate students work on projects at host companies (GE Silicones, Waterford, NY, GE plastics, Selkirk, NY, Syntex Chemicals, Boulder, CO) in lieu of a masters thesis.

- Director and Assistant Professor, 1987 – 1989
- Assistant Director, 1986 – 1987

UNIVERSITY OF RHODE ISLAND DEPARTMENT OF CHEMICAL ENGINEERING, KINGSTON, RHODE ISLAND

- Adjunct Professor, 2012 – 2017

PROFESSIONAL AFFILIATIONS

- American Institute of Chemical Engineers, Senior Member; past Chair, Boston local section; past Executive Committee Member, Particle Technology Forum
- Institute for Briquetting and Agglomeration, Member
- Licensed Professional Engineer, Massachusetts

EDUCATION

- Ph.D. (Chemical Engineering), University of Colorado
- M.Ch.E., University of Delaware
- B.S.Ch.E., University of Colorado, special honors
