19 April 2023

BY CERTIFIED MAIL AND / OR EMAIL
AND / OR HAND DELIVERY

Dear Governor DeSantis:

We, the undersigned residents, have learned that negotiations have been underway behind the scenes between U.S. Rep. Darren Soto, U.S. DOE agent Chris Castro, Osceola County, Valencia College, and CMG (formerly known as Compagnie Mercosur Grecomar S.A.) – a foreign, multinational granite-mining company with no hydrogen-production experience – to place the largest industrial energy facility in all of the State of Florida, with hazardous operations and toxic wastes, seven (7) large manufacturing facilities, plus parking for 1200 vehicles and tanker trucks, on the sacred Seminole shores of Lake Tohopekaliga – the very headwaters of the Everglades – upon whose purity central and south Florida depend.

These shores, zoned agricultural (future redesignation “general institutional”), providing sanctuary for protected and threatened species,¹ and purchased from a heritage landowner by the County for the purpose of creating a community park, are located between residential communities with highways² which, for over a decade, have suffered the worst traffic backups in Florida.

Governor DeSantis, we thank you for your [Executive Order 19-12](#),³ purposed to “reduce harmful discharges” into the Everglades and to restore Everglades water quality, keeping science at the forefront of environmental protection. We also thank you for [Executive Order #23-6](#),⁴ likewise purposed to enhance for future generations Florida’s water quality and preserve its natural resources – in your words, so that “we leave Florida to God better than we found it.”

An April 6, 2023 Presidential order (a veto) concurs: "[A] bill. . . attempted to block . . . [protection of] our nation's waterways – a resource millions of Americans depend on – from destruction and pollution. . . Every American has a right to clean water."

Egregiously violating the letter and spirit of these Executive Orders, CMG's proposal would contract rather to drain and pollute the Headwaters-Everglades' agricultural area, harm water quality, and destroy the de facto wildlife corridor. Arguably, no worse siting has ever been proposed for the State of Florida. We adamantly oppose this Proposal, clearly wrong by every criterion:

1. No foreign company (CMG French and Uruguayan, partnering with German company Siemens) – under a new U.S. corporation, formed in Florida as a [Delaware Domestic Corporation February 22, 2023](#) (just 54 days ago)⁵ for the tax credits and funding – should be handed the benefits of federal and state taxpayers' monies and public officials' advocacy, particularly when that company lacks a track record of successful – or any – operations in hydrogen production. Nor should such a company be advantaged above American and all other companies by its January 2023 Proposal⁶ – prior to the advent of the February 12, 2023 Request for Proposal (RfP).⁷ Given the rush on the RfP, and its unique process, it is no wonder that the County received only one proposal. CMG headquarters in Paris, France appear to have only one employee.⁸ Given CMG's recent significant financial losses,⁹ its substantial negative owners' equity,¹⁰ the limited financial and other information provided by CMG in its Proposal and the fact that the bid did not meet the minimum County requirements; and since, most importantly, the County has disclosed neither the status nor process of negotiations with CMG, despite repeated public requests to do so, the process deserves investigation.

2. The manufacture of hydrogen (H₂) – even "green" H₂ – contrary to its claim of decreasing greenhouse gasses (GHGs), *increases* methane (CH₄), a noxious GHG, in the atmosphere. Production requires steady electrical grid energy, reliant upon GHGs; for which reason the [International Energy Agency recommends nuclear power](#) to produce H₂.¹¹ Top experts and authorities – [Princeton University researchers](#)¹² and the US National Oceanographic and Atmospheric Administration (NOAA) – agree: "green" H₂ is neither clean nor green, but instead harmful, [with long-term environmental health consequences](#),¹³ [prolonging the CH₄ problem](#).¹⁴ H₂ energy is a "false solution".¹⁵ Fraught with contradictions, "clean" energy actually pollutes. Further, after H₂ production, utilities may combine the isolated H₂ with CH₄ for burning in power plants and even home heating, producing NO_x and harm to the health of all exposed. Inefficient and polluting, such burning also produces nitrous oxide (N₂O), six (6) times worse than burning fracked gas.¹⁶ According to Stanford University researchers, Florida hosts the worst U.S. source of N₂O, with 2018 emissions equivalent to the pollution from 2,000,000 cars. [Reducing emissions from industrial sources is the lowest-hanging fruit in the arsenal of N₂O mitigation](#).¹⁷ We must ensure fewer industrial emission sources in Florida.

3. All the revealed operations for CMG's facilities function contrary to their stated aims, resulting in toxic air, water, and/or soil contamination; inter alia: H₂ production, lithium-ion battery manufacture, electric vehicle research with likely charging-station manufacture, and solar photovoltaic (PV) systems manufacture.

According to Osceola County Commissioners, many of the intended operations have not yet been divulged to them; however, as elusive as the Proponents may be, the content so-far revealed more than suffices to halt the Proposal immediately.

4. CMG specifically proposes an 18-megawatt Siemens H₂ power plant of 150,000 square feet (ft²), a 100,000 ft² lithium battery building, a 20,000 ft² data hub and mining facility, a 250,000 ft² automotive and battery research facility, a 150,000 ft² testing facility, a 100,000 ft² headquarters building, a 250,000 ft² solar photovoltaic (PV) factory, a 60,000 ft², incubator factory, and a large-scale clubhouse with a pool, gym, catering, and smokestacks – all of which would override the public park intended by the original owners of the land¹⁸ – and planned by the County.

5. Solar panels produce [“300 times more toxic waste than high-level nuclear waste”](#).¹⁹ Particularly in manufacture and when they break, solar panels expose those nearby to toxic chemicals. For solar systems’ manufacture: “Raw quartz is refined into silicon in industrial furnaces that emit carbon dioxide and sulfur dioxide. It must then be further refined into polysilicon, producing [silicon tetrachloride](#), a highly toxic compound. When combined with water, silicon tetrachloride produces [hydrochloric acid](#). The act of producing one ton of polysilicon leads to [three to four tons of silicon tetrachloride waste](#).”²⁰ The Stuttgart Institute for Photovoltaics states: “...[P]ollutants such as lead or carcinogenic cadmium [can be almost completely washed out of the fragments of solar modules](#) over a period of several months, for example by rainwater.”²¹ According to the *Harvard Business Review*, [waste produced by solar panels will make electricity from solar panels four times more expensive](#) than the world’s leading energy analysts thought.²² All this for only intermittency in electricity.

