## **Flea/Carpet Beetle Treatment Preparation**

- Vacuum or shampoo your carpet and furniture, including under and in the furniture.
- Make sure closets are cleaned out including shoes. Exposed floor space is key.
- Remove bedding from the bed, and place on top of the bed.
- Remove your pets' food and water containers as well as litter boxes.
- Remove all toys & clutter from your floor. Exposed floor space is a key factor to colony elimination.

**IMPORTANT: The technician will be spraying a very light mist over as much of the floor surface as possible, including under beds and between the mattress and box springs.**

**People and pets should stay out for 2 hours or until the product dries.**

**After care: Vacuum daily**, empty your vacuum cleaner into an exterior receptacle. You may see a temporary influx in activity as the mechanical vibration from the vacuum can cause flea eggs to hatch, this is good, it will help to speed up eradication and limit the need for retreatments.
