

Do you have a Splinter?

Is it not painful or annoying when you get something in your eye? Especially when it blinds you and cannot seem to get it out. Well I remember when I was little my parents would have to help me get the dirt out of my eye so I could see. But sometimes there can be something else blinding us within our eyes which can be difficult for us to remove. These splinters can be our own sins which need to be removed. But how can we remove these splinters and allow us to see. Well, the first thing is we should allow ourselves to remove those sins in the sacrament of Reconciliation, and as we come to this season of Lent we have a chance to remove these splinters.

But it's up to us to take this season as a season of conversion to see that radiant light, the radiant light of Jesus Christ. That is the light we want to be able to see. Because through lent we see many splinters in our eyes but there is one splinter from a special wood that removes all those sins which is Jesus Christ who hung up on the wood of the Cross which freed all of us from Sin. And it is through that Wood that he was the bearer of good fruit for us. This allows us the chance to bear good fruit as well to remove our sins and walk in that radiant light which we will be able to see. But only if we take this time of lent to really go on a journey of conversion of our spiritual soul and really live in the light of Christ.
