1. CHEMICAL PRODUCT and EMERGENCY TELEPHONE CONTACT

Product Name: Urea Liquor
Chemical Family: Amide
Synonyms: Urea Cattle Feed
Formula: CH₄N₂O + H₂O

EMERGENCY TELEPHONE NUMBER
CHEMTREC: 800-424-9300

2. COMPOSITION / INFORMATION ON INGREDIENTS

No limits established for urea liquor, biuret, or ammonium carbamate

3. HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW

Colorless liquid. With slight ammonia (pungent) odor and may have a faint salty taste. Reacts with sodium hypochlorite or calcium hypochlorite to form the explosive, nitrogen trichloride. When heated to decomposition it emits toxic fumes of nitrogen oxides (NOₓ) and/or ammonia. Use water to control fires involving urea liquor, if water is compatible with burning product, urea liquor itself is non-flammable.

(Continued)
POTENTIAL HEALTH EFFECTS

Primary Routes of Entry: Skin contact/absorption, eye contact, and vapor inhalation.

General Acute Exposure: May cause irritation to eyes and skin. Ammonia and carbon dioxide vapors may accumulate in a confined space and present ammonia and carbon dioxide gases.

General Chronic Exposure: No test data available.

Carcinogenicity:
NTP.............................................. : Not Listed
IARC.............................................. : Not Listed
OSHA............................................ : Not Regulated

Medical Conditions Aggravated by Exposure: No test data available.

4. FIRST AID MEASURES

First Aid for Eyes: Flush eyes with copious amounts of tepid water for at least 15 minutes. If irritation, pain, swelling, excessive tearing, or light sensitivity persists, the patient should be seen in a health care facility.

First Aid for Skin: If irritation occurs, flush exposed area with copious amounts of tepid water for at least 15 minutes followed by washing area thoroughly with soap and water. The patient should be seen in a health care facility if irritation or pain persists.

First Aid for Inhalation: If irritation develops move patient to fresh air and monitor. If cough or difficulty in breathing develops, evaluate for respiratory tract irritation. If trained to do so, administer supplemental oxygen if needed. If irritation, coughing, or difficulty in breathing persists the patient should be seen in a health care facility.

First Aid for Ingestion: If conscious, give the patient large quantities of water to drink and induce vomiting. Seek medical attention.

5. FIRE FIGHTING MEASURES

Urea liquor is not flammable.

Extinguishing Media: Use water to extinguish a fire involving urea liquor, if water is compatible with the burning product.

Special Fire Fighting Procedures:
  a. Positive pressure self-contained breathing apparatus (SCBA) should be used when there is a potential for inhalation of vapors and/or fumes.
  b. Wear full fire fighting protective equipment which is proper for conditions.

Caution:
  a. Runoff from fire control or dilution water may cause pollution.
  b. At elevated temperature, urea liquor may decompose to form cyanuric acid, ammonia, biuret, and/or nitrogen oxides.
6. ACCIDENTAL RELEASE MEASURES

Spill or Leak Measures: Keep unnecessary people away and isolate hazard area. Urea liquor may be toxic to cattle (ruminants) when ingested, if amount ingested is not controlled properly.

Determining Spill Size: Generally, a small spill is one which involves a single, small package (i.e. up to a 55 gallon drum), small cylinder, or a small (non-continuing) leak from a large container.

Small Spill:  a. Spilled urea liquor may cause slippery conditions.
               b. Recover and use as fertilizer.
               c. If disposal of product or contaminated by-products is necessary, follow guidelines set forth by local, state, and federal environmental agencies.
               d. Runoff may cause pollution.

Large Spill:  a. Spilled urea liquor may cause slippery conditions.
               b. Recover and use as fertilizer.
               c. If disposal of product or contaminated by-products is necessary, follow guidelines set forth by local, state, and federal environmental agencies.
               d. Runoff may cause pollution.

7. HANDLING AND STORAGE

No unusual precautions are necessary.

Handling Precautions: Use proper personal protective equipment when working with or around urea liquor. (See section 8).

