

**POLYMULE®**

**INNOVATIVE  
LOGISTICS  
SOLUTIONS**

\*Patent(s) pending/19

## OUR COMPANY

LOCATED IN THE HIGH DESERTS OF UTAH, our company is developing next-generation mobility solutions for consumers, relief organizations, and the military. Among other products, we build the most rugged, versatile, and compact utility carts on planet earth. *Confidently haul your gear over any terrain...*

### THE PROBLEM

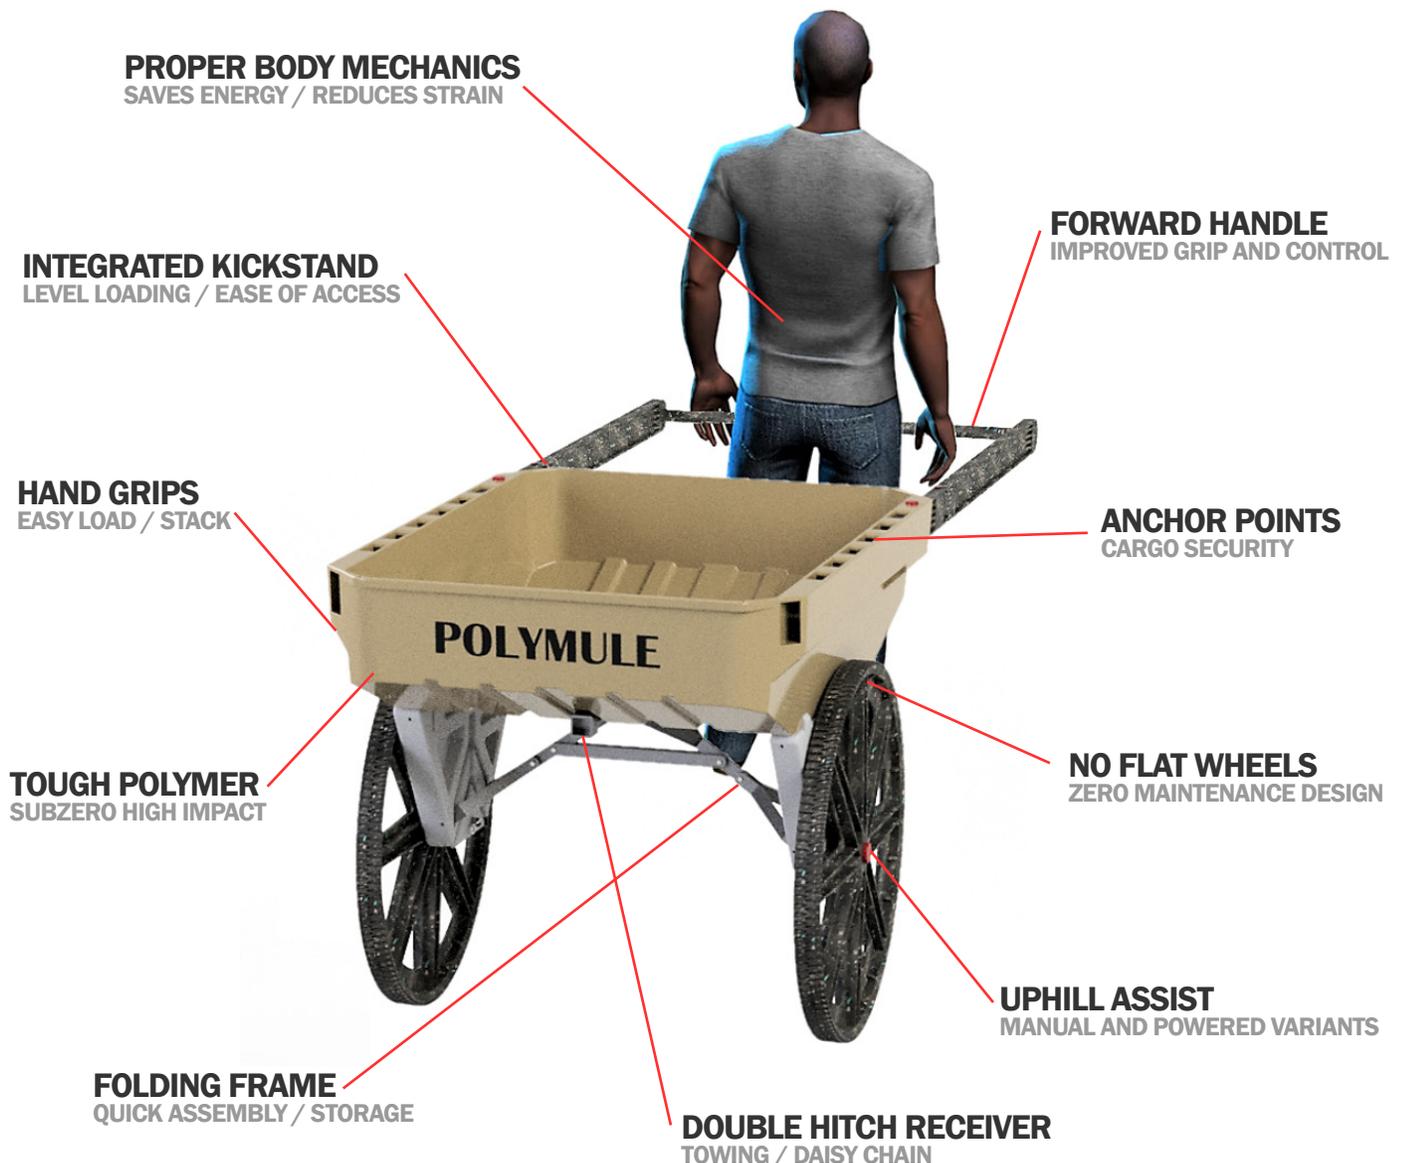

- *Rough terrain* makes on-the-ground gear transport difficult and burdensome
- *Vehicles are often unavailable*, infeasible, or undesirable
- *Few ways exist* for people to haul gear or supplies in remote areas
- *Many organizations* and individuals face this problem on a regular basis

# THE POLYMULE WARRIOR®

The “YETI” of utility carts, the Polymule Warrior® is a tough-as-nails logistics tool designed for adventure and built for work. Featuring reinforced polymer, large no-flat wheels, 15 cubic feet of cargo capacity, an uphill assist mechanism, and a whopping 20 inches of ground clearance, the Warrior® is ready to go where motor vehicles can't. Confidently transport heavy gear, distribute supplies, relocate your base-camp, or haul a cooler of fish over the roughest terrain.

