TURBOCASER EXPRESS

**RAPID DRILL-THRU
TURBINE POWERED CASING
AND LINER REAMING SYSTEM**

The Turbocaser™ Express is a drillable reaming system that enables casings and intermediate liners to be landed at target depth first time.

With the new ability to ream while running, the casing can be run sooner while the hole is in best condition, eliminating wiper trips and open hole exposure.

Placed at the end of the string, Turbocaser™ Express down-hole turbine provides high speed rotation of a reamer shoe, independent of casing string rotation. The Turbocaser™ Express is used to re-establish open hole conditions by removing debris, ledges, filter cake or other obstructions to ensure the string reaches target depth.

The casing is cemented in the normal manner. The Turbocaser™ Express is designed for very rapid drill out. Drill out time of the Turbocaser™ Express motor and system is under 15 minutes and a dedicated drill out is not required.

Turbocaser™ Express technology has been used to run full strings and liners to depth in difficult wells where conventional techniques have not been successful. Landing casing at the planned depth, with less risk and greater predictability, is the foundation of well integrity.

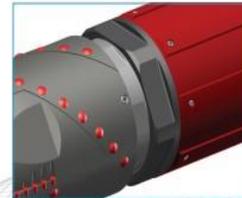

ELIMINATES WIPER TRIPS

LANDS CASINGS AND LINERS ON DEPTH

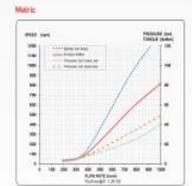

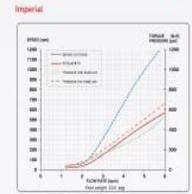

NO STRING ROTATION NECESSARY

DRILL THRU AND DRILL AHEAD

LOW FLOW RATE

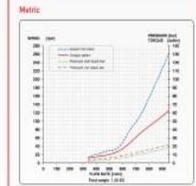

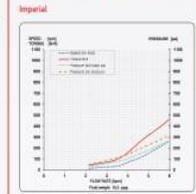

7'0" TURBOCASER™ EXPRESS

Standard Specification

	Imperial	Metric
Top Body OD A	7.717"	196.00mm

SHALERUNNER™

TURBINE POWERED COMPLETION REAMING SYSTEM

The Shalrunner™ provides high-speed reaming to land completions at target depth. The Shalrunner™ reams while running into hole without the need to rotate the liner or completion.

The unique design combines rotational power with low circulating pressures. The completion is protected from vibration, from reactive torque and free from pressure spikes that could prematurely set the liner hanger or packers.

The Shalrunner™ can eliminate a wiper trip which also allows the completion to be run sooner.

Completing longer laterals with lighter weight tubulars and lower torque connections is now achievable using the Shalrunner™.

Shalrunner™ is specifically designed for well construction in all territories. The tools have optimized power systems and specific dimensions for very high dogleg severity.

- GETS THE COMPLETION TO DEPTH
- ELIMINATES DEDICATED WIPER TRIPS
- NO PRESSURE SPIKES – PROTECT THE LINER HANGER
- LOW VIBRATION – PROTECT COMPLETION COMPONENTS
- LOW FLOW RATE – MINIMIZE ECD
- OPEN FLOW MOTOR – REDUCE SURGE
- HIGH DOGLEG CAPABILITY

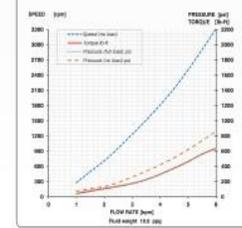

Standard Specification:

ATTACHED: 20 MESH FILTER x 6 PIECES + FIXING WIRE

TO BE FIXED TO PUMP SUCTION STRAINER AS PER
OPERATING INSTRUCTIONS "MUD QUALITY AND
OPERATIONS MANAGEMENT, PART (D)"

EXTRACT

- (d) In all cases, but particularly for poor mud environments, Deep Casing Tools recommends the use and installation of a 20 MESH screen directly on the pump suction strainer - on the MUD pit side (so the screen is always pushed against the strainer plate). ALL triplex pump inlets need to be equipped with the filter screens provided. If plugging of this filter does occur, the pump will cavitate and the driller will be alerted to this issue. 6 sections of 20 MESH filters and appropriate fixing wire are provided with every DCT tool for this purpose.