6. H₂ is ten times more combustible than gasoline and combusts at concentrations as low as 4%. The minimum ignition energy of H₂ in air is one of the lowest among known substances, and H₂-air mixtures can ignite with [1/10](#) the effort of igniting gasoline-air mixtures.²³ When workers are required to [fight hydrogen-related fires](#), employers [must](#) provide workers with necessary protective gear to protect them from such invisible flames and potential explosion hazards.²⁴ H₂ is dangerous to breathe because it can replace oxygen and [lead to suffocation](#).²⁵ As a very volatile gas, it is even more hazardous when under pressure and leaking from any material damage to its holding tank. With its low viscosity, it is [prone to leakage](#).²⁶ It can cause [embrittlement of metals, and deterioration of plastic and rubber seals](#).²⁷ Liquid H₂ requires cryogenic refrigeration, as its boiling point is -423°F and its melting point - 434°F. It also requires high-pressure storage tanks of 5,000–10,000 pounds per square inch (psi). (For comparison, a car tire falls between 28 and 36 psi.) Invisible when it begins to burn, and otherwise imperceptible, its explosive fires, which have occurred in other locations in the U.S., cannot be contained or even *addressed* by the local fire department in 34746, which lacks the due hazmat capacity.²⁸ Since H₂ burns invisibly, thermal-imaging cameras are needed to detect any fire, rendering fire potential and containment timing extremely dangerous to employees and local residents. Significant amounts of water are necessary to douse a fire to safety; and evacuations of residential areas are likely to ensue.

7. In locations where explosive H₂ industrial facility fires have occurred, dozens of homes have been damaged. One H₂ explosion in [Long View, NC](#) blew out windows of nearby homes and was felt 10 miles away.²⁹ Similar explosions with fire erupted in

[Santa Clara, CA](#), when a tanker truck was being filled with hydrogen and an emergency valve to stop a leak malfunctioned. Flames shot up ~50' and multiple tanker trucks started on fire. ³⁰

8. Explosive fires in and around trucks carrying H₂ present a high-probability hazard, such as occurred in [Delaware County, OH](#).³¹ Hazardous transport – particularly over one of Florida's most congested roadways, Pleasant Hill (colloquially, per law enforcement, "Pleasant Kill", due to its high accident rate) – expands the vulnerable hazard area by many miles, and eventually hundreds of miles on other roadways, threatening homes, schools, businesses, and countless people, animals, and plantlife all along the way.

9. The property on which the facilities are proposed is situated on Lake Tohopekaliga, meaning, "we shall gather together here" to the area's Native tribal people – the Seminole Native Nation – and acknowledged by all as the headwaters of the Everglades. This Lake is effectively a river flowing throughout the heart of Florida to supply pure water, all the way to Lake Okeechobee³² and beyond. This precious water, sacred to Native peoples, and the life-source for local wildlife, would be contaminated by CMG's operations. Moreover, the water table would be significantly lowered through CMG's taking likely tens of millions of gallons per year. CMG declines in correspondence³³ to divulge how much water it would draw, only stating, "We have spoken with the local water authority who have (*sic*) confirmed that subject to permit we can extract water from the aquifers and surface water storage". Native people were not consulted, nor were other residents.

10. Wildlife onsite and in the Lake would permanently lose their habitat and lives. Bald eagles – protected under the federal Migratory Bird Treaty Act (MBTA), the Bald and Golden Eagle Protection Act, and the Florida state eagle rule (68A-16.002, Florida Administrative Code [F.A.C.]) – nest there. Gopher tortoises, protected under [Chapter 68A-27](#), F.A.C., reside there, as well. The Florida sandhill crane, protected by the MBTA and designated as a "Threatened" species under Florida's Endangered and Threatened Species Rule, makes homes there. Other wildlife on the site and in the Lake – southern fox squirrels, deer, wild hogs, bobcats, many waterfowl, turtles, otters, snakes, alligators and others - would be irreparably and permanently harmed, as hundreds of trees and millions of plants were burned or plowed under to be replaced by concrete and asphalt; with ancient ponds removed and land and lake habitat eliminated, from out of mankind's misguided worship of gigantic, polluting factories.

11. The proposed property for CMG's operations has no rail or pipeline access; so all raw materials, hazardous chemicals and finished products would have to be transported over our already overcrowded roads – daily gridlocked with long rush hours. Given that residents already experience such difficulty commuting, the additional 1200 vehicles plus tanker trucks and other product transport would make commutes next to impossible – with full evacuation in the event of an emergency certainly impossible.

12. In its pursuit of a higher tax base, Osceola County has been forcing farmers out, while rezoning or redesignating agricultural land for residential, institutional,

commercial, industrial and manufacturing purposes. At this critical period of national food shortages and the loss of agricultural and food plants due to fires of recent inexplicable frequency throughout the U.S., including two this year here in Kissimmee, we need *more* farmers and the preservation of our last agricultural lands. If planned correctly and incentivized rather than undermined, Florida's agriculture could likely feed our Nation.

13. Lake Tohopekaliga, a "[fisherman's paradise](#)"³⁴ hosts a [national Bass Fishing Tournament](#) as well as a [fishing championship](#),³⁵ attracting professional fishermen from all over the country;³⁶ as the Lake produces [more big bass than any other fishing lake](#).³⁷ A February 2023 [Major-League Fishing Tournament at the Lake will be aired on CBS and other networks](#).³⁸ The [Fishing League Worldwide is hosting events on our historic Lake](#), as well.³⁹ However, CMG's large chemical manufacturing buildings and toxics would likely drive out such activities – and the Lake's bounty. Local fishermen would no longer trust the healthfulness of the fish they might catch.

14. It is a matter of State and National Security that the largest energy facility in Florida were even *considered* to be sited in the very cradle of water provision for the State – the Everglades headwaters – with this area surrounded by residential properties. The site would become, if constructed, a primary target in Florida for enemies foreign and domestic. No worse siting plan has likely ever been conceived in Florida. A recent Forbes report notes, "[T]he underlying reality is...U.S. Energy...infrastructure is extremely vulnerable to cyber-attacks, physical incidents, and existential threats." This applies to chemical factories purportedly for energy production.

15. Three residential communities abut the agricultural land targeted for CMG's hazardous facilities: Bellalago homes, BellaParc, and Concorde Estates (the last aka Parkview at Lakeshore). CMG's taking water from our Lake's aquifer would significantly reduce water resources for these and many other communities dependent upon the Lake for potable and irrigation water. The toxics involved in CMG's various operations would adversely impact not only Kissimmee and Poinciana, but also communities from Lake Tohopekaliga all the way through South Florida. The deposition of lithium, phosphorus, lead and more from manufacturing processes portend neurotoxicity, genotoxicity, cancer and early death. Our residential area could become a damaged and infamous Superfund Site.

