

# PRECISION'S STEALTH WORKFLOW INTELLIGENCE BENEFITS TO SPECIALISTS

[Precision Specialists Services](#) is dedicated to working with Specialists to help them meet their unique challenges and needs, with the focus on understanding and achieving success as the client defines it. How do we improve the consistent referral pathways of patients, and engage them to triage your needs in advance in a billable electronic encounter?

We work with Specialists to strengthen the relationship between their practice and their referral partners, like Primary Care Providers and other referral sources. By leveraging the referral capabilities of [Precision's Stealth Workflow Intelligence](#), a Specialist can create a virtual Referral Network that can combine the advantages of improved referrals management across disparate entities for care coordination to coordinate continuum for electronic, in-office, virtual and delivered care services to their co-managed patients.

This not only creates excellent alignment of incentives from a reimbursement standpoint, but also a shared knowledge of patient status. Combined, this improves communication, patient engagement, and outcome. Scalable interoperability at the community level leveraging sustainable and user-friendly tools is the goal and together, that is what can be achieved when a client leverages the power of the Precision Health Model.

[Precision Healthcare Technology](#) is the only platform built to validate individual medical necessities to the CMS Standard of Care for each individual patient on an ongoing basis. Our [Precision Stealth Workflow Intelligence](#) operates in the background away from the provider's workflow, as the air traffic controller for compliance, engagement and care coordination. The provider never even logs into our system nor sees it and there are no new staff responsibilities. We do everything and they do nothing! There are 600+ EMR companies, and NONE can do ANY of this, but we can work with or within ALL of them.

## PROGRAM COST?

Zero upfront cost, only pay a small flat rate for patients who engage, and only after you are paid by insurance for this billable electronic encounter. We transfer the data from our system to your EMR, submit to your claims process and follow the claims through to adjudication. You do nothing! We can launch in 72 hours, and you have first revenue in 35 days.
