

FREQUENTLY ASKED QUESTIONS

How does EVERESSE work?

EVERESSE uses radiofrequency, or RF, energy to stimulate collagen generation in the deeper layers of your skin. This helps combat the laxity and loss of volume that can happen as we age. EVERESSE can be used on the face, neck, jawline, around the eyes, and across the body (such as the thighs, abdomen, and arms) for visible lifting and tightening.

Who is a good candidate for EVERESSE?

EVERESSE can be beneficial to any patient of any age, whether as a preventative or corrective measure. EVERESSE is also safe on all skin types. EVERESSE may also be beneficial for weight loss patients who experience sagging skin or loss of volume on the face, neck, or body.

Are EVERESSE treatments comfortable?

Unique from other treatments on the market, EVERESSE uses continuous water cooling to provide comfort throughout the entire treatment. This means that the RF energy is being delivered where it's supposed to go – into the deeper layers of skin – while the skin's surface is kept comfortable.

During your treatment, you will first experience a cool sensation on the surface of your skin. This gradually transitions into a deeper heat sensation that feels hot but tolerable.

How long does a treatment take?

Treatment length will vary depending on the areas being treated and the protocol being used. A full face and neck treatment will take 20 to 30 minutes on average.

FREQUENTLY ASKED QUESTIONS

What can I expect after the treatment?

There's no downtime after an EVERESSE treatment; most patients go right back to their everyday routine. Some patients may experience some redness or swelling in the treated area, which is normal and should resolve on its own. If any discomfort persists after your treatment, please contact us.

When will I see results?

You may see a lifting and tightening effect in the targeted areas immediately after your EVERESSE treatment. However, because collagen generation takes place over time, most patients will continue to see results improve with time - typically up to six months after the treatment.

How many EVERESSE treatments do I need?

The number of treatments needed will vary depending on the patient. On average, patients receive two EVERESSE treatments spaced three months apart as part of their initial treatment plan. We will work with you to understand your goals and craft the right treatment plan for you.