16. Schools located within a quarter-mile of the proposed CMG facilities include Bellalago Academy, Mater Academy, Central Point Christian Academy, Sunrise Elementary School, Onward Christian Academy, Side by Side Music Academy, and Valencia College. The sixteen (16) schools within 5 miles include Mater Brighton Lakes, KidsAreUs, Liberty High School, Poinciana High School, Pleasant Hill Academy, Living Waters School, iBelieve Christian Academy, La Petite Academy, Deerwood Elementary, Bezos Academy Kissimmee-Poinciana, Little Warriors Academy, Osceola Business Academy, Peace Lutheran School, Mater Palms Academy, Poinciana Christian Preparatory School North, and Reedy Creek Elementary. Our communities, overbuilt by the County with residences, are left no escape route, and no way for parents to rescue their children from school, should a chemical leak or an explosive fire occur – which it eventually will.

17. Insurers may be unwilling to contract with nearby homeowners, or may charge exorbitant rates, if CMG is allowed to operate in this residential area with nearly 3,000 homes in the Bellalago developments alone. Given [the potential for serious explosive and expansive fires](#) with personal injury, property damages, evacuations and business disruptions; not to mention the potential for sinkholes, with the depletion of water from the aquifer, insurers may decline involvement.⁴⁰

18. Everyone in our local communities would mourn the loss natural beauty – a permanent destruction of it, never to be curable in perpetuity, were CMG allowed to construct and operate the proposed facilities. It goes without saying that our homes would collectively lose countless \$millions in value, and our area would decline from being desirable to suffering potential unsaleability. [Tourism companies promote the area as an attraction](#): “The lake provides a tranquil setting for travelers and people looking to escape city life.”⁴¹ This value would also be lost to CMG’s presence. Not to mention that our Lake “[brings millions of dollars to the local economy](#),”⁴² but would lose out, with CMG’s activities on its shore.

19. Right now, one can view the landscape of the shores around Lake Tohopekaliga and see approximately the beauty that Native peoples saw 500 years ago. If nothing else in our area remains to show future generations its true nature, the Lake’s visages must be maintained for historic preservation. Kindly note among the Exhibits to this letter a smaller-than-planned Siemens H₂ power plant that alone would dominate views of the Lake. Add the other factories, most in the hundreds of thousands of square feet, and our neighborhoods would be absolutely overshadowed by this voluminous industrial complex, all privatized – and we would suffer the loss of what had been sold to the County, per a recent Master Plan Study, for a beautiful recreational park to be enjoyed by all. Far from enhancing “diversity”, “equity”, and “justice”, as federal funds for this project require in our very diverse and peaceable community and our treasured environment, CMG would bring destructive denial of vulnerable persons, egregious environmental injustices, and jarring, joint suffering.

Governor DeSantis, we understand it is not within your authority to allow the enabling of explosive fires in a residential area and terrorism thereby – undermining State security. Please use your influence and executive power to stop this insane, permanent destruction of sacred land, water, air, and lives.

Exhibit #6d

**OSCEOLA COUNTY BOARD OF COMMISSIONERS
AGENDA REQUEST**

DEPT/OFFICE: STRATEGIC INITIATIVES **MEETING DATE:** 3/20/2023
DIRECTOR/MANAGER: CHRISTINA MORRIS **REQUEST TYPE:** Consent

AGENDA REQUEST

Approval to commence negotiations with CMG Clean Tech for the sale of real property located at the Mac Overstreet Property, located on Pleasant Hill Road at the east side of the intersection with Reaves Road (ITB-23-13649-TP). CMG Clean Tech proposes to construct a green energy technology park, manufacturing clean energy products made in the USA and create 1,201 high-wage jobs.

STRATEGIC PLAN GOAL

Diversified Economy

FINANCIAL INFORMATION

TOTAL REQUESTED AMOUNT: \$0.00

ITB-23-13649-TP contemplates a sale of 309+/- acres at a minimum price of \$85,000 per acre. The response submitted by CMG Clean Tech offers to purchase the property in phases.

APPROVING DEPARTMENTS

OMB:
Procurement:
Attorney:

BACKGROUND INFORMATION

- Through the solicitation process, Osceola County offered a unique opportunity to bring forward a project that exemplified the highest and best use of the property, targeting the green energy technology sector especially in terms of manufacturing, R&D, office, and auxiliary uses in addition to creating high-wage green technology jobs.
 - CMG Clean Tech proposes to develop a green energy technology park including their headquarters, research and development facility; along with 7 factories, each with its own revenue stream and employee count. The model will create 1,201 jobs within 36 months paying an average wage of \$75,000 per year wage, plus associated construction and development related employment. This in turn will allow CMG Clean Tech to manufacture energy products and provide world leading technology through their "Made in USA" system.
 - ITB-23-13649-TP was an open competitive process, as contemplated by Sec. 14-133 of the Osceola County Code, and construction of a green energy technology park would represent a significant economic development project constituting a public purpose, as contemplated by Sec. 14-133 of the Osceola County Code.
 - Approval of this request will authorize the commencement of negotiations with CMG Clean Tech for the sale of 309 +/- acres of real property known as the Mac Overstreet Property, located on Pleasant Hill Road at the east side of the intersection with Reaves Road. Staff will present the proposed

especially in terms of manufacturing, R&D, office, and auxiliary uses in addition to creating high-wage green technology jobs.

- CMG Clean Tech proposes to develop a green energy technology park including their headquarters, research and development facility; along with 7 factories, each with its own revenue stream and employee count. The model will create 1,201 jobs within 36 months paying an average wage of \$75,000 per year wage, plus associated construction and development related employment. This in turn will allow CMG Clean Tech to manufacture energy products and provide world leading technology through their "Made in USA" system.
- ITB-23-13649-TP was an open competitive process, as contemplated by Sec. 14-133 of the Osceola County Code, and construction of a green energy technology park would represent a significant economic development project constituting a public purpose, as contemplated by Sec. 14-133 of the Osceola County Code.
- Approval of this request will authorize the commencement of negotiations with CMG Clean Tech for the sale of 309 +/- acres of real property known as the Mac Overstreet Property, located on Pleasant Hill Road at the east side of the intersection with Reaves Road. Staff will present the proposed agreement to the Board of County Commissioners for consideration and the Board may approve or reject the proposed agreement in its sole and absolute discretion.
- The property is identified as Osceola County Property Appraisal Tax Parcel ID# 29-26-29-3361-0001-0A20.
- The property for sale consisted of a total of approximately 309 +/- acres, upland/usable acres - 209+ / acres and wetland/conservation Acres – 100+/- acres.
- The property for sale as detailed above does not include the proposed park and boat ramp consisting of approximately 42+/- acres. The proposed park and boat ramp property will be retained, together with appropriate access, by Osceola County.
- CMG Clean Tech submitted the only response and included their recommendation regarding the best use of the property.
- A formal solicitation process was completed including advertisement and notification through Vendorlink which resulted in 11 plan holders downloading the solicitation documents and resulted in a total of 1 response received by the due date and time, with none from Osceola County vendors.
- The economic impact analysis conducted by the CMG Clean Tech concludes that the green energy technology park will generate an annual economic impact of \$119 million in new economic activity at full employment.
- CMG Clean Tech's development would be required to rezone to an Employment Center Core (ECC) and Perimeter (ECP) zoning districts based on a unified site plan and comply with the Urban Infill Center standards outlined in the Osceola County Land Development Code.
- This is a cash sale in "As Is" Condition with closing to occur as determined agreeable by the Buyer and Seller.
- Commission District 3.
- Project Manager is Christina Morris, Economic Development Director, Strategic Initiatives.
- Staff recommends approval and award.

