As an EU member State, Italy is bound by the EU AI Act.³³¹² The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

Italy's AI law is the first in Europe to implement the EU AI Act. The law formalizes enforcement by designating the National Cybersecurity Agency (ACN) and the Agency for Digital Italy (AGID) as the competent national authorities for the monitoring and inspection of the AI systems and their compliance with the new law.³³¹³ The AGID manages notifications and promotes safe use cases for citizens and businesses within a framework of stable interinstitutional coordination.

Public Participation

The Proposals for a National Strategy for Artificial Intelligence drafted by the MISE AI Expert Group in July 2020 followed a 2019 consultation on an initial set of proposals.³³¹⁴ The Expert Group comprised ten representatives of enterprises operating in the field of AI, ten representatives of research centers / think tanks or academia, and ten representatives of the labor market, professions, consumers, and civil society.³³¹⁵

A 2020 survey of Italian consumers by BEUC, the European Consumer organization, found substantial public concern about the deployment of AI.³³¹⁶ More than half of the respondents disagreed or strongly disagreed that current regulation is adequate to efficiently regulate AI. Over 70% of respondents in Italy “strongly

agreed that users should be able to say ‘no’ to automated decision-making.” More than half “(strongly) agreed that companies use AI to manipulate consumer decisions.”

The Italian Strategy for Artificial Intelligence for 2024–2026 stems from an Artificial Intelligence for Italy event held in Rome on March 12, 2024, opened to representatives of public administrations, companies in the ICT and innovation sector, as well as to academia and research.³³¹⁷ The Agency for Digital Italy (AGID) initiated a public consultation on draft guidelines for adopting AI in public administration. The consultation process represents a significant opportunity for stakeholder engagement in shaping Italy's approach to responsible AI implementation in government services.³³¹⁸

As part of the Sixth National Action Plan for Open Government (2024–2026),³³¹⁹ the Italian government opened a public consultation to involve civil society organizations, public administrations and citizens in the definition of the Recommendations for Open Government on the use of AI, to improve equity and accessibility. The consultation is taking place through workshops and meetings as well as on the platform ParteciPa. The year-long process aims “to promote public discussion and greater awareness on the potential biases and discriminations of AI.”³³²⁰

Data Protection

Since Italy is an EU Member State, the General Data Protection Regulation (GDPR)³³²¹ is directly applicable in Italy and to Italians. The aim of the GDPR is to

Artificial Intelligence and Democratic Values 2026
Center for AI and Digital Policy

“strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market.”³³²²

Italy’s adaptation to the GDPR is implemented through the Italian Data Protection Code, updated in 2021.³³²³ The decree amends the Personal Data Protection Code to align more closely with GDPR principles, specifically authorizing public administrations and publicly controlled companies to process personal data for tasks in the public interest or within public powers. The updates to the Personal Data Protection Code also named the Italian Data Protection Authority (DPA), or *Garante per la Protezione dei Dati Personali*, as the supervisory authority for the GDPR. The DPA is an independent administrative authority with direct sanctioning powers as well as extended enforcement capabilities.³³²⁴

Italy transposed the EU Data Protection Law Enforcement Directive (LED)³³²⁵ in 2018,³³²⁶ thereby protecting “citizens’ fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes.”³³²⁷ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.³³²⁸

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Italy is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.³³²⁹

The DPA issued guidance on preventing unauthorized web scraping, emphasizing the privacy risks and compliance with GDPR. The Guidance issued in 2024 advises organizations to implement measures like restricted access and technological protections to safeguard personal data.³³³⁰

Italy has actively participated in the Global Privacy Assembly (GPA) negotiations, adopting the following resolutions: the Declaration on Ethics and Data Protection in Artificial Intelligence (2018),³³³¹ the Resolution on AI Accountability (2020),³³³² the Resolution on Generative AI (2023), and the Resolution on Artificial Intelligence and Employment (2023).³³³³ However, Italy did not endorse the Resolution on Facial Recognition Technology (2020).³³³⁴ This reflects ongoing efforts to ensure that ethical guidelines and accountability mechanisms are established across various AI domains.

Algorithmic Transparency

Italy is subject to the GDPR and Convention 108+. Italians have a general right to obtain access to information about automated decision-making and to the

factors and logic of an algorithm.³³³⁵ The Council of Europe Committee of Ministers stresses that these include transparency levels proportionate to the risk of the systems or decisions and meaningful contestation.³³³⁶

As for the public sector, in its 2018 White Paper on Artificial Intelligence at the service of citizens,³³³⁷ the Agency for Digital Italy (AGID) stressed the necessity for the functioning of AI systems to abide by criteria of transparency and openness. “Transparency is a fundamental prerequisite to avoid discrimination and solve the problem of informational asymmetry, thus guaranteeing for citizens the right to understand public decisions.”³³³⁸

Italy’s AI Law also establishes specific protection for minors through a dual-tier consent framework. Children under fourteen require parental consent for AI-related data processing, whilst those aged fourteen to eighteen may provide their own consent, provided information is accessible and comprehensible. Italy now combines EU-level contestation/explanation rights with domestic statutory transparency/traceability duties.³³³⁹

In May 2021, the Italian Court of Cassation released its judgment in *Garante per la Protezione dei Dati Personali v. Associazione Mevaluate Onlu*,³³⁴⁰ concerning the Italian DPA’s 2016 order to Mevaluate Italia s.r.l. to suspend the implementation of its online Artificial Intelligence system capable of analyzing documents voluntarily uploaded by users to provide reputational ratings. The Court of Cassation quashed the previous ruling of the Court of Rome, which had ruled in favor of the lawfulness of the system as data subjects had provided their consent. The Court of

³³⁴⁰ Data Guidance, *Italy: Court of Cassation Rules that Algorithm Must Be Transparent for Consent to be Valid* (May 25, 2021), <https://www.dataguidance.com/news/italy-court-cassation-rules-algorithm-must-be>; for the judgment (in Italian), see <http://www.italgiure.giustizia.it/xway/application/nif/clean/hc.dll?verbo=attach&db=snciv&id=/20210525/snciv@s10@a2021@n14381@tO.clean.pdf>

Cassation found that the lack of transparency regarding Mevaluate's algorithms invalidates such consent, thus violating Article 8 of the EU Charter of Fundamental Rights, the GDPR and a series of articles of Legislative Decree No. 196 of 2003. It was further found that consent can only be valid if the data subject is appropriately informed about the purposes of processing and freely and specifically expresses their consent to the same. Consent cannot be considered as informed if the logic involved in the algorithm remains unknown to the data subjects, as it was the case in Mevaluate reputational ranking system.

AI Oversight

Italian courts and DPA have enforced data protection and fundamental rights related to AI tools to date. Italy's AI Law approved in September 2025 designated the National Cybersecurity Agency (ACN) and the Agency for Digital Italy (AGID) as the competent national authorities.³³⁴¹

In January 2021, an Italian court determined that an algorithm that evaluates employee performance violates labor law.³³⁴² The case concerned the ranking algorithm of the food delivery service Deliveroo. The judge ruled that the algorithm unfairly assessed absent workers, noting that it failed to take account of permissible reasons for absence. The court ordered the company to pay a fine and legal costs and to post the judgment.³³⁴³ The DPA issued a 2.6 million Euros penalty to the on-demand delivery company Foodinho³³⁴⁴ because of irregularities concerning the algorithm used by the company to rate drivers' performance. The DPA found that the controller had not adequately informed employees about how the system worked and did not guarantee the accuracy and correctness of the results of the algorithms used to evaluate drivers.³³⁴⁵ One of the issues of concern was the risk of discrimination

arising from the algorithmic system, aligning with the decision of the Court of Cassation case discussed above.

The DPA also banned remote surveillance of customer care employees for lack of respect of essential safeguards enshrined in the GDPR.³³⁴⁶ The case originated from a complaint by an employee of a public transports operator concerning the processing of personal data related to the company's call center operators by way of the inbound calls management system. Investigations showed employees had been inadequately informed about the processing.³³⁴⁷ The DPA fined the company EUR 30,000, noting the company's cooperation in the fact-finding activities and discontinuing the processing following the on-site inspection.

Since 2023, the Italian DPA has imposed limitations and bans on AI companies because of violations to transparency and children protections of personal data. The DPA imposed a provisional limitation on the processing of Italian users' data by the US-based company that developed and operates the Replika app because of "factual risks to children" such as replies that are inappropriate to their age and the lack of an age verification mechanism."³³⁴⁸ A temporary ban on OpenAI's ChatGPT followed due to similar concerns over privacy violations and age-verification processes. The DPA also cited a data breach and required OpenAI to provide additional information, with potential fines looming. Access to OpenAI's platforms, including ChatGPT, was restored in April 2023, following guarantees of more transparency and rights for European users and non-users.³³⁴⁹

In March 2024, the Italian DPA initiated an investigation into OpenAI's model Sora due to concerns over the processing of personal data in the EU, particularly in Italy. The inquiry demands that OpenAI provide detailed information within 20 days about Sora's training process, the data it processes and collects, the handling of sensitive personal data, and the sources of this data. Additionally, Italy's DPA seeks to understand if and how Sora will be offered in the EU, including the

methods for informing users and non-users about data processing procedures and the legal bases for the processing.³³⁵⁰

The DPA launched an inquiry into the Chinese AI application DeepSeek, requesting details on data collection, processing, storage, and legal compliance. DeepSeek was given 20 days to respond. Following the investigation, DeepSeek was blocked from Apple and Google Play stores in Italy due to concerns over improper data handling and privacy violations.³³⁵¹

Facial Recognition

According to Privacy International, the municipality of Como, Italy, purchased a facial recognition system “with little transparency and despite the lack of a clear legal framework.”³³⁵² Privacy International reported that Como “embraced a narrative of technological innovation pushed by Huawei” within the broader concept of smart city and innovation tech, but after the intervention of the Italian Data Protection Authority (DPA), the municipality was obliged to suspend the system. The DPA determined that there was no legal basis to collect facial images. Subsequent reporting by Wired indicated that the municipality had changed vendors and that the system installed most recently failed to work as proposed.³³⁵³

The Italian National Police intended to use a facial recognition system, called SARI Real-Time which would allow for real-time identification of migrants on boats upon their landing on Italian ports. The SARI Real-Time system, originally purchased to be employed during protests and public events, was discontinued following a decision by the DPA, who ruled in April 2021 that the system could open the doors to unjustified mass surveillance and that there was no legal basis to deploy

it.³³⁵⁴ The DPA “in line with the stance taken by the Council of Europe” considered “that the use of facial recognition for the purposes of preventing and suppressing crime is highly problematic.”³³⁵⁵

In December 2021, the Italian parliament introduced a moratorium on video surveillance systems that use facial recognition technologies. This law introduces a temporary ban for private entities as well as public authorities to use these systems in public places or places accessible to the public.³³⁵⁶ The moratorium, originally set to last until December 31, 2023, has been updated to reflect evolving legislative developments surrounding facial recognition technologies.

According to EDRI, this is an important development, yet the moratorium contains major exceptions: “it only covers video surveillance systems with facial recognition, it doesn’t take into account systems such as those developed by Clearview AI.” The “moratorium allows the police to use such systems subject to a case-by-case approval by the DPA and it exempts judicial authorities and public prosecutors from any control.”³³⁵⁷ EDRI also remarked that “[u]ntil now, the Italian DPA had stopped the use of real-time facial recognition systems and remote biometric identification systems by the police and municipalities because Italy lacked a legal basis for the processing of biometric data by law enforcement authorities. Now this moratorium provides a legal basis and risks normalising the use of these technologies during police activities in the field of public security and for investigation and crime prosecution activities.”³³⁵⁸

In March 2022, the DPA issued a 20 million euro fine on Clearview AI,³³⁵⁹ a private firm that offers an identity matching service for law enforcement, reportedly

powered by a database of around 10 billion faces made up by selfies scraped off the internet. The DPA fined Clearview AI “after finding it applied what amounted to biometric monitoring techniques also to individuals in the Italian territory.”³³⁶⁰ Italy issued the fine citing unlawful processing “without an appropriate legal basis” and “infringements of several fundamental principles including transparency—as it failed to adequately inform users—, purpose limitation—as it processed users’ data for purposes other than those for which they had been made available online—, and storage limitation—as it did not set out any data storage period. Thus, Clearview AI is violating data subjects’ freedoms including the protection of privacy and non-discrimination.”³³⁶¹ The DPA also “ordered the company to erase the data relating to individuals in Italy; it banned any further collection and processing of the data through the company’s facial recognition system. Clearview AI was finally ordered by the Italian SA to designate a representative in the EU to be addressed in addition to or instead of the US-based controller in order to facilitate exercise of data subject rights.”³³⁶²

AlgorithmWatch reported in 2020 that Italy was exploring the use of facial recognition in football stadiums.³³⁶³ In December 2022, Serie A CEO Luigi De Siervo announced that Italian league officials are working on a system of facial recognition technology to be used inside the stadiums to identify fans responsible for racist chants. According to De Siervo: “We’re still awaiting authorisation from privacy authorities but we should be able to get that with the help of the government.”³³⁶⁴

In March 2024, the DPA issued a warning to Worldcoin, a private firm with a project based on iris scanning to verify the identity of users and linking this treatment to the market of financial instruments, in this specific case the cryptocurrency called “WLD.” The DPA considers that the processing of biometric data based on the consent of the project members doesn’t provide for sufficient information about the risks associated with the processing of such high-risk data. In

addition, the promise to receive free WLD tokens from Worldcoin once the user gives its consent to the processing of biometric data via iris scanning negatively affects the ability to give free consent. Therefore, the DPA deems that it cannot be considered a valid legal basis to collect biometric data according to the requirements under the GDPR.³³⁶⁵

In June 2024, the DPA issued a 120 thousand euro fine on a dealership for violating the personal data of employees through the use of facial recognition systems to control work presence, following up on a complaint issued in 2021.³³⁶⁶ With reference to the processing of biometric data, the DPA reiterated that the use of such data is not allowed because there is no national legal provision that currently provides for the use of biometric data for the recording of attendance. In addition, in an employment relationship, consent cannot be considered as a valid legal basis due to the unbalanced nature of this relationship. Finally, the DPA pointed out that this processing violated also the principle of data minimization, necessity, and proportionality.

AI Literacy

The Italian Government has demonstrated an intention to strengthen the provision of AI competencies at all education levels. At the primary and secondary education level, the government launched the National Plan for the Digital School (PNSD) to update school curricula and promote new skills in digital education and AI-related courses.³³⁶⁷ At higher education levels, the government is encouraging the integration of courses with AI-related themes in bachelors, masters and doctoral programs. The planned budget also aims to support projects among PhDs, researchers, and professors. Literacy campaigns will also be fostered via broadcasting and multimedia. Special attention will be devoted to informing about fake news and issues of cyber security.

The Italian Strategy for Artificial Intelligence for 2024–2026 aims to promote high-quality AI education at all levels. In addition to goals to encourage the widespread development of AI courses at the university level and to train highly skilled researchers at the PhD level, the Strategy aims to develop general AI and digital literacy skills for all Italian citizens by introducing AI at all school levels. The

Strategy also includes specific upskilling and reskilling programs for businesses and the public administration.³³⁶⁸

The Ministry of Education and Merit (*Ministero dell'Istruzione e del Merito*, MIM) provided Italian schools with guidelines for the introduction of artificial intelligence (AI) in schools as part of an August 2025 decree on an AI digital service on the national education platform.³³⁶⁹

EdTech and Children Tracking

The Council of Europe Consultative Committee of the Convention 108 issued Guidelines on Children's Data Protection in an Education Setting in November 2020, also applicable to remote e-learning solutions and services.³³⁷⁰ In May 2022, the WeSchool app, with an estimated 1,000,000 users in Italy, was analyzed as part of a global investigative report conducted by Human Rights Watch on the education technology (EdTech) endorsed by 49 governments, including Italy, for children's education during the pandemic. Human Rights Watch found that Italy's endorsement of this online learning platform put at risk or directly violated children's rights.

EdTech products, such as WeSchool, sent children's data to AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online. According to Human Rights Watch, in line with child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising.³³⁷¹

In line with the Italian national AI strategy objective to promote digital skills and literacy, the education minister announced that AI-assisted software will be trialed in 15 classrooms across four regions, serving as virtual assistants to enhance the learning experience for students and support teachers in customizing education to

meet individual needs. This pilot program aims to improve digital literacy and promote a more informed and responsible citizenry.³³⁷²

Use of AI in Public Administration

In 2018, the Agency for Digital Italy issued a White Paper on Artificial Intelligence at the service of citizens to encourage innovation in the public sector.³³⁷³ The White Paper defines a plan to facilitate the adoption of AI technologies in the Italian Public Administration and improve the quality of public services. The White Paper includes a set of recommendations defining the challenges for developing and implementing AI technologies in the public sector. The White paper defines nine challenges across ethics, technology, skills, data, law, implementation, inequalities, metrics, and transparency.

The Agency for Digital Italy (AGID)'s Three-Year Plan for Information Technology in Public Administration 2024–2026 strengthened the guiding principles for digital transformation and offered detailed guidelines for AI adoption.³³⁷⁴ Developed in collaboration with universities, private sector, and public associations, the plan emphasizes interoperability, accessibility, and the use of open-source software to prevent technological lock-in and reduce costs. The plan sets a target for at least 125 public administrations to adopt open-source software by 2025, promoting efficiency and fostering a community for technological solution-sharing.³³⁷⁵

Moreover, the Italian Presidency's Department for Digital Transformation, under the G7's Digital & Technology Working Group, coordinated the release of the G7 Toolkit for Artificial Intelligence in the Public Sector which was developed in partnership with the OECD and UNESCO. This toolkit aims to align AI policies across G7 member countries, promoting ethical standards of transparency, accountability, and social impact in public sector AI applications. It provides practical insights and shares best practices for the use of AI by public administrations,

while integrating ethical considerations and showcasing G7 trends as a reference for the responsible and secure application of AI in the development of public policies.³³⁷⁶

Environmental Impact of AI

Italy's National AI Strategy for 2024–2026 presents sustainability as one of the goals in the general vision as AI can be “an ally in enhancing the quality of life for individuals and the sustainable management of resources, optimizing the use of energy and raw materials”.³³⁷⁷ As part of the strategic macro-area on research, Italy promotes applied AI research “focusing on contexts of greatest economic and social value for Italy and the greatest impact on citizen welfare”.³³⁷⁸ However, the Strategy does not provide for actionable measures dedicated to sustainability.

Nonetheless, Italy has extended its commitment to sustainable AI beyond national borders through a collaborative initiative with the United Nations Development Programme (UNDP).³³⁷⁹ Under the leadership of Prime Minister Giorgia Meloni, Italy announced the establishment of an AI Hub for Sustainable Development set to launch in 2025. This hub, part of the broader Mattei Plan, is designed to foster AI-driven growth and innovation in nine African nations by promoting AI applications in critical sectors such as agriculture, health, energy, and education.³³⁸⁰ The project aims to bridge the digital divide, emphasizing inclusive digital ecosystems and sustainable local innovations in line with UNDP's goals for developing countries.

This initiative also highlights Italy's dedication to ethical and responsible AI deployment that supports sustainable economic growth and social equity, particularly in underrepresented regions. Furthermore, the AI Hub rests on three key pillars: data pipelines, green computing infrastructure, and talent development, to ensure that AI benefits are equitably distributed and align with the broader objectives of the SDGs.

Center for AI and Digital Policy

This international partnership reflects Italy's ambition to lead globally in responsible AI practices.³³⁸¹

Lethal Autonomous Weapons

Italy has been an active participant in the Convention on Certain Conventional Weapons (CCW) meetings on killer robots since 2013. Italy supports a two-track approach in favor of a legally binding solution with a combination of prohibitions and regulations, which would maintain an element of human control while not interfering with the advancement of technology.³³⁸² Italy is contributing to the Group of Governmental Experts on Emerging Technologies in the Area on Lethal Autonomous Weapons (GGE LASWS) mandate to formulate and adopt consensus elements for a future instrument on LAWS by the end of 2026.³³⁸³

At the UN General Assembly in 2019, Italy emphasized that “any existing or future weapon system must be subject to human control, particularly in relation to the ultimate decision to use lethal force.”³³⁸⁴ Italy was one of 70 states that endorsed a joint statement on autonomous weapons systems at the UN General Assembly declaring their commitment to “upholding and strengthening compliance with International Law, in particular International Humanitarian Law (IHL), including through maintaining human responsibility and accountability in the use of force.”³³⁸⁵

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Italy also voted in favor³³⁸⁶ of the resolution³³⁸⁷ on autonomous weapons systems at the 78th UN General Assembly First Committee in 2023 and contributed to the subsequent Secretary-General report.³³⁸⁸

Italy has also participated in international summits on the Responsible application of Artificial Intelligence in the Military domain (REAIM), such as the 2023 summit hosted by the Netherlands.³³⁸⁹ Italy also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued that November.³³⁹⁰ In 2024, Italy endorsed a Blueprint for Action to govern responsible use of artificial intelligence (AI) in the military field following the REAIM summit in Korea.³³⁹¹

Human Rights

Italy is a signatory to the major international human rights instruments and generally ranks highly for the defense of human rights.³³⁹² Freedom House rates Italy as “Free” (89/100) for political rights and civil liberties in the 2025 Freedom in the World report.³³⁹³ Freedom House notes that “Civil liberties are generally respected, but concerns about the rights of migrants and LGBT+ people persist. Regional inequalities are long-standing and substantial. Endemic problems of corruption and organized crime pose an enduring challenge to the rule of law and economic growth.”

The Rome Call for Ethics in AI

In February 2020, the Italian Government, together with the Pontificia Accademia per la Vita, Microsoft, IBM and FAO signed the Rome Call for Ethics in AI. This initiative is aimed at increasing awareness of the role of ethics in AI and proposes a more human-centric approach to AI.³³⁹⁴ The Call sets out a program of Algorithm Ethics according to the “fundamental principles of good innovation,” including Transparency, Responsibility, Impartiality, Reliability, Security, and Privacy. The Call centers on three areas:

- **Ethics:** All human beings are born free and equal in dignity and rights.
- **Education:** Transforming the world through the innovation of AI means undertaking to build a future for and with younger generations.
- **Rights:** The development of AI in the service of humankind and the planet must be reflected in regulations and principles that protect people – particularly the weak and the underprivileged – and natural environments.

The RenAIssance Foundation was set up to guard and promote the Rome Call for AI Ethics in April 2021.³³⁹⁵ Representatives of the Chief Rabbinate of Israel’s Commission for Interreligious Relations, the Pontifical Academy for Life, and Abu Dhabi Forum for Peace, commended a joint declaration on AI Ethics: An Abrahamic Commitment to the Rome Call in 2023.³³⁹⁶ The joint declaration is meant as a companion to the Rome Call “to call upon the world to think and act in the name of brotherhood and peace—even in the field of technology.”

These efforts to promote mutual understanding continued with the multi-faith AI Ethics for Peace event in Hiroshima Japan in 2024. More than 150 participants, including leaders representing eleven world religions, joined together, leading to 16 new signatories to the Rome Call for AI Ethics.³³⁹⁷

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In April 2024, Cisco, the multinational digital communications technology company,³³⁹⁸ and the Archbishop of Canterbury Justin Welby³³⁹⁹ endorsed the Rome call for ethics.

AI Safety Summit

In November 2023, Italy participated in the first AI Safety Summit and endorsed the Bletchley Declaration.³⁴⁰⁰ Italy thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development, and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

The AI Safety Summit, co-hosted by the United Kingdom and South Korea in May 2024, brought together leaders from 11 countries, including Italy, to discuss and strengthen the global commitment to AI safety, innovation, and inclusivity. During this event, the participating countries issued the Seoul Declaration for Safe, Innovative, and Inclusive AI, emphasizing the importance of international cooperation in AI safety, interoperability between governance frameworks, and support for AI safety research. This declaration expanded upon the goals set in the 2023 Bletchley Declaration, advocating for inclusive AI practices to bridge digital divides and safeguard democratic values, while supporting the UN Sustainable Development Goals.³⁴⁰¹

Italy’s active involvement in the summit reflects its ongoing commitment to ethical and safe AI governance standards within a multilateral framework. Building on the efforts at Bletchley Park and Seoul, the AI Action Summit took place in France

in February 2025.³⁴⁰² Italy signed the Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet, calling for “global reflection integrating inter alia questions of safety, sustainable development, innovation, respect of international laws including humanitarian law and human rights law and the protection of human rights, gender equality, linguistic diversity, protection of consumers and of intellectual property rights.”³⁴⁰³

OECD / G20 AI Principles

Italy endorsed the OECD and the G20 AI Principles.³⁴⁰⁴

In 2021, Italy hosted the G20 summit. Recognizing the “benefits stemming from the responsible use and development of trustworthy human-centered Artificial Intelligence (AI),” the G20 Leaders declared in Rome that they would encourage competition and innovation, “as well as diversity and inclusion.”³⁴⁰⁵ Artificial intelligence figured prominently in the G20 Declaration of the Digital Ministers who met in Trieste, Italy. They stated, “We reaffirm our willingness to implement trustworthy Artificial Intelligence (AI) and to commit to a human-centered approach, as decided in 2019 under the Japanese G20 Presidency, guided by the G20 AI Principles, drawn from the OECD Recommendations on AI.”³⁴⁰⁶

Italy is also a founding member of the Global Partnership for AI, a multi-stakeholder initiative which aims to foster international cooperation on AI research and applied activities and is “built around a shared commitment to the OECD Recommendation on Artificial Intelligence.”³⁴⁰⁷

Under the G7 presidency in 2024, Italy worked with the Brazilian G20 Presidency to advance dialogues and actions with AI identified as a common priority

for sustainable development. The G7 Italian Presidency underscored its global leadership in AI and technology policy, focusing on fostering international cooperation and ensuring AI development adheres to democratic values. Under the scope Digital Development-Growing Together, the Italian G7 Presidency and the G7 countries acknowledged the need to work in partnership with developing countries to strengthen local AI digital ecosystems.³⁴⁰⁸ The Italian Presidency's priorities were also to focus on the impact of AI on jobs and inequality.³⁴⁰⁹ The Italian Presidency's Department for Digital Transformation, under the G7's Digital & Technology Working Group, coordinated the release of the G7 Toolkit for Artificial Intelligence in the Public Sector, developed in partnership with the OECD and UNESCO.³⁴¹⁰ The G7 Digital & Tech Working Group also finalized the Reporting Framework for Advanced AI Systems, an essential step toward the promotion, development, and ethical application of AI.³⁴¹¹

Council of Europe AI Treaty

Italy contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law.³⁴¹² On September 5, 2024, the European Commission signed the Council of Europe Framework Convention on behalf of the

European Union and its State Members, including Italy.³⁴¹³ Italy has not yet ratified the Convention or taken action independently.³⁴¹⁴

UNESCO Recommendation on AI Ethics

Italy is a UNESCO member since 1948. Italy endorsed the 2021 UNESCO Recommendation on AI Ethics,³⁴¹⁵ the first ever global agreement on the ethics of AI. Italy's national AI strategy, international partnerships, and plans align to the UNESCO Recommendation. The Italian National Commission for UNESCO also oversaw the Italian translation of the document "The UNESCO Recommendation on The Ethics of AI: Shaping the Future of Our Societies," published in May 2023 by the German, Dutch and Slovenian National Commissions, with the support of the International Research Centre of Artificial Intelligence under the auspices of UNESCO.³⁴¹⁶

Italy has neither competed nor announced preparation for the UNESCO Readiness Assessment Methodology (RAM), which forms one of the core pillars of the implementation of UNESCO Recommendation on the Ethics of Artificial Intelligence.³⁴¹⁷

Evaluation

Italy has endorsed the OECD/G20 AI Principles and is a founding member of the Global Partnership on AI. The Rome Call for AI Ethics, undertaken by Pope Francis with the support of the Italian government and private companies, sets out a powerful vision for AI that is human-centric and that diminishes social inequality. Italy has underscored these key priorities in the framework of its Presidency of the G7. Italy has also signed the UNESCO Recommendation on the Ethics of AI.

Italy is subject to the GDPR and has ratified the modernized Council of Europe Convention 108, providing a high level of protection for personal data and the specific right of algorithmic transparency. The Italian Data Protection Authority has played a leading role in fundamental rights protection against possible encroachments stemming from the design, deployment, or use of AI systems, most recently through investigations concerning OpenAI and DeepSeek.

Alongside the AI Law passed in 2025, the National AI Strategy for 2024–2026 provides for policy objectives in research, public administration, enterprises, and education.³⁴¹⁸ The Strategy is in line with the UNESCO Recommendation on training and AI literacy and advances Italy toward implementation through the strategic measures on education.

Jamaica

In 2025, Jamaica publicized the National Artificial Intelligence Policy Recommendations, which provides a roadmap for the legal, ethical, and social structures necessary to guide AI development to benefit all Jamaicans. The country also completed the UNESCO Readiness Assessment Methodology (RAM) report.

National AI Strategy

The Jamaican National AI Task Force formed in 2023³⁴¹⁹ submitted a report to the Cabinet in September 2024 with research-based recommendations for a national AI policy.³⁴²⁰ The Task Force comprises members from private sector entities, civil society, academia, and other experts and aims to establish an evidence-based foundational AI framework; explore AI's role and transformation potential across key sectors such as Education, Business, and Government; addresses ethical challenges posed by AI; and develop strategies for risk mitigation, international positioning, and social impact assessment. The Task Force's public report, *National Artificial Intelligence: Policy Recommendations*³⁴²¹ outlines legal & regulatory framework proposals such as interim guidelines for ethics and data-privacy, the creation of a national AI regulatory authority, and partnerships.

Even before the Task Force report suggested tools, the Jamaican government reaffirmed its commitment to addressing the challenges posed by AI and deepfakes to the democratic process. The Minister for Skills and Digital Transformation reiterated the government's dedication to preserving democracy and transparency. She stated, "Central to the Administration is our commitment to preserving democracy and the democratic process. The government understands the critical importance of maintaining trust and transparency in our electoral system."³⁴²²

There are also several significant policy initiatives worth mentioning. Jamaica's 2009 National Development Plan, Vision 2030, which aims to advance the achievement of the UN Sustainable Development Goals, does not address digital policy directly. However, the Vision 2030 the Jamaica Secretariat acknowledges a

role for digital technologies such as AI in the future: “[t]he advancement of technology enablement geared to support adaptation and agility and access to public goods and services for sustainable and inclusive growth. This includes digitalization and equity in access to technology products and services. It also includes the infusion of cultural values and norms that support the application of technology and innovation towards improved productivity, competitiveness, and growth.”³⁴²³

Jamaica’s Broadcasting Commission (BCJ) has been a leader in fostering a human-centered approach to AI in Jamaica and Small Island Developing States (SIDS). The BCJ is an “independent statutory agency which falls within the ambit of the Minister with responsibility for Information.” The BCJ mandate is to “provide advice to policy makers in the formulation of policies for the [media] industry” and “conduct research on all areas relating to the electronic media in Jamaica.”³⁴²⁴

At the 2019 Regional Forum on Artificial Intelligence in Latin America and the Caribbean, Cordel Green, the Executive Director of the Broadcasting Commission, stated, “As we seek to understand the new environment and the broad impacts of AI on society, UNESCO’S ROAM principles (Rights, Openness, Accessibility to all, Multi stakeholder participation) are critical. We should resist technological determinism. AI must be designed to promote human well-being, enhance human performance and mitigate harm, [...] we must avoid the worst outcomes of the first industrial revolution which left millions of people behind. We can make AI the rising tide which lifts all ships.” He also mentioned that “the role of the state is to ensure the regulation, support and planning of the sector by developing policies that address the needs of all citizens and do not undermine fundamental rights.”³⁴²⁵

It is to address these issues, and because “Small Island Developing States must protect their own interests,” that “the BCJ has spearheaded the Caribbean AI Initiative, which is a collaborative project with the UNESCO Cluster Office for the

Caribbean,³⁴²⁶ supported by UNESCO’s Information For All Programme (IFAP).³⁴²⁷ The Initiative “aims to develop a sub-regional strategy on the ethical, inclusive and humane use of AI in the Caribbean Small Island Developing States.”³⁴²⁸ The first Caribbean AI Policy Roadmap was released in June 2021³⁴²⁹ following a period of stakeholder consultation.³⁴³⁰ UNESCO updated the Caribbean AI Policy Roadmap in 2024 “to reflect the tectonic shift in the global technology landscape.”³⁴³¹ The updated Roadmap³⁴³² consolidates the original six principles—Resiliency, Governance, Transformation, Upskilling, Preservation and Sustainability³⁴³³—into four pillars: 1) the preservation of cultural identity and creativity, 2) governance and transformation, 3) education and upskilling and 4) resilience and sustainability.³⁴³⁴ The update explicitly aligns with the UNESCO Recommendation on AI Ethics, provides for stronger safeguards against algorithmic bias, and promotes UNESCO’s readiness assessment methodology (RAM), sector-specific action plans, and monitoring mechanisms.

Public Participation

The Caribbean AI Policy Roadmap was the object of a series of stakeholder consultations through the organization of forums and a poll. On February 18–19, 2021, a two-day Artificial Intelligence Forum: Opportunities to Accelerate Human Progress for Sustainable Development in Caribbean Small Islands Developing States³⁴³⁵ collected input from diverse stakeholders regarding AI policy topics. Three additional workshops addressing the AI Policy Roadmap principles were held with

stakeholders from the private sector, academia, civil society and youth³⁴³⁶ and events outreach continued with a focus in Jamaica.³⁴³⁷ UNESCO ran Caribbean AI Policy Roadmap town hall³⁴³⁸ with a Kingston session in April 2025, bringing civil-society actors, educators and grassroots participants into regional policy conversations. These town-halls were advertised and open to participants.

The Jamaican Government is emphasizing bipartisan discussions as a form of public participation as it works to establish a broad consensus on the responsible use of AI, particularly in political contexts.³⁴³⁹

Data Protection

In recognition of the Universal Declaration of Human Rights, the Jamaican Parliament amended the Constitution in 2011 to provide for a new Charter of Fundamental Rights and Freedoms that includes right to privacy, including of communication.³⁴⁴⁰ Jamaica has prioritized developing laws similar to the European Union's General Data Protection Regulation (GDPR).³⁴⁴¹ The Government of Jamaica passed the Data Protection Act (DPA) in June 2020.³⁴⁴² The DPA applies to both public and private sector organizations. The DPA is built on principles including fairness and lawfulness, purpose limitation, data minimization, accuracy, storage limitation, respect for data subjects' rights. These rights include the right to personal data access; consent to processing; prevent processing, and rights in relation to automated decision-making.³⁴⁴³

The DPA established the Office of the Information Commissioner (OIC) presiding over a Data Protection Oversight Committee (DPOC) to enforce data privacy rights outlined in the legislation. The OIC is also responsible for advising the

Minister of Science, Energy and Technology on matters related to data protection; disseminating information to the public; and drafting relevant guidelines. The first Information Commissioner was appointed in December 2021, along with the DPOC.

The Minister of Science, Energy and Technology expressed support for the Information Commissioner's progress in May 2022, noting, "the Office has already been making strides in the data privacy and protection arena. The OIC has been leveraging various public awareness strategies to facilitate preliminary consultations regarding the issues and concerns of different interest groups."³⁴⁴⁴ The OIC has launched and fully operationalized their web portal complete with service descriptions, a resource center, and portals for data controllers and other users.³⁴⁴⁵

The Office of the Information Commissioner proclaimed rules and regulations based on the Data Protection Act for AI-driven businesses in March 2024.³⁴⁴⁶ The Data Protection Regulations 2024 outline data protection procedures, including specific identification and authorization requirements for individuals acting on behalf of data subjects, methods for submitting requests to data controllers, guidelines for data protection officers, and protocols for reporting security breaches and ensuring compliance with data protection standards. These regulations also empower individuals with rights to access, correct, and control their personal data, while requiring organizations to handle data responsibly and transparently.

Jamaica's OIC joined the Global Privacy Assembly as an accredited member in 2025.³⁴⁴⁷ The OIC has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence³⁴⁴⁸, the 2020 GPA Resolution on Accountability in the Development and Use of Artificial Intelligence,³⁴⁴⁹ the 2022 GPA Resolution

on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology³⁴⁵⁰ or the 2023 GPA Resolution on Generative AI.³⁴⁵¹

Algorithmic Transparency

The right to algorithmic transparency is provided by the DPA. One peculiarity is that access to this right is submitted to a “prescribed fee” which might have a deterrent effect even more so for underprivileged individuals.³⁴⁵²

The Data Protection Regulations 2024³⁴⁵³ emphasize the critical importance of algorithmic transparency by granting individuals the right to understand the logic behind automated decisions and to object to processing that significantly affects them. This aligns with global ethical principles by ensuring fairness, accountability, and protection against discrimination. Additionally, the regulations mandate robust safeguards against misuse of personal data, requiring data controllers to provide clear, intelligible explanations of data processing purposes and impacts.

National Identification Systems

In a 2019 landmark decision, Jamaica’s Chief Justice criticized the government’s decision to enforce compulsory registration by all citizens in a new digital ID system with criminal sanctions, call the sanctions “a remarkable choice ‘in a democracy where the exercise of executive power rests upon the consent of the governed.’”³⁴⁵⁴

Jamaica adopted the National Identification Act (NIRA) in December 2018 to establish a National Identification System (NIDS) that “facilitates the enrolment of all citizens of Jamaica and all individuals who are ordinarily resident in Jamaica”

³⁴⁵⁰ Global Privacy Assembly, *Adopted Resolution on Accountability in the Development and Use of Artificial Intelligence* (2022), <https://globalprivacyassembly.org/wp-content/uploads/2020/11/GPA-Resolution-on-Accountability-in-the-Development-and-Use-of-AI-EN.pdf>

for “the verification of identity information and the authentication of a National Identity Number and National Identity Card.”³⁴⁵⁵

The NIRA was approved despite the strong objection of civil society and parliamentary opposition to the compulsory formal registration of all citizens including specific biometric information. The Act required the capture and storage with a central registering authority of vein patterns, and if needed, footprints, toe prints, palm prints and the blood type of citizens and residents, along with iris scans and fingerprints.

In *Julian J. Robinson v. The Attorney General of Jamaica*, the Supreme Court of Judicature of Jamaica ruled that the NIRA was unconstitutional and nullified it, on the grounds of violating the right to privacy and equality enshrined in the Jamaican Charter of Fundamental Rights. More particularly, “The Court, while giving an extensive interpretation of the right to privacy held the mandatory nature of the Act and the criminal sanctions to be in violation of informational privacy and liberty of the individuals. The disproportionate measures used to enforce the Act, the lack of necessary and a legitimate purpose, and absence of safeguards against misuse of the data collected under the Act were the primary grounds on which the Court declared the Act to be unconstitutional.”³⁴⁵⁶

A new Act, the National Identification and Registration Act of 2020 (NIRA Act), which allows for the voluntary submission of biometric information for participation in the NIDS, was passed in October 2021.³⁴⁵⁷ The Act has attracted criticism from civil society organizations.³⁴⁵⁸ The NIRA Act Regulations were formalized in 2024 and the government issued the first electronic national ID card in 2024.³⁴⁵⁹

Facial Recognition

The Passport, Immigration and Citizenship Agency (PICA) introduced facial recognition components to passport production with the objective to protect the identity of the citizen and reduce passport fraud.³⁴⁶⁰ The implementation of facial

recognition programs started through immigration kiosks at airports in 2016.³⁴⁶¹ Reportedly, in 2017, PICA “has moved a step closer to protecting the identity of Jamaicans by implementing, for the first time in Jamaica, a facial recognition system akin to the Automated Fingerprint Identification System (AFIS) currently in use by the police.”³⁴⁶²

In recent years, law enforcement authorities in Jamaica have expressed interest in integrating police surveillance technologies into regular law enforcement practices.³⁴⁶³ This is the case for example of the Jamaican Constabulary Force, Jamaica’s primary domestic law enforcement agency. The agency has announced its procurement of various technologies, including predictive policing, networked camera systems, and DNA databases. A notable development occurred in July 2020, when media reports indicated that the Constabulary Force secretly deployed facial recognition technology to support routine law enforcement investigations.³⁴⁶⁴ At issue was the use of facial recognition in the CCTV surveillance system known as JamaicaEye, a traffic monitoring technology.³⁴⁶⁵ Jamaica’s Security Minister Horace Chang announced in June 2022 that Jamaica invested in more cameras to JamaicaEye as part of efforts to incorporate technology in everyday policing. Chang noted plans to install 300 additional CCTV cameras across the corporate area, adding to the more-than 850 CCTV cameras already installed across main townships.³⁴⁶⁶

Jamaica’s largest life insurance company and pension fund manager has implemented “facial recognition technology that will replace the notarized certificate that [pensioners] had to submit annually as ‘proof of life’ for their pension payments to continue uninterrupted.”³⁴⁶⁷ According to the Financial Gleaner, “[p]ensioners will be required to upload a Government-issued picture ID, along with a short live video

of their face, once a year, which will be verified or validated by the facial recognition technology.”³⁴⁶⁸

Environmental Impact of AI

The Vision 2030 Jamaica National Development Plan integrates sustainability as a guiding principle, emphasizing environmental protection, sustainable consumption and production, and resilience against climate change.³⁴⁶⁹ The plan outlines cross-sectoral strategies to manage the environmental impacts of economic activities, transportation, and land use, while promoting policies that align with global development frameworks like the Sustainable Development Goals (SDGs).

Jamaica has also emphasized sustainability in the context of Small Island Developing States (SIDS) by urging governments to create policies for Artificial Intelligence (AI) that prioritize human well-being and equitable development.³⁴⁷⁰ While advocating policies to build AI and cloud infrastructure, including building data centers, Jamaica has acknowledged the challenges posed by the use of AI technologies, including the negative environmental impacts and the high costs of energy use.³⁴⁷¹

Lethal Autonomous Weapons

Jamaica has consistently supported the negotiation of a legally binding instrument on autonomous weapons systems in international bodies, including as a member of the Non-Aligned Movement (NAM),³⁴⁷² and through endorsement of the

Belén Communiqué by Latin American and Caribbean states.³⁴⁷³ Jamaica has attended some of the Convention on Certain Conventional Weapons (CCW) Group of Governmental Experts meetings on Lethal Autonomous Weapons Systems (GGE on LAWS) since 2014.³⁴⁷⁴

At the 78th UN General Assembly First Committee in 2023, Jamaica voted in favor³⁴⁷⁵ of resolution L.56³⁴⁷⁶ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

At the 79th UN General Assembly First Committee in October 2024, Jamaica voted in favor of Draft Resolution L.77 on lethal autonomous weapons systems along with 160 states in October 2024.³⁴⁷⁷ Draft Resolution L.77 emphasizes “the importance of the role of humans in the use of force to ensure responsibility and accountability and for States to comply with international law” and expresses concerns about the “negative consequences and impact of autonomous weapon systems on global security and regional and international stability.”

AI Literacy

In presenting the proposed 2025 budget to the House,³⁴⁷⁸ Jamaica’s prime minister referred to the ASPIRE program, where People are centered through human capital development. As part of the program, the Prime Minister directed the Ministry of Education to “ensure that AI is prominent in our national training and development

strategy.”³⁴⁷⁹ The Prime Minister stressed the Task Force recommendations³⁴⁸⁰ to integrate AI and coding into school curricula, launch a prompt engineering course for public service workers and students in vocational programs, and train teachers on AI tools. Jamaica’s HEART program,³⁴⁸¹ or Human Employment and Resource Training/National Service Training Agency Trust offers programs on digital literacy and basic computer skills as well as more specialized programs in computer engineering and data operations. The UNESCO Caribbean office collaborated with Jamaica’s Teaching Council to host AI in Education workshops in Kingston and Montego Bay.³⁴⁸² More than 400 educators participated in the workshops “to strengthen teachers’ capacity to integrate AI effectively but also responsibly.”

The Task Force report stresses the significance of capacity building, noting “To ensure that AI benefits society at large, all citizens must be equipped with the necessary digital, media, and information literacy skills to effectively engage with AI.”³⁴⁸³ The report emphasizing critical thinking, creatively “and a questioning mindset” as necessary to “help individuals avoid automation bias and develop informed trust in AI systems.”

Human Rights

Since declaring independence from British colonial rule, Jamaica has been organized under a democratic political system featuring competitive elections, a vibrant civil society, and respect for the rule of law. Freedom House rates Jamaica “Free” in the Freedom in the World 2025 report with a score of 80/100.³⁴⁸⁴ However, Freedom House also notes that “corruption remains a serious problem, and long-standing relationships between officials and organized crime figures are thought to persist. Violent crime is an ongoing concern, as are harassment and violence against LGBT+ people.”

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Jamaica has endorsed the Universal Declaration of Human Rights and ratified the International Covenant on Economic, Social and Cultural Rights and the International Covenant on Civil and Political Rights along with most other UN human rights conventions.³⁴⁸⁵

The National AI Task Force's emphasis on the integration of human rights, such as privacy, into its AI policies reinforces Jamaica's commitment to ensuring AI development aligns with democratic principles and international human rights standards.³⁴⁸⁶

OECD / G20 AI Principles

Jamaica has not endorsed the OECD AI Principles³⁴⁸⁷ and is not a member of the Global Partnership on Artificial Intelligence.³⁴⁸⁸ According to the OECD, Jamaica's DPA aligns the country with the OECD AI Principles as it includes the principles of "transparency, explainability and fairness" in data collection and processing.³⁴⁸⁹

Jamaica is a "member state of the Inter-American Development Bank (IDB), which has adopted the OECD AI Principles as part of its fAIr LAC initiative."³⁴⁹⁰ The OECD acknowledges the work of the Inter-American Development Bank and its "fAIr LAC initiative to promote the responsible and ethical use of AI and improve public services, e.g., education, health, and social protection, in Latin American and Caribbean (LAC) countries."³⁴⁹¹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Council of Europe AI Treaty

Jamaica has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.³⁴⁹²

UNESCO Recommendation on AI Ethics

Jamaica endorsed the UNESCO Recommendation on the Ethics of AI.³⁴⁹³ Jamaica's Broadcasting Commission played a leading role in the elaboration of the Caribbean AI Policy Roadmap, which was based on a first draft of the UNESCO Recommendation. Jamaica's AI Task Force cited the Roadmap as a "foundation for formulating region-specific strategies that address the socio-economic realities of Caribbean nations"³⁴⁹⁴ in the Policy Recommendation report. The Recommendations center on ethical considerations "of particular relevance" to Jamaica: Limitations of AI systems, Transparency about AI processes, Accountability, Capacity Building, Data Privacy, and Inclusivity and Access.

Jamaica signed the 2023 Santiago Declaration to Promote Ethical Artificial Intelligence at a summit of Latin American and Caribbean leaders organized with support from UNESCO and the Latin American Development Bank (CAF) with the express purpose of implementing the Recommendation.³⁴⁹⁵ The Santiago Declaration aligns with the UNESCO Recommendation and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.

Jamaica completed the UNESCO Readiness Assessment Methodology (RAM) report in 2025.³⁴⁹⁶ UNESCO's report highlights Jamaica's "strong foundation for ethical and responsible AI governance" established through actions such as the Data Protection Act and the "strong political will and a rights'-based approach"

³⁴⁹² Council of Europe Treaty Office, *Chart of Signatures and Ratifications of Treaty 225* (Mar. 14, 2026), <https://www.coe.int/en/web/Conventions/full-list/?module=signatures-by-treaty&treatyenum=225>

reflected by the AI Task Force policy recommendations.³⁴⁹⁷ The Readiness Assessment Methodology (RAM) is a key tool to support UNESCO Member States in their implementation of the UNESCO Recommendation on the Ethics of AI.³⁴⁹⁸ The RAM helps to highlight any institutional and regulatory gaps and enables UNESCO to tailor support for governments to fill those gaps to ensure an ethical AI ecosystem in line with the Recommendation.

Evaluation

Jamaica has played a pioneering role in regional AI policy and has demonstrated a capacity and ability for leadership in the Caribbean Small Island Developing States (SIDS), in large part through the efforts of the Broadcasting Commission. As an active member of the UNESCO Caribbean Cluster, Jamaica participated in developing the Caribbean AI Policy Roadmap, which draws inspiration from a first draft of the UNESCO Recommendation on the Ethics of AI and reflects regional concerns of Caribbean SIDS regarding the environment, history of colonialism, and maintenance of distinctive Caribbean cultures.

Jamaica has also demonstrated the oversight capacity of its judicial system with its Supreme Court striking down a law that would have implemented state surveillance through a mandatory AI-powered national identification system. Jamaica's National Artificial Intelligence Policy Recommendations offers a roadmap for implementing the ideals in the Caribbean Roadmap and UNESCO Recommendation with the power of an oversight body. Specific short- (1–3 years), mid- (4–6 years) and long-term (7–10 years) objectives in the recommendations show Jamaica's commitment to maintaining the proactivity and speed with which the country has moved forward with the national AI policy framework. Concerns persist, however, over the growing use of facial recognition technology.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Japan

In 2025, Japan enacted the AI Act to promote the development and adoption of AI technologies while mitigating the risks and the follow up AI Basic Plan to operationalize the goals of the Act. Japan continued global leadership in AI governance by endorsing the Council of Europe Framework Convention on Artificial Intelligence early in the year.

National AI Strategy

Under the direction of former Prime Minister Shinzo Abe, Japan emerged as a global leader in both AI policy and data governance. Abe declared in 2019 that “Artificial Intelligence (AI) must be used solely for humans and humans must be held responsible for its outcome. We will take the lead in establishing human-centered ethical principles for AI.”³⁴⁹⁹

Earlier, in 2016, Prime Minister Abe called for the Japanese government to establish an “Artificial Intelligence Technology Strategy Council.”³⁵⁰⁰ The Council set out an Artificial Intelligence Technology Strategy and Industrialization Roadmap.³⁵⁰¹ The Roadmap focuses on public-private collaboration along the AI “full pipeline from research and development to social implementation.”

Japan’s AI strategy emphasizes a risk-based, agile, and multi-stakeholder process, rather than a one-size-fits-all obligation or prohibition.³⁵⁰² Priority areas include productivity; health, medical care, and long-term care; mobility; and information security. The roadmap includes three phases: (1) the development and application of AI within various domains, (2) the public use of data and AI across those domains, and (3) the creation of ecosystems that integrate domains together. In August 2018, an action plan specified the objectives and timetable for accomplishment for each initiative under the Strategy.³⁵⁰³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The government established separate opportunities for the examination of ethical aspects of AI technology, intellectual property rights, personal information protection, and promotion of open data as cross-sectional items.³⁵⁰⁴

Japan updated the AI Strategy in 2019,³⁵⁰⁵ 2021³⁵⁰⁶ and again in 2022.³⁵⁰⁷ The 2022 Strategy defines the purpose “to contribute to the resolution of global issues through the realization of Society 5.0 and to present a comprehensive policy package related to AI for overcoming Japan’s own social issues and improving industrial competitiveness.”³⁵⁰⁸ The Society 5.0 refers to “a human-centered society that balances economic advancement with the resolution of social problems by a system that highly integrates cyberspace and physical space.”³⁵⁰⁹ “Based on the Human-Centered AI Social Principles, it is important to enable diverse human resources to contribute based on a wide range of knowledge, perspectives, ideas, etc., regardless of their diverse backgrounds such as gender, age, political beliefs, and religion.”³⁵¹⁰

The 2022 strategic objectives are: (0) dealing with imminent crises by establishing systems and technological infrastructures to maximize the protection of people's lives and property against pandemics and large-scale disasters; (1) developing and attracting “human resources for the AI era”³⁵¹¹ in a sustainable manner; (2) “Japan should become a top runner in the application of AI in real-world industries and achieve enhanced industrial competitiveness” while contributing to “the promotion of sustainable industries and the achievement of the UN Sustainable Development Goals (SDGs) through innovation”³⁵¹² “In addition, it is important to further improve the quality of services, improve the working environment, and ultimately reduce the financial burden by applying AI in the public sector”³⁵¹³ (3) realizing a “sustainable society with diversity”³⁵¹⁴ not only for Japan but also on a

global scale to contribute in the achievement of SDGs; (4) “Japan should take the leadership to build an international network in the AI field for research, education and social infrastructure and accelerate AI research and development, human resources development, and achievement of SDGs”³⁵¹⁵

AI adoption in Japan is based on three pillars: (1) the AI Promotion Act, which sets the strategic direction; (2) the 2024 AI Guidelines for Businesses, which translate principles into practice; and (3) guidance on the interpretation of existing statutes, to address issues raised by generative AI.³⁵¹⁶ During the 19th Council in 2025, the Guideline for Japanese Governments’ Procurements and Utilizations of Generative AI for the sake of Evolution and Innovation of Public Administration was approved to promote secure and safe use of generative AI.³⁵¹⁷ Notably, Japan’s Parliament also approved the Act on the Promotion of Research & Development and the utilization of AI-related technology (AI Act) making it the second major economy in the Asia-Pacific Region to enact comprehensive AI legislation.³⁵¹⁸ Concurrent with the Act being brought into force, the AI Basic Plan was also approved by the Cabinet Office in 2025.³⁵¹⁹

Social Principles of Human-Centric AI

Japan’s 2019 Social Principles of Human-Centric AI³⁵²⁰ were developed by the Council for Social Principles of Human-Centric AI. The Social Principles specify the form of society that Japan should aim for, discuss impacts on society, present a set of AI social principles, and identify issues to consider in AI R&D and social implementation. They call for all relevant stakeholders to cooperate and interact closely.

Three fundamental values underpin the Social Principles of Human-Centric AI: (1) Dignity—A society in which human dignity is respected; (2) Diversity and

Inclusion—A society in which people with diverse backgrounds can pursue their own well-being; and (3) Sustainability—A sustainable society.

The social principles themselves are meant to be implemented across Japanese society, including national and local governments, as well as in multilateral frameworks. They include seven principles for AI:

- Human-Centric—The utilization of AI must not infringe upon the fundamental human rights guaranteed by the Constitution and international standards and AI should be developed, utilized, and implemented in society to expand the abilities of people and allow diverse people to pursue their own well-being;
- Education/Literacy—All stakeholders must have an accurate understanding of AI, knowledge, and ethics permitting appropriate use of AI in society;
- Privacy Protection—AI should not infringe on a person's individual freedom, dignity or equality; AI using personal data should have mechanisms to ensure accuracy and legitimacy, and to allow individuals to be substantially involved in managing the privacy of their personal data, personal data must be protected appropriately according to its degree of importance and sensitivity;
- Ensuring Security—A risk management approach is necessary as it is important to consider the balance between the benefits and risks and endeavor to improve social safety and sustainability as a whole;
- Fair Competition—Maintaining a fair competitive environment to ensure the creation of new businesses and services, maintain sustainable economic growth, and present solutions to social challenges;
- Fairness, Accountability, and Transparency—It is necessary to ensure fairness and transparency in decision-making, appropriate accountability for the results, and trust in the technology so that people who use AI are not subject to undue discrimination related to personal background or unfair treatment in terms of human dignity; and
- Innovation—The government shall proceed with regulation in a manner that reduces impediments to innovation while safeguarding privacy, security and complying with the other principles.

Japan's Ministry of Economy, Trade and Industry (METI) updated the Governance Guidelines for implementation of AI Principles in 2022³⁵²¹ after inviting experts from consumer protection and standardization. The updated guidelines aim to operationalize the AI principles and facilitate the deployment of AI in national industries.

³⁵²¹ METI, *Governance Guidelines for Implementation of AI Principles – Expert Group on how AI Principles Should be Implemented: AI Governance Guidelines WG* (Jan. 28.2022), https://www.meti.go.jp/shingikai/mono_info_service/ai_shakai_jisso/pdf/20220128_2.pdf

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

METI and the Ministry of Internal Affairs and Communications (MIC) integrated and updated the existing guidelines—AI R&D Guidelines, AI Utilization Guidelines, and Governance Guidelines for Implementation of AI Principles—and compiled them into AI Guidelines for Business V 1.0 in 2024.³⁵²² The Guidelines set out ten principles: 1) human centricity 2) transparency 3) fairness 4) accountability 5) security 6) privacy 7) education and literacy, 8) fair competition, 9) innovation, and 10) safety. MIC and METI updated the guidelines again in 2025. Version 1.1 outlines the fundamental concepts necessary for the development, provision, and use of AI.³⁵²³

AI R&D Guidelines

The original AI R&D Guidelines were directed at developers.³⁵²⁴ They include 9 principles related to 1) collaboration; 2) transparency; 3) controllability; 4) safety; 5) security; 6) privacy; 7) ethics (respect human dignity and individual autonomy); 8) user assistance; and 9) accountability.

The Japanese AI R&D Guidelines influenced global AI policies. The Japanese government proposed an international discussion on AI policy at the G-7 ICT Ministers' meeting in 2016 in Kagawa-Takamatsu and presented the Guidelines to the G-7 Leaders meeting in Turin, Italy in 2017.³⁵²⁵ The Japanese AI R&D Guidelines also contributed significantly to the development of the OECD AI Principles, the first global framework for AI Policy. The OECD AI Principles were adopted by 42 countries in May 2019, and then by G-20 Nations at the Leaders' Summit hosted in Osaka, in June 2019. OECD Secretary-General thanked Prime Minister Abe and said that the OECD AI Principles, endorsed by the G-20 nations, are “affirming that the AI we want is centered on people, respects ethical and democratic values, is transparent, safe, and accountable.”

AI Governance in Japan

Japan enacted the AI Act in September 2025 “to appropriately mitigate various risks inherent to AI and ensure citizens’ safety and trust.”³⁵²⁶ The Act charges the government with creating guidelines and advising companies on how to handle risks related to AI with the goal of advancing AI applications by building public trust. The Act established an AI Strategic Headquarters chaired by the Prime Minister and composed of the Cabinet Ministers and called for the creation of the AI Basic Plan. The AI Basic Plan³⁵²⁷ released in December 2025 lays out the government’s AI policy based on three principles,³⁵²⁸ all aligned to earlier documents: Promoting innovation while mitigating risks, Institutionalizing an agile response through a Plan-Do-Check-Act cycle, and Integrating domestic and international policies to become “a hub of diverse AI innovations.” The plan details specific Government initiatives around four broad policy goals—“Adopt AI,” “Create AI,” “Enhance AI Trustworthiness” by leading governance, and “Collaborate with AI” to transform into an AI society built on human-AI collaboration—to realize the ultimate goal to make Japan “the most AI-friendly country in the world.”

The 2025 AI Act and AI Action Plan continue Japan’s soft-law approach to AI governance. The actions leave open the opportunity for legally binding regulation as needed but continues with the 2021 METI finding that “legally-binding horizontal requirements for AI systems are deemed unnecessary at the moment.”³⁵²⁹ The introduction of general-purpose AI systems and the risks to national security, human rights and democratic process impacted the regulatory approach. The 2023 and 2024 Whitepapers published by Liberal Democratic Party AI Project Team consider introduction of narrow legislation for advanced AI systems with serious risks.³⁵³⁰ Japan has taken some steps towards regulations. The Cabinet Office’s AI Policy

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Study Group released its Interim Report outlining a proposal for the future of Japan's AI policy,³⁵³¹ which informed the AI Basic Plan.

In the case of sector-specific regulations, none prohibit the use of AI but rather promote the adoption of AI while requiring businesses to take appropriate measures and disclose information about risks.³⁵³² For example, the Digital Platform Transparency Act imposes requirements on large online malls, app stores, and digital advertising businesses to ensure transparency and fairness in transactions with business users, including the disclosure of key factors determining their search rankings.³⁵³³ The Financial Instruments and Exchange Act³⁵³⁴ requires businesses engaging in algorithmic high-speed trading to register with the government and requires them to establish a risk management system and maintain transaction records.³⁵³⁵

Public Participation

Japan organized a conference with public participation in advance of the 2016 G-7 ICT Ministers' meeting. The conclusions of the conference informed the 2016 Takamatsu Declaration.³⁵³⁶ The G7 ICT Ministers agreed to promote ICT technology R&D for Artificial Intelligence; meet high standards of privacy and data protection; promote accessibility and digital literacy for everyone; and respect cultural and linguistic diversity.

