ThermaZone Device

ThermaZone® is an iceless, thermal therapy, pain management device that leverages thermoelectric technology, circulating two ounces of distilled water through a closed-loop system (16.9 oz. of distilled water is included with every device). ThermaZone Motion Advantage™ pads use a network of microchannels to deliver and maintain precise temperatures evenly across the therapy area. Safe, convenient, and easy to operate, ThermaZone thermal therapy offers 20 selectable, consistent comfort levels ranging from 34°F to 125°F, plus five preset timer modes - three of which include automatic shutoff.

No Ice Needed

2 oz. of Distilled Water
