Foresight Cyber ®
Introduction

What would you stand to lose if the worse happened and you went offline?

Are you leaving your cyber security to chance?

At Foresight Cyber, we lead the way in protecting our clients and managing their cyber security, through our expertise and the partnerships we have with renown cyber security software vendors.

From legal and accountancy practices to corporate giants, we are experienced professionals and trusted advisers, who provide a first-class service and give our clients peace of mind.

Our services

Skybox Managed Services

We are trusted partners of Skybox Security, providing Managed Services from design to full deployment, in a structured, pain free way, so you can take a full advantage of your Skybox investments.

Cyber security Assessment

Are you concerned about your businesses resilience in light of the many high profile cyber attacks?

Our Cyber Security Assessments are tailored to satisfy any business vertical and cover a wide-range of technical, administrative and management elements of your cyber security status.

Network Compliance

Using our Network Security Compliance solution, we look at your network and pinpoint potential areas of weakness, then ensure that not only is your system hard to crack but, should a cyber-criminal penetrate, damage is limited.

We call it segmentation – you might call it peace of mind.

Vulnerability Management

Your business is vulnerable after a software provider, like Microsoft, issues security patches. Any time lag between patch issue and patch installation provides a window of opportunity for the cyber criminal. Our Vulnerability Management solution monitors security patch issues, instructs your IT teams and service providers to install relevant patches immediately, and connects your patch management process to our vulnerability management process.
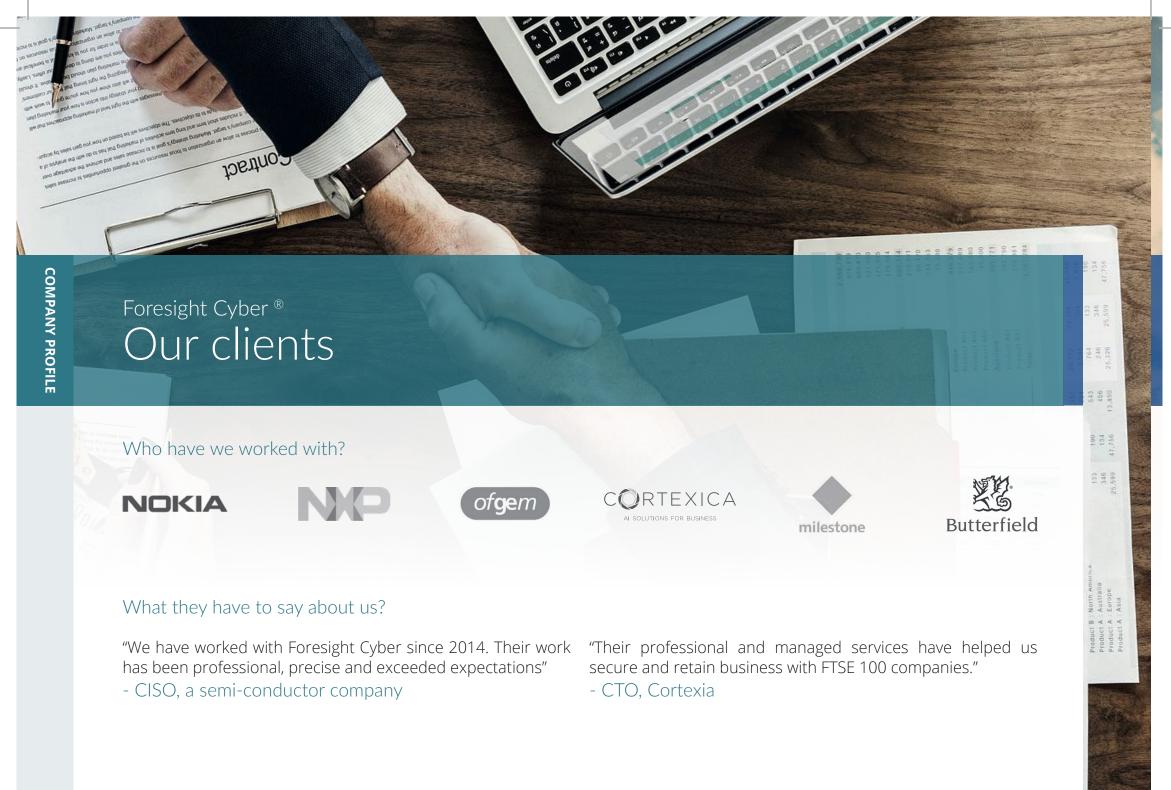

Office365 Security

Microsoft Office 365 is a critical cloud-based system - enabling business processes, internal and external communications, and a business value increase. In information security, a business can only improve its business cyber security resilience once it fully understands its current risk posture. Our experienced team, coupled with market leading technologies, deliver easy to understand and an actionable Office365 security assessment coupled with our leading Office365 security monitoring service.
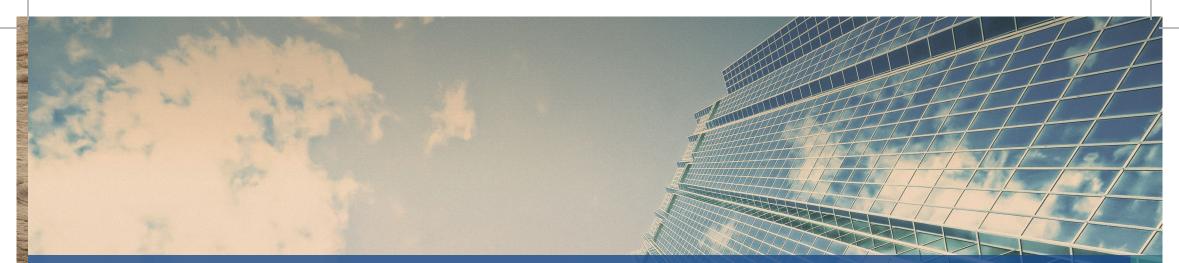

Foresight Cyber ®
Our team

Our team has almost 100 years' combined experience in information and cyber security - we were delving into cyber security before most of the world had woken up to the dangers of cyber crime.