In October 2016, Japan³⁵³⁷ also launched a new public conference on the theme "Toward AI Network Society" with the participation of experts from industry, academia, and citizens to examine the social, economic, ethical, and legal

implications of AI.³⁵³⁸ The AI Network Society conference formulated the AI R&D Guidelines. In 2019, another meeting of the Toward AI Network Society conference produced the AI Utilization Guidelines, “a commentary on the principles expected to be taken into consideration in the utilization of AI.”³⁵³⁹

The 2022 AI Governance Guidelines were elaborated following public consultation. In 2021, the Ministry of Economy, Trade, and Industry issued a call for Public Comments on the AI Governance Guidelines for Implementation of AI Principles Ver. 1.1³⁵⁴⁰ The Governance Guidelines reflect the advice of companies, academics, legal experts, and auditors. The Digital Agency likewise solicited and heard the opinions of a wide range of people on the draft Guidelines for the Procurement and Utilization of Generative AI in public administration in 2025.³⁵⁴¹

The Cabinet Office’s AI Policy Study Group Interim Report,³⁵⁴² which outlines a vision and goal for Japan’s future AI policy landscape, was updated following a period of public participation.³⁵⁴³

Data Protection

The 2003 Act on the Protection of Personal Information (APPI) initially governed data processing in the private sector only.³⁵⁴⁴ As of April 2022, the APPI shall apply to the private sector, national administrative agencies, local governments, national and public hospitals, national and public universities, and national research

and development corporations.³⁵⁴⁵ This amendment accompanies the launch of a new Digital Agency in September 2021. The aim is “to accelerate the digitization of local and central government after the COVID 19 pandemic further exposed the necessity of reformation”. The Agency “commits to “Human-friendly digitalization: No one left behind”, underpinned by the vision of “Government as a service” and “Government as a startup”.”³⁵⁴⁶

The 2020 amendments to the APPI bring the law closer to the EU’s General Data Protection Regulation (GDPR).³⁵⁴⁷ The amendments upgrade individuals’ rights, introduce the concept of pseudonymization, reinforce data breach reporting, and increase penalties for offenders. In January 2019, the European Commission adopted an adequacy decision on Japan’s APPI, allowing personal data to flow freely between the two economies.³⁵⁴⁸

Prime Minister Abe put forward the concept of Data Free Flow with Trust (DFFT) in a speech at the World Economic Forum in January 2019.³⁵⁴⁹ Abe said, “We must, on one hand, be able to put our personal data and data embodying intellectual property, national security intelligence, and so on, under careful protection, while on the other hand, we must enable the free flow of medical, industrial, traffic and other most useful, non-personal, anonymous data to see no borders, repeat, no borders.” Abe underscored the importance of privacy protection, explaining that the DFFT regime should be built on “non-personal data.” Abe further emphasized that the appropriate framework for the protection and governance of data according to their sensitivity would allow higher freedom of data flow across

borders. The G20 Leaders adopted the concept of Data Free Flow with Trust at the 2019 Summit,³⁵⁵⁰ and reaffirmed the goal at the 2020 Summit in Riyadh.³⁵⁵¹

Regulatory cooperation for DFFT was also discussed at the Digital Ministers' G7 Digital Track during the G7 Germany 2022 and was a key topic during the G7 Digital Ministers' meeting in Takasaki in April 2023 as well.³⁵⁵²

The G7 2022 Action Plan for Promoting DFFT emphasized the importance of regulatory cooperation. Key topics for discussion include regulatory approaches related to privacy-enhancing technologies and interoperability of data protection frameworks, as well as regulatory cooperation between data protection and privacy authorities on enforcing data protection and related laws and regulations.³⁵⁵³

The third G7 Data Protection and Privacy Authorities Roundtable took place in Japan in June 2023. Issues such as "the promotion of DFFT, cross-border enforcement cooperation and advanced technologies and privacy protection with the aim of fostering cooperation amongst each other" were addressed.³⁵⁵⁴ Relatedly, in 2025, the PPC presented its Global Strategy as a way for Japan's government to promote "Data Free Flow with Trust" (DFFT).³⁵⁵⁵

The Personal Information Protection Commission (PPC), established in 2016, supervises the implementation of the APPI. PPC members exercise their official authority independently. The PPC also supervises the implementation of the My Number Act, which regulates the use of numeric identifiers for social security and taxation.³⁵⁵⁶

The PPC is a member of the Global Privacy Assembly since 2017.³⁵⁵⁷ The PPC endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,³⁵⁵⁸ the 2020 GPA Resolution on AI Accountability,³⁵⁵⁹ the 2022 GPA Resolution on Facial Recognition Technology³⁵⁶⁰ and the 2023 GPA Resolution on Generative AI.³⁵⁶¹

Algorithmic Transparency

Japanese law does not contain a general right of algorithmic transparency, and Japan is not a signatory of the Council of Europe's Convention 108+, which contains transparency obligations for processing personal data.³⁵⁶² However, there are specific provisions for certain sectors. For example, for financial services, the Comprehensive Guidelines for Supervision over Major Banks require that the concerned individual be provided with specific explanations of the reasons for the rejection of a request to conclude a loan agreement.³⁵⁶³

In July 2022, the Tokyo District Court ruled in favor of Hanryumura, a Korean-style BBQ restaurant chain operator in an antitrust case brought against Kakaku.com, operator of Tabelog, Japan's largest restaurant review platform. Japanese legal experts have said an antitrust case related to a local restaurant website could change how large internet platforms such as Google, Facebook, and Amazon

operate in the country, forcing them to reveal the inner workings of their secret algorithms. “There hasn’t been a case in competition law anywhere else in the world where a court has requested a digital platform to disclose its algorithm,” said Kentaro Hirayama, a lawyer specializing in antitrust issues and formerly with Japan Fair Trade Commission, the country’s antitrust regulator. The internet company has appealed against the decision.³⁵⁶⁴

Japan's MIC and METI released an updated version of the AI Guidelines for Business (Version 1.1) in 2025.³⁵⁶⁵ The updated guidelines mandate that business actors implement comprehensive governance policies, actively monitor AI-related risks, and establish disclosure mechanisms to ensure transparency. The guidelines are structured according to three tiers, defining foundational values (human dignity, inclusion, and sustainability) and setting out ten cross-sector principles for responsible AI development and deployment. Version 1.1 strengthens corporate accountability requirements in AI deployment across all sectors.

Facial Recognition

Japan has deployed facial recognition in several sectors, including transportation, banking (ATMs), police, and immigration. Japan used facial recognition technology originally intended for security purposes, along with thermal scans to prevent the spread of the novel coronavirus when it hosted the Tokyo Olympics and Paralympics in 2021.³⁵⁶⁶ Go Iwashita, the Director of the Security Bureau for Tokyo Organizing Committee for the Olympic and Paralympic Games, said “Throughout the game, four million facial recognition operations had been performed and we received no reports of failure.”³⁵⁶⁷

Osaka Metro Co. has developed automated ticket gates with facial recognition with a view to equipping all metro stations in Osaka by 2024, ahead of

the 2025 World Expo.³⁵⁶⁸ Likewise, the Japanese Ministry of Economy, Trade and Industry is testing facial recognition ticketing on driverless buses in several cities across the country.³⁵⁶⁹

In September 2020, Japan Times reported that Japanese Police Forces have been using facial recognition technology across the nation since March 2020 to locate criminal suspects. Critics warned that the system could transform the country into a surveillance society unless it operates under strict regulations, a senior National Police Agency (NPA) official said “we are using the system only for criminal investigations and within the scope of the law. We discard facial images that are found to be unrelated to cases.”³⁵⁷⁰ The NPA manages and utilizes facial images under rules set by the National Public Safety Commission, a Japanese Cabinet Office commission that guarantees the neutrality of the police system by insulating the force from political pressure and ensuring the maintenance of democratic methods in police administration. The NPA also manages fingerprints and DNA under the Public Safety Commission. The agency’s database currently holds 10 million facial images of criminal suspects.

Japan does not have specific legislation for facial recognition in the government sector. As of September 2020, the Japanese APPI covers the use of facial biometric data gathered from security cameras.³⁵⁷¹ Law enforcement is however exempt from this type of privacy regulation. APPI also allows the use of anonymized facial recognition data beyond the intended purposes if such data is sufficiently protected from being restored to its original form. The Personal Information Protection Commission formed a committee of experts in January 2022 to review and prepare a guideline for the appropriate use of camera images for crime prevention and safety in public spaces.³⁵⁷² The draft guidelines were released for public comment in January 2023. The PPC supports the use of facial recognition cameras in public places for crime prevention or security purposes but recommends that operators increase transparency so as not to cause undue anxiety to those being filmed.

Biometric Identification

In 2021, the Digital Agency was tasked to accelerate the digitization of public services, industries, and lifestyle through the My Number System and My Number Card. The My Number System relates primarily to the Social Security and Tax Number System, which provides one unique number to all registered residents. The system centralizes all personal information dispersed across various administrations with the aim to improve the efficiency of public services. The My Number Card can be used as an official identification card as well as a multi-purpose card for a wide range of public services or for various private on-line transactions.

Before the COVID-19 pandemic, former Director-General of the Administrative Management Bureau at the Ministry of Internal Affairs and Communications, Mr. Susumu Kamimura explained in a paper that the “black-box effect” is “more likely the reason AI has not been deployed in the public sector, where transparency and accountability are often more important than efficiency and low-cost.”³⁵⁷³ The paper also raised privacy as a concern, noting that “Japanese people are extremely sensitive to a lack of privacy, and that is the main reason Japan does not have a true national ID system, and its partial substitute—My Number—has not been fully implemented. An AI-powered precise identification of personal features will not be readily tolerated.”³⁵⁷⁴

A survey to study the attitudes toward the My Number Card by Kioicho Strategy Institute demonstrated that, “Among respondents, 59.4% said they have a My Number Card, which roughly corresponds to the 55.7% of Japanese as a whole. [...] By contrast, 18.4% of respondents said that they had no intention of obtaining a card.”³⁵⁷⁵ The Japanese government conducted a campaign to give card holders up to ¥20,000 worth of My Number Points to be used for shopping and other purposes to encourage sign-ups.

In February 2023, the Tokyo Medical Practitioners Association filed a lawsuit against the government with the Tokyo District Court to prevent the replacement of patients’ insurance cards with My Number from April 2023. The suit claims that the Health Insurance Act should be amended before the government can require medical practices to accept My Number.³⁵⁷⁶ As of 2025, the My Number Card system

Center for AI and Digital Policy

continues to expand gradually as a key component of Japan's digital government strategy under the Digital Agency. The system remains central to the government's efforts to improve administrative efficiency and expand digital public services, though public adoption continues to progress incrementally. In 2026, the government plans to use the My Number Card as a health insurance credential. While emergency professionals already have access to patient data through the My Number card, the next phase would include nationwide rollout of medical records, secondary use of medical data and digitization of areas such as medical subsidies and maternal-child health services.³⁵⁷⁷

Environmental Impact of AI

Japan announced plans in October 2020 to achieve net zero carbon emissions by 2050 and has since accelerated efforts to eliminate emissions.³⁵⁷⁸ The Green Growth Strategy hinges on decarbonizing the production of electricity through renewable energy and hydrogen power and shifting sectors such as transportation to electricity. Through the Strategy, Japan plans to leverage various methods to decrease energy demand and carbon emissions, including taxation as well as innovation.³⁵⁷⁹

Rather than viewing regulation and carbon taxes as hindrances to innovation, Japan's Director of the Environmental Policy Division in the Ministry of Economy, Trade and Industry Kawahara Kei sees opportunity: "While increasing Japan's industrial competitiveness, we will make our contribution to the world by spreading Japanese technology overseas."³⁵⁸⁰

Lethal Autonomous Weapons

Since 2014, Japan has participated in international talks on lethal autonomous weapons systems. Japan often states that it has "no plans" to acquire such weapons and highlights the need to retain meaningful human control over the use of force. However, Japan does not support the negotiation for a new treaty to address mounting

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

concerns over fully autonomous weapons and has yet to join the group of 29 countries calling for a prohibition on such weapons.³⁵⁸¹

In December 2021, Japan and other countries blocked any advancement in U.N. talks toward legally binding measures to ban and regulate the development and use of lethal autonomous weapon systems. The Sixth Review Conference of the Convention on Certain Conventional Weapons ended in December 2021 in Geneva without progress, failing to reflect eight years of work and leaving countries and nongovernmental organizations that have called for legally binding rules expressing disappointment.³⁵⁸²

At the 77th UN General Assembly First Committee meeting in October 2022, Japan issued a statement, noting that the country “recognizes the meaningful results achieved by the Group of Governmental Experts (GGE) in the discussion on emerging technologies in the area of lethal autonomous weapons systems (LAWS) in the past years, as one of the key topics under the CCW. Despite the sensitivity and complexity of this issue, intensive deliberations at the GGE meetings have significantly contributed to fostering bases for common understanding. Japan believes it is beneficial for the High Contracting Parties to continue the discussion on LAWS step-by-step within the CCW framework. Japan also welcomes many proposals submitted to the GGE this year to advance such discussion. Japan will continue to actively contribute to international rulemaking.”³⁵⁸³

Japan was also among the 70 countries that delivered a joint statement on autonomous weapons systems at the 77th UN General Assembly. In this joint statement, States urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (“IHL”), including through maintaining human responsibility and accountability in the use of force.”³⁵⁸⁴ In a 2024 statement to UN,

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Japan supported the view that “the obligations of IHL apply to all weapon systems, including LAWS, that weapon systems must not be used if they are incapable of being used in compliance with IHL [...] Japan recognizes that, in the use of weapon systems, human responsibility cannot be transferred to machines, and we must ensure that they are operated under a responsible chain of human command and control in a manner consistent with the obligations of states under IHL, and that responsibility is clearly attributed.”³⁵⁸⁵

Representatives from Japan³⁵⁸⁶ agreed a joint call to action on the responsible development, deployment and use of artificial intelligence in the military domain following the February 2023 Summit on Responsible Artificial Intelligence in the Military Domain (REAIM) in The Hague.³⁵⁸⁷ Japan also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.³⁵⁸⁸ Japan was also involved in the Global Commission on Responsible AI in the Military Domain launched at the 2023 REAIM Summit and concluded its efforts with a report in 2025.³⁵⁸⁹

The Republic of Korea hosted the second REAIM summit in 2024. Japan endorsed the outcome document, the Blueprint for Action,³⁵⁹⁰ which outlines principles for AI governance and emphasizes international law compliance, accountability, and human oversight.³⁵⁹¹

AI Literacy

Japan has advanced AI literacy as part of its digital transformation strategy. In 2024–2025, the Ministry of Education (MEXT) updated school guidelines to

Center for AI and Digital Policy

strengthen students' understanding of AI fundamentals, ethics, and responsible use.³⁵⁹²

To address the 58% of teachers who felt underprepared to teach AI (per a 2022 survey), MEXT launched the AI Education Accelerator Program to train 50,000 educators by 2025 in partnership with firms like SoftBank Robotics.³⁵⁹³ The program offers sustained training focused on integrating AI literacy, ethics, and data protection under the Act on the Protection of Personal Information (APPI). This initiative supports Japan's AI Strategy 2022 goal for all high school graduates to gain basic literacy in mathematics, data science, and AI.³⁵⁹⁴ Classrooms emphasize critical thinking, testing AI outputs, debating ethical issues such as facial recognition, and applying AI tools in projects. Schools are also adopting AI-powered platforms like LEAF, featuring tools such as BookRoll for interactive learning and LogPalette for data visualization to personalize education and support teachers.

Human Rights

Freedom House rates Japan as “Free” with 2025 score of 96/100.³⁵⁹⁵ Political rights and civil liberties in Japan are generally well respected. However, outstanding challenges in the country include ethnic and gender-based discrimination and claims of improperly close relations between the government and the business sector.

AI Safety Summit

In November 2023, Japan participated in the first AI Safety Summit and endorsed the Bletchley Declaration.³⁵⁹⁶ Japan thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth,

sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.” In line with this global trend, Prime Minister Kishida announced the establishment of the AI Safety Institute (AISI).³⁵⁹⁷ The Integrated Innovation Strategy 2024 announced that the AISI will be established within the Information-technology Promotion Agency, Japan (IPA) as a central institution for AI safety and will promote the securing of specialized human resources and the consolidation of technical knowledge.³⁵⁹⁸

Japan continued the commitment to AI safety and international cooperation by participating in the AI Seoul Summit in May 2024, endorsing the Seoul Declaration for Safe, Innovative, and Inclusive AI³⁵⁹⁹ and the Seoul Statement of Intent toward International Cooperation on AI Safety Science.³⁶⁰⁰ In September 2024, AISI published the Guide to Evaluation Perspectives on AI Safety, offering guidance to individuals involved in the development and provision of AI systems with guidance on evaluating AI safety.³⁶⁰¹ AISI also published the National Status Report on AI Safety in Japan 2024, outlining its progress and future objectives in AI safety.³⁶⁰²

In 2025, Japan participated in the third AI Safety Summit, rebranded as the AI Action Summit, held in Paris, France. The Paris Summit marked a significant shift in focus from safety and risk management to AI adoption and action, with over 1,000

participants from more than 100 countries attending.³⁶⁰³ Japan was among 61 countries and regional blocs that signed the final declaration on inclusive and sustainable artificial intelligence for people and the planet.³⁶⁰⁴

Recently, AISI established a cooperative system (J-AISI partnership) in which relevant government ministries and agencies worked together to promote AI safety.³⁶⁰⁵

G7 Hiroshima Process

In 2023, the G7, led by Prime Minister Kishida, released the G7 Leaders' Statement on the Hiroshima AI Process.³⁶⁰⁶ The G7 leaders emphasized: "We also recognize the need to manage risks and to protect individuals, society, and our shared principles including the rule of law and democratic values, keeping humankind at the center."

The G7 leaders confirmed the need for generative AI governance. Thanks to Japanese diplomacy, by the end of 2023, the G7 leaders reached an agreement on the world's first international framework, known as the G7 Hiroshima AI Process Comprehensive Policy Framework. It includes both a set of Guiding Principles applicable to all AI actors throughout the entire AI lifecycle and a Code of Conduct that lists in more detail the actions that AI developers must abide by.³⁶⁰⁷ The Hiroshima process was supported by a report prepared by the OECD geared towards ensuring a common understanding on generative AI.³⁶⁰⁸ In 2024, Japan launched the Hiroshima AI Process Friends Group to expand the number of countries and organizations committed to the Framework.³⁶⁰⁹ In 2025, as part of the G7 Hiroshima AI Process, the G7 launched the Hiroshima AI Process (HAIP) Reporting Framework, a voluntary reporting mechanism among organizations developing

advanced AI systems to encourage transparency and accountability.³⁶¹⁰ This framework builds on the International Guiding Principles and International Code of Conduct established in 2023 and represents a concrete implementation tool for the Hiroshima AI Process Comprehensive Policy Framework.

Furthermore, Japan's Prime Minister addressed the Hiroshima AI Process Friends Group, committing Japan to contributing to enhancing the voluntary Reporting Framework by "cooperating with international organizations and private businesses to support the improvement of the environment for the development and use of AI in the global community, including developing countries". The Prime Minister also announced the creation of AI legislation that "promotes innovation, addresses risks" to make "Japan the friendliest country in the world for research, development, and deployment of AI".³⁶¹¹

OECD / G20 AI Principles

Japan endorsed the OECD and the G20 AI Principles and is a member of the Global Partnership on AI (GPAI). Japan was a catalyst for the adoption of the OECD AI Principles at the G20 Ministerial meeting in Tsukuba and the G20 Leaders' Summit in Osaka, Japan, in 2019.³⁶¹² In October 2023, the OECD published a report assessing the global implementation of the OECD AI Principles, mentioning Japan's AI governance activities in two of the five OECD values-based principles and three of the five government recommendations. The report recognizes Japan's active role in promoting responsible AI governance.³⁶¹³ In 2024, GPAI Tokyo Expert Support Center has been established as the third Center after Montreal and Paris.³⁶¹⁴

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Council of Europe AI Treaty

Japan contributed as an Observer State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of law. Japan signed the Convention in February 2025.³⁶¹⁵

UNESCO Recommendation on AI Ethics

Japan, along with 192 other States, endorsed the UNESCO Recommendation on the Ethics of AI in November 2021.

METI has been holding meetings of the Expert Group on how AI principles should be implemented. While compiling its report on the AI Governance in Japan, the Expert Group acknowledged the UNESCO Recommendation as part of the “high-level guidance from AI principles to implementation” while describing “the governance structure in the era of Society 5.0.”³⁶¹⁶ The Japanese Government also supported the launch of a platform in the UNESCO Southern Africa sub-region for the implementation of the Recommendation.³⁶¹⁷

The UNESCO Recommendations call on AI adopters to develop tools to support implementation of the Recommendations at the country level, such as the Readiness Assessment Methodology (RAM). Japan has not initiated the RAM process.³⁶¹⁸ The UNESCO Regional Office for East Asia published a Call for conducting landscape analyses and comparative studies of AI legal frameworks, policies, and applications in China, Japan, and South Korea.³⁶¹⁹ The project aims to provide Japan with a roadmap detailing steps to be taken at a national level to advance full implementation of the UNESCO Recommendation on AI.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Evaluation

Japan is a pioneer in the field of AI policy. Japan hosted the G20 Leaders' meeting in Osaka in 2019 at which time the G20 nations endorsed the OECD AI Principles. The former Prime Minister Shinzo Abe promoted the concept of Data Free Flow with Trust (DFFT), a core concept for human-centric AI, that carries forward in the policy recommendations of the OECD, the G20, the G7 and the European Commission. During Japanese Presidency of G7 in 2023 the first international framework on generative AI was adopted. Japan also endorsed the UNESCO Recommendation on the Ethics of AI and is taking steps toward its implementation. Japan has also signed the Council of Europe's AI Treaty.

Japan represents a third-way approach to AI policy, positioned between the strict, sanctions-based model of the EU AI Act and the generally more market-led stance of the United States. Japan has long relied on soft law through non-binding guidelines, voluntary cooperation and reputational incentives. The 2024 AI Business Operator Guidelines issued by the METI and the MIC illustrate this, relying on iterative governance as a living document. The AI Promotion Act continues this structure by setting broad principles and duties of cooperation but without explicit penalties. The AI Basic Plan and AI Strategy Headquarters mark progress on further implementation. However, concerns about the unregulated use of facial recognition remain.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Jordan

In 2025, Jordan trained approximately 9000 public employees on the potential and uses of AI in public administration as part of the implementation of the National AI Strategy.

National AI Strategy

The Government of Jordan, through the Ministry of Digital Economy and Entrepreneurship (MoDEE), issued the Jordanian Artificial Intelligence Policy 2020³⁶²⁰ to enhance future comprehensive cross-sectoral social and economic development, keep abreast of the steady changes in AI, harness economic benefits, and improve the performance of government sectors. To implement this Policy and manage the outputs, a National Ministerial Committee for Artificial Intelligence formed under a decision by the Council of Ministers. The Committee is headed by the Minister of Digital Economy and Entrepreneurship, with members from ministries and government institutions working in data-rich sectors such as health, education, finance, energy, clean technology, cyberspace, transportation, justice and community protection. The strategy makes provision for a dedicated AI and regulatory data authority. As of early 2026, the country has no standalone AI regulatory authority but operates through institutional oversight and operational mechanisms, through the Personal Data Protection Council and the Data Protection Unit.³⁶²¹

Jordan's Artificial Intelligence Strategy and Implementation Plan of 2023–2027³⁶²² evolved from the previous strategies and policies regulating digital transformation and digital technology. The strategy was developed in collaboration with international partners, including the United Nations Industrial Development Organization (UNIDO), the United Nations Economic and Social Commission for Western Asia (UN ESCWA), and the European Union Delegation in Jordan.

The AI Strategy³⁶²³ defines five strategic pillars, including: 1) Capacity-building and developing national skills and expertise in AI; 2) Encouraging scientific

³⁶²⁰ Ministry of Digital Economy and Entrepreneurship, *Jordan Artificial Intelligence Policy 2020* (Dec. 2022), https://modee.gov.jo/ebv4.0/root_storage/en/eb_list_page/ai_final_-_english_version.pdf

research and development related to AI; 3) Enhancing investment and entrepreneurship environment; 4) Supporting a legislative and regulatory environment conducive for the safer adoption of AI technologies; and 5) Applying AI tools to improve the efficiency of government services and the public sector.

As part of the Policy, the Committee prepared a National Charter on AI Ethics.³⁶²⁴ The Charter provides a framework of principles and guidelines related to the accountability of AI operating systems and ensuring their transparency in decision-making and impartiality in data processing and data privacy. The principles include accountability, transparency, impartiality, respect for personal privacy, promotion of human values and other guidelines that promote rule of law, human rights, democratic values and diversity. Additionally, the Ministry of Digital Economy and Entrepreneurship has prepared a National AI Code of Ethics in cooperation with the relevant authorities from the government, private and academic sectors, civil society institutions and security authorities.³⁶²⁵

Public Participation

The MoDEE maintains a platform for public consultations and surveys.³⁶²⁶ The landing page for the platform lists consultations from 2019, however. An undated press release³⁶²⁷ announces a consultation on the National Charter on the Ethics of AI with a deadline in March 2022, suggesting some public participation in the formation of national AI policies. The notice instructs those interested to access a draft from the MoDEE website or social media. A similar press release announced a consultation of one month on the AI Strategy and Implementation Plan in 2022,³⁶²⁸ again referring potential participants to a draft available on the MoDEE website and social media.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

UNIDO reported that the strategy and roadmap was developed “in close consultation with the public, private sector and academia.”³⁶²⁹

The Open Government Partnership 2023 review of Jordan’s action plan³⁶³⁰ for open government identified Jordan’s plans to create a centralized portal to receive citizen input on draft laws and policies as promising. The portal would unite ministries’ individual consultations on social media or in person. The review suggests linking the platform to social media to connect with users and to provide a mechanism to ensure citizens can see their comments taken into account.

Data Protection

The Personal Data Protection Law No. (24) of 2023³⁶³¹ states that every natural person has the right to protect their Data, and processing of such Data shall be permitted only after obtaining the consent of the Data Subject or in cases permitted by law. The Data Subject has the following rights: 1) Awareness and access to the Data held by the Controller and the ability to obtain it; 2) Withdrawal of Consent; 3) Correction, amendment, addition, or update of Data; 4) Limiting Personal Data Processing to a specific scope; 5) Erasure or concealment of Data according to the provisions of this law; 6) Objection to Processing and Profiling if they are unnecessary for the purposes for which the Data was collected, or excessive in relation to those purposes, discriminatory, prejudiced, or in violation of the law; 7) Transfer of a copy of their Data from one controller to another; 8) Being notified of any Data Breach or violation regarding the security and integrity of their Data.

The Personal Data Protection Directorate (PDPD), a regulatory unit under the Ministry of Digital Economy and Entrepreneurship, is responsible for safeguarding personal data and ensuring the right to privacy.³⁶³² The PDPD ensures compliance with the provisions of the Personal Data Protection Law as well as the regulations and instructions issued in the Hashemite Kingdom of Jordan. The unit aims to enhance Jordan's position in the field of personal data protection and the development of legislation and policies that support the protection of the digital environment. The Public Service Department of PDPD is responsible for receiving complaints, reports, and inquiries related to privacy and personal data protection, investigating them, and

³⁶³² Ministry of Digital Economy and Entrepreneurship, *Personal Data Protection Directorate (PDPD)* (2025), <https://www.modce.gov.jo/EN/Pages/False>

providing responses following transparent, confidential, and high-quality procedures.

The Personal Data Protection Directorate is not a member of the Global Privacy Assembly and thus ineligible to sponsor GPA resolutions.³⁶³³

Algorithmic Transparency

Jordan has established components of algorithmic transparency as a legal right through the Personal Data Protection Law.³⁶³⁴ The law provides the right for data subjects to be informed about data processing activities and their purposes but it does not explicitly require data controllers to explain the internal logic of the algorithm. This law is enforceable by criminal and financial penalties, ensuring that transparency is not merely a voluntary ethical guideline.

Under the Article 4(B)(6) of the Law, Jordanian citizens have the right to object to automated processing if it is considered unnecessary, excessive, or discriminatory. This legal right forces a review of the processing, effectively allowing citizens to contest adverse automated decisions, though it does not grant the right to challenge the logic of automated decisions.

The National Artificial Intelligence Code of Ethics extends these protections and encourages disclosing the foundations and mechanisms of action behind decisions.³⁶³⁵ The code promotes a technical understanding of how decisions are reached, though it remains voluntary.

AI in Public Administration

The Prime Minister's office held a dialogue session titled Applications of Artificial Intelligence in Developing Arab Public Administration in 2026.³⁶³⁶ The session brought together Minister of State for Public Sector Development Badria Al Balbisi, Minister of Digital Economy and Entrepreneurship Sami Smeirat, and Secretary-General of the Ministry of Digital Economy and Entrepreneurship Samira Zoubi. At the event, the Minister of Digital Economy and Entrepreneurship highlighted the government's integrated national project "to raise awareness and

build capacities in artificial intelligence.” By the end of 2025, the Minister reported, approximately 9000 people would receive training, with the third phase targeting 3000 government employees. The plan aims to build awareness and capacity among 15,000 government employees by the end of 2027.

Environmental Impact of AI

While Jordan has no specific national policy on AI's environmental impact, the AI Strategy lists “environment” as one of 12 priority deployment sectors. Likewise, the National Code of AI Ethics includes a principle on Sustainability and Environment. The Code requires “ensuring that artificial intelligence techniques do not unnecessarily drain energy resources and raise their effectiveness and efficiency, thus reducing their carbon impact on the environment and limiting climate change.”³⁶³⁷

Lethal Autonomous Weapons

Jordan is a High Contracting Party to the Convention on Certain Conventional Weapons (CCW)³⁶³⁸ and a member of the CCW’s Group of the Non-Aligned Movement³⁶³⁹ and the Arab Group in the United Nations. Both groups support a legally binding international instrument on Lethal Autonomous Weapons Systems (LAWS). A NAM statement at a 2023 GGE on LAWS stressed “an urgent need to pursue a legally binding instrument under the Convention that will contain prohibitions and regulations for addressing the humanitarian and international security challenges posed by emerging technologies in the area of LAWS.”³⁶⁴⁰

AI Literacy

The Jordanian Artificial Intelligence Strategy and Implementation Plan (2023–2027) includes AI Literacy under its first objective, which is “building

Center for AI and Digital Policy

capacities and developing Jordanian skills and expertise in the field of artificial intelligence”.³⁶⁴¹ The Strategy positions the development of AI skills and human capacity as a central pillar by focusing on general literacy and operational readiness. It explicitly aims to raise awareness of AI technologies and their ethical use across the public sector and wider community. It also directs the inclusion of AI concepts in school and university curricula to ensure that students gain a basic understanding of what AI is and its societal impacts.

The strategy outlines a comprehensive approach to AI literacy across three pillars:

- Public and Societal Awareness
- Education and Academic Integration of AI topics and digital literacy
- Workforce and Government Upskilling

To prevent labor displacement and ensure economic participation, the Ministry of Digital Economy and Entrepreneurship leads upskilling initiatives regarding public sector training and vocational upskilling.³⁶⁴²

Human Rights

Freedom House ranks Jordan as “Partly Free” with a score of 34/100 for political rights and civil liberties in the 2025 Freedom in the World report.³⁶⁴³ Greater representation for political parties in the legislature following electoral reforms that led to more competitive elections led to Jordan’s status change from Not Free to Partly Free. While the elections led to greater representation, the king still dominates politics and governance and the judiciary remains hindered. Freedom of expression and of the press remain limited by laws such as the 2023 Cybercrime Prevention Law and government pressure. Organizations advocating for LGBT+ rights have especially been targeted.

Civil society organizations have denounced the Cybercrime Law of 2023.³⁶⁴⁴ The law expanded the scope of previous Cybercrimes Law and implemented “harsh penalties” for offenses such as spreading fake news, threatening peace, and contempt

for religions. As Amnesty international's report explains,³⁶⁴⁵ these offenses are vaguely defined and have been used to charge individuals criticizing authorities and Jordan's peace deal with Israel on social media. Amnesty's Deputy Director for the Middle East and North Africa lamented, "This sweeping crackdown has stifled the already small space for dissent in Jordan and created an environment of self-censorship."

Jordan supports the Universal Declaration of Human Rights and has ratified or acceded to human rights treaties including the International Covenant on Civil and Political Rights, Convention on the Rights of the Child, Convention on the Elimination of All Forms of Discrimination against Women, and Convention on the Rights of Persons with Disabilities.³⁶⁴⁶

OECD AI Principles / G20 AI Guidelines

Jordan is not a member of the OECD, G20, or Global Partnership on Artificial Intelligence (GPAI)³⁶⁴⁷ and has not endorsed the AI Principles.³⁶⁴⁸ Jordan has not submitted national initiatives to the OECD dashboard.³⁶⁴⁹ Despite the lack of direct engagement, Jordan's national AI strategy and initiatives align with principles for sustainable development, human-centeredness, transparency, safety, and accountability.

Council of Europe AI Treaty

Jordan is not a member of the council of Europe and did not participate in the drafting of the Framework Convention on Artificial Intelligence and Human Rights,

Democracy, and the Rule of Law.³⁶⁵⁰ Jordan has not signed this first international AI treaty.³⁶⁵¹

UNESCO Recommendation on AI Ethics

Jordan is a UNESCO member and thus bound by the Recommendation on the Ethics of Artificial Intelligence. Jordan's Code of AI Ethics cites the UNESCO recommendation as a legal reference, noting the recommendation call "for taking the necessary legislative measures in accordance with the constitutional procedures and administrative structures of each country."³⁶⁵² Jordan's ethical principles and actions align with the international framework. Jordan has not prepared or initiated the UNESCO Readiness Assessment Methodology (RAM) to facilitate implementation of ethical and trustworthy AI.³⁶⁵³

Evaluation

Jordan's AI Strategy and Implementation Plan 2023–2027 and National Code on AI Ethics establish a governance framework that promotes human development and capacity-building as a key factor in developing and using AI for sustainable development. The Code of Ethics explicitly aligns with the UNESCO Recommendation, which Jordan supported as a UNESCO member. The Personal Data Protection Law establishes a right to protection for personal information and to know about automatic processing, refuse processing, and request a review of automated decisions. The Personal Data Protection Directorate established under the law is empowered to receive and investigate complaints.

Structural obstacles limit implementation of the principles and foundation for safe, ethical, and trustworthy AI development in Jordan, however. A lack of independence for the Personal Data Protection Directorate, as for the judiciary, limits Jordanians' rights in practice. The silencing of government critics through the Cybercrimes Law offers an example of this gap between principles and practice. This use of the law raises doubts about plans to implement a more robust government

portal to receive citizen comments on draft laws and policies and threatens the achievement of greater representation in Parliament.

Kazakhstan

In 2025, Kazakhstan passed an AI Law as a legal regime for protecting human rights in AI development and use. The country also introduced a framework for AI in schools to train teachers and students to integrate AI and digital literacy skills and tools responsibly and ethically.

National AI Strategy

In recent years, Kazakhstan has taken an active interest in AI and new technologies to reform the country's economy and extend internal security and policing.³⁶⁵⁴ Kazakhstan has also expressed interest in Russia's AI development.³⁶⁵⁵ The government set out an AI and other smart technologies Agenda in 2017 and adopted the Concept for Artificial Intelligence Development for 2024–2029 in 2024.³⁶⁵⁶ The Concept for Artificial Intelligence Development focuses on six pillars: data, infrastructure, human capital, scientific research, regulatory environment, and acceleration programs.³⁶⁵⁷ The Concept envisions embedding AI across economic sectors and public administration, contributing to GDP growth, and creating high-value AI products and startups.

One of Kazakhstan's primary purposes in embracing AI according to the Agenda is to spark foreign investment to diversify the economy and reduce the country's economic dependence on natural resources. Developing AI is also a means to strengthen social governance and welfare. President Kassym-Jomart Tokayev announced during the 2024 annual state-of-the-nation that Artificial intelligence technologies should be actively integrated into the e-Government platform.”³⁶⁵⁸ The 2017 AI Agenda also envisions AI tools as a means to counter the growing threat of

terrorism and the religious extremism propaganda on the Internet and social networks.³⁶⁵⁹ Prime Minister Askar Mamin sees foreign investment³⁶⁶⁰ and international partners³⁶⁶¹ as essential for Kazakhstan to develop AI tools, given that the country “simply does not have such financial means to develop its own AI technologies.”³⁶⁶²

Kazakhstan has worked actively to implement the AI Concept. The Committee of Artificial Intelligence and Innovation Development under the Ministry of Digital Development, Innovation and Aerospace Industry began its work leading and coordinating state policy in the fields of artificial intelligence, technology, innovation, and digital assets in 2024.³⁶⁶³ The first national standards in AI approved in 2025 align AI development in Kazakhstan with the international standard, ISO/IEC 5339.³⁶⁶⁴ The new standards cover all key stages of the AI lifecycle, from general concepts and system architecture to risk management and big data analysis, and all types of AI applications, from conversational systems like ChatGPT to industrial and medical solutions.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Kazakhstan also established two key agencies to guide, govern, and support the development of artificial intelligence in the country. The president announced the establishment of the Ministry of Artificial Intelligence and Digital Development to replace the Ministry of Digital Development, Innovation, and Aerospace,³⁶⁶⁵ The president led the inaugural session of the Council for the Development of Artificial Intelligence, signaling a clear embrace of AI for long-term national development.³⁶⁶⁶

AI Legislation

Kazakhstan's comprehensive AI law and amendments to existing laws to support AI legislation and development entered into force in January 2026,³⁶⁶⁷ following legislative review through much of 2025.³⁶⁶⁸ The AI Law³⁶⁶⁹ aims to “ensure the development of artificial intelligence and stimulate its implementation in various areas to improve the quality of human life and increase the efficiency of the economy” by providing a legal framework, ensuring transparency and security in the use and results of AI systems, attracting investment, and supporting research. The regulations are based on legality, equality and justice, transparency and clarity, responsibility and control, decision-making that prioritizes a person's well-being and freewill, data protection and privacy, and safety and security. The law further defines rights and obligations of AI system owners and possessors as well as users.

The AI law establishes risk high, medium, and low categories.³⁶⁷⁰ The law also prohibits the use and creation of systems to: intimidate, manipulate, or otherwise distort behavior or limit human agency; cause harm or threaten a person with a vulnerability; classify individuals or groups based on predicted behavior; collect or process personal data in violation of the law; classify individuals based on biometric

data “to form conclusions about their race, political views, religious affiliation and any other circumstances (dimension) with the aim of using them for any discrimination”; and revealing emotion without consent.

The Order implementing the AI Law and amendments³⁶⁷¹ charged the Ministry of Artificial Intelligence and Digital Development to develop legislation to align existing laws with the AI Law.

Public Participation

Kazakhstan has yet to develop a systematic process for public consultation in matters of policy. A law on public access to government information was adopted in 2015, but it is “poorly implemented in practice.”³⁶⁷² On transparency, Freedom House states, “The government and legislature offer little transparency on their decision-making processes, budgetary matters, and other operations. The media and civil society do not have a meaningful opportunity to provide independent commentary and input on pending laws and policies.”³⁶⁷³ A 2020 OECD report analyzed the legal and policy framework of more than 200 public councils that gathered civil society in Kazakhstan.³⁶⁷⁴ Recommendations included the implementation of clearer guidelines for public consultation, training, and ensuring a feedback loop of the input from the Councils.

A 2022 Presidential Decree establishing an action plan for legal policy included an action to increase public participation in the process of testing candidates for judges (Action N82) and improvement of legal education and legal propaganda (Action N99).³⁶⁷⁵

Presidential and governmental decrees, as well as other legal documents, are published on the Ministry of Justice official webpage, readily available to the public.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Ministry of Digital Development, Innovations and Aerospace Industry oversees these 740 e-government integrated services as part of the Digital Kazakhstan National program.³⁶⁷⁶ Services are available to citizens via the egov.kz portal, mgov mobile app, and front offices of Government for Citizens.

The High Committee for Digital Transformation held a multi-stakeholder meeting on the draft AI, data, and quantum strategies that informed the final May 2025 texts.³⁶⁷⁷ The Artificial Intelligence and Innovation Development Committee developed in 2024 can consider appeals of individuals and legal entities.³⁶⁷⁸ However, the scope of public participation is unclear.

Data Protection

Law No. 94-V on Personal Data and its Protection (Personal Data Law)³⁶⁷⁹ of May 21 2013 sets the general regulations for the localization, collection, and processing of personal data.

The country experienced a wave of major data breaches from the databases of the CEC and the Prosecutor General's Office in 2019.³⁶⁸⁰ Soon after, the personal information of 11 million people was published online and could be accessed by anyone through a published database.³⁶⁸¹ These incidents led to the amendment of the existing data protection law, which was revised to mostly align with the GDPR.³⁶⁸²

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Amendment Law on the Regulation of Digital Technologies was enacted in 2020.³⁶⁸³ The Amendments entered into force in two phases, first in July 2020, and then in January 2021.³⁶⁸⁴ Court practice regarding non-compliance with personal data protection measures began in 2021–2022.³⁶⁸⁵

The amendments established the Ministry of Digital Development, Innovation and Aerospace Industry of Kazakhstan as the competent authority to enforce the data protection law, created rules for the collection and processing of personal data, and introduced the concept of “personal data safety protection service.” The amendments also clarify informed consent with the requirement that the content and amount of personal data collected strictly correspond to those previously declared and to the legal purposes of their processing. While the GDPR requires “the appropriate data protection training to personnel having permanent or regular access to personal data,” Kazakhstan’s amendments do not require data protection training. Training is important because human error is one of the major causes of data breaches across the world.

Kazakhstan’s Ministry of Digital Development, Innovation and Aerospace Industry is not a member of the Global Privacy Assembly (GPA). Thus, no national authority has sponsored the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,³⁶⁸⁶ 2020 GPA Resolution on AI Accountability,³⁶⁸⁷ 2022 GPA Resolution on Facial Recognition Technology,³⁶⁸⁸ or the 2023 GPA Resolution on

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Generative AI.³⁶⁸⁹ The International Financial Center of Astana, Kazakhstan, a special legal regime established by the President with its own civil and commercial laws,³⁶⁹⁰ became a GPA member in 2024.³⁶⁹¹

Algorithmic Transparency

Although Kazakhstan's Personal Data Protection Law has been inspired by the GDPR, it does not include the concept of the "right to not be subject to automated decision-making."³⁶⁹² Kazakhstan's AI Law explicitly requires automatic decisions to align with requirements in the Personal Data Law.³⁶⁹³ The new law could extend these rights to a right to decline to be subject to automated decisions, given this language: a subject of a decision by AI systems "has the right to be informed about the procedure for automated processing and its consequences, about the possibility of objecting to automated processing, as well as about the procedure for protecting his rights, freedoms, and legitimate interests." With greater clarity, these provisions could align with the right to transparency enshrined in the Council of Europe's Modernized Convention for the Protection of individuals with regard to the processing of personal data (Convention 108+)³⁶⁹⁴ and Convention on Artificial Intelligence.³⁶⁹⁵

Facial Recognition and Smart Cities

Facial recognition surveillance technology is becoming increasingly widespread in Kazakhstan. While the government insists that the main goal is to maintain public safety, many activists are worried that this will ultimately create a

³⁶⁸⁹ Global Privacy Assembly, *Resolution on Generative Artificial Intelligence Systems* (Oct. 2023), <https://globalprivacyassembly.org/wp-content/uploads/2023/10/5.-Resolution-on-Generative-AI-Systems-101023.pdf>

totalitarian surveillance state.³⁶⁹⁶ This concern is even more pregnant that the companies behind these surveillance systems in Kazakhstan are under U.S. sanctions for unethical use of AI technology.

In October 2019, facial recognition systems were first installed on buses.³⁶⁹⁷ Notably, President Tokayev paid a visit and discussed future cooperation with Hikvision,³⁶⁹⁸ a Chinese state-owned surveillance company under U.S. sanctions³⁶⁹⁹ that provided the hardware for Kazakhstan's newly established surveillance system. In the same year, the small city of Akkol was proclaimed the first complete Smart City in Kazakhstan. Akkol is digitally monitored by an AI-based facial recognition surveillance system. Its functions include thermal imaging, searching for a car by number plates, recognizing missing persons, and detecting the presence of weapons in schools, hospitals, and other public places.³⁷⁰⁰ Over 4,000 cameras have blanketed Nur-Sultan, the capital.³⁷⁰¹

In 2020, the authorities announced that Kazakhstan would be spending \$23 million to install facial recognition software in its largest city, Almaty.³⁷⁰² In mid-March 2020, Kazakhstan's government was fighting the novel coronavirus. The Ministries of Health and Internal Affairs ultimately turned to AI technological solutions to confront the coronavirus outbreak. The range of technologies reoriented to enforce quarantine and curfews included traffic cameras, facial recognition technologies, and smartphone apps.³⁷⁰³ The Ministry required the 8,000 or so

Center for AI and Digital Policy

Kazakhstani citizens under quarantine to use the SmartAstana tracking app, to allow officials monitoring compliance of isolation mandates.

The government also monitored citizens through facial recognition video surveillance technology to find violators of the quarantine regime in Almaty. By the end of the country's two-month state of emergency, 2,424 people had been charged with violating quarantine in Almaty and 3,347 in Nur-Sultan.³⁷⁰⁴ According to experts, the pandemic exacerbated the existing arbitrary and uneven policing practices as national and municipal authorities' surveillance practices increased without public oversight.³⁷⁰⁵

The country launched a facial recognition system at airports, religious institutions, and underground walkways of Nur-Sultan city in 2022.³⁷⁰⁶ Reports of arrests of protesters based on facial recognition from surveillance cameras and AI-powered recognition technology also continued.³⁷⁰⁷ Kazakhstan and China have strengthened their cooperation in AI, big data, cloud computing, and other high-tech sectors.³⁷⁰⁸

Biometrics

Kazakhstan implemented the use of biometrics in the eGov Mobile app in 2022.³⁷⁰⁹ The system requires a Digital ID video identification. The Chairman of the Board of National Information Technology highlighted this development as an “easier and time-efficient [process] that provides more reliable personal data protection.” The authentication via biometrics applies for 400 public services and e-license services, across over 2.4M citizens, using the airport, train services, banking, mobile services, postal service, and notary public.

Center for AI and Digital Policy

Environmental Impact of AI

Despite the lack of official action, experts at the Connected conference in Kazakhstan's capital Astana³⁷¹⁰ discussed the future of climate change and the role of AI in mitigating or exacerbating it. Kazakhstan has acknowledged the environmental impact of artificial intelligence. Prime Minister Olzhas Bektenov highlighted concerns regarding AI's potential strain on the nation's power grid and its environmental implications during the Digital Almaty 2025 forum.³⁷¹¹ He emphasized the need to address various aspects of AI development, including its environmental impact and the load it places on the power system. However, no official policy yet addresses these concerns.

Lethal Autonomous Weapons

Kazakhstan was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly in October 2022. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.³⁷¹² In this joint statement, States declared that they “are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (IHL), including through maintaining human responsibility and accountability in the use of force.”³⁷¹³

In February 2023, Kazakhstan participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Kazakhstan, together with other countries, agreed on a joint call for action on the responsible development, deployment and use

of artificial intelligence in the military domain.³⁷¹⁴ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” States also “stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain.”

AI Literacy

Kazakhstan established a national framework to govern the use of AI in education for the period 2025–2029.³⁷¹⁵ The was approved via a Joint Order by the Minister of Education and the Minister of Digital Development, Innovation and Aerospace Industry. The framework defines clear ethical and integrity rules, covering legal regulation, personal data protection, and unified standards for academic integrity in all schools and universities.³⁷¹⁶ The framework complements efforts to integrate AI in the curriculum with subjects including Digital Literacy and Informatics as well as training for teachers. This national approach draws on recommendations from UNESCO, OECD, and the European Union.

Beyond education, Kazakhstan’s Generative Nation movement aims to train up to 200,000 citizens annually. The key public initiative is a free, four-week AI People course,³⁷¹⁷ which targets the general population with practical skills, such as using AI tools and mastering prompt engineering for daily and professional life. This dual focus of regulating AI use in academic institutions while equipping the entire population with basic literacy positions Kazakhstan to maximize the benefits of the digital transformation while mitigating associated risks.

³⁷¹⁴ Government of Netherlands, *Call to Action on Responsible Use of AI in the Military Domain* (Feb. 16, 2023), <https://www.government.nl/latest/news/2023/02/16/reaim-2023-call-to-action>

Human Rights

Freedom House rates Kazakhstan is “Not Free” with a score of (23/100) for political rights and civil liberties.³⁷¹⁸ Freedom House reports “Parliamentary and presidential elections are neither free nor fair [...] and authorities have consistently marginalized or imprisoned genuine opposition figures. The dominant media outlets are either in state hands or owned by government-friendly businessmen. Freedoms of speech and assembly remain restricted and subjected to punishment, and corruption is endemic.” Human Rights Watch confirms this assessment, noting a poor track record in ensuring accountability mechanisms against human rights violations.³⁷¹⁹ Kazakhstan rejected recommendations from the UN Human Rights Council³⁷²⁰ to safeguard media freedom and ensure the protection of journalists, bloggers, and other media workers³⁷²¹ during the 2025 Universal Periodic Review.

Kazakhstan is eligible for admission to the Council of Europe (CoE) and has increased cooperation with the body in recent years. A previous agreement was limited to criminal justice. However, the Neighborhood Co-operation Priorities for Kazakhstan 2019–2022 introduced new areas of cooperation, including the fight against economic crime, promoting a common legal space and human rights standards, and assistance in the electoral field. The document was adopted by the Committee of Ministers in April 2019. Kazakhstan participates in the CoE Central Asia Rule of Law Programme, launched in 2020, which has the goal of “Improving the lives of citizens by reinforcing human rights, democracy and rule of law.”³⁷²² Corruption in Kazakhstan remains a serious concern, entrenched in different sectors, institutions, and public and private spheres.³⁷²³

The re-established Constitutional Court of Kazakhstan began to operate on January 1, 2024.³⁷²⁴ Citizens may appeal directly to the court on cases regarding

fundamental rights and freedoms in the country. The Constitutional Court received more than 5,300 appeals in 2023.³⁷²⁵

OECD / G20 AI Principles

Kazakhstan has not endorsed the OECD AI Principles. According to the OECD AI Observatory, the Digital Kazakhstan Government Program, a national initiative, addressed the OECD AI principles of inclusive growth, sustainable development, and well-being; investment in AI R&D; and fostering an ecosystem for AI.³⁷²⁶

The country's major AI research center, the Institute of Smart Systems and Artificial Intelligence at Nazarbayev University, operates in accordance with the ethical principles aligned to the OECD AI Principles: Societal Well-being, Human-Centered Values, Transparency, Technical Resilience and Robustness, and Accountability.³⁷²⁷

Council of Europe AI Treaty

Kazakhstan has not signed the Council of Europe AI Treaty.³⁷²⁸

UNESCO Recommendation on AI Ethics

Kazakhstan is a UNESCO member since 1992³⁷²⁹ and endorsed the UNESCO Recommendation on the Ethics of AI.³⁷³⁰ Kazakhstan contributed actively to the drafting of the UNESCO Recommendation. A country delegation from the Institute of Smart Systems and Artificial Intelligence of Nazarbayev University (ISSAI) participated in the UNESCO Session on the Ethics of Artificial Intelligence held online over two days in 2020. The event gathered feedback and stakeholder

AI literacy program for the general public,³⁷³⁷ and AI legislation. The AI Law³⁷³⁸ passed in 2025 lays a foundation for to enshrine human-centric AI principles promoting human rights and democratic values into AI development and use. ISSAI's ethical principles provide a model for aligning AI research and innovation to global frameworks such as the OECD AI Principles and UNESCO Recommendation. The Personal Data Protection Law has not fully addressed the areas of automated decision-making and algorithmic transparency, and no system exists for regular civic engagement in policymaking.

Meanwhile, Kazakhstan has already endorsed smart surveillance systems in various cities, which led to fears that the country would transform into a digital authoritarian regime and a real life-laboratory for foreign companies under US sanctions for unethical use of AI technology.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Kenya

In 2025, Kenya launched the National AI Strategy 2025–2030 and expanded AI capacity-building and AI literacy programs for civil servants and students. The Office of the Data Protection Commissioner Strategic Plan 2025–2029 includes objectives for strengthening AI privacy compliance.

National AI Strategy

Kenya's Ministry of Information, Communications and Digital Economy (MICDE) launched the National AI Strategy 2025–2030 in March 2025.³⁷³⁹ The National AI Strategy aims to address key issues, including data governance, legal frameworks, and privacy policies. The AI Strategy defines key priorities and objectives aimed at fostering innovation, promoting economic growth, and guiding the responsible integration of AI technologies to support Kenya's broader development goals.³⁷⁴⁰

The Strategy notes citizens' concerns with ensuring that AI is developed and deployed in a way that respects human rights and aligns with Kenyan values³⁷⁴¹ and ethical use.³⁷⁴² Principles that will guide implementation of the AI Strategy include transparency, equity, explainability, accountability in AI systems, privacy protection, fairness, safety, security and respect for human autonomy and decision making.³⁷⁴³ The AI strategy development process was supported through partnerships with organizations like the German Agency for International Cooperation (GIZ) and UNESCO.³⁷⁴⁴ Part of the FAIR Forward—Artificial Intelligence for All—initiative, the partnership aimed at establishing a framework for the responsible, ethical deployment of AI, aligning with Kenya's broader goals of social inclusion and sustainable development.³⁷⁴⁵

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The development of the National AI Strategy was crucial to the realization of the Digital Master Plan (DMP) 2022–2032 released by the MICDE.³⁷⁴⁶ Building on earlier master plans and e-Government strategies and policies,³⁷⁴⁷ the DMP provides a blueprint to “create business opportunities, wealth creation, employment and the contribution of ICT to the growth of the economy [...] towards the realization of our goal in transforming lives, better for the citizens.”³⁷⁴⁸ To this end, the DMP identifies four pillars to advance the provision of services to citizens and businesses:

- Digital Infrastructure, which aims to ensure equitable access to national service through national ICT infrastructure
- Digital Government Service, Product and Data Management to improve productivity, efficiency, effectiveness, and governance across sectors through e-Government
- Digital Skills to develop “a digitally skilled workforce and citizenry that is grounded on ethical practices and social cultural values”
- Digital Innovation, Enterprise and Digital Business to help transform innovative ideas into sustainable business and operating models.

The Digital Master Plan aligns with the Smart Africa Alliance goals for the long-term outcomes of digital government, including “job creation and economic growth, sustainable development, cashless economy, citizens participation, transparency, trust, and accountability.”³⁷⁵⁰

As a member of the African Union (AU), Kenya is committed to advancing the formulation and implementation of human-centered AI policies, in alignment with the goals of the AU digital transformation strategy,³⁷⁵¹ the Continental Data

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Policy Framework,³⁷⁵² and since 2024, the African AI Continental AI Strategy.³⁷⁵³ The Continental Artificial Intelligence Framework aims to develop governance and ethical frameworks to contain the risks of AI. More specifically, the strategy sets these objectives by 2030: adoption and implementation of ethical AI principles that respect human rights and dignity; adoption and implementation of safety and security in the design, development, and use of AI systems; and implementation of robust AI governance. The AU AI Working Group is endowed with the mission to foster collaboration among African states to “help countries develop AI strategies, identify other regulatory and governance issues, and learn from regional best practices.”³⁷⁵⁴

Kenya furthered international collaboration on AI governance with the launch of the Diplomat's Playbook on AI Governance in 2024.³⁷⁵⁵ The Playbook equips diplomats with tools for global AI policy engagement, focusing on ethical governance, Global South empowerment, and sustainable development solutions. Kenya's endorsement of the Statement on Inclusive and Sustainable AI at the Paris AI Action Summit reinforced this alignment with global ethical governance principles.³⁷⁵⁶

Cybercrime, Disinformation, and AI-Generated Content

Kenya has undertaken several initiatives to regulate content in digital spaces to protect against disinformation and hate speech and, according to some civil society organizations, censor criticism of the government. The Media Council's Code of Media Practice updated in 2025 explicitly defines obligations for the use of AI-generated content, such as ensuring the accuracy of information through human editorial review and “refrain artificial intelligence from cloning the likeness, voice, or persona of real individuals without their informed consent.” The code also requires media enterprises to clearly distinguish between editorial and user-generated content

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

and prevent or remove content that “is unlawful; violates human dignity or privacy; and constitutes hate speech.”³⁷⁵⁷

Kenya also enacted amendments to the Computer Misuse and Cybercrimes Act³⁷⁵⁸ in 2025 that expanded regulations on online conduct. Civil-society organizations raised concerns about potential impacts on freedom of expression and privacy,³⁷⁵⁹ largely because of overly broad provisions. While Kenya’s High Court suspended some of the provisions in the original act just before the amendments passed, Human Rights Watch reported concerns that provisions such as those to criminalize phishing through calls or email could be used to criminalize dissenting citizens’ direct communication with elected officials.³⁷⁶⁰

Public Participation

Kenya has made significant strides in establishing a systematic process to engage stakeholders in meaningful participation in policymaking through the public consultation portal of the Communications Authority (CA).³⁷⁶¹ Kenya also hosts conferences and workshops to encourage multistakeholder engagements to define AI strategy and policy. Most documents related to Kenya’s AI policies, such as the National Digital Master Plan 2022–2032, are publicly accessible. However, some earlier documents, such as the Distributed Ledgers Technology and AI Taskforce report, that were previously available on government websites are no longer accessible, perhaps because of a reorganization and renaming of the Ministry of Information Communications and Digital Economy in 2022.

The Ministry of Information, Communication and the Digital Economy (MICDE) in partnership with the German Corporation for International Cooperation (GIZ) has organized a series of stakeholder consultations to gather input from

government, academia, civil society, and industry to develop a National AI Strategy.³⁷⁶² The launch of the National AI Strategy Development Process in Nairobi in April 2024 brought together more than 70 participants from government, academia, industry, and civil society to discuss critical issues such as data governance, legal frameworks, and privacy policies.³⁷⁶³ This discussion stressed the importance of balancing innovation with ethical concerns, focusing on transparency, accountability, and digital rights.³⁷⁶⁴

In a 2023 consultation, the CA invited comments from all stakeholders for the development of the Framework for a Regulatory Sandbox.³⁷⁶⁵ The regulatory sandbox is an alternative regulatory tool that allows CA to access testing in a controlled environment of new and emerging technology products and services and provides relevant information for understanding the evolution of technology.³⁷⁶⁶

Data Protection

Kenya continues to refine its approach to data protection in the context of AI and digital technologies. Kenya enacted the Data Protection Act (DPA) in November 2019,³⁷⁶⁷ establishing protections for personal data and reaffirming the right to privacy. The DPA gives effect to Article 31(c) and (d) of the Constitution,³⁷⁶⁸ which establish the right to privacy, regulate the processing of personal data, provide for data subjects' rights, and create obligations for data controllers and processors. The DPA contains principles of data protection that relate to the fair, transparent processing of personal data (Section 25), the right to erasure and rectification (Section 34, 40), and rights related to automated decision-making (Section 35).³⁷⁶⁹

Center for AI and Digital Policy

The DPA applies to both government and private entities handling personal data, including the large datasets used for AI training and decision-making.³⁷⁷⁰

Pursuant to the DPA, the Office of the Data Protection Commissioner (ODPC) was established in 2020, to oversee the Data Protection Act. The ODPC Strategic Plan 2025–2029 outlines strategic priorities to strengthen data protection, regulatory frameworks, and AI privacy compliance in Kenya.³⁷⁷¹

In 2022, the ODPC became a member of the Global Privacy Assembly (GPA).³⁷⁷² Kenya's ODPC has not endorsed the GPA 2018 Declaration on Ethics and Data Protection,³⁷⁷³ 2020 Resolution on Accountability in the Development and Use of AI,³⁷⁷⁴ 2022 Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology,³⁷⁷⁵ or 2023 Resolution on Generative AI.³⁷⁷⁶ However, the Global Privacy Assembly recognized Kenya's advancements in data protection at the September 2025 meeting, awarding the ODPC four awards for excellence in dispute resolution, enforcement, education, and innovation.³⁷⁷⁷ Additionally, Kenya has been selected to host the 2027 Global Privacy Assembly in Nairobi.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Kenya has not yet signed or ratified³⁷⁷⁸ the AU Convention on Cyber Security and Personal Data Protection (Malabo Convention).³⁷⁷⁹ However, the government has responded to calls to sign and ratify the Convention amid concerns surrounding data localization requirements and cross-border data transfer that would require reciprocity with Malabo signatories.³⁷⁸⁰ The ODPC initiated broad stakeholder consultations on the accession process in 2025.³⁷⁸¹ This move aligns with the National AI Strategy's strong emphasis on data sovereignty and regional data governance harmonization.

Algorithmic Transparency

Kenya has not explicitly established a right to algorithmic transparency in legislation. However, the DPA includes provisions related to algorithmic transparency, such as granting individuals rights over their personal data, including the right to access and correct their data. The DPA also requires the data controller or data processor to notify the data subject in writing that a decision has been taken based solely on automated processing.³⁷⁸² Further, Section 22 requires that a data controller or data processor shall not only “inform a data subject when engaging in processing based on automated individual decision making” but also “provide meaningful information about the logic involved.”³⁷⁸³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI Oversight

The Ministry of Information, Communications, and the Digital Economy (MICDE) is primarily responsible for overseeing AI development and policy.³⁷⁸⁴ The Ministry initiatives led to the development of Kenya's National AI Strategy with support from partners like GIZ and UNESCO to guide the ethical adoption and implementation of AI across critical sectors including education, financial services, agriculture, healthcare, and governance.

The National Communications Authority (CA) and the Office of the Data Protection Commissioner (ODPC) are also actively involved in the regulation of aspects of AI such as data privacy and security.³⁷⁸⁵ The CA plays a critical role in ensuring that AI-related advancements align with national goals, including infrastructure development and cybersecurity, while protecting digital rights. The ODPC ensures compliance and enforcement of data protection obligations.

The Kenya Robotics and Artificial Intelligence Society Bill,³⁷⁸⁶ which was proposed to the Parliament in 2023 and debated in 2024, would introduce a regulatory body, the Kenya Robotics and Artificial Intelligence Society, to set standards for AI and robotics development and ensure compliance. However, tech experts testified before the National Assembly ICT Committee that the initiative oversimplifies the complexities of AI roles and imposes impractical requirements, such as mandatory membership for AI professionals.³⁷⁸⁷

AI in Education

Kenya was one of 49 countries subject of a study by Human Rights Watch about the use of government-endorsed or government-built Ed Tech tools for online learning during the COVID-19 pandemic.³⁷⁸⁸ The findings show that Kenya Education Cloud, a platform used by the Ministry of Education to deliver online education to primary and secondary students, shared children's data with AdTech

Center for AI and Digital Policy

companies. The platform contained ad trackers that sent data about users to third-party companies to target ads across the internet.³⁷⁸⁹ The Office of the Data Protection Commissioner has since published a guidance note that highlights duties for public and private providers in handling data, such as DPIAs, children's rights and transparency notices related to data protection in the education sector.³⁷⁹⁰

The Kenya Ministry of Education planned to implement automated decision-making in admission decisions.³⁷⁹¹ In response to the public outcry, the Ministry explained the factors underlying the model, including the reliance on criteria of merit, equity, choice, category of school, and school capacity. Reports about the outcomes of the model are forthcoming. A previous process of quotas in the Form One selection in Kenya led to complaints by parents who argued discrimination in 2012.³⁷⁹²

Biometrics

Kenya's policies on biometrics are part of its broader efforts to modernize identification systems and enhance security. The country has initiated the National Integrated Identity Management System (NIIMS) introduced through changes made to the Registration of Persons Miscellaneous Amendment Bill that entered into force in 2019. The system was intended to create and operate a national population register as a single source of information about Kenyan citizens and foreigners in the country.³⁷⁹³ This system collected biometric data, including fingerprints and facial images, to facilitate access to government services and initiatives such as digital driving licenses and e-passport systems.

