Application Instructions For Marble Granules Texture :

Follow these four simple steps for a flawless, long-lasting stone finish on your walls:

1. Surface Preparation

- Ensure the plaster substrate is completely cured (at least 28 days old), clean, dry, and free from dust, grease, or loose particles.
- Repair any major structural cracks or undulations using a high-quality polymer modified mortar or exterior putty.

2. Priming (The Foundation)

- Apply one liberal coat of **Reino Exterior/Interior Primer** diluted as per specifications.
- *Pro Tip:* Tinting the primer to match the shade of your marble granules improves coverage and final color consistency. Allow it to dry for 4–6 hours.

3. Application of Granules

- **Mixing:** Stir the material thoroughly before application. Do not dilute with water unless explicitly specified.
- **Trowel Method:** Apply a uniform layer of the marble granule paste using a stainless steel trowel, maintaining a thickness equal to the grain size.
- **Spray Method:** Alternatively, use a professional hopper spray gun at the recommended air pressure for a uniform textured layout.

4. Finishing & Curing

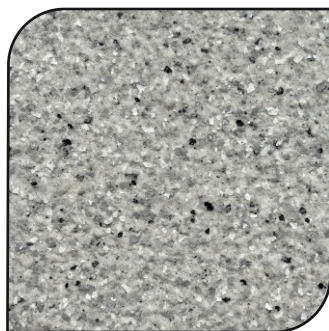

- While the material is still wet, gently float the surface with a plastic or stainless steel trowel to flatten the coated granules uniformly and eliminate gaps.
- Protect the freshly applied wall from rain, heavy moisture, and direct dust for at least 24 hours until completely cured.
- The protective coat is 100% compulsory because it completely seals the porous marble granules against water absorption and dust accumulation.

Need More Information?

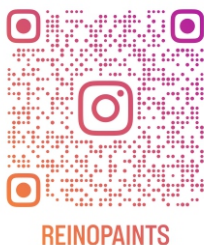

For detailed technical specifications, exact coverage rates, mixing ratios, and specific substrate requirements, please refer to the **Reino Paints Marble Granular Texture's Technical Data Sheet (TDS)** or contact our technical support team.

Important : The Finished effect depends entirely on existing conditions, sound surface preparation, through mixing and the applicator's skill and neatness.
