Support Professional Service

Platform licence and maintenance

# Application Management of your Skybox platform

Ensures the Skybox platform operates optimally and the reports and analysis it produces are correct and reliable

|   |  |
|---|--|
| <b>Network Model Management</b>         | <b>Lifecycle of network devices in the model</b> |
| <b>Business Asset Model</b>             | <b>Network Maps</b>                              |
| <b>CMDBs Imports &amp; Correlations</b> | <b>FA &amp; NA Policies</b>                      |
| <b>Skybox Tasks Management</b>          |  |

## Functional Application Management

Clients' benefit: No need to train staff in maintaining Skybox data and model.

**Strong assurances that Skybox analysis and output can be relied on**

|                                    |   |
|------------------------------------|---|
| <b>Operating system management</b> | <b>Availability &amp; Capacity management</b> |
| <b>Skybox software updates</b>     | <b>Licence monitoring &amp; management</b>    |
| <b>Backup and Restore</b>          | <b>User &amp; Access Management</b>           |

## Technical Application Management

Clients' benefit: worry free operation of Skybox platform means clients' IT teams do not need to be trained in intricacies of maintaining Skybox software.

**'Lights are always on'**

# Managed Security Service Provider (Skybox scope)

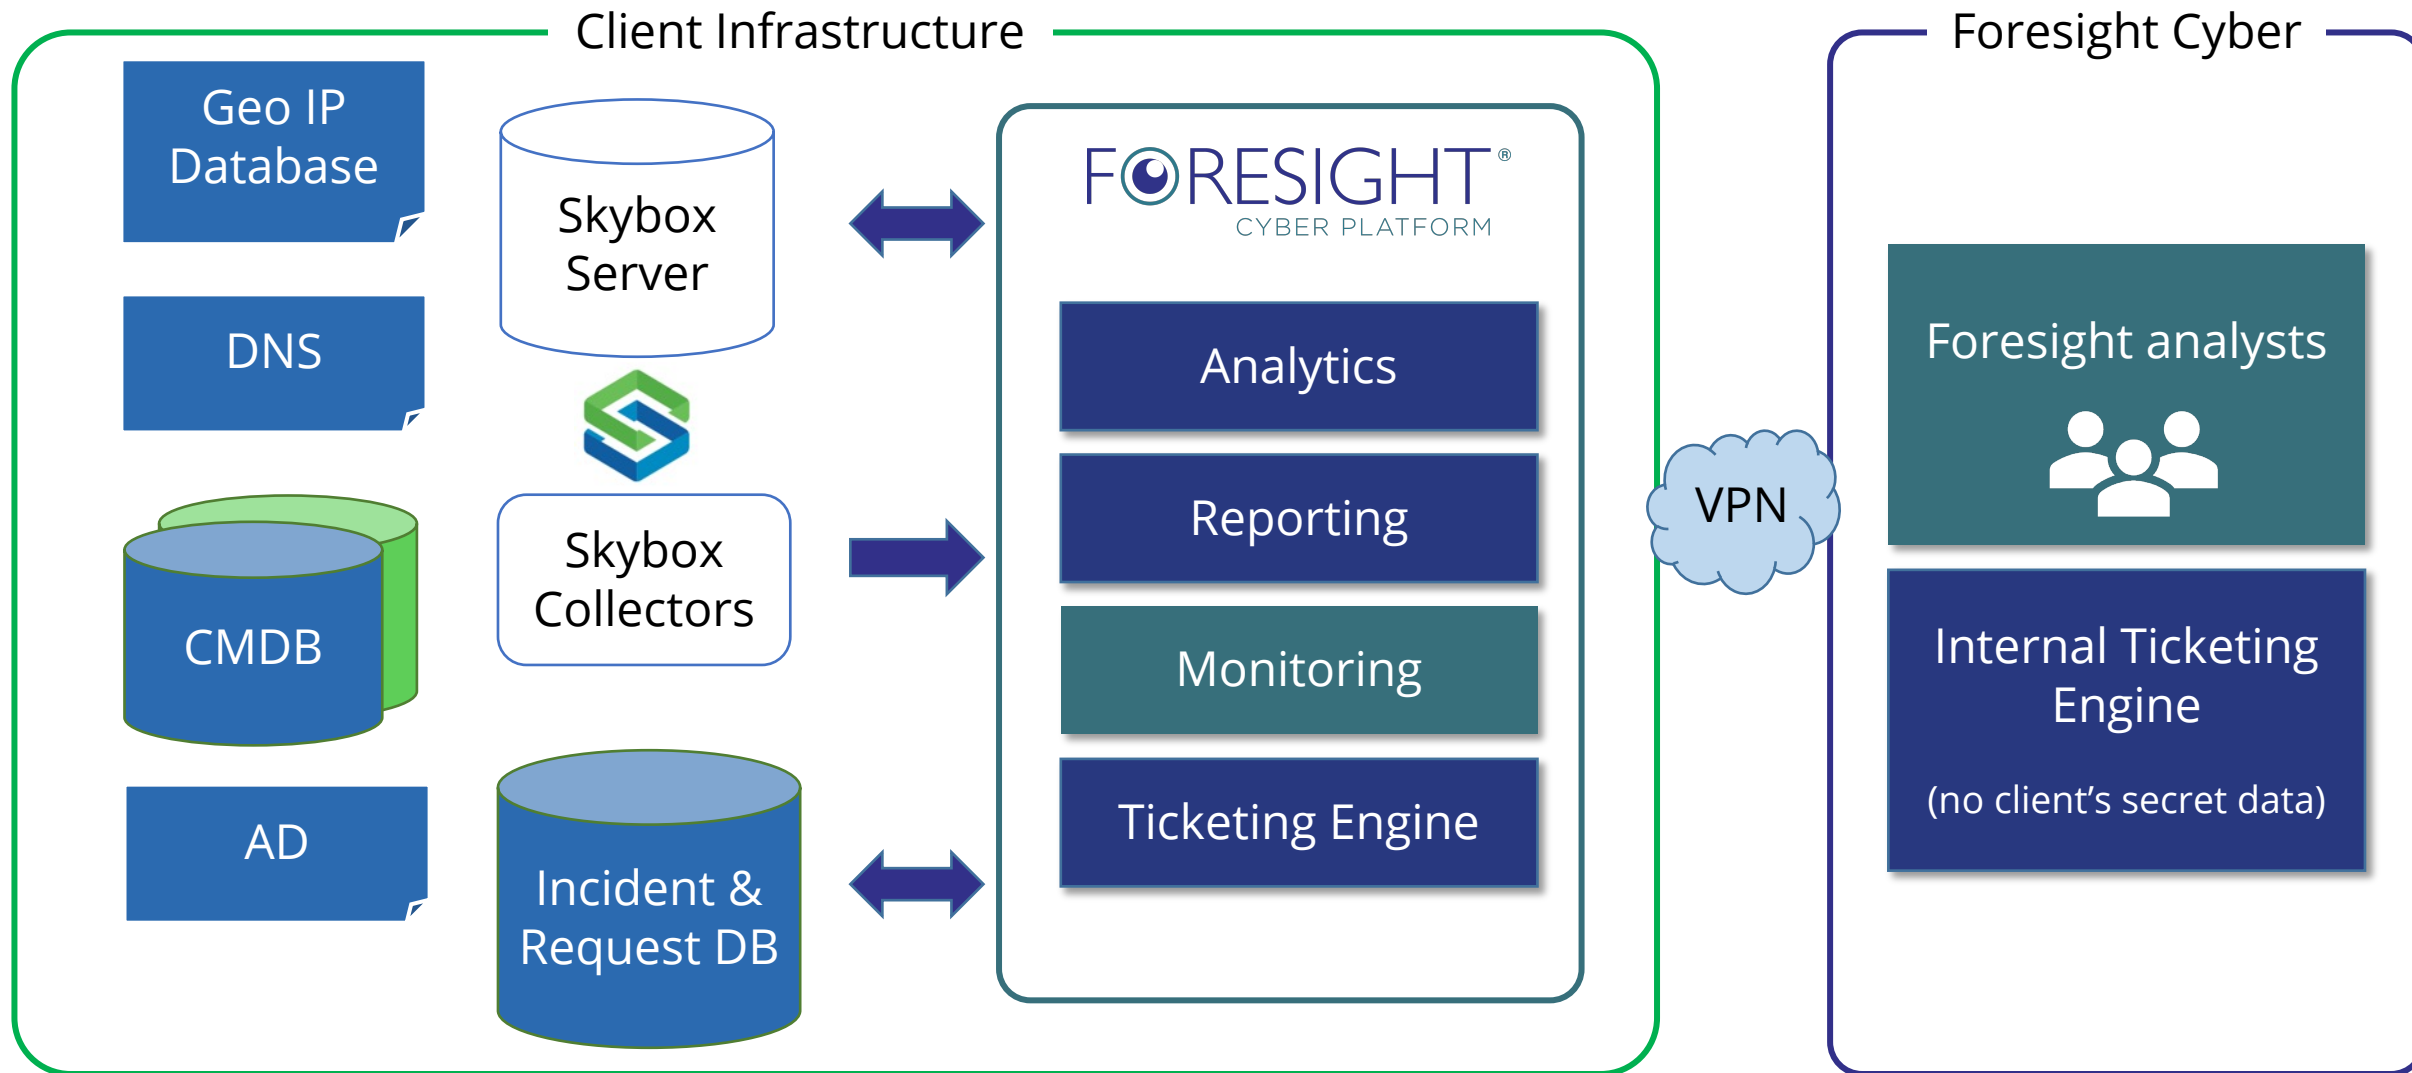

|                                       |                                   |
|---------------------------------------|-----------------------------------|
| <b>Zone access compliance</b>         | <b>Vulnerability remediations</b> |
| <b>Firewall rules compliance</b>      | <b>FW changes assessments</b>     |
| <b>Firewall rules recertification</b> | <b>Network/Firewall hardening</b> |

Save SOC human resources by letting our experts orchestrate remediations of issues discovered by Skybox.

We become an extension of your SOC team.