The Kenyan government started an upgrade of the medical records system in 2015 in a bid to stop health insurance fraud in Kenya's Hospital Insurance Fund (NHIF). The NHIF has 6.7M members, serving a population of 48M. The government started the biometric registration of civil servants and security officers

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

to migrate the system to smart cards.³⁷⁹⁴ The government deployed biometric kits to 1,370 hospitals in 2018.

In 2018, the biometric plan included the registration of students into a health insurance plan nationwide and the registration of newborns.³⁷⁹⁵ The infant biometrics plan emerged from the need of the country to ensure that kids of HIV-affected mothers returned to the hospitals for treatment. UC San Diego conducted fundamental research on fingerprinting engineering.

Kenya biometric ID system Huduma Namba went live in 2019 amid allegations of insufficient protections for privacy rights and challenges by digital rights groups. The Kenyan High Court ruled in 2020 that the government must implement comprehensive data protection measures before fully operationalizing the system.³⁷⁹⁶ After the court's decision in 2021, Huduma Bill was sponsored in the National Assembly by the Leader of Majority. However, the Bill has remained in Parliament. The Cabinet Secretary for ICT at the time asserted that the project "ran into trouble because of inadequate sensitization and a lack of trust in the system by a vast majority of citizens."³⁷⁹⁷

Kenya is set to revamp the ID scheme as part of the digitization efforts of the country. The Cabinet Secretary for Information, Communication, and Digital Economy announced the plans to replace the controversial Huduma Namba with a new digital identity known as the Maisha Namba in February 2024.³⁷⁹⁸ The online identification will have a centralized database that will connect with the National Information Management System (NIIMS). The system will contain a comprehensive set of data held by the government to facilitate access to public services, and also to be linked to the birth-to-death Unique Personal Identifier

³⁷⁹⁸ Chris Burt, *Kenyan government seeks to differentiate new national digital ID from Huduma Namba*, Biometric Update (Feb 24, 2023), <https://www.biometricupdate.com/202302/kenyan-government-seeks-to-differentiate-new-national-digital-id-from-huduma-namba>

(UPI).³⁷⁹⁹ The plans include the assignment of a number to the newborn that will remain as the identifier at school and as the National Identity number, social security number, and death certificate number.

Despite the legal framework, concerns remain about data security, potential misuse of biometric data, and the inclusivity of the NIIMS system.³⁸⁰⁰ Critics argue that marginalized groups may face barriers in accessing the system, potentially exacerbating existing inequalities.³⁸⁰¹ Most recently, the Cabinet Secretary of the Ministry of Interior and National Administration also announced the issuance of biometric passports, which were launched in 2022. Citizenship and Residency documents with advanced features of third-generation security will be part of this innovation to the immigration process.

Facial Recognition

Kenya's policies on facial recognition are evolving. Currently there are no laws in Kenya that specifically address the challenges associated with the misuse of facial recognition technology. Nor are there laws aimed at regulating the adoption and use of facial recognition or even traditional CCTV systems more broadly.³⁸⁰² However, existing laws, like the Data Protection Act, have been applied.

The Kenyan National Police Service (NPS) launched facial recognition on major roads and highways through an urban CCTV network in 2018.³⁸⁰³ This system called Integrated Command and Control system (ICCS) relied on CCTV cameras to do Automatic Number Plate Recognition (ANPR) to detect vehicles involved in crimes as part of the Critical Incident Management suite (CIMS).

The NPS partnered with a Japanese firm to install an upgrade of the ICCS, to “help in fast and accurate identification of suspects.”³⁸⁰⁴ The NPS Plans include using

Center for AI and Digital Policy

the Neo Face as an alternative when law enforcement cannot identify a suspect using fingerprints.

Lethal Autonomous Weapons

Kenya supports a legally binding instrument on autonomous weapons and has voted in favor of UN resolutions toward that end.³⁸⁰⁵ Kenya is part of the African Group and Non-Aligned Movement. Kenya reiterated the position to “act quickly to establish a robust international regulatory framework that would ensure such technological advancements [as AI and LAWS] serve to protect humanity, rather than diminish its values.”³⁸⁰⁶ Kenya is actively shaping operational norms for military AI. Kenya engaged in the 2024 Responsible Artificial Intelligence in the Military Domain (REAM) summit in Seoul and contributed to the non-binding REAIM “Blueprint for Action.”³⁸⁰⁷ The Blueprint outlines ethical guidelines for AI use in military settings, emphasizing transparency, accountability, and human oversight.³⁸⁰⁸ While not binding, Kenya’s endorsement aligns with its previously stated position supporting international regulation of autonomous weapons.

Environmental Impact of AI

Kenya’s National AI Strategy explicitly embeds sustainability, with the prioritization of enhancing green infrastructure and balancing AI development with environmentally sustainable AI systems.³⁸⁰⁹ Kenya aims to align its AI advancements with sustainability objectives by investing in energy-efficient infrastructure and promoting AI applications that support environmental goals such as precision agriculture. Additionally, sustainable developments can be seen by aligning the

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Kenya Cloud Policy³⁸¹⁰ with the National AI Strategy. The cloud policy encourages investment in green cloud infrastructure, thus accelerating the adoption of low-carbon AI infrastructure.

AI Literacy

Kenya has made meaningful progress in laying the foundations for AI literacy, though substantial gaps persist. The Digital Skills pillar of the Kenya National Digital Master Plan 2022–2032 commits to developing “a digitally skilled workforce that is grounded on ethical practices and socio-cultural values.”³⁸¹¹ The government has also expanded programs to equip learners, public servants, and private-sector actors with AI and data competencies.

The Africa Centre of Competence for Digital and Artificial Intelligence Skilling at the Kenya School of Government (KSG), developed in partnership with the Ministry of Information, Communications and the Digital Economy (MICDE), UNDP, and Microsoft,³⁸¹² delivers modular training in AI, data science, cybersecurity and digital skills to public servants across Africa. The program supports ethical and human-centered digital transformation in government. In parallel, the 2025 launch of a flagship Massive Open Online Course (MOOC) for civil servants jointly developed by UNESCO, the University of Oxford, and KSG under the DigiKen initiative—Digital Platforms Kenya—demonstrates growing institutional commitment to scaling AI literacy across government.³⁸¹³

Kenya is engaging with programs to embed AI and coding literacy among younger learners, too. The first phase of the UNESCO–CODEMAO Youth Coding Initiative (2022–2024) trained students and teachers in foundational AI and coding tools. The second phase (2025–2030) aims to expand reach to underserved counties.³⁸¹⁴ However, infrastructure and access remain uneven: UNESCO reports that only 17% of Kenya’s rural population has access to reliable internet compared to 44% in urban areas, and that women’s utilization of advanced digital services

³⁸¹⁰ Ministry of ICT and the Digital Economy (MICDE), *Kenya Cloud Policy* (Dec. 2024), <https://ict.go.ke/sites/default/files/2024-12/Kenya%20Cloud%20Policy%20-%202024.pdf>

stands at 35% versus 54% for men.³⁸¹⁵ Expanding AI literacy must reach underserved groups to ensure inclusive participation in the emerging AI economy. Ensuring that AI literacy programs incorporate ethical, rights-based, and algorithmic-transparency components will further support Kenya's overall governance of AI and align with its broader human-centered AI ambitions.³⁸¹⁶

Human Rights

According to Freedom House, Kenya is “Partly Free” with a score of 51/100 for political rights and civil liberties.³⁸¹⁷ The country's media and civil society sectors are vibrant, even as journalists and human rights defenders remain vulnerable to restrictive laws and intimidation. Concerns exist about the government's interference with the right to privacy of individuals and the frequent use of cybercrime laws to crack down on online critics of the government. The Ibrahim Index of African Governance in 2024 scores Kenya at 60.3/100 for overall governance, and 63.8/100 in Participation Rights & Inclusion, placing the country in position 10 out of 54 countries.³⁸¹⁸

Kenya's Constitution contains the Bill of Rights under Chapter 4 with a catalog of fundamental civil and political rights and socio-economic and cultural rights. These rights include Freedom and security of the person, right to Privacy, Freedom of expression, Freedom of the media, right to access to information, and right to dignity.³⁸¹⁹ Kenya's Human Rights Commission has an oversight mandate on human rights protection and promotion.

Kenya is a signatory to various regional and international human rights treaties and conventions including the African Charter on Human and Peoples Rights, the International Convention on Civil and Political Rights (ICCPR), and the International Covenant on Economic, Social and Cultural Rights (ICESCR).

Center for AI and Digital Policy

AI Safety Summit

Kenya participated in the first AI Safety Summit and endorsed the Bletchley Declaration in 2023.³⁸²⁰ Kenya thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.”

At the second safety summit, the AI Seoul Summit, Kenya and other participants signed a Statement of Intent to cooperate on AI Safety Science. Kenya’s Special Envoy for Technology attended the first International Network of AI Safety Institutes in San Francisco in November 2024.³⁸²¹

Conversations about synthetic content, managing risks, and global governance continued at the third summit, the AI Action Summit in Paris in February 2025. Representatives defined a shift in focus “to develop technical solutions that are open and accessible to all” and reiterated a commitment to “Ensuring the development of trusted, safe and secure AI to benefit of all.”³⁸²²

OECD / G20 AI Principles

Kenya is not a member of the OECD and has not endorsed the OECD AI principles.³⁸²³ Many of Kenya’s initiatives in digital transformation and AI align with OECD AI principles. Research and development center on fulfilling the Sustainable Development Goals. Kenya’s AI strategies, initiatives, and policies such as AI Use Case in the Public Sector; Blockchain and AI Task Force; Emerging Digital Technologies for Kenya Exploration and Analysis; Kenya’s Digital Economy Blueprint; Kenya’s Digital Economy Strategy; and Kenya’s Digital Literacy Program (Digischool) align with OECD principles such as inclusive growth, sustainable development, and well-being and capacity-building.³⁸²⁴

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Council of Europe AI Treaty

Kenya has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law, the first legally binding international treaty on AI.³⁸²⁵

UNESCO Recommendation on AI Ethics

Kenya is a UNESCO member state since 1964,³⁸²⁶ and was one of the 193 member states that adopted the Recommendation on the Ethics of Artificial Intelligence in November 2021.³⁸²⁷

According to the UNESCO AI Needs Assessment Survey in Africa, Kenya has been active in initiatives to improve participation through improvements in internet access under the Rights, Openness, Accessibility, and Multi-stakeholder participation. The report does not include information about Kenya's progress in strategies, policies, legislations, ethical guidelines, centers of excellence on AI, start-up, and incubation centers.³⁸²⁸

The Government of Kenya has collaborated with UNESCO in organizing and participating in the Eastern Africa Sub-Regional Forum on Artificial Intelligence. Kenya hosted the 2024 forum under the theme of Harnessing Artificial Intelligence for Sustainable Development in June.³⁸²⁹

Kenya completed the UNESCO Readiness Assessment Methodology (RAM) in 2024.³⁸³⁰ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.³⁸³¹ The RAM report commends Kenya's strong legal framework and multistakeholder consultation process in developing the AI and digital economy strategies. The report notes challenges in Kenya's public investment

in research and development and disparities in access to digital services across gender and rural-urban divides.³⁸³²

Evaluation

Kenya is stepping up its efforts in establishing a comprehensive framework for digital policies in line with developments in the African Union. Kenya has updated its data protection legal regime, created an independent data protection commission, and progressed on the right to algorithmic transparency. Kenya is yet to adopt a national AI policy that reflects the commitment it took by endorsing the UNESCO Recommendation on the Ethics of AI. However, partnerships with organizations like GIZ and UNESCO illustrate a commitment to ethical AI use, particularly through initiatives like FAIR Forward, which focuses on inclusive AI development. Despite this alignment, Kenya's lack of formal endorsement and absence of a dedicated regulatory body for AI limits the full integration of OECD standards or the push for the ratification of the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, particularly in algorithmic transparency and accountability. Due to budgetary constraints, Kenya may need to consider whether to expand the mandate of the Office of the Data Protection Commissioner to also encompass regulation of AI or create an independent AI regulatory body. Serious concerns also exist about practices akin to AI-powered mass surveillance.

³⁸³² UNESCO Global AI Ethics and Governance Observatory, *Country Profiles: Kenya* (2026), <https://www.unesco.org/ethics-ai/en/kenya>

Kuwait

In 2025, Kuwait mandated AI curriculum for 10th graders and initiated AI and cybersecurity training for public-sector employees. The country's 2025 Freedom House ranking fell significantly following the Amir's dissolution of Parliament and constitutional articles requiring elections.

National AI Strategy

Kuwait's focus on the diversification of its oil-based economy is the basis of the Kuwait Vision 2035 New Kuwait,³⁸³³ the country's National Development Plan requiring investment in R&D propelled by industry, government, and academia. Kuwait released the draft National AI Strategy 2025–2028 in 2024 in line with the Vision 2035. The strategy remains publicly available in draft form with 2025 representing the launch and pilot phase of the strategy.³⁸³⁴

The National AI Strategy 2025–2028 document outlines strategic objectives for the Government to advance toward the AI goals defined under the Vision 2035. The Strategy combines the pillars of the vision with a roadmap for AI, envisioning Kuwait's global positioning, sustainable living, effective public administration, creative human capital, developed infrastructure, sustainable diversified economy, and high-quality healthcare as keys to harnessing AI “for the benefit of its citizens and the nation as a whole.”³⁸³⁵ The National AI Strategy stresses the importance of “transparency, accessibility and user-friendliness” to the objective of transforming public services.³⁸³⁶ The Strategy defines Advancing Responsible AI as the first step in the roadmap, building the development of AI on “Ensuring AI is developed and deployed responsibly within Kuwait is a critical piece of the AI puzzle.” The Government notes policy and regulatory tools to ensure responsible AI governance.³⁸³⁷

Launched in 2017, the New Kuwait Development Plan aims to transform the country into a financial and commercial hub for the region. The plan is aligned with the UN Sustainable Development Goals 2030 and more particularly the objective of

³⁸³³ Ministry of Foreign Affairs, *Kuwait Vision 2035 “New Kuwait”* (2025), <https://www.mofa.gov.kw/en/pages/kuwait-vision-2035>

Center for AI and Digital Policy

“consolidating the values of society, preserving its identity, as well as achieving justice, political participation and freedoms.”³⁸³⁸ The seven pillars of the Kuwait Vision 2035 are:³⁸³⁹ (1) public administration (2) economy (3) infrastructure (4) living environment, (5) healthcare, (6) human capital, and (7) global position. The public administration pillar has the objective of “reform[ing] administrative and bureaucratic practices to reinforce transparency, accountability and efficiency in the government.”

In the country’s first National Cyber Security Strategy (2017–2020), the State of Kuwait declares the objective to ensure that the strategy “preserves the fundamental rights, freedom and privacy of individuals and institutions.”³⁸⁴⁰ The strategy aims to create a cybersecurity environment that is safe and secure through the development of legislation that keeps pace with technology and aligns with international standards.³⁸⁴¹

Kuwait’s Communications and Information Technology Regulatory Authority (CITRA) declared the importance of adopting artificial intelligence³⁸⁴² and cloud computing techniques to achieve the New Kuwait 2035 objectives. Another government entity, the Central Agency for Information Technology (CAIT) has a key role in implementing a roadmap for government in digital transformation and announced the launch of the Massar strategy during the Smart Government Summit in May 2022.³⁸⁴³

Government entities such as CAIT are making concerted efforts to advance the digital transformation roadmap in Kuwait. In November 2022, CAIT hosted the Digital Transformation Kuwait Conference, to discuss digitization in government services and the pathway to the digital economy. The Deputy Director General of CAIT expressed the need for “cooperation between government and private sector to build, an advanced digital economy coupled with a flexible legislative system that

dedicates uniformity to the sector's cybersecurity policies, guidelines and strategies."³⁸⁴⁴

Regional AI Governance

As a member State of the Digital Cooperation Organization (DCO), Kuwait endorsed the Riyadh AI Call for Action (RAICA) Declaration "aimed at advancing the DCO's commitment to identifying and addressing present, emerging and future humanitarian issues in the field of AI."³⁸⁴⁵ RAICA was launched during the Global AI Summit of 2022³⁸⁴⁶ and established a commitment to developing AI technology that benefits people, communities, and countries.

In October 2023, Attorneys General from member states of the Gulf Cooperation Council, including Kuwait, approved a unified guiding document for uses of AI in public prosecution.³⁸⁴⁷ This document is based on ten principles including justice, fairness, transparency, interpretability, security, human values, sustainability, and privacy.³⁸⁴⁸

In 2025, Kuwait's Association of Artificial Intelligence of Things and Saudi Arabia's Artificial Intelligence Governance Association signed a strategic memorandum of understanding³⁸⁴⁹ to share expertise and collaborate on governance standards and research on AI of Things. Kuwait presided over the 5th General Assembly of the Digital Cooperation Organization (DCO) in 2026. The outcome document, Kuwait Declaration on Responsible AI for Global Digital Prosperity,

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

reaffirmed commitments to ethical AI governance, addressing risks of inequality, bias, privacy, and security in AI systems.³⁸⁵⁰

Public Participation

The Kuwait Government's online platform is the channel of communication of the government with the society, providing information about laws and regulations and increasing awareness of information technology.³⁸⁵¹ The platform includes a list of government entities using e-services with channels for consultation. Kuwait is yet to have a mechanism to engage civil society in AI policymaking.

The Kuwait Vision Engagement Program 2035 (برنامج المشاركة لرؤية الكويت) included a mechanism providing an opportunity for the society to provide input in the formulation of the New Kuwait document.³⁸⁵² Individuals, government organizations, private companies, NGOs, or volunteers were able to submit their interest in various roles, such as ambassadors, pledgers, enablers, innovators, spreaders, and entrepreneurs.

The Kuwaiti Government produced the Country Engagement Framework (CEF) as part of the Third Kuwait National Development Plan (KNDP-3) within the New Kuwait 2035 Vision. This policy framework, produced in consultation with stakeholders and with the support of the World Bank,³⁸⁵³ reflected the analysis of issues and challenges regarding the seven pillars of Vision 2035.

On the civil society front, the Kuwait Transparency Society, a non-profit organization in Kuwait, participated in drafting the executive regulations of the "Right of Access to Information Law" passed in November 2021.³⁸⁵⁴ The focus group included a team of governmental experts to improve the final format of the regulations in line with international experiences.³⁸⁵⁵ The Society monitors the

regulations implementation and trains government agencies in implementing the law in line with transparency and anti-corruption standards.

Kuwait has embraced e-government plans, to enhance transparency and decentralization of public services, to minimize the control of government officials on operations.³⁸⁵⁶ This is still work in progress, as reported by the Bertelsmann Foundation country report,³⁸⁵⁷ which by 2024 ranked Kuwait 55 of 137 countries, substantially lower than in previous years, with low scores in “Rule of Law” and “political participation.” The draft National AI Strategy 2025–2028 identifies AI-driven government services as a national project priority, with citizen engagement cited as a key objective of digital transformation.³⁸⁵⁸

Data Protection

Kuwait's Constitution protects the right to privacy. Article 39 reads: “Freedom of postal, telegraphic, and telephone correspondence is maintained, and secrecy is ensured.” Messages may not be monitored unless required by law and only in compliance with established processes.³⁸⁵⁹

Kuwait lacks a dedicated personal data protection legislation and a data protection supervisory entity.³⁸⁶⁰ Two government entities: CITRA and CAIT, are responsible for the regulation and governance respectively, of information technology services in the country. CITRA³⁸⁶¹ is the Communication & Information Regulatory Authority, responsible for regulating, supervising, and monitoring the telecommunication sector of Kuwait and protecting the interest of users.³⁸⁶² CAIT is the Central Agency for Information Technology, responsible for IT governance.³⁸⁶³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

CITRA has made efforts to provide governance and regulation to the technology sector, through Decision No. 42 of 2021 on Data Privacy Protection Regulation (DPPR)³⁸⁶⁴ and the Cybersecurity strategy.³⁸⁶⁵ The DPPR describes data protection obligations on Telecommunication Services Providers and associated industrial sectors in terms of data collection, storage, processing, and transfer.³⁸⁶⁶ Human-centered values and fairness may be inferred from the DPPR mandate to “respect the rights and freedoms of natural and legal persons,”³⁸⁶⁷ setting provisions against the harmful use of personal data by third parties. Penalties are also established in case of violations of these rights.

Kuwait updated the Data Privacy Protection Regulation in 2024.³⁸⁶⁸ CITRA also repealed the Data Classification Policy under Decision No. 34 of 2024, which previously classified data into four distinct levels to provide guidance to entities that process, store, and transfer data.³⁸⁶⁹ The DPPR governs the collection and processing of personal data via Service Providers of Communication and Information Technology Services (CIT Service) in the public and private sectors.³⁸⁷⁰ CIT Services include public telecommunications networks, the operation of a website, smart application, or cloud computing services, by any natural or legal person.

The 2014 Law on Electronic Transactions includes privacy safeguards for privacy and data protection of civil, commercial, and administrative transactions, controlling electronic records, signatures, transactions, messages, and documents relating to these activities, but no specific mention to safeguards on interactions with AI-powered systems.³⁸⁷¹

The Law No. 63 of 2015 related to Combating Information Technology Crimes (Cyber Crime Law) regulates acts performed using an “information network”

or “information technology.”³⁸⁷² Punishable under this law are hacking computer systems, accessing personal data without authorization, fraud, posting pornography, and engaging in human trafficking over the Internet. Articles 6 and 7 extend bans on print publications to online sharing of information, including online journalism and private use of social media and blogs.³⁸⁷³

The Cyber Crime Law, enforced since 2016, faced criticism for permitting restrictions on Internet-based speech.³⁸⁷⁴ Nothing in the Cybercrime law precludes police from utilizing these criteria to monitor private communications on Twitter, Facebook, and other social media platforms and mobile phone apps. An analysis by the Council of Europe (CoE) of the Cybercrime Law No 63 and Law No 20 of 2014 on Electronic Transactions found several areas of misalignment with the Budapest Convention.³⁸⁷⁵ This development contrasts with the original objectives of the National Cybersecurity Strategy of 2017-2020 that made “fundamental rights, freedom and privacy of individuals and institutions” a priority.³⁸⁷⁶

In January 2022, the Kuwaiti government announced a Cyber Security Bill to amend Law No. 63 of 2015 and established the National Center of Cybersecurity.³⁸⁷⁷ In a statement to the United Nations General Assembly in October 2022, the Kuwaiti Diplomatic attaché stressed the importance of the Cybersecurity Strategy 2017-2020 to “protect vital national and informational infrastructure and assets.”³⁸⁷⁸

Algorithmic Transparency

Kuwait has not enacted algorithmic transparency in law but the DPPR³⁸⁷⁹ requires providers to ensure transparency throughout collection and data processing. Yet, the DPPR does not include articles addressing automated decision-making,

explainability, or AI-related transparency. The Kuwait National AI Strategy 2025–2028 commits to ensuring the traceability and explainability of AI decisions and establishing mechanisms to detect and mitigate algorithmic bias.³⁸⁸⁰

Biometric Identification

Kuwait's efforts in digital government started in the early 2000s, following the GCC's decision to create electronic ID schemes for residents across the region. Kuwait launched the ID card program and eGovernment services in 2009. By 2012, Kuwait Ministry of Interior set up a biometric system in all land, sea, and airports, to track wanted individuals attempting to enter illegally to the country, and in 2016, launched a new e-passport system to combat forgery in immigration ports.³⁸⁸¹

The Kuwaiti government launched the new Digital ID card in April 2020, entrusting the project's management to the Public Authority for Civil Information (PACI).³⁸⁸² The new Civil ID card would become the primary way of verifying the digital identity of all Kuwaiti citizens and residents and replace the physical card. The Civil ID was a crucial component in streamlining administrative operations to support Kuwait's comprehensive digital government project, aimed to change the way citizens and residents receive government services.

The new Civil ID card has a microprocessor that can store massive information, including digital certificates in a secure environment, allowing the use of electronic authentication and digital signatures.³⁸⁸³ ID verification takes place through mobile and QR codes, with the aid of a bot. A feature of the 'credential wallet' hosts driver's licenses, birth certificates, and other documentation. During COVID-19 the Civil ID app was also used for registration of the status and doses of vaccination.³⁸⁸⁴

Effective March 1, 2024, Kuwait's Ministry of Interior made biometric fingerprinting mandatory for all citizens, residents, and GCC nationals aged 18 and above, requiring enrollment in a central biometric database.³⁸⁸⁵ Foreign nationals

who did not comply with the December 30, 2024, deadline faced restrictions including travel bans and suspension of residency, banking, and employment transactions. The Kuwait government is also set to use DNA and biometric information to inform decisions about granting, confirming, or revoking citizenship.³⁸⁸⁶ Ministerial Resolution No. 678 of 2025 establishes the regulatory framework for this process.³⁸⁸⁷

The Ministry of Education (MoE) announced the approval by the Audit Bureau in January 2023 of the implementation of a fingerprint system to track the attendance of teachers and school workers in government schools.³⁸⁸⁸ Earlier, in 2019, the MoE had plans for implementing a fingerprint system for attendance in 900 public schools, to include students and teachers, “without any gender discrimination” to strengthen safety measures.³⁸⁸⁹ The compulsory biometric attendance began in the academic year 2023–2024, and is considered by MoE as a necessary action to “end the case of neglect by some teachers and school administration and preventing tampering with records.”³⁸⁹⁰ In January 2025, the MoE launched a smartphone application to record biometric attendance of employees and students.³⁸⁹¹

Facial Recognition

Facial recognition mechanisms were in the plans of Kuwait Civil Aviation in 2019,³⁸⁹² but were placed “under revision” by Yousef Al-Fouzan, Director General at Kuwait’s Directorate-General for Civil Aviation (DGCA). The system was

designed to locate passengers' whereabouts "at all times" to offer "better airport services." As of 2025, facial recognition has been approved and made mandatory for employees at Kuwait's DGCA for the purpose of attendance tracking, marking a shift away from fingerprint authentication formerly used in workforce management.³⁸⁹³

Kuwait's Ministry of Human Resources and Information Technology Sector unveiled smart security patrol vehicles equipped with mobile cameras for facial and license plate recognition, connected directly to the ministry's central database and incorporating AI for real-time image processing and analysis.³⁸⁹⁴

The Ministry of Interior of Kuwait rejected categorically allegations of mass surveillance practices to monitor citizens' accounts on social media in 2020.³⁸⁹⁵ The Minister set up an investigation committee to pursue fake accounts that published leaked recordings of Kuwait's State Security. A study by Amnesty International 11 countries using data tracing apps for COVID-19, including Kuwait, found that the Shlonik app was among "the most alarming tools [...] carrying out live or near-live tracking of users' locations by frequently uploading GPS coordinates to a central server [...] far beyond what is justified in efforts to tackle COVID-19."³⁸⁹⁶ Conversely, a report by Privacy International in 2022, did not find Kuwait to use practices of surveillance in public spaces and use of facial recognition.³⁸⁹⁷

Kuwait began the mandatory collection of biometric data for citizens, residents, and GCC nationals aged 18 and above on March 1, 2024, achieving 98% compliance by November 2024.³⁸⁹⁸ On August 14, 2024, the Civil Service

Commission released Circular No. 9 requiring the use of biometrics to track employee attendance and confirm their location during working hours.³⁸⁹⁹

Following the national biometric registration campaign, Kuwait's General Administration of Customs implemented a multimodal biometric border control system incorporating facial recognition, fingerprint scanning, and iris identification, active at Kuwait International Airport and security centers across the country as of August 2024.³⁹⁰⁰

Smart Cities

The government of Kuwait has announced plans for Smart sustainable cities, in line with the New Kuwait 2035 Vision and the efforts towards the UN SDGs. The cities aim to improve urban efficiency, digital public services, and quality of life for residents.³⁹⁰¹ Kuwait's General Secretariat for the Supreme Council for Planning and Development (GSSCPD) and UNDP organized workshops in February 2020 to obtain input from public and private entities and civil society about good practices regarding the creation of eco-cities.³⁹⁰²

Kuwait signed the infrastructure contract in August 2024 for the South Saad Al-Abdullah City project, described as Kuwait's first smart city, covering 64 square kilometers and set to provide approximately 24,508 smart housing units.³⁹⁰³ The Public Authority of Housing and Welfare (PAHW) signed a MoU with China for the development of housing projects as part of a broader long-term strategic partnership.³⁹⁰⁴ As of November 2024, when Kuwait hosted the International

Center for AI and Digital Policy

Conference on Smart Management and Innovation for Sustainable Cities, PAHW reported six smart development projects in progress, aided by international partners from China and South Korea, as well as Microsoft.³⁹⁰⁵

Environmental Impact of AI

Kuwait's National AI Strategy envisions AI development in line with sustainable development goals. The Strategy identifies Energy as one sector where AI can drive advancements to “drive efficiency, foster innovation, and unlock new opportunities” in line with Kuwait's Vision 2035.³⁹⁰⁶ The Strategy identifies projects in energy to ensure adequate supply while promoting decarbonization.³⁹⁰⁷ However, the strategy does not address the energy or water demands of AI systems. Kuwait's sovereign wealth fund (KIA) joined Microsoft, MGX, BlackRock, and Global Infrastructure Partners in 2025 in a \$30 billion AI infrastructure partnership focused on developing sustainable, energy-efficient data centers.³⁹⁰⁸

Lethal Autonomous Weapons

Kuwait has been an active participant of the CCW GGE Group of Governmental Experts on Lethal Autonomous Weapons, yet the country has not banned their use.³⁹⁰⁹ Kuwait is one of 126 High-Contracting Parties in the Convention of Certain Conventional Weapons (CCW) and endorsed Protocol I (on Certain Conventional Weapons), Amendment II, Protocol III, IV, and V.³⁹¹⁰

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Kuwait, as part of the Non-Aligned Movement (NAM), expressed its position against lethal autonomous weapons systems during the UN General Assembly of 2015, due to the “moral, humanitarian, and legal challenges for the international community.”³⁹¹¹ The statement, presented during the Group of Governmental Experts on Emerging Technologies in the Area of Lethal Autonomous Weapons Systems Meeting in Geneva in 2022, calls for the negotiation of a “legally binding international instrument stipulating prohibitions and regulations on lethal autonomous weapons systems.”³⁹¹²

Kuwait participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands in February 2023. At the end of the Summit, Kuwait, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.³⁹¹³ States in the call “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”

In December 2023, Kuwait voted in support of UN General Assembly Resolution 78/241 on lethal autonomous weapons systems.³⁹¹⁴ In October 2024, Kuwait voted in favor of UN General Assembly First Committee Draft Resolution L.77,³⁹¹⁵ which addresses the negative consequences of autonomous weapon systems on global security and emphasizes the importance of human control in the use of force and compliance with international law.

AI Literacy

Kuwait's National AI Strategy 2025–2028 identifies digital literacy campaigns to educate the public and workforce development as key enablers of responsible AI adoption, emphasizing ethical awareness alongside technical

Center for AI and Digital Policy

skills.³⁹¹⁶ The Ministry of Education announced the inclusion of AI in the 10th grade computer curriculum beginning in the 2025–2026 academic year. The program covers core AI concepts, data literacy, and the ethical and social impact of AI use.³⁹¹⁷ The government also launched the Google Skilling Program to train public-sector employees in AI, cybersecurity, and cloud computing, led by the Minister of Communications, aimed at building capacity for responsible AI use in public service delivery.³⁹¹⁸ In October 2025, Microsoft hosted a national AI Summit in Kuwait to build AI skills across the public and private sectors.³⁹¹⁹

Human Rights

Kuwait is a signatory of the Universal Declaration of Human Rights.³⁹²⁰ Kuwait has ratified the International Covenant on Civil and Political Rights (ICCPR) or the International Covenant on Economic Social and Cultural Rights (ICESCR).³⁹²¹ When the ICCPR was first issued, Kuwait expressed reservations and observations³⁹²² about the requirements to protection against discrimination on the basis of religion or sex.

Freedom House downgraded Kuwait's status from "Partially Free" to "Not Free" with an aggregate score of 31/100 in 2025. Kuwait's political rights score fell to 7/40 following the Emir's dissolution of parliament and suspension of elections in 2024.³⁹²³ Amnesty International reported that Kuwait has areas to improve in relation

to protecting the rights of certain groups of non-citizens.³⁹²⁴ Human Rights Watch in 2024 reported that Kuwaiti authorities limit free speech and punish dissidents using sections in the penal code, national security, and cybercrime legislation, notably for remarks published on social media.³⁹²⁵

Kuwait's Diplomatic Attache Jana Al-Dhafiri's speech at the 23rd regular session of the Independent Permanent Human Rights Commission (IPHRC) of the Organization of Islamic Cooperation (OIC) stressed Kuwait's commitment to human rights in AI. Al-Dhafiri called for "extraordinary measures to bridge digital gaps and foster innovation, including creating a comprehensive global regulatory framework [...] to advance a free, open, and secure digital future centered on human rights."³⁹²⁶

Transparency International's 2024 Corruption Perception Index ranks Kuwait in 65th of 180 countries with a score of 46/100, signifying some level of corruption.³⁹²⁷ Kuwait has taken considerable steps in the past five years to fight corruption and establish key foundational policy instruments to improve the government's role in fighting corruption. Accordingly, the Kuwait Anti-Corruption Authority (NAZAHA) was set up as an independent public authority to combat corruption under Law No. 2 of 2016, including the development of the NAZAHA governance framework.

The Government of Kuwait supports and promotes the right of peoples to self-determination (Guideline # 2), as well as international and regional resolutions that uphold this right, on the understanding that it is a "fundamental right that cannot be suppressed by any means or under any circumstances."³⁹²⁸ The European Union and Kuwait held their fifth Human Rights Dialogue in Kuwait City on December 3, 2024, covering topics including labor rights, digital rights, freedom of expression and assembly, and rule of law.³⁹²⁹ Kuwait's Public Authority for Anti-Corruption (Nazaha) formulated the Kuwait Integrity and Anti-Corruption strategy (KIACS)

UNESCO Recommendation on AI Ethics

Kuwait is a UNESCO member since 1960³⁹³⁷ and is one of the 193 member states endorsing the Recommendations on the Ethics of AI.³⁹³⁸ Kuwait had a leading position in this process, chairing the UNESCO Intergovernmental committee that approved the AI code of ethics in 2021.³⁹³⁹ The committee included 300 experts, 102 countries, and 49 observers. Ambassador Adam Al Mulla, Permanent Representative of Kuwait to UNESCO highlighted the importance of the UNESCO Recommendation as a negotiated effort to reach a framework of international and national policies “to ensure that Artificial Intelligence benefits society as a whole.”

UNESCO launched the Guidance for Policy Makers in the Gulf States with a forum to discuss AI policy with representatives from Kuwait and other five Arab states in 2021.³⁹⁴⁰ The UNESCO event was a key engagement in the region that aimed to “initiate the conversation on the possibility of developing national policies in AI.” Following this effort, in a 2022 statement, Kuwait University called all university units to activate the UNESCO recommendation in their current and future applications.³⁹⁴¹

Kuwait is an example in the Arab region of engagement in the promotion of the UNESCO Recommendations. Kuwait’s Ambassador Mr. Al Adam Al Mulla was elected Chair of the Group of Friends of the Implementation of the Recommendation on the Ethics of Artificial Intelligence in September 2022.³⁹⁴² The Group of Friends of the Implementation of the Recommendation on the Ethics of AI seeks to set a program that includes: 1) Elaboration of capacity-building tools and methodologies aligned to Policy action 1 for the Ethical Impact Assessment, Monitoring and Evaluation; 2) Global Forum on Ethics of Artificial Intelligence; 3) Establishment of the Global Observatory of AI Ethics; 4) Assisting Member States in building strong national institutions for promoting AI ethics; 5) Establishment, facilitation, and management of expert networks, such as the AI Ethics Experts without Borders (AIEB), Global Network of Knowledge Centers on Ethics of AI, Women on Ethical

AI Network (W4ethicalAI).³⁹⁴³ Ambassador Al Mulla reiterated the importance of UNESCO's role in enforcing AI ethics at the first high-level convening for AI held in Morocco in June 2024.³⁹⁴⁴

Kuwait has not initiated the Readiness Assessment Methodology (RAM).³⁹⁴⁵

Evaluation

Kuwait's formulation of the New Kuwait Vision 2035 harnesses efforts to lead in digital transformation. The country is in the early stages of policy formulation to support the adoption of responsible AI, with the draft National AI Strategy 2025–2028 published signaling progress. Practical implementation is yet to be demonstrated. Kuwait's engagement in UNESCO AI ethics processes, including chairing the committee that drafted the UNESCO Recommendation on AI Ethics and presiding over the DCO's adoption of the Kuwait Declaration on Responsible AI for Global Digital Prosperity in February 2026, are positive steps that need to be translated at the national level by the finalization and implementation of the national AI strategy.

Kuwait has a formalized system for public information and consultation, and this could be leveraged to promote participation in trustworthy AI policy formulation, though the May 2024 dissolution of the National Assembly has constrained the scope of public participation in policy formulation. Governance and oversight are areas of opportunity for growth for Kuwait. The modernization of Kuwait's data protection legal regime would also allow to ease concerns over surveillance practices happening in a legal vacuum, including the expanding use of biometric identification systems documented.

Lithuania

In 2025, Lithuania prepared guidelines and principles on the use of AI in schools and officially launched an AI Regulatory Sandbox. Lithuania also stressed the importance of developing and using AI in line with the principles of the UN Charter and international human rights laws at the UN Security Council High-Level debate.

National AI Strategy

The Ministry of Economy and Innovation released Lithuania's national AI strategy in 2019. The *Lithuanian Artificial Intelligence Strategy: A Vision of the Future* summarizes the key points from a Landscape Report on the status of AI in the country before defining six sections that align with the purpose “to modernize and expand the current AI ecosystem in Lithuania and ensure that the nation is ready for a future with AI.”³⁹⁴⁶ The sections correspond to key actions divided into policy recommendations defined by principles and mechanisms. The six sections are:

1. Ethical and legal core principles for the development and use of AI
2. Lithuania's position in the AI ecosystem
3. Integration of AI systems across all economic sectors
4. Development of skills and competencies
5. Growth of AI Research and Development
6. Approaching data responsibly and efficiently.

The ethical and legal core principles section identifies two components for Trustworthy AI: “1) Ethical purpose—it should respect fundamental rights, applicable regulation and principles and values and 2) it should be technically robust and reliable” to protection against unintentional harm.³⁹⁴⁷ Policy recommendations to realize Trustworthy AI center on four principles implemented through a series of mechanisms. The four policy recommendations center on:

- Developing mechanisms for public feedback to advise the public sector on ethical regulation and implementation, including establishing an AI ethics committee and recognizing AI literacy as a “new civic skill.”³⁹⁴⁸
- Creating and establishing trust in the rules, laws, and norms that govern AI, in part through regional and international cooperation.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

- Encouraging transparency and fairness in AI applications through support for research on minimizing bias, incentives for companies to uphold ethical standards, creation for an interdisciplinary AI center to promote discussions around ethics, and establishment of a “safeguarding mechanism that researchers would develop systems that are transparent and intrinsically capable of explaining the reasons for their results to users.”³⁹⁴⁹
- Encouraging ethics by design by creating a research and educational culture centered on this principle, in part by encouraging discussions on the ethical implications of technology from high school and beyond and developing “mediation capabilities to support vulnerable populations.”³⁹⁵⁰

Lithuania’s AI development activity plan 2023–2026³⁹⁵¹ issued in 2022 sets three main objectives: improve the conditions for the development of the AI ecosystem, increase the use of AI across both public and private sectors and create the necessary conditions for AI innovation.

As part of efforts implementing the national strategy, in 2024 the Ombudsman for Academic Ethics and Procedures of the Republic of Lithuania approved the Guidelines for the Ethical Use of Artificial Intelligence in Education and Research.³⁹⁵² The Guidelines focus on how to ensure the ethical use of AI technologies in education and research, addressing general principles and relations with open science, publication ethics, protection of intellectual property rights and consumers. “The guidelines provide information on [...] the integration of aspects of the ethical use of artificial intelligence into other relevant institutional policies governing studies and science”³⁹⁵³ while allowing institutions to define their systems and processing for evaluating and validating AI tools.

The AI strategy aligns with the National Digital Decade Strategic Roadmap approved in March 2024. The Roadmap summarizes the country’s progress in the context of the Digital Decade for Europe and sets out the actions and measures that

Center for AI and Digital Policy

will contribute to achieving the general objectives and digital targets.³⁹⁵⁴ Lithuania plans to make significant investments in various digitalization-related activities by 2030. The Roadmap for Lithuania consists of 4 chapters: Digital skills and ICT professionals; Secure, resilient, performant, and sustainable digital infrastructure; Digital transformation of businesses; and Digitalization of public services. Among the country's priorities, Lithuania is paying particular attention to the education system, with a major overhaul of primary and secondary school curricula to strengthen digital competences.³⁹⁵⁵

Nordic-Baltic Cooperation on AI

As for the international landscape, the Lithuanian minister responsible for digital development signed the 2018 declaration on “AI in the Nordic-Baltic region” establishing a collaborative framework on “developing ethical and transparent guidelines, standards, principles and values to guide when and how AI applications should be used” and “on the objective that infrastructure, hardware, software and data, all of which are central to the use of AI, are based on standards, enabling interoperability, privacy, security, trust, good usability, and portability.”³⁹⁵⁶

The ministerial declaration Digital North 2.0³⁹⁵⁷ builds on the common priorities of the Nordic-Baltic countries, and follows the previous ministerial declaration, Digital North 2017–2020. A council of ministers for digitalization (MR-DIGITAL) was established in 2017 with to promote regional development by: (1) Building a common area for cross-border digital services to increase mobility and integration, (2) Establishing a fair data economy for efficient sharing and re-use of data to drive innovation that promotes green economic growth and development, and (3) Promoting “Nordic-Baltic leadership in the EU/EEA and globally in a sustainable and inclusive digital transformation of our societies.”³⁹⁵⁸

The ministers for digitalization released another joint statement announcing a focus on digital inclusion, striving to implement measures to make digital services more accessible to all Lithuanian inhabitants and ensuring that those who do not

possess the necessary level of skills get the opportunity to acquire them in November 2021.³⁹⁵⁹

A common statement by the Nordic and Baltic ministers for digitalization in September 2022 reiterated their commitment to “ensuring that our region maintains its position as a leader in digitalisation, and that everyone in the region benefit from digitalisation regardless of age, wealth, education or level of digital skills” following the COVID-19 pandemic and the war in Ukraine. To maintain the trust citizens put in digital services from the public sector, the ministers noted “we need to continue our efforts to make our digital public services human centric and accessible. [...] Robust and secure digital services, safeguarding users' privacy and ensuring that personal data are stored and processed in a trustworthy way, are crucial to the citizens' sustained trust in digital services.”³⁹⁶⁰

EU Digital Services Act

As an EU member state, Lithuania shall apply the EU Digital Services Act (DSA).³⁹⁶¹ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation. The Communication Regulatory Authority (*Ryšiu Reguliavimo Tarnyba*, RRT) is an independent national agency to monitor and regulate Lithuania's digital connectivity markets in line with the European Union regulations, serving as the competent authority for the DSA.³⁹⁶² The authority also works on filter tools to mitigate online risks³⁹⁶³ and provide guidelines for being safe online.³⁹⁶⁴

EU AI Act

As an EU member State, Lithuania is bound by the EU AI Act.³⁹⁶⁵ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

The Ministry of Economy and Innovation submitted a series of amendments to the Lithuanian legislature in 2024 to speed up the development of AI in the country and to fulfill the country's obligations under the EU AI Act.³⁹⁶⁶ Parliament adopted the amendments in early 2025.³⁹⁶⁷ The amendments designate the Innovation Agency as the notifying authority under the Act, charging it to assess the compliance of private entities and research institutions seeking designation as Notified Bodies under the AI Act.³⁹⁶⁸ The amendments designate the Communications Regulatory Authority as the market surveillance authority and single point of contact.³⁹⁶⁹ The authority will oversee the safety and reliability of AI products and systems placed on the market.

The Ministry also launched a pilot artificial intelligence (AI) environment, or AI sandbox in 2024.³⁹⁷⁰ The Innovation Agency's launched the GovTech sandbox within the GovTech Lab Lithuania project as a pilot to scale up safe technology and develop new concepts and strategies within the public sector. Projects have included ITocracy, Constant Reshuffling, Digital protest, Encapsulated, Anti Ping pong, Health focus.³⁹⁷¹ Following Seimas (Parliament) approval of amendments to the Law

on Technology and Innovation in early 2025,³⁹⁷² the Innovation Agency launched the Artificial Intelligence (AI) Regulatory Sandbox with the first activities in September 2025.³⁹⁷³ The Sandbox allows real-world testing of AI products before market entry. The first activities of this measure will start in September 2025.

Public Participation

The national strategy was elaborated by the Ministry of Economy in consultation with an advisory group of “expert representatives from the private sector and academia.”³⁹⁷⁴ The national AI strategy highlighted public participation as one of the the principles shaping the Lithuanian AI ethical AI regulation and implementation with a view to promote the transparent and fair use of AI. However, the platform for consultations, e-Citizen (*e-pilietis*) shows no AI-related consultations.³⁹⁷⁵ The platform collects archives of past consultations that include consultation information, a summary of results, and where applicable, a summary of how the results will be used. Such archives exist for the cycle on the regulation of personal data protection in 2018³⁹⁷⁶ and the role of the digital transformation manager in 2023.³⁹⁷⁷

The AI development activity plan 2023–2026³⁹⁷⁸ provides for an action item dedicated to “activities for setting dialogue with the society on questions of ethical

AI and the social implications of the use of AI systems” (action item 1.5.3.). Yet the action committee in charge of the implementation of the AI development plan is to consult involved parties and NGOs, with the omission of the public at large (action item 1.5.1).

Data Protection

Since Lithuania is an EU Member State, the General Data Protection Regulation (GDPR)³⁹⁷⁹ is directly applicable in Lithuania and to Lithuanians. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens.”³⁹⁸⁰ The GDPR entered into force on May 24, 2016 and applies since May 2018. Lithuania’s Law on Legal Protection of Personal Data was amended in July 2018 to adapt to the requirements of the GDPR.³⁹⁸¹

Regarding the activities of law enforcement authorities, the Law on Legal Protection of Personal Data, Processed for the Purposes of Prevention, Investigation, Detection or Prosecution of Criminal Offences, or the Execution of Criminal Penalties, or National Security, or Defence³⁹⁸² transposed the EU Data Protection Law Enforcement Directive (LED). The LED protects data rights when personal data is used for law enforcement purposes, whether that data belongs to victims, witnesses, or suspects. The LED also prohibits of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.³⁹⁸³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

Lithuania is also a member of the Council of Europe and ratified³⁹⁸⁴ the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.³⁹⁸⁵

The State Data Protection Inspectorate³⁹⁸⁶ (Inspectorate, or *Valstybinė Dduomenų Apsaugos Inspekcija*, VDAI) is the main national supervisory authority in Lithuania. When data processing relates to journalistic, academic, artistic or literary expression, the Inspector of Journalist Ethics (Inspector)³⁹⁸⁷ has a similar mission to that of the Inspectorate. The Inspector while on duty cooperates with the Inspectorate to ensure compliance with the GDPR.

Amendments to the Law on Legal Protection of Personal Data, effective July 1, 2024, allow employers to process employees’ and job applicants’ criminal records under specific conditions, even if not previously provided for in the law.³⁹⁸⁸ Employers must evaluate their legitimate interest and publish a list of positions requiring a clean criminal record, alongside safeguards to protect data subject rights. The State Data Protection Inspectorate issued guidelines to help employers comply, and the European Data Protection Board issued Guidelines on Legitimate Interest in October 2024.³⁹⁸⁹ Additionally, the amendments impose stricter requirements for

criminal offences or the execution of criminal penalties, and on the free movement of such data, and repealing Council Framework Decision 2008/977/JHA, Article 11 (1) and (2) (Apr. 27, 2026), <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A02016L0680-20160504>

data subjects lodging complaints related to video surveillance, necessitating initial contact with the responsible entity before approaching the State Data Protection Inspectorate. Complaints to the Inspectorate must include proof of this initial contact. Other changes include extending the right to file complaints to non-profit organizations and enabling more efficient complaint handling, such as merging similar cases and extending the limitation period for administrative fines to three years.”

Despite being a member of the Global Privacy Assembly (GPA) since 2002, the State Data Inspectorate has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence;³⁹⁹⁰ the 2020 GPA Resolution on AI Accountability;³⁹⁹¹ the 2022 GPA Resolution on Facial Recognition Technology³⁹⁹² or the 2023 GPA Resolution on Generative AI.³⁹⁹³

Algorithmic Transparency

Lithuania is subject to the GDPR and Convention 108+. Lithuanians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.³⁹⁹⁴ They also have the right to contest a decision and seek rectification.

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems³⁹⁹⁵ specifically emphasizes requirements on transparency, accountability and effective remedies.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI Oversight

The State Data Protection Inspectorate (VDAI) issued an interim assessment and recommendations regarding the use of DeepSeek, an AI chatbot developed in China, due to concerns over personal data protection.³⁹⁹⁶ The Inspectorate advised caution when sharing personal or sensitive data with the application, citing transparency concerns about data storage and access by third parties outside the EU. VDAI is working with other European authorities to address these risks and ensure GDPR compliance for AI systems.

Environmental Impact of AI

Lithuania does not have specific legislation addressing the environmental impact of AI. However, the Environmental Impact Assessment Law requires screening and/or assessment for projects having an environmental impact.³⁹⁹⁷ The law does not specify data centers or energy consumption as targets for assessment, leaving a possible loophole in enforcement.

Lethal Autonomous Weapons

Lithuania was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”³⁹⁹⁸

Center for AI and Digital Policy

Lithuania voted in favor³⁹⁹⁹ of resolution L.56⁴⁰⁰⁰ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

Lithuania participated in the meeting of the Group of Governmental Experts on Emerging Technologies in the Area of Lethal Autonomous Weapons System in Geneva in 2024.⁴⁰⁰¹ After the meeting, Lithuania joined with Australia, Canada, Estonia, Japan, Latvia, Poland, the Republic of Korea, the United Kingdom, and the United States to submit a working paper suggesting draft articles aimed at regulating the development and use of Lethal Autonomous Weapon Systems in compliance with International Humanitarian Law principles.⁴⁰⁰²

Lithuania participated in the REAIM international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands in February 2023. At the end of the Summit, Lithuania endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain, stressing the “paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”⁴⁰⁰³ Lithuania also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁴⁰⁰⁴

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Lithuania also participated in the REAIM 2024 Summit in South Korea and endorsed the outcome document, *Blueprint for Action*.⁴⁰⁰⁵ The *Blueprint for Action* lays out action steps for implementing the principles defined in the REAIM 2023 joint call around responsible AI in the military domain and governance of AI in the military domain.

Lithuania's Ministry of National Defense and Artificial Intelligence (AI) Working Group of the Future Committee of the Seimas hosted a conference on the Use of Artificial Intelligence (AI) Solutions Now and in the Future of Defense in September 2024.⁴⁰⁰⁶ Rasa Petrauskienė, chairperson of the Working Group of the Seimas Future Committee described the significance of the conference: "Our country is standing at a historical turning point. This conference provides a unique opportunity for Lithuania to become a leading country in the formation of global AI policy in the defense sector. We have a chance not only to follow global trends but also to create them." Minister of National Defense Laurynas Kasčiūnas elaborated on the necessity to consider the implications of AI in defense proactively: "Every day we fight with the aggressor both in the physical and technological fields. AI has huge potential to transform the battlefield, or even decide the winner. Therefore, it is our responsibility, firstly, to understand how these technologies can help us stay one step ahead, and secondly, to ensure that they are used responsibly. This requires cooperation between technology developers, public and private sectors, the military, and public representatives. Only in this way will we be able to create innovative solutions and ensure a safer future for everyone."

AI Literacy

The national AI strategy integrated AI literacy as a new civil skill in 2019.⁴⁰⁰⁷ Lithuania's Ministry of Education, Science, and Sport (*Švietimo, Mokslo ir Sporto Ministerija*) developed principles and guidelines for the responsible use of AI tools in schools, *School in the Age of Artificial Intelligence (AI): Principles and Guidelines for Responsible Use*.⁴⁰⁰⁸ The guidance is designed to "help each school

to develop its own rules for the use of AI, although it is not compulsory to do so.”⁴⁰⁰⁹ The guidelines also address permitted AI tools aligned to the risk assessment criteria for the AI Act and specifies “it is forbidden to list an AI tool if it uses emotion recognition, biometric tracking, social ranking, etc., or if the tool is not declared data protection compliant.” Teachers ultimately decide if students may use an AI tool and how; guidelines require students to learn to tag AI-generated content.

Human Rights

Lithuania adopted the United Nations Declaration on Human Rights in 1998. As a member of the European Union and of the Council of Europe, Lithuania is committed to upholding the EU Charter of Fundamental Rights and the European Convention on Human Rights. According to the Freedom House 2025 Freedom in the World report, Lithuania is “Free” with a score of 89/100.⁴⁰¹⁰ The report describes Lithuania as a free and “democracy in which political rights and civil liberties are generally respected,” though women; LGBT+ people; and members of Romany, Jewish, Muslim, Russian, and Polish minorities as well as other groups experience discrimination and underrepresentation.

A 2020 Recommendation from the Council of Europe Committee of Ministers to Member States reaffirmed that member States “must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”⁴⁰¹¹

OECD / G20 AI Principles

Lithuania is a member of the OECD and endorsed the OECD AI Principles.⁴⁰¹² The main principles of the Lithuanian AI strategy overlap with OECD

AI principles. Some public sector initiatives and academic sector initiatives can be seen on the OECD AI monitoring platform.⁴⁰¹³ The Seimas of the Republic of Lithuania adopted a Resolution on the Use of Artificial Intelligence Technologies in the Public Sector. The resolution emphasizes the necessity of establishing unified legal guidelines to ensure that AI integration enhances efficiency, transparency, and accountability within public institutions. It also highlights the importance of mitigating risks associated with unregulated AI usage, such as data breaches and inaccuracies. The resolution calls upon the government to implement eleven specific principles governing AI application in public sector operations.⁴⁰¹⁴ These guidelines and the initiative to align with the OECD Principles promoting responsible AI use and seizing the potential benefits of AI systems to promote sustainable, inclusive growth.

Council of Europe AI Treaty

Lithuania contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law.⁴⁰¹⁵ The Committee on AI opened the Convention for signature and ratification by any country in the world at a meeting in Vilnius, Lithuania in September 2024.

Lithuania is party to the convention as a member of the European Union but has not signed or ratified the treaty as an independent nation.⁴⁰¹⁶

UNESCO Recommendation on AI Ethics

Lithuania was among the 193 countries that actively supported UNESCO's efforts in drafting and adopting its Recommendations on AI Ethics.⁴⁰¹⁷ According to the Ministry of Foreign Affairs of the Republic of Lithuania, Lithuania has been committed to supporting and implementing the UNESCO Recommendation. In

addition, the advancement and implementation of ethical principles for AI were among the priorities that Lithuania presented to UNESCO for its candidacy to the Executive Board 2021–2025.⁴⁰¹⁸

At the 2025 High-Level Open Debate on Artificial Intelligence in Peace and Security, Lithuania’s delegate reinforced a commitment to ethical AI, stressing that “The rise of AI is also a pressing human rights challenge. If left unchecked, it can deepen inequality, reinforce bias, and harm women, children, and marginalized communities. AI-driven harassment and disinformation targeting activists and journalists is not a future threat—it’s happening now.”⁴⁰¹⁹ The delegate proposed that the Security Council affirm that AI development should align with international law and the UN Charter, reinforce guardrails, and encourage broadened cooperation.

Lithuania has not initiated the Readiness Assessment Methodology (RAM),⁴⁰²⁰ a tool designed to enable countries to identify and overcome challenges to addressing the development and governance of AI systems in accordance with the UNESCO Recommendation.⁴⁰²¹

Evaluation

Lithuania has endorsed the OECD AI principles and the UNESCO Recommendation on the Ethics of AI, set a national AI strategy in 2019, and launched an AI Development Action Plan in August 2022. Lithuania has taken the initial steps to implementing the EU AI Act by identifying authorities for AI oversight. The country will need to develop additional measures to supplement the EU AI Act with a national governance framework. The E-Citizen platform offers a great opportunity to acknowledge, facilitate, and expand public participation in the development of a legal framework.

Luxembourg

In 2025, Luxembourg launched the Accelerating Digital Sovereignty 2030 initiative as part of efforts to implement the OECD AI Principles. The national data protection authority (CNPD) issued guidance on data protection and AI systems according to the EU AI Act and GDPR, in line with CNPD's expected role as the single point of contact and market surveillance authority under the AI Act.

National AI Strategy

The Luxembourg Strategic Vision for Artificial Intelligence was presented in 2019 by the Prime Minister, who was also Minister for Digitalisation, together with the Minister of Economy. The strategy has 3 objectives for Luxembourg to: 1) be among the most advanced digital societies in the world, especially in the EU; 2) become a data-driven and sustainable economy; and 3) support human-centric AI development.⁴⁰²²

The Strategic Vision is based on a human-centered approach to AI whereby human intelligence should be “in charge” of AI and individuals should be at the center of all services based on AI. Luxembourg commits to the respect of the 2019 Ethics Guidelines for Trustworthy AI formulated by the EU High-Level Expert Group on Artificial Intelligence.⁴⁰²³ The Luxembourgian government commits to adopt policies to tackle the difficulties that could be caused by the mainstreaming of AI technologies and underlines that this mainstreaming should be aimed to the improvement of the citizens' daily lives, keeping in mind that AI was not just created by humans, but for humans as well. For this reason, Luxembourg commits to transparent, understandable and trustworthy AI for all the people who live, invest and work in Luxembourg.⁴⁰²⁴

The Strategy also underlines the need for a regulation of the use and management of data respectful of fundamental ethical principles and confidentiality and which allows for reaching the full potential of the use of data in the economic and social domains.⁴⁰²⁵ The Strategy includes key actions to ensure the protection of fundamental rights:

- collaborating with the data protection authority and leveraging its expertise in order to address AI-related questions

⁴⁰²² The Government of Luxembourg, Digital Luxembourg, *Artificial Intelligence: A Strategic Vision for Luxembourg*, p. 5 (May 2019), https://digital-luxembourg.public.lu/sites/default/files/2020-09/AI_EN_0.pdf

⁴⁰²³ Ibid, p. 7

⁴⁰²⁴ Ibid, p. 9

⁴⁰²⁵ Ibid, p. 6

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

- creating a consultative committee specialized in technology and ethics to debate the ethical consequences of technologies and advise the government on potential risks and societal impacts. The Committee was effectively created in 2020.
- collaborating with the private sector to develop a proper corporate governance regarding AI,
- working with the Institute of Standardization, Accreditation, Safety and Quality of Products and Services (ILNAS) to actively follow the regulatory processes of products and services in the framework of the ISO system.
- putting in place innovative technologies to reinforce data protection in view of machine learning.⁴⁰²⁶

The Strategy considers how AI can foster investments and strategic partnerships, the efficiency of public services, the need to integrate AI in the context of life-long learning, attraction of talents, education, planning, and how to integrate the efforts of Luxembourg in the context of European integration. The Strategy imagines applications for AI across three spheres in Luxembourg: the private, professional, and public.⁴⁰²⁷

Luxembourg's Strategic Vision for AI has led to the creation of an AI4Gov inter-ministerial committee,⁴⁰²⁸ whose members represent the Ministry for Digitalisation, the Communications and Media Service (SMC), and the Information and Press Service (SIP). The inter-ministerial coordination group, under the leadership of the Prime Minister, set up a governance mechanism to continuously follow up on strategic initiatives that support Luxembourg's AI development. It is tasked with regularly assessing the strategic vision and setting up a framework for future actions. The aim of the AI4Gov Committee is also to encourage ministries and administrations to make use of AI and data science to transform their actions and tasks.⁴⁰²⁹ The open data pledge of the national strategy was implemented in 2016⁴⁰³⁰ and has been expanded since. The Open Data Platform enables accessible sourcing of public-sector data, open to public and private producers and users of data.

The Strategic Vision is part of Digital Luxembourg, a broader policy strategy that aims to coordinate and strengthen Luxembourg's transformation into a solid digital society.⁴⁰³¹ The Ministry of Economy also adopted the report Data-Driven Innovation Strategy for the Development of a Trusted and Sustainable Economy in

⁴⁰²⁶ Ibid, pp. 14-15

Center for AI and Digital Policy

Luxembourg, which connects with the National AI Strategy's provisions.⁴⁰³² The Innovation Strategy is based on a vision of a Luxembourg data-driven economy, where AI systems, combined with Internet of Things components, systems, and networks, HPC, and Big Data analytics are used "to drive future growth." Ensuring a strong regulatory, intellectual property, investment and financing environment is one of three priorities in the Strategy.

The government of Luxembourg, along with thirteen other EU Member States, published a position paper on innovative and trustworthy AI in October 2020.⁴⁰³³ The paper set out two visions for the EU's development of AI: 1) promoting innovation, while managing risks through a clear framework and 2) establishing trustworthy AI as a competitive advantage. The countries call for a borderless single market for AI in the EU. They state that "The main aim must be to create a common framework where trustworthy and human-centric AI goes hand in hand with innovation, economic growth, and competitiveness to protect our society, maintain our high-quality public service, and benefit our citizens and businesses. This can help the EU to protect and empower its citizens, stimulate innovation and progress in society, and ensure its values are protected."

