

12V Paddle Board Pump Instructions

1. Connect the hose to the pump (screw clockwise) and valve of the paddleboard (twist clockwise and push).
2. Plug into your car/van 12v socket with lead provided, keeping your engine running.
3. Turn on the pump by holding the middle button, until the screen comes on.
4. Using the + button select 16psi for the Red Paddle boards and 20psi for the family board.
5. Press the centre power button to start inflation. It will take approx 12minutes to inflate a Red Board, (please note the family board will take a little longer to inflate).
6. After inflation the pump will automatically stop. For the family board you will need to stop the pump after 15 minutes. Remove the hose from the paddleboard and continue to pump manually.

Precautions and warnings:

- Do not continually use the pump for more than 15 minutes, the motor may overheat and cause damage.
- Let the unit cool down for 15mins.
- Do not expose to rain/water.
