DIY Pneumatic T-Shirt Cannon

by Brian S. Elliott

Most of us have seen the T-shirt cannons used at popular sporting events. Similarly, most of us have thought that they look like a lot of fun. The illustration above shows a simple DIY T-shirt cannon. If one combines a Co2 paintball gun tank with an ordinary pressure washer valve handle, as shown above, then the basis for one of these guns is in hand. The barrel is simply a length of 3" Sch 40 PVC pipe with appropriate fittings glued to each end. The barrel is connected to the output of the pressure washer valve with an ordinary 1/4" hex nipple. All of the components for this project are readily available for bargain basement prices.