**INVITATION TO BID
(Sale of Real Property)**

Reference: ITB-23-13649-TP - Sale of Real Property – Mac Overstreet Property - 351+/- Acres

Release Date: February 12, 2023

In accordance with all applicable Florida Statutes, Osceola County Ordinances and policies and procedures promulgated thereby, the Osceola County Board of County Commissioners (Board) does hereby wish to sell the property generally described below to the overall generally accepted, by the Board, most responsive and responsible highest bidder with an acceptable intended use of the property.

Notice is hereby given that the Osceola County Board of County Commissioners, owner of certain real property described below, will open sealed bids for the sale and purchase of this property on **TUESDAY, FEBRUARY 28, 2023 at 2:00 PM** (local time) in the Procurement Services Department located at 1 Courthouse Square, Suite 2300, Kissimmee, FL 34741.

Consideration: Osceola County is offering a unique opportunity to bring forward a project that exemplifies the highest and best use of the property that must target the green energy technology sector especially in terms of manufacturing, R&D, office, and auxiliary uses in addition to creating high-wage green technology jobs. Partnership on shared public recreation amenities are a key consideration and Osceola County is willing to discuss the inclusion of a public boat ramp, active and passive park on this site.

An acceptable Letter of Intent will be determined in the sole discretion of the Osceola County Board of County Commissioners. The successful proposal will include the following:

- (a) Price; No offers less than \$85,000 per acre.
- (b) Financial terms of sale;
- (c) highest and best use of the property;
- (d) job creation in terms of type of industry jobs, number of and average wage of jobs created;
- (e) Refundable and Non-Refundable deposit amounts;
- (f) Time period for due diligence completion;
- (g) Type, certification to and time frame for completion of due diligence work in terms of survey, environmental reports, submission of preliminary concept plans and final engineering plans;
- (h) Estimated closing time period;
- (i) If renovating, remodeling or redeveloping, estimated start to completion time period;

Acceptable Intended Use: Acceptable intended use is in the sole discretion of Board of County Commissioners and refers to a variety of factors:

- (a) Highest and best use of the property;
- (b) Job creation in terms of development/construction jobs, number of and average wage of ongoing industry jobs and type of industry jobs;
- (c) Refundable and Non-Refundable deposit amounts;

- (d) Time period for due diligence completion;
- (e) Type, certification to and time frame for completion of due diligence work in terms of survey, environmental reports, submission of preliminary concept plans and final engineering plans; and,
- (f) Estimated groundbreaking to completion time frame.

The Board is requesting bids via sealed bid auction from one or more individual(s), group(s), company(ies) or any other entity(ies) legally capable of holding title to real estate, hereinafter referred to as the Bidder(s), **to purchase, "AS-IS"**, the property described below.

Property Location: Property is located at Mac Overstreet, at the northeast quadrant of Pleasant Hill Road and Reaves Road, with the property having lake frontage along the western shore of Lake Tohopekaliga in northwest Osceola County.

Description: *A total of 351 acres, more or less. Please refer to Exhibit "A"*

Parcel ID Number: 29-26-29-3361-0001-0A20 – **Exhibit "A"**
 General Location: Mac Overstreet Property; east of Pleasant Hill Road, north and east of Interior Street a.k.a Reeves Road and Bella Parc Drive, west of Lake Tohopekaliga
 Land Size: 351 +/- acres, consisting of (approximately)
 • Upland Acres - 242 +/- Acres (69%)
 • Wetland Acres – 108 +/- Acres (31%)
 Zoning: Institutional
 Future Land Use: Employment Center
 Frontage: The subject property has approx. 850± feet of frontage along the north side of Reaves Road. The property also has 2,650± feet of frontage along the western shore of Lake Tohopekaliga.
 Utilities: Public – Kissimmee Utility Authority and Toho Water Authority
 Access: The main access to the property is at the eastern terminus of Reaves Road.

Attachments: Attached to this solicitation is a single attachment the County is providing regarding the property being sold.

ALL OFFERS FOR THE SALE AND PURCHASE OF THIS PROPERTY SHALL BE SUBMITTED IN A SEALED OPAQUE ENVELOPE, CLEARLY MARKED WITH THE SOLICITATION NUMBER AND DELIVERED TO:

**PROCUREMENT SERVICES DEPARTMENT
1 COURTHOUSE SQUARE, SUITE 2300
KISSIMMEE, FL 34741
ATTN: TED PHILLIPS
RE: ITB-23-13649-TP**

DUE DATE: TUESDAY, FEBRUARY 28, 2023, at 2:00 PM, LOCAL TIME

Any offer to purchase the real property identified herein received from any real estate broker, real estate salesperson or any other person in representative capacity, shall be deemed to have been received from the principal on whose behalf the offer is submitted. Said real estate broker, real estate salesperson or other representative shall not be deemed to be an agent for the Osceola County Board of County Commissioners. The Osceola County Board of County Commissioners shall have no obligation to pay any commission and/or fee on the sale of the described property. Any cost incurred by a bidder in evaluating the property, preparation of a bid, or any other action bidder may elect in responding to this advertisement shall be the sole expense of the bidder.

The Osceola County Board of County Commissioners, its' employees, representatives and agents make no warranties with respect to the title, condition, improvements, access, or any right to use the property.

Bid Security: The bid submittal shall be accompanied by a Bid Security equaling \$10,000, in the form of a certified cashier's check. This does not constitute the totality of escrow, due diligence and/or extension depositions within the proposals received. Any increase of security, escrow, due diligence or extension deposits can be negotiated separately with the winning bidder. Failure of the Bidder to supply Bid Security in the amount noted shall automatically render the Bidder as non-responsive resulting in the disqualification from further consideration of your bid submittal.

