Σ HYPHER SHIP

EXPERIMENTAL LEVERAGED STRATEGIES

As part of the exclusive ΣNDOTECH Private Club HYPHER SHIP program, investors will be able to choose between several high-leveraged versions of the specifically tuned SHUTTLE strategies.

Leverage is a simple concept – instead of providing the full market value of an asset such as Bitcoin, the traders account balance operates on “margin” – 5:1 leverage (or 5x) means that for every dollar the trader stakes in equity, they can trade \$5.

But using leverage can be tricky. By increasing potential returns one should be ready to accept a potential similar increase in losses. Currently ΣNDOTECH strategies rely on long trends and therefore accept risk of up to 30% capital loses. With such risks, one cannot expect to increase profits more than twice without being ready to potentially lose capital.

Therefore, we first had to rework our strategies to reduce risk to 20-25%, and second to use leverage in a brand new smart way by increasing and decreasing it based on market and strategy performance.

Compound and Reinvestment: Another investment tool we use in EndoTech to increase returns by keeping probability and risk intact. Simply by keeping your investment connected to our Hyper strategy for 1-3 years can generate an expected x10-x100 compound effect of total profits!

Probability is: At Endotech we make sure to develop our strategies to highest standard of Quant industry and to provide investors with probability close to 80% to succeed with our automated execution of strategies. We aim to continue with high and consistent probabilities of such success, and actively work to reinvest in our company to ensure that is the case.

1–3 Years of reinvestment, compound methodology

Risk of Capital Loss up to 100%

Probability ~ 80%

1000%

With Compound

300%

With Leverage

100%

Alpha strategy
