

Dear Provider,

As a specialist I'm very appreciative of our working relationship to deliver excellent care. Streamlined communications are the key to our collaborative efforts. To that end, we have engaged [Precision Healthcare Technology](#) to automate some of these repetitive processes and reporting to assure compliance requirements are met. In that process, I came to find out that your type of practice benefits financially more than any other sector in healthcare.

Precision is the only platform that can update individual patient's medical necessities after each subsequent encounter, care plans, refer to a specialist or ancillary service, enroll the patient, and then schedule the patient, all in the background away from your workflow. Below is a short message from Precision.

Thanks so much for your interest in [Precision Healthcare Technology](#)! Here is a short overview of how we help specific types of organizations. The first message is a one-page [Elevator Pitch Overview](#) followed by [How Precision Serves Healthcare Organizations, Hospitals & Providers](#).

[Precision Healthcare Technology](#) is a one-of-a-kind platform that operates in the background of nearly every sector in healthcare, away from provider's workflow. It's AI-driven, blockchain protected, and Stealth Workflow Intelligence is the only Concierge White Glove system in healthcare. This means they operate the technology and transfer the benefit into your EMR for you, without you or your staff doing or changing a thing differently.

There are 600+ EMR systems and NONE can do these things, yet we can work with or within ALL of them!

"As a career hospital CEO for startups and turnarounds, I've watched the Precision program since its inception and in my opinion, there is no greater tool in healthcare. The program, ongoing support, and the people behind it are first class in every way. Precision is always my first step in any turnaround."

- Jeff Livingston – Houston, Texas

WE DO THE DRIVING

YOU BENEFIT WITH NO CHANGE IN WORKFLOW OR HOW YOU OPERATE

THE BOTTOM LINE

We can launch in 72 hours, revenue in 35 days, no cost up front, nothing owed until after you are paid, only pay for those patients engaged, no technology to learn, we transfer data from our system to your EMR and submit to billing, follow claims through to payment adjudication, all with no new staff responsibilities. Providers can conservatively expect \$12,100 per \$2,000 spent per 100 patients. These are services that you are required to perform likely missing, not getting full compliance credit, and/or not monetizing your efforts.

Their information [QuickStart link is here](#). I've copied Co-Founder, Doug Sparks, who will be happy to assist. As an advance thank you, Doug will provide you a link to see exactly how payers view your practice from RAF Score to your percentage compliance in 16 Quality Measures. This report will show you to the dollar the revenue missed for services where medical necessity was found and you failed to act, and then go get that revenue for you. Thank you again.