Recently, Luxembourg launched Accelerating Digital Sovereignty 2030,⁴⁰³⁴ a comprehensive strategic initiative integrating three interconnected national strategies covering artificial intelligence, data, and quantum technologies. Presented jointly by the Ministry of Digitalisation, Media and Economy, the Luxembourg AI Strategy 2030 listed 30 Actions and explicitly aligns with the OECD AI Principles as foundational guidance for Luxembourg's AI governance framework. The strategy emphasizes practical experimentation to scale responsible AI use across sectors and identifies key implementation measures such as establishing the Luxembourg AI Factory, operating regulatory sandboxes, and maintaining alignment with European values.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

EU Digital Services Act

As an EU member state, Luxembourg shall apply the EU Digital Services Act (DSA).⁴⁰³⁵ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

EU AI Act

As an EU member State, Luxembourg is bound by the EU AI Act.⁴⁰³⁶ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

Luxembourg began revisiting the national AI strategy in 2024 to ensure that AI technologies developed in the country are compatible with GDPR and the EU AI Act.⁴⁰³⁷

Chamber of Deputies speaker Elisabeth Margue submitted a bill to implement the EU AI Act and designate the supervisory and competent authorities to Parliament.⁴⁰³⁸ The bill remains in committee at the Chamber of Deputies.⁴⁰³⁹ The bill proposes the Luxembourg Office of Accreditation and Surveillance (OLAS) as the notifying authority overseeing conformity assessment bodies evaluating general purpose AI systems, the Luxembourg Agency for Medicines and Health Products (ALMPS) to supervise bodies specific to system in healthcare and medical device sectors, and the Luxembourg State Data Protection Commissioner's Office (CGP).

The National Commissioner for Data Protection (CNPd) will serve as the Notified Body charged with performing third-party conformity assessment activities for high-risk systems for law enforcement, immigration, or asylum. The CNPD will also be the default market surveillance authority and primary point of contact,

Center for AI and Digital Policy

charged with coordinating activities across the sector-specific market surveillance authorities.⁴⁰⁴⁰ The bill also designates supervisory authorities for judiciary and prosecution services, the financial sector, insurance sector, medicine and health, and audiovisual.⁴⁰⁴¹

Public Participation

The National AI Strategy evolved from a project initiated by the Government of the Grand Duchy of Luxembourg and a public consultation on AI policy in 2020. The public consultation was answered by 20,000 randomly selected participants. Top consultation results include:⁴⁰⁴²

- Over 80% of the public thinks that the state needs a data ethics committee
- When asked which sector they trusted most with data and AI, the public sector won with 77% of respondents voicing a high or very high level of trust
- 70% of respondents believe that AI can help them with tasks in their daily lives
- 73% of people use digital tools for public sector tasks (online payments, MyGuichet.lu, etc.). Coming in second was mobility (Google Maps, Waze, etc.)
- More than 70% of respondents are in favor of full-scale, AI-based trials, such as Luxembourg's digital twin project.⁴⁰⁴³

Digital Luxembourg, now known as Innovative Initiatives, supports and powers several initiatives that are open to public participation.⁴⁰⁴⁴ For example, the High Committee for Digital Transformation held a meeting to discuss Luxembourg's national strategies on artificial intelligence, data, and quantum technologies.⁴⁰⁴⁵ The Committee brought together government members, civil society representatives,

employers, public research institutions, and experts to promote dialogue and offered a concrete platform for meaningful multi-stakeholder participation. The meeting discussed the draft AI, data, and quantum strategies presented by the responsible ministries which later consolidated into the final strategy documents.

Data Protection

Since Luxembourg is an EU Member State, the General Data Protection Regulation (GDPR)⁴⁰⁴⁶ is directly applicable in Luxembourg and to Luxembourgers.⁴⁰⁴⁷ The Act of August 1, 2018, on the organization of the National Data Protection Commission and the general data protection framework supplements the GDPR.

Regarding the activities of law enforcement authorities, Luxembourg transposed the EU Data Protection Law Enforcement Directive (LED)⁴⁰⁴⁸ with the Act of August 1, 2018, on the protection of individuals with regard to the processing of personal data in criminal and national security matters. The LED protects citizens' right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes.⁴⁰⁴⁹

The National Data Protection Commission (*Commission Nationale pour la Protection des Données*, CNPD) enforces rights related to both the GDPR and the LED. To ensure better compliance with GDPR, in May 2022, the CNPD adopted the GDPR-CARPA certification mechanism for companies, public entities, and other organizations established in Luxembourg.⁴⁰⁵⁰ The CNPD accredited a first entity, EY

PFS Solutions, in the framework of GDPR-CARPA, in June 2022, giving it the right to issue GDPR certifications.⁴⁰⁵¹

The CNPD launched a regulatory sandbox for AI in May 2024 to serve as a platform for collaboration between government bodies and industry stakeholders. The sandbox encourages the development of responsible AI solutions while safeguarding ethical standards and ensuring compliance with the EU's AI regulations, including data privacy.⁴⁰⁵²

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

Luxembourg is also a member of the Council of Europe. The country signed but has not yet ratified⁴⁰⁵³ the Council of Europe’s modernized version of Convention 108 for the protection of individuals with regard to the processing of personal data (Convention 108+).⁴⁰⁵⁴ The CNPD released a statement⁴⁰⁵⁵ in 2025 noting that most AI systems prohibited under the EU AI Act for unacceptable risks are also problematic with respect to several principles of the GDPR, including the principle of transparency. If deployed in Luxembourg territory, these systems could give rise to complaints or be subject to investigations under the GDPR.

The CNPD has represented Luxembourg in the Global Privacy Assembly (GPA) since 2005.⁴⁰⁵⁶ Luxembourg did not endorse the 2018 Declaration on Ethics and Data Protection in Artificial Intelligence,⁴⁰⁵⁷ 2020 Resolution on Accountability

Algorithmic Transparency

Although Luxembourg has not yet ratified the Protocol amending Convention 108 (Convention 108+), which reinforces algorithmic transparency,⁴⁰⁶¹ the country adheres to the GDPR and the AI Act, both of which provide important safeguards. Luxembourg does not currently have a standalone national law or regulation on algorithmic transparency firmly established in its legal order. Nonetheless, Draft Bill No. 8476 establishes a national governance and enforcement framework for the EU AI Act.⁴⁰⁶² Individuals in Luxembourg have a general right under the GDPR to obtain access to information about automated decision-making and the underlying factors and logic of algorithms.⁴⁰⁶³

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems⁴⁰⁶⁴ specifically emphasizes requirements on transparency, accountability, and effective remedies.⁴⁰⁶⁵

Center for AI and Digital Policy

The Luxembourg Institute of Science and Technology (LIST) Ethical Bias Leaderboard launched in March 2024 evaluates the performance of AI models across seven biases: Ageism, LGBTIQ+ phobia, Political bias, Racism, Religious bias, Sexism, and Xenophobia posed by AI models.⁴⁰⁶⁶ The Leaderboard provides transparency to users, facilitates their ability to choose LLMs that exhibit lower biases, and increases awareness about the “inherent limitations of AI.” Evaluators emphasized the need for explainability to foster trust and to improve reliability.

The CNPD has also issued national guidance⁴⁰⁶⁷ clarifying that all public and private entities deploying high-risk AI systems must ensure the explainability, legality, and contestability of outputs, in line with both GDPR and the EU AI Act. The formal role as the AI Market Surveillance Authority proposed by Bill 8476⁴⁰⁶⁸ would expand CNPD's mandate to enforce transparency, accountability, and contestability requirements for high-risk AI systems under the EU AI Act. The CNPD will also oversee a national AI regulatory sandbox, enabling companies to test high-risk AI systems in controlled environments while ensuring legal compliance.⁴⁰⁶⁹

Ban on Facial Recognition

Luxembourg is widely noted for its political stance against facial recognition technologies in government use. Minister of Defense François Bausch pledged in October 2019 that no facial recognition systems were implemented during his term in the Defense Department.⁴⁰⁷⁰ Furthermore, Article 43bis of the Law of 18 July 2018 prohibited the use of automatic detection systems, including facial recognition, in their video surveillance systems (VISUPOL).⁴⁰⁷¹ Luxembourg amended the 2018

Center for AI and Digital Policy

law on facial recognition with Bill No. 8512 in November 2025. The amendment allows policy to set up surveillance zones under specific circumstances and legally recognized the use of VISUPOL, a digital operational platform used by the police.⁴⁰⁷² The CCTV network is overseen by the CNPD and complies with data protection laws, notably the General Data Protection Regulation (GDPR) as well as Luxembourg's national data protection legislation. It also does not use facial recognition software, in compliance with the EU Artificial Intelligence Act (AI Act), which prohibits the untargeted scraping of facial images from the internet or CCTV footage to create or expand facial recognition databases.

The European Data Protection Board (EDPB) issued guidelines on the use of facial recognition technologies in the area of law enforcement in May 2022.⁴⁰⁷³ The EDPB Chair said: "Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms." The EDPB stresses that facial recognition tools should be used only in strict compliance with the Law Enforcement Directive (LED). These technologies may only be used if their application satisfies the strict necessity and proportionality tests, as set out in the European Data Protections: Enforcement Directive and the Charter of Fundamental Rights of the EU.⁴⁰⁷⁴

Environmental Impact of AI

AI technologies in Luxembourg are beginning to have a notable impact on the environment, with the country leveraging AI for both environmental protection and sustainability efforts. As AI adoption increases, it is important to address the environmental impact of the technology itself, particularly its energy consumption and carbon footprint.⁴⁰⁷⁵ Luxembourg's 2025 AI Strategy, part of the Accelerating Digital Sovereignty 2030 initiative, notes that "AI will play a central role in implementing Luxembourg's integrated National Energy and Climate Plan

(PNEC).”⁴⁰⁷⁶ The strategy and regulatory frameworks aim to balance the benefits of AI with sustainable development goals, ensuring that AI-driven environmental initiatives align with global efforts to mitigate climate change.

Lethal Autonomous Weapons

Luxembourg has regularly voiced its position on lethal autonomous weapon systems (LAWS) in the meetings on autonomous weapons systems of the Convention on Certain Conventional Weapons (CCW). For example, in 2019, Luxembourg argued that international norms on LAWS could be strengthened and spoke in favor of maintaining “human control” over the use of force.⁴⁰⁷⁷ In September 2021, Luxembourg submitted a joint submission to the Chair of the Group of Governmental Experts (GGE) on LAWS, indicating that “the ceding of human control, agency, responsibility and intent in decisions on the application of force to algorithms and computer-controlled processes poses fundamental ethical concerns.”⁴⁰⁷⁸ In 2022, Luxembourg together with other delegations submitted a working paper on emerging technologies in the area of LAWS to the Chair of the GGE, acknowledging the responsibility of the GGE to “recognize the urgent need for adequate rules and limits on the development, deployment, and use of autonomous weapon systems to ensure sufficient human involvement and oversight.”⁴⁰⁷⁹ Luxembourg also took part in the 2023 CCW where it was decided “to strengthen the Convention. In the context of the objectives and purpose of the Convention, the Group is to further consider and formulate, by consensus, a set of elements of an instrument, without prejudging its nature, and other possible measures to address emerging technologies in the area of lethal autonomous weapon

Center for AI and Digital Policy

systems.”⁴⁰⁸⁰ In August 2025, Luxembourg joined a group of European countries at the UN GGE on LAWS recommending implementation of context-appropriate human judgement and control as central to IHL compliance.⁴⁰⁸¹

Luxembourg was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly in October 2022. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.⁴⁰⁸² In this joint statement, States declared that they “are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (“IHL”), including through maintaining human responsibility and accountability in the use of force.”⁴⁰⁸³

At the 78th UN General Assembly First Committee in 2023, Luxembourg voted in favor⁴⁰⁸⁴ of resolution L.56⁴⁰⁸⁵ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons

Center for AI and Digital Policy

systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

In February 2023, Luxembourg participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Luxembourg, together with other countries, agreed on a joint call for action⁴⁰⁸⁶ stressing “the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”⁴⁰⁸⁷ Luxembourg also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁴⁰⁸⁸

AI Literacy

Luxembourg has undertaken several initiatives to promote AI literacy and capacity building for both public sector entities and the general public. For example, the Ministry of Education has been consulting since 2022 to integrate digital literacy and skills across the educational path.⁴⁰⁸⁹ AI literacy is a key component as Article 4 of the EU AI Act, which mandates AI literacy for providers and deployers of AI systems, came into effect in 2025. In August 2025, the CNPD published official guidance on AI literacy requirements to support organizations in understanding their obligations towards AI systems, upskilling workforce, and penalties for non-compliance.⁴⁰⁹⁰

Luxembourg's AI Strategy 2030 emphasizes AI Literacy directly through Actions 3– 6 with initiatives targeting public sector capacity building, workforce

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

training, and broader societal AI literacy to ensure citizens can meaningfully understand AI system capabilities and limitations.⁴⁰⁹¹

Human Rights

Luxembourg is a signatory to many international human rights treaties and conventions. In 2025, Luxembourg received a rating of “Free” and score of 97/100 in the 2025 Freedom in the World Report. Freedom House reported that “Luxembourg is a constitutional monarchy with a democratically elected government. Political rights and civil liberties are generally respected.”⁴⁰⁹²

Luxembourg’s emerging AI governance framework, including Bill No. 8476 and recent CNPD publications, commitments to the EU Charter of fundamental Rights and the GDPR by reinforcing the requirement that high-risk AI systems comply with human rights principles.⁴⁰⁹³ A 2020 EU Recommendation to member States on the human rights impacts of algorithmic systems reiterated that States’ commitment to the Convention for the Protection of Human Rights and Fundamental Freedoms requires them to “ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”⁴⁰⁹⁴

OECD / G20 AI Principles

Luxembourg is a member of the OECD and endorsed the OECD AI Principles.⁴⁰⁹⁵ Luxembourg also supports the OECD AI Principles as a member of the Global Partnership on AI.⁴⁰⁹⁶ Luxembourg does not directly refer to the OECD AI principles in the AI strategy. However, the strategy supports the key principles

and suggestions such as human-centered AI, transparency of AI systems, exploring links between ethics and AI, and establishing private and public partnerships. OECD has also noted several examples of implementation of the AI Principles by Luxembourg.⁴⁰⁹⁷ Luxembourg's recent efforts, including the implementation of the EU AI Act and the establishment of a regulatory sandbox, align with OECD recommendations for responsible AI development. Luxembourg centered the OECD AI Principles in the 2025 Accelerating Digital Sovereignty 2030 initiative, which also details implementation measures including the Luxembourg AI Factory, sectoral AI hubs, rapid EU AI Act implementation, and regulatory sandboxes.⁴⁰⁹⁸

Council of Europe AI Treaty

Luxembourg contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI and Human Rights, Democracy, and the Rule of Law.⁴⁰⁹⁹ The European Union signed this first legally binding international treaty on AI when it opened for signature on September 5, 2024. While Luxembourg is a member of the EU and the Council of Europe, the country has not independently signed the treaty despite active participations in negotiations.⁴¹⁰⁰ However, Luxembourg's 2025 AI Strategy includes Action 25 to implement the Framework Convention on AI, Human Rights, Democracy and the Rule of Law and notes participation in the CAI's work on HUDERIA.⁴¹⁰¹

UNESCO Recommendation on AI Ethics

Luxembourg endorsed the UNESCO Recommendation on the Ethics of AI in November 2021.⁴¹⁰² The country has not yet initiated the UNESCO Readiness Assessment Methodology (RAM), a tool to facilitate the UNESCO Recommendation.⁴¹⁰³ However, recent steps such as its bill implementing the EU AI Act and designation of the CNPD as the AI market surveillance authority, and new transparency guidelines issued in 2025 demonstrate alignment with several core UNESCO principles, particularly those related to human rights, governance, and accountability.⁴¹⁰⁴ Additionally, Luxembourg's efforts in promoting AI literacy and implementing the PNEC highlight its efforts to further align with the UNESCO Recommendations on AI Ethics.

Evaluation

Luxembourg, home to several leading multinational tech firms, was among the early adopters of AI policy frameworks addressing certification and standardization. The country benefits from a robust data protection regime, overseen by the independent CNPD. To be true to its commitment to a human-centered approach to AI and in line with its endorsement of the UNESCO Recommendation on the Ethics of AI and the EU AI Act, Luxembourg designated the CNPD as the AI market surveillance authority.⁴¹⁰⁵ The introduction of Draft Bill No. 8476 and newly issued CNPD guidelines on prohibited AI practices signal active operational commitment to human-centric AI.⁴¹⁰⁶

These initiatives build on its endorsement of the UNESCO Recommendation on the Ethics of AI and OECD AI Principles. Luxembourg could further solidify its leadership by ratifying the Convention 108+ and Framework Convention on Artificial Intelligence. The longstanding political commitment to not implement facial recognition in law enforcement remains noteworthy. Luxembourg has made significant progress in outlining a unified and inclusive AI strategy and enhanced

public participation. If initiatives such as Bill 8476 are passed as law, there will be formalized institutional arrangements for EU AI Act implementation, thereby placing the country among European frontrunners in balancing AI innovation with fundamental rights protection, data sovereignty, and democratic accountability.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Malaysia

Malaysia completed the UNESCO Readiness Assessment Methodology (RAM) in 2025. The launch of the National AI Office (NAIO) in late 2024 consolidated national efforts toward a centralized and coherent approach to AI governance, leading in 2025, to a series of bills adopted to update Malaysia's legal framework to support responsible and ethical AI and a draft National AI Action Plan 2026–2030.

National AI Strategy

The Government of Malaysia launched the National AI Roadmap (AI-Rmap) as part of a broader economic blueprint, the Twelfth Malaysia Plan, 2021–2025 (12 Plan).⁴¹⁰⁷ The 12 Plan outlines ambitions to develop AI governance and data protection to promote ethical and responsible use of technology. To the aim for AI governance and research and development, the AI-Rmap adds building enabling digital infrastructure, fostering AI talents, acculturating AI, and kick-starting a national AI innovation ecosystem.⁴¹⁰⁸ The action plan, through 2025 tasked an implementation unit with creating an AI code of ethics as part of the strategic initiative to institutionalize AI principles for AI implementation.

Efforts to advance AI governance in Malaysia gained momentum through 2025 by building on the AI-Rmap and technology roadmaps launched by the Ministry of Science, Technology, and Innovation (MOSTI).⁴¹⁰⁹ The Malaysia Science and Technology Information Center launched the National Guidelines on AI Governance and Ethics, proposing seven principles aligned with international principles, “to guide the development of Trusted and Responsible AI”:⁴¹¹⁰ Fairness; Reliability, Safety, and Control; Privacy and Security; Inclusiveness; Transparency; Accountability; and Pursuit of Human Benefit and Happiness.

Center for AI and Digital Policy

The Ministry of Digital launched the National AI Office (NAIO) in December 2024, as the central authority for advancing the nation's AI agenda overseeing strategic planning, research and development, and regulatory oversight.⁴¹¹¹ NAIO is tasked to produce seven deliverables, including a National AI Action Plan 2026–2027. These deliverables aim to promote ethical and sustainable AI practices, encourage AI implementation across key sectors, provide data for AI development, attract foreign investment and provide national competitiveness, and assess the effects of AI on government operations. NAIO has begun drafting Malaysia's National AI Action Plan 2026–2030.⁴¹¹² As part of the process, MyDIGITAL Corporation—a government agency responsible for digitalization efforts—issued a Request for Proposal (RFP) to select a delivery partner to support NAIO in developing the National AI Action Plan.⁴¹¹³

Other notable AI policy developments include the launch of the Public Sector AI Adaptation Guidelines by the Ministry of Digital to promote responsible and ethical AI adoption in the public sector.⁴¹¹⁴ The guidelines include AI ethics, risk management, roles and responsibilities, and a self-assessment tool. Additionally, the Prime Minister's Department launched the AI Legal Justice Roadmap 2025-2026 to improve efficiency and accessibility of legal services using AI.⁴¹¹⁵ The Roadmap will be implemented by the agencies under the Legal Affairs Division (BHEUU). Malaysia is also taking formal steps to govern AI in healthcare. The Malaysian Medical Council adopted a Guideline on the Ethical Use of AI in Medical Practice,⁴¹¹⁶ and the Medical Device Authority announced Malaysia's first regulatory sandbox for AI-driven medical devices.⁴¹¹⁷

Public Participation

The Malaysian Personal Data Protection Commissioner (PDP Commissioner) held several public consultations in 2025. The first three public consultations collected inputs to develop guidelines on data protection impact assessments,⁴¹¹⁸ data protection by design,⁴¹¹⁹ and automated decision making and profiling.⁴¹²⁰ Subsequently, the PDP Commissioner issued a public consultation paper on proposed amendments to provisions related to data controllers' obligations, as well as the inspection and enforcement powers of the PDP Commissioner in the Personal Data Protection Regulations 2013.⁴¹²¹

As part of its efforts to develop the National AI Action Plan 2030 (2026–2030), NAIIO has organized strategic roundtable sessions on AI Safety & Security, Policy & Regulation, Talent, and Advisory & Industry Engagement.⁴¹²² These events brought together representatives from public and private sectors, academia, regulators, and industry groups. NAIIO has also established specialized Working Groups, bringing together experts from technology, academia, industry, government, and civil society “to shape AI advancements guided by ethical principles, public interest, and long-term sustainability.”⁴¹²³

Center for AI and Digital Policy

Data Protection

Data protection in Malaysia stems from the Personal Data Protection Act of 2010 (PDPA),⁴¹²⁴ which came into force in 2013. The PDPA seeks to safeguard personal data and confer certain rights to users regarding personal data. The PDPA imposes strict requirements on any person who collects or processes personal data (data users) and grants individual rights to data subjects. The PDPA is based on widely accepted personal data protection principles, including informed consent, notice, purpose limitation, security, storage limit, data integrity, access, and correction.⁴¹²⁵

The PDP Commissioner is an agency under the Digital Ministry, created after Parliament passed the Bill relating to the Personal Data Protection Act 2010 (PDPA) i.e. Act 709.⁴¹²⁶ “The PDP Commissioner is responsible for regulating the processing of commercial transactions of personal data by organizations (Data Controllers) and protecting the interests of individuals from any misuse of personal data. The PDP Commissioner implements and enforces personal data protection laws, including the formulation of operational policies and procedures.”

The Personal Data Protection (Amendment) Act 2024 introduces significant changes to align with global data protection standards.⁴¹²⁷ The updates set greater emphasis on accountability by mandating the appointment of Data Protection Officers (DPOs) for data controllers and processors, direct legal obligations for data processors, and breach notifications to authorities and affected individuals. The amendments also grant individuals data portability rights, expand the definition of sensitive personal data to include biometric information, and introduce stricter cross-border data transfer requirements. Additionally, penalties for non-compliance are increased in fines up to RM1 million and imprisonment of up to three years.

While the PDPA does not apply to federal and state governments, the Data Sharing Bill 2024 (RUUPD 2024) establishes a framework for data sharing among federal government agencies.⁴¹²⁸ It introduces a National Data Sharing Committee responsible for evaluating requests based on factors such as the nature of the data, its

⁴¹²⁸ Ministry of Digital, *Malaysia Passes Landmark Law That Allows Data Sharing Between Federal Government Agencies* (Dec.19, 2024), <https://www.digital.gov.my/en-GB/siaran/Malaysia-Meluluskan-Rang-Undang-Undang-Penting-Yang-Membolehkan-Perkongsian-Data-Antara-Agensi-Kerajaan-Persekutuan>

intended use, handling procedures, and safeguards to ensure privacy and confidentiality. The law mandates that requesting agencies have adequate cybersecurity measures in place before accessing shared data. To uphold accountability, the bill includes penalties for data breaches, with fines of up to RM1 million, imprisonment of up to five years, or both.

Additional legislation passed to date include the Personal Data Protection Regulations 2013 (“the 2013 Regulations”); the Personal Data Protection (Class of Data Users) Order 2013 (“the Order”); the Personal Data Protection (Registration of Data User) Regulations 2013 (“Registration Regulation”); the Personal Data Protection (Fees) Regulations 2013; the Personal Data Protection Regulations 2016 (“Compounding of Offences Regulations”); the Personal Data Protection (Class of Data Users) (Amendment) Order 2016 (“the Order Amendment”); the Personal Data Protection (Appeal Tribunal) Regulations 2021;⁴¹²⁹ the Personal Data Protection (Amendment) Act 2024;⁴¹³⁰ and the Data Sharing Bill 2024 (RUUPD 2024).⁴¹³¹

Malaysia’s data protection agency, the Personal Data Protection Commissioner, is not a member of Global Privacy Assembly and has not endorsed the relevant resolutions.⁴¹³²

Algorithmic Transparency

The Personal Data Protection Commissioner’s guidelines on automated decision-making and profiling submitted for public consultation in early 2025 proposed a rights-protecting framework for algorithmic transparency explicitly aligned to and adapted from international standards.⁴¹³³ If legislation based on the PDP Commissioner’s proposed amendments to provisions related to the inspection and enforcement powers of the PDP Commissioner in the Personal Data Protection

Regulations 2013,⁴¹³⁴ provide adequate accountability, Malaysia will have a legal framework for protecting the right to algorithmic transparency.

As proposed, regulations on automated decisions and profiling would apply only to decisions that are “being made by technological means without human involvement” and “where such decisions may legally or significantly affect an individual.”⁴¹³⁵ The proposal refers collectively to protections as the “ADM Restrictions,” which include the Right to Refuse to a fully-automated decision, the Right to Information on the decision made, and the Right to Human Review. The guidelines further define “meaningful information about the logic” for the decision and provide for contestability and reversal as part of the right to human review.⁴¹³⁶

AI in Healthcare

To combat the spread of COVID-19, the Malaysian government led a multi-agency effort to create the MySejahtera app, which achieved widespread adoption, reaching 24.5 million users—nearly three quarters of the national population—by December 2020.⁴¹³⁷ The collected data is fully owned by the Ministry of Health, and supervised by the National Cyber Security Agency and the National Security Council.

To enhance its COVID-19 efforts, the Malaysian government launched the Hotspot Identification for Dynamic Engagement (HIDE) system, an early warning system to preemptively identify COVID-19 hotspots using predictive technology, big data analytics, and AI.⁴¹³⁸ The Ministry of Science, Technology, and Innovation (MOSTI) explored plans to add “artificial intelligence and big data analytics into the

HIDE system to produce more accurate predictions of coronavirus hotspots based on Bluetooth contact tracing.”⁴¹³⁹ HIDE currently uses MySejahtera check-in data.

Meanwhile, the Malaysia Healthy Ministry is actively exploring AI applications to “enhance diagnostic accuracy, reduce treatment costs, and address gaps in healthcare delivery.”⁴¹⁴⁰ The government plans to deploy a cloud-based digital management system in 100 public health clinics, streamlining operations and reducing patient waiting times.⁴¹⁴¹

Facial Recognition and Biometric Identification

Since launching the Safe City Initiatives in 2004, cities across Malaysia have been installing CCTVs in public areas to monitor crime, traffic surveillance, and flooding.⁴¹⁴² As part of the initiative, the Minister of Federal Territories announced in 2020 their intention to increase up to 5000 cameras in the capital city of Kuala Lumpur and upgrade existing cameras with AI capabilities, facial recognition, and other functions.⁴¹⁴³

In 2018, Auxiliary Force Sdn Bhd, a member of Royal Malaysia Police Cooperative Bhd., became the first Malaysian security force in the country to integrate body-worn cameras with facial recognition technology.⁴¹⁴⁴ In 2019, the state of Penang launched the first public facial recognition to help police combat crime. The system uses AI to identify faces captured by the CCTV network operated by Penang Island City Council, with a plan to have hundreds of new cameras installed at major roads, intersections, and hotspots for criminal activity.⁴¹⁴⁵

Businesses have also integrated the use of facial recognition across the nation, including facial recognition “check-ins” at events.⁴¹⁴⁶ The Malaysian Ministry of Transport introduced a public-private facial recognition program in 2019, allowing users to take selfies of themselves as passenger verification in rideshare services.⁴¹⁴⁷

AirAsia, a low-cost carrier, adopts FACES, a facial recognition technology that allows passengers to replace their traditional boarding pass with their face.⁴¹⁴⁸ To use FACES, passengers must enroll in AirAsia FACES via their mobile app, take a selfie video, and scan their travel documents, such as their ID or passport. Before using FACES, passengers must also perform a one-time document verification check at the dedicated FACES counters in the airport.⁴¹⁴⁹

Malaysia’s Immigration Department expanded its biometric passenger screening initiative by increasing the number of autogates at major airports, including Kuala Lumpur International Airport (KLIA), to automate immigration clearance.⁴¹⁵⁰ Previously, these gates, which incorporate QR code and facial recognition technology, were available only to Malaysian nationals. This initiative is now set to expand under the Foreign Digital Identity (FDID) system,⁴¹⁵¹ which will track all foreign visitors using biometric data, including fingerprints, iris scans, and facial recognition, to strengthen border control and assign each visitor a unique digital identity. The system will integrate these biometrics into a centralized database, enabling automated verification at entry and exit points and reducing reliance on manual screening. While designed to improve security and prevent fraud, the

initiative raises policy considerations around privacy, data governance, and oversight, as it involves large-scale collection of sensitive biometric information.

Malaysia launched MyDigital ID as a national digital identification system to streamline online transactions and government service access, while enhancing digital security.⁴¹⁵² The initiative forms part of a broader cybersecurity strategy targeting scams, financial fraud, and identity theft.⁴¹⁵³ MyDigital ID uses facial recognition technology to verify user identity during registration, although authorities have stated that the system does not collect or store biometric data.⁴¹⁵⁴ Given its role as a national identity platform, concerns have been raised regarding government security capabilities and safeguards, with calls for an independent oversight body to enforce rigorous security audit process.⁴¹⁵⁵

AI in Court

Malaysia announced in 2010 its plan to establish an e-judiciary system against the backdrop of a broader initiative to digitalize its government and public services.⁴¹⁵⁶ By 2017, the national judiciary system had been fully digitized and was integrated with other government agencies, including COPS (Royal Malaysia Police), MySikap (Road Transport Department), INSIST (Malaysian Department of Insolvency), MyIdentity (National Registration Department), SMPP (Malaysian Prison Department), iAGC (Attorney General's Chambers of Malaysia), and MyeTaPP (Department of Lands and Mines).

A court in Sabah, Malaysia used AI to help mete out a court sentence as part of a nationwide pilot program aimed at determining the efficiency of AI in sentencing recommendations. This was followed by the release of an official guidance for using AI in judiciary sentencing on the peninsula in 2021, which described a three-phase

strategy to expand the use of AI sentencing programs across the entire nation.⁴¹⁵⁷ According to Malaysian authorities, using AI in Malaysia's courts will help make sentencing more consistent and improve the quality of judgment while clearing backlogs more quickly and cost-efficiently. Plans to upgrade industrial courts with AI digital recording systems to produce real-time case transcripts are also underway.⁴¹⁵⁸

However, lawyers and various stakeholder groups have criticized the deployment as premature, citing insufficient understanding of the systems functioning among judges, lawyers, and the public. The use of AI in the courts has also been criticized as unconstitutional and not envisaged under the country's Criminal Procedure Code. Other critics of the AI-sentencing pilot say AI systems risk worsening the bias against minorities and marginalized groups by not giving them a fair trial.⁴¹⁵⁹

Autonomous Vehicles

The Government of Malaysia is leveraging AI as a key technology in developing autonomous or self-driving vehicles.⁴¹⁶⁰

The Ministry of Transport in Malaysia updated the Guidelines for Public Road Trials of Autonomous Vehicles to provide guidance on testing automated vehicles on designated public roads.⁴¹⁶¹ The Guidelines outline operational safety measures and advise consideration of traffic and weather conditions that may affect system performance. Data collected from the trial may be used to develop a national governance framework for AV adoption and application in Malaysia.

Center for AI and Digital Policy

The Digital Ministry is in discussions with the Transport Ministry to draft and introduce legislation for autonomous vehicles and plans to commercialize autonomous buses once the necessary legal framework is in place.⁴¹⁶²

Environmental Impact of AI

Malaysia's policy documents frame AI as a tool to “enable sustainable consumption and production, and to solve environmental issues.”⁴¹⁶³ The National Guidelines on AI Governance and Ethics, however, emphasize the government's alignment with responsible AI, environmental, social, and corporate governance, and sustainable development goals. Recognizing “Sustainability” as a critical element in AI policymaking, the guidelines address the environmental impact of AI technologies by assessing the “energy consumption and carbon footprint associated with AI hardware infrastructure, data centers, and computing resources.”⁴¹⁶⁴

Lethal Autonomous Weapons

Malaysia is not a state party to the Convention on Certain Conventional Weapons or a member of related regional groups.⁴¹⁶⁵ Malaysia has noted the “urgency of addressing the legal, ethical, moral, humanitarian and technological issues” related to LAWS and called for “sustained dialogue [...] to ensure strict compliance with international law, in particular international humanitarian law and international human rights law,” during the UN General Assembly.⁴¹⁶⁶

Malaysia participated in the inaugural Summit on Responsible Artificial Intelligence in the Military Domain (REAIM) in the Netherlands in 2023. At the Summit, Malaysia joined other attending countries on a call for action on the

responsible development, deployment, and use of artificial intelligence in the military domain,⁴¹⁶⁷ stressing “the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”

Representatives from Malaysia attended the Vienna Conference on Autonomous Weapons Systems, called Humanity at Crossroads,⁴¹⁶⁸ in 2024 but did not associate itself with the Chair’s Summary.⁴¹⁶⁹ The Chair’s Summary advocates for a two-tier approach, prohibiting “ethically unacceptable” autonomous weapons systems and appropriately regulating others.⁴¹⁷⁰

AI Literacy

Malaysia is providing national AI literacy and training initiatives to equip citizens, civil servants, and policymakers with foundational AI knowledge. These efforts are led by NAIIO, MyDIGITAL Corporation, and the Ministry of Digital.

MyDIGITAL Corporation and Intel Corporation jointly launched “AI untuk Rakyat,” a national program offering online AI literacy courses to citizens.⁴¹⁷¹ The program aims to “create a comprehensive and accessible learning experience for Malaysians of diverse age groups, backgrounds, and geographical locations.” Over one million Malaysians has completed the program as of June 2024.⁴¹⁷² The AI At

Work program offers generative-AI training to build AI literacy among public employees.⁴¹⁷³ The Parliament of Malaysia, NAIIO, UNITAR International University's Centre of Leadership, Governance and Democracy, and Microsoft, jointly introduced a two-day AI for Policymakers workshop, providing members of Parliament with training on AI ethics, global best practices, and data-driven policymaking.⁴¹⁷⁴

Human Rights

Malaysia is a member of the United Nations and has endorsed the Universal Declaration of Human Rights. According to Freedom House, Malaysia is “partly free” with a score of 53/100.⁴¹⁷⁵ Freedom House notes, “The Barisan Nasional (BN) political coalition ruled Malaysia from independence in 1957 until 2018, maintaining power by manipulating electoral districts, appealing to ethnic nationalism, and suppressing criticism through restrictive speech laws and politicized prosecutions of opposition leaders.” Since the BN lost to an opposition alliance in 2018, political affairs have been characterized by a “more complex pattern of competition and cooperation among multiple coalitions, creating opportunities for reform and modest improvements to civil liberties.”

On transparency, Freedom House noted that “efforts towards enacting a freedom of information act and other reforms stalled after the PN (*Perikatan Nasional*) took power.”⁴¹⁷⁶ Government operations were also not transparently carried out while Parliament was suspended for part of 2021.

OECD / G20 AI Principles

Malaysia demonstrates alignment with the OECD AI Principles by establishing the National AI Office (NAIO) to coordinate AI governance according

to OECD-recommended frameworks.⁴¹⁷⁷ Although the country has not officially joined the G20 AI Guidelines, it continues to incorporate many of the best practices into its strategic planning.

Council of Europe AI Treaty

Malaysia has not endorsed the Council of Europe AI Treaty.⁴¹⁷⁸

UNESCO Recommendation on AI Ethics

As a member of UNESCO, Malaysia adopted the Recommendation on the Ethics of Artificial Intelligence, the first global standard on the ethics of artificial intelligence in November 2021.⁴¹⁷⁹ Malaysia has since completed the UNESCO Readiness Assessment Methodology (RAM), a key tool to support Member States in their implementation of the UNESCO Recommendation on the Ethics of AI.⁴¹⁸⁰

Additionally, Malaysia has been actively implementing key principles and policy areas set out in the UNESCO Recommendation. The “AI untuk Rakyat” is a national program offering online AI literacy courses to citizens.⁴¹⁸¹ The National Guidelines on AI Governance & Ethics explicitly integrates UNESCO’s key ethical pillars—transparency, human oversight, data governance, and fundamental rights—into its AI governance framework.⁴¹⁸² The Public Sector AI Adaptation Guidelines emphasizes inclusive and responsible AI adoption in the government.⁴¹⁸³ NAIIO’s

public consultations for the forthcoming National AI Act Plan 2026-2030 adopts a multi-stakeholder approach in shaping AI governance.⁴¹⁸⁴

Evaluation

Malaysia has made significant strides in advancing its digital and AI capabilities across both public and private sectors. The NAIIO under the Ministry of Digital serves as a clear and coordinated authority driving AI governance in the country. Integrated within the overall 12 Plan, NAIIO's seven key deliverables—including the AI Technology Action Plan (2026–2030), an AI Adoption Regulatory Framework, and an AI Code of Ethics—establish a de facto national AI framework. The launch of the Public Sector AI Adaptation Guidelines direct this framework for ethical and transparent AI use in government operations, while NAIIO's public consultations for the forthcoming National AI Act Plan 2026–2030 have increased stakeholder engagement and address issues related to algorithmic transparency and data privacy.

Together with launch of the UNESCO RAM report, these measures signal that Malaysia's policy landscape is evolving from a fragmented approach toward a comprehensive national AI framework. However, challenges remain—particularly in ensuring that the rapid digital transformation fully addresses concerns over surveillance, algorithmic transparency, and the protection of individual rights. It remains to be seen whether these initiatives will ultimately translate into a robust, human-centered framework for AI and data protection, as the country continues to undergo political and social reforms.

Malta

In 2025, Malta ran a public consultation on a realigned national AI vision and strategy and furthered efforts at widespread AI capacity-building and education. The country also passed legislation implementing the EU AI Act and formally establishing supervisory authorities.

National AI Strategy

The Parliamentary Secretary for Financial Services, Digital Economy and Innovation (PSFS) of Malta released a National AI Strategy⁴¹⁸⁵ and a National AI Ethics Framework in 2019.⁴¹⁸⁶ The strategy aims to make Malta the “Ultimate AI Launchpad” by creating a venue where “local and foreign companies and entrepreneurs can develop, prototype, test and scale AI, and ultimately showcase the value of their innovations across an entire nation primed for adoption.”⁴¹⁸⁷ The National AI Strategy was drafted on the basis of a report delivered by the Malta AI Taskforce,⁴¹⁸⁸ a group of experts entrusted to advise the government on AI matters, and public consultation. Three strategic enablers—Education and workforce; Ethical and legal, and Ecosystem and infrastructure—support the pillars of investment, startups, and public and private adoption.⁴¹⁸⁹ The ethical and legal enabler aims to establish the first national AI certification program for those wishing to create “ethically aligned, transparent and socially responsible AI solutions.”

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Malta Digital Innovation Authority (MDIA), which oversees the AI strategy, reported “significant progress”⁴¹⁹⁰ marked by “widespread AI use across sectors, increased public awareness, educational initiatives, and improved international rankings.” Given this progress and the shifting technology landscape, the MDIA released a draft of a “realigned strategy” for public consultation in late 2025. The realigned strategy “moves away from a technology-first approach, placing societal well-being and sustainability at its core. Malta’s vision is to create a trusted AI ecosystem that promotes societal well-being, inclusive social and economic progress, and sustainability.” The realigned strategy⁴¹⁹¹ is based on five principles: Diversity, Equality, Fairness, and Anti-Discrimination; Accountability, Responsibility, and Legal Liability; Transparency, Explainability, Human Agency, and Oversight; Safety; and Privacy, Data Protection, and Data Governance.

The realigned strategy centers “cultivating informed public and a skilled workforce” and “strengthening regulatory, policy, security and support structures” as the two key enablers.⁴¹⁹²

In October 2025, Malta formalized the AI governance framework through Legal Notices 226 and 227 implementing the EU AI Act at the national level. Legal Notice 226 designates MDIA as the primary market surveillance Authority for AI systems and the single point of contact for EU AI Act implementation. MDIA’s enforcement powers include assigning administrative penalties up to €350,000 or 1% of worldwide annual turnover.⁴¹⁹³ Legal Notice 227 designates the Information and Data Protection Commissioner (IDPC) as both Market Surveillance Authority for high-risk AI systems (including biometric systems for law enforcement, border management, and justice) and as Fundamental Rights Authority. The legal framework establishes mandatory judicial authorization by Magistrate for real-time biometric identification systems and empowers both authorities with complaint mechanisms and enforcement capabilities.⁴¹⁹⁴

Ethical AI Framework and Principles

The National AI Strategy identified four key actions towards trustworthy AI:

⁴¹⁹⁰ MDIA, *National AI Strategy and Vision Realignment*, <https://mdia.gov.mt/national-strategies/malta-ai-strategy-and-vision/2025-strategy-and-vision/>

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

- Establish an Ethical AI Framework Towards Trustworthy AI
- Launch the world's first national AI certification framework
- Appoint a Technology Regulation Advisory Committee to advise on legal matters
- Set up a Regulatory Sandbox for AI and a Data Sandbox for AI

The 2019 National AI Strategy foresees a strong ethical AI framework as a supplement to the national legal and regulatory system to ensure that AI development is ethically aligned, transparent, and socially responsible.⁴¹⁹⁵

The Ethical AI Framework that followed the strategy defines four objectives: 1) Build on human-centric approach; 2) Respect for all applicable laws and regulations, human rights and democratic values; 3) Maximize the benefits of AI systems while preventing and minimizing their risks; 4) Align with emerging international standards and norms around AI ethics.⁴¹⁹⁶ The framework sets out four ethical AI principles to achieve Malta's vision for ethical and trustworthy AI: human autonomy; prevent harm; fairness; and explainability.

The framework also recommends the establishment of a National Technology Ethics Committee (NTEC) under the auspices of the MDIA to ensure its monitoring and implementation.⁴¹⁹⁷ However, to date, there is no evidence that the committee has in fact been created.

Malta also developed a national Technology Assessment Recognition Framework as a certification framework, issued by the MDIA.⁴¹⁹⁸ The certification offers valuable recognition in the marketplace that the AI systems of successful applicants have been developed in an ethical, transparent, and socially responsible manner.

As for the AI regulatory sandbox, the MDIA opened a number of competitive calls that resulted in state-of-the-art research and innovative projects. The MDIA Technology Assurance Sandbox has been revamped and in March 2023 another project on conversational AI was onboarded.⁴¹⁹⁹

EU Digital Services Act

As an EU member state, Malta shall apply the EU Digital Services Act (DSA).⁴²⁰⁰ The DSA regulates online intermediaries and platforms to prevent illegal and harmful activities online and the spread of disinformation by requiring online platforms and intermediaries to prevent or remove posts containing illegal goods, services, or content.

Malta is also party to the European Commission Guidelines under the DSA for the mitigation of systemic risks online for elections.⁴²⁰¹

EU AI Act

As an EU member State, Malta is bound by the EU AI Act.⁴²⁰² The EU AI Act is a risk-based market regulation that supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy, and ethical AI.

Malta has three national authorities with AI oversight and reporting duties: the Malta Digital Innovation Authority (MDIA),⁴²⁰³ the Office of the Information and Data Protection Commissioner (IDPC),⁴²⁰⁴ and the National Accreditation Board.⁴²⁰⁵ The MDIA is the leading market surveillance authority and notifying authority on innovation technologies including AI. The IDPC enforces the GDPR and the national Data Protection Act and serves as the other market surveillance authority. The National Accreditation Board is the other notifying authority. The MDIA is required to assist the IDPC in “safeguarding the data protection rights of data subjects.”

The Malta Digital Innovation Authority Act names the MDIA as the competent authority as part of the effort to establish a “national technology assurance framework.”⁴²⁰⁶ Although the MDIA’s initial focus was on distributed ledger technology to regulate and promote blockchain and cryptocurrency technology, in 2020/2021 its mandate broadened to include AI technology.⁴²⁰⁷

Malta formalized these oversight roles through Legal Notices 226 and 227 in 2025.⁴²⁰⁸ Legal Notice 226 officially designates MDIA as the primary Market Surveillance Authority for AI systems and the single point of contact for EU AI Act implementation. The MDIA can administer penalties up to €350,000 or 1% of worldwide annual turnover for non-compliance. Legal Notice 227 designates IDPC as Market Surveillance Authority specifically for high-risk AI systems under Annex III of the EU AI Act, including biometric systems used for law enforcement, border management, and justice, as well as Fundamental Rights Authority for personal data protection.⁴²⁰⁹ The framework establishes that real-time biometric identification systems require prior authorization from a Magistrate, and IDPC must maintain a registry of high-risk AI systems.⁴²¹⁰

Malta has also several independent oversight bodies for human rights, namely: the National Commission for the Promotion of Equality, the Commission for the Rights of Persons with Disabilities and the Parliamentary Ombudsman. They are competent to oversee the impact of AI policies within their field of competences.

Public Participation

The Parliamentary Secretary for Financial Services, Digital Economy and Innovation within the Office of the Prime Minister oversaw public consultations on the initial National AI Strategy document “Malta Towards an AI Strategy: High-Level Document for Public Consultation” in 2019. The AI Taskforce also ran an in-person public consultation workshop to help guide citizens.⁴²¹¹ The Malta AI Task

Center for AI and Digital Policy

Force and Parliamentary Secretary for Financial Services, Digital Economy, and Innovation released the Malta Ethical AI Framework for Public Consultation.⁴²¹²

MDIA continued the stakeholder-intensive consultation process on the AI strategy realignment from 2023 to 2025. MDIA held individual stakeholder meetings with representatives from private sector AI users and developers, public administration, academia, representative bodies, ministries, political parties, and voluntary organizations. The Authority maintains an open feedback mechanism via email.⁴²¹³ A draft of the realigned strategy was open for comments via the consultation portal for approximately 12 weeks in late 2025–early 2026.⁴²¹⁴

Locating public consultation opportunities among the various government websites is not user friendly. In its annual report however, the MDIA discusses its expanding role with regard to AI.⁴²¹⁵

Data Protection

Since Malta is an EU Member State, the General Data Protection Regulation (GDPR)⁴²¹⁶ is directly applicable in Malta and to Maltese citizens. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens.”⁴²¹⁷ The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Maltese Data Protection Act 2018 (Chapter 586 of the Laws of Malta) (DPA) supplements the GDPR and took effect on May 28, 2018.⁴²¹⁸ The Office of the Information and Data Protection Commissioner (IDPC)⁴²¹⁹ is the national supervisory authority under the GDPR and the Data Protection Act. The IDPC notes that the GDPR takes legal precedence in cases where the AI systems process personal data and clarifies the office's role as a fundamental rights authority under the AI Act.⁴²²⁰

Malta also transposed the EU Data Protection Law Enforcement Directive (LED)⁴²²¹ with Subsidiary Legislation⁴²²² to protect “citizens’ fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes.”⁴²²³ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.⁴²²⁴

Malta's implementation of the EU Data Act (Regulation (EU) 2023/2854), effective since September 12, 2025,⁴²²⁵ aims to foster a competitive data market, enable innovation, and improve access to data from connected devices. It grants users rights to data generated by products like smartphones and smart appliances. The MDIA is the designated authority for enforcement, with the IDPC responsible for applications concerning the protection of personal data and the Malta Communications Authority designated in specific other instances.

Center for AI and Digital Policy

Malta is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.⁴²²⁶

Although the IDPC is an accredited member of the Global Privacy Assembly since 2003,⁴²²⁷ it did not endorse the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁴²²⁸ the 2020 GPA Resolution on AI Accountability,⁴²²⁹ or the 2022 GPA Resolution on Facial Recognition Technology.⁴²³⁰ However, the IDPC co-sponsored the 2023 GPA Resolution on Generative AI.⁴²³¹

Algorithmic Transparency

Malta is subject to the GDPR and AI Act as a member of the European Union. A 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems⁴²³² specifically emphasizes requirements on transparency, contestability, accountability, and effective remedies. Maltese citizens have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm. Malta has signed and

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

ratified the Council of Europe Convention 108+,⁴²³³ which reinforces citizens' rights against automated decisions with adverse effects.

Malta's Ethical AI Framework also covers criteria for guaranteeing algorithmic transparency such as the necessity to establish measures to ensure the traceability of outcomes for decisions made based on the use of an algorithm. Users are also to be made aware in clear and easily understandable language that relevant decisions, content, advice, or outcomes are the result of an algorithmic decision.

Designating IDPC as both Market Surveillance Authority for high-risk AI systems and Fundamental Rights Authority in the legislation implementing the AU AI Act further strengthened Maltese citizens' right to algorithmic transparency.⁴²³⁴ The regulation establishes notification requirements for real-time biometric identification systems, mandates that no adverse legal decision may be taken based solely on automated system outputs, and provides individuals with the right to submit complaints regarding AI Act violations. These provisions enhance the existing GDPR and Convention 108+ frameworks by creating specific enforcement mechanisms and accountability structures for high-risk AI applications.

Smart Surveillance

Malta's Safe City pilot project in Paceville, and later in Marsa, using technology developed by Chinese tech giant Huawei, was criticized as a mass surveillance project. Former Prime Minister Joseph Muscat even referred to the potential network as "eyes in the sky."⁴²³⁵ UN Data Protection Rapporteur Joseph Cannataci expressed doubts about the legal basis on which the project was developed, and EU Commissioner for Justice Vera Jourova also expressed concerns about how the data collected by Huawei would be used. The project was discontinued in January 2023 after the contract expired and the state-owned company tasked with implementing the system was dissolved.⁴²³⁶

Malta deployed new surveillance infrastructure in 2025 while establishing regulatory oversight under the EU AI Act. The government announced a €2 million CCTV network for 24/7 monitoring for crime prevention and intelligence-led

policing across Paceville and three other localities.⁴²³⁷ The government published no transparency requirements or impact assessments. Malta implemented the EU-mandated Entry/Exit System requiring biometric facial recognition and fingerprints for all non-EU nationals at border controls in October 2025.⁴²³⁸ Malta's IDPC, designated as the Market Surveillance Authority for high-risk AI systems in law enforcement and border management,⁴²³⁹ will oversee the project's compliance with the protections laid out in the AI Act and GDPR.

Environmental Impact of AI

Malta has not published specific policies or guidelines related to the environmental impact of AI systems or technology. Malta's AI policy framework in 2025 references environmental responsibility at the ethical and strategic level but does not enforce technical or binding requirements for AI systems.⁴²⁴⁰ The main official acknowledgment comes from the Malta Declaration 2025 on the Use of AI, which calls for sustainability and minimization of negative environmental impact when deploying AI.⁴²⁴¹ This is not reflected in the text of Malta's core AI regulations; Legal Notice 226 of 2025 contains no mention of environment or sustainability. As of late 2025, there are no published national assessments or regulatory mandates linking AI-specific environmental impact to law or to new data center infrastructure; general environmental laws apply, but there is no AI-targeted provision or measurement.⁴²⁴²

Lethal Autonomous Weapons

The Maltese government supports a legally binding instrument on lethal autonomous weapons. Malta has participated in some Convention on Certain

Conventional Weapons (CCW) meetings on autonomous weapons. Malta spoke for the first time at the 2021 CCW Group of Governmental Experts on Lethal Autonomous Weapon Systems (GGE on LAWS) meeting, stating the country “remains concerned with the rapid technological advancement especially in AI, where as a result, lethal autonomous weapons systems are today capable of functioning with a lesser degree of human control or none.”⁴²⁴³ Prime Minister Robert Abela reaffirmed Malta's alignment with the UN position on the necessity of human oversight in the deployment of lethal autonomous weapons⁴²⁴⁴ at an EU leaders’ summit in March 2025, stating that Malta has no intention of using European financing to purchase arms or “destructive ammunition.”

In October 2022, Malta was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.⁴²⁴⁵ In this joint statement, States declared that they “are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (“IHL”), including through maintaining human responsibility and accountability in the use of force.”⁴²⁴⁶

At the 78th UN General Assembly First Committee in 2023, Malta co-sponsored and voted in favor of resolution L.56⁴²⁴⁷ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

At the 79th UN General Assembly First Committee in October 2024, Malta co-sponsored and voted in favor of resolution L.77⁴²⁴⁸ with 160 other countries in favor to 3 against, with 13 abstentions.⁴²⁴⁹ The Resolution highlighted “the importance of addressing the challenges and concerns (about the possible negative consequences and impacts) posed by autonomous weapons systems” from humanitarian, legal, security, technological, and ethical perspectives and mandated the UN Secretary-General to convene open informal consultations in 2025 open to the full participation of all Member States.

Malta participated in the first REAIM international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Malta, together with other countries, agreed on a joint call for action on the responsible development, deployment, and use of artificial intelligence in the military domain,⁴²⁵⁰ stressing “the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” Malta also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁴²⁵¹

AI Literacy

Malta's Digital Education Strategy 2024–2030 incorporates AI literacy into the national school curriculum, with Year 6 students (ages 10–11) introduced to AI concepts and tools including image generation, text-to-speech applications, and AI-assisted searching.⁴²⁵² The strategy also includes AI literacy training for educators. Additionally, the IDPC organized a Fundamental Rights Impact Assessment (FRIA)

workshop in October 2025 to educate professionals on conducting fundamental rights assessments for high-risk AI systems under the EU AI Act.⁴²⁵³

Human Rights

Freedom House ranks Malta as “Free” with a score of 87/100 in the 2025 Freedom in the World report. Freedom House explains, “Malta is a parliamentary democracy with regular, competitive elections and periodic rotations of power. New and smaller political parties encounter difficulties in challenging the dominance of the two main parties, and official corruption is a serious problem. While civil liberties are generally respected, mistreatment of migrant workers and asylum seekers remains a concern.”⁴²⁵⁴

Malta is a Member State of the Council of Europe (CoE) and of the United Nations and thus has human rights obligations at the regional and universal levels. Malta must abide by the European Convention on Human Rights and is subject to the jurisdiction of the European Court of Human Rights and the monitoring of the CoE treaty bodies. Malta’s human rights policies and practices are also monitored by the CoE Commissioner for Human Rights.

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers affirmed that “member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or [minimizing] possible adverse effects.”⁴²⁵⁵

As a UN Member State, Malta is subject to the oversight of various UN human rights bodies, including the Human Rights Council and its Universal Periodic Review and thematic special procedures. In February 2025, Malta proposed a new Ombudsman Bill to establish a National Human Rights Institution, which could bolster AI governance by providing independent redress for rights violations and ensuring alignment with EU human rights standards.⁴²⁵⁶

Center for AI and Digital Policy

OECD / G20 AI Principles

Malta is not a member of the OECD⁴²⁵⁷ but is recognized by the OECD as adhering to the AI Principles.⁴²⁵⁸ The Maltese National AI Strategy emphasizes that Malta's Ethical AI Framework builds on the OECD AI Principles. The Framework explicitly states that particular attention was given to ensuring alignment with OECD AI Principles.⁴²⁵⁹ The eSkills Malta Foundation merged with the MDIA in 2024 to boost AI literacy in Malta, aligning with the AI literacy requirements of the EU AI Act and supporting the OECD principle of "Building human capacity."⁴²⁶⁰

Council of Europe AI Treaty

Malta contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law.⁴²⁶¹ Malta is party to the treaty as part of the European Union but has not signed the treaty independently.⁴²⁶²

UNESCO Recommendation on AI Ethics

Malta has been a UNESCO member state since 1965 and is among the 193 Member States that adopted the UNESCO Recommendation on the Ethics of Artificial Intelligence. The Ethics guidelines from the first national AI strategy aligns with many UNESCO principles and recommendations. The attention in national strategy documents to preparing citizens for a future with AI, whether in the workforce or their daily lives, aligns with the recommendation's education and awareness focus. Programs initiated by MDIA and in education put the principles to

action. Malta has not initiated the UNESCO Readiness Assessment Methodology (RAM).⁴²⁶³

Evaluation

Malta has progressed significantly on the goal to become the “ultimate AI launchpad” and reoriented the national AI strategy in 2025 to focus more clearly on building human and structural capacity for trustworthy AI. The country benefits from a comprehensive European and national data protection legal regime and actions to implement the EU AI Act, as with the Malta Digital Innovation Agency Act to enhance the MDIA’s independence and power over innovative technology policies. The MDIA now has power to conduct market surveillance and compliance of products through investigation and enforcement, secure budget for its implementation, and issue and implement programs and schemes such as providing a certificate or mark of assurance or approval to innovative technology. In addition, Malta co-sponsored the GPA Resolution related to AI for the first time. Overall, the development of AI-related policies and the governance structure in Malta show improvement.

Center for AI and Digital Policy

Mauritius

In 2025, Mauritius committed to developing a new AI policy framework to integrate outcomes from the UNESCO RAM report. The 2025–2029 Digital Transformation Blueprint laid out this plan and established an AI unit to promote coordination across sectors.

National AI Strategy

Mauritius has progressed from AI readiness assessment to structured policy implementation. Following the completion of the UNESCO Artificial Intelligence Readiness Assessment (RAM) in October 2024, the Government included findings in the strategy: *A Blueprint for Mauritius a Bridge to the Future: Digital Transformation 2025–2029* (Digital Transformation Blueprint).⁴²⁶⁴ The Blueprint mandates the formulation of a new national Artificial Intelligence Strategy and the creation of an AI Unit within the Ministry of Information Technology, Communication, and Innovation to drive cross-sectoral integration of AI.

The intended National AI Policy, aligned with the Government Programme 2025–2029, will, according to the Blueprint, promote trustworthy, transparent, accountable, human-centric, and innovation-friendly AI, while positioning Mauritius as a regional hub for ethical AI.⁴²⁶⁵ Planned initiatives included under the Mauritius Budget 2025–2026 include AI regulatory sandboxes, mobile and regional Fab Labs, and AI literacy programs targeting upper-primary students. Also envisaged are public–private partnerships to establish an AI Tech Park supporting startups and R&D in Fintech, Agritech, Edtech, and Climate Action. These measures collectively reflect a national pivot toward responsible, inclusive AI adoption.

Mauritius was one of the first African countries to publish a national AI strategy in 2018.⁴²⁶⁶ The strategy reflected the country’s aim to promote and utilize AI in improving growth, productivity, and quality of life, with recommendations for the achievement of these goals. The original strategy provided a roadmap for the development of AI in the country by identifying sectors and national projects that could leverage AI, capacity-building and skill development, AI ethics, partnerships for emerging technologies, awareness campaigns, and adoption of AI in public services. The national AI strategy will continue many of these efforts aligned with

goals to integrate the UNESCO AI Ethics Recommendation into national AI policies.⁴²⁶⁷

The Economic Development Board and the Ministry of Finance and Economic Development were responsible for piloting the new strategy.⁴²⁶⁸ The AI projects identified for implementation fall in the manufacturing, health, agriculture, and FinTech sectors. Mauritius established an AI Council composed of experts whose primary role is to advise the Government on ways to support the country's AI ecosystem. The Strategy also urged the government to create a regulatory environment for AI that includes a framework on ethics and data protection.

According to the Africa Policy Institute (Afripoli), Mauritius' digital strategy focuses on five waves, one of which is the review of the existing legal frameworks to support AI and robotics developments.⁴²⁶⁹ The UN e-government survey report highlights the efforts of Mauritius to align the Digital Government Transformation Strategy with the Public Sector Business Transformation Strategy and the appointment of a High-Level Digital Government Task Force for oversight and reporting.⁴²⁷⁰ Mauritius' policy efforts align with the country's commitments as a member of the African Union, notably the AU digital transformation strategy⁴²⁷¹ and the Continental Data Policy Framework.⁴²⁷²

Moreover, the government of Mauritius collaborates with the national AI industry, showing support for their initiatives. In particular, the Mauritius Ministry of Information Technology, Communication and Innovation promoted the Artificial Intelligence (AI) Summit, an initiative of the Mauritius Emerging Technologies Council (METC).⁴²⁷³

Center for AI and Digital Policy

Public Participation

Mauritius includes a framework for public participation in its laws. The country's Constitution makes it mandatory for the legislature to create avenues for public participation in the law-making process. Accordingly, it provides citizens with the right to participation, freedom of association, and expression.⁴²⁷⁴

The Digital Government Survey of 2018 reported a significant lack of involvement of citizens in national issues and policy discussions.⁴²⁷⁵ Recommendations in the Transformation Strategy included the “provision of digital platforms for integrating citizens and other stakeholder views in government decision-making processes,”⁴²⁷⁶ engagement by Ministries or Government departments with the public, and dissemination of information to inform decision-making, as well as the release of Open Data “as a means to achieve transparency in public sector operations.”⁴²⁷⁷ In response, the government established the Citizen Support Portal.⁴²⁷⁸ The Portal is an e-participation and e-decision-making platform meant to enable government to engage with citizens. The platform is intended to “handle citizen complaints, monitor complaints, and inform citizens on Government policies.”⁴²⁷⁹ The platform is supported by 35 Citizen Advice Bureaus placed across the country to facilitate access to computers or the Internet to citizens who do not have these means.⁴²⁸⁰

The government of Mauritius has, on occasion, proactively consulted with relevant stakeholders in developing its national digital policy. The Digital Transformation Blueprint 2025–2029 commits to an e-Participation platform to enable citizens to engage digitally in consultations, provide policy feedback, and participate in decision-making, thereby institutionalizing public input as AI policy evolves.⁴²⁸¹ While preparing the strategic plan Digital Mauritius 2030, the government has been consulting stakeholders from the public and the private

sectors.⁴²⁸² The Ministry of Information Technology, Communication and Innovation initiated the development of a National Artificial Intelligence Strategy with a consultation meeting in July 2025, which brought together government, business, academia, and civil society under a public–private–people partnership approach. The Ministry also set up thematic working groups to draft inputs for the strategy chapters, indicating an ongoing multi-stakeholder engagement process.⁴²⁸³

In the UN e-Government survey 2020, Mauritius moved to first place in Africa, 63rd in the world, and 45th globally in the open data index, and was recognized as a model digital government.⁴²⁸⁴ The most recent e-Government Survey from 2024⁴²⁸⁵ ranked the country as one of the two countries in the African continent in the very high EGDI group, after South Africa.

