

FRACO'S QUALITY LAWN FERTILIZERS

Eastview Wrestling

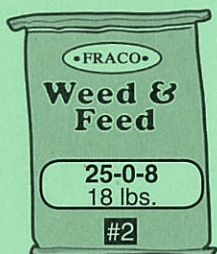

Spring

A good choice for the first fertilizer application in the spring of the year is a product that contains a crabgrass pre-emergent. **#1 Crabgrass Control 27-0-8** is a crabgrass pre-emergent product that promotes a lush green lawn

\$19.00 / Bag • 20 lbs.

• If you prefer a fertilizer which does not have a crabgrass pre-emergent then **#3 Lawn Fertilizer 24-0-8** will promote a lush green lawn as well.

Early Summer

By early summer, a fertilizer with broadleaf weed (dandelions, chickweed, and other common broadleaf weeds) control is a good choice. **#2 25-0-8 Weed & Feed** not only provides nutrients for a thick healthy lawn but also kills approximately 40 different varieties of broadleaf weeds.

\$18.00 / Bag • 18 lbs.

• If you prefer a fertilizer which does not have a broadleaf weed killer, **#3 Lawn Fertilizer 24-0-8** will promote a lush green lawn as well.

Late Summer

The late summer application of fertilizer should be a product that contains sulfur and iron as well as a slow-release nitrogen to help keep the "green" in your lawn. **#3 24-0-10 Fertilizer** is a complete turf mix food that maintains the "green" lush appearance of your lawn. (Should be careful with hot dry conditions in August. Fertilize according to the weather.)

Fall

The last step of fertilizer application is generally just before the snow starts to fly in the fall. **#3 Lawn Fertilizer 24-0-10** is a complete turf mix food that feeds your lawn all winter and gives it a good start in the spring.

\$16.00 / Bag • 18 lbs.

Garden

#4 Garden 10-10-10 is great to use in the fall for shrubs, hedges and gardens as well.

\$15.00 / Bag • 20 lbs.
