

THIRD PARTY RISK MONITORING

Stop Data Breaches, Spear Phishing, and Social Engineering

The LookingGlass™ Third Party Risk Monitoring service delivers continuous visibility into the risk exposure and attack surface of your organization’s key vendors. This service is a completely outsourced way to analyze your third party vendors’ risk impact on your organization.

As the threat landscape continues to evolve, you need more than just an automated scorecard or self-service tool for monitoring third party risk. While these may be acceptable for organizations just looking to “check the box,” those that genuinely want to understand and proactively reduce their risk need an option that truly operationalizes threat intelligence and protects against threat actors, spear phishing, and data breaches.

WHAT YOU GET

- Continuous scanning of the surface, deep, and dark web for customer and employee access credentials
- Monthly summary reports detailing findings, changes, and trends observed
- Ongoing monitoring of vendors’ network, domain names, and IP space for any new indications of exposure, compromise, infection, or illicit use in eight specific categories:

Malware Hosting/Distribution	Spam
Virus/Botnet Infection	Darknet/Tor Traffic
Command-and-Control Activity	Phishing Activity
Malicious/Scanning Behavior	Ransomware

- Coverage of more than 6,000 known threat actors, activists, and groups
- Suspicious/high-risk domain name registrations that might be weaponized for spear phishing and social engineering/business email compromise campaigns
- Announcement of data breaches related to a specified vendor
- Receive our optional Cyber Attack Surface Analysis report for specified vendors to analyze five critical areas of cyber risk

BENEFITS TO YOUR ORGANIZATION

Expert Advice

LookingGlass provides full human vetting/analyst review of every finding to ensure that the false positives and “noise” common to many automated scorecard services are eliminated.

Access to a dedicated program manager provides personalized customer support and review of your Monthly Summary Report.

Industry’s Most Comprehensive Intelligence

We source from nearly 100 types of structured threat data feeds – including LookingGlass proprietary feeds – as well as coverage of unstructured content from the surface, deep web and dark web.

The Power of LookingGlass Behind You

Leverage LookingGlass’ infrastructure, people, systems, and 20+ years of industry experience for real-time, actionable threat intelligence.

ABOUT LOOKINGGLASS CYBER SOLUTIONS

LookingGlass Cyber Solutions delivers unified threat protection against sophisticated cyber attacks to global enterprises and government agencies by operationalizing threat intelligence across its end-to-end portfolio. Scalable threat intelligence platforms and network-based threat response products consume our machine-readable data feeds to provide comprehensive threat-driven security. Augmenting the solutions portfolio is a worldwide team

of security analysts who continuously enrich our data feeds and provide customers unprecedented understanding and response capability into cyber, physical and 3rd party risks. Prioritized, relevant and timely insights enable customers to take action on threat intelligence across the different stages of the attack life cycle.