Authorities launched AI for All,⁴²⁸⁶ a national public awareness booklet, and announced the Let’s Talk AI program as an outreach strand on the MITCI portal in 2025. The initiatives aim to democratize AI knowledge across schools and businesses, promoting public engagement with AI technologies and enhancing public participation in formulating the upcoming AI policy.⁴²⁸⁷ Parliamentary debates in July–October 2025 also referenced a technical committee working on the AI Strategy, confirming an institutional mechanism to sustain participation and expert input.⁴²⁸⁸ These outreach efforts build on the Data Protection Office’s conference on Data Protection Day in 2023 to raise awareness about privacy rights, accountability, and protection against government surveillance.⁴²⁸⁹

Data Protection

Mauritius was among the first African countries to enact data protection in line with the European General Data Protection Regulation (GDPR)⁴²⁹⁰ with the Data Protection Act 2017 (DPA).⁴²⁹¹ The 2017 DPA repealed the previous Data Protection Act.⁴²⁹² The DPA aims to enhance data subjects' control over their personal data and individual autonomy.⁴²⁹³ Unlike the GDPR, the DPA does not have extra-territorial effect. The DPA covers "the processing of personal data, wholly or partly by automated means."⁴²⁹⁴ Section 21 of the DPA⁴²⁹⁵ enshrines provisions regarding the lawful, fair, and transparent processing of data, the right to erasure and rectification, and the observance of the rights of data subjects. Section 34 provides for the right to privacy within the "principles of lawfulness, necessity, and proportionality in a democratic society."

The DPA requires a Data Protection Impact Assessment ex-ante to assess if the processing has the potential to result in "high risk to the rights and freedoms of data subjects by virtue of their nature, scope, context, and purpose."⁴²⁹⁶ The DPA has been criticized for providing no limitations regarding the use of new technologies, including AI,⁴²⁹⁷ thus raising privacy and ethical concerns if no impact assessment is conducted.⁴²⁹⁸

The Assessment shall include:

- Purposes and the legitimate interest of the processing
- Necessity and proportionality
- Risks to the rights and freedoms of data subjects
- Measures to address risks; safeguards

The Data Protection Office (DPO)⁴²⁹⁹ is the supervisory authority responsible for protecting the privacy rights of individuals since 2009. The DPO offers e-services ranging from Data Protection Impact Assessments, compliance audits, certifications, transfer of personal data abroad, and notifications of a personal data breach.

Mauritius's Data Protection Commissioner contributed to the reform of the data protection legislation and to reforms in the Southern Mediterranean region, including with regard to the negotiations with the EU to achieve adequacy.⁴³⁰⁰ The DPO has been a member of the Global Assembly (GPA) since 2013. However, the DPO did not endorse the GPA 2018 Declaration on Ethics and Data Protection in Artificial Intelligence,⁴³⁰¹ 2020 Resolution on Accountability in the Development and Use of Artificial Intelligence,⁴³⁰² or 2022 Declaration on Facial Recognition Technology.⁴³⁰³

The DPO has issued several Guidelines regarding the DPA,⁴³⁰⁴ including AI solutions in the context of the COVID-19 pandemic⁴³⁰⁵ and a Code of Practice⁴³⁰⁶ to ensure that the Mauritius Police Force complies with the DPA when it operates the

Safe City surveillance systems. In a report by the UN Rights Committee of 2021, Mauritius was found in violation of citizens' privacy rights due to the lack of assurance of protection of the biometric data stored in the National Identity Card.⁴³⁰⁷

The Government promulgated the Information and Communication Technologies (Registration of SIM) (Revocation) Regulations 2025 (GN No. 2 of 2025), revoking the 2023 SIM registration regime. Operators were required to destroy stored photographs by 14 January 2025 and certify destruction to the ICT Authority by 23 January 2025; non-compliance is an offence. This course-correction responds to privacy and proportionality concerns over excess biometric/image collection.⁴³⁰⁸

In 2018, Mauritius ratified⁴³⁰⁹ the African Union Convention on Cyber Security and Personal Data Protection (Malabo Convention).⁴³¹⁰ The collaboration with the European Union led the Ministry of Information Technology, Communication, and Innovation (MITCI) to initiate the Cyber Resilience for Development Project (Cyber4D) project in 2018.⁴³¹¹ In April of that year, the country signed the Commonwealth Cyber Declaration on the occasion of the Commonwealth Heads of Government Meeting (CHOGM).⁴³¹² The parties to the Declaration acknowledged the importance of agreeing on common standards, strengthening data protection and security, and affirmed that “the same rights that citizens have offline must be also protected online.”

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The MITCI submitted a new Cybersecurity and Cybercrime legislation to Parliament⁴³¹³ in alignment with the Council of Europe tenets and other international conventions in 2021 and achieved enactment. Mauritius is a priority country in the Council of Europe Global Action on Cybercrime Extended Project (GLACY+), which seeks to strengthen States' capabilities in the formulation of cybercrime legislation.⁴³¹⁴ However, the cybercrime legislation does not specifically address personal data protection or algorithm transparency as fundamental rights.

The Digital Transformation Blueprint⁴³¹⁵ elevates Data Governance as a core enabler of digital government, proposes a Data Management Office (DMO) (initially a DMU) to lead a National Data Strategy, and establishes an AI Office and a National Cyber Resilience & Cyber Security Agency (NCRCSA) to strengthen security, ethics, and oversight of AI systems. The National Data Strategy includes (i) a Data Governance Framework, (ii) Data Sharing policy and protocol, (iii) Data Retention policy, and (iv) a National Government Data Warehouse, with a Citizen Data Hub managed by the DMO.

The 2025–2026 Budget Speech committed to amend the Data Protection Act to meet EU requirements, align the Cybersecurity and Cybercrime Act with international standards, set up a Cyber Security Operation Centre, create a dedicated AI Unit at MITCI, launch an AI Innovation Start-Up Programme, and fund a Public Sector AI Programme (Rs 25 million) to equip ministries with AI tools. The Budget also provides resources to Statistics Mauritius to build open/big-data capacity and finances a Tier IV Government Data Centre for disaster recovery.⁴³¹⁶

On 31 July 2025, MITCI launched the formulation of a National AI Strategy under a public–private–people partnership model. Working groups across government, industry, academia, and civil society were convened, with a nationwide public consultation announced. The kick-off emphasized ethics, inclusivity, human-centric innovation, and prerequisites such as data governance, quality datasets, regulatory clarity, and security.⁴³¹⁷

Center for AI and Digital Policy

After an eight-day visit to the country in December 2023, the UN Special Rapporteur on the right to privacy stated, “Overall, privacy is taken seriously in Mauritius and the Government has prioritized developing a comprehensive legal framework. However, the challenge, as is the case for all States, is to ensure the implementation of the laws.”⁴³¹⁸

The Ministry of Education and Mauritius Telecom signed an MoU to pilot mytGPT for Education in schools in 2025. Given the involvement of children’s data and AI-enabled learning tools, the rollout should be preceded by Data Protection Impact Assessments (DPIAs) and strong safeguards in line with Section 34 DPA.⁴³¹⁹

Algorithmic Transparency

The DPA foresees in Article 37 that the data subject is entitled to information related to “the existence of automated decision-making, including profiling, and information about the logic being involved, as well as the significance and envisaged consequences of such processing for the data subject. On September 4, 2020, Mauritius became the first African country to ratify the Convention 108+, which sets a right to algorithmic transparency.”⁴³²⁰ Section 38 of the DPA addresses the rights of an individual not to be subject to automated decision making, including profiling, that results in legal effects for the subject. This section establishes that automated processing for evaluation “shall not be based on special categories of personal data” and must include safeguards for the “rights, freedoms, and legitimate interests” of the subject.⁴³²¹ The DPA covers “the processing of personal data, wholly or partly by automated The DPA, Article 5, also establishes examining any proposal for automated decision-making that may result in adverse effects on the privacy of individuals as a function for the DPO.

Center for AI and Digital Policy

Mauritius signed a Joint Declaration⁴³²² on privacy and the protection of personal data with the European Union, Australia, Comoros, India, Japan, New Zealand, Singapore, South Korea, and Sri Lanka, with the aim to promote core safeguards relating to automated decision-making such as transparency and the possibility to challenge the outcome of an automated decision.

Facial Recognition and Smart Cities

Mauritius' National AI Strategy states that AI is essential to help improve public safety, which is also echoed in Mauritius' Vision Strategic Plan 2030⁴³²³ and the Digital Government Transformation Strategy. Already underway, the Safe City Project is set to include the installation of a Safe City infrastructure comprised of a total of 4000 surveillance cameras (Intelligent Video Surveillance –IVS) with built-in facial recognition capabilities once it is completed.⁴³²⁴ Huawei Technologies Co, Ltd, the Chinese Information Communication Technology giant with an almost two-decades-old presence in Mauritius in partnership with Mauritius Telecom, provided the AI-powered technology, which has the capability of generating alarms when it detects suspicious personnel.⁴³²⁵ The Carnegie Endowment for Peace study on AI surveillance reported this exclusive surveillance contract for smart policing with Huawei to be the result of a commitment of Mauritius to access long-term financing from China.⁴³²⁶

In 2020, members of the Parliament raised concerns about the effectiveness of data protection safeguards because the Prime Minister exempted the Safe City Project from the DPA, under Section 44 of the DPA, evoking national security grounds. As a result, the Government released a Code of Practice⁴³²⁷ for the operation of the Safe City Systems by the Mauritius Police Forces in accordance with the provisions of the DPA 2017. Mauritius' Prime Minister stated that no biometric data

has been collected because the AI technology is not yet operational and reiterated that the Safe City project is aligned with Section 44 of the DPA 2017.⁴³²⁸

The Safe City pilot falls under the jurisdiction of the Mauritius Police Force, under the Prime Minister's Office, but the responsibilities for the data of this project were opaque from the onset.⁴³²⁹ The Government Information Center reported in 2021 that data from the Safe City Project could be stored for “at least 30 days on a 24-hour basis.” Deliverables include the “Supply, installation, testing and commissioning of 4000 Intelligent Video Surveillance cameras over 2000 sites” as well 300 Traffic Surveillance cameras and a centralized Command and Control Centre.⁴³³⁰

The Hoover Institution warned about the risks for “political control, manipulation, and oppression” resulting from surveillance projects, and calls for checks and balances by the Mauritian Parliament, National Audit Office, and media to ensure that the public interest in projects of this magnitude is a priority. A 2021 OHCHR report also pointed to the use of AI for profiling and automated decision-making by Intelligent agencies in Mauritius despite the regulations of Section 9 of the Constitution. The report noted deployment of AI across four areas: (1) public safety video and image analysis, including the use of CCTVE audio recording; (2) DNA Analysis powered by AI; (3) Forensic application of Facial Identification Techniques (FITS) and (4) Crime forecasting through the Intelligent Video Surveillance (IVS).

In May 2023, the German Council on Foreign Relations published a study demonstrating that these concerns still exist in Mauritius, as part of Chinese-planned coastal smart cities, located close to submarine cable landing stations and vital naval channels.⁴³³¹ Dia—Democracy in Africa—wrote on November 13, 2024 that there seems to be a correlation between the island's digitalization trajectory and its democratic backsliding. Mauritius, moving from a liberal democracy to an electoral

autocracy, is marked by state capture, censorship, surveillance, and suppression of media and academic freedom.⁴³³²

Biometrics

At the age of 18, all Mauritius citizens must apply for an identity card that they must carry on them.⁴³³³ Mauritius launched its first identity card scheme under the National Identity Card Act of 1985.⁴³³⁴ A new smart biometric ID card scheme, which mandates the Government to store data including fingerprints and calls for stiffer penalties against identity fraud⁴³³⁵ to deter multiple ID card applications using fake information, initiated under the Mauritius National Identity Card Unit in 2019.

The 2013 National Identity Card scheme led to a constitutional challenge, *Madhewoo v The State of Mauritius, and another*,⁴³³⁶ which reached the Supreme Court of Mauritius as citizens of Mauritius feared misuse of their personal data for Government mass surveillance. The Supreme Court held that although the smart ID card scheme interfered with the plaintiff's right to privacy under Section 9(1) of the Constitution, the application of the 2013 Act was permissible under Section 9(2) because the right to privacy is not absolute and interference with that right is permissible in the interest of public order. However, the Court held that the storage of the data was not adequately secured because of the lack of safeguards as provided under the DPA. In response, the Mauritius Government issued the National Identity Card (Amendment, Civil Identity Register) Regulations 2015,⁴³³⁷ which erases the biometric data once the ID card has been issued.

In 2016, the Judicial Committee of the Privy Council confirmed the 2015 judgment of the Supreme Court of Mauritius.⁴³³⁸ Subsequently, the plaintiff filed a UN human rights complaint. On July 21, 2021, the UN Human Rights Committee shared the views of the Committee according to which the mandatory storing of

Artificial Intelligence and Democratic Values 2026
Center for AI and Digital Policy

biometric data interfered with the plaintiff's right to privacy since it relates to data storage and retention contrary to Article 17 of the International Covenant on Civil and Political Rights⁴³³⁹ to which Mauritius is a party. The Committee found that the Government failed to set appropriate measures to protect the stored data against the risk of arbitrariness and abuse and must take steps to avoid similar violations. Mauritius was given 180 days to report back to the Committee with the actions taken to give effect to the Committee's views and to publish them broadly in the official language of Mauritius. To date, there are no official reports about any action planned by Mauritius to address the UN report.

A 2021 OHCHR report also pointed to the use of AI for profiling and automated decision-making by Intelligent agencies in Mauritius despite the regulations of Section 9 of the Constitution. The report noted deployment of AI across four areas: (1) public safety video and image analysis, including the use of CCTV audio recording; (2) DNA Analysis powered by AI; (3) Forensic application of Facial Identification Techniques (FITS) and (4) Crime forecasting through the Intelligent Video Surveillance (IVS).⁴³⁴⁰

The Government of Mauritius launched a new identity card with additional features to prevent fraud, including the creation of a Mobile ID Card and digital wallet in 2024.⁴³⁴¹ The Mobile ID effort is being conducted in partnership with Thales. In August 2024, the government unveiled additional details about the Mobile ID Card, which will comply with ISO standards. The 2024 National Identity Card Regulation revoked the 2013 National Identity Card Regulations. The new regulation states that changes to biometric information will require the issuance of a new card. However, it does not mention the deletion of biometric data, as discussed in the 2015 Regulations. As of 2025, the Mobile ID is not compulsory⁴³⁴² and authentication can be done via Face ID or Touch ID registered in the mobile phone of the user.⁴³⁴³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Environmental Impact of AI

The 2018 AI Strategy does not address mitigating environmental impacts of AI, only the use of AI to reduce environmental impact in agriculture and to reduce pollution and energy waste in urban areas. Pillar 4 in the 2025 Digital Blueprint addresses waste reduction from the digital economy, including public procurement acquisition of energy-efficient ICT products and green data centers, as well as government portals using the principle of “green computing.”⁴³⁴⁴

Lethal Autonomous Weapons

Mauritius ratified the Convention on Certain Conventional Weapons (CCW) in 1993 and has participated in some CCW meetings on autonomous weapons systems. As a member of the Non-Aligned (NAM) and the African Union, Mauritius supports the negotiation of a legally binding instrument on autonomous weapons systems to ensure that the weapons respect human rights and remain accountable.⁴³⁴⁵ The African Group in 2021 stressed the “ethical, legal, moral, and technical questions” raised by the use of autonomous weapons systems and urged for concrete policy recommendations to be adopted including prohibitions and regulations.⁴³⁴⁶

AI Literacy

Mauritius has framed AI literacy as a cross-cutting capacity for all citizens. In 2025, the Government’s Digital Transformation Blueprint (2025–2029) positioned AI as a core enabler of a “smart, secure and citizen-first digital nation,” and called for building digital/AI skills at national scale through education and reskilling programs.⁴³⁴⁷ These priorities were reiterated at the presidential launch of the Blueprint in May 2025.⁴³⁴⁸ Foundational efforts pre-date the current cycle. Since

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

2006, the National Computer Board, now the Mauritius Digital Promotion Agency (MDPA), has operated nationwide digital-literacy schemes such as the Universal ICT Education Programme (UIEP)⁴³⁴⁹ and the Cyber Caravan outreach model,⁴³⁵⁰ now modernized as Digital Lab on the Go (DLOG)).

Human Rights

The 2025 Freedom in the World Report ranks Mauritius “Free” with a score of 86/100,⁴³⁵¹ up one from 2024. The positive change is attributed to the successful handover of political power from the long-reigning party to the opposition after a decisive electoral defeat in November 2024. The country’s peaceful democratic transition allowed Mauritius to climb 23 places (the most globally) in terms of democratic representation in the International IDEA’s Global State of Democracy 2025 Report.⁴³⁵² Mauritius also showed improved indicators in credible elections and scored highly in civic engagement and rule of law.

Mauritius has a comprehensive framework on Human Rights as a member of the United Nations and a signatory of the Universal Declaration of Human Rights. Mauritius has also ratified the International Covenant on Civil and Political Rights (ICCPR), the International Covenant on Economic and Social Cultural Rights (ICESR), and the Convention on Cybercrime (Budapest Convention).⁴³⁵³ Mauritius enacted the Protection of Human Rights Act 1998, which that creates a national framework for the protection of human rights.⁴³⁵⁴ The Act establishes the National Human Rights Commission to protect human rights and investigate complaints regarding violations. Democratic backsliding in Mauritius, marked by state capture, censorship, surveillance, and suppression of media and academic freedom, raises concerns about its impact on human rights protections and AI policy implementation.

These developments could affect how AI policies align with international human rights standards.⁴³⁵⁵

In 2018, the UN Human Rights Council, Universal Periodic Review of Mauritius highlighted the country's efforts to develop human rights indicators, which were integrated systematically into national implementation and monitoring plans.⁴³⁵⁶ Mauritius issues periodic reports on the implementation of the African Charter on Human and People's Rights. The latest report,⁴³⁵⁷ covering 2018–2024, highlighted Mauritius's efforts to prepare youth and women for greater opportunities in the job market through digital skills programs and vocational programs.⁴³⁵⁸

OECD / G20 AI Principles

Mauritius is not a member of the OECD or the G20 and has not endorsed the OECD AI Principles⁴³⁵⁹ or the G20 AI Guidelines.⁴³⁶⁰ Mauritius is not a member of the Global partnership on Artificial Intelligence (GPAI).⁴³⁶¹ The OECD AI Observatory reports the strides of the government of Mauritius in the field of AI policy⁴³⁶² with the release of the AI Strategy and the establishment of an AI Council. The Mauritius AI strategy addresses six OECD AI principles: (1) inclusive growth, sustainable development, and well-being; (2) Human-centered values and fairness, (3) Robustness, security, and safety, (4) Fostering a digital ecosystem for AI, (5) Providing an enabling policy environment for AI, and (6) Building human capacity and preparing for labor market transitions.⁴³⁶³ However, fairness is only glancingly mentioned in the national AI strategy without a clear indication of how the

Center for AI and Digital Policy

government of Mauritius defines and intends to promote fairness in relation to AI development and deployment.⁴³⁶⁴

At the International Conference on Digital Economy & Digital Banking held in Mauritius in October 2022, Mauritius' Prime Minister, Pravind Kumar Jugnauth, reiterated the government's engagement to continue to foster collaboration with international institutions, especially with the OECD, with the aim to promote Mauritius as a Development Model in Africa.⁴³⁶⁵ The Prime Minister shared Mauritius's determination to become a member of the OECD. Mauritius was one of the guest countries invited to attend the G20 summit in Delhi, India, in September 2023.⁴³⁶⁶

In 2024, the Government strengthened its technical relationship with the OECD with the launch of the OECD–Mauritius Country Programme.⁴³⁶⁷ The Blueprint for Mauritius 2025–2029 mandate to develop a new National AI Strategy aligns with OECD policy recommendations.⁴³⁶⁸

Council of Europe AI Treaty

Mauritius did not participate in negotiations for the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁴³⁶⁹ Mauritius has not endorsed this first international treaty on Artificial Intelligence.⁴³⁷⁰

Center for AI and Digital Policy

UNESCO Recommendation on AI Ethics

Mauritius is a member state of UNESCO since 1968⁴³⁷¹ and one of the 193 countries that endorsed the UNESCO Recommendation on the Ethics of AI (UNESCO Recommendations) on November 21, 2021.⁴³⁷²

In 2022, Mauritius attended the UNESCO-Southern Africa Sub-Regional Forum on AI (SARFAI 2022) held in Windhoek, Namibia in September 2022. Discussions concerned the Ethical Impact Assessment and Readiness Assessment Methodologies in the framework of the implementation of the UNESCO Recommendation. Mauritius was not a participant in the session. The co-hosts of SARFAI 2022 (Botswana, Malawi, Mozambique, Namibia, South Africa, Zambia and Zimbabwe) approved the Windhoek Statement on Artificial Intelligence in Southern Africa,⁴³⁷³ which calls for the establishment of a Southern African coordination mechanism for the implementation of the UNESCO Recommendation on the Ethics of AI.

Member states of the South African Development Community (SADC), including Mauritius, were to submit the Declaration to the 2023 Joint Meeting of SADC Ministers responsible for Education and Training and Science, Technology, and Innovation, for discussion and adoption. The most recent UNESCO AI Needs Assessment Survey did not include any report or statistic about Mauritius.⁴³⁷⁴

Mauritius completed the Readiness Assessment Methodology (RAM) report⁴³⁷⁵ and explicitly acknowledged the report in the development of the Digital Transformation Blueprint.⁴³⁷⁶ UNESCO notes the equitable access to internet and investment in education and skills as strengths for the country's AI development but stressed the need for cross-sectoral collaboration in the development of AI policy.⁴³⁷⁷ Discussions between Mauritius and UNESCO emphasized the importance of integrating the UNESCO AI Ethics Recommendation into the new national AI

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

strategy under the Bridge to the Future Government Program 2025–2029,⁴³⁷⁸ indicating a commitment to ethical AI practices.⁴³⁷⁹

With patronage from UNESCO, Mauritius hosted its inaugural AI Summit in 2024, focused on “ethical AI driving socio-economic progress, global collaboration, and innovation.” Organized by the Ministry of Information Technology, Communication, and Innovation and the Mauritius Emerging Technology Council, the event marks a preliminary step towards implementing the UNESCO Recommendation, particularly principle 9 on Awareness and Literacy) and, given the international spotlight, principle 4 on Multi-stakeholder and Adaptive Governance & Collaboration. The Summit brought together stakeholders from across Africa and around the world and provided a spotlight for the UNESCO Recommendation on the Ethics of Artificial Intelligence, presented by Prof. Emma Ruttkamp-Bloem of the UNESCO World Commission on the Ethics of Scientific Knowledge and Technology.⁴³⁸⁰

Evaluation

Mauritius has made significant strides in advancing its AI policy framework, including the development of a new national AI strategy under the "Bridge to the Future" Government Program 2025–2029.⁴³⁸¹ The program commits to emphasizing transparency, accountability, and alignment with international benchmarks such as the UNESCO Recommendation on AI Ethics and OECD AI Principles in the new strategy. Public engagement has been enhanced through the AI-for-All campaign, democratizing AI knowledge across schools and businesses. However, democratic backsliding marked by censorship and surveillance raises concerns about human rights protections and the alignment of AI policies with democratic values. Continued focus on ethical governance, public participation, and regulatory frameworks will be essential for Mauritius to achieve trustworthy and inclusive AI development.⁴³⁸²

Mexico

In 2025, Mexico updated the data protection law to reflect the dissolution of the autonomous data protection agency (INAI) and shifted oversight for data protection to the Anticorruption and Good Government Secretariat. The Chapultepec Principles released in early 2026 aim to provide a nonbinding voluntary framework for the ethical development and use of AI in the country.

National AI Strategy

In 2018, Mexico became the first Latin American country to announce a national AI strategy. The Office of the Mexican President under the Peña Nieto administration together with the United Kingdom's Embassy in Mexico City commissioned a readiness assessment and policy report.⁴³⁸³

The report provided a preliminary outline of how Mexico should become a leader in AI. Mexico's manufacturing-centric economy, the report argues, faces grave risks amid growing automation and should take a clear, strategic position in developing AI. The report set out five thematic areas: governance, government, and public services; research and development; capacity, skills, and education; data infrastructure; and ethics and regulation.

Within the category of ethics and regulation, the report recommends that the Mexican government bring data assets inside the scope of Mexican competition law (COFEC) in recognition of the fact that data is a competitive asset. The report also calls for the creation of an AI Ethics Council which would "set guidelines and limits which reflect Mexican Values" and "award a quality mark for AI companies who abide by the standards."⁴³⁸⁴

On this basis, in March 2018, the Office of the President under the former Peña Nieto administration launched Mexico's AI Strategy 2018. The Strategy sets out five key actions for the Mexican government: 1) develop an inclusive governance framework; 2) identify the needs of AI in industry; 3) open the recommendations of the readiness assessment and policy report for public consultation; 4) support Mexico's AI leadership in international forums; and 5) promote continuity through

changing administrations by working with all interested stakeholders toward an official AI National Policy.⁴³⁸⁵

However, a 2022 report conducted by the OECD in collaboration with the Development Bank of Latin America reported: “Mexico’s 2018 strategy, which was put into effect under a previous administration, is no longer publicized on official government websites. It is unclear whether the current administration considers the strategy to be still in effect.”⁴³⁸⁶

During the López Obrador administration but following a recommendation of the 2018 AI readiness and policy report, a multi-stakeholder national coalition, IA2030.Mx comprising institutions from government, industry, civil society, and academia, and coordinated by C Minds, issued the Mexican National AI Agenda (2018–2030).⁴³⁸⁷ The Agenda takes the UN Sustainable Development Goals (SDGs) as inspiration in the objective to “lay the foundation for the ethical development and use of AI, mitigating the present and future social and environmental risks.”⁴³⁸⁸ The Agenda revolves around six thematic axes: 1) Data, Digital Infrastructure, and Cybersecurity; 2) Ethics; 3) Governance, Government, and Public Services; 4) Skills, Capacities, and Education; 5) Research and Development; and 6) Mexicans Abroad.

Concerning ethics, the Agenda states that “it is of the utmost importance for the development and adoption of AI technology in our country to be based on the protection of, and respect for human rights.”⁴³⁸⁹ The Agenda explains that “one of the main merits in using human rights as a pivotal element in the development of AI is that human rights clearly establish the responsibility of the government in protecting human rights and providing mechanisms for the prevention of, and remedy against possible violations.”⁴³⁹⁰ The Agenda identifies three rights which may be particularly at risk: freedom of expression, equality and non-discrimination, and privacy.

The Mexican government also published the General Principles for the Development and Use of Systems based on AI in the Federal Public

Administration.⁴³⁹¹ The key principles are: Monitor and evaluate the impacts of AI systems in order to ensure that they achieve the expected results; Promote transparency, by explaining to the users that interact with AI systems the decision process taken by such systems, the expected benefits as well as the potential risks derived from using such systems; Protect privacy, by incorporating mechanisms of control and consent for the use of personal data during the design of AI systems; Foster equality, by reducing risks of discriminatory biases derived from the utilized data; Due process, by allowing individuals to dispute decisions made by AI systems.

The National Artificial Intelligence Alliance (*Alianza Nacional de Inteligencia*, ANIA) established a framework to integrate AI as a driver of social, economic, and educational development in Mexico, promoting inclusion, scientific research, innovation, and responsible entrepreneurship. This framework was designed to guide public policy, regulation, and governance to protect human and environmental rights by managing AI-associated risks and ensuring ethical and transparent AI deployment. The initiative included multi-sectoral workgroups covering public policy, education, labor, cybersecurity, gender inclusion, and innovation conducting diagnostics and formulating regulatory and policy recommendations; promoting AI awareness and training; documenting AI use cases within Mexico; and fostering international collaboration. Launched in the Senate, ANIA united stakeholders from technology, academia, civil society, and government under an AI Framework for the Common Good. This collaborative model, developed with UNESCO, aimed to advance an ethical AI ecosystem for the benefit of all Mexicans.⁴³⁹²

The Secretariat of Science, Humanities, Technology, and Innovation (*Secretaría de Ciencia, Humanidades, Tecnología e Innovación*, Secihti) and Digital Transformation and Telecommunications (*Agencia de Transformación Digital y Telecomunicaciones*, ATDT) established a national framework for the design, use, and evaluation of AI systems in the country with the Declaration of Ethics and Good Practices for the Use and Development of Artificial Intelligence.⁴³⁹³ The Declaration is based on the Principles of Chapultepec, named for a sacred cultural and nature

Center for AI and Digital Policy

preserve in Mexico City. The Principles serve as a nonbinding, voluntary guidelines for the public and private sector. These 10 foundational principles are:⁴³⁹⁴

- “AI should amplify rights, never reduce them.”
- All AI-supported decisions should have responsible human oversight within clear institutional frameworks
- Decisions should not be automated if they cannot be explained
- “AI is governed best when its governed collectively.”
- “AI is valuable only if it fosters wellbeing for people.”
- “Before automating, it’s necessary to understand whom and what are affected.”
- Technology should respond to the country’s needs
- “Developing AI requires strengthening education and knowledge in the country.”
- AI must integrate the country’s cultural and linguistic diversity
- “Data is a public good and should be cared for with responsibility.”

AI Legislation

Mexican Senator Ricardo Monreal introduced the Federal Law Regulating Artificial Intelligence, a bill aimed at creating a legal framework for AI in Mexico, in February 2024.⁴³⁹⁵ However, the bill never passed. The Senate has since undertaken a series of conversations with academic and industry experts to gain insights into how to regulate AI. Congressman Ricardo Monreal Ávila, coordinator of the Morena parliamentary group, introduced a constitutional reform initiative to Article 73, fraction XVII, granting Congress explicit authority to legislate on artificial intelligence ⁴³⁹⁶. The initiative aims to establish Mexico's technological sovereignty and create a robust legal framework aligned with international standards. The reform proposal emphasizes the need for regulatory frameworks that protect human rights while fostering innovation.

Deputies from the ruling political party, MORENA ((*Movimiento de Regeneración Nacional*, National Regeneration Movement), and the Mexican Green Ecologist Party (PVEM, *Partido Verde Ecologista de México*) presented the Federal Law for the Ethical, Sovereign, and Inclusive Development of Artificial Intelligence to the Chamber of Deputies (*Cámara de Diputados*).⁴³⁹⁷ The comprehensive bill establishes a risk-based classification system for AI applications, creates a National AI Council with multi-stakeholder representation, and prohibits specific high-risk uses, including mass surveillance without judicial authorization, psychological manipulation of vulnerable groups, and social scoring systems.⁴³⁹⁸ The proposed law mandates impact assessments for high-risk AI systems and establishes certification requirements for AI deployed in critical sectors.

Public Participation

The Mexican AI National Agenda is the product of broad public participation. The IA2030Mx coalition stated that “the members of this movement have been working since the beginning of 2018 under a philosophy of co-responsibility of government, academia, industry and civil society, seeking that Mexico does not lag behind in the 4th Industrial Revolution, strategically takes advantage of the benefits of AI and mitigates the possible ethical and social risks.”⁴³⁹⁹ “What started as the collaboration of 10 institutions grew to the participation of more than 110 on a national scale. One of the first actions of the coalition was launching a national consultation on AI” in which 1588 people across the different Mexican states participated.⁴⁴⁰⁰

public to voice concerns. For example, a forum in March 2025 centered on the Impact of AI on Innovation, Creativity, and Intellectual Property.⁴⁴⁰¹

Data Protection

The right to data protection⁴⁴⁰² is enshrined in Article 16 paragraph 2 of the Mexican Constitution. Mexico has also ratified the 1981 Council of Europe (Convention 108) for the protection of individuals with regard to the processing of personal data but not yet the 2018 Protocol modernizing the Convention.⁴⁴⁰³

Two federal laws on personal data protection, one for personal data held by private parties,⁴⁴⁰⁴ one for personal data held by “obligated subjects” (government entities) and related guidelines, provide the main legislative framework for data protection in Mexico. Reforms⁴⁴⁰⁵ to both laws and the General Law on Transparency and Access to Public Information in 2025 upheld protections with some changes but created the Secretariat of Anticorruption and Good Government (*Secretaría Anticorrupción y Buen Gobierno*, SABG) to replace the National Institute for Transparency, Access to Information and Personal Data Protection (*Instituto Nacional de Transparencia, Acceso a la Información y Protección de Datos Personales*, INAI),⁴⁴⁰⁶ which was dissolved along with other independent, autonomous agencies by a 2024 constitutional amendment.⁴⁴⁰⁷ Under the new law,

all references to INAI and regulatory agencies fall to the SABG. Analysts have criticized the dissolution of the INAI, which had functional and financial autonomy.⁴⁴⁰⁸ The SABG, by contrast, falls under the executive branch.⁴⁴⁰⁹ Each of the 32 Mexican States has a legal framework that regulates the collection and processing of personal data by the public sector. A State-level data protection authority oversees compliance with the law.

On releasing Recommendations for AI-related data processing, the INAI stressed the need to uphold the right to privacy in public and private processing, noting “a common basis for the private and the public sector are the principles and duties regarding the protection of personal data that are found in the regulations that apply to them, which assure data subjects that the processing of their information is carried out properly.”⁴⁴¹⁰ Whether the processing of personal data occurs in the private or the public sector, data subjects benefit from the ARCO rights, which refer to the access, ratification, cancelation, and opposition rights of data subjects with respect to their personal data.⁴⁴¹¹ Data subjects have the right to oppose the processing of their data at any time by any mechanism, including automated decision-making and profiling. In the public sector, data subjects are also granted the right to data portability.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In May 2022, the INAI issued recommendations for the processing of personal data deriving from the use of AI.⁴⁴¹² The INAI's recommendations highlight the OECD AI Principles—inclusive growth, sustainable development, and well-being; human-centered values and fairness; transparency and explainability; robustness, security, and safety; and accountability—as the foundation for responsible AI governance and development.

The INAI is part of the Ibero-American Data Protection Network (RIPD),⁴⁴¹³ a group of experts on data protection and access to information, comprising 34 entities, including 14 federal and state authorities from Latin America and the Caribbean. In 2019, the RIPD adopted the Specific Guidelines for Complying with the Principles and Rights Governing Personal Data Protection in Artificial Intelligence Projects,⁴⁴¹⁴ based on the Standards for Personal Data Protection for the Ibero-American States approved in 2017.⁴⁴¹⁵ The INAI relied on the RIPD AI Guidelines to formulate its own recommendations on top of the OECD AI Principles.

The INAI was a member of the Global Privacy Assembly (GPA) since 2010; as of February 2026, the SABG is not listed as a GPA member.⁴⁴¹⁶ Data protection institutes for the Federal District (Mexico City) and for the states of Mexico, Michoacan, Nuevo León, Quintana Roo, and Tamaulipas are accredited members. The INAI co-sponsored the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁴⁴¹⁷ 2020 GPA Resolution on AI Accountability,⁴⁴¹⁸ and 2023

GPA Resolution on Generative AI.⁴⁴¹⁹ However, INAI did not endorse the 2022 GPA Resolution on Facial Recognition Technology.⁴⁴²⁰

Algorithmic Transparency

Although transparency and explainability are not expressly mentioned in the data protection laws of Mexico, the INAI's 2022 Recommendations for the processing of personal data deriving from the use of AI mention transparency and explainability as one of the five basic AI principles that should be respected during the development and implementation of AI systems.⁴⁴²¹ The INAI explains that: "whoever uses AI systems should be transparent regarding the use of such systems and provide significant information in order for people to be aware that they are interacting with AI systems; to know what part AI systems play in the results obtained; to be granted the opportunity to contest the outcome if they have been negatively impacted by the AI system."⁴⁴²² The ARCO rights—access, ratification, cancellation, and opposition rights of data subjects with respect to their personal data⁴⁴²³—apply to any processing of data, giving Mexicans the right to oppose the processing of their data at any time by any mechanism, including automated decision-making and profiling.

Data Scraping

The INAI and 16 of its international data protection and privacy counterparts released a follow-up joint statement laying out expectations for industry related to

⁴⁴¹⁹ Global Privacy Assembly, *Resolution on Generative Artificial Intelligence Systems* (Oct. 2023), <https://globalprivacyassembly.org/wp-content/uploads/2023/10/5.-Resolution-on-Generative-AI-Systems-101023.pdf>

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

data scraping and privacy.⁴⁴²⁴ The initial statement in August 2023 established that “[social media companies] and other websites are responsible for protecting personal information from unlawful scraping.”⁴⁴²⁵ The follow-up, which incorporates feedback from engagement with companies such as Alphabet (YouTube), X Corp (formerly Twitter), and Meta Platforms (Facebook, Instagram, WhatsApp), adds that organizations must “comply with privacy and data protection laws when using personal information, including from their own platforms, to develop AI large language models”; must regularly review and update privacy protection measures to keep pace with technological advances; and ensure that permissible data scraping, such as that for research, “is done lawfully and following strict contractual terms.”⁴⁴²⁶

Use of AI in Public Administration

As a member of the Latin American Centre for Development Administration (CLAD), Mexico approved the Ibero American Charter on Artificial Intelligence in Civil Service in November 2023.⁴⁴²⁷ The Charter aims to provide a roadmap and common framework for CLAD member states to learn about the challenges and opportunities involved in the implementation of AI in public administration and adapt their AI policy strategies and laws accordingly.

The guiding principles in the Charter include human autonomy; transparency, traceability and explainability; accountability, liability and auditability; security and technical robustness; reliability, accuracy, and reproducibility; confidence, proportionality, and prevention of damage; privacy and protection of personal data; data quality and safety; fairness, inclusiveness, and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection. The Charter calls on member states to create policies and laws to require the assessment of the impact of AI systems on human rights and freedoms and the registration of algorithms to “anticipate risks, prevent undesirable

effects and ensure its proper implementation,”⁴⁴²⁸ and proposes a risk classification mechanism that includes prohibitions.

EdTech and Children Tracking

In November 2020, the Council of Europe Consultative Committee of the Convention for the Protection of individuals with regard to automatic processing of personal data (Convention 108), to which Mexico is party, issued Guidelines on Children’s Data Protection in an Education Setting, also applicable to remote e-learning solutions and services.⁴⁴²⁹ The Committee recalls that “The UN Convention Committee on the Rights of the Child set out in 2001, that [...] Education must be provided in a way that respects the inherent dignity of the child and enables the child to express his or her views freely.”⁴⁴³⁰ The Committee highlighted the need for children to have agency over how their data re used and called for better education for them around their digital footprint. The Committee set standards to minimize data collection, especially in the use of EdTech “when consent cannot be freely given because the choice is to use a product and receive remote instruction or refuse and receive none.”⁴⁴³¹ The Committee recommended “A precautionary approach and a strengthened protection towards sensitive, special categories of data, including genetic and biometric data, and ethnic origin, or relating to sexual orientation, or offences, recognising children’s additional vulnerability.”⁴⁴³² In addition, they noted that “Profiling of children should be prohibited by law. In exceptional circumstances, States may lift this restriction when it is in the best interests of the child or if there is an overriding public interest, on the condition that appropriate safeguards are provided for by law”⁴⁴³³

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including Mexico, for children’s education during the pandemic. Based on technical and policy analysis of 163 EdTech products, Human Rights Watch found that governments’ endorsements of the majority of these online learning platforms put at risk or directly violated children’s rights.

EdTech products used in Mexico sent children's data to AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online. The report noted steps companies should take to protect children's rights, including working with governments to define clear retention and deletion rules for children's data collected during the pandemic. Furthermore, governments should develop, refine, and enforce modern child data protection laws and standards, and ensure that children who want to learn are not compelled to give up their other rights to do so.⁴⁴³⁴

The UNESCO Representation in Mexico and the Secretariat of Public Education of Mexico held a conference on the opportunities for AI use in education.⁴⁴³⁵ Educators, specialists, private-sector members, and education authorities participated in the dialogue as part of the International Day of Education centered on strengthening “teachers, students and curricula to preserve people’s autonomy so that it is human beings and communities who make decisions about their future in an increasingly automated world.” The UNESCO Representation presented 11 priority proposals, including one to establish an observatory of AI in education in Mexico was also put forward.

AI and Copyright

The Second Chamber of the Supreme Court of Justice (SCJN) issued a landmark ruling in Amparo Directo 6/2025, unanimously determining that works generated entirely by artificial intelligence cannot receive copyright protection under Mexican law.⁴⁴³⁶ The Court's 47-page decision established that Article 12 of the Federal Copyright Law recognizes only natural persons as authors, as creativity requires human intellect, emotions, and lived experiences that AI systems cannot possess. The Court found that uploading photographs and prompting a generative AI tool to create an avatar did not reflect substantial human creative input. However, the ruling maintained that AI-assisted works, where human creativity is enhanced by AI tools, remain protectable.⁴⁴³⁷

Use of AI for Criminal Purposes

The use of AI and the use of deepfakes for criminal-related purposes is on the rise and Mexico has not been exempted. In December 2023, the financial services regulator, the National Commission for the Protection and Defense of Users of Financial Services gave a warning about a deepfake video being widespread mainly through social media purporting to be Mr. Carlos Slim (Mexico's wealthiest man). The video shows a manipulated image of Mr. Carlos Slim taken from an earlier event that his company and foundation Telmex promotes among interns.⁴⁴³⁸ The deepfake video informs about a new application requesting citizens to redirect to a hyperlink, download, fill out, and send a form to earn an attractive sum of money per day. The video was a well-elaborated scam and there is evidence that many people in Mexico were affected by this fraud.

Environmental Impact of AI

Mexico's participation in the Latin American and Caribbean Regional Council and other international organizations signals a commitment to sustainable development in the use of AI technologies. However, Mexico has not developed specific policies around the environmental impact of AI or other digital technologies.

Lethal Autonomous Weapons

Mexico is a High Contracting Party to the Convention on Certain Conventional Weapons (CCW)⁴⁴³⁹ and participant in the Group of Government Experts (GGE) on Lethal Autonomous Weapons Systems (LAWS). Mexico has consistently advocated for prohibitions and regulations on autonomous weapons systems in the UN⁴⁴⁴⁰ and other venues, including regional discussions⁴⁴⁴¹ and the

Vienna Conference.⁴⁴⁴² Mexico notes an “urgent need” for international action given that “such systems represent a risk to international peace and security and are incompatible with the full observance of the rules of international law, in particular international humanitarian law.”⁴⁴⁴³ In 2024, Mexico co-sponsored Draft Resolution L.77, reiterating concerns LAWS pose for international peace, stability, and security and stressing the importance of maintaining human control over decisions related to the use of force, and the need for accountability, responsibility, and adherence to international legal frameworks.⁴⁴⁴⁴

AI Literacy

The Mexican Government and public institutions have various initiatives to support AI Literacy in schools and universities as well as workplaces. The Secretary of Public Education (*Secretario de Educación Pública*, SEP) announced a “humanist, critical, and community focus” to the New Mexican School and “the principles of equality, democratic inclusion, and collective construction will be foundational for the ethical implications of artificial intelligence” as part of his address at the UNESCO-sponsored International Day of Education conference.⁴⁴⁴⁵

The Interinstitutional Observatory for Artificial Intelligence in Higher Education in Mexico (*Observatorio Interinstitucional de Inteligencia Artificial en la Educación Superior en México*) established partnership among universities and the National Association of Universities and Institutions of Higher Education (*Asociación Nacional de Universidades e Instituciones de Educación Superior*, ANUIES) to “promote the integration of Artificial Intelligence in higher education in an ethical, equitable, transparent way, centered in people” by monitoring, researching, advising public policy.⁴⁴⁴⁶ The Observatory and National AI Forum

stress the importance of training teachers in AI technologies as a way to ensure responsible use by students.⁴⁴⁴⁷

The Secretariat of Labor and Social Security (*Secretaría de Trabajo y Previsión Social*) has also developed courses to “build and provide work competencies and skills and assist companies’ compliance with their training obligations.”⁴⁴⁴⁸

Human Rights

Freedom House gives Mexico a “partly free” (59/100) rating for political rights and civil liberties.⁴⁴⁴⁹ According to Freedom House, “Mexico has been an electoral democracy since 2000 and power has alternated between parties at both the federal and state levels, though the left-leaning National Regeneration Movement (Morena) has grown dominant in recent years. The country suffers from severe rule-of-law deficits that limit full citizen enjoyment of political rights and civil liberties.” A 2024 constitutional amendment that introduced the popular election of judges, including Supreme Court justices, has raised concerns about potential threats to judicial independence and the impartiality of the courts. Additionally, the reform expanded the use of mandatory pretrial detention, a practice criticized by human rights organizations for undermining due process.⁴⁴⁵⁰

OECD / G20 AI Principles

Mexico has taken an active role in pursuing international cooperation for the ethical development of AI. The Mexican government endorsed the OECD AI Principles.⁴⁴⁵¹ Mexico has also endorsed G20 AI Guidelines and is one of the founding members of the Global Partnership on AI (GPAI), the world’s first international AI initiative.⁴⁴⁵²

Council of Europe AI Treaty

Mexico contributed as an Observer State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law.⁴⁴⁵³ However, Mexico has not signed the treaty.⁴⁴⁵⁴

UNESCO Recommendation on AI Ethics

Mexico is represented in UNESCO's World Commission on the Ethics of Scientific Knowledge and Technology (COMEST). COMEST produced a preliminary study on the ethics of AI, which became the foundation of the UNESCO Recommendation on the Ethics of AI.⁴⁴⁵⁵ In November 2021, Mexico alongside 192 other states adopted the Recommendation on Ethics of AI.⁴⁴⁵⁶ Mexico is among the countries that "have initiated a process to establish institutional infrastructures, such as national steering committees on the ethics of AI, to oversee the piloting of the capacity-building tools under development."⁴⁴⁵⁷

Mexico signed the 2023 Santiago Declaration to Promote Ethical Artificial Intelligence⁴⁴⁵⁸ as part of the Regional Council supported by a UNESCO and CAF (development bank of Latin America).⁴⁴⁵⁹ The Santiago Declaration aligns with the UNESCO Recommendation and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data

protection.⁴⁴⁶⁰ Mexico reinforced this commitment with its endorsement of the Montevideo Declaration following the Second Ministerial and High-Level Authorities Summit on the Ethics of Artificial Intelligence in Latin America and the Caribbean.⁴⁴⁶¹ The declaration calls on governments and companies across the region to ensure AI advancements align with democratic values, prioritize human rights, and improve quality of life.

Mexico completed the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation.⁴⁴⁶² The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.⁴⁴⁶³ UNESCO developed the Artificial Intelligence Readiness Assessment of Mexico report following the RAM in partnership with the National Alliance for Artificial Intelligence (ANIA) and supported by Centro-i.⁴⁴⁶⁴ The assessment involved over 250 participants from government, civil organizations, academia, and industry to evaluate Mexico's AI ecosystem and readiness for ethical governance. The report, which was presented to the Mexican Senate, highlights AI's potential to boost global GDP and transform up to 60% of jobs. The report also outlines Mexico's opportunity to become a regional leader through a national AI strategy integrated into its National Development Plan. However, the report advises bolstering inclusivity for underrepresented groups, including by supporting Indigenous languages, and integrating media literacy in education. Additional recommendations include a unified digital identity system, an expanded open data policy, and enhanced security for critical infrastructure.

Evaluation

Mexico was the first Latin American country to initiate a national AI strategy in 2018. However, the change in administration at the end of 2018 put a brake on

Center for AI and Digital Policy

previous AI policy initiatives. The 2022 Recommendations for the processing of personal data deriving from the use of AI issued by the former national data protection authority (INAI) and the steps taken to implement the UNESCO Recommendation on the Ethics of AI were positive signs. Legislative proposals on AI and efforts in government agencies such as the Secretariats of Public Education and Labor offer further signs of progress. However, constitutional reforms such as the one to eliminate the INAI and other changes to governance structure could curb efforts to establish independent AI governance to ensure fundamental rights and the rule of law. Concerns remain over the use of AI for mass surveillance of citizens and for malicious and criminal related purposes.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Morocco

In 2025, Morocco established the base for a national AI strategy, Maroc IA 2030, while Parliament continued to work on a legal framework to govern the technology. Internationally, Morocco's foreign minister stressed the importance of ethical and responsible AI aligned to the sustain development goals to peers in the African Union.

National AI Strategy

Morocco lacks a National AI Strategy. However, government organizations have collaborated among themselves and civil society to create pathways to such a strategy. For example, the Morocco AI conference organized by a non-governmental agency proposed a framework for a national strategy that included recommendations on Ethics and Regulation as well as Governance.⁴⁴⁶⁵ The report centers Morocco's New Development Model for Morocco, which includes artificial intelligence as a key lever in the country's vision until 2035, driving a need for investment in human capital.⁴⁴⁶⁶

Researchers from Moroccan universities built on a 2021 Strategy for Developing an AI Ecosystem by the Agency for Digital Development to propose a framework for an AI strategy in 2024.⁴⁴⁶⁷ The LAFBAH AI Framework—standing for Leadership & vision, Adaptive governance, Forward-thinking, Breakthrough innovations, Agility in implementation, and Human-centered approach—favors “a holistic and integrated approach to AI in Morocco, which combines AI Governance with technological innovation, ethical and societal considerations to promote sustainable and inclusive development and enhance Moroccan competitiveness.” The Maroc IA 2030 roadmap launched in early 2026 allegedly operationalized outcomes from the two-day National AI Conference in July 2025,⁴⁴⁶⁸ placing a “strong emphasis on digital sovereignty, the development of national skills,

innovation incentives, and territorial inclusions, while seeking to reduce structural dependence on external technological systems.”⁴⁴⁶⁹

The president of Morocco’s National Human Rights Council reiterated the need for a human-rights-based AI strategy in the country at a scientific seminar in 2025.⁴⁴⁷⁰ She emphasized the need for a national AI strategy and noted that “human rights are not necessarily at odds with technological and digital advancement.” Her speech highlighted that “voluntary commitment to rights and freedoms, along with the protection of human dignity, could be a key determinant in innovation approaches, which would pave the way for deeper, more meaningful, and more human-centered innovations.”

The Moroccan House of Representatives created a parliamentary working group, the Artificial Intelligence Thematic Working Group in September 2024. The group is to study the opportunities and impacts of AI systems, including an assessment of existing laws.⁴⁴⁷¹ The working group met for another workshop in January 2025, this time focused on the legislative and regulatory framework of artificial intelligence in Morocco, including potential uses in parliamentary action.⁴⁴⁷²

A parliamentary opposition group in the Moroccan House of Councilors (the General Union of Moroccan Workers’ group) presented a bill to regulate the use of artificial intelligence (AI) in the country in April 2024.⁴⁴⁷³ The bill is aimed at addressing the negative aspects and illegal uses of AI technology. It proposes the creation of a National Agency for Artificial Intelligence dedicated to AI governance. This agency would be responsible for implementing, monitoring, and updating a national AI strategy in line with global developments in the field.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

African Union Continental AI Strategy

In December 2018, the Mohamed VI Polytechnic University in Morocco hosted UNESCO's first Forum on AI in Africa.⁴⁴⁷⁴ This led to the creation of the Benguérir Declaration,⁴⁴⁷⁵ advocating for the advancement of an AI Strategy across the African continent.⁴⁴⁷⁶ The declaration emphasized “the importance of fostering AI in Africa as a catalyst for development, focusing on the human rights aspect and grounded in universal ethical principles.”⁴⁴⁷⁷ Morocco supported the development of the African Union Continental AI Strategy,⁴⁴⁷⁸ released in 2024, and has since advocated for unity to promote coordinated action to implement it. For example, the Minister of Foreign Affairs stressed the need for “mobilization and collective action to make AI a true lever for development, peace, and security for Africans”⁴⁴⁷⁹ in a meeting with AU Peace and Security Council peers.

Public Participation

Although specific public participation opportunities for the development of Morocco's AI Strategy were not identified, the formulation of the New Development Model for Morocco, which outlines the country's vision until 2035,⁴⁴⁸⁰ employed a comprehensive consultative process and co-construction approach. Artificial intelligence is highlighted in the report as a disruptive force, emphasizing the necessity for adequate training in this field. However, it remains unclear whether a similar process will be adopted for the development of the National AI Strategy.

The Morocco AI Annual conference serves as a platform for businesses, government entities, and civil society to convene in Morocco.⁴⁴⁸¹ Last held virtually

in December 2024,⁴⁴⁸² the conference aimed to foster “meaningful dialogue on how AI is transforming innovation across industries,” including to “address the ethical and legal implications of AI.”

Data Protection

Morocco’s Law on the Protection of Individuals with Regard to the Processing of Personal Data was passed in 2009.⁴⁴⁸³ This law establishes a framework for safeguarding personal data and the National Commission for the Protection of Personal Data (*Commission Nationale de contrôle de la protection des Données à caractère Personnel*, CNDP). The CNDP possesses the authority to issue guidance and enforce its provisions. Presently, the CNDP is engaged in the process of revising the law to ensure alignment with global standards and potentially seek EU adequacy status.⁴⁴⁸⁴ Morocco signed and ratified the Council of Europe Convention 108 on automatic processing of personal data in 2019⁴⁴⁸⁵ but has neither signed nor ratified Convention 108+. ⁴⁴⁸⁶

Since 2013, the processing of biometric data has been governed by the provisions outlined in CNDP Decision no. 478-2013,⁴⁴⁸⁷ which delineates the necessary conditions for the utilization of biometric devices for access control.⁴⁴⁸⁸ This decision establishes regulations for the handling of biometric data and mandates

prior authorization from the CNDP for the installation of such devices. However, authorization for the use of biometric data in accessing “sensitive premises and facilities” is granted under specific conditions.

In September 2019, the CNDP imposed a moratorium on facial recognition⁴⁴⁸⁹ by both public and private organizations.⁴⁴⁹⁰ The CNDP then extended the moratorium it through a Deliberation,⁴⁴⁹¹ which stipulates the requirement of CNDP authorization among other criteria. Notably, in 2020, the CNDP sanctioned the use of biometric systems for “user authentication and proof of life for social welfare beneficiaries” by social security institutions.

The CNDP conducted interviews to investigate a deliberation on the use of artificial intelligence for processing personal data through late 2025.⁴⁴⁹²

Morocco is an active member of the Network of African Data Protection Authorities (NADPA).⁴⁴⁹³ This network serves as a platform for facilitating exchanges and cooperation among its members, aiming to amplify Africa's voice in its engagements with partners worldwide.⁴⁴⁹⁴ The NADPA has focused on “strengthening the network’s international presence, promoting legislation on Data Protection across Africa, and fostering cooperation among members, including capacity building.”⁴⁴⁹⁵

The CNDP has represented Morocco to the Global Privacy Assembly since 2011.⁴⁴⁹⁶ The CNDP co-sponsored the 2023 Resolution on Generative AI

Digital ID

Morocco established its national electronic identity system in 2008,⁴⁵⁰⁷ introducing the CNIE (*Carte Nationale d'Identité Electronique*), a smart ID card equipped with cutting-edge security features. Enrollment procedures included biometric data capture to ensure the uniqueness of individuals, employing an Automatic Fingerprint Identification System (AFIS) for de-duplication.

In 2022, the Digital Development Agency (ADD) and the Directorate of National Security (DGSN) collaborated to launch an identification and authentication service for digital service users. This initiative enables individuals to verify their identities when accessing services from both public and private sectors.⁴⁵⁰⁸ Holders of the National Electronic Identity card introduced in 2019 gained immediate access to the platform; holders of the old CNIE were also granted access.⁴⁵⁰⁹

A tripartite agreement between the Ministries of Health and Social Protection, the National Security Directorate, and the National Commission for the Control of Personal Data Protection aimed to utilize the national identity card to simplify and enhance access to health services.⁴⁵¹⁰ Hospitals and other medical facilities would be empowered to verify patient identities, and citizens would have the option to include certain health data in the electronic chip embedded within the national identity card.⁴⁵¹¹ Morocco enhanced the CNIE to a secure digital service tool in 2024 with launch of the second-generation National Electronic Identity Card (CNIE 2.0). The CNIE 2.0 enables authentication via the National Trust Platform, integration with the

Mon e-ID app, access to public and private sector services, and mobile issuance for remote areas.⁴⁵¹²

AI Development and Applications

Morocco has implemented AI systems in various sectors, including higher education, the judiciary, and healthcare. The Euromed University of Fes (UEMF) inaugurated the Euromed School of Digital Engineering and Artificial Intelligence (EIDIA), a specialized institution focusing on AI research, development, and education.⁴⁵¹³ It stands as the first Digital Engineering and Artificial Intelligence (EIDIA) school within the Euro-Mediterranean-African Space, marking a significant milestone in the region's academic landscape.⁴⁵¹⁴

Morocco's Justice Committee purchased an AI program to “revolutionize the court system.” Tools will initially be used to undertake tasks such as note taking and “transcribe judgments through AI-supported voice dictation” with further plans to facilitate processings.⁴⁵¹⁵

In healthcare, Morocco has integrated AI tools as part of the efforts to expand access to healthcare through digitization and software. A representative from the Ministry of Health noted stressed that “Artificial Intelligence (AI) is a tool intended to support our healthcare professionals, not replace them” and that “the final decision always remains under the responsibility of the healthcare professional.”⁴⁵¹⁶

Environmental Impact of AI

The LAFBAH AI Framework proposed to guide a national AI strategy seeks to use AI to advance environmental development and other factors in line with the UN's Sustainable Development Goals (SDGs).⁴⁵¹⁷ The framework, which is shared

on the OECD dashboard for Morocco, identifies sustainable practices as a “fundamental factor in minimizing environmental impact and promoting green technologies for the benefit of the Moroccan economy and society.” However, no policies to date explicitly address this challenge.

Lethal Autonomous Weapons

Morocco is a member of the Group of Government Experts on Lethal Autonomous Weapons Systems (GGE on LAWS)⁴⁵¹⁸ of the Convention on Certain Conventional Weapons (CCW) of the UN Office for Disarmament Affairs (UNODA) since 2014. Ethical concerns led the group to declare a pre-emptive ban on LAWS.⁴⁵¹⁹ Morocco voted in favor of UN the 2024 General Assembly Resolution expressing concerns over threat of LAWS to international security and affirming that “international law, international humanitarian law, international human rights and criminal law applies to autonomous weapons systems and reaffirmed that any weapon which cannot be used in compliance with international humanitarian law must not be used.”⁴⁵²⁰

Morocco endorsed the Political Declaration on the Responsible Military Use of Artificial Intelligence and Autonomy.⁴⁵²¹ “To build international consensus around responsible behavior and guide states’ development, deployment, and use of military AI,” reads the declaration’s stated goal.

AI Literacy

Morocco’s national digital strategy, Digital Morocco 2030,⁴⁵²² aims to “make Morocco a Digital Hub to accelerate the Kingdom’s social and economic development,” in part by ensuring the available of digital talent. The strategy focuses

on upskilling and professional digital talent but includes “campaigns to promote digital awareness for young Moroccan and foreign talents.”⁴⁵²³ A national digital and AI training program based on this objective launched in fall 2025, though reached only 12 cities.⁴⁵²⁴

Human Rights

Morocco ratified the Universal Declaration of Human Rights (UDHR).⁴⁵²⁵ Morocco is a member of the Arab League but has not ratified the Arab Charter on Human Rights.⁴⁵²⁶ Other UN human rights treaties that Morocco has ratified are: International Covenant on Civil and Political Rights (ICCPR); the International Covenant on Economic, Social and Cultural Rights (ICESCR); the Convention against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment (CAT); the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW); the Convention on the Rights of Persons with Disabilities (CRPD); the Convention on the Rights of the Child (CRC); the Convention for the Protection of all Persons from Enforced Disappearance (CED); the International Convention on the Elimination of All Forms of Racial Discrimination (CERD); and the International Convention on the Protection of the Rights of All Migrant Workers and Members of Their Families (CMW).

Freedom House scored Morocco as “Partly Free” with score of 37/100 in 2025.⁴⁵²⁷ Freedom House explains that while Morocco holds regular multiparty elections for Parliament and local bodies, King Mohammed VI and his palace “maintain full dominance through a combination of substantial formal powers, informal lines of influence in state and society, and ownership of crucial economic resources. Many civil liberties are constrained in practice.” Morocco scored 54/100 for net freedom.⁴⁵²⁸ The Ibrahim Index of African Governance in 2023 scored Morocco at 62/100 for Overall Governance, and 48.5/100 in Participation, Rights &

Inclusion, placing the country in position 8 out of 54 African countries, with an increasing trend since 2012.⁴⁵²⁹

The Moroccan presidency of the Human Rights Council organized high-level discussions in Geneva to address artificial intelligence and its impact on human rights. Since prioritizing this issue in January 2024, Morocco has appointed co-facilitators who led extensive consultations resulting in a comprehensive report advocating for the integration of human rights principles in the development and evolution of AI tools.⁴⁵³⁰

OECD / G20 AI Principles

While Morocco is not a member of the OECD and has not endorsed the OECD AI Principles,⁴⁵³¹ the OECD does track Morocco on its Policy Observatory site.⁴⁵³² Morocco is not a member of the Global Partnership on Artificial Intelligence (GPAI).⁴⁵³³ The Recommendations towards a National AI Strategy for Morocco Report,⁴⁵³⁴ New Development Model,⁴⁵³⁵ and Maroc IA 2030 roadmap⁴⁵³⁶ suggest a commitment to OECD principles, especially related to international cooperation and creating an AI ecosystem.