8. EXPOSURE CONTROLS, PERSONAL PROTECTION

Respiratory Protection Requirements: Urea liquor may pose an inhalation hazard in confined areas due to its ability to produce ammonia and carbon dioxide vapors. If necessary to enter an area which contains urea liquor, monitor for ammonia and oxygen content. Oxygen levels should be maintained between 19.5% and 23.5%, if outside of this range use appropriate precautions. If ammonia vapors are present, protect as follows:

<25 ppm: No protection required.
25 to 35 ppm: Protection required if the daily TWA is exceeded.
35 to 50 ppm: Protection required if exposed for more than 15 minutes
50 to 250 ppm: Minimum of an air-purifying respirator equipped with ammonia canister(s) or cartridge(s).
250 to 300 ppm: Minimum of a full face air-purifying respirator equipped with ammonia canister(s) or cartridge(s).
>300 ppm: A fresh air supply system must be used (i.e. positive pressure self contained breathing apparatus)
Engineering Controls: Adequate ventilation should be supplied.

Skin Protection Requirements: Impervious gloves should be worn. urea liquor is shipped as a hot liquid (approximately 220°F), as thus, additional protection for hands and skin should be used to prevent contact of hot liquid.

Eye Protection Requirements: It is recommended that safety glasses or goggles be used and if there is a potential for splashing liquid, a face shield should be used in conjunction with the safety glasses or goggles.

Other Protective Equipment: Safety shower and eyewash fountain or at least 5 gallons of accessible clean water should be provided in a urea liquid handling area.

10. REACTIVITY

Stability: This is a stable material.
Hazardous Polymerization: Will not occur.

Decomposition: Urea liquor forms ammonia, cyanuric acid, biuret, and/or nitrogen oxides (NOx) upon decomposition.

Incompatibilities: Reacts with sodium hypochlorite or calcium hypochlorite to form nitrogen trichloride which may explode spontaneously in air. Incompatible with sodium nitrite, phosphorus pentachloride, and nitrosyl perchlorate.

11. **TOXICOLOGICAL INFORMATION**

Human Skin Irritant .......................: 22 mg / 3 day - intermittent exposure  
TDLo, oral, Rat .............................: 821 g/kg  
TDLo, oral Mouse ............................: 394 g/kg  
LD 50, oral, Rat ............................: 8471 mg/kg  
LD 100, Creek Chub ........................: 16,000 mg/l, 24 hour

12. **ECOLOGICAL INFORMATION**

Notify local health and wildlife officials and operators of any nearby water intakes of contamination or discharge into or leading to waterways.

**Urea** (Source: CF Industries, UAN MSDS, 1995)
Urea can be toxic to domestic animals and has caused poisonings when it was applied unevenly on pastures as a fertilizer. Large amounts of urea can damage plant seedlings and inhibit germination. At high concentrations, urea can be toxic to aquatic life. As a readily available source of nitrogen, urea can also foster excessive growth of algae or microorganisms in water systems.

The cell multiplication toxicity threshold values for bacteria, green algae, and protozoa are > 10,000, >10,000, and 29 mg/L, respectively. The critical range for the creek chub is 16,000 to 30,000 mg/L in Detroit river water.

In the soil, urea degrades rapidly, usually within 24 hours, however, degradation may be slower depending on soil type, moisture content, and urea formulation. The ultimate degradation products are carbon dioxide and ammonia. The soil mobility is high based on an organic carbon partition coefficient value of 8. In water, biodegradation rate increases with increasing temperature and presence of phytoplankton. Oxidation of urea by nitrifying bacteria can increase biological oxygen demand. Bioaccumulation of urea is very low. The 72-hour bioconcentration factor (BCF) for carp is reported to be 1.

13. **DISPOSAL CONSIDERATIONS**

Urea liquor is not listed by the Federal EPA as a hazardous waste. Consult state and local environmental agencies for acceptable disposal methods.

14. **TRANSPORTATION INFORMATION**

Urea liquor is not listed by any transportation authority as a hazardous material and as such, no specific information is available.

15. **REGULATORY INFORMATION**

**SARA TITLE III:** Not Listed

**CERCLA Hazardous Substances List:** Not Listed

**TSCA Inventory:** Listed

---

**REVISIONS**

Nov. 5, 1996: The MSDS was rewritten to comply to ANSI Standard Z400.1-1993, by Roger Allison.

Feb. 16, 1999 Revised to make minor typographical and editorial changes.
