

Hello!

I am so thrilled that you have invited me to guide you through Lutron's RadioRA3 certification course. This course will be conducted in 3 phases.

Phase 1: Presentation, Discussion and Introduction to the new Designer+ Software

Phase 2: RadioRA3 Examination

Phase 3: Hands on System Activation Training

During our half day of training, we will be tackling Phase 1 & 2. I will be available to schedule a RA3 Advanced Training to walk through the System Activation and dig deeper into Designing Systems. It would be ideal to schedule this session after you have had an opportunity to sell your first RA3 project. That way, we can utilize this first project to address specific design & implementation questions and help ensure that your job is a success.

Expectations

After taking the RA3 Instructor Led Training, you will have a basic understanding of the system with the ability to Download the Designer Software. This base level will provide you with the confidence to find and sell new jobs. You will NOT be an expert after this course, but know that MRL Company will offer continued support through additional trainings, product updates and project support.

Complete ASAP

1. Please read through the attached Pre-Course Tasks. It will walk you through how to set up your myLutron account, a PRO account, access the training & download the software required for the course. It also lists a few online courses that we would like to you review before we meet.
2. Complete the pre-qualification course through Lutron LCI listed in the Pre-Course Task document.

Must Bring

1. Laptop with Designer Software loaded and ready to go (you will not be able to log in until class begins)
2. Notepad or tablet for note taking

Thank You & I look forward to working with you!

Yvette May

A promotional banner for Lutron RadioRA3. At the top, the Lutron logo (a sunburst icon) is followed by the text "LUTRON RadioRA3" in a large, white, sans-serif font. Below this, three bullet points are listed: "Easier to Install", "Easier to Program & Customize", and "Streamlined Integration". The background of the banner shows a modern interior with a white ceiling. In the foreground, four white Lutron RadioRA3 components are displayed: a circular ceiling-mounted sensor, a single rocker switch, a multi-switch plate, and a smartphone displaying the Lutron app interface.