Council of Europe AI Treaty

Morocco has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁴⁵³⁷

UNESCO Recommendations on AI Ethics

Morocco has been a member state of UNESCO since October 1975.⁴⁵³⁸ It is one of the 193 countries that endorsed the UNESCO Recommendation on the Ethics of Artificial Intelligence in November 2021.⁴⁵³⁹ Morocco participated on the 24-member expert group that prepared the text of the recommendation and was one of the 5 African countries that “contributed comments on the first draft of the recommendation.”⁴⁵⁴⁰

In 2021, in UNESCO's AI Needs Assessment Survey, 32 countries in Africa identified institutional capacity building for AI as a key priority.⁴⁵⁴¹ At the UNESCO General Conference 2023, 194 countries decided to designate AI Movement in Morocco as the first UNESCO-affiliated Center in Africa.⁴⁵⁴² AI Movement will work on:

- Capacity building for policymakers, public administrations
- Innovation and entrepreneurship through its programs like African Women in Tech
- Educational programs at Masters and Doctoral level, as well as programs for Executives to support African businesses.
- Creating research cooperation within Africa and beyond

implement the provisions of the recommendation on the ethics of AI.”⁴⁵⁴³ Beginning in 2023, Morocco was selected as part of a pilot group of countries developing legislative, regulatory, and institutional changes to best align themselves with the UNESCO Recommendation on the Ethics of AI.⁴⁵⁴⁴

At the beginning in 2023, Morocco was selected as part of a pilot group of countries developing legislative, regulatory, and institutional changes to best align themselves with the UNESCO Recommendation on the Ethics of AI.” Morocco has since completed the UNESCO Readiness Assessment Methodology (RAM), a tool to help countries identify gaps and opportunities to implement AI systems ethically. The RAM report highlighted Morocco’s “favorable ecosystem for the development of a holistic and responsible vision of AI”⁴⁵⁴⁵ and progress on technical infrastructure. Along with gaps in technological infrastructure, the lack of a national AI strategy could increase the challenge of making necessary adjustments to legal frameworks, particularly in regulating personal data and cyberspace, to “address the challenges and opportunities of AI.”

Evaluation

Morocco's AI trajectory points to a strategic shift in the direction of a National Strategy for Artificial Intelligence, though no such document has been published. Even in situations when the human rights environment is not ideal, the Data Protection National Commission's active oversight offers a layer of safety in areas of AI research. Morocco has demonstrated its commitment to ethical AI and data protection standards by endorsing the UNESCO Recommendation on the Ethics of AI and by signing Convention 108 and the Protocol. The nation's co-sponsorship of Resolution 2023 on Generative Artificial Intelligence Systems at the World Privacy Assembly demonstrates its active involvement in forming global AI policy.

Completion of the UNESCO RAM and continental agreements and meetings further demonstrated the country’s contributions to global AI governance. Morocco's introduction of projects centered on AI in higher education and emphasis on human capital in the roadmap, along with a attention to leveraging AI to improve public services, point to awareness of the critical role AI will play in determining the course of the future and its deliberate attempts to establish itself as a leader in the international AI arena, particularly in Africa and the Middle East.

Mozambique

Mozambique acted on recommendations in the 2023 UNESCO RAM report in 2025 by initiating a national AI strategy formulation process, in collaboration with UNESCO, and carrying out public consultations on proposed data protection and cybersecurity legislation.

National AI Strategy

The National Institute of Information and Communication Technologies (*Instituto Nacional de Tecnologias de Informação e Comunicação*, INTIC) presented plans for developing a National Artificial Intelligence Strategy at the 3rd BFSI Mozambique Conference in December 2025.⁴⁵⁴⁶ According to INTIC board chair Lourino Chemane, UNESCO is providing technical support to align the strategy with international principles on ethics, human rights, and responsible technology use. The strategy is being developed through a multisectoral and multidisciplinary committee that includes representatives from government, the private sector, academia, and civil society. The collaboration with UNESCO will help embed international principles on ethics and human rights into Mozambique's national AI policy, strengthening public trust in digital solutions. Committee members developing the strategy stressed the need to establish clear regulatory and ethical policies, “ensuring security, transparency, and protection of personal data.”⁴⁵⁴⁷

The strategy forms part of a broader digital transformation agenda that encompasses digital government, open data, cybersecurity, interoperability, and e-commerce.⁴⁵⁴⁸ Chemane emphasized that the agenda aligns with regional and international commitments, including the African Union's Agenda 2063 and the UN Sustainable Development Goals (SDGs). The strategy responds in part to the 11 recommendations to improve the country's regulation, institutional framework, and capacity building for ethical AI implementation recommendations in UNESCO's

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Readiness Assessment Methodology (RAM) report,⁴⁵⁴⁹ which Mozambique completed in 2023.

The country does not have an independent agency or mechanism specifically designated for AI oversight. The Ministry of Communications and Digital Transformation (*Ministério das Comunicações e Transformação Digital*, MCTD) leads AI policy formulation and strategy implementation and the charge includes has “contributing to the work of combatting crimes”⁴⁵⁵⁰ but no enforcement powers are specified.⁴⁵⁵¹ The National Artificial Intelligence Strategy is in process.

Public Participation

Mozambique established a multisectoral committee for the development of the National Artificial Intelligence Strategy.⁴⁵⁵² INTIC board chair Lourino Chemane stated that stakeholder engagement is embedded from the outset of the policy process rather than limited to consultations after the strategy is finalized.⁴⁵⁵³ The committee includes representatives from government, the private sector, academia, and civil society, creating opportunities for diverse perspectives to inform policy design from the beginning. The extent to which the broader public can meaningfully participate beyond the committee structure remains unclear. Materials about the country's AI strategy are not yet publicly available, as the strategy is still under development.

The proposed data protection law is available for public consultation on the INTIC website as of February 2026,⁴⁵⁵⁴ though no deadlines are specified. Citizens enter their comments in a matrix (misabeled for the cybersecurity law) and email to four INTIC addresses. The Draft Laws page⁴⁵⁵⁵ on the INTIC website also includes

drafts of a Cyber Crimes law and Cyber Security law with similar matrices and a form available to submit completed matrices.

Government websites and legal texts are primarily available only in Portuguese.

Data Protection

Mozambique is drafting a data protection law but does not yet have a comprehensive data protection law or a dedicated data protection authority.⁴⁵⁵⁶ The Constitution of the Republic of Mozambique grants all citizens the right to protection of their private life and the right to honor, good name, reputation, protection of their public image, and privacy.⁴⁵⁵⁷ Article 71 of the Constitution acknowledges the need to legislate on access, generation, protection, and use of computerized personal data.

A draft Personal Data Protection Law was released in 2025.⁴⁵⁵⁸ The proposed legislation aims to align Mozambique with international standards, particularly the principles of the African Union's Malabo Convention on Cyber Security and Personal Data Protection,⁴⁵⁵⁹ which Mozambique ratified.⁴⁵⁶⁰ The draft law establishes fundamental principles including consent, transparency, legality, purpose, and proportionality, and proposes a two-tiered governance structure with a National Council for the Protection of Personal Data chaired by the Prime Minister.

Until comprehensive data protection legislation is enacted, various legal instruments provide limited privacy protections. These include the Civil Code,⁴⁵⁶¹ the Penal Code,⁴⁵⁶² the Labor Law,⁴⁵⁶³ the Electronic Transactions Law,⁴⁵⁶⁴ and

regulations on electronic service providers and digital platforms.⁴⁵⁶⁵ Draft cybersecurity and cybercrime laws aim to provide further protection and accountability for those who misuse or abuse technology.⁴⁵⁶⁶ A Zero Draft of the National Data Governance Policy and Strategy⁴⁵⁶⁷ developed with the World Bank seeks to unite these efforts to establish “the principles, institutional mechanisms, and action priorities that will enable the country to consolidate digital sovereignty, ensuring that data produced within national territory is managed in line with the strategic interests of the State and the protection of citizens.”

Mozambique does not have a data protection authority and is not a member of the Global Privacy Assembly (GPA).⁴⁵⁶⁸

Algorithmic Transparency

Mozambique has not established a legal right to algorithmic transparency by law. The Constitution provides general privacy protections and places limits on the use of individually identifiable information about political, philosophical, or ideological beliefs, religious beliefs, political affiliation, and trade union membership. The Constitution also prohibits accessing databases to obtain personal data of third parties and transferring personal data between different services or institutions unless specifically permitted by law or judicial decision.⁴⁵⁶⁹

The draft Personal Data Protection Law includes provisions on principles such as transparency and consent. The draft law does not specifically establish a right to algorithmic transparency, explainability of automated decision-making, or contestability of algorithmic decisions with adverse consequences.⁴⁵⁷⁰ Until comprehensive data protection legislation is enacted with specific provisions

addressing algorithmic decision-making systems, Mozambican citizens do not have a legally enforceable right to know when automated systems are used to make decisions affecting them or to challenge such decisions.

Biometric Identification

Biometric and facial recognition technologies are expanding in Mozambique's telecommunications and security sectors without a dedicated legal framework governing their use. Mozambique's Regulatory Authority for Communications (*Autoridade Reguladora das Comunicações*, INCM) introduced facial recognition technology in mobile subscribers to validate customer identity at registration and address fraud and irregular SIM registration.⁴⁵⁷¹ After months of voluntary participation in the biometric registration, the government announced that mobile users would be required to register with biometric identity cards,⁴⁵⁷² further integrating facial images and other biometric traits into subscriber databases as part of INCM's telecommunications oversight. The Regulation on the Registration of Telecommunications Services approved in April 2023⁴⁵⁷³ implement biometric registration as a means to deter fraudulent activity and "make it easier to identify criminals."

INCM press releases assure citizens the actions will improve data protection and security by storing the data in a Central Database and no longer rely on individual operators to store this information.⁴⁵⁷⁴ Because Mozambique still lacks comprehensive data protection legislation and sector-specific rules on biometrics and facial recognition, key safeguards, such as clear limits on biometric data collection, processing, storage, retention, and sharing, remain undefined, contributing to a high-risk environment for misuse of these systems and potential abuses of privacy, freedom of expression, and association.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Environmental Impact of AI

Mozambique requires environmental impact assessments for public or private activities categorized as A+ because of their complexity, location, irreversibility, or magnitude of impacts under the Directive of Independent Specialist Reviewers of Environmental Impact Assessments for Category A+ activities.⁴⁵⁷⁵ These projects must undergo independent review. However, the directive does not specifically address data centers, AI infrastructure, energy consumption of AI systems, or the resource demands of machine learning operations.

The country's AI development initiatives focus on applications that support sustainable development goals, particularly early warning systems for climate resilience, but specific policies to hold AI developers and deployers accountable for technology's environmental footprint have not been established.⁴⁵⁷⁶

Lethal Autonomous Weapons

Mozambique is not a High Contracting Party to the Convention on Certain Conventional Weapons (CCW)⁴⁵⁷⁷ and has not explicitly supported a treaty to prohibit or otherwise regulate the use or development of Lethal Autonomous Weapons Systems (LAWS). The country generally supports disarmament in line with the African Group and Non-Aligned Movement and has reiterated the importance of human control in the responsible use of force. Mozambique voted in favor of Draft Resolution L.77 on lethal autonomous weapons systems at the 79th United Nations General Assembly First Committee in October 2024.⁴⁵⁷⁸ The resolution⁴⁵⁷⁹ raises concerns about the negative consequences and impact of autonomous weapons systems on global security and regional and international stability, and stresses the importance of the role of humans in the use of force to ensure responsibility and accountability. The resolution called for further discussions among UN Member

States, the Group of Governmental Experts (GGE) on LAWS, and civil society organizations in 2025.

AI Literacy

Mozambique does not yet have clearly articulated nationwide policies specifically labeled as AI literacy programs and is working to address digital divides in access to internet. A study by UNU-WIDER in Mozambique's Nampula province found that less than 15 percent of youth regularly use computers, highlighting significant digital divides that affect the potential for AI literacy development and broader digital participation.⁴⁵⁸⁰

Initiatives by non-governmental organizations contribute to bridging the gap in digital skills and literacy diagnosed in the UNESCO RAM report.⁴⁵⁸¹ For example, the Jecua Community Connectivity and Digitalization Project, led by Microsoft, Ologa Sistemas de Información, and the TAEDA Foundation in collaboration with Franciscan friars, is providing internet access and digital training to over 100,000 underserved Mozambicans.⁴⁵⁸² The program emphasizes digital literacy training, empowering communities with practical skills for learning, communication, and entrepreneurship, with a special focus on including women and girls. Mozambique's participation in international discussions such as the UNESCO Global Forum on the Ethics of AI provides a base for addressing these concerns.⁴⁵⁸³

Human Rights

Mozambique has committed to uphold the Universal Declaration of Human Rights as a member of the United Nations. The country is a state party to 12 human rights treaties, including the International Covenant on Civil and Political Rights, the Convention on the Rights of the Child, the Convention Against Torture and Other Cruel Inhuman or Degrading Treatment or Punishment, and the Convention on the Rights of Persons with Disabilities.⁴⁵⁸⁴

Center for AI and Digital Policy

Freedom House rates Mozambique as “Partly Free” with a score of 41/100 in the Freedom in the World 2025 report.⁴⁵⁸⁵ The report identifies limitations on freedoms of expression, the press, association, and peaceful assembly. Freedom House notes that members of the media, political opposition, and civil society organizations have been subject to criminal charges, intimidation, or harassment.

OECD / G20 AI Principles

Mozambique is not a member of the OECD or G20 and has not endorsed the OECD AI Principles or the G20 AI Guidelines.⁴⁵⁸⁶ Mozambique is not a member of the Global Partnership on Artificial Intelligence, the international initiative that formalized a partnership with the OECD in 2024 and through which members endorse the OECD AI Principles.⁴⁵⁸⁷

The country’s ongoing development of a National Artificial Intelligence Strategy with UNESCO support represents an effort to align with international principles on ethics, human rights, and responsible technology use. The extent to which the strategy, once published, will incorporate principles consistent with the OECD AI Principles, such as inclusive growth and well-being, respect for human rights and democratic values, transparency, robustness, and accountability, cannot be assessed until the strategy is finalized and made publicly available.

Council of Europe AI Treaty

Mozambique is not a member of the Council of Europe and has not participated in the negotiation⁴⁵⁸⁸ or signed the Framework Convention on Artificial Intelligence and Human Rights, Democracy and the Rule of Law. Neither has Mozambique taken action to endorse the treaty.⁴⁵⁸⁹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

UNESCO Recommendation on AI Ethics

Mozambique is working to implement the UNESCO Recommendation on the Ethics of Artificial Intelligence with technical support from UNESCO. The country completed UNESCO's Readiness Assessment Methodology in 2023,⁴⁵⁹⁰ a macro-level instrument that helps countries understand their level of preparedness to implement AI ethically and responsibly and identify needed institutional and regulatory changes. The assessment produced 11 recommendations to improve Mozambique's regulation, institutional framework, and capacity building, with a timeframe of 2024–2026 for implementation.

INTIC is leading the development of the National Artificial Intelligence Strategy with collaboration from UNESCO to incorporate international principles on ethics and human rights.⁴⁵⁹¹

Evaluation

Mozambique is in the early stages of building an AI governance ecosystem, with notable strengths in its collaboration with UNESCO, a multisectoral approach to strategy development, and constitutional and treaty-based human rights commitments. The country still lacks core legal and institutional safeguards such as a comprehensive data protection law, an independent oversight body, algorithmic transparency rights, and clear rules for high-risk uses like biometrics. The ongoing development of a National AI Strategy, alignment with the UNESCO Recommendation on the Ethics of AI, and participation in international disarmament debates create a foundation for rights-respecting AI. A lack of transparency around public participation, significant digital divides, and biometric deployments without robust protections demonstrate a need for closing regulatory and capacity gaps to ensure AI advances democratic governance and fundamental rights.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Myanmar

In 2025, Myanmar progressed on drafting a National AI Strategy. The country also passed a Cyber Security Law that requires authorization for the use of VPNs.

National AI Strategy

The Government of Myanmar is in the process of developing a National AI Strategy.⁴⁵⁹² Opening a meeting to draft the documents, the Union Minister for Science and Technology framed the importance of an AI Policy to use the technology in development and “to ensure that citizens are aware of the ethics, standards, and regulations to be followed, and to development local AI human resources.”

The e-Governance Master Plan 2030⁴⁵⁹³ aims to “facilitate Myanmar Digital Transformation through effective, efficient, and systematic implementation of Digital Government in order to foster the development of Digital Economy that is sustainable, transformative, secure, open to innovation and all-inclusivity, and integrated with the ASEAN community.”⁴⁵⁹⁴ The Plan frames AI technology as an enabler of digital services in various sectors, highlighting the benefits of reaching remote areas through mobile applications and AI to provide services at lower cost.⁴⁵⁹⁵ The strategy charges the public to familiarize themselves with digital tools through training programs and awareness-building initiatives, including “issues related to personal information protection and cybersecurity.”⁴⁵⁹⁶ The Master Plan lays out advantages, disadvantages, and applications of AI⁴⁵⁹⁷ with little depth on how these interact with challenges of e-government such as lacking infrastructure and legal frameworks.⁴⁵⁹⁸

Myanmar endorsed the UNESCO Recommendation on the Ethics of AI, which could provide a template for a human-centered national AI strategy, should Myanmar take step to implement it.

Public Participation

The Myanmar government does not appear to hold public participation in AI policymaking.

Data Protection

Myanmar does not have a single principal data protection law and does not have a data protection agency. Three legal instruments refer to the concept of privacy or data protection:

- The Constitution of the Republic of the Union of Myanmar (2008)⁴⁵⁹⁹
- The Law Protecting the Privacy and Security of Citizens (Union Parliament Law 5/2017) of March 8, 2017, as amended by Law 16/2020 of August 28, 2020, and by the State Administration Council Law 4/2021 of February 13, 2021 (Privacy Law)⁴⁶⁰⁰
- The Electronic Transactions Law of April 30, 2004 (State Peace and Development Council Law No. 5/2004), as amended by the Law amending the Electronic Transactions Law (No. 6/2014) of February 25, 2014, and by the State Administration Council Law No. 7/2021 of February 15, 2021 (ETL)⁴⁶⁰¹

Section 357 of the Constitution states: “The Union shall protect the privacy and security of home, property, correspondence, and other communications of citizens under the law subject to the provisions of this Constitution.”⁴⁶⁰²

According to its Preamble, the Privacy Law was enacted to protect the privacy and security of citizens as stated in the Constitution. Privacy is defined as “the right to freedom of movement, freedom of residence, and freedom of speech of a citizen.” Section 3 of the Privacy Law states that every citizen “has the right to enjoy the protection of his/her privacy and security in full, as set out in the Constitution.” Section 4 requires the relevant Ministry and relevant government department, organization, or official (called Responsible Authorities in the Privacy Law) to ensure that the privacy and security of citizens are protected. Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Privacy Law was amended by the State Administration Council Law 4/2021 of February 13, 2021 (“SACL 4/2021”), Section 8 of the Privacy Law protected citizens from unreasonable searches, seizures, and surveillance. The SACL 4/2021 suspended section 8 on February 13, 2021, thirteen days after Myanmar’s military took power in a coup.

Amendments to the ETL by the State Administration Council Law 7/2021 of February 15, 2021 (SACL 7/2021) introduced the concept of personal data and personal data protection. Personal Data is defined as “information that identifies or is capable of identifying an individual.” A new section 27-A was inserted into the ETL, among other things: (a) setting out the obligations of a Personal Data Management Officer; (b) requiring that an “investigation team” receiving personal data keep it confidential except disclosing it to permitted persons; and (c) excluding the application of the personal data protection obligations from certain scenarios, such as investigations by the government. The term Personal Data Management Officer covers persons authorized by the government and organizations who are responsible for collecting, retaining, and using personal data.

Despite the data protection regime, the 2025 Cyber Security Law⁴⁶⁰³ grants the State Administration Council broad powers to monitor and regulate online activity and requires retention of data such as usernames, account activity, national identity numbers, and IP address for up to three years. The Law does not require authorities to gain consent before sharing or modifying personal data. The Law requires all digital platform service providers to obtain a license from the newly designated Cyber Security Steering Committee to operate in Myanmar. While providers must take care to store data in line with classification rules, the law facilitates state surveillance. In particular, Article 36 in Chapter 9 strengthens enforcement powers and expands liability for non-compliance. Article 90 and related provisions criminalize unauthorized VPN use and mandate domestic storage of user data.⁴⁶⁰⁴ Appeals against surveillance or data-takedown orders go to military-controlled bodies rather than independent courts, leaving data access requests opaque and without judicial oversight.⁴⁶⁰⁵

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Algorithmic Transparency

In Myanmar, algorithmic transparency is neither protected nor provided as a legal right. The report *Human Rights Impact Assessments for AI: Learning from Facebook's Failure in Myanmar* by the Carr Center for Human Rights Policy at Harvard Kennedy School investigates the identification of discrimination as an algorithmic harm and the assessment of algorithmic decision-making under the UN Guiding Principles through the case of Facebook.⁴⁶⁰⁶

Facial Recognition

In December 2020, Myanmar authorities started using a system of 335 surveillance cameras in the capital, Napyidaw.⁴⁶⁰⁷ This was done as part of the government's "Safe City" project to curb crime. Made by the technology company Huawei, the cameras were spread between eight townships and reportedly equipped with facial recognition as well as license plate recognition capabilities. An advisor for the Naypyitaw Safe City project, said that "anyone with a criminal history entering Naypyitaw will be recognized."⁴⁶⁰⁸

Similar systems have been installed in Mandalay and the commercial capital Yangon.⁴⁶⁰⁹ Myanmar's regional minister for Electrical Power and Construction confirmed by way of comments to the media, that the system in Mandalay would use AI to detect any abnormal activity such as crime and accidents. Such activity would be recorded and followed by the cameras, which would send information to one another as well as to the police.

Human Rights Watch raised concerns that the use of this technology was approved without public consultation or transparency, making it unclear how the Myanmar authorities would mitigate any potential impact on human rights and the right to privacy.⁴⁶¹⁰

Protesters protesting the ousting of Aung San Suu Kyi in a coup in 2021 have cited fears regarding the deployment and use of facial recognition technology by the

military junta.⁴⁶¹¹ In a few weeks after the coup, the military leadership successfully pushed for amendments⁴⁶¹² suspending Sections 5, 7, and 8 of the Law Protecting the Privacy and Security of Citizens. The ramifications of the suspension of these sections, particularly Section 8(b) of the Privacy Law which previously provided that the State “shall not surveil, spy upon, or investigate any citizen in a manner which could disturb their privacy and security or affect their dignity” when it comes to the potential of privacy breaching AI surveillance, is immense.

The deployment of facial recognition technology by the Tatmadaw against protesters has drawn concern from the international community including a call by the Indonesian President for a high-level ASEAN meeting in 2021.⁴⁶¹³ A report by the Reuters news agency in July 2022 revealed that Myanmar's military government is expanding camera surveillance systems for cities in all 14 states and divisions in the country.⁴⁶¹⁴ Myanmar's military deployed an AI-powered Person Scrutinization and Monitoring System (PSMS) integrated with facial recognition cameras and biometric databases by 2025. Human Rights Myanmar documented the system resulted in at least 1,657 arrests between March and May 2025, targeting pro-democracy activists and Civil Disobedience Movement members.⁴⁶¹⁵ Myanmar's military deployed Chinese-supplied “Great Firewall” technology from Geedge Networks, enabling real-time surveillance and geolocation tracking of 33.4 million internet users.⁴⁶¹⁶

Biometric Identification

In 2019, Myanmar's Ministry of Transport and Communications announced its intention to make biometric data collection mandatory when mobile phone services are purchased, this being part of a strategy to create a “national database to

store and manage biometric mobile subscriber registration information from all mobile network operators in Myanmar.”⁴⁶¹⁷

Environmental Impact of AI

Myanmar has not published policies related to the environmental impact of AI in English.

Lethal Autonomous Weapons

At the United Nations General Assembly (UNGA) in October 2017, Myanmar said that lethal autonomous weapons systems were a security issue that warranted serious consideration.⁴⁶¹⁸ At the 74th Session of the UNGA in October 2019, Myanmar’s Ministry of Foreign Affairs noted that there were “growing concerns on new types of weapons such as lethal autonomous weapon systems and their destructive power” and there was a risk of a new arms race growing with worldwide military expenditures increasing at an “alarming level.”⁴⁶¹⁹ Myanmar voted in support of UNGA Resolution 78/241 on lethal autonomous weapons systems,⁴⁶²⁰ which stressed the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems.” Myanmar also supported the 2024 Draft Resolution on lethal autonomous weapons systems⁴⁶²¹ stressing “the importance of the role of humans in the use of force to ensure responsibility and accountability and for States to comply with international law.”

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Myanmar is not a state party to the Convention on Certain Conventional Weapons (CCW),⁴⁶²² but according to Human Rights Watch, participated in CCW meetings on killer robots in 2017–2018.⁴⁶²³

AI Literacy

Myanmar's government has no generalized AI literacy or capacity-building program. However, the Union Minister for Education and other official attended a capacity-building presentation directed to teachers about ed-tech and using AI tools responsibly.⁴⁶²⁴ Nearly 60 educators from across the country participated in an 8-week online training program to learn the fundamentals of AI technology, including for offline use.⁴⁶²⁵ The two-day workshop closing the program included a day emphasizing the ethical implications of AI and learned how to safeguard student data and minimize biases in AI-centered assessments.

Human Rights

Though the country is a signatory to the UN Declaration of Human Rights, according to Freedom House, Myanmar is “Not Free” with a score of 7/100 in the 2025 Freedom in the World Report.⁴⁶²⁶ According to Freedom House, “Myanmar’s already-stalled democratic transition was completely derailed in February 2021, when the military, known as the Tatmadaw, seized control of the government, arresting dozens of senior government officials and preventing the newly elected parliament from convening. The National League for Democracy (NLD), which won a sweeping victory in the November 2020 elections, led a broad-based opposition to the takeover, organizing a country-wide Civil Disobedience Movement (CDM) that continued throughout the year. Protesters were met with indiscriminate violence from military forces, and journalists, activists, and ordinary people risked criminal charges and detention for voicing dissent. Armed conflict between the military and ethnic

rebel groups continued, as did the forced displacement of hundreds of thousands of Rohingya, a mostly Muslim ethnic minority.”

The use of AI has been implicated in what has been described as ethnic genocide and ethnic cleansing in Myanmar, in the wake of several reports regarding the complicity of Meta, formerly known as Facebook.⁴⁶²⁷ The social media platform was reported as unable or unwilling to moderate hate speech calls for violence against Rohingya Muslims in Myanmar, and in some cases amplified them. Relying on a small Burmese-speaking team who were not based in Myanmar, the company depended heavily on Natural Language Processing systems which struggled to provide accurate translations of content in Burmese. In the aftermath of the crisis which has seen over 1 million Rohingya Muslims in refugee camps in Bangladesh, a class action has been launched against Meta seeking 150 billion pounds in compensation for the company’s complicity in the genocide.⁴⁶²⁸

The Law Amending the Electronic Transactions Law of 2004⁴⁶²⁹ enacted in February 2021 permits government confiscation of personal data and the criminalization of content deemed to be untruthful or fake or created to incite public panic. Meanwhile, the Cyber Security Law⁴⁶³⁰ went into effect despite criticisms and calls for withdrawal due to its potential impacts on fundamental rights, particularly the prohibition on virtual private networks (VPNs) without the Ministry’s permission. The law grants authorities the power to order Digital Platform Service Providers to “block or remove content” when a “legitimate complaint” is made that the content “damages a person’s social standing and livelihood.”⁴⁶³¹

OECD / G20 AI Principles

Myanmar has endorsed neither the OECD AI Principles nor the G20 AI Guidelines.⁴⁶³² The country is not a member of the Global Partnership on Artificial Intelligence (GPAI).⁴⁶³³

Council of Europe AI Treaty

Myanmar has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁴⁶³⁴

UNESCO Recommendation on AI Ethics

Myanmar adopted the UNESCO Recommendation on the Ethics of AI together with UNESCO Member States.⁴⁶³⁵ Myanmar has not engaged with the Readiness Assessment Methodology (RAM).⁴⁶³⁶

Evaluation

Myanmar does not have a national AI strategy and has not established a process for meaningful public participation to this end. Meanwhile, AI is being used for surveillance purposes in a country in which the unregulated use of new technologies has already had devastating consequences in the framework of the Rohingya genocide. Myanmar has yet to act on its endorsement of the UNESCO Recommendation on the Ethics of Artificial Intelligence.

Namibia

Namibia published the UNESCO Readiness Assessment Methodology (RAM) report in 2025 and released a National Digital Strategy that includes a plan for AI capacity building for civil servants and AI literacy programs in schools and community-based programs.

National AI Strategy

Namibia has not yet announced a national AI strategy or regulatory framework.⁴⁶³⁷ However, the country has enacted, and is in the process of drafting, several policy frameworks that support the country's commitment to harness the transformative power of AI and other emerging technologies.⁴⁶³⁸ The initiatives include the draft Data Protection Bill,⁴⁶³⁹ draft Cybercrime Bill, and the National Cybersecurity Strategy (2022–2027).

Public Participation

Namibia's ICT policy does not explicitly include AI but prioritizes the use of digital technologies to strengthen public service delivery and support democratic participation.⁴⁶⁴⁰ Central to this approach are the right to access to information and mechanisms for meaningful public engagement, which underpin an open governance model. Despite significant advances in digital government, however, public participation remains one of the areas for growth in the country.⁴⁶⁴¹ Findings from the E-Participation Index indicate limited citizen engagement on online government platforms, raising concerns about the capacity for meaningful public input into future AI policymaking.

The Namibian National Assembly passed the Access to Information Act 2022 to provide for the right to access information held by both public and private entities.⁴⁶⁴² Although not yet fully in force, the Act aims to promote transparency, accountability, and democratic governance by ensuring information is well-organized and accessible.⁴⁶⁴³

The Ministry of Information and Communication Technology sought public consultation on the draft Data Protection Bill, 2021, in October 2022.⁴⁶⁴⁴ The consultations raised human rights concerns around the draft bill, including weak consent provisions and insufficient protections for data subjects.⁴⁶⁴⁵ Additional community consultations were scheduled through March 2023 to address these shortcomings.

Data Protection

The right to privacy, and data privacy as an extension, is enshrined in Article 13 of Namibia's Constitution.⁴⁶⁴⁶ However, beyond the constitution, Namibia has not yet established a comprehensive data protection regulatory framework.

The government published the Draft Data Protection Bill to regulate the processing of personal data that is organized in a searchable way, whether handled by computers or manually.⁴⁶⁴⁷ The bill would:

- Establish a Data Protection Supervisory Authority and define its powers, duties, and functions
- Establish obligations for data controllers and processors
- Regulate the processing of personal information to protect individuals' fundamental rights and freedoms, especially their right to privacy
- Provide for the rights of individuals whose data is processed

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

- Specify restrictions and exceptions under this Act
- Provide for codes of conduct for data controllers and processors, and related matters

Public consultations during 2022 and 2023 revealed concerns including weak protection for data subjects, limited independence of the supervisory authority, and overly broad exceptions.⁴⁶⁴⁸ Notably, many of these issues were linked to changes made between the 2020 and 2022 versions. The draft law remains in its early legislative stages and continues to undergo parliamentary review.⁴⁶⁴⁹

The draft bill aligns with several frameworks, including the African Union Malabo Convention, which Namibia ratified in 2019, the South African Development Community (SADC) model laws on data protection and cybercrime; the European Union's General Data Protection Regulation (GDPR), and South Africa's Protection of Personal Information Act (POPIA).⁴⁶⁵⁰

Namibia is not a member of the Global Privacy Assembly and as such, does not endorse any of the adopted resolutions.⁴⁶⁵¹

Algorithmic Transparency

Namibia has not established a right to algorithmic transparency. The draft Data Protection Bill includes provisions for automated decision making.⁴⁶⁵² However, existing law does not provide individuals the right to know when such systems are used, to receive explanation, or to challenge their decisions.

National Awareness Campaign on Deepfakes and Scams

Namibia plans to launch a nationwide awareness campaign in response to the rise of digital applications and increasing risks from disinformation.⁴⁶⁵³ The goal is to help citizens better understand how to use emerging technologies and recognize their limitations. The initiative, announced by Namibia's Information and

Center for AI and Digital Policy

Communication Technology Minister, will include school programs, public sessions on generative technologies, and stronger regulations on the use of AI tools in media and public services. The government also plans to collaborate with the private sector and civil society organizations to broaden the campaign's reach.

Environmental Impact of AI

Namibia currently does not have a specific policy addressing the environmental impact of AI. Namibia's ICT policy acknowledges the environmental impact of the broader digital sector, with a focus on reducing emissions and ensuring safe electronic waste disposal.⁴⁶⁵⁴ The UNESCO AI Readiness Assessment Report on Namibia⁴⁶⁵⁵ highlights the importance of addressing the environmental impact of AI technologies, including its "effects on greenhouse gas emissions, energy consumption, and resource use, particularly in areas like autonomous vehicles and industrial automation."⁴⁶⁵⁶

Lethal Autonomous Weapons

Namibia has supported the UN General Assembly efforts to address the challenges and concerns raised by lethal autonomous weapons systems. Namibia was among the 70 states urging the international community to establish rules that ensure autonomous weapons remain under meaningful human control and compliant with international law.⁴⁶⁵⁷ Namibia voted in favor of resolution 78/241 in 2023⁴⁶⁵⁸ and resolution 79/62 in 2024,⁴⁶⁵⁹ and supported the draft resolution to create an

Center for AI and Digital Policy

instrument for future multilateral negotiations on LAWS.⁴⁶⁶⁰ Namibia is not a state party to the Convention on Certain Conventional Weapons (CCW).⁴⁶⁶¹

AI Literacy

Namibia's National Digital Strategy (2025–2028)⁴⁶⁶² outlines a comprehensive plan to enhance digital skills within the public sector, with a focus on creating a digitally literate public service. The Strategy includes Digital Skills as one of 5 Strategic Pillars. The Digital Skills pillar focuses on “cultivating digital competencies across all societal levels in Namibia, spanning from basic digital literacy to advanced information and communications technology (ICT) skills. It aims to close the digital skills gap, ensuring that Namibians are well-prepared to engage with the digital economy and contribute to technological innovation.”⁴⁶⁶³ To realize these goals, the Strategy emphasizes integrating digital literacy into the national education curriculum and training teachers, equipping schools with the necessary technology, developing community-based digital literacy and AI training programs, and conducting awareness campaigns on child online safety.⁴⁶⁶⁴ These initiatives align with the Sixth National Development Plan (NDP6), which includes provisions for advancing digital learning and literacy in AI for both teachers and learners in the education system.⁴⁶⁶⁵

Limited AI expertise among policymakers and regulators has been a significant barrier to developing a comprehensive national AI strategy.⁴⁶⁶⁶ Low levels of public awareness and trust, coupled with insufficient stakeholder engagement, may further restrain the adoption and implementation of AI policies.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Human Rights

Freedom House scored Namibia 73 out of 100 and categorized the country as “Free” in the 2025 Freedom in the World report.⁴⁶⁶⁷ Namibia is a multiparty democracy; however, the SWAPO Party has been in power since the country’s independence. Among human rights concerns, Freedom House cites reported discrimination against minority ethnic groups, poverty and marginalization of nomadic San people, police brutality, and discrimination against women and LGBTQ+ people.⁴⁶⁶⁸

OECD / G20 AI Principles

Namibia is not a member of OECD, the G20, or the Global Partnership on AI (GPAI), and has not formally adopted the OECD AI Principles or the G20 AI Guidelines.⁴⁶⁶⁹

Council of Europe AI Treaty

Namibia is neither a member of the Council of Europe nor a signatory to the Council of Europe Framework Convention on Artificial Intelligence, which currently consists of signatories from Europe and select partner states.⁴⁶⁷⁰

UNESCO Recommendation on AI Ethics

As part of its implementation of the UNESCO Recommendation on the Ethics of AI, the Namibian government hosted a national workshop with over eighty professionals from government, academia, civil society, and the private sector to develop a national framework (roadmap) for the ethical development and use of AI.⁴⁶⁷¹

The workshop marked the first step toward completing the UNESCO Readiness Assessment Methodology. Supported by UNESCO, the assessment report was published in 2025, evaluating Namibia’s preparedness across five dimensions:

⁴⁶⁶⁷ Freedom House, *Namibia*, Freedom in the World 2025 (2025), <https://freedomhouse.org/country/namibia>

legal, technical, social, education, and economic.⁴⁶⁷² The RAM report acknowledges Namibia's progress in implementing the UNESCO framework while identifying ongoing challenges including the absence of "a formal AI regulatory framework, limited AI expertise, infrastructure gaps, and low public awareness."⁴⁶⁷³ To fully realize AI's potential for national development, the report recommends strengthening policy development, building capacity, and improving digital infrastructure.

Namibia hosted the UNESCO Southern Africa Sub-Regional forum on Artificial Intelligence in Windhoek under the theme "Towards a sustainable and ethical use of 'Artificial Intelligence for Development.'"⁴⁶⁷⁴ The event brought together policymakers, academics, and civil society to discuss ethical and inclusive AI development, marking Namibia's first significant engagement in regional AI governance. Notably, the event culminated in the Windhoek Statement on Artificial Intelligence in Southern Africa.⁴⁶⁷⁵ The statement recommended advancing standard-setting initiatives and fostering collaboration and knowledge exchange among AI stakeholders, including through the establishment of a regional coordination mechanism for implementing the Recommendation on the Ethics of AI.

Evaluation

Namibia currently lacks a formal national AI strategy or comprehensive AI policy framework. The draft Data Protection Bill represents an important foundation for future AI governance and the protection of individual rights, though it remains in the legislative process.

Namibia's completion of the UNESCO Readiness Assessment Methodology is a positive signal of the country's commitment to ethical and responsible AI governance. Capacity gaps identified in the RAM report continue to constrain the development of a robust national AI policy framework and limit meaningful public participation.

Public engagement on AI-related policymaking remains limited, with few documented consultation processes. Although Namibia has enacted the Access to Information Act, it has not yet entered into force. Challenges accessing public

information, official documents, and details on government initiatives limits transparency and informed public participation.

Netherlands

In 2025, the Dutch Data Protection Authority (DPA) and Consumers & Markets Authority intensified oversight of AI, issuing detailed guidelines for AI use in both the public and private sectors.

National AI Strategy

In January 2024, the Dutch government presented its “vision on generative AI,” which highlighted the opportunities and challenges posed by generative AI, recognizing its potential to revolutionize sectors like labor, education, research, and government services.⁴⁶⁷⁶ While embracing the technology’s ability to enhance productivity and innovation, the vision is also focused on managing risks, market monopolies, and biases in AI models.

Key initiatives outlined in the vision include funding for AI research, public-private partnerships, and the creation of a national AI test facility. It emphasizes responsible AI development based on principles of safety, fairness, human wellbeing, and sustainability. To ensure the responsible integration of AI, it committed to pursuing a comprehensive action plan that includes stakeholder collaboration, legislative development, education, and strict oversight.⁴⁶⁷⁷

The Dutch government set out the Strategic Action Plan for Artificial Intelligence in September 2019.⁴⁶⁷⁸ The Plan sets out three broad themes: “Capitalizing on societal and economic opportunities,” “Creating the right conditions,” and “Strengthening the Foundations.” The key goals are public-private partnerships, international cooperation, an “inclusive approach that puts people first,” and “a country that is at the forefront of AI applications which serve the interests of people and society.” Under this plan, the Dutch government commits to protecting public values and human rights. The plan emphasizes prohibition of discrimination, protection of privacy, freedom of speech, human dignity and autonomy, as well as the right to a fair trial.

The Dutch AI strategy follows the 2018 Netherlands Digitalization Strategy (NDS), the first Cabinet-wide effort to formulate key priorities for digitalization, data and AI. As part of the NDS, the government “supports and endorses the guidelines established in the EU’s recent communication on the ‘Ethics guidelines for

⁴⁶⁷⁶ Government of the Netherlands, *Dutch Government Presents Vision on Generative AI* (Jan. 18, 2024), <https://www.government.nl/latest/news/2024/01/18/dutch-government-dutch-government-presents-vision-on-generative-ai>

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

trustworthy AI.”⁴⁶⁷⁹ The government also commits to creating a “responsible innovation toolbox (including impact assessments, handbooks and guidelines)” and making knowledge available in the areas of transparency, explainability and accountability. Through the Transparency Lab initiative, the “government is working with businesses and supervisory bodies to assess how algorithms and their practical applications can be made more transparent and verifiable.”

In 2021, the government published an updated Netherlands Digitalization Strategy. The ministries that coordinate the efforts are advised by the Digital Netherlands Council, which joins the deliberation process on digitalization policy and consists of domain experts. The Strategy commits the Netherlands to European and international cooperation within appropriate ethical and legal frameworks. The NDS devotes particular attention to fairness (especially in relation to the GDPR), rule of law, accountability, transparency, and fundamental rights (with explicit reference to privacy, non-discrimination, and autonomy). A renewed Netherlands Digitalisation Strategy was launched in June 2025 under the motto, ‘Accelerating together is the only option’. The strategy has identified ‘responsibly leveraging on AI’ as one of the six priorities of all government organizations. The NDS focused on scaling up AI within the government and establishing auditable standards for AI use by the government.”⁴⁶⁸⁰

Despite the actions already taken by the Dutch government, some concerns have been raised as to how the government proceeds towards its policy objectives. The findings in the 2020 report of the Temporary Committee on the Digital Future (TCDT) of the Dutch House of Representatives concludes that the House of Representatives has only discussed digitization in a fragmented way; that not all of the risks, opportunities and public values have been addressed; and that many laws and rules in the field of digitization are determined in the European Union.⁴⁶⁸¹ The TCDT proposed to establish a standing committee for Digital Affairs in the House of

⁴⁶⁷⁹ Nederland Digitaal, *Dutch Digitalization Strategy 2.0* (2018), <https://www.nederlanddigitaal.nl/documenten/publicaties/2019/11/13/english-version-of-the-dutch-digitalisation-strategy-2.0>

⁴⁶⁸⁰ Government of the Netherlands, *The Netherlands Accelerate with a Renewed Digital Strategy* (Jul. 7, 2025), <https://www.rijksoverheid.nl/actueel/nieuws/2025/07/04/nederland-versnelt-met-vernieuwde-digitaliseringsstrategie>

⁴⁶⁸¹ House of Representatives, Temporary Committee on the Digital Future (TCDT), *Summary of the Report Update Required. Representatives, which was effectively formed in 2021 and addressed themes like digital fundamental rights, digital citizenship, and data ethics.⁴⁶⁸²

The Dutch Research Council (NWO) and the Ministry of Economic Affairs & Climate Policy jointly developed a public-private research program that funds research on explainable, socially aware and responsible AI.⁴⁶⁸³ The NWO funds several other AI-related programs, such as SPRONG—Responsible Applied AI. SPRONG aims to find ways to responsibly implement AI in practice, which resulted in several AI projects on sustainability and reducing socio-economic inequality.⁴⁶⁸⁴ In 2023, the NWO announced funding for the ten-year AI research program ROBUST, which in part focuses on “accuracy, reliability, repeatability, resilience and security” and taking “AI out of the black box.”⁴⁶⁸⁵ The Special Interest Group of AI, SIGAI, representing all computing science academic institutes and researchers in the Netherlands that perform AI research also published Dutch Artificial Intelligence Manifesto highlighting the importance of socially aware, explainable and responsible AI.⁴⁶⁸⁶

The public administration within the Kingdom is layered and sometimes disconnected. However, the government organizations and the Association of the Netherlands Municipalities (VNG), the Ministry of the Interior and Kingdom Relations commit to focusing on “ethics in, by and for design and the transparency of algorithms when government experiments with AI for public tasks.” A study commissioned by Ministry of Interior proposed AI guidelines that apply to the public and private sectors. The guideline, prepared by researcher at VUB, Tilburg University, Eindhoven University of Technology and the National Human Rights Institute of the Netherlands, is a result of Dutch parliament stating that “racism must be ended as soon as possible, not least by stopping the use of discriminatory algorithms.”⁴⁶⁸⁷

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In 2020, the Dutch Data Protection Authority (*Autoriteit Persoonsgegevens*) approved the first code of conduct in the Netherlands, the Data Pro Code⁴⁶⁸⁸ drafted by NL Digital, the Dutch industry association for organizations in the ICT sector. In 2021, researchers from VUB, Tilburg University, Eindhoven University of Technology, and the National Human Rights Institute of the Netherlands developed AI guidelines that apply to the public and private sectors. The Guideline is a result of Dutch parliament stating that “racism must be ended as soon as possible, not least by stopping the use of discriminatory algorithms” and was funded by the Ministry of the Interior.⁴⁶⁸⁹

EU Digital Services Act

As an EU member state, the Netherlands shall apply the EU Digital Services Act (DSA).⁴⁶⁹⁰ The DSA regulates online intermediaries and platforms to prevent illegal and harmful activities online and the spread of disinformation. The Netherlands designated the Dutch Consumer & Markets Authority (*Autoriteit Consument & Markt*) to monitor compliance with the DSA in the Netherlands.⁴⁶⁹¹

EU AI Act

As an EU member State, the Netherlands is bound by the EU AI Act.⁴⁶⁹² The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

⁴⁶⁸⁸ Nederland ICT, *Guidelines on Codes of Conduct and Monitoring Bodies under Regulation 2016/679* (Aug. 20, 2020), https://www.edpb.europa.eu/our-work-tools/accountability-tools/register-code-of-conduct/2020/data-pro-code-0_en

⁴⁶⁹² European Parliament, *Artificial Intelligence Act, European Parliament legislative resolution of 13 March 2024 on the proposal for a regulation of the European Parliament and of the Council on laying down harmonised rules on Artificial Intelligence (Artificial Intelligence Act) and amending certain Union Legislative Acts (COM(2021)0206 – C9-0146/2021 – 2021/0106(COD))*, P9_TA(2024)0138, [https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/03-13/0138/P9_TA\(2024\)0138_EN.pdf](https://www.europarl.europa.eu/RegData/seance_pleniere/textes_adoptes/definitif/2024/03-13/0138/P9_TA(2024)0138_EN.pdf)

The Netherlands has not officially determined the division of supervisory duties under the EU AI Act, but the data protection authority (*Autoriteit Persoonsgegevens*, AP) and the Dutch Authority for Digital Infrastructure (RDI) “in collaboration with 20 other Dutch supervisory authorities that may play a role in AI-supervision,”⁴⁶⁹³ have submitted three rounds of advice on supervisory duties to the Dutch government. The third and final round of advice was submitted on November 7, 2024.⁴⁶⁹⁴ The country has designated six authorities, including the Dutch Data Protection Authority, with special powers under the AI Act to protect fundamental rights.⁴⁶⁹⁵

The Association of Dutch Municipalities (*Vereniging Nederlandse Gemeenten*, VNG) published a report⁴⁶⁹⁶ highlighting municipalities’ unpreparedness for the EU AI Act and suggesting necessary actions to meet compliance obligations. The report highlights that municipalities are faced with new activities (e.g. setting up AI compliance, inventorying AI systems, and organizing AI literacy and human supervision) as well as specific obligations (e.g. fundamental rights assessments and enhanced risk management for high-risk AI systems) for which they are not yet sufficiently equipped and are dependent on AI providers to do it.⁴⁶⁹⁷

Public Participation

With the implementation of the EU AI Act, the Dutch Algorithm Coordination Directorate (DCA), part of the Dutch Data Protection Authority (*Autoriteit Persoonsgegevens*, AP), opened its first two calls for public input in the fall of 2024. The calls specifically referenced certain prohibitions outlined in the EU AI Act, “based upon the AP’s role as coordinating supervisor of algorithms and

AI.”⁴⁶⁹⁸ Citizens, governments, businesses and other organizations were asked to submit responses to the first two prohibitions outlined in the Act, manipulative and deceptive AI systems (prohibition A) and exploitative AI systems (prohibition B), as well as the sixth prohibition, AI systems for emotion recognition in the areas of workplace and education institutions (prohibition F).

The Dutch DPA issued additional calls for public consultations on published guidance on implementing meaningful human intervention in algorithmic decision-making systems to ensure compliance with GDPR prohibitions of decisions based solely on automated processing that produce legal or similarly significant effects.⁴⁶⁹⁹ The DPA sought consultations aimed at validating and enhancing the guidance document based on real world practical experience.

The DPA launched a consultation concerning the implementation of the EU's Regulation on Transparency and Targeting of Political Advertising, specifically strict limitations on using personal data and targeting techniques for political online advertising.⁴⁷⁰⁰ The purpose of the regulation is to prevent voters from being secretly influenced during election campaigns and that confidence in fair elections is being undermined.

Participation in the development of the Dutch digitalization plan and the Strategic Action Plan for Artificial Intelligence was geared more toward public agencies, private companies, universities and research institutes than the citizens directly. Taskforce AI, which created the initial AI report, is a public-private partnership. The national Innovation Centre for AI (ICAI) is also a national network between knowledge institutions, industry and government.⁴⁷⁰¹

The AI Coalition for the Netherlands (AIC4NL), a public-private consortium, offers membership for interested stakeholders in the field of AI, which would grant access to AI projects and working groups.⁴⁷⁰² The Human-Centric AI working group has developed two key projects. The Ethical, Legal and Societal Aspects (ELSA) Labs aims “to ensure that companies, governmental authorities, centers of expertise, civil society organizations and the general public develop responsible applications of AI jointly. This involves solutions for both social and business problems, focusing

on honesty, fairness, security and (above all) trustworthiness. The approach addresses human values as well as public values.”⁴⁷⁰³

While not equivalent to public participation in AI policy as such, the Dutch government has made efforts towards document accessibility and knowledge-building, which are often the building blocks for adequate public participation in AI policies. The Electronic Announcement Act requires national governments to publish official publications on the internet rather than on paper.⁴⁷⁰⁴ All AI policies are accessible by the public via the websites of the Dutch Parliament and the Digital Government.⁴⁷⁰⁵

Data Protection

Since the Netherlands is an EU Member State, the General Data Protection Regulation (GDPR) is directly applicable. In alignment with GDPR requirements, the Dutch Data Protection Authority (DPA, or *Autoriteit Persoonsgegevens*, AP) was established. The authority is an independent supervisory body in charge of promoting and enforcing personal data protection rights. The DPA is tasked with the supervision of national and international businesses and organizations, the central government (including the police and the criminal justice authorities), as well as associations, schools, foundations, and individual citizens.

The DPA is a member of the European Data Protection Body (EDPB), “an independent European body, which contributes to the consistent application of data protection rules throughout the European Union, and promotes cooperation between the EU’s data protection authorities.”⁴⁷⁰⁶

The Dutch DPA is also a member of the Global Privacy Assembly (GPA) since 2002. The DPA did not endorse the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁴⁷⁰⁷ the 2020 GPA Resolution on AI

Center for AI and Digital Policy

Accountability,⁴⁷⁰⁸ nor the 2023 GPA Resolution on Generative AI.⁴⁷⁰⁹ However, the DPA did co-sponsor the 2022 GPA Resolution on Facial Recognition Technology.⁴⁷¹⁰

The Dutch DPA fined Clearview AI, an American facial recognition startup, €30.5 million for violating GDPR by building a database that included facial data from Dutch citizens. Dutch DPA chairman Aleid Wolfsen said Clearview violated data privacy law “on several points: the company should never have built the database and is insufficiently transparent” and further warned that use of Clearview services is prohibited in the Netherlands. “Clearview breaks the law, and this makes using the services of Clearview illegal,” Wolfsen said. “Dutch organisations that use Clearview may therefore expect hefty fines from the Dutch DPA.”⁴⁷¹¹

The Dutch DPA imposed a €2.7 million fine on Experian Nederland for unlawfully processing personal data and failing to adequately inform individuals about how their information was being used. Experian provided credit ratings on individuals to its customers until January 1, 2025.⁴⁷¹² To this end, the company collected data on factors such as negative payment behavior, outstanding debts, and bankruptcies. The DPA found that Experian violated the rules by improperly using personal data.

Algorithmic Transparency

The Netherlands is subject to both the EU GDPR and Council of Europe Convention 108+. Algorithmic transparency is therefore a legal right. The DPA has expressed concerns about the lack of transparency and poor data security practices in the public sector, policing, criminal justice. The government has also mentioned

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

that digital government will be one of its three core focus areas for 2020–2023.⁴⁷¹³ In March 2024, “as the coordinating authority for the oversight of AI and algorithms,” the Dutch DPA and the DCA outlined an oversight work plan focused on four main areas: “transparency, auditing, governance, and preventing discrimination in algorithmic processes.”⁴⁷¹⁴

The second AI & Algorithmic Risks Report in 2024 highlighted the urgent need for better risk management and incident monitoring.⁴⁷¹⁵ The DPA also stressed that “the advance of generative AI puts additional pressure on the development of effective safeguards.” The report recommends a comprehensive strategy including human control and oversight, secure applications and systems, and strict rules to ensure that organizations are in control. The fourth edition of the report emphasized growing concerns over AI risks related to fundamental human rights, transparency, and regulatory oversight in AI-driven profiling and the increasing role of AI in workplace decision making. The report underscores concerns that these AI applications may exhibit systemic bias, leading to discrimination and undermine fundamental rights, particularly in predictive policing and automated risk profiling. The report suggests further coordination between national supervisory authorities and EU regulators to ensure consistent oversight and fair and transparent AI governance.⁴⁷¹⁶

AI Oversight

The Dutch government launched a supervisory body for algorithms, the *algoritmetoezichthouder*, or Algorithm Watchdog in 2023.⁴⁷¹⁷ The Department for the Coordination of Algorithmic Oversight was also created within the DPA. The main mission of the algorithm supervisor is to coordinate all algorithm-related cooperation among Dutch regulators. The focus will be mainly on monitoring the use of algorithms in the public sector to better protect citizens’ fundamental rights (such

Center for AI and Digital Policy

as privacy and non-discrimination) and reduce the risks of serious incidents. This development responds to a series of issues identified with the use of AI in the public sector and some initiatives of several Dutch regulators.

The Dutch Digital Infrastructure Agency (RDI) partnered with UNESCO in October 2023 to enhance the supervisory capabilities of AI regulators across Europe.⁴⁷¹⁸ This collaboration supports the efforts of Dutch and European working groups focused on AI oversight. UNESCO aims to assist RDI and these groups in strengthening their oversight abilities in accordance with the AI Act and other relevant legislation by sharing best practices, presenting options and approaches for shareholders, discussing oversight case studies, and providing training for leaders.⁴⁷¹⁹

The Dutch Court of Audit, following an investigation on the Dutch government's use of algorithms, concluded that "government interests are central to algorithms, not private citizens' interests; that the government recognizes the importance of privacy but takes little account of ethical aspects; and warns against the government's use of algorithms becoming dependent on external suppliers."⁴⁷²⁰ In another report issued in 2022, the Dutch Court of Audit concluded that 6 out of 9 algorithms used by the Dutch government did not meet the basic requirements of Dutch law and exposed the government to various risks: from inadequate control over the algorithm's performance and impact to bias, data leaks and unauthorized access.⁴⁷²¹

Several Dutch regulators—the Netherlands Authority for Consumers and Markets, the Dutch DPA, the Dutch Authority for the Financial Markets, and the Dutch Media Authority—intensified their cooperation via the Digital Regulation Cooperation Platform (DST). The platform facilitates their ability to coordinate oversight activities, including on the use of algorithms and AI.⁴⁷²² The regulators also pushed for more transparency in how the personal data of users is processed and

used.⁴⁷²³ This stronger coordination followed a 2021 audit of Google’s teaching tools for schools⁴⁷²⁴ that found the software’s privacy protections to be lacking, and regulatory pushback against other Big Tech firms.⁴⁷²⁵

Algorithm Impact Assessment

Under the commission of the Dutch Ministry of the Interior, Utrecht University developed the Fundamental Rights and Algorithm Impact Assessment (FRAIA) in 2021.⁴⁷²⁶ This innovative tool aims to proactively identify and address risks to fundamental rights associated with algorithm use. Between 2023 and 2024, FRAIA was successfully piloted with 15 algorithms across various government bodies, allowing for the collection of valuable insights and recommendations for future enhancements.⁴⁷²⁷ While there was some initial skepticism, participants in these pilot programs expressed positive feedback and valued FRAIA’s comprehensive approach, which integrates legal, ethical, and technical perspectives. As a result, FRAIA is gaining considerable political and international recognition.

Fraud Detection Algorithm

In early 2020, a Dutch court ruled that the System Risk Indication algorithm (SyRI), used to combat fraud in government programs violated Article 8 of the European Convention on Human Rights.⁴⁷²⁸ In the landmark decision, the Court ruled that the principle of transparency was not observed because there is no insight into the risk indicators and the operation of the risk model. The Court also warned that there is a risk of bias in that inadvertent links could be established through SyRI based on lower socio-economic status or an immigration background. The Dutch Parliament adopted a motion in 2025 instructing the government, in cases of fraud detection, to consider that citizens are assessed blindly to reduce the possibility of bias in human assessment.

Center for AI and Digital Policy

The UN Special Rapporteur on Extreme Poverty and Human Rights explained that the decision challenged the “systematic, legislatively sanctioned, used of digital technologies in welfare state on human rights ground.”⁴⁷²⁹ In a filing with the court, the Special Rapporteur voiced concern that “SyRI has consistently been rolled out in poorer and more vulnerable areas of municipalities”, and that the Dutch government has denied access to information about the data and ‘risk models’ used in the algorithm.” The Special Rapporteur called the decision, “a clear victory for all those who are justifiably concerned about the serious threats digital welfare systems pose for human rights.”⁴⁷³⁰

The Data Processing by Partnerships Act was introduced by the government in April 2020. Where SyRI was related to public data sharing, this bill expands the data surveillance and sharing to all data stored in public and private storage.⁴⁷³¹

In January 2021, the Dutch government resigned after it became clear that thousands of families, disproportionately of ethnic minority backgrounds, were wrongly accused of child welfare fraud by a discriminatory algorithm and ordered to pay money back, which drove many victims into deep poverty.⁴⁷³² This scandal would later lead to several policy shifts: a mandatory AI registry, a new algorithmic supervisory body, and mandatory human rights risk assessments for public sector AI systems.⁴⁷³³ Alexandra van Huffelen, Minister of Digitalization at the time, later declared that high-risk AI systems should require certification before use, that “impact assessments should be meaningful and address fundamental rights in the complete AI lifecycle,” that AI should respect and protect people and their rights, and human-centric AI requires more human oversight - especially when systems have a big influence on people.”⁴⁷³⁴ Van Huffelen also makes clear that the government’s

Center for AI and Digital Policy

experiences with the fraud detection algorithm have urged the Netherlands not just to implement new algorithmic oversight policies, but also to proactively implement components of the EU AI Act, and sometimes even go beyond its requirements: she states that the high-risk impact assessment should be expanded to more cases via “a broader Impact Assessment tool on Human Rights and algorithms” and that Big Tech platform governance is inadequate, suggesting that stricter rules should include content labelling policies.⁴⁷³⁵

In a similar scandal, journalists revealed that five Dutch municipalities (Nieuwegein, Houten, IJsselstein, Lopik and Veenendaal) used a discriminatory risk scoring system for fraud—even after the SyRi scandal—and the Dutch labor union FNV filed a complaint with the Dutch DPA in January 2023.⁴⁷³⁶

AI Registries

Amsterdam launched an AI registry in beta version to detail how city government uses algorithms to deliver services in 2020. For each algorithm, the registry lists training datasets, a description of how an algorithm is used, how humans utilize the prediction, and how algorithms were assessed for potential bias or risks. Citizens can give feedback on algorithms their local government uses and access the name, city department, and contact information for the person responsible for the responsible deployment of a particular algorithm.⁴⁷³⁷

The city of Amsterdam’s system was used as a blueprint for a nation-wide mandatory registry for algorithms deployed in the public sector.⁴⁷³⁸ The registry, available online starting December 2022, is freely accessible for citizens and shows information on the purpose, legal background, application, human rights impact assessments, and oversight of public sector algorithms.⁴⁷³⁹ Contribution to the

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

registry is currently voluntary but the aim is to make it compulsory by the end of 2025.⁴⁷⁴⁰ The Dutch government's Fundamental Rights and Algorithms Impact Assessment (FRAIA), launched in 2021, dovetails with the algorithm registry: the registry specifies whether a Human Rights Impact Assessment was performed. As of July 2025, the Algorithms Register contains about 1,000 algorithms and the Dutch Government aims to develop a legal framework for this Register to ensure mandatory registration of algorithms.⁴⁷⁴¹

The Dutch cities of Rotterdam and Eindhoven are among 7 European cities to participate in a public AI algorithm registry experiment, The Algorithmic Transparency Standard, led by Eurocities Digital Forum Lab. Building on the Amsterdam and Helsinki experiment, the aim is to provide cities with a common data schema for algorithm registries that is validated, open-source, publicly available, and ready for use in local algorithm registries.⁴⁷⁴²

Predictive Policing

The Dutch police force, in collaboration with Utrecht University and the University of Amsterdam, established the National Police Lab AI to develop "AI techniques to improve the safety in the Netherlands in a socially, legally and ethically responsible way."⁴⁷⁴³ In alignment with the government's commitment to experiment with technology to solve social issues, the Dutch police has launched pilot projects with predictive policing to anticipate and prevent crime that might be committed by a certain person or at a certain location.

