LOQ is defined as below .1% by weight and 1 mg/g.

Total THC and Total CBD are calculated values using the Oregon reporting requirement (OAR 333-064-0100). In this calculation, the acid form of the cannabinoid is multiplied by 0.877 to account for decarboxylation. The decarboxylate acid is added to the cannabinoid value for the total cannabinoid. Total CBG is calculated using the same formula.

Total THC and CBD values have been adjusted for moisture content of flower/bio-mass.
