

TREATMENT TIME

With diode laser, a larger area can be treated at one time as compared to IPL treatment. Laser treatment are typically four times faster than traditional IPL technology and much less painful IPL, waxing or electrolysis.

MAXIMAL COMFORT

Diode laser hair removal is a low risk procedure involving minimal discomfort. It offers integrated skin cooling during treatments which greatly reduces any “pain” felt by the customer.

OPTIMAL RESULTS

Compared to IPL and other treatments, laser has better penetration and effective damage to the hair follicles. With just a few treatments customers see results that will last for years.

NO DOWNTIME

Unlike IPL, diode laser’s wavelength is much more precise, which makes the epidermis less affected. Skin irritation like redness and swelling rarely happen after laser hair removal treatment.
