The Color Decision

- Hi, this is Peter from Guitars and Bass Stuff. This is a short presentation on how to order and install our guitar 3D printed products.
- Right now, we have over 50 stock designs and 8 stock colors, literally 500+ ways to select your custom Pickguard, Headstock or Control Cover. We can also use your actual guitar for the design.
- Base- choose this for a 1 color product with no design.
- Colors are Gold, Silver, Black, White, Green, Red, Blue, Orange

Installation: Pickguards and Control Covers are pre-drilled to match the OEM hole locations. Headstock Covers are thinner than the pickguards so that the original sound is preserved.

The Headstock Covers use the existing tuner rings to hold the covers in place.

Our Pledge

- Your Total Satisfaction, is our pledge. Period.
- Every project proof is emailed to you for approval before printing. Once approved, your new gear will be mailed via USPS in a padded envelope.
- In some instances, the product may need a small amount of double-sided mounting tape which we will supply. The Tuner Rings may need a small amount of Elmers type glue to secure the rings in place.
- The Control Cover is held in place by using the existing potentiometer hex nuts.
- If needed, we may request a customer supplied paper template, pickguard or pictures of the guitar.
- The finished pieces can be clear coated by us or left as a matte finish.
- I have 4 bass guitars, a Yamaha, a Stingray and two Jazz, Soapbar and Precision DIY kits. This has allowed me to have every pickup. Most of the pictures both here and on the website have been of my Music Man Stingray.
- 100% US made. A great and inexpensive upgrade to your guitar that is easily upgraded.
- Thank you for your business and feel free to reach-out to us with new design ideas and to provide feedback.