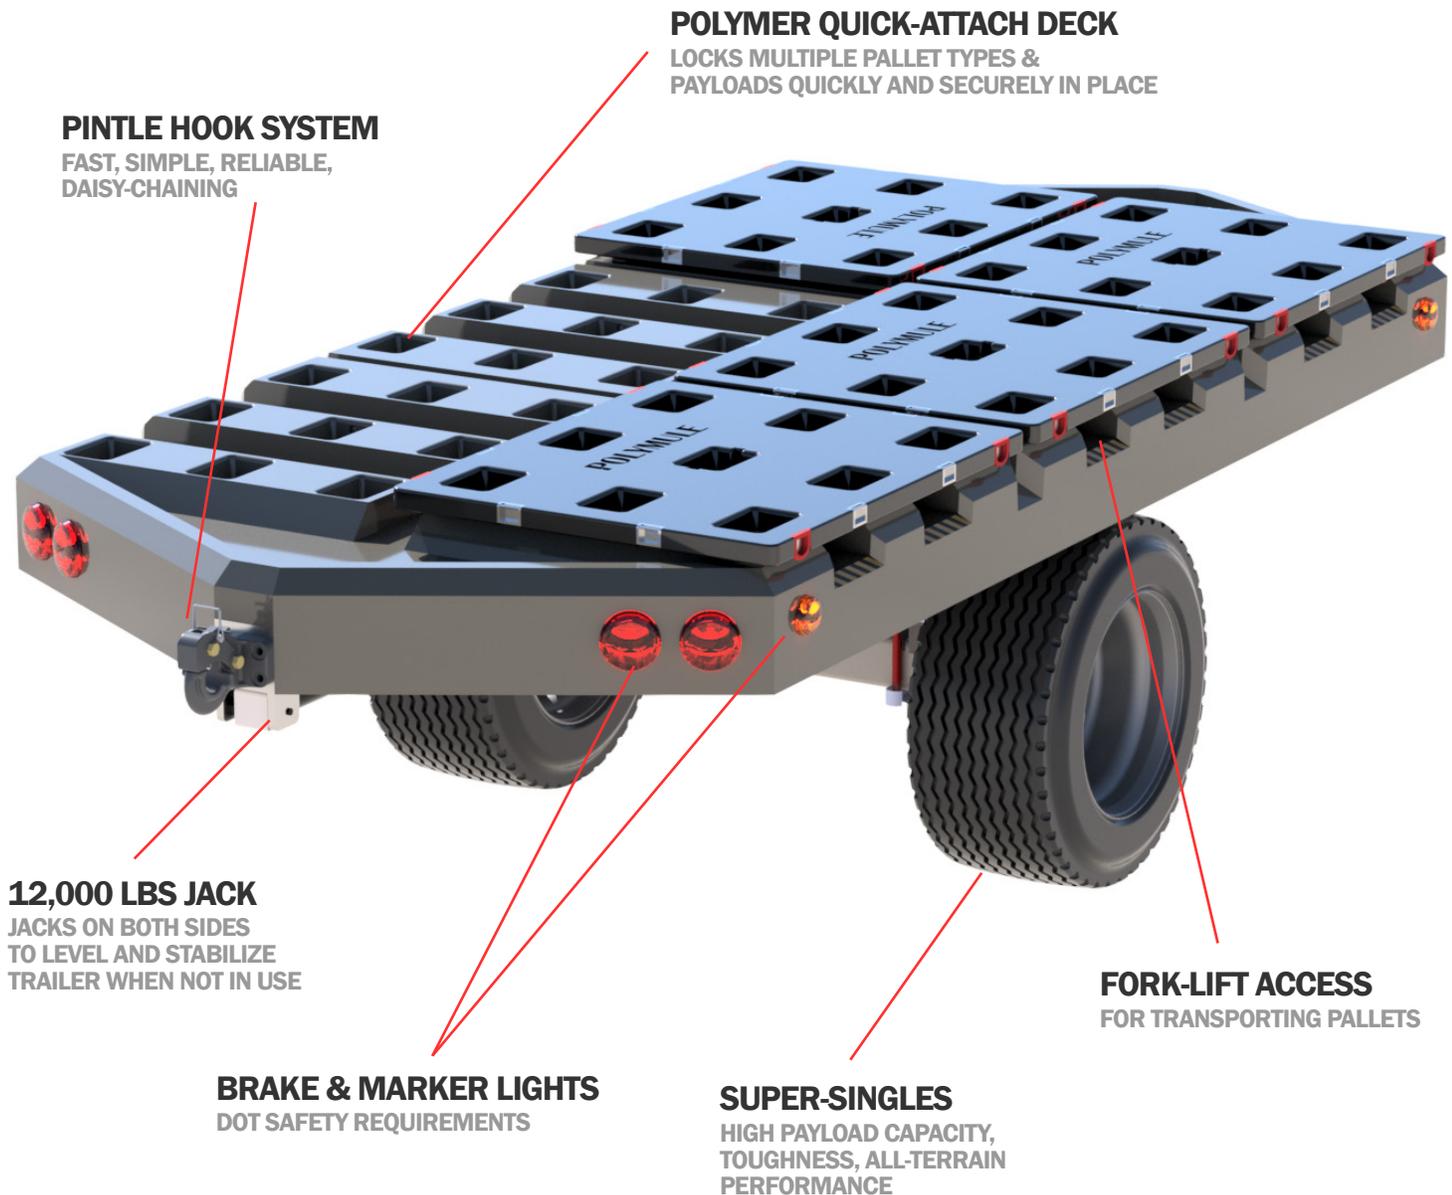

The Warrior® quickly assembles without tools, stacks and stows for transport, tows behind ATVs, and can be outfitted with a number of optional accessories including an all-weather-cover and a rear handle.

# MULETEAM 6<sup>®</sup> - LOGISTICS PLATFORM

Specifically designed for the upcoming \$80B GBSB program, the MULETEAM 6<sup>®</sup> is positioned to become the primary in-field logistics solution in support of the 30-year mission to replace all US ICBMS. The platform uses the proven pintle-hook / lunette-eye system enabling multiple units to be daisy-chained together and towed by readily available pickup trucks. This functionality provides transport versatility and helps avoid the use of larger, more expensive semi-trucks which aren't well-suited for rough terrain or adverse weather.