The first was the Sensing Project in Roermond, where police used cameras and other sensors to reduce pickpocketing. The system monitored all people driving in and around Roermond and created a risk score, effectively transforming the "city into a living lab where every person travelling by car is subjected to mass surveillance and other human rights violations".⁴⁷⁴⁴ The project violated the principles of human rights, informed consent, right to privacy and data protection, right to due process and non-discrimination. Amnesty International called on the

Dutch government to “halt the Sensing project and comparable ‘experimental’ predictive policing projects” and to “implement a mandatory and binding human rights impact assessment requirement applicable to the public sector.”⁸ The experiment was halted in 2022, with its “results unclear” and without leading to structural policy shifts.⁴⁷⁴⁵

The second predictive policing project is *Criminaliteits Anticipatie Systeem* (Crime Anticipation System or CAS) implemented nationwide in 2017. The use of CAS to predict crime locations makes the Netherlands the first country in the world to deploy predictive policing on a national scale.⁴⁷⁴⁶ The Dutch Court of Auditors criticized the CAS for its lack of oversight, privacy, and transparency, deeming the system “high-risk,” “worrying,” and “prejudiced,” but Dutch police has not made significant changes in response.⁴⁷⁴⁷

The Dutch Police Scientific Advisory Board published the report *Navigating No-Man’s Land*, outlining seven challenges and recommendations for the responsible use of AI in police practice in 2025. The report warns that algorithms are increasingly making autonomous decisions within police operations, requiring urgent legal and ethical frameworks. Police Chief Janny Knol acknowledged these challenges, committing to implement the recommendations to ensure legitimacy and accountability in AI-assisted policing.⁴⁷⁴⁸

Environmental Impact of AI

The Netherlands is taking a proactive and structured approach to addressing the environmental impact of AI through its updated AI Impact Assessment (AIIA). The AIIA serves as a mandatory tool for evaluating the ethical, societal, and ecological implications of AI systems throughout their lifecycle—from development to deployment. A key component of the assessment focuses specifically on sustainability, recognizing that AI systems require significant resources, including energy, water, and raw materials. The AIIA prompts organizations to critically assess whether the energy consumption is proportional to the intended benefits of the AI system, and to evaluate how the energy is generated and consumed. Moreover, the

⁴⁷⁴⁸ Scientific Advisory Board of the Dutch Police, *Navigating No-Man’s Land (Navigeren in niemandsland)*, (Jun.12, 2025), <https://www.eur.nl/en/news/ai-policing-between-innovation-and-no-mans-land>

AIIA promotes the integration of sustainability considerations into technical decision-making, such as model selection, infrastructure design, and system maintenance. It underscores the importance of designing AI systems that are not only accurate and reliable, but also environmentally responsible. This approach aligns with the broader goals of the Dutch government to ensure that public sector innovation contributes to climate resilience and the responsible use of digital technologies. Importantly, the AIIA requires a multidisciplinary team—including environmental, legal, and data experts—to collaboratively complete the assessment, ensuring that sustainability is embedded across all dimensions of an AI project.”⁴⁷⁴⁹

The Dutch government has shown a strong commitment to initiatives to contribute to apply AI technology to promote sustainability⁴⁷⁵⁰ by allocating substantial resources through the National Growth Fund to projects that address climate resilience and promote sustainable practices.⁴⁷⁵¹ The AI Coalition for Netherlands (AIC4NL, previously Netherlands AI Coalition) also engages collaboratively with various stakeholders, including governmental bodies, enterprises, educational institutions, research organizations, and societal groups, to advance the development of socially responsible applications of AI.⁴⁷⁵² The coalition underscores energy and sustainability as pivotal domains for the application of AI and established a specialized working group focused on Energy and Sustainability.⁴⁷⁵³

Lethal Autonomous Weapons

In 2016, the Dutch government agreed with the conclusions of the Joint Committee of the Advisory Council on International Affairs (AIV) and the Advisory Committee on Issues of Public International Law (CAVV) advisory report that meaningful human control is required in the deployment of autonomous weapon

⁴⁷⁴⁹ Ministry of Infrastructure & Water Management, *AI Impact Assessment: The Tool for a Responsible AI Project* (Dec. 31, 2024),

systems and responsibility and accountability attribution needs to be considered in the design stage of weapon systems.⁴⁷⁵⁴

The government also viewed a moratorium on fully autonomous weapon systems to be unfeasible as of 2022. In a 2022 letter from the Government to the House of Representatives regarding Autonomous Lethal Weapons, the Minister of Foreign Affairs stated that the Dutch government agreed that the underlying mathematical models—and the data underlying those models—must be traceable and explainable at all times and further that it must be clear throughout the decision-making process where and how meaningful human control is assigned and who is responsible for what.⁴⁷⁵⁵ The same year the Royal Netherlands Army became the first military in the West to deploy armed unmanned ground vehicles (UGVs) “for experimental use in an operational unit in a military-relevant environment.”⁴⁷⁵⁶ Also in 2022, the Netherlands endorsed the UN’s Joint Statement on Lethal Autonomous Weapons Systems,⁴⁷⁵⁷ which underlines “the need to maintain human responsibility and accountability in the use of force.”⁴⁷⁵⁸

In February 2024, at the High-Level Segment of the Conference on Disarmament held in Geneva, the Minister of Foreign Affairs Hanke Bruins Slot announced that, as the current chair of the Government Group of Experts on Lethal Autonomous Weapons Systems, the Netherlands will preside over the discussions on the regulation of lethal autonomous weapons systems. The Minister stated, “One big challenge we face is the rapid evolution of emerging technologies. [...] we believe that the responsible development and use of emerging technologies in weapons systems are indispensable for modern armed forces. But those technologies also entail real and imminent risks to security, human rights and fundamental freedoms. [...] We must develop clear standards for responsible behaviour in this area. And we must strengthen the existing norms. The urgency is clear. [...] The risks and legal

implications of weapons systems that take decisions fully outside the scope of human control are obvious.”

He also clearly expressed the Dutch national position. “Autonomous weapons systems that can’t be used in accordance with international law, including international humanitarian law, should be explicitly prohibited. And those that can be used in accordance with international law should be regulated. We must ensure human judgement and control with the development of new weapon systems. That should be the main objective of regulation.”⁴⁷⁵⁹ On November 5th, 2024, the UN General Assembly adopted the Draft Resolution L.77 on Lethal Autonomous Weapons Systems. The Netherlands was one of 161 countries that voted in favor of this.⁴⁷⁶⁰

The Netherlands hosted the first REAIM Summit in 2023, issuing a joint call for action stressing “the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”⁴⁷⁶¹ The Netherlands has also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy.⁴⁷⁶² The Netherlands also launched the Global Commission on Responsible AI in the Military Domain in the Hague. The Global Commission has been established for an initial period of two years to help promote mutual awareness and understanding regarding the global governance of AI in the military domain and support fundamental norm development and policy coherence in the field. The Global Commission produces strategic guidance reports to identify short- and long-term recommendations for governments and the wider multi-stakeholder community.⁴⁷⁶³ The Netherlands also participated in

and endorsed the outcome document, *Blueprint for Action*, for the second REAIM summit, which took place in 2024 in Korea.⁴⁷⁶⁴

The Netherlands maintains a stance on regulating lethal autonomous weapons (LAWS), advocating for a two-tiered international treaty that both prohibits and regulates such systems.⁴⁷⁶⁵ The Dutch government's current policy, finalized in 2022, pursues a legally binding international instrument with a dual structure: (1) a complete ban on autonomous weapons that cannot be used in compliance with international humanitarian law (IHL), and (2) regulation of other autonomous systems to ensure their ethical use in accordance with IHL. The principle of *meaningful human control*—the requirement that humans retain sufficient judgment and oversight to remain accountable for any use of force is central to the Dutch position, along with a focus on the *effects* of autonomous systems rather than definitions. The Netherlands advocates for transparency measures such as traceability and understandability in the use of AI in military applications.

The Netherlands continues to play a leading role in international discussions on the regulation of LAWS. Robert in den Bosch of the Netherlands served as Chair of the UN Group of Governmental Experts (GGE) on LAWS, guiding the development of a “rolling text” outlining key regulatory elements for a future treaty.⁴⁷⁶⁶ The Netherlands was also among a group of 42 states that, in September 2025, issued a joint statement expressing readiness to move toward formal treaty negotiations under the UN Convention on Certain Conventional Weapons (CCW).⁴⁷⁶⁷

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Domestically, the Netherlands' position enjoys parliamentary backing and aligns with public and civil society advocacy for binding rules on “killer robots.” The current policy reflects the outcomes of expert consultations with the Advisory Council on International Affairs (AIV) and the Advisory Committee on Issues of Public International Law (CAVV).⁴⁷⁶⁸

AI Literacy

The Dutch Data Protection Authority published a guide highlighting AI literacy as a foundational element for responsible AI governance and meaningful human oversight.⁴⁷⁶⁹ As the coordinating supervisor on algorithms and AI, the DPA emphasizes that AI literacy supports compliance with the article 4 of the EU AI Act⁴⁷⁷⁰ and enables staff and users to recognize AI's risks and opportunities. The DPA recommends a long-term, strategic approach through a four-step framework: identifying AI systems, associated risks, and knowledge gaps; defining measurable literacy goals; executing training programs and establishing governance structures; and evaluating outcomes via audits and reports. Literacy should be tailored to different roles, with policymakers and supervisors requiring deeper understanding and citizens and consumers needing basic knowledge. The DPA notes that AI literacy also enhances societal resilience by fostering critical engagement with AI.

The DPA will continue guiding implementation by sharing best practices and convening stakeholders, positioning AI literacy as essential for accountable AI deployment.

Human Rights

The Netherlands has endorsed the Universal Declaration of Human Rights, the European Union (EU) Charter of Fundamental Rights, and the European Convention on Human Rights (ECHR).⁴⁷⁷¹ The Dutch government expanded the AI, Public Values and Human Rights knowledge platform to include training on AI

⁴⁷⁶⁸ UN Office for Disarmament Affairs, *Briefing by the Chair of the CCW GGE on LAWS on the Margins of the First Committee* (Dec. 15, 2025), <https://disarmament.unoda.org/en/updates/briefing-chair-ccw-gge-laws-margins-first-committee>

literacy and compliance with the EU AI Act, focusing on fundamental rights, non-discrimination, and transparency in AI.⁴⁷⁷²

Freedom House classifies the Netherlands as “Free” in the Freedom in the World report with a score of 97/100 in 2025.⁴⁷⁷³

AI Safety Summit

In November 2023, the Netherlands participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁴⁷⁷⁴ The Netherlands thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

At the AI Action Summit in Paris in 2025, the Netherlands signed the Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet⁴⁷⁷⁵ and the Paris Declaration on Maintaining Human Control in AI enabled Weapon Systems.⁴⁷⁷⁶

OECD / G20 AI Principles

The Netherlands endorsed the OECD AI Principles as an OECD and through membership in the Global Partnership for AI (GPAI).⁴⁷⁷⁷ The GPAI is a multi-stakeholder initiative that aims to foster international cooperation on AI research and applied activities and is “built around a shared commitment to the OECD

Recommendation on Artificial Intelligence.” An integrated partnership with the OECD formalized this shared commitment to the principles in 2024.⁴⁷⁷⁸

Council of Europe AI Treaty

The Netherlands contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law.⁴⁷⁷⁹ The Netherlands is party to the Convention through the European Commission signature but has not acted independently on this first legally binding international AI treaty.⁴⁷⁸⁰

UNESCO Recommendation on AI Ethics

In November 2021, the Netherlands, alongside 192 other states, adopted the UNESCO Recommendation on the Ethics of AI.⁴⁷⁸¹ Together with 8 other states, the Netherlands recalled the efforts made by the members of the Group of friends for the implementation of the Recommendation and called on Member States to be “actively involved throughout the implementation process of the Recommendation.”⁴⁷⁸²

The Netherlands was the first European country to initiate UNESCO’s Readiness Assessment Methodology (RAM).⁴⁷⁸³ The outcome of the RAM study highlighted the country’s robust protections for fundamental rights and attention to the ethical implications of AI applications. The report specifically called out the strength of the Impact Assessments and Algorithm Registry.⁴⁷⁸⁴

Evaluation

The Netherlands continues to perform strongly in the AI domain with comprehensive legal frameworks and a commitment to ethical AI use, aligning with EU regulations. The Dutch Data Protection Authority (DPA) and the Dutch Consumer & Markets Authority have intensified their oversight of the sector, issuing detailed guidelines for AI use in both the public and private sectors.⁴⁷⁸⁵ The Netherlands has taken positive steps towards the rights-based deployment of AI with endorsement of UNESCO Recommendation on the Ethics of AI and related implementing efforts, OECD AI Principles, GDPR, and creation of an AI watchdog within the DPA. The country has expanded algorithmic transparency with its AI public registry and impact assessments. Further, the Netherlands has played a leading role in building international consensus towards the need to regulate the use of autonomous weapons. The Dutch judiciary should be credited with a landmark decision concerning the use of secret algorithms in government services. Still, the rise of predictive policing and biometric databases, as well as risk-based systems that may adversely impact minority and vulnerable groups remain a concern.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

New Zealand

In 2025, New Zealand's Ministry of Business, Innovation and Employment released a national AI strategy centered on the OECD AI Principles. A Privacy Amendment and Biometric Code passed into law, providing greater protection around algorithmic transparency and biometric processing.

National AI Strategy

The process for developing a National AI strategy started in May 2021 with the proposal of AI cornerstones⁴⁷⁸⁶ and culminated in 2025 with New Zealand's Strategy for Artificial Intelligence: Investing with Confidence published by the Ministry of Business, Innovation and Employment (MBIE).⁴⁷⁸⁷ The strategy provides a coordinated roadmap for AI adoption and innovation in the private sector, emphasizing a light-touch, risk-based regulatory approach aligned with the OECD AI Principles⁴⁷⁸⁸ and protective of Māori values and cultural integrity.⁴⁷⁸⁹ The Strategy for Artificial Intelligence explicitly encompasses other resources such as the MBIE Responsible AI Guidance for Businesses⁴⁷⁹⁰ also released in 2025 to promote clarity in an enabling environment for AI adoption and innovation.

Government ministries also developed tools for the public sector as part of the AI Strategy. Digital Government NZ adopted the OECD AI Principles to guide AI adoption across ministries in the Public Service AI Framework. While not legally binding, the framework "encourages agencies to pursue using AI to create value for New Zealanders, while managing risks and maintaining public trust and confidence in the Public Service overall."⁴⁷⁹¹ The Responsible AI Guidance for the Public

Service: GenAI⁴⁷⁹² supports the “responsible update and use of GenAI”⁴⁷⁹³ in public agencies with advice on key considerations for GenAI in customer service, including transparency; bias, discrimination, fairness, and equity; accessibility; privacy; and Māori, Pacific Peoples, ethnic communities.

The 2025 strategy and supporting documents build from the Ministry of Science, Innovation, and Technology 2024 cabinet paper, *Approach to Work on Artificial Intelligence*.⁴⁷⁹⁴ The paper advocates for increasing AI use in New Zealand to drive innovation, economic growth, and more effective public services through the “light-touch, proportionate, and risk-based” approach defined in the strategy. The approach prioritizes the use of existing regulatory mechanisms rather than developing a standalone AI Act.⁴⁷⁹⁵ In addition to the OECD AI Principles, the paper acknowledges New Zealand’s obligations arising from the Treaty of Waitangi in the development and use of AI. The paper highlights the Data Iwi Leaders’ Group’s (DILG) readiness to adopt AI, noting that, in discussions with the Cabinet Office, the DILG agreed that “the danger for Māori in AI lies in being excluded from its ability to bring about substantial improvements in the provision of services for Māori.”⁴⁷⁹⁶

Existing regulatory mechanisms include the Ministry for Social Development’s Privacy, Human Rights and Ethics (PHRaE) framework⁴⁷⁹⁷ published in 2018⁴⁷⁹⁸ to promote privacy-by-design in AI tools. In addition, Government agencies signed Stats NZ’s Algorithm Charter for Aotearoa,⁴⁷⁹⁹ committing to clearly explaining how decisions are informed by algorithms (transparency); incorporating the *Te Ao Māori* perspective in the development and use of algorithms; actively engaging with stakeholders and affected people, communities and groups;

understanding the limitations in data and managing bias; retaining human oversight by providing a channel to appeal decisions informed by algorithms; and regularly peer-reviewing algorithms to assess for unintended consequences and act on this information to safeguard privacy, ethics and human rights.⁴⁸⁰⁰

New Zealand's *Te Rautaki Matihiko mō Aotearoa*, the Digital Strategy for Aotearoa (Digital Strategy)⁴⁸⁰¹ and related Action Plan⁴⁸⁰² aim to enable "Aotearoa New Zealand's people, communities, economy, and environment to flourish and prosper in the digital era."⁴⁸⁰³ David Clark, the Minister for the Digital Economy and Communications, introduced the digital strategy by stating that: "New Zealand stands on the precipice of a huge opportunity to design, build and use digital technologies in world-leading, ethical, equitable ways that reflect the culture and uniqueness of our country." The Strategy is framed around 3 connected themes: *Mahi Tika*—Trust; *Mahi Tahi*—Inclusion; and *Mahi Aka*—Growth, supported by goals and measures.⁴⁸⁰⁴ As part of the Digital Strategy, the Centre for Data Ethics and Innovation⁴⁸⁰⁵ was established in 2025 to "shape a collective understanding of data ethics and innovation." The Centre collates and develops guidance to facilitate ethical data use, promotes awareness of data ethics guidance, and supports government agencies to integrate data ethics in their programs.

Public Participation

New Zealand government processes have consistently included periods of public participation in policy and law development. Public participation opportunities for AI are across the government sector in a variety of industries from

policy and instrument development, like the Algorithm Charter,⁴⁸⁰⁶ to application and end use, like consultation on the use of AI in conservation efforts.⁴⁸⁰⁷

Consultation opportunities on the development of AI and digital policy include the 2019 public consultation on the draft Algorithm Charter for the use of algorithms in the public sector with government data.⁴⁸⁰⁸ The consultation period ran for approximately 2 months, and submissions were solicited from key stakeholders such as central government agencies, academics, non-government organizations, civil society representatives, and regulators. Thirty-four written submissions were received in relation to the charter and related issues.⁴⁸⁰⁹

The Ministry of Justice held public consultations on reforming the disclosure aspect of the Privacy Act to increase transparency regarding the collection, use, and disclosure of personal in 2022.⁴⁸¹⁰ The Ministry of Justice subsequently published a summary of comments and reforms under consideration.⁴⁸¹¹ New Zealand's Digital Technologies Industry Draft Transformation Plan 2022–2032 was also open for public consultation in 2022.⁴⁸¹²

New Zealand does not have a single written constitution, rather several documents of constitutional importance. One of these, *Te Tiriti o Waitangi*/The Treaty of Waitangi, is a founding agreement between the English Crown and the Maori iwi (tribes). *Te Tiriti* is applied in New Zealand through a series of core principles.⁴⁸¹³ The AI Charter reflects these principles as a commitment to embed a

Te Ao Māori perspective in the development and use of algorithms consistent with the Treaty of Waitangi.⁴⁸¹⁴

The public was consulted on the Privacy Regulation of Biometrics in 2022, particularly regarding concerns over facial recognition in retail CCTV.⁴⁸¹⁵ The consultation received 100 submissions, leading to plans for a regulatory code.⁴⁸¹⁶

After the Privacy Amendment Bill introduced to Parliament in 2024 was referred to the Justice Committee for further consideration,⁴⁸¹⁷ the Chairperson called for comments.⁴⁸¹⁸ This process, as outlined by the NZ government, provided individuals and organizations an opportunity to offer their opinions, observations, and recommendations on the bill under review by the selected committee.⁴⁸¹⁹

The GCDO hosted the AI Accelerate: Ideas to Impact public forum in Wellington in August 2025.⁴⁸²⁰ The event engaged over 200 public service leaders, stakeholders, and Māori data-sovereignty representatives to discuss practical AI adoption and oversight across agencies.

Data Protection

The Privacy Act 2020 came into force on 1 December 2020, replacing the Privacy Act of 1993.⁴⁸²¹ Apart from the Privacy Act, the courts of New Zealand developed a series of privacy torts recognizing the right of an individual to sue

another for breach of privacy.⁴⁸²² The New Zealand Bill of Rights Act contains many rights founded on the right to privacy, such as the freedom from unreasonable search and seizure.⁴⁸²³

The Privacy Act provides a framework for protecting an individual's right to privacy of personal information, including the right to access personal information and giving effect to internationally recognized privacy obligations and standards. The Privacy Act set down 13 privacy principles that require an individual to be informed of the fact and purpose of data collection, that require that collection not to be through unfair or overly intrusive means, that require the information to be protected by the agency and not used or shared outside the purposes for which it was collected, held only as long as needed for the purpose, and may not transfer the information offshore except under particular circumstances that continue comparable protection of the information.⁴⁸²⁴ The individual has some rights to access and correct the information collected.⁴⁸²⁵ These principles were largely unchanged from the 1993 Act that was replaced, with the only addition being requirements around offshore transfers.

The Office of the Privacy Commissioner (OPC) has the power under the Privacy Act to issue codes of practice that become part of the law.⁴⁸²⁶ These codes apply the Privacy Act to specific scenarios, for example credit reporting or situations of national security. There are currently six codes of practice. A breach of the privacy principles may lead to fine or a claim of interference under the Act, but these are minimal when compared to the European fines under the General Data Protection Regulation, or those proposed in the Australian Privacy Reforms.

The Privacy Amendment Act 2025 with a new Information Privacy Principle 3A (IPP3) received Royal Assent,⁴⁸²⁷ officially introducing several significant updates to the Privacy Act 2020. The most consequential change is the obligation of organizations to inform individuals when their personal information is collected indirectly. The new provision will come into force on May 1, 2026 and aims to enhance transparency and accountability, aligning New Zealand's privacy framework more closely to the EU GDPR.

The OPC has also been active in the Global Privacy Assembly, co-sponsoring the 2022 resolution on facial recognition technology⁴⁸²⁸ and the 2020 Resolution on Accountability in the Development and Use of Artificial Intelligence.⁴⁸²⁹ New Zealand did not co-sponsor the 2023 Resolution on Generative AI Systems⁴⁸³⁰ or 2018 Declaration on Ethics and Data Protection in AI.⁴⁸³¹ New Zealand joined eighteen other data protection authorities in signing the Joint Statement on Building Trustworthy Data Governance Frameworks to Encourage Development of Innovative and Privacy-protecting AI at the 2025 Global Privacy Assembly in Seoul.⁴⁸³²

Algorithmic Transparency

The Privacy Act does not contain a right for an individual to understand how the AI decision was made. However, in New Zealand, where an automated decision is being made by a government agency, section 23 of the Official Information Act 1982 provides an individual with a right to obtain reasons for a government decision. These reasons are to be supplied in a written statement that includes any findings on material issues of fact and a reference to the information on which the findings were based to allow anybody with the power of review to understand the process of thought before a conclusion was reached.⁴⁸³³

The Privacy Amendment Act 2025 provides the regulatory groundwork for future reforms in explainability and fairness of private-sector AI systems by improving data source transparency and individual awareness by mandating specific

and proactive disclosure of indirect data collection practices.⁴⁸³⁴ The Ministry of Business, Innovation and Employment's Responsible AI Guidance for Businesses includes an AI Transparency Checklist and advises businesses to watermark or label AI-generated content or provide disclaimers when GenAI systems are used or included in functionality.⁴⁸³⁵

The Algorithm Charter⁴⁸³⁶ also commits its public sector signatories to transparency by clearly explaining how decisions are informed by algorithms. This transparency may include a plain English document, making information about data and processes available, and publishing information about how data are collected, secured and stored.⁴⁸³⁷ Where algorithms are being employed by government agencies in a way that can significantly impact on the wellbeing of people, or there is a high likelihood many people will suffer an unintended adverse impact, the Charter signatories will make an assessment of their algorithm decisions using a risk matrix.⁴⁸³⁸ The Public Service AI Principles includes the OECD principles of transparency and explainability, requiring agencies to assess and document AI decision-making processes, but makes no mention of contestability.⁴⁸³⁹

The Joint AI Security Guidance, *Deploying AI Systems Securely*, developed with NZ's participation through its National Cyber Security Centre alongside Australia, Canada, UK, and US in 2024, provides further recommended practices for algorithmic systems.⁴⁸⁴⁰ The guidance suggests government agencies should implement protection, detection, and response methodologies when deploying externally developed AI systems, including maintaining comprehensive audit logs of

algorithmic decisions and establishing clear monitoring protocols for system transparency.⁴⁸⁴¹

The Court has required that information provided to individuals under this access right⁴⁸⁴² is in a “form which can be comprehended,” including “the key” which unlocks the information in a “meaningful way.”⁴⁸⁴³ In other words, the standard appears to require an explanation: evidence, support or reasoning for a decision.

Data Scraping

The Office of the Privacy Commissioner and international data protection and privacy counterparts released a follow-up joint statement laying out expectations for industry related to data scraping and privacy.⁴⁸⁴⁴ The initial statement in August 2023 established that “[social media companies] and other websites are responsible for protecting personal information from unlawful scraping.”⁴⁸⁴⁵ The follow-up, which incorporates feedback from engagement with companies such as Alphabet (YouTube), X Corp (formerly Twitter), and Meta Platforms (Facebook, Instagram, WhatsApp), adds that organizations must “comply with privacy and data protection laws when using personal information, including from their own platforms, to develop AI large language models”; must regularly review and update privacy protection measures to keep pace with technological advances; and ensure that permissible data scraping, such as that for research, “is done lawfully and following strict contractual terms.”⁴⁸⁴⁶

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and

surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

Use of AI in the Public Sector

The Algorithm assessment report, published in 2018, recommended that consideration be given to ways in which agencies ensure human rights, privacy and ethics when developing algorithms, and that agencies embed a *Te Ao Māori* perspective where appropriate. The Data Ethics Advisory Group (DEAG) was created to assist in meeting those recommendations. The DEAG is convened by the Government Chief Data Steward (GCDS) to assist the New Zealand Government to maximize the opportunities and benefits from new and emerging uses of data while responsibly managing potential risks and harms. The Group provides advice, comments, views and recommendations to the GCDS and State Sector agencies.⁴⁸⁴⁷ It has provided advice matters including on population density assessment and a framework to work more collaboratively with *iwi* (tribes).⁴⁸⁴⁸

The Algorithm Charter⁴⁸⁴⁹ finalized in July 2020 is considered a “commitment by government agencies to carefully manage how algorithms will be used to strike the right balance between privacy and transparency, prevent unintended bias and reflect the principles of the Treaty of Waitangi.”⁴⁸⁵⁰ The Algorithm Charter stipulates that an annual review will be conducted to ensure that it is meeting its intended purpose of improving government transparency and accountability without stifling innovation or causing undue compliance burden. An independent review involving interviews with signatories, non-signatories, and subject matter experts, was completed in December 2021.⁴⁸⁵¹ This report found almost universal support for the charter, but a lot of work remains on implementation to ensure compliance with all charter commitments. The report also noted there is little opportunity for New Zealanders to get individual recourse on decisions made about them that were

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

informed by an algorithm. It also noted that greater enforcement of the Charter might be necessary to keep social license, as there is a lack of a clear oversight body. The report also noted that capability and capacity within agencies and the expert community is limited. Stats NZ is working to consider and implement the findings of the review.

Various NZ institutions worked to development and implement guidance to integrate AI in the public sector. The National Cyber Security Centre participated in developing the Joint AI Security Guidance in April 2024, providing security guidance for public sector AI.⁴⁸⁵² The Cabinet paper *Approach to Work on Artificial Intelligence* in July 2024 expanded on the Algorithm Charter's framework by outlining five key domains for public sector AI governance.⁴⁸⁵³ The AI Blueprint for Aotearoa by the AI Forum of NZ also introduced guidelines for public sector AI adoption, emphasizing both innovation and ethical considerations aligned with Te Ao Māori principles.⁴⁸⁵⁴

Developments continued with the Government Chief Digital Officer (GCDO) appointing a national AI Expert Advisory Panel to guide responsible AI adoption across the public service.⁴⁸⁵⁵ The AI Expert Advisory Panel will play a significant role for setting standards, coordinating AI adoption across public service agencies. The Public Service AI Framework⁴⁸⁵⁶ mandates that all public sector AI deployments undergo algorithmic impact assessments and adhere to risk-based governance structures. Additionally, the Responsible AI Guidance for the Public Service GenAI provides a framework for government agencies to responsibly integrate generative

AI models into public services.⁴⁸⁵⁷ The framework requires public service agencies to proactively identify and mitigate bias risks across data collection, model development, and deployment stages to ensure equitable outcomes for all communities, including Māori and Pasifika populations.

Facial Recognition

New Zealand's Office of the Privacy Commissioner co-sponsored a GPA resolution on the Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology in 2022.⁴⁸⁵⁸

The Office of the Privacy Commissioner released the Biometric Processing Privacy Code 2025⁴⁸⁵⁹ under the Privacy Act to regulate the collection, use, and storage of biometric information for biometric processing. The Code provides exceptions for intelligence and security agencies to Rules 2 and 3 on the direct sampling from individuals and Rule 4(b) requiring collection by means that are fair and “does not intrude to an unreasonable extent upon the personal affairs of the individual concerned.” Exceptions to Rule 10(5) allow intelligence and security agencies to use biometric information for biometric categorization without meeting the criteria.

The Code underwent extensive consultation periods through multiple phases of drafting from a position paper to workshops, targeted consultations, and broad public consultations between 2022 and 2025.⁴⁸⁶⁰ The Code applies to automatic processing of biometric information by organizations outside of health services with targeted exceptions for national intelligence and security office.⁴⁸⁶¹ The Code has 13 rules aligned with common privacy principles including requirements for purpose

and use limitations and specification, proportionality, fairness, transparency, data quality, and the right to correction.

Environmental Impact of AI

The AI Forum, in partnership with the Ministry for the Environment (*Manatū Mō Te Taiao*) and Stats NZ, launched the 2022 report *AI for the Environment in Aotearoa New Zealand*, exploring how AI can contribute to positive environmental outcomes in the country. The report identifies five key areas where AI can provide impactful solutions: biodiversity preservation, understanding land use impacts, pollution reduction, freshwater and marine resource protection, and climate change mitigation. It highlights AI's capacity to process large data sets, improve predictions, enhance decision-making, and deliver real-time insights. Additionally, the report recommends the development of a cohesive environmental data ecosystem, strengthening capabilities, and aligning funding to maximize AI's potential in addressing environmental challenges.⁴⁸⁶²

The Prime Minister's Chief Science Advisor stated that the office is considering how AI might be useful for improving outcomes for NZ's natural environment. The office's webpage highlights existing applications and provides examples of AI research and technology that are already supporting positive environmental outcomes.⁴⁸⁶³

Lethal Autonomous Weapons

New Zealand is a High Contracting Party to the Convention on Certain Conventional Weapons (CCW) and active in the Group of Government Experts (GGE) on Lethal Autonomous Weapons Systems (LAWS). In 2021, the Minister of Disarmament and Arms Control announced that New Zealand will push for a new international law to ban and regulate autonomous weapons systems (LAWS).⁴⁸⁶⁴ New Zealand committed to “upholding and strengthening compliance with International Law, in particular International Humanitarian Law (IHL), including through maintaining human responsibility and accountability in the use of force,”⁴⁸⁶⁵

⁴⁸⁶² AI Forum of New Zealand, *AI for the Environment in Aotearoa New Zealand* (May 18, 2022), <https://aiforum.org.nz/2022/05/18/ai-for-the-environment-in-aotearoa-new-zealand>

in a joint statement on LAWS at the 2022 UN General Assembly. New Zealand joined a statement delivered by Brazil at the GGE on LAWS⁴⁸⁶⁶ in 2025 stressing the “urgent need” to move forward to fulfill the GGE mandate to development a legal instrument to establish prohibitions and regulations on LAWS.

At the Responsible AI in the Military Domain Summit (REAIM 2023) in the Netherlands, New Zealand joined a call to ensure the responsible use of AI in the military domain⁴⁸⁶⁷ and endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁴⁸⁶⁸

AI Literacy

The AI literacy initiatives in New Zealand are focused primarily on the business and public sector. The AI Strategy calls for targeted training across all private sector companies and ministries to foster AI-ready public servants,⁴⁸⁶⁹ integrating AI comprehension into professional development pathways. In support, the Government Chief Digital Officer (GCDO) and the AI Expert Advisory Panel launched two capability programs.⁴⁸⁷⁰ The first, a three-part AI Masterclass series for senior leaders, aims to “improve the understanding of and use of AI within agencies” covering “core AI concepts and key decision-making considerations.” The second is the AI Foundational Development Programme for general public-service users, which will run for 5 weeks online. Materials will be published online.

New Zealand’s Ministry of Education does not have a dedicated AI Literacy program but proposed curriculum to begin in 2028 integrates related skills such as

systems and computational thinking, design, and computer science throughout the curriculum.⁴⁸⁷¹ Existing curriculum addresses many of these skills as well.⁴⁸⁷² The Ministry of Education has also provided guidance for schools on Generative AI.⁴⁸⁷³

Human Rights

Freedom House ranked New Zealand as Free with a score of 99/100 in the 2025 Freedom in the World report.⁴⁸⁷⁴ and noted that New Zealand has “a long record of free and fair elections and of guaranteeing political rights and civil liberties.”⁴⁸⁷⁵ The total consists of a score of 40/40 on political rights and a score of 59/60 on civil liberties. The country maintains strong protections, though issues such as discrimination against Māori, Pacific Islanders, and other minority groups persist, including disparities in education, employment, and the justice system. Concerns about foreign influence in politics remain. The Government acknowledges ongoing risks of discrimination against Māori, Pacific peoples and other minority communities. The 2025 AI policy framework explicitly incorporates Te Ao Māori perspectives and equity programs to address some of these issues.⁴⁸⁷⁶

The Bill of Rights Act of 1990 (NZBORA), the Human Rights Act of 1993 (HRA) and the Privacy Act of 2020 are the primary legislative instruments that recognize and safeguard human rights in New Zealand. The Preamble of the NZBORA describes its purpose as the affirmation and promotion of human rights and fundamental freedoms and the expression of New Zealand’s commitments to the International Convention on Civil and Political Rights. The NZBORA qualifies the exercise of rights through section 5 “reasonable limits prescribed by laws as can be demonstrably justified in a free and democratic society.” NZBORA is not supreme

⁴⁸⁷¹ Ministry of Education, *New Zealand Curriculum, NZC—Technology Phases 1–4* (2026), <https://newzealandcurriculum.tahurangi.education.govt.nz/new-zealand-curriculum-online/nzc-technology-phases-1-4-years-0-10/5637293836.p>

⁴⁸⁷² Ministry of Education, *New Zealand Curriculum—Technology* (2026), <https://newzealandcurriculum.tahurangi.education.govt.nz/the-new-zealand-curriculum---technology/5637209125.p?activeTab=tab:3>

⁴⁸⁷⁵ Ibid

⁴⁸⁷⁶ Digital Government NZ, *Māori, Pacific Peoples, Ethnic Communities and GenAI* (2025), <https://www.digital.govt.nz/standards-and-guidance/technology-and-architecture/artificial-intelligence/responsible-ai-guidance-for-the-public-service-genai/customer-experience/maori-pacific-and-ethnic-communities>

law and cannot be used by the Courts as a basis to strike down legislation.⁴⁸⁷⁷ A statutory meaning consistent with the rights protected in NZBORA is preferred, however a statute that has direct conflict with NZBORA will remain in force.⁴⁸⁷⁸ This situation has been criticized by the United Nations Human Rights Committee, which has called on New Zealand to strengthen the NZBORA.⁴⁸⁷⁹

The HRA protects people in New Zealand from discrimination on grounds such as ethnic or national origins, race, sex, political opinion, and others.⁴⁸⁸⁰ It applies to the public sector (with some limitations for national security) and the private sector in matters such as employment, education, provision of services, and membership of organizations.

New Zealand has endorsed the Universal Declaration of Human Rights and was one of the 48 nations that voted in favor of the UDHR in 1948 under the UN General Assembly Resolution No. A/RES/217(III)[A].⁴⁸⁸¹ In addition to the UDHR, New Zealand is a signatory to various international human rights treaties, including the following core instruments: the International Covenant on Civil and Political Rights (ICCPR); the International Covenant on Economic, Social and Cultural Rights (ICESCR); the International Convention on the Elimination of All Forms of Racial Discrimination (CERD); the Convention on the Elimination of All Forms of Discrimination against Women (CEDAW); the Convention on the Rights of the Child (CRC); the Convention Against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment (CAT); the Convention on the Rights of Persons with Disabilities (CRPD).⁴⁸⁸²

⁴⁸⁷⁷ The White Paper ‘A Bill of Rights for New Zealand’ (1985) proposed the enactment of a Bill of Rights that would have the power to strike down inconsistent legislation. This was not accepted by the Parliamentary Select Committee on Justice and Law Reform. See *Final Report of the Justice and Law Reform Select Committee “On a White Paper of a Bill of Rights for New Zealand”* (1998) AJHR 3

OECD AI Principles / G20 AI Guidelines

New Zealand endorsed the OECD AI Principles in May 2019 and recommitted to the AI Principles as updated in May 2024.⁴⁸⁸³

New Zealand joined the Global Partnership on AI (GPAI) in 2020 to promote “the responsible development and use of AI” in a manner consistent with human rights, fundamental freedoms, and democratic values.⁴⁸⁸⁴

The Office of the Minister of Science, Innovation, and Technology of New Zealand has promoted the OECD AI Principles as a key direction for responsible AI development.⁴⁸⁸⁵ The Principles are explicitly integrated into policy documents and guidance including the national AI strategy⁴⁸⁸⁶ and Responsible AI Guidance for the Public Service: GenAI.⁴⁸⁸⁷

Council of Europe AI Treaty

The Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law opened for signature by member and non-member states in September 2024.⁴⁸⁸⁸ New Zealand has not endorsed this first legally binding, international AI treaty.⁴⁸⁸⁹

UNESCO Recommendation on the Ethics of AI

New Zealand has endorsed the UNESCO Recommendation on the Ethics of AI.⁴⁸⁹⁰ New Zealand has not initiated the Readiness Assessment Methodology (RAM) to assess alignment with the ethical principles outlined in the Recommendation.⁴⁸⁹¹ New Zealand's policy developments and guidelines for responsible AI use in the public and private sectors reflect progress on implementing the UNESCO Recommendation.

Evaluation

New Zealand has a national AI strategy centering the OECD AI Principles⁴⁸⁹² and guidance on responsible and ethical adoption of AI aligned to a “light-touch, proportionate, and risk-based” regulatory framework.⁴⁸⁹³ The country ranks among the best in the world for civil liberties and political freedom, reflected in active public consultations and discussions with the Māori and other groups to design national policies. Greater protections toward algorithmic transparency through the Privacy Amendment, Algorithm Charter, and regarding facial recognition with the Biometric Processing Code⁴⁸⁹⁴ reflect a commitment to realizing the human-centered, rights-protecting principles and policy actions recommended by the OECD and the UNESCO Recommendation. Establishing an explicit right to contest automated decisions as protection against algorithmic bias and adding enforcement powers to AI oversight would ensure New Zealand citizens are protected from real existing harms caused by AI use and abuse.

Center for AI and Digital Policy

Nigeria

In 2025, Nigeria formally launched the National Artificial Intelligence Strategy, marking the country's first comprehensive framework for ethical and inclusive AI governance. Nigeria reinforced multilateral commitments by signing the Paris Charter on Artificial Intelligence in the Public Interest and continuing to advocate for a legally binding instrument on lethal autonomous weapons.

National AI Strategy

Nigeria is making notable strides in AI governance with the National AI Strategy, driven by the Federal Ministry of Communications, Innovation, and Digital Economy (FMCIDE), Nigeria's IT standards regulator. Nigeria launched its first Artificial Intelligence and Robotics Centre to advance skills and innovation in emerging technologies, including AI and IoT, in November 2020.⁴⁸⁹⁵ In August 2022, the National Information Technology Development Agency (NITDA) called for experts to contribute to a National AI Policy, leading to the establishment of a Volunteer Expert Group (VEG).⁴⁸⁹⁶ NITDA's Director General, Kashifu Inuwa, said the National Artificial Intelligence Policy (NAIP) would cover Education and Research; Finance; Health; Media and Telecommunications; Labor and Productivity; General and Special Issues (such as building safe and responsible AI and ensuring Nigerian culture and values are digitally visible); and Security.⁴⁸⁹⁷

Minister of Communications, Innovation and Digital Economy of Nigeria, Dr Bosun Tijani, launched a public call for the drafting of a National AI Strategy in August 2023, stating: "A National Strategy for Nigeria to responsibly steer the AI revolution towards achieving national goals around job creation, social inclusion, and sustainable development becomes imperative. With collaborative leadership, Nigeria seeks to pioneer ethical and inclusive AI innovation that improves welfare

Center for AI and Digital Policy

and expands opportunities for all its citizens.”⁴⁸⁹⁸ With that aim, the Minister held the first session on the National AI Strategy workshop with Nigerians across the globe on March 27, 2024. A second workshop ran April 15–18, 2024.⁴⁸⁹⁹ According to the Minister, the objective of the National AI Strategy was to build on the existing work done by the NITDA through an expanded co-creation approach including top AI researchers of Nigerian descent globally.⁴⁹⁰⁰

The final version was formally launched as official National Artificial Intelligence Strategy (NAIS) in September 2025. The vision is: “To be a global leader in AI, leveraging ethical and inclusive innovation, local talent, and strategic collaboration to drive sustainable development.” Three overarching strategic objectives underpin the vision: Economic Growth and Competitiveness, Social Development and Inclusion, and Technological Advancement and Leadership. The NAIS pursues these objectives through five core strategic pillars: Building Foundational AI Infrastructure; Building and Sustaining a World-class AI Ecosystem; Accelerating AI Adoption and Sector Transformation; Ensuring Responsible and Ethical AI Development and Deployment; Developing a Robust AI Governance Framework.⁴⁹⁰¹

The National AI Strategy reflects a commitment to fairness, accountability, and transparency by emphasizing inclusive AI development that considers social inclusion, ethical use, and respect for human rights. The Strategy also aligns with fundamental rights by aiming to promote inclusivity, diversity, and shared prosperity and to mitigate bias in AI applications.

Both houses in Nigeria’s national assembly have proposed bills to regulate artificial intelligence. A working paper in the House seeks to regulate the Development, Deployment, and Use of AI.⁴⁹⁰² The Senate introduced the National Artificial Intelligence Commission (Establishment) Bill (SB 731) in 2025 to propose

the establishment of a national AI governance oversight body. However, the bill stalled after a first reading in February 2025.⁴⁹⁰³

Regional AI Governance Collaboration

Nigeria hosted the Global Inclusivity and Artificial Intelligence: Africa (GIAA) Conference in Lagos, in September 2024.⁴⁹⁰⁴ The event brought together over 370 stakeholders to discuss inclusive AI development across Africa, further advancing Nigeria's engagement in AI initiatives as the country continues to develop the AI strategy and policies. The conference emphasized the need for AI development that benefits all communities, acknowledging Africa's diverse cultural landscape, including Nigeria's more than 300 ethnic groups and over 500 languages.

Nigeria announced that it was working with the United Arab Emirates on Solar Energy and Artificial Intelligence⁴⁹⁰⁵ after a meeting held in Nigeria between Nigeria's Minister of Science and Technology, and the Ambassador of the United Arab Emirates to Nigeria. The government announced that the National Agency for Science and Engineering Infrastructure would be responsible to develop AI in Nigeria.

Public Participation

The Nigerian government made efforts to involve the public in the development of the National Artificial Intelligence Policy (NAIP). This was evident in the NITDA August call for the contribution of stakeholders in the information technology sector to the development of the AI Policy and workshops held in March and April 2024.⁴⁹⁰⁶ Articles in the popular press⁴⁹⁰⁷ and social media posts⁴⁹⁰⁸ announcing the release of the draft National AI Strategy in August 2024 invited

feedback with links to the strategy document. The draft itself includes an email address to receive public feedback and input on the back cover.⁴⁹⁰⁹

The draft Data Protection Act also went through public consultation in 2021 before being enacted in 2023.⁴⁹¹⁰

Data Protection

Section 37 of the Nigerian Constitution provides for the right to privacy. Nigeria enacted the Nigeria Data Protection Act (NDPA) in 2023 to address data privacy issues in the digital age.⁴⁹¹¹ Currently, the National Data Protection Regulation (NDPR)⁴⁹¹² and Data Protection Act (NDPA) are in force. The NDPA takes precedence where the Act conflicts with the NDPR and the related Implementation Act from 2020.⁴⁹¹³

The Nigeria Data Protection Act 2023 (NDPA) was signed into law and became the applicable data protection law in Nigeria in July 2023.⁴⁹¹⁴ The NDPA 2023 establishes the Nigeria Data Protection Commission (NDPC) as the data protection authority in the country, replacing the National Data Protection Bureau. NDPC's independence is enshrined in art. 7. The NDPA 2023 applies to the processing of personal data of subjects in Nigeria. Compared to the NDPR 2019, the Act establishes a new data portability right for data subjects and requires processors and controllers to obtain authorization for, and justify processing of, "sensitive data" relating to religious or other beliefs, sexual orientation, health, race, ethnicity, political views, trades union membership, criminal records. The NDPA 2023 adds a requirement for data controllers to consult the Nigeria Data Protection Commission prior to processing personal data if the Data Privacy Impact Assessment performed signals high-risk potential of the operation. The NDPA 2023 also distinguishes between data processors and controllers of "major importance" and "not of major

Center for AI and Digital Policy

importance,” with the former required to formally register before the National Data Privacy Committee.⁴⁹¹⁵

The National Data Protection Commission has authority to levy sanctions for infringement. Possible sanctions include the greater of 10,000,000 nairas or 2% of the revenue of the preceding year for data controllers or data processors of major importance, or for data controllers or processors not of major importance, the great of 2,000,000 nairas and 2% of the revenue of the preceding year.

The Nigeria Data Protection Commission (NDPC) issued the General Application and Implementation Directive (GAID 2025) in March 2025.⁴⁹¹⁶ The Directive became fully effective in September 2025 after a six-month transition period.

The Nigeria Data Protection Bureau (NDPB), which represented Nigeria before the General Privacy Assembly (GPA) until the Nigeria Data Protection Commission joined the GPA Assembly as a full member in October 2023,⁴⁹¹⁷ did not a sponsor the 2018 Declaration on Ethics and Data Protection in Artificial Intelligence,⁴⁹¹⁸ 2020 Resolution on Accountability in the Development and Use of Artificial Intelligence,⁴⁹¹⁹ 2022 Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology,⁴⁹²⁰ or 2023 Resolution on Generative AI.⁴⁹²¹

Center for AI and Digital Policy

Algorithmic Transparency

Nigeria established the right to algorithmic transparency in art. 3.1 (7) (I) of the NDPR, which required data controllers to explain the existence of automated decision-making and the logic involved.⁴⁹²² These provisions are now superseded by the right to algorithmic transparency in the NDPA 2023.⁴⁹²³ The NDPA 2023 establishes that data subjects have the right not to be subject to decisions taken solely based on automated processing of personal data, if those decisions produce legal or similar significant effects on the subject. The data subject is entitled to obtain human intervention in the decision, express his or her point of view, and contest the decision. The data subject is also entitled to be informed of the existence of automated decision-making, its significance, and his or her rights in relation to the process prior to being subject to processing of personal data by the controllers.⁴⁹²⁴

Articles 42–44 of the General Application and Implementation Directive (GAID 2025)⁴⁹²⁵ establish a comprehensive framework for transparency and accountability in automated and emerging-technology systems. Article 42 sets out demonstrable-transparency requirements, including disclosure of algorithmic capabilities, risks, mitigation measures, and redress channels. Article 43 extends these obligations to artificial intelligence and other emerging technologies, mandating Data Protection Impact Assessments (DPIAs) that evaluate disparate outcomes and vulnerability indexes, sandbox testing, and continuous monitoring. Article 44 further requires alignment with international human-rights standards and cessation of technologies that pose undue risks to privacy or fundamental rights. Together, these provisions operationalize algorithmic transparency, fairness, and human oversight under the NDPA 2023.

Ministry of Communications, Innovation, and Digital Economy in collaboration with the National Information Technology Development Agency (NITDA), the tool is part of Nigeria's broader effort to digitally transform public administration. Service Wise GPT leverages generative AI to enhance citizen engagement by providing accurate, real-time responses to inquiries in sectors like healthcare, education, and immigration. Beyond public-facing functions, it is also designed to automate internal processes such as policy drafting, memo generation, and real-time policy research assistance. By reducing administrative workloads, improving compliance, and supporting more informed decision-making across ministries, Service Wise GPT aims to boost transparency, accountability, and productivity in Nigeria's public sector.

The NASS-AI project⁴⁹²⁷ uses AI to classify parliamentary bills from the national assembly to make them more accessible. Based on the principle of open data the system ensures that legislative-related documents are complete, accessible, and machine-processable, amongst other requirements.

Facial Recognition

Nigeria plans to use facial recognition technology as an essential part of its digital identification scheme. According to the Director-General of the Nigerian Identity Management Commission (NIMC), the agency has plans to capture the iris of prospective enrollees, and the agency already has the capacity for capturing the iris at its backend.⁴⁹²⁸

In 2022, Nigeria added facial recognition for voter verification. The Independent National Electoral Commission (INEC) used an Automated Biometric Identification System (ABIS) that deduplicated fingerprints and used facial recognition to verify voters before issuing permanent voter registration cards.⁴⁹²⁹ This was adopted in response to the issues identified with nullified registrations voters who were already registered and incomplete data. In 2023, the Federal Government indicated plans to install facial recognition technology at major airports across the federation.⁴⁹³⁰

Biometrics

The Nigerian government through the Independent National Electoral Commission set a plan to use biometrics (fingerprint and face) matching systems such as the Automatic Biometric Identification System and Biometric Voter Accountability System (BVAS) in the February 2023 presidential elections. This is despite the systems having invalidated around 2.78 million Nigerians.⁴⁹³¹ Despite these concerns, post-election analysis praised BVAS for significantly reducing electoral fraud.⁴⁹³²

In 2021 the failure of the BVAS system resulted in several votes deemed inconclusive during the governorship poll in Anambra State.⁴⁹³³ Elections for Ekiti State's governorship were held successfully with these systems. Reports from Oyo state showed that 42% of voter registrations were rendered invalid due to duplications.⁴⁹³⁴

The World Bank issued recommendations to the Nigerian government to invest in AI-enabled Geospatial data to support the response to the COVID-19 crisis and build back better.⁴⁹³⁵ Nigeria has multiple datasets, captured across multiple platforms such as Bank Verification Number (BVN), Voter's card, International passport, Road Safety, and National Identification Number (NIN). Reports suggest that the country loses up to US\$2 billion annually on biometric data collection duplication.⁴⁹³⁶

To address these inefficiencies and improve Nigeria's digital identity infrastructure, the World Bank provided \$45.5 million in 2024 to Nigeria's National Identity Management Commission as part of the Digital Identification for

Development (ID4D) project.⁴⁹³⁷ This funding, part of a larger \$430 million initiative, aims to upgrade biometric systems and increase the number of Nigerians enrolled in the NIN system.⁴⁹³⁸

Nigeria advanced new initiatives governing biometric data and identity systems in 2025. Under the General Application and Implementation Directive (GAID 2025),⁴⁹³⁹ biometric information, which is classified as sensitive personal data in the Nigeria Data Protection Act 2023,⁴⁹⁴⁰ is subject to Data Protection Impact Assessment (DPIA) for high-risk or large-scale processing. The National Population Commission confirmed that the forthcoming national census will include fingerprint, facial, and voice-recognition modalities to enhance verification.⁴⁹⁴¹ The National Identity Management Commission also announced plans to launch a multipurpose digital identity card with biometric authentication by October 2025.⁴⁹⁴² The Senate passed the National Identity Management Commission (Repeal and Enactment) Bill 2025 to consolidate oversight of biometric databases and seeks to make citizen enrollment in the national digital-ID system compulsory.⁴⁹⁴³

objective includes a statement that “AI’s energy and resource consumption warrants a specific focus on green and sustainable AI initiatives.” The Outcomes and strategies focus on “green AI” solutions and projects, such as those used to monitor and manage waste. However, the Strategy does not define what “green AI” would entail.

Lethal Autonomous Weapons

Nigeria, though not a State party to the Convention on Certain Conventional Weapons (CCW),⁴⁹⁴⁵ has actively participated in CCW meetings and supports a legally binding instrument on autonomous weapons. Nigeria endorsed both the 2024 Freetown Communiqué and the Vienna Conference’s call for urgent regulation,⁴⁹⁴⁶ while also contributing to a draft UN protocol proposing prohibitions on autonomous weapons systems without meaningful human control.⁴⁹⁴⁷

The Humanity at the Crossroads conference in Vienna in April 2024, brought together over 1,000 representatives from 144 nations, including Nigeria,⁴⁹⁴⁸ to discuss the urgent regulatory needs for LAWS.⁴⁹⁴⁹ Key concerns included maintaining human control, accountability, and adherence to international law, with LAWS posing serious risks to global security and human rights. The conference’s consensus on prohibiting certain AWS and regulating others underlined the closing window to prevent an autonomous arms race. For states like Nigeria, active participation and contributions signify a commitment to shaping international norms, protecting human dignity, and ensuring regional stability in the face of emerging AI-driven military technologies.⁴⁹⁵⁰

In 2021, Nigeria issued a joint statement with ten other states at the CCW Group of Governmental Experts on Lethal Autonomous Weapons Systems (GGE on LAWS) meeting, calling to “adopt a legally binding instrument to ensure the prohibition of autonomous weapons systems.”⁴⁹⁵¹

At the 78th UN General Assembly First Committee in 2023, Nigeria voted in favor⁴⁹⁵² of resolution L.56⁴⁹⁵³ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. Nigeria contributed a statement to the report.⁴⁹⁵⁴

Human Rights

Nigeria is party to the Universal Declaration of Human Rights (UDHR), and a member of the African Union (AU) and has ratified the African Charter on Human and People’s Rights.⁴⁹⁵⁵ The rights and freedoms in the treaties signed have been envisaged in Chapter IV of the Nigerian Constitution.⁴⁹⁵⁶ In 2006 the government of Nigeria developed a National Action Plan for the Promotion and Protection of Human Rights (NAP) which was a response to the Recommendation of the Vienna Declaration and Program Action, adopted at the World Conference on Human Rights. NAP was an integrated and systematic national strategy to help realize the advancement of human rights in the country. There have been considerable improvements in the enforcement, promotion, and protection of human rights and freedoms in the country since the transition to democratic rule in 1999.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Freedom House ranks Nigeria as “Partly Free” with a rating of 44/100 in the 2025 Freedom in the World Report.⁴⁹⁵⁷ The country’s security challenges, extra-judicial killings, torture, and abuses by military of police forces, along with harassment and arrests of media over political issues undermine political rights. Further, civil liberties are undermined by religious and ethnic bias while women and LGBT+ people face discrimination.

In 2016, Nigeria joined the United States, Canada, Australia, the United Kingdom, and some European Union states to sponsor a United Nations Resolution that affirms that rights that apply offline must also apply online.⁴⁹⁵⁸

Nigeria’s involvement in the UN’s call for input on digital technologies in the administration of justice through its National Human Rights Commission highlighted the importance of addressing the protection of human-rights and promotion of equitable legal outcomes when adopting digital technologies in the justice system⁴⁹⁵⁹

AI Safety Summit

In November 2023, Nigeria participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁴⁹⁶⁰ Nigeria thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.” Nigeria continued its engagement in international AI-safety cooperation beyond the 2023 Bletchley Summit. In May 2024, Nigeria participated in the second Global AI Safety Summit held in Seoul and

joined other governments in endorsing the Seoul Declaration.⁴⁹⁶¹ In February 2025, Nigeria also took part in the third edition of the summit, the Paris AI Action Summit, signing on to commitments aimed at strengthening global coordination on AI risks, improving information-integrity protections, and promoting transparency in advanced AI systems.⁴⁹⁶²

OECD / G20 Principles

Nigeria is not a member of the OECD and has not endorsed the OECD AI Principles.⁴⁹⁶³ Five AI initiatives from Nigeria are mentioned in the OECD AI Policy Navigator.⁴⁹⁶⁴ The National AI Strategy has not been submitted. The National AI Strategy’s vision to leverage “ethical and inclusive innovation, local talent, and strategic collaboration to drive sustainable development”⁴⁹⁶⁵ aligns with the OECD principle for human-centered, sustainable AI development.

Council of Europe AI Treaty

Nigeria has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁴⁹⁶⁶

UNESCO Recommendation on AI Ethics

Nigeria is a member of UNESCO and endorsed the UNESCO Recommendation on the Ethics of AI.⁴⁹⁶⁷ Nigeria also participates in the African Forum for Ethics and Governance of Artificial Intelligence (AFEGAI), which was created in 2019 following a recommendation by UNESCO and African Member States to establish an African Forum of Association of Artificial Intelligence (AI).⁴⁹⁶⁸ AFEGAI brings together AI constituencies in Africa to support the ethical development of Artificial Intelligence. AFEGAI coordinates AI Governance Forums in Africa.⁴⁹⁶⁹

Nigeria is also in the process of completing UNESCO's Readiness Assessment Methodology (RAM),⁴⁹⁷⁰ a key step in aligning with the Recommendation on the Ethics of AI. The RAM aims to evaluate the country's readiness in terms of ethical AI development, governance frameworks, and regulatory measures.

Evaluation

Nigeria has developed a national AI strategy that included stakeholder consultations. Still, Nigeria has not yet established an institutionalized or continuous mechanism for broad public engagement in AI policymaking.⁴⁹⁷¹ The independent data protection, which officially joined the Global Data Privacy assembly as a full member, and the right to algorithmic transparency mark concrete progress toward establishing a robust legal framework to protect citizens from AI risks.

Nigeria is a signatory of the UDHR and the African Union Charter but is only "partially free" with a record of human rights protection that could be improved. Fulfilling the commitment taken by endorsing the UNESCO Recommendation on the Ethics of AI could provide a perfect opportunity to accomplish the reform necessary at national level to turn trustworthy AI into reality for the benefit of all. Beginning the RAM process is a step in the right direction.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Norway

In 2025, Norway drafted an AI Act to implement the EU AI Act. The National data protection authority called for a prohibition on remote biometric identification as part of the new law.

National AI Strategy

The Norwegian Government presented the national artificial intelligence (AI) strategy in January 2020.⁴⁹⁷² The strategy outlines policy actions for the coming years to maximize the opportunities that AI can bring for Norwegian individuals, businesses and industry, and the public sector.⁴⁹⁷³ The national AI strategy includes policy initiatives such as:

- Expanding the offer of education programs and workplace trainings in the AI field to create a solid basis of digital skills and capabilities
- Strengthening Norwegian research in AI
- Enhancing the innovation capacity in AI in both the private and public sector
- Outlining ethical principles for AI to allow fair, reliable and trustworthy AI-related developments
- Establishing digitalization-friendly regulations as to define the legislative framework in which AI developments take place
- Constructing a strong data infrastructure, ensuring open data and data sharing across sectors and business areas, and ensuring the availability of language data resources through the Norwegian language bank at the National library
- Deploying a telecommunication infrastructure that provides high-capacity connectivity and computing power and that ensures security in AI-based systems.

In a section dedicated to ethics, the strategy highlights the adoption of the EU ethics guidelines for trustworthy AI⁴⁹⁷⁴ and the OECD AI principles.

Norway developed its strategy after signing a Declaration of cooperation on Artificial Intelligence with 24 other European countries in May 2018.⁴⁹⁷⁵ Several

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

other initiatives in 2018 paved the way for the drafting of the national strategy. For example, the Norwegian Data Protection Authority (Datatilsynet) published a report on artificial intelligence and privacy.⁴⁹⁷⁶ Another report, Digital21, focused on national collaboration and encouraged engagement from industry, academia and government.⁴⁹⁷⁷ The Norwegian Board of Technology also published a report, Artificial Intelligence: Opportunities, Challenges and a Plan for Norway.⁴⁹⁷⁸

The national AI strategy emphasizes that implementation and progress will be closely reviewed and, if necessary, changed with further AI policies. The Datatilsynet released the Strategy for Working with Artificial Intelligence in March 2024, aligned with the 2024–2026 goals. The strategy ensures a coordinated and unified approach to AI-related inquiries and activities to improve supervision in the AI area as well as the authority's use of AI and other IT tools to improve efficiency and quality in the Datatilsynet's work.⁴⁹⁷⁹

Norway established six new centers in 2025 to provide evidence-based research to inform Norway's regulatory framework, including implementation of the EU AI Act and alignment with international standards for responsible AI development.⁴⁹⁸⁰ Research will focus on areas ranging from trustworthy AI and human-AI collaboration to robotics and ethical decision-making across societal impact, technology, and innovation.⁴⁹⁸¹

Nordic-Baltic and Nordic Cooperation on AI

As for the regional landscape, the Norwegian Minister for digitalization signed the declaration on AI in the Nordic-Baltic region, establishing a collaborative framework on “developing ethical and transparent guidelines, standards, principles and values to guide when and how AI applications should be used” and “on the objective that infrastructure, hardware, software and data, all of which are central to

the use of AI, are based on standards, enabling interoperability, privacy, security, trust, good usability, and portability.”⁴⁹⁸²

The ministerial declaration Digital North 2.0⁴⁹⁸³ builds on the common priorities of the Nordic-Baltic countries, and follows the previous ministerial declaration, Digital North 2017-2020. “In order to promote work with digitalisation, co-ordinate efforts, and follow up on the goals of the declaration, a council of ministers for digitalisation (MR-DIGITAL) was established in 2017. The aim is to promote development in three areas: (1) Increase mobility and integration in the Nordic and Baltic region by building a common area for cross-border digital services; (2) Promote green economic growth and development in the Nordic-Baltic region through data-driven innovation and a fair data economy for efficient sharing and re-use of data; and (3) Promote Nordic-Baltic leadership in the EU/EEA and globally in a sustainable and inclusive digital transformation of our societies.”⁴⁹⁸⁴

The Nordic and Baltic ministers for digitalization released another joint statement in November 2021, announcing a focus on digital inclusion, striving to implement measures to make digital services more accessible to all Norwegian inhabitants and ensuring that those who do not possess the necessary level of skills get the opportunity to acquire them.⁴⁹⁸⁵

The Nordic and Baltic ministers for digitalization issued a common statement in September 2022 on the importance of cooperation on digital security in the Nordic-Baltic region following the COVID-19 pandemic and the war in Ukraine. In their common statement, the ministers stressed that this “rapid transformation has challenged everyone to adapt to new, digital ways of doing business, learning and accessing public authorities.” The ministers declared that they “have committed to ensuring that our region maintains its position as a leader in digitalisation, and that everyone in the region benefit from digitalisation regardless of age, wealth, education or level of digital skills. One important factor that helps ensure a strong level of digitalisation in the region is the trust citizens put in digital services from the public sector – be it at regional, national or local level. To keep up this high level of trust, we need to continue our efforts to make our digital public services human centric and accessible. [...] Robust and secure digital services, safeguarding users' privacy and

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

ensuring that personal data are stored and processed in a trustworthy way, are crucial to the citizens' sustained trust in digital services.”⁴⁹⁸⁶

As part of its action plan for Vision 2030 (2021–2024), the Nordic Council of Ministers identified innovation, digital integration, the safe use of artificial intelligence, data development and open data, education and digitalization as key objectives.⁴⁹⁸⁷ The Nordic Council of Ministers also emphasizes the involvement of civil society in efforts relating to our vision for 2030 thanks to “a Nordic civil society network and public consultations.”⁴⁹⁸⁸ Nordic Data Protection Authorities signed a joint declaration addressing current data protection issues and emphasized that national legislation must ensure responsible AI and a legal basis to process personal data in 2024, signaling the Nordic DPAs’ commitment to strengthening their cooperation moving forward.⁴⁹⁸⁹

Public Participation

The Norwegian Ministry of Local Government and Modernization published the National Strategy for Artificial Intelligence in 2020,⁴⁹⁹⁰ following the Minister of Digitalization’s listening sessions across Norway through 2019. Suggestions from diverse communities in the listening sessions informed the national strategy. Additionally, close to 50 businesses and government agencies provided comments through written statements.

