This 34th volume of *The Journal of African Studies and Research Forum* entails two issues. The first issue (No. 3) comprises non-Science, Technology, Engineering, and Mathematics (STEM) articles. Thus, the analyses are from fields that focus on the structures, methodologies, and outcomes within humanities, social sciences, and arts. These analyses allow researchers to offer a deeper understanding of the impact and value of disciplines beyond STEM. The second issue (No. 4) contains STEM articles. Accordingly, the analyses here are based on a wide range of analytical methods and thinking processes that can be broadly categorized into data analysis techniques, specific laboratory and simulation methods, and core cognitive skills.
