# KCLS RESTRICTED SOLUTIONS

## 4 SYSTEMS TO GIVE YOU THE BEST RESTRICTED KEY CONTROL

Designed to give you the most coverage in your existing hardware, Restricted Solutions by KCLS offers restricted key control without costly investment in new hardware. Retrofitting most existing systems with our restricted solutions is easy and affordable. Security managers can rest assured that the keys used in their facilities cannot be duplicated at Hardware Stores or Big Box retailers.

*KCLS cylinders are manufactured to the exacting specifications to match your existing hardware.*

Made with solid brass and nickel silver keys and pins, the cylinders will provide years of trouble free service. One solution includes our seven pin cylinders which will provide ample combinations for large facilities.

These cylinders are designed to be master keyed, grand master keyed, and great grand master keyed. Some of our solutions will work with standard cylinders and interchangeable cylinders all in one system.

Our investment in the special keys and equipment required to provide you with the BEST key control solutions is only one part of our commitment to providing you with PREMIUM service.

# The FOUR HORSEMEN

Our original and first system is a 5 or 6 pin solution that fits in most standard cylinders. Great for homes, apartments, small businesses, and padlocks.

Our second and most versatile system is a seven pin system, offering the most combinations for large facilities and works with both standard and interchangeable cores, creating a solution that covers all of your hardware.

Our third system is a standard five or six pin solution that works on standard systems only. This system was added to introduce a different key system to offer more variety and ensure all of our systems are not compromised.

Our fourth and final system is strictly a seven pin system designed for SFIC interchangeable cylinders. This system is widely used by our national customers and large retailers looking for key control with the simplicity to change keys themselves.

## FREQUENTLY ASKED QUESTIONS

### Are your systems patented?

No. Our systems are exclusive keyways only sold to locksmith distributors, with an agreement between the locksmith and manufacturer to NEVER compromise another locksmith's system, ensuring your system CANNOT be copied or changed by anyone other than KCLS.

### Are your systems UL437?

No. That is a High Security system, and we do offer those types of cylinders and keys as well.

### How is the key control maintained?

We maintain the key cuts in our secure server as well as a physical copy in case of any electronic failures. We also have an Authorized Signer form that is completed at the time of installation. This form is what we will follow when someone comes in asking for a key copy. Even with the key present, if their name is not on this authorized list, we will not copy the key. We are bound by our agreement with our manufacturers to honor this form, or we face potential prosecution and rejection from these coveted systems.

### What are your keys made of?

Depending on the system, we use brass or nickel silver.

### I am not on the Authorized Signer List, how do I get key copies?

Simple! You will need to have one of the authorized signers come to us and request a key copy.

### What happens if I lose my key?

As with ALL physical keys, a lost key will require a rekey of all the cylinders. If the lost key is found BEFORE we start the rekey process, you can cancel the rekey and rest assured that our key system could not be fraudulently copied while lost.