General Instructions/Declarations

1. **Public Opening of Bids:** Bids will be publicly opened in the Procurement Services Conference Room, 1 Courthouse Square, Suite 2300, Kissimmee, Florida 34741, on **Tuesday, February 28, 2023, at 2:00 P.M. Local Time**, or as soon as possible thereafter. Pursuant to Florida Statute 119.071, sealed bids received in response to a competitive solicitation are exempt from Florida Statute 119.07(1) and s. 24(a), Art. 1 of the State Constitution until 30 days after opening of the bids or posting of the notice of an intended decision, whichever is earlier.
2. **Bid Compliance:**
 - (a) All items contained in the bid must be in total compliance with the specifications in this solicitation.
 - (b) Alternate bids will not be considered unless they are specifically called for in this solicitation.
 - (c) Bidders' attention is specifically called to the terms and conditions of this solicitation. As witnessed by the Bidder's signature on the cover page and the proposal page(s), all Bidders, without exception, will be solely responsible for all aspects of the terms, conditions, and special provisions of this solicitation.
3. **Questions:** Questions regarding this solicitation must be received through written letter or email directed to the designated Procurement Services Representative no later than **Friday, February 17, 2023, by 12:00 P.M. Local Time**. Questions of sufficient general interest will be formatted by the Procurement Services Department and issued to all interested parties in the form of an addendum.
4. **Addenda:**
 - (a) Any interpretations, clarifications, or changes made will be in the form of written addenda issued by the

ITB-23-13649-TP	Due Date: Tuesday, February 28, 2023, at 2:00 P.M., Local Time	Advertised Dates: Sunday, February 12, 2023, Thursday, February 16, 2023, Sunday, February 19, 2023 and Thursday, February 23, 2023
Contract: Ted Phillips Ted.phillips@osceola.org	Respond to: Procurement Services 1 Courthouse Sq., Suite 2300 Kissimmee, FL 34741 Phone: 407-742-0900; Fax 407-742-0901

Procurement Services Department.

- (b) Oral answers given by any member of the Procurement Services Department or requesting department will not be authoritative and the County will not entertain any protests based on a verbal instruction.
- (c) It will be the responsibility of the Bidder to contact the Procurement Services Department prior to submitting a bid to ascertain if any addenda have been issued, to obtain all such addenda, and to return executed addenda with their bid. The County will not consider requests to re-open a bid as a result of the failure of the Bidder to secure addenda.

5. Bid Submittal:

- (a) All bids must be submitted in a sealed envelope, plainly marked on the outside with the Invitation to Bid number, date, time of opening, and the Bidder's name.
- (b) It is the Bidder's responsibility to assure that the bid is received in the OSCEOLA COUNTY PROCUREMENT SERVICES OFFICE, 1 COURTHOUSE SQUARE, SUITE 2300, KISSIMMEE, FLORIDA 34741, no later than **2:00 P.M. Local Time on Tuesday, February 28, 2023**. Any bid received after this date and time will not be accepted or considered and will be returned unopened to the Bidder. No offers will be accepted or received in any other Osceola County office.
- (c) **Cost of Submittal:** The cost of submittal of this bid is considered an operational cost of the Bidder and shall not be passed on to or be borne by the County.
- (d) **No telegraphic or facsimile offers will be considered.**

6. Bid Copies: Bidders are asked to submit three (3) copies of the bid response: (one (1) unbound original and two (2) bound copies).

7. Financial Capability to Purchase Property: Bidders shall submit with their bid at the time of the opening a letter from your bank or financing company verifying their ability to purchase the property for the bid offered along with any associated costs to complete the transaction.

8. Electronic and/or Facsimile Copies: No electronic or facsimile offers will be considered.

9. Right to Cancel or Reject: A solicitation may be canceled, or any or all submittals in response to a solicitation issued by the County may be rejected, in whole or in part, without recourse, when it is in the best interest of the County in accordance with the Administrative Code, Chapter 3. The County reserves the right to reject any or all bids, or any part thereof, with or without cause, without recourse, to waive technicalities or irregularities, and to accept or reject the bids, or any part thereof, which, in its judgment, best serve the interest of the County. The County also reserves the right to reject the bid from a Bidder who has previously failed to perform properly, or complete on time contracts of a similar nature, or who investigation shows is not in a position to perform the contract. The cost of submittal of this bid is considered an operational cost of the Bidder and shall not be passed on to or be borne by the County.

10. Lobbying: Lobbying Black-Out Period; Questions Regarding Bids:

- (a) Lobbying is defined as any action taken by an individual, firm, association, joint venture, partnership, syndicate, corporation, and/or all other groups who seek to influence the governmental decision of a Board Member, the County Manager, any requesting or evaluating department/division personnel and/or any member of the evaluation committee concerning an active solicitation during the Black-Out period.
- (b) The Lobbying Black-Out Period commences upon the issuance of this solicitation document.
- (c) The Lobbying Black-Out Period for awards requiring Board approval concludes at the beginning of the meeting at which the Board will be presented the award(s) for approval or request to provide authorization to negotiate a Contract(s). If the Board refers the item back to the County Manager for further review or otherwise does not take action on the item, the Lobbying Black-Out Period will be reinstated until such time as the Board meets to consider the item for action.
- (d) The Lobbying Black-Out Period for awards requiring County Manager Approval concludes upon issuance of a Notice of Intent to Award.

