Timer-Controlled Air Compressor

by Brian S. Elliott

There are many compressed air installations where the noise produced by the air compressor might be problematic. One of the most noteworthy examples is when businesses are located adjacent to residential areas. During normal business hours, the noise isn't a particular concern. However, in the off-hours this noise may be particularly irritating to your residential

neighbors. A simple solution to this problem is to install an ordinary commercial 7 day timer, as shown in the illustration. This allows the compressor run time to be programmed so that it operates only during working hours, against municipal sound ordinances, or at times that all parties have agreed on.
