Foresight Cyber Assessment Services

Established in 2009 as a specialised cyber security group, we focus on delivering professional and managed services from our Security Operation Centre and client sites.

TRUSTED ADVISORS

EXPERIENCED PROFESSIONALS

TALENTED INNOVATORS

Our Mission: Protecting Business Resilience

In information security, a business can only improve its business resilience posture when it fully understands the current risk posture. Our experienced team, coupled with market leading technologies, deliver actionable results in three service levels as part of our security assessments.

Silver level

- Elementary assessment of cyber security
- Focus on key security controls
- Self-paced assessment questionnaire
- Review by industry leading experts
- Quantitative risk driven report

Gold level

- Detailed assessment of cyber security
- External and internal systems vulnerability and hardening assessment
- PCI DSS scan and report
- Review of your risk management process

Platinum level

- Comprehensive assessment of cyber security using US government approved framework
- Business resilience interviews with key stakeholders
- Wide-ranging technical security assessment
- Data leakage review
- Analysis of Indications of Compromise in your network

Our Assessment services case studies

A **semiconductor business** engaged with our consultant to perform assessment of various areas of IT and cyber security, namely vulnerability management, firewall management, security hardening and cloud security. After we had delivered these assessment the company initiated improvement projects which resulted in reducing the overall cyber security risk.

A **visual recognition intelligence** business, with customers in retail, crowd control and facility management, have been using our consultancy and managed services.

At the beginning of our engagement we delivered our Gold level assessment which resulted in increased levels of risk awareness and kicked off necessary improvements. As a result, the company was able to satisfy security requirements of new clients and grow the business.