Title: Sale of Real Property – Mac Overstreet Property – 351 +/- Acres		

- (e) Bidders, Respondents, potential Vendors, service providers, Lobbyists, Consultants, or Vendor representatives shall not contact any Board Member, the County Manager, any requesting or evaluating Department/Office personnel and/or any member of the Evaluation Committee concerning an active solicitation during the Black-Out Period.
 - (f) All questions and procedural matters shall be directed to the Procurement Services Office. Except in response to communications initiated by authorized County representatives, contact by Bidders or Respondents to any Board Member, the County Manager, any requesting or evaluating County Personnel, or any member of the Evaluation Committee, initiated during the Black-Out Period, may result in disqualification from the Solicitation Process.
 - (g) Any questions relating to the interpretation of specifications, or any aspect of the solicitation process shall be addressed to the Procurement Services Office Representative, in writing, by the cutoff date and time stated herein.
 - (h) Respondents to this solicitation or persons acting on their behalf may not contact, between the release of the solicitation and the end period as established in items (c) and (d) of this section, any employee or officer of the executive or legislative branch concerning any aspect of this solicitation, except in writing to the procurement officer or as provided in the solicitation documents. Violation of this provision may be grounds for rejecting a response.
11. **Proper Signatures:** Failure to sign and witness the Bidder's signature may result in a disqualification of the bid. Please be sure the bid is signed, properly witnessed, and sealed.
 12. **Withdrawal of Bids:** Bids may be withdrawn any time before the bid opening date. The Bidder may withdraw a bid without prejudice to itself, not later than the day and hour set for opening of bids, by communicating the purpose of the withdrawal in writing to the County. Thereafter, the bid will be returned to the Bidder unopened. **Bids may not be withdrawn for a period of ninety (90) days after the bid opening date.**
 13. **Protests and Appeals:** Any prospective bidder or respondent, or any bidder or respondent who is not the intended awardee and who claims to be the rightful awardee, may file a Notice of Protest in accordance with the terms and conditions of Section 3.5 of the Osceola County Administrative Code
 14. **Bid as Public Domain:** All documents and other materials made or received in conjunction with this project will be subject to the public disclosure requirements of chapter 119, Florida Statutes. The bid will become part of the public domain upon opening. Bidders shall not submit pages marked "proprietary" or otherwise restricted.
 15. **Conflict of Interest:** All Bidders must disclose, with the bid, the name of any officer, director, or agent who is also an officer or employee of Osceola County. Furthermore, all Bidders must disclose the name of any Osceola County officer or employee who owns, directly or indirectly, an interest of ten percent (10%) or more of the Bidder's firm or any of its branches. Failure to disclose in this manner will result in the disqualification of the bid or the cancellation of work. It is the sole responsibility of the Bidder to ensure compliance with the County Administrative Code, Chapter 3, Section 3.9, Conflict of Interest.
 16. **Failure to comply with any of the foregoing instructions or any other essential element of the Invitation to Bid may result in the disqualification of the bid.**

Description

CMG Cleantech S.A., a mining company, engages in the extraction of granite in Uruguay. It provides gray granite for various applications, such as tombstones, paving and facades, furniture, and public roads; and violet blue granite. CMG Cleantech S.A. was formerly known as Compagnie Mercosur Grecepar S.A. The company was incorporated in 2015 and is based in Paris, France.

MLCMG Stock Overview

CMG Cleantech S.A., through its subsidiaries, develops clean hydrogen and solar technology in Uruguay and internationally.

Subject: Re: CMG Proposal for Multiple Factories - Water Impact on the Lake Toho Aquifer and Wastewater Treatment in Kissimmee Florida USA

Thank you for your email.

When we are in a position to respond to particular questions, we will of course endeavour to do so however full details of the project are still being finalised. Do keep an eye on the website for further information. It's a hugely exciting project and we plan to be sharing updates as it progresses.

Regards,

On Wed, Apr 12, 2023 Bellalago Resident wrote:

John Darling
Director Tech Infinite Ltd

As you may know, CMG Clean Tech / Tech Infinite has proposed an 18 megawatt Siemens hydrogen power plant (150,000 sq. ft.), a battery build (100,000 sq. ft.), a data hub and mining facility (20,000 sq. ft.), an automotive & battery research facility (250,000 sq. ft.), a testing facility, (150,000 sq. ft.), a headquarters building (100,000 sq. ft.), a solar PV factory 250,000 sq. ft.), an incubator factory (60,000 sq. ft.), and a large scale club house with pool, gym and catering in Kissimmee, Florida, USA.

In reviewing the CMG bid response, I did not see the estimated water required for the operations of the facility, but perhaps I missed this disclosure. The statement is made, "We have spoken with the local water authority who have confirmed that subject to permit we can extract water from the aquifers and surface water storage".

Can CMG / Tech Infinite provide us with the amount of water needed to operate all these plants and facilities in U.S. gallons on an annual basis, assuming the full buildout, and the source of the water.

Thank you in advance.

Sincerely,

Bellalago Resident

Switching to Hydrogen Fuel Could Cause Long-Term Climate Consequences

By Princeton University April 2, 2023

The hydrogen economy could increase levels of atmospheric methane. Credit: Bumper DeJesus
<https://scitechdaily.com/switching-to-hydrogen-fuel-could-cause-long-term-climate-consequences/>

Research conducted by Princeton University and the National Oceanic and Atmospheric Association suggests that a chemical reaction in the lower atmosphere could restrict the potential of hydrogen as a clean fuel.

The reason for this is that hydrogen gas reacts readily in the atmosphere with the same molecule responsible for breaking down methane, which is a potent greenhouse gas. If the level of hydrogen emissions surpasses a specific threshold, this shared reaction is likely to result in an accumulation of methane in the atmosphere, leading to long-term climate consequences.

"Hydrogen is theoretically the fuel of the future," said Matteo Bertagni, a postdoctoral researcher at the High Meadows Environmental Institute working on the Carbon Mitigation Initiative. "In practice, though, it poses many environmental and technological concerns that still need to be addressed."

Bertagni is the first author of a research article published in *Nature Communications*, in which researchers modeled the effect of hydrogen emissions on atmospheric methane. They found that above a certain threshold, even when replacing fossil fuel usage, a leaky hydrogen economy could cause near-term environmental harm by increasing the amount of methane in the atmosphere. The risk for harm is compounded for hydrogen production methods using methane as an input, highlighting the critical need to manage and minimize emissions from hydrogen production.

"We have a lot to learn about the consequences of using hydrogen, so the switch to hydrogen, a seemingly clean fuel, doesn't create new environmental challenges," said Amilcare Porporato, Thomas J. Wu '94 Professor of Civil and Environmental Engineering and the High Meadows Environmental Institute. Porporato is a principal investigator and member of the Leadership Team for the Carbon Mitigation Initiative and is also associated faculty at the Andlinger Center for Energy and the Environment.

The problem boils down to one small, difficult-to-measure molecule known as the hydroxyl radical (OH). Often dubbed "the detergent of the troposphere," OH plays a critical role in eliminating greenhouse gases such as methane and ozone from the atmosphere.

The hydroxyl radical also reacts with hydrogen gas in the atmosphere. And since a limited amount of OH is generated each day, any spike in hydrogen emissions means that more OH would be used to break down hydrogen, leaving less OH available to break down methane. As a consequence, methane would stay longer in the atmosphere, extending its warming impacts.

According to Bertagni, the effects of a hydrogen spike that might occur as government incentives for hydrogen production expand could have decades-long climate consequences for the planet.

"If you emit some hydrogen into the atmosphere now, it will lead to a progressive build-up of methane in the following years," Bertagni said. "Even though hydrogen only has a lifespan of around two years in the atmosphere, you'll still have the methane feedback from that hydrogen in 30 years from now."

