BB Glow is a combination of powerful tinted serum applied using Microneedling method - an intensive skin treatment that uses state-of-the-art technology to penetrate first layers of the skin with microneedles which are rapidly released from a Microneedling pen (don't worry - it's painless!). One of the main benefits of basic microneedling is stimulation of natural collagen production and skin rejuvenation, where the BB Glow serum adds incredible nutrients and most importantly the color tint you desire.

THE TREATMENT

Despite the treatment being suitable for any type of skin such as dry, oily, pigmented or normal, it is important to note that it is not recommended to anybody. People who are not suitable for this procedure are those with any kind of skin condition including active acne skin or cystic acne, eczema, psoriasis, open wounds, pregnant and breastfeeding women, or anybody taking hormonal medication. When it comes to minor risks It is very likely that you experience a little redness, dryness, swelling, bruising, or flaking skin immediately after the procedures. These may last for a few you upcoming days. Even though, potential side effects are mostly minor there is a variety of major short term and long-term issues associated with the procedure that may occur. Short-term issues could include problems such as infections, pigmentation irregularities, changes or allergic responses. Long-term issues may be associated with adverse effects on skin texture throughout the time with repeated applications or scarring. In general, bleeding is not a common reaction after microneedling, however, it may happen after a deeper treatment or to those who are taking blood-thinning medications.

Initial

RISKS AND COMPLICATIONS

BB Glow treatment is 100% safe even in a long-term applications if high-quality materials and sterile tools are used and the treatment is delivered by a trained professional. The micro needling technology prevents needles to go deep into the skin, therefore, no damage to the skin can be made. In general, the procedure is comfortable, however, some tingling and tightness in the skin can be felt. Furthermore, the BB serums are free of alcohol, allergens, benzophenone, fragrances, formaldehyde, parabens, mineral oils, or synthetic colouring.