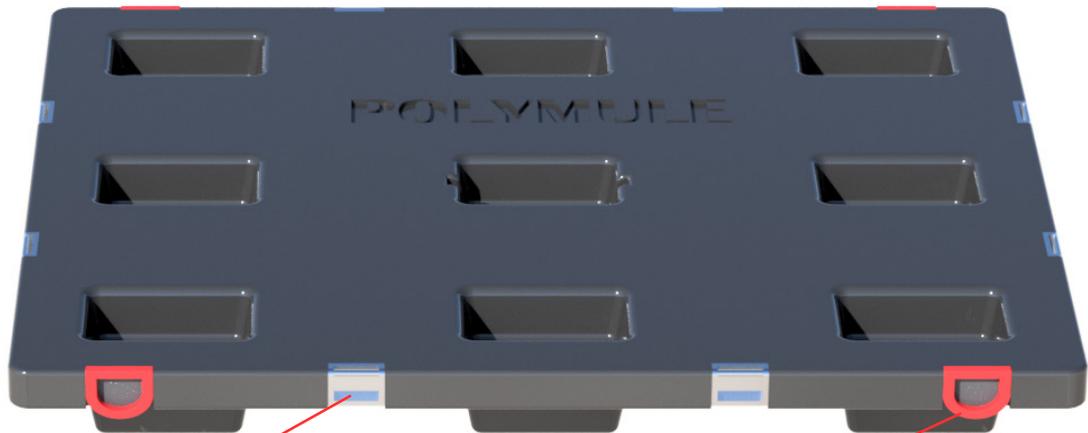

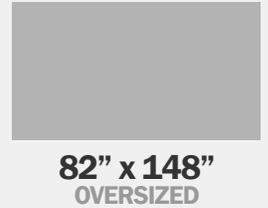

Heavy-duty jacks level the trailer when not in use and super-single wheels provide generous ground clearance and all-terrain performance for up to 16,000 lbs of cargo.

# MULETEAM PALLETS®

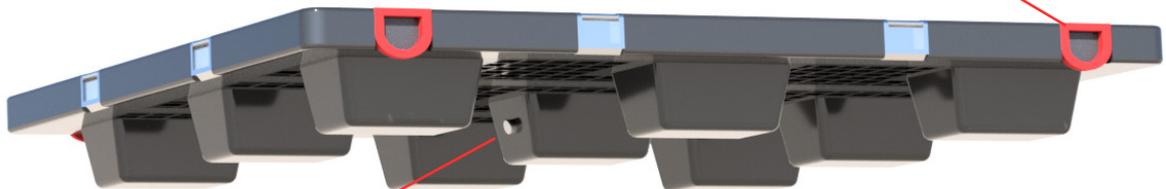

Designed to be forward-placed with GBSD suppliers and distribution centers, our MULETEAM® pallets streamline the transportation and in-field deployment of parts and equipment. Made with durable injected composite and embedded steel, the pallets come in multiple sizes, quickly attach to the MULETEAM 6® trailer without rigging, and are easily hoisted by cranes thanks to heavy-duty D-rings.

