Spero – For parents, carers and teachers

Digital technology offers us amazing opportunities. It can help us learn, play, create, communicate and solve problems. But, like everything we use, it also has an impact on us and the world around us.

This story was written to help children begin asking questions about where our digital world comes from, what it needs to work, and how the choices we make today shape the future they will inherit. Our aim isn't to make children feel worried or guilty, it's to help them become curious, thoughtful and informed.

Reading together makes a difference

Stories are often the beginning of great conversations. There are no perfect answers, being curious is the important part.

Keep exploring together

If this story sparks your child's imagination, why not investigate some of the real-world topics together? There are some questions at the back of the book.

You could also explore:

- 🏭 Data centres
- ⚡ Renewable energy
- 🔋 Batteries and rare minerals
- 🌳 Nature and biodiversity
- 🤖 Artificial Intelligence
- 🌎 How technology can help protect our planet

A visit to the library, a family discussion or an online search together can turn one story into many more discoveries.

A small conversation today can inspire a lifetime of curiosity.

Every big change begins with someone asking *"Why?"* or *"What if?"*

We hope this book helps children see that our digital world and our natural world are connected. With that knowledge, kindness and imagination, they can help build a future where both people and our planet can thrive.

Happy reading, exploring and discovering together.
