

ASSESSMENT • TRAINING • LIABILITY
ACCOUNTABILITY SOFTWARE

ATLAS is a web-based software that allows law enforcement agency supervisors to, objectively and quickly, review an officer's body-worn camera (BWC) or motor vehicle recorder (MVR) and measure their actions against the agency's best practices. ATLAS' customized datasets and key performance indicators (KPIs) allow for followup actions, from commendations to corrective measures, in one step.

- **Automate**
your body worn camera review process
- **Identify**
performance inconsistent with agency policy
- **Distinguish**
between an officer issue and an agency issue
- **Minimize**
ambiguity by clearly defining performance standards
- **Track**
officer performance over time
- **Document**
the agency's performance management efforts
- **Provide**
data to defend Section 1983 civil suits

Benefits

ATLAS streamlines the video review process and gets you back on the road faster.

The information collected in the software allows your agency to monitor officer performance over time.

Knowing where officer error occurs allows your agency to improve the policy, training and supervision and could lead to a measurable improvement in officer performance.
