

HOST CHAMBER (TM) - The Anti-Theft Innovation

SNAP-2 is ChellaLee LLC's patent-pending, fastener-free anti-theft module. It secures by the wheel, deters thieves with stealth, and alerts owners repeatedly via Bluetooth.

Unlike exposed steering locks or OBD devices, HOST CHAMBER is hidden from sight, secured without fasteners, and communicates silently with the owner's phone.

Applications include cars, boats, trailers, motorcycles, and construction equipment.

HOST CHAMBER is OEM-ready, field-tested, and designed to meet the rising demand for proactive, smart anti-theft solutions.

ChellaLee LLC is now seeking investor support, licensing deals, and strategic partnerships.