We are continually seeking to extend and improve our knowledge, so we keep one step ahead of the ever sophisticated cyber threats. All our staff have at least one professional certification.

- ✔ External and internal systems vulnerability and hardening assessment
- ✔ PCI DSS scan and report
- ✔ Review of your risk management process

Platinum level

- ✔ Cyber Essentials
- ✔ Comprehensive assessment of cyber security using a US government approved frameworks
- ✔ Business resilience interviews with key stakeholders
- ✔ Wide-ranging technical security assessment
- ✔ Data leakage review
- ✔ Analysis of Indications of compromise in your network

Foresight Cyber ®
CISO as Service

Management teams need the support of a CISO or ISO to ensure their organisation's security is robust enough to combat cyber attacks and that is meeting legislative, regulatory and corporate obligations.

Having a dedicated Chief Information Security Officer should be on every organisation's wish list.

Management teams need the support of a CISO or ISO to ensure their organisation's security is robust enough to combat cyber attacks and that it is meeting legislative, regulatory and corporate obligations.

But what if your business doesn't have the budget to employ your own CISO or ISO? Or your business's needs don't warrant creating a permanent role?
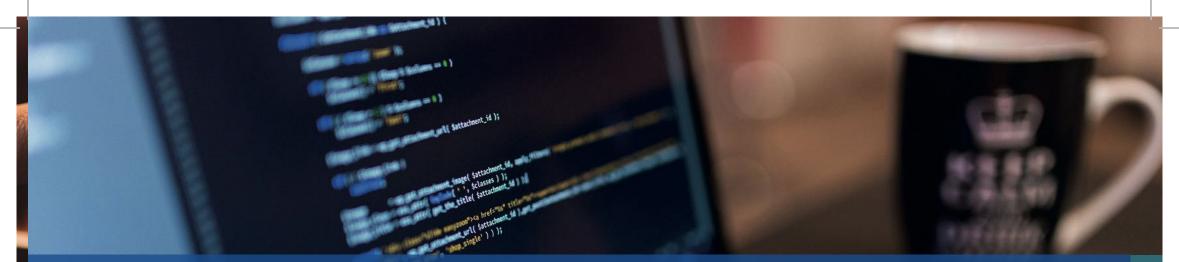

This is where Foresight Cyber can help, by providing you with an outsourced CISO.

Our CISOs have a wealth of skills, experience and knowledge to help your organisation, whatever your size or sector and they have all held CISO positions in medium to large enterprises.

Our security specialists offer a service tailored exactly to your organisation's needs: a single point of contact for all information security matters, from business to boardroom

Our Outsourced CISO service includes:

✔ Regular meetings with your senior management team to understand the business strategy
✔ Assessment of current cyber and information security threats, devising an appropriate risk profile
✔ A cyber security strategy, covering potential threats and new regulatory obligations, reviewed six-monthly
✔ An appropriate information security programme to support the security strategy
✔ Selection, design, implementation and, where appropriate, operation of cyber security technologies
✔ Creation of process definitions, measures/KPIs and reporting elements
✔ Product applicable regulatory reporting

Foresight Cyber ®
Cyber Security Services

We deliver a range of services that help your business manage the risk of cyber crime.

Whatever the size of your network - accessed by 50, 500, or 50,000 staff - you'll want to ensure that not only is it hard to crack, but should a cyber-crimonal penetrate, damage is limited.

Vulnerability Management

Your business is vulnerable after a software provider, like Microsoft, issues security patches. Any time lag between patch issue and patch installation provides a window of opportunity for the cyber criminal.

Our Vulnerability Management solution monitors security patch issues, instructs your IT teams and service providers to install relevant patches immediately, and connects your patch management process to our vulnerability management process.

Network Security compliance

If you run an organisation with more than one site – perhaps you have multiple sites – with a networked IT system you'll want to be sure it is secure and that you're following best practice.

As with our Vulnerability Management service, we look at your network and pinpoint potential areas of weakness. Our two services – Vulnerability Management and Network Security Compliance – often run hand-in-hand.

Whatever the size of your network – accessed by 50, 500, or 50,000 staff – you'll want to ensure that not only is it hard to crack but, should a cyber-criminal penetrate, damage is limited.

We liken it to having fire doors in a building: if hackers gain access through the external door, they can't jump from office to office, or department to department. We call it segmentation – you might call it peace of mind.

If your organisation relies on a network and you're concerned about its safety being compromised, please get in touch with the Foresight Cyber team to talk about Network Security Compliance.

We partner with leading cyber security software providers, including Skybox, Qualys and Hardenize, only selecting the software solution that best suits your cyber security needs.