In the study, the researchers identified the tipping point at which hydrogen emissions would lead to an increase in atmospheric methane and thereby undermine some of the near-term benefits of hydrogen as a clean fuel. By identifying that threshold, the researchers established targets for managing hydrogen emissions.

"It's imperative that we are proactive in establishing thresholds for hydrogen emissions so that they can be used to inform the design and implementation of future hydrogen infrastructure," said Porporato.

For hydrogen referred to as green hydrogen, which is produced by splitting water into hydrogen and oxygen using electricity from renewable sources, Bertagni said that the critical threshold for hydrogen emissions sits at around 9%. That means that if more than 9% of the green hydrogen produced leaks into the atmosphere — whether that be at the point of production, sometime during transport, or anywhere else along the value chain — atmospheric methane would increase over the next few decades, canceling out some of the climate benefits of switching away from fossil fuels.

And for blue hydrogen, which refers to hydrogen produced via methane reforming with subsequent carbon capture and storage, the threshold for emissions is even lower. Because methane itself is the primary input for the process of methane reforming, blue hydrogen producers have to consider direct methane leakage in addition to hydrogen leakage. For example, the researchers found that even with a methane leakage rate as low as 0.5%, hydrogen leakages would have to be kept under around 4.5% to avoid increasing atmospheric methane concentrations.

"Managing leakage rates of hydrogen and methane will be critical," Bertagni said. "If you have just a small amount of methane leakage and a bit of hydrogen leakage, then the blue hydrogen that you produce really might not be much better than using fossil fuels, at least for the next 20 to 30 years."

The researchers emphasized the importance of the time scale over which the effect of hydrogen on atmospheric methane is considered. Bertagni said that in the long-term (over the course of a century, for instance), the switch to a hydrogen economy

would still likely deliver net benefits to the climate, even if methane and hydrogen leakage levels are high enough to cause near-term warming. Eventually, he said, atmospheric gas concentrations would reach a new equilibrium, and the switch to a hydrogen economy would demonstrate its climate benefits. But before that happens, the potential near-term consequences of hydrogen emissions might lead to irreparable environmental and socioeconomic damage.

Thus, if institutions hope to meet mid-century climate goals, Bertagni cautioned that hydrogen and methane leakage to the atmosphere must be held in check as hydrogen infrastructure begins to roll out. And because hydrogen is a small molecule that is notoriously difficult to control and measure, he explained that managing emissions will likely require researchers to develop better methods for tracking hydrogen losses across the value chain.

"If companies and governments are serious about investing money to develop hydrogen as a resource, they have to make sure they are doing it correctly and efficiently," Bertagni said. "Ultimately, the hydrogen economy has to be built in a way that won't counteract the efforts in other sectors to mitigate carbon emissions."

Hottan Bothred | [April 2, 2023 at 10:18 am](#) | [Reply](#)

Stop that, it's silly. Stopping hydrogen leaking is already very incentivized, as you're losing fuel. H₂ is in fossil fuel exhaust anyway, even in farts. Hydrogen gas has an equilibrium point in the atmosphere; it either reacts or burns or escapes the atmosphere. Some bacteria even consume it for energy. You won't lose much, you're already doing it anyway, and it can't matter.

What's more of a threat is mass-producing hydrogen. So far, it's a 60% of its energy to make electricity, then losing >20% of the energy electrolyzing water. It's lossy, similar to charging batteries, except now you have a physical explosive thing to move around that won't travel across wires, so add distribution/delivery losses, not to mention losing the things that explode. It's better than stupid batteries, yet there's reasons to not like it, but H₂ emissions isn't a good one.

Hottan Bothred | [April 2, 2023 at 10:25 am](#) | [Reply](#)

Less-than signs here are stripped as potentially HTML, which removed half that sentence. I'll rephrase- "So far, you're most likely burning coal, losing over 60% of its energy to make electricity, then losing over 20% of that energy electrolyzing water."

Clyde Spencer | [April 2, 2023 at 8:17 pm](#) | [Reply](#)

"Free atmospheric hydrogen ends up in outer space within 1/2 hour."

Assuming that the top of the exosphere is about 250 miles from the surface, a molecule of H₂ would have to travel at a speed of 500 miles per hour, in a straight line, to make it from the surface to "outer space" in the half-hour you claim. I find that to be unlikely. Individual molecules will have a random-walk path, aka Brownian Motion. Thus, it will take MUCH longer than 1/2 hour. While the speed of H₂ along any leg of its random-walk may well be high, what we are talking about here is the rate of diffusion upwards. A few minutes searching online didn't provide a definitive answer. It isn't a simple problem because both buoyancy and partial pressure appear to play a role. However, I think that you need to provide a reliable citation for your claim..

Daniel halmo | [April 2, 2023 at 8:21 pm](#) | [Reply](#)

I knew hydrogen wouldn't work, and this is just one more reason why.

Clyde Spencer | [April 2, 2023 at 8:24 pm](#) | [Reply](#)

"We have a lot to learn about the consequences of using hydrogen, so the switch to hydrogen, a seemingly clean fuel, doesn't create new environmental challenges," . . . [W]hat to do with the water resulting from combustion? If it is used for transportation, and held on board, it will decrease the mileage from the increasing mass. If it is condensed and released onto the pavement, it will make the roads slick, leading to more accidents, especially in Winter. If it is released to the air, it will increase the relative humidity, leading to a higher heat index in Summer, and encouraging the growth of mold. There are other problems as well.

Lorem Ipsum | [April 2, 2023 at 10:59 pm](#) | [Reply](#)

I thought we already past the point to use "pure" hydrogen as a fuel? I thought now people start to utilize alternative like ethanol, methanol, urea, and so on? As they has more energy density, easy to transport, more safe?

Using this as general rule that affects all hydrogen power source sounds like deliberately misleading.

CCS widely deployed in rock storage and downbore reactors to work near ports.

Central Scrutinizer | [April 3, 2023 at 2:26 am](#) | [Reply](#)

Matteo is a researcher and called Hydrogen a "fuel"? That's just totally incorrect. Hydrogen is a storer of energy created elsewhere.

MarrionBerry8844 | [April 3, 2023 at 12:02 pm](#) | [Reply](#)

Please explain... How does OH radical break down hydrogen? If it does break down hydrogen, what are the byproducts of such a reaction? You haven't addressed these areas.

MartynU | [April 5, 2023 at 12:37 pm](#) | [Reply](#)

Hydrogen's biggest source is not electrolysis but hydrocarbon fossil fuels. Don't be surprised to learn that the oil companies are the biggest promoters of H₂ as a future fuel.

