SALTO AND RS2 TECHNOLOGIES ACCESS INTEGRATION

SALTO has partnered with RS2 Technologies to deliver a flexible and seamlessly integrated solution to electronically secure & control any mechanical keyed lock. Utilizing your existing RS2 Access IT platform, you can cost effectively expand your system with SALTO Sallis or SVN (Salto Virtual Network) electronic locks. All system administration and monitoring continues to take place in the RS2 user interface, minimizing costly training and management of separate systems.

Welcome to SALTO

THE OPPORTUNITY

Traditional access control has always been applied to peripheral doors or other sensitive access points – with all other doors secured by conventional mechanical locks and masterkeyed cylinders.

This approach has one major problem: mechanical key control. The difficulty in controlling who has access and where using mechanical keys in conventional buildings compromises security. Also, replacing lost keys is extremely costly and time-consuming.

SECURING THE ENTIRE BUILDING

With the RS2-SALTO solution, access control can be extended throughout the entire building, targeting those doors where access control is required but where the cost of a fully wired door is not justified.

· High security perimeter doors controlled by RS2
· Medium security interior doors controlled by SALTO

MANUFACTURING WITH BioCote®

BioCote® is an antimicrobial agent that contains silver ions which are engineered to provide continuous, built-in protection available on most SALTO devices.

· Proven to reduce bacteria by up to 99.99%
· Proven to deactivate Influenza / H1N1 / a strain of Coronavirus by 90%
· Long lasting performance that can't be worn out or washed off

Supports All Devices:

XS4 Original
XS4 One DL
XS4 Mini
XS4 Readers
NEO Cylinder
NEOXX
Locker Locks
Fusion
Ælement
Wireless Gateways
Readers

RS2 & SALTO INTEGRATION

The integration supports all available SALTO SVN locks & hardware

LOCKER LOCKS: Provides instant and reliable mobile and smartcard-based access to lockers, cupboards, cabinets, boxes and more
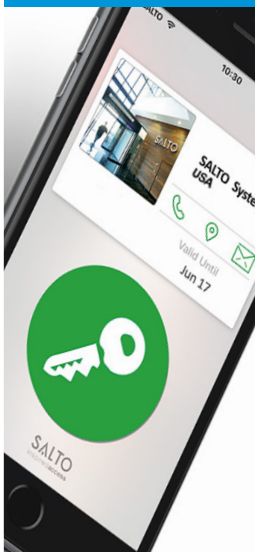

- Real time transactions
- Monitor locker status online *(locker opened, bolt inside or out status, locker closed)*
- Monitor battery status online
- Perform an emergency opening or lockdowns remotely
- Mobile technology
- BLE (Bluetooth Low Energy) and NFC

NEO & NEOXX: Perfect for outdoor, all weather conditions

- IP66 certification: Waterproof performance and high durability
- Tested up to 110,000 operations on 1 set of batteries
- Mobile technology
- RFID (DESFire EV1 EV2, MIFARE, HID iCLASS Seos), BLE (Bluetooth Low Energy) and NFC technologies

SUPPORTED FUNCTIONALITY

System Administration

- RS2 access IT system administration of SALTO cardholder access level and time zone assignments and updates
- Encoding and updating of smartcard and mobile credentials
- Configuration and control over SALTO reader modes like lockdown/ privacy Override/ off mode

Event Monitoring & Control

- RS2 access IT event monitoring and control of SALTO card and mobile transactions
- Monitoring of wireless real time and stand-alone data-on-card or mobile transactions
- Update readers and SALTO BlueNET SVN-Flex readers
- Transaction reports including the battery status of all SALTO devices

Platform Interoperability

- Video triggers and intercom
- Access assignments and visitor management
- Elevator control destination dispatch
