

I WOULD LIKE TO ADDRESS TWO QUOTES  
FROM U.S. ENERGY SECRETARY  
JENNIFER GRANHOLM

SHE CALLS OUR RENEWABLE SECTOR  
A 'HYDROGEN CLEAN ECONOMY'  
WHERE SHE STATES ...

"When you're creating an entirely new sector, which is really what this  
hydrogen clean economy will be,  
you have to do everything everywhere all at once,"

*and*

Clean hydrogen is the "Swiss army knife of zero-carbon technologies,"  
"If we get it right, it can do just about everything."

*as she stated in CNN Politics on 6.5.23*

*and while she was in Las Vegas, NV on 2.6.24 she mentioned*

**Energy Secretary Jennifer Granholm touts need  
for Nevada Renewable Energy Production**

*she goes on to state*

"This is an enormous opportunity,"

There is a great deal of difference between creating a single  
piece of hardware or software as it relates to hydrogen  
versus creating an entire

'hydrogen clean economy'

THAT WILL TOUCH AND AFFECT  
EVERYONE!