Risk of the hydrogen economy for atmospheric methane

Hydrogen (H₂) is expected to play a crucial role in reducing greenhouse gas emissions. However, hydrogen losses to the atmosphere impact atmospheric chemistry, including positive feedback on methane (CH₄), the second most important greenhouse gas. Here we investigate through a minimalist model the response of atmospheric methane to fossil fuel displacement by hydrogen. We find that CH₄ concentration may increase or decrease depending on the amount of hydrogen lost to the atmosphere and the methane emissions associated with hydrogen production. Green H₂ can mitigate atmospheric methane if hydrogen losses throughout the value chain are below 9 ± 3%. Blue H₂ can reduce methane emissions only if methane losses are below 1%. We address and discuss the main uncertainties in our results and the implications for the decarbonization of the energy sector.

Commitments to reach net-zero carbon emissions have drawn renewed attention to hydrogen (H₂) as a low-carbon energy carrier^{1,2}. Currently, H₂ is mostly used as an industrial feedstock, and its global production has a high carbon footprint because it relies almost entirely (≈95%) on fossil fuels¹. However, many technologies to produce H₂ with a lower carbon footprint are available¹. Among these, low-carbon H₂ can be produced from water electrolysis powered by renewable energy (green H₂) or from methane reforming coupled with carbon capture and storage (blue H₂). H₂ fuel may be especially important to decarbonize energy and transport sectors where direct electrification is complicated, like heavy industry, heavy-duty road transport, shipping, and aviation¹. H₂ is also being considered for storing renewable energy¹. As a result of this potential, countries accounting for more than a third of the world's population have developed national strategies for large-scale H₂ production^{1,2}.

Even if a more hydrogen-based economy would reduce CO₂ emissions and improve air quality³, it would also increase the H₂ emissions into the atmosphere. The H₂ molecule is very small and difficult to contain, so it is still largely unknown how much H₂ will leak in future value chains. H₂ emissions will also occur due to venting, purging, and incomplete combustion^{4–6}. This potential increase in H₂

emissions has received relatively little attention to date because H₂ is neither a pollutant nor a greenhouse gas (GHG). However, it has been long known^{7–10} that H₂ emissions may exert a significant indirect radiative forcing by perturbing the concentration of other GHG gases in the atmosphere. This indirect GHG effect of H₂ calls for a detailed scrutiny of the global H₂ budget and the environmental consequences of its perturbation^{11,12}.

H₂ is the second most abundant reactive trace gas in the atmosphere, after methane, with an average concentration of around 530 ppb_v¹³. H₂ sources include both direct emissions (≈45% of total sources) and production in the troposphere from the oxidation of volatile organic compounds (≈25%) and methane (≈30%)^{11,14}. The main H₂ sinks are the uptake by soil bacteria (70–80% of total tropospheric removal) and the atmospheric reaction with the radical OH (20–30%), which is responsible for the indirect GHG effect of H₂. H₂'s reaction with the OH radical tends to increase tropospheric methane (CH₄) and ozone (O₃), which are two potent greenhouse gases. It also increases stratospheric water vapor, which is associated with stratospheric cooling and tropospheric warming^{8,15}. Recent global climate models have estimated that hydrogen has an indirect radiative forcing of around 1.3¹⁴–1.8¹⁶ 10^{–4} W m^{–2} ppb_v^{–1}, and a global warming potential (GWP) that lies in the

We, the below signatories, urge Osceola County to halt the chemical-manufacturing, storage, and electrical power industrial plant proposed to take >300 acres including wetlands next to Lake Toho between Lakeside and Bellalago communities and near three schools. We oppose its construction and operations based upon the potential for the leaching of chemicals including lithium and phosphorus into the Lake and for chemical fires and pressurized, high-temperature hydrogen containment explosions on-site and on Pleasant Hill Road; its unpaid yet voluminous usage of water, despite occasional droughts attended with restriction of residents' water usage; its eradication of wildlife and destruction of a last Native site; its noise, traffic and parking lot for >1,000 cars; its denial of diversity, equity and environmental justice to the Community; and the County's lack of notice and failure to consult with the Community. This property was sold to the County for the purpose of the Community retaining it as "parkland", intact and pure.

We, the below signatories, urge Osceola County to halt the chemical-manufacturing, storage, and electrical power industrial plant proposed to take >300 acres including wetlands next to Lake Toho between Lakeside and Bellalago communities and near three schools. We oppose its construction and operations based upon the potential for the leaching of chemicals including lithium and phosphorus into the Lake and for chemical fires and pressurized, high-temperature hydrogen containment explosions on-site and on Pleasant Hill Road; its unpaid yet voluminous usage of water, despite occasional droughts attended with restriction of residents' water usage; its eradication of wildlife and destruction of a last Native site; its noise, traffic and parking lot for >1,000 cars; its denial of diversity, equity and environmental justice to the Community; and the County's lack of notice and failure to consult with the Community. This property was sold to the County for the purpose of the Community retaining it as "parkland", intact and pure.

We, the below signatories, urge Osceola County to halt the chemical-manufacturing, storage, and electrical power industrial plant proposed to take >300 acres including wetlands next to Lake Toho between Lakeside and Bellalago communities and near three schools. We oppose its construction and operations based upon the potential for the leaching of chemicals including lithium and phosphorus into the Lake and for chemical fires and pressurized, high-temperature hydrogen containment explosions on-site and on Pleasant Hill Road; its unpaid yet voluminous usage of water, despite occasional droughts attended with restriction of residents' water usage; its eradication of wildlife and destruction of a last Native site; its noise, traffic and parking lot for >1,000 cars; its denial of diversity, equity and environmental justice to the Community; and the County's lack of notice and failure to consult with the Community. This property was sold to the County for the purpose of the Community retaining it as "parkland", intact and pure.

See us to hydrate

We, the below signatories, urge Osceola County to halt the chemical-manufacturing, storage, and electrical power industrial plant proposed to take >300 acres including wetlands next to Lake Toho between Lakeside and Bellalago communities and near three schools. We oppose its construction and operations based upon the potential for the leaching of chemicals including lithium and phosphorus into the Lake and for chemical fires and pressurized, high-temperature hydrogen containment explosions on-site and on Pleasant Hill Road; its unpaid yet voluminous usage of water, despite occasional droughts attended with restriction of residents' water usage; its eradication of wildlife and destruction of a last Native site; its noise, traffic and parking lot for >1,000 cars; its denial of diversity, equity and environmental justice to the Community; and the County's lack of notice and failure to consult with the Community. This property was sold to the County for the purpose of the Community retaining it as "parkland", intact and pure.