## PALLET SIZES:

**TIE DOWNS**  
TO SECURE PALLET CARGO

**HEAVY DUTY D-RINGS**  
FOR HOISTING

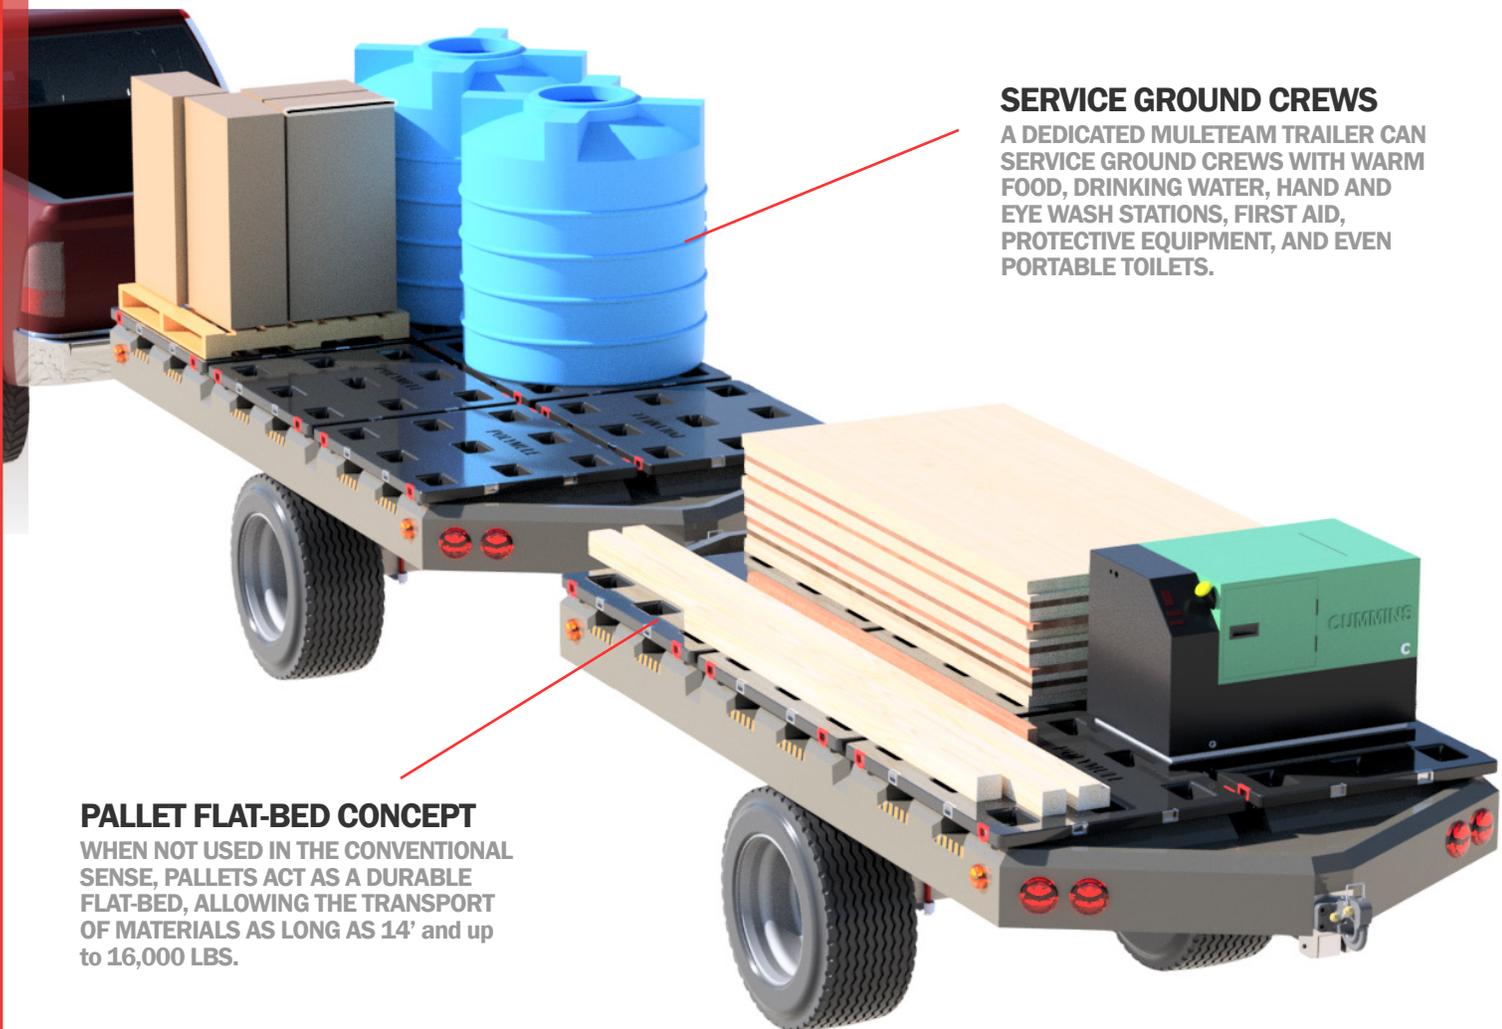

**LOCKING PINS**  
AUTOMATICALLY LOCKS PALLET  
ONTO TRAILER (NO NEED FOR  
RIGGING). PINS ARE RELEASED  
WHEN LIFTED BY FORKLIFT

**STACKABLE**  
PALLET NEST FOR STORAGE  
& TRANSPORT

# USE CASES

- Deployment of parts, tools, materials, supplies, and equipment
- Winter ice management, salt spreading on road & walkways
- Food and potable water logistics for feeding personnel
- Positioning of medical and safety equipment including hand and eye wash stations
- Sanitation, trash, and refuse management
- Fuel and diesel generator transport (trailers can forward-deployed)
- Oversized equipment transport (lead acid batteries, wafers)
- \* Custom enclosures for climate controlled transport and shielding
- Cargo hoisting by cranes (all MULETEAM® pallets can be hoisted)
- Positioning of area lighting, communications, and security monitoring equipment

**SERVICE GROUND CREWS**  
A DEDICATED MULETEAM TRAILER CAN SERVICE GROUND CREWS WITH WARM FOOD, DRINKING WATER, HAND AND EYE WASH STATIONS, FIRST AID, PROTECTIVE EQUIPMENT, AND EVEN PORTABLE TOILETS.

**PALLET FLAT-BED CONCEPT**  
WHEN NOT USED IN THE CONVENTIONAL SENSE, PALLETS ACT AS A DURABLE FLAT-BED, ALLOWING THE TRANSPORT OF MATERIALS AS LONG AS 14' and up to 16,000 LBS.

# CORE COMPETENCIES

- Advanced Mobility Solutions – R&D, Engineering, and Manufacturing
- Advanced AI Navigation and Situational Awareness Solutions
- Ballistic Composites and High-Level Systems Design
- Modeling, Simulation, Validation, Verification, and Testing
- Systems Consolidation and User Interface Expertise
- ISO, UL, UN, and MIL-SPEC Standards: 810H, 1472G, 461G, UN38.3
- Can meet aggressive design and development time-tables
- Short production lead times & high volumes
