

To Whom It May Concern

Here at the Saint John airport we have been using Texas Refinery 880 Crown and Chassis grease for almost two years. Once we got the grease in our systems and the old grease pushed out we have found this grease to be the best we have ever used. The grease stays twice as long as any other because it only takes half as much to do the same job. We always had a problem with bearings in our runway sweepers. Since we started using Crown and Chassis, that problem has been eliminated.

I also use this grease on my farm and feel the same way; I would highly recommend this product to anyone.
