

RIVER VIEW CLINIC

Emergency Procedures

For concerns regarding facial treatments PLEASE read the following advice. Following facial injections, you will have residual swelling, bruising and temporary lumps where needles have been inserted. The vast majority of these side effects will initially resolve within 24-48 hours.

Augmentation of Lips and Cheeks may take up to 7- 14 days before swelling declines. Botulinum Toxin (Botox) This is a treatment, which has prolific safety data and side effects are always temporary.

However for BOTOX 'Line Softening' please be aware that there are several factors that will influence your response and are totally out of our control:

The specific strength of your muscle will be discussed with you at your consultation.

The number of units you invest in & if you are Male or Female

BOTOX is not a drug - but a protein, therefore the efficacy of this Treatment can vary up to 20% • Botulinum Toxin (Botox) does not work on collagen loss and static lines, but muscle, which will change over a period of time.

You may acquire resistance, to Botulinum Toxin over a period of time, this is a scientific fact Allergic Reactions and Infection In the extremely rare scenario, that you feel you are suffering from an allergic reaction or infection - (common symptoms are excessive swelling, pain, and heat to touch) You must contact yours out of service GP or Hospital A&E Department.

Bioidentical Hormone Therapy

We want you to love your 'Bioidentical Hormone Therapy' however if you are new to your treatment, it may take a period of time before you have a response to your treatment, in some cases up to 6 weeks. We want you to LOVE being part of RIVER VIEW CLINIC.