The Datatilsynet and the Norwegian Technology Council conducted a public survey about views on AI in 2024.⁴⁹⁹¹ The survey results informed a draft version of the Act on Artificial Intelligence (AI Act) submitted for public consultation by the

Center for AI and Digital Policy

Ministry of Digitalisation and Public Administration in June 2025.⁴⁹⁹² The proposed law will implement the EU AI Act in Norway.

Norway has worked to strengthen national funding for research and innovation in artificial intelligence, and to substantially increase their research collaborations. With the Norwegian Artificial Intelligence Research Consortium (NORA.ai), Norway has taken important steps to support the European ambition of increased cross-border co-operation in AI research.⁴⁹⁹³

Data Protection

The European Economic Area (EEA) Agreement is an international agreement which enables three European Free Trade Area (EFTA) States, including Norway, to participate in the EU Single Market. All relevant EU legislation in the field of the Single Market is integrated into the EEA Agreement so that it applies throughout the whole EEA. The GDPR was incorporated in the EEA Agreement by a 2018 Joint Committee Decision. The new Norwegian Personal Data Act (PDA) implements the GDPR and became effective as of July 2018.⁴⁹⁹⁴ Norway also updated several sector-specific regulations, such as in the healthcare sector, to ensure compliance with the GDPR.

Norway is also a member of the Council of Europe and ratified the Convention 108 for the protection of individuals with regard to the processing of personal data. The country has not ratified the modernized version (108+) as of 2025 but agreed to apply the protocol provisionally.⁴⁹⁹⁵

The Norwegian Data Inspectorate (*Datatilsynet*) is the national supervisory authority charged with enforcing the GDPR in Norway. The Datatilsynet is a member of the European Data Protection Board (EDPB), though the country has no voting rights or the right to be elected chair or vice-chair for GDPR-related matters.⁴⁹⁹⁶

Center for AI and Digital Policy

The Datatilsynet is a member of the Global Privacy Assembly (GPA) since 2002 and co-sponsored the 2020 GPA Resolution on AI Accountability⁴⁹⁹⁷ and 2022 GPA Resolution on Facial Recognition Technology.⁴⁹⁹⁸ The Datatilsynet did not endorse the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence⁴⁹⁹⁹ or the 2023 GPA Resolution on Generative AI.⁵⁰⁰⁰

In June 2018, the Data Inspectorate released a report on AI and privacy. The report showed how imperative further knowledge about the privacy implications of artificial intelligence is, “not only in order to safeguard the right to privacy of the individual, but also to meet the requirements of society at large.”⁵⁰⁰¹ The Datatilsynet offered greater technical detail describing artificial intelligence, including the black box, while also taking a closer look at four relevant AI challenges associated with the data protection principles enshrined in the GDPR: fairness and discrimination, purpose limitation, data minimization, and transparency and the right to information. The report brings awareness to the ethical and privacy consequences of AI systems and the need for deployed systems to respect privacy by design and meet the legislative requirements.

The Datatilsynet has been very active in both enforcement and publication of guidelines on a wide range of significant data protection concerns, including CCTV surveillance and codes of conduct. The data protection authority has made a list of processing activities likely to pose a significant risk to data subjects’ rights and as such always necessitate a data protection impact assessment.⁵⁰⁰² These include: processing of biometric data for identification purposes on a large scale; collecting

and combining personal data from third parties in order to decide whether the data subject shall be offered, continue to receive, or shall be denied a product, service or offer; monitoring employees' internet activity, electronic communication or camera surveillance for the purposes of employee monitoring; systematic monitoring, including camera surveillance, on a large scale, in areas accessible by the public.

Following a data protection impact assessment of Facebook, the Data Inspectorate announced that it will no longer communicate via the social media network. Datatilsynet Director-General Bjorn Erik Thon noted, "We believe the risks to the users' rights and freedoms associated with the processing of personal data through a Page on Facebook are too high."⁵⁰⁰³ This is not the first time the Data Inspectorate opposed Facebook. Back to 2012, the Datatilsynet raised important concerns about Facebook's facial recognition tool. Bjorn Erik Thon stated that "It's a very powerful tool Facebook has and it's not yet clear how it all really works," and "They have pictures of hundreds of millions of people. What material Facebook has in its databases is something we need to discuss with them."⁵⁰⁰⁴

In December 2021, the Datatilsynet issued its highest fine at the time—65 million NOK (around 6.5 million Euros)—against Grindr for failing to comply with the consent requirements under the GDPR.⁵⁰⁰⁵ Grindr appealed the fine and the Norwegian Data Protection Authority will assess the relevant appeal and consider whether there are grounds to rescind or alter the decision. By application of the Norwegian Public Administration Act, the Norwegian Consumer Council will also issue an opinion. If the decision is not rescinded/altered, the case may be assessed by the Privacy Appeals Board.⁵⁰⁰⁶

Algorithmic Transparency

Although it has not yet ratified the Protocol amending the Convention 108 which provides for algorithmic transparency, Norway is subject to the PDA, implementing the GDPR. Norwegians have a general right to obtain access to information about automated decision-making and to the factors and logic of an

algorithm and to contest automated decisions.⁵⁰⁰⁷ The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems specifically emphasizes requirements on transparency, accountability, and effective remedies.⁵⁰⁰⁸

Data Scraping

The Datatilsynet and international data protection and privacy counterparts released a joint statement laying out expectations for industry related to data scraping and privacy.⁵⁰⁰⁹ An initial statement in August 2023 established that “[social media companies] and other websites are responsible for protecting personal information from unlawful scraping.”⁵⁰¹⁰ The follow-up, which incorporates feedback from engagement with companies such as Alphabet (YouTube), X Corp (formerly Twitter), and Meta Platforms (Facebook, Instagram, WhatsApp), adds that organizations must “comply with privacy and data protection laws when using personal information, including from their own platforms, to develop AI large language models”; must regularly review and update privacy protection measures to keep pace with technological advances; and ensure that permissible data scraping, such as that for research, “is done lawfully and following strict contractual terms.”⁵⁰¹¹

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The draft Artificial Intelligence Act reinforces accountability for data collection and AI training practices to address this problem by mandating that AI developers maintain lawful bases along with appropriate documentation when using scraped data.⁵⁰¹²

Facial Recognition

The Norwegian Consumer Council (*Forbrukerrådet*) urged the Government (*Regjeringen*) to “take a more active role to ensure Norwegian consumers’ privacy and turn words into action” in September 2022.⁵⁰¹³ Drawing on a report from the Privacy Commission, the Consumer Council noted that the use of remote biometric identification, including facial recognition, puts great pressure on privacy.⁵⁰¹⁴ The Datatilsynet formally proposed a nationwide ban on remote biometric identification in 2025, placing high regard on human rights and privacy.⁵⁰¹⁵ The initiative complements earlier requests from the Consumer Council and anticipates a rights-protection framework in Norway’s forthcoming AI Act.

Regulatory Sandbox

Pursuant to the national AI strategy, the Datatilsynet has created a regulatory sandbox for responsible AI. The goal is to promote the development of innovative artificial intelligence solutions that, from a data protection perspective, are both ethical and responsible. The sandbox provides free guidance to a handful of companies, of varying types and sizes, across different sectors, selected through regular calls for application issued by the Data Inspectorate, in exchange for full openness about the assessments that are made.⁵⁰¹⁶ In the fifth round of the regulatory

sandbox, generative AI emerged as a common theme for projects in the sandbox, offering potential for valuable insights across the projects.⁵⁰¹⁷

The proposed Norwegian state budget for 2023 funded the regulatory sandbox as a permanent initiative, not as a temporary pilot project as it was the previous two years.⁵⁰¹⁸ The government launched KI-Norge, a national coordination hub under the Norwegian Digitalisation Agency (Digdir) to complement the Datatilsynet sandbox.⁵⁰¹⁹ The platform aims to strengthen oversight capabilities by supporting regulators and developers through testing environments, cross-stakeholder collaboration, and guidance tools.

Environmental Impact of AI

The Norwegian Ministry of Research and Education has formal collaboration agreements with the US Department of Energy to address AI challenges in climate, energy, and health through joint research projects, student exchanges, and a commitment to ethical AI.⁵⁰²⁰

Lethal Autonomous Weapons

Norway has regularly participated in the Convention on Certain Conventional Weapons meetings.⁵⁰²¹ The ethics committee of the Norwegian Government Pension Fund Global⁵⁰²² recommended in June 2020 that the Fund add lethal autonomous

weapons systems to the exclusion list of weapons that it will not invest in.⁵⁰²³ Norway's parliament voted in favor of a proposal to add new criteria to the fund's policy, following endorsement by the Ministry of Finance in 2021. The proposal was aimed at breaking ties the fund may have with companies that sell weapons to parties that use them to violate international humanitarian law.⁵⁰²⁴

Norway's Government Pension Fund Global (GPF) strengthened its ethical guidelines in 2023 by excluding companies linked to military sales that contravene international humanitarian law. This exclusion policy aims to prevent investments in companies that sell weapons used in ways that violate ethical and humanitarian standards.⁵⁰²⁵

In 2022, Norway and 69 other countries signed a UN statement calling for humans to stay in control of AI weapons. The countries called for clear limits and human oversight for military decisions.⁵⁰²⁶ The statement details a two-tier approach where States should commit to (1) outlaw fully autonomous lethal weapons systems operating completely outside human control and a responsible chain of command, and (2) regulate other lethal weapons systems featuring autonomy in order to ensure compliance with the rules and principles of international humanitarian law by preserving human responsibility and accountability through appropriate human control and risk mitigation measures.

Norway reiterated this stance in 2024 by backing new global rules for AI weapons. The proposal would ban fully autonomous weapons and require human control over other military AI systems.⁵⁰²⁷

Center for AI and Digital Policy

Norway endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain at the REAIM 2023 summit hosted by the Netherlands.⁵⁰²⁸ States stressed that autonomous weapons should be “employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” Norway also participated in an endorsed the outcomes statement for the REAIM 2024 summit. The Blueprint for Action operationalized the principles for the 2023 REAIM call into a series of action steps for countries to collaborate on a legal instrument on AI in the military.⁵⁰²⁹ Norway reaffirmed this stance at the REAIM 2025 conference, emphasizing continued human oversight and accountability in the military use of AI systems.⁵⁰³⁰

AI Literacy

Norway’s National Strategy for Artificial Intelligence noted government intention to give digital skills and literacy greater prominence in primary and secondary education.⁵⁰³¹ The government vowed to make Elements of AI, a series of free online courses developed by Finnish and Norwegian companies with the University of Helsinki, available in Norwegian in 2020. The National Digitalisation Strategy includes the goal for 95% of the population to have basic digital skills “and everyone should be offered the opportunity to develop such skills through national curriculum, workforce training, and opportunities through institutions such as libraries.”⁵⁰³²

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Human Rights

Norway is a signatory to many international human rights treaties and conventions, among which the Universal Declaration of Human Rights and the Council of Europe's European Convention on Human Rights.⁵⁰³³ Norway legislators passed the Human Rights Act in 2019, allowing five human rights conventions to override domestic legislation in times of conflict. The following conventions have this special designation: the European Convention on Human Rights, the International Covenant on Civil and Political Rights, the International Covenant on Economic, Social and Cultural Rights, the Convention on the Elimination of All Forms of Discrimination Against Women, and the Convention on the Rights of Children.

Freedom House ranks Norway among the world's most democratic and "Free" countries in the 2025 Freedom in the World report with a score of 99 out of 100 for its strong civil rights and transparent government.⁵⁰³⁴

Norway values diversity in AI by prioritizing the development of language technology systems that support communications in Norwegian, Sámi, and other dialects.⁵⁰³⁵ The aim is to protect the rights of the Sámi people, a Finno-Ugric-speaking people inhabiting the region of Sápmi, of which Norway is part. This focus on the Sámi language is also included in the Norwegian National AI Strategy, in line with the UNESCO recommendation to increase the accessibility of AI technologies through multi-lingual delivery.

In a 2020 recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers clarified that their commitment to the Convention for the Protection of Human Rights and Fundamental Freedoms requires that "member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, interdependent and interrelated, with the intention to produce positive outcomes and preventing or minimising possible adverse effects."⁵⁰³⁶

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

OECD / G20 AI Principles

Norway is a member of the OECD and endorsed the OECD AI Principles in May 2019.⁵⁰³⁷ The country reaffirmed this commitment in 2024 by aligning its AI initiatives with updated OECD guidelines, which now emphasize risk management, data privacy, and AI accountability.⁵⁰³⁸ The national AI strategy reflects aligns with the OECD principles including fairness, accountability, transparency, and trustworthiness in AI development with a focus on data privacy and integrity.⁵⁰³⁹

Norway has taken steps to implement the OECD AI principles through initiatives such as norge.no, a public platform providing a centralized guide for accessing public services.⁵⁰⁴⁰ The site includes open data from previous versions of the site via the National Data Catalog, which offers an overview of datasets, concepts, APIs, and models accessible to both public and private sectors.⁵⁰⁴¹ The project was established by the Brønnøysund Register Centre and the Norwegian Digitalization Agency.

In September 2022, Norwegian Research Council announced a 10-year financial support for Integreat, a purely AI focused Center of Excellence (CoE) that will offer groundbreaking research and develop theories, methods, models, and algorithms from a sociological perspective that integrate general and domain-specific knowledge with data, laying the foundations of the next generation of machine learning. This initiative supports OECD's principle of shaping an enabling policy environment for AI and corresponds to the policy goal identified in the Norway's AI strategy to strengthen research in AI and enhance the innovation capacity in AI in both the private and public sector.⁵⁰⁴²

and the Rule of Law.⁵⁰⁴³ Norway signed the Council of Europe AI Treaty,⁵⁰⁴⁴ the first international legally binding agreement on AI, on September 5, 2024.⁵⁰⁴⁵ Norway pledged to apply the treaty to cover AI's lifecycle and risks for both public and private sectors.

UNESCO Recommendation on AI Ethics

Norway has endorsed the UNESCO Recommendations on AI, the first ever global agreement on the ethics of AI.⁵⁰⁴⁶ Norway has not initiated the UNESCO Readiness Assessment Methodology (RAM).⁵⁰⁴⁷ Norway's digitalization and AI strategies provide ambitious goals to promote digital and AI literacy across the population.⁵⁰⁴⁸ The national AI strategy's attention to diverse language resources for training systems reflects a similar commitment to ethical AI.⁵⁰⁴⁹

Evaluation

Norway launched a national AI strategy in 2020, aiming to foster responsible and transparent AI aligned with ethical principles. The strategy includes principles including fairness, transparency, accountability, and a commitment to protect civil rights in digital spaces. Norway integrated the OECD AI Principles into the AI policy framework, supporting transparency, accountability, and human rights protections. Norway's oversight framework includes the Data Inspectorate (*Datatilsynet*) for data protection, the Consumer Council for consumer rights in digital platforms, and the Privacy Commission, which recently highlighted risks related to biometric and facial

recognition technologies. As a European Free Trade Associate state (EFTA) in the European Economic Area (EEA), Norway will be required to implement the EU AI Act by 2026. The proposed AI Act allocates resources for oversight to enforce the Act's provisions on high-risk AI and transparency.

Although Norway ranks high in the protection of civil liberties, Norway has yet to ratify the updated Council of Europe Convention 108+, which would enhance data protection and algorithmic transparency rights, strengthening protections for digital privacy. Following Norway's endorsement of the UNESCO Recommendation on the Ethics of AI, the government has engaged with UNESCO's Global AI Ethics Observatory, which provides frameworks for implementing ethical AI at national levels. Norway has also signed the Council of Europe AI Treaty and specified that it will apply to private as well as public AI uses. However, further action will be required to translate these recommendations and pledges into practice.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Oman

In 2025, Oman released an updated National AI Policy, providing a governance framework for the safe and ethical use of AI systems. Oman also progressed toward implementing the UNESCO Recommendation on AI Ethics by completing the Readiness Assessment Methodology (RAM).

National AI Strategy

Oman's digital transformation began under the framework of Oman Vision 2040, announced in 2021. The Vision positioned advanced and forward-looking technologies as core drivers of national progress and economic diversification.⁵⁰⁵⁰ The Sultanate of Oman Ministry of Transport, Communications and Information Technology subsequently published three programs centered on AI related to future opportunities and AI applications,⁵⁰⁵¹ an executive program,⁵⁰⁵² and the National Program for AI and Advanced digital Technologies.⁵⁰⁵³ The National Program includes pillars dedicated to the adoption and localization of AI as well as a pillar centered on effective governance with a human-centered vision. This pillar focuses on establishing the necessary legislative and regulatory frameworks to ensure the safe and ethical use of AI technologies, protecting data privacy, and fostering trust in advanced digital technologies.

Several pilot programs and policy initiatives were introduced to promote the safe and efficient adoption of AI across sectors such as healthcare, environment, agriculture, and smart cities in 2024.⁵⁰⁵⁴ Notable accomplishments in recent years include the establishment of a National AI Committee and launch of several strategic initiatives like Engineer it with AI, National Open Data Portal, Oman GPT, Oman AI Studio, and AI Economics Initiative.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

General Policy for the Safe and Ethical Use of AI Systems

The General Policy for the Safe and Ethical Use of AI Systems,⁵⁰⁵⁵ also known as the National AI Policy 2025⁵⁰⁵⁶ and AI Strategy 2025,⁵⁰⁵⁷ outlines a national framework to govern the use and development of AI systems in the Sultanate of Oman. The policy combines technical regulations and ethical principles to ensure the responsible and safe use of AI systems. The foundational, ethical principles include privacy, equality, justice, and the preservation of human dignity. The introduction explicitly references alignment with Islamic principles, underscoring the commitment to preserving local cultural and ethical characteristics. The principles align with three ethical standards for the use of AI systems: (1) humanity and society; (2) inclusivity and justice; and (3) responsibility and accountability.

The framework aims to enhance public trust in AI systems and contribute to supporting innovation and achieving competitiveness at the regional and international levels. The policy emphasizes a flexible regulatory environment and aligns with the National Program focus on strengthening the capacity of both the public and private sectors to adopt and implement ethical safeguards in AI development and deployment.

The National AI Policy 2025 builds on an earlier version of the document that includes an ethical charter as well as specific provisions for entities using and developing AI technologies.⁵⁰⁵⁸ The Ministry of Transport, Communications and Information Technology monitors compliance across state agencies while regulatory bodies oversee compliance in other sectors. The policy cites other relevant publications such as the Personal Data Protection Law, demonstrating the integration across sectors and other bodies.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Public Participation

Oman has implemented several initiatives across the e-government portal, Omanuna, to increase effective communication with citizens and include them in the policymaking process, based on government recognition of “the importance of involving the public in decision-making, planning, and the implementation and evaluation of policies and initiatives, effective communication with citizens has become a top priority. In this context, utilising digital tools to enhance community participation is more vital than ever.”⁵⁰⁵⁹

Oman Vision 2040, which officially launched Oman’s digital development projects, received input from over 41,000 participants from government and private sectors, civil society institutions, municipal councils, and academic institutions.⁵⁰⁶⁰ To ensure diverse perspectives were represented, organizers sought out women, youth, people with special needs, and expatriates during this process.⁵⁰⁶¹ Moreover, during the drafting of the national AI policy, the Sultanate of Oman Ministry of Transport, Communications and Information Technology launched a public consultation to encourage the public to get involved in shaping the policy.⁵⁰⁶²

Data Protection

Oman enacted its Personal Data Protection Law (PDPL) in 2022.⁵⁰⁶³ The PDPL came into force on February 13, 2023, introducing mandatory safeguards on the collection, analysis, and inference based on personal data. The PDPL embeds core privacy-by-design principles relevant to AI, including lawful processing, purpose limitation, data minimization, and accountability. The law also clearly distinguishes between data controllers (i.e., the individual/entity who determines the purpose and means of the processing of personal data and carries out this processing himself or entrusts it to someone else) and data processors (i.e., the individual/entity who processes personal data on behalf of the controller). Data subjects are granted enforceable rights such as access, erasure, consent withdrawal, and breach notification. Oversight is entrusted to the Ministry of Transport, Communications

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

and Information Technology, which may impose fines ranging from OMR 500 to OMR 500,000, depending on the severity of violations.

The Ministry of Transport, Communications and Information Technology, in its dual role as policymaker and regulatory authority, issued the Executive Regulations of the Personal Data Protection Law (PDPL Executive Regulations), which specify that consent must be explicit, written, and freely given by the data subject.⁵⁰⁶⁴ The PDPL Executive Regulations also require the controller to obtain authorization from the Ministry of Transport, Communications and Information Technology before handling personal data. The Regulations further mandates technical and organizational safeguards, including logging of data processing activities, appointment of a Data Protection Officer, breach notification protocols, and strict conditions for cross-border data transfers.

The Ministry of Transport, Communications and Information Technology is not a member of the Global Privacy Assembly so is ineligible to endorse the relevant resolutions.⁵⁰⁶⁵

Algorithmic Transparency

The principles of algorithmic transparency and contestability are not established as explicit rights under Omani laws. The rights are, however, indirectly and partially addressed through the Personal Data Protection Law. According to the Personal Data Protection Law (PDPL)⁵⁰⁶⁶ organizations must inform individuals about the purpose of data processing and obtain their explicit consent, and the data subject has the right to access the data, rectify it, transport it, and update it. However, the PDPL does not explicitly grant individuals the right to receive meaningful information about the logic involved in an automated decision. While citizens can object to the decision, PDPL does not legally compel the organization to explain how an algorithm reached a conclusion. The PDPL also does not contain an explicit probation against being subject to a decision with legal or significant effects that is based solely on automated processing.

The National AI Policy 2025 outlines the importance of respecting the right of individuals to human intervention in decisions that directly affect their lives or

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

rights.⁵⁰⁶⁷ The policy further requires entities using AI to ensure that systems are transparent in their decision-making mechanisms. These provisions are yet to be enacted as law.

AI Surveillance

In an effort to reduce road accidents and improve response times, the Royal Oman Police (ROP) implemented a comprehensive monitoring network composed of AI-supported cameras throughout the nation.⁵⁰⁶⁸ Beyond detecting common violations, the ROP confirms that AI is also being used to track repeat offenses and offenders to uncover behavioral insights and promote targeted enforcement. Although ROP's stance on the use of AI to monitor traffic violations is clear, there is no concrete evidence indicating whether these enforcement mechanisms will be expanded to cover other offenses.

EdTech

Oman's Ministry of Education (MOE) deployed 4,000 Microsoft 365 Copilot licenses across the nation's urban and rural schools to ensure equitable access to AI-powered tools.⁵⁰⁶⁹ Additionally, every student from fifth grade onwards has received access to Oman's local AI tutor Mudarris, a learning companion that adapts to each student's learning pace and style, provides 24/7 support in Arabic and English, and offers emotional support and motivation.⁵⁰⁷⁰ So far, the initiative has received positive feedback: statistics show improvements in math scores, increased science fair participation, and more female students joining coding clubs.⁵⁰⁷¹ However, the long-term consequences and role of AI in emotional support are still unclear.

⁵⁰⁷¹ Ibid

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Environmental Impact of AI

Oman currently has no AI-specific environmental regulation. However, the General Policy for the Safe and Ethical Use of AI Systems provides that entities should “promote the use of AI systems in achieving sustainable development and protecting the environment by improving energy efficiency, avoiding the depletion of natural resources, and reducing pollution of all kinds.”⁵⁰⁷² AI-related infrastructure such as data centers, large-scale machine learning operations, or AI-driven industrial automation falls under Oman’s general environmental legal regime, particularly the Environmental Protection and Pollution Control Law and its executive regulations governing emissions control, environmental permits, and mandatory Environmental Impact Assessments.⁵⁰⁷³

Government strategies such as Oman Vision 2040⁵⁰⁷⁴ position AI as a catalyst for energy efficiency and green innovation, signaling support for renewable-powered data infrastructure and green AI practices. The Ministry of Transport, Communications and Information Technology launched the Green AI Alliance to establish a “first-of-its-kind regional initiative supporting AI development while preserving the environment,”⁵⁰⁷⁵ along with the Digital Triangle Project, which features green data centers, toward the end of 2025.

Lethal Autonomous Weapons

Oman is not a party to the Convention on Certain Conventional Weapons and has not taken an independent stance on lethal autonomous weapons in major international fora.⁵⁰⁷⁶ However, as a member of the Non-Aligned Movement and the Arab Group at the United Nations, Oman is associated with calls for a legally binding treaty to regulate or prohibit autonomous weapons systems.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

At the 79th UN General Assembly First Committee in October 2024, Oman reaffirmed its commitment to ethical oversight in emerging defense technologies by voting in favor of Draft Resolution L.77 on lethal autonomous weapons systems. This vote reflected Oman's broader concern about the destabilizing effects of such technologies on regional security and its insistence on maintaining meaningful human control in the use of force, consistent with international humanitarian law. Oman's position builds on the country's support for Resolution 78/241 at the 78th General Assembly, emphasizing the humanitarian, legal, and ethical implications of autonomous weapons.⁵⁰⁷⁷ By consistently aligning with resolutions that prioritize accountability and human oversight, Oman has positioned itself as a regional advocate for responsible innovation in defense technologies and a supporter of multilateral efforts to mitigate the risks of automation in warfare.

AI Literacy

Human capacity development is one of the main pillars of Oman's General Policy for the Safe and Ethical Use of AI Systems with plans to:⁵⁰⁷⁸

- Invest in education and training to build local AI expertise,
- Integrate AI curricula across all educational levels, and
- Support professional training and certification programs.

The National Program of AI and Advanced Digital Technologies includes provisions to equip graduates from local higher education institutions with the necessary skills to support the adoption of AI.⁵⁰⁷⁹ The Makeen initiative, which aims to equip Omani youth with in-demand modern digital skills such as AI, big data, programming, and application development, provides multiple specialized hands-on training programs dedicated to AI and its sub-fields.⁵⁰⁸⁰ Ministry employees also participated in workshops to increase awareness on the use of AI tools.⁵⁰⁸¹

Center for AI and Digital Policy

Human Rights

Oman has affirmed its commitment to the Universal Declaration of Human Rights (UDHR). The Oman Human Rights Commission (OHRC) was established in 2008 under Royal Decree No. 124/2008 as an independent national entity focused on disseminating human rights culture and safeguarding human rights in Oman.⁵⁰⁸² The OHRC has distributed the UDHR to various authorities and civil society institutions, underscoring adherence to the UDHR's principles.⁵⁰⁸³

Nevertheless, Freedom House classified Oman as “Not Free” with a Global Freedom Score of 24/100 in 2025.⁵⁰⁸⁴ Power remains concentrated in the hands of the Sultan and citizens face broad constraints on expression, political participation, and access to justice. In practice, the ruling family retains control over policy and election decisions. Political pluralism is effectively banned, with no independent parties permitted.

OECD AI Principles / G20 AI Guidelines

Oman is not a member of the OECD or the G20 but the national approach to AI demonstrates clear alignment with the principles and guidelines promoted by both groups. For example, the AI Strategy 2025 emphasizes transparency, accountability, explainability, and fairness.⁵⁰⁸⁵ Oman participates in the Gulf Cooperation Council and Arab Digital Economy frameworks that cite OECD and G20 AI standards as global benchmarks for responsible AI.⁵⁰⁸⁶

Council of Europe AI Treaty

Rights, Democracy, and the Rule of Law.⁵⁰⁸⁸ Oman has not signed the Council of Europe AI Treaty as of date.⁵⁰⁸⁹

UNESCO Recommendation on the Ethics of AI

Oman is a member state of UNESCO and has been active in forums and affiliated activities. Omani researchers and institutions have participated in UNESCO AI ethics events, including the 2025 Global Forum.⁵⁰⁹⁰ Oman's General Policy for the Safe and Ethical Use of AI Systems⁵⁰⁹¹ and UNCTAD/CSTD contribution⁵⁰⁹² explicitly reference ethical guidance in the development and use of AI systems. UNESCO selected Oman as a beneficiary country to implement the Recommendation on the Ethics of Artificial Intelligence through UNESCO's Readiness Assessment Methodology (RAM).⁵⁰⁹³ Oman published the report with UNESCO's support in early 2026.⁵⁰⁹⁴

Evaluation

Oman's National AI Strategy, aligned with Oman Vision 2040, promotes the responsible adoption of AI through national programs, strategic initiatives, and ethical policies that support innovation, capacity-building, and trusted AI use across sectors. Oman has leveraged digital engagement and public consultations to ensure inclusive citizen participation in policymaking, incorporating diverse societal perspectives in Oman Vision 2040 and AI policy development. Ongoing initiatives focused on developing human capacity by integrating AI curricula across all educational levels and supporting professional training and certification programs

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Pakistan

In 2025, Pakistan finalized the National Artificial Intelligence Policy, creating a framework for AI governance and development aligned with international standards and ethical principles. The Supreme Court ruled on the use of AI in the judicial process, acknowledging the utility of AI tools for addressing a backlog of cases while stressing the necessity of human judgement to make judicial rulings.

National AI Strategy

The Federal Minister of Information Technology & Telecommunication (MoITT) Syed Aminul Haque announced government plans in December 2021 to introduce a national AI policy.⁵⁰⁹⁶ A draft released for public consultation in May 2023⁵⁰⁹⁷ defines the purpose “to create a broad-based awareness of the use of AI-based platforms while keeping privacy at the forefront, upskilling human capital on AI and allied technologies, guiding investment in AI research and development, ensuring ethical and responsible use of AI, and provide a framework for addressing the challenges and risks associated with the socio-economic outfit of the country.”

Pakistan’s Federal Cabinet approved the National AI Policy 2025,⁵⁰⁹⁸ a comprehensive framework establishing six strategic pillars: innovation ecosystem, awareness and readiness, secure AI ecosystem, transformation and evolution, AI infrastructure, and international partnerships. The Policy’s vision explicitly links AI adoption with human rights, rule of law, and inclusion, referencing UNESCO’s Ethics of AI and the UN Sustainable Development Goals. The policy establishes a National AI Fund, AI Council, and Policy Implementation Cell to operationalize oversight. The AI Council, including representatives from academia, industry, civil society, and key sectors such as healthcare and agriculture, is tasked with providing strategic direction and overseeing the overall implementation process. The Policy’s implementation framework is aligned with the Digital Pakistan Vision and the Uraan National Transformation Plan (2024–2029), integrating AI development within broader national digital and innovation goals.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The concept of “Digital Pakistan” was first introduced at the state level after a record year of revenues from software exports in 2016–2017.⁵⁰⁹⁹ Official language focused on getting more citizens digitally connected, literate, and brought under the government’s data collection umbrella.⁵¹⁰⁰ A year later, the MoITT issued the 2018 Digital Pakistan Policy.⁵¹⁰¹ This policy includes the need to develop necessary policy frameworks, laws, and rules to enable the creation of a sustainable IT environment, including the enactment of a data protection and privacy law. In December 2019, former Prime Minister Imran Khan launched the Digital Pakistan Vision,⁵¹⁰² setting Pakistan’s digital ambition for the government and the private sector to work toward a digitally progressive and inclusive Pakistan. The Digital Nation Pakistan Act 2024 established the National Digital Commission and Pakistan Digital,⁵¹⁰³ to serve “as the foundation for the construction of a holistic digital ecosystem with advanced concepts and components for the rapid delivery of next-generation digital services, applications and content.”⁵¹⁰⁴

A few other initiatives also aim for Pakistan to bridge the digital divide. In 2018, the Presidential Initiative for AI and Computing (PIAIC) sought to reshape Pakistan by revolutionizing education, research, and business by adopting the latest technologies. The PIAIC envisioned Pakistan becoming a global hub for AI, data science, cloud-native computing, edge computing, Blockchain, augmented reality, and the internet-of-things.⁵¹⁰⁵

The National Centre of Artificial Intelligence was created in 2018 “to grow the AI industry, aligning with international trends, and solving Pakistan’s problems to boost the knowledge-based economy.”⁵¹⁰⁶ Since 2019, the annual Pakistan Artificial Intelligence Summit⁵¹⁰⁷ brings academic, industry and government representatives

together to discuss the most pressing issues confronting artificial intelligence and ICT in general in Pakistan.

Pakistan was one of the 11 Digital Cooperation Organization member states to sign the Riyadh AI Call for Action Declaration (RAICA) launched during the 2022 Global AI Summit.⁵¹⁰⁸ Endorsement of the RAICA commits Pakistan to identify and address present, emerging, and future humanitarian issues in the field of AI.⁵¹⁰⁹ The declaration highlights seven key pillars through which AI can be used as a tool to benefit lives around the world—bridging the digital divide, empowering underprivileged communities, promoting digital development, ensuring fairness and non-discrimination, driving innovation in AI, combatting climate change in AI, and engaging in international collaboration and cooperation in AI. With a strong human-centered AI, focus, the Declaration refers repeatedly to the promise and potential of AI to transform societies, economies, and humanity's most pressing global issues, including climate change. The Declaration calls explicitly for the creation, adoption and promotion of comprehensive AI ethical guidelines and appeals to signatory countries to work with various stakeholders, from humanitarian organizations to innovative companies, to employ AI to advance universal human rights.

In October 2022, the Government of Pakistan announced the China-Pakistan Digital Corridor, with a component of AI collaboration, building on the Sino-Pak strategic relationship through the China-Pakistan Economic Corridor.⁵¹¹⁰ The former Additional Director-General of the Federal Investigation Agency and founder of Digital Pakistan expressed that Pakistan must collaborate with China to develop AI capabilities, naming cybersecurity as a primary collaborative area. The digital corridor is intended to use AI to improve areas like food security, agricultural development, and green development. A joint statement from 2024⁵¹¹¹ advances the collaboration on AI as the countries agree to “strengthen policy coordination in the field of artificial intelligence, deepen relevant practical cooperation, and jointly seek to promote the development of AI technology.” They also agree to uphold the “principle of attaching equal importance to development and security in AI systems” and express a commitment to build an “open, fair and effective AI governance mechanism through dialogue, consultation and equal cooperation.”

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Public Participation

In keeping with a culture of regional and neighborhood-based political decision-making, the government of Pakistan does not offer centralized public participation opportunities to citizens per se. However, in an unprecedented first, in 2021 the Ministry of Information Technology and Telecommunications launched an online survey form that provided citizens the opportunity to weigh in on the Digital Pakistan Policy. The Ministry then issued a consultation draft of the 2021 Personal Data Protection Bill.⁵¹¹² Accompanying the draft, the Ministry conducted a road show in the large Pakistani cities and issued press statements to publicize the drafting of the Policy and the accompanying bill.⁵¹¹³

By October 2024, the website of the Ministry presented a list of draft policies under review and provided an email address for receiving feedback in relation to four of them: the Draft National Freelancing Facilitation Policy, the Draft Telecom Infrastructure Sharing Framework”, the Draft Framework for Frequency Spectrum Re-Farming, in addition to the Draft AI Policy already mentioned above.⁵¹¹⁴ The Ministry also provides general contact information for MoITT officials, including telephone numbers and email addresses.⁵¹¹⁵

The UNESCO-led Multi-Stakeholder Dialogue on Ethical and Inclusive AI Governance held in Islamabad in May 2025 marked the first large-scale consultation since consultations on the National AI Policy 2025.⁵¹¹⁶ Representatives from government, academia, civil society, and the private sector discussed policy implementation and ethical safeguards, emphasizing the need for transparent follow-up mechanisms and sustained citizen engagement in AI governance. Independent experts and civil-society actors observed that while the National AI Policy 2025 introduced consultative principles, the process lacked broad public outreach and

transparency.⁵¹¹⁷ Several analyses published in 2025 recommended establishing permanent participatory mechanisms, such as public comment periods, stakeholder committees, and open consultations, to ensure that citizens' perspectives are meaningfully incorporated into AI policymaking.”

In addition, since 2018, citizens have had access to the Prime Minister's Performance Delivery Unit (PDU), an online platform offering direct connection between the Government and citizens. One of PDU's initiatives is the Citizen's Portal, an app where citizens can submit and track complaints and make requests directly to the relevant government body. To date, the portal—which is also available as a mobile phone app—registered over 4.9 million complaints, of which over 4.8 million have been resolved. The portal has a participation rate of over 4 million Pakistani citizens. Further, success stories and testimonies are published on the website and promoted through social media. The portal continues to serve as a direct conduit for information flowing between the government and Pakistani citizens.

Language and connectivity are the primary obstacles to participation. While government websites are bilingual, policy documents within the websites are published exclusively in English, with no translation available. As more than 50% of Pakistan's population cannot read or write English, this serves as a major impediment to meaningful public participation from all levels of society.⁵¹¹⁸ Meaningful connectivity and access to the internet, including intentional restrictions over alleged security concerns,⁵¹¹⁹ also represent challenges to public participation. The fixed broadband subscriptions per 100 persons in Pakistan stand at 1.4 and is phenomenally lower than the 30 subscriptions per 100 persons in high-income countries and lower than 4.4 in the lower-middle-income countries.⁵¹²⁰

Data Protection

The Pakistan Personal Data Protection Bill⁵¹²¹ and the E-Safety Authority Bill 2023⁵¹²² were approved by the cabinet in July 2023. The MoITT stated that the objective of the new legislation is to protect individuals and business communities' data and to provide them with a safe environment.⁵¹²³

The PDPB governs the collection, processing, use, and disclosure of personal data and sanctions against violations of data subjects' rights.⁵¹²⁴ The PDPB provides for rights regarding automated processing, including profiling: A data subject shall have the right not to be subject to a decision based solely on automated processing, including profiling. The PDPB also provides for data subject rights with regard to the processing of personal data in clause 15.⁵¹²⁵ However, the draft mentions a list of caveats including legal compulsions, employment law, inability of data subject to provide consent, medical purposes, even "in order to protect the vital interests of the data subject or another person." These exceptions provide great leeway in the interpretation of the proposed rules and raise concerns as to their potential interpretation.

The PDPB also provides for the establishment of a National Commission for Personal Data Protection of Pakistan within six months after the entry into force of the legislation. The authority is purported to have the same independent status as the Civil Courts: "The Authority shall be competent to decide complaints and pass any order. To decide complaints the Authority shall be deemed to be Civil Court and shall have the same powers as are vested in the Civil Court."⁵¹²⁶ However, due to government and especially military interference and undue pressure on the existing judiciary, concerns arise about the potential lack of independence of this authority,

Center for AI and Digital Policy

once it does come into existence. As of November 2025, the PDPB has not passed into law. Hence, the Commission has not yet been formed. There is also no indication, as a matter of public record, when and whether the law will be published in the Official Gazette of Pakistan.⁵¹²⁷ Given the lack of a data protection authority, Pakistan is not a member of the Global Privacy Assembly (GPA).⁵¹²⁸

The Federal Cabinet also approved the Cloud First Policy and the Social Media Rules in 2022,⁵¹²⁹ a governance instrument toward cloud infrastructure and internal and cross-border data flows.⁵¹³⁰ The Policy references the need for cloud service providers to safeguard data privacy: “CSP (cloud service providers) implement technical and administrative controls to protect data—both stored and in transit. Furthermore, formal engagements with CSP generally define data protection standards and establish SLA (service level agreements) that outline security and privacy measures. The policy also provides data classification guidelines for public sector data, ranging from “open,” “public,” “restricted,” “sensitive/confidential,” to “secret.”

The National Registration and Biometric Policy Framework 2.0 sets uniform rules for the collection, storage, and use of biometric data by public and private entities.⁵¹³¹ The framework requires privacy-by-design, consent-based processing, and ISO/IEC 27001-aligned security controls, and mandates Privacy and Data Protection Impact Assessments before deploying biometric systems. Although not legally binding, it is among Pakistan’s few policies embedding data-protection principles such as data minimization and limited retention. However, the lack of an independent oversight body and NADRA’s centralization of biometric databases heighten risks of mass surveillance and function creep, limiting the policy’s effectiveness without statutory enforcement.

Article 14 of Pakistan’s 1973 Constitution protects the right to privacy in the home. This right has been interpreted to extend to digital communications as well. However, more recent laws allow for this right to be circumvented and called into question. The 2016 Prevention of Electronic Crimes Act (PECA) includes various data protection- and privacy-related provisions to reduce cyber blackmailing, defamation, and bringing disrepute to natural persons with the use of photoshopped images.

Concerns arise about PECA provisions that grant government agencies access to citizen's private data and restrict citizens' access to their government data. Section 31, for example, allows an authorized agent to require a person to hand over data without producing a court warrant if reasonably required for a criminal investigation. Other provisions are intended to grant the Pakistan Telecommunications Authority (PTA) and other law enforcement agencies access to the private data of citizens, along with restricting citizens from gaining access to government data. Section 32 of the PECA requires internet service providers to retain specified traffic data for a minimum of one year and subject to the PTA's demands outlined in Section 31. Section 42 outlined that powers are delegated to the government when it comes to sharing information with foreign entities.⁵¹³²

In February 2022, PECA's Ordinance (a series of proposed amendments) passed.⁵¹³³ One of the passed amendments seeks to make the online defamation of authorities, including the military and judiciary, a criminal offense with harsh penalties. Both Human Rights Watch⁵¹³⁴ and Amnesty International⁵¹³⁵ termed it as the latest in a concerted campaign to restrict freedom of expression and stifle dissent. While the PECA already contained broad provisions around the criminalization of the defamation of natural persons, the amendment expanded those provisions to include the government, military, and judiciary redefining what a "person" is considered. Other passed amendments include making defamation a nonbailable offense and increasing its prison term to five years, expanding the definition of those who can initiate criminal proceedings for defamation, among other passed amendments. The amendment made no mention of AI or its use in online or other forms of disinformation.

On February 23, 2022, the Islamabad High Court restrained the Federal Investigation Agency (FIA)—the primary investigative body for PECA—from making any arrests under the newly passed Ordinance.⁵¹³⁶ Alongside this investigative restraint, the major opposition parties moved resolutions in the National Assembly to repeal the Ordinance⁵¹³⁷ and the National Commission for Human

Center for AI and Digital Policy

Rights (NCHR) issued a statement⁵¹³⁸ demanding the Ordinance's immediate repeal, expressing serious reservations on the promulgation of the Ordinance, stating it breached the right to freedom of speech and expression enshrined under Article 19 of the Constitution of Pakistan⁵¹³⁹ and protected under various international agreements to which Pakistan is a signatory, and violates the democratic process. In April 2022, PECA's Ordinance was struck down by the Islamabad High Court,⁵¹⁴⁰ a verdict lauded by the media⁵¹⁴¹ and human rights organizations⁵¹⁴² for upholding the constitutional right to freedom of speech.

Still, on August 20, 2024, the Punjab Provincial Government issued a draft Punjab Cybercrime Control Act 2024.⁵¹⁴³ This proposed legislation incorporates comprehensive provisions for data protection and privacy and aligns with the 2016 PECA, while introducing stricter penalties of up to 15 years for cybercrime offenses.

In 2023, Pakistan issued the Pakistan Electronic Media Regulatory Authority (PEMRA) Ordinance, the Official Secrets Amendment Act, 2023, and the E-Safety Authority Bill 2023. The PEMRA amendment lays out the procedures to register and monitor ratings of TV channels as well as elaborating on the definitions of disinformation and misinformation. This law and the way it was adopted, days after being presented in parliament and without deliberation, has garnered criticism and protest from many parties, including media, civil society, and human rights bodies.

Only five days after the promulgation of the PEMRA Ordinance, the Official Secrets Amendment Act, 2023 was signed into law.⁵¹⁴⁴ The President denied having signed this bill into law. This law makes a person guilty of an offense if they "intentionally creates a problem of public order or acts against the state." In addition,

if a person “attacks or damages a prohibited place and the purpose of this is to directly or indirectly benefit the enemy,” this is also punishable.

The Social Media Rules were adopted in October 2020.⁵¹⁴⁵ The spirit of these rules bears proximity to the 2016 Prevention of Electronic Crimes Act’s (PECA) Section 20 on the defamation of public institutions.⁵¹⁴⁶ The rules compel social media companies to establish offices within the country, localizing their database servers. They specify a new position of National Coordinator to liaise with these companies and seem to indicate the aspiration of greater control over Pakistani users. AI was not featured in these rules explicitly, though online disinformation was. They were updated and released again a year later.⁵¹⁴⁷ Twitter came under intense state scrutiny when an unhappy public used the platform to express their discontent with the government, which led to further restrictions.⁵¹⁴⁸ Access to Twitter was officially restored in May 2025,⁵¹⁴⁹ while access to other sites such as YouTube⁵¹⁵⁰ and Signal⁵¹⁵¹ were restored earlier though hard to access.

Algorithmic Transparency

Algorithmic transparency is not yet established as a legal right in Pakistan. The Personal Data Protection Bill (PDPB) provides for the “right not to be subject to a decision based solely on automated processing, including profiling”⁵¹⁵² with no further details. In a landmark judgement recognizing AI-assisted judicial processes, the Supreme Court of Pakistan affirmed that “AI use must comply with constitutional

guarantees of dignity, fairness, and due process.”⁵¹⁵³ This judicial acknowledgment represents Pakistan’s first formal reference to algorithmic accountability. Although no laws have been implemented, the National AI Policy 2025 frames transparency and human oversight as part of the Secure AI Ecosystem pillar. The government will “mandate lifecycle evaluations and impact assessments” and “implement a framework for auditing AI decision-making, as well as transparency and algorithmic accountability, to be used by third-party auditors, with mechanisms for auditing and redress in cases of unwarranted outcomes.”⁵¹⁵⁴

Smart Surveillance

Two Acts contain concerning provisions on surveillance in Pakistan. The 1996 Act providing for the reorganization of the Pakistan Telecommunications Authority (PTA) permits the government to authorize any person(s) to intercept calls and messages, or to trace calls through any telecommunication system in the interest of national security or in the apprehension of a person in relation to any offense.⁵¹⁵⁵ Under the 2013 Investigation for Fair Trial Act, a judge has the power to issue a warrant of surveillance or interception, upon the fulfillment of certain conditions.⁵¹⁵⁶

Aside from statutory provisions, some Pakistani software exhibits surveillance state aspects. Hotel Eye is software that combines surveillance technologies and government databases to track hotels and their customers. The software also collects citizens’ data without their consent. Hotel Eye is now mandatory for hotel and private rest house operators throughout Pakistan.⁵¹⁵⁷ Various provinces in Pakistan including Punjab, Balochistan,⁵¹⁵⁸ and Gilgit-Baltistan have reported on the deployment of Hotel Eye for purposes of crime prevention, lauding its efficacy in helping trace, track, and surveil suspected criminals.⁵¹⁵⁹ This widespread use raises concerns regarding surveillance of private citizens, in

particular with regard to gender interactions and in view of discriminatory laws against women still in effect in the country.⁵¹⁶⁰

In the case of the Balochistan province, technical, operational, and training support on the use of Hotel Eye (among other specialized software) was provided very recently by the United Nations Office on Drugs and Crime⁵¹⁶¹ under the European Union-funded Rule of Law Roadmap (RoLR) Balochistan project.⁵¹⁶²

The Government of Pakistan deployed several tech-related measures during COVID-19 that threaten the right to privacy, such as a track-and-trace system originally developed to track-and-trace possible terrorist activities. The system is opaque and lacks judicial oversight and reportedly combines personal call-monitoring mechanisms and geofence tracking to identify when a person leaves a given geographic location.⁵¹⁶³

Practices of surveillance in public space and use of facial recognition are of concern. A report by Privacy International identified such practices in Pakistan during the COVID-19 pandemic.⁵¹⁶⁴ Privacy International found that the government of Pakistan retrofitted systems, originally designed for counter-terrorism purposes by the Inter-Services Intelligence directorate, for COVID-19 surveillance. The absence of explanation of how the system operates, raised grave concerns among digital rights privacy activists, about tracking and tracing, monitoring and tracking suspected patients through VPN⁵¹⁶⁵.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

One of China's Belt and Road Initiative's flagship project is the \$63 billion USD China-Pakistan Economic Corridor. China is supporting numerous Safe City projects to allegedly improve security within Pakistan's major urban centers by providing low-interest loans and urging the involvement of Chinese state-owned enterprises. Safe City projects have effectively installed much of the Xinjiang digital security system across numerous Pakistani cities, including Islamabad, Peshawar, Lahore, Quetta, Karachi, and Gwadar. An example is Lahore's Huawei-built Safe City which uses approximately 8000 high-grade CCTV cameras, 4G wireless connectivity, facial recognition, automated vehicle number plate recognition, multiple tracking options, integrated communication platforms, geographic information systems, and specialized apps for security personnel use. These systems are controlled through a large 10,000-square-meter integrated command, control, and communication center that uses AI, big data, and cloud computing technology.⁵¹⁶⁶

By January 2023, the National Database Registration Authority (NADRA), a government body reporting directly to the Ministry of Interior Affairs and responsible for all identification documents, shared data and images of 4,000 wanted people to a Safe City Islamabad for biometric matching, to lead to their arrest.⁵¹⁶⁷ According to the report, Safe City Islamabad placed a request to NADRA in October 2021 for data on people suspected for serious crimes, including a category of "proclaimed offenders" (referring to individuals who avoided court warrants). By mid-January, Safe City Islamabad announced the arrest of three people and 887 alerts arising from facial recognition across the 106 cameras installed in the capital city.⁵¹⁶⁸ The Safe City Islamabad project continues to be featured in the country's annual budgetary appropriations for its Public Sector Development Program 2022–2023.⁵¹⁶⁹

In January 2023, the NADRA announced the use of an AI-based solution to verify fingerprints/records of senior citizens.⁵¹⁷⁰ The solution aims to supplement the

physical, biometric verification of fingerprints.⁵¹⁷¹ The project was allocated funding in the Public Sector Development Program 2020–2021⁵¹⁷² and is being developed under the supervision of the National Center of AI at the National University of Science & Technology.⁵¹⁷³

On September 29, 2024, the Punjab Safe City project,⁵¹⁷⁴ a joint project between Punjab Police and Punjab Information Technology Board (PITB), deployed the AI-powered Face Trace System (FTS) to increase the effectiveness of biometric criminal identification and detention.

EdTech and Children Tracking

Pakistan is one of 49 countries subject of a 2022 study by Human Rights Watch about the use of government-endorsed Ed Tech tools for online learning during the COVID-19 pandemic.⁵¹⁷⁵ Based on technical and policy analysis of 163 EdTech products, Human Rights Watch found that governments' endorsements of the majority of these online learning platforms put at risk or directly violated children's rights. In the case of Pakistan, the report found that the Muse App developed for K-5 students in Pakistan and used by more than 120,000 students across 1,000 schools by April 2020 targeted children with behavioral advertising. The report also found that the Pakistani government endorsed Apps with the capability to collect the Android Advertising ID and identify, tag, and track billions of users, including children (Muse App, Taleemabad App); collected the WiFi MAC address of children (Muse App); collected aggregate numbers used to trace mobile devices (Taleemabad App); engaged in ID bridging (to bypass privacy controls) (Muse and Taleemabad); and collected WI-Fi SSID, which can be used to infer information about a child's habits and relationships (Taleemabad). Other websites and Apps shared their users' data to Facebook Pixel, which could track every moment of interaction across their platforms (Khan Academy, Learn Smart Pakistan, Sabaq Foundation).⁵¹⁷⁶

Use of AI by Courts

In April 2023, a judge in a Pakistani court used GPT-4,⁵¹⁷⁷ Open AI's chatbot, to help render a judgment in a case.⁵¹⁷⁸ This decision sparked widespread debate regarding AI's capabilities and the possibility of it replacing legal professionals, including judges. This seems to have been a one-off incident, though, and has not led to a formalization of the use of AI by courts in Pakistan.

Already in 2022, an academic study reported the planned use of artificial intelligence to aid judicial decision-making.⁵¹⁷⁹ Plans to establish this project by the Deep Learning Lab of the National Centers for AI for this purpose were reported on in 2020.⁵¹⁸⁰ The Supreme Court of Pakistan delivered a landmark judgment in April 2025 to recognize AI-assisted judicial processes.⁵¹⁸¹ The court ruled that, given a backlog of cases, "the thoughtful adoption of AI can serve as a viable instrument for access to timely justice and alleviating systemic backlogs." Still, the judge "unequivocally affirmed that AI is not, and must never become, a substitute for judicial decision-making. Adjudication is a constitutional function rooted in legal reasoning, institutional independence, and human empathy, qualities no automated system can replicate."⁵¹⁸²

Lethal Autonomous Weapons

Pakistan was one of the first nations to call for a ban on lethal autonomous weapons systems. Since 2013, Pakistan and 30 other countries have called for a ban on fully autonomous weapon systems, which will prohibit weapons systems that lack human control.⁵¹⁸³ The Human Rights Council of Pakistan argued that lethal

autonomous weapons systems raise complex moral, ethical, and legal dilemmas. Pakistan delivered a statement on behalf of the Organization of the Islamic Conference, representing more than 50 states, alerting about the negative impact of removing human control from the use of force, as this “fundamentally changes the nature of war” and raises the potential for an “accountability gap.” Pakistan has presented multiple calls for a new international ban treaty of LAWS and denounced them as “illegal, unethical, inhumane, and unaccountable as well as destabilizing for international peace and security.”

Despite active participation in every meeting of the Convention on Certain Conventional Weapons from 2014–2019,⁵¹⁸⁴ Pakistan has not acceded to the Convention. On October 2023, the Ministry of Foreign Affairs launched an official webpage to state Pakistan’s Positions & Policies on Arms Control, Non-Proliferation & Disarmament Related Issues. The ministry reaffirmed the country’s commitment to calling for a legally binding instrument regulating the use of Lethal Autonomous Weapons (LAWS) and denounced the use of trans-border unauthorized armed drones outside of international armed conflict.⁵¹⁸⁵

AI Literacy

Pakistan’s National Artificial Intelligence Policy 2025 prioritizes AI literacy and skill development as Development Objectives, pledging “to integrate AI education into national curricula and develop specialized training programs to prepare a skilled workforce capable of driving AI innovation.”⁵¹⁸⁶ The Policy operationalizes the objective under the Awareness and Readiness pillar, aiming to equip citizens, students, and public officials with the knowledge needed to understand and engage with AI systems.⁵¹⁸⁷ The Policy calls for nationwide AI education initiatives, integration of AI topics into school and university curricula, and specialized training for regulators and oversight bodies. These measures can strengthen public participation in AI-related policymaking and build institutional capacity for ethical and transparent AI governance.

Human Rights

Freedom House's 2025 annual report rates Pakistan as "Partly Free" with a score of 37/100, noting slight improvements in civil liberties and judicial oversight.⁵¹⁸⁸ The report points out that, despite the competitive multiparty political system in the country, Pakistan's military exerts substantial influence over security and other policy issues, intimidation of media outlets, and use of indiscriminate or extralegal use of force to manage religious militancy and attacks on religious minorities and opponents.⁵¹⁸⁹ Relations between military and civilian leaders have grown more contentious in recent years.

Pakistan is rated "Not Free" in Freedom House's 2024 report on global internet freedom.⁵¹⁹⁰ Pakistan frequently blocks content critical of Islam or the military as well as pornography or nudity websites and political and social content. There are also allegations that the Pakistani government uses censorship equipment to block and regulate its citizens' internet access.⁵¹⁹¹ According to another Freedom House report, digital controls tightened even further around the February elections. Mobile phone services and access to social media platforms were suspended nationwide on the day of general elections.⁵¹⁹² In addition, the report claims: "People are frequently prosecuted for their online activities, often receiving harsh sentences," including the death penalty in some cases.

Pakistan is signatory of several human rights conventions.⁵¹⁹³ Pakistan is one of the original signatories of the Universal Declaration of Human Rights and signed the International Covenant on Civil and Political Rights (ICCPR) in 2008, which also upholds the right to privacy. In 1989, Pakistan adopted the Convention on the Rights of the Child, which include the right to privacy. In 1990, Pakistan signed the Cairo

Declaration on Human Rights in Islam.⁵¹⁹⁴ In 2004, the country signed the International Covenant on Economic, Social and Cultural Rights (ICESR).⁵¹⁹⁵

The UN Office of the High Commissioner for Human Rights, in its 2022 Universal Periodic Review of Pakistan,⁵¹⁹⁶ made extensive recommendations⁵¹⁹⁷ regarding the protection and promotion of human rights in Pakistan. These include recommendations on civil and political rights, liberty and security of the person, sexual and gender-based violence, freedom of thought, conscience and religion, and freedom from persecution for those criticizing state institutions Pakistan submitted to the OHCHR statements to committees on racial discrimination, human rights, rights of the Child, and committees against torture. The OHCHR issued 18 recommendations for the Government of Pakistan, concluding on the need to take administrative and legislative measures to improve the state of human rights in the country, to be integrated systematically in national implementation and monitoring plans.⁵¹⁹⁸

OECD / G20 AI Principles

Pakistan is not a member of the OECD and has not endorsed the OECD AI principles as a non-member.⁵¹⁹⁹ Pakistan does not submit reports to the OECD AI Policy Observatory in relation to policies, strategies, or activities associated with AI.⁵²⁰⁰ However, the international partnerships and collaboration pillar of the National AI Policy includes measures to adopt international standards, engage in capacity building and talent exchange, and leverage AI for global trade

UNESCO Recommendation on the Ethics of AI.⁵²⁰⁹ Pakistan's endorsement of the 2021 UNESCO Recommendation on the Ethics of AI and the 2022 Riyadh AI Call for Action Declaration on ethics of AI gives the country an opportunity to adopt a human-centered approach to AI. The Personal Data Protection Bill is also a positive step towards protecting data subjects' rights, though the bill has not been implemented. The National Registration Biometric Policy Framework approved in 2025 signals progress with oversight standards for AI-based identity verification and privacy-by-design.⁵²¹⁰ The national digital authority established by the Digital Nation Pakistan Act signals the country's movement in a positive direction and sets the tone for the country's commitment to developing AI policy and regulation.⁵²¹¹

However, the widespread use of AI technology for surveillance purposes, coupled with political instability and problems of discrimination against women, minorities and disadvantaged groups, are serious causes for concern. With the country benefitting from burgeoning and tech-savvy young, predominantly urban and rapidly urbanizing population, strengthening civic participation, promoting democratic values, facilitating the development of literacy (including digital literacy), and enabling digital access could go a long way in fostering the adoption of ethical, trustworthy, and human-centric AI and digital policies.⁵²¹²

Peru

In 2025, Peru progressed on implementing recommendations from the UNESCO RAM report. Regulations on the AI Law were approved, establishing a comprehensive regulatory framework on AI and designating the Government and Digital Transformation Secretariat, which is part of the Presidency of the council of Ministers, as the AI oversight authority.

National AI Strategy

The Government and the Digital Transformation Secretariat of the Presidency of the Council of Ministers (*Secretaría de Gobierno y Transformación Digital de la Presidencia del Consejo de Ministros*) issued Peru's National Artificial Intelligence Strategy (*Estrategia Nacional de Inteligencia Artificial*, ENIA) for the period of 2021–2026.⁵²¹³ Peru's vision is to “accelerate national development while promoting digital inclusion and ensuring the reduction of social gaps.”⁵²¹⁴ The ENIA aims to foster the necessary conditions to take advantage of the opportunities presented by developments in AI and to create value for the private and public sector, while mitigating potential risks.⁵²¹⁵ Key objectives⁵²¹⁶ include adopting ethical guidelines for sustainable, transparent, and replicable use of AI with clear definitions of responsibilities and data protection. Other objectives emphasize training and attracting talent and building data and AI infrastructure to promote AI development and use to boost the country's economy and welfare. Efforts also include building a National AI Innovation Center.

Peru published Law No. 31814 to promote the use of AI for the economic and social development of the country (AI Act) in July 2023.⁵²¹⁷ The law designates the Presidency of the Council of Ministries (*Presidencia del Consejo de Ministros*) as the supervising authority operating through the Secretariat of Government and Digital Transformation under the National System of Digital Transformation. The Government approved the Regulations of Law No. 31814 on Artificial Intelligence

⁵²¹³ Presidencia del Consejo de Ministros, *National Artificial Intelligence Strategy 2020–2026 First Draft of Peruvian National AI Strategy* (Dec. 2021), https://wp.oecd.ai/app/uploads/2021/12/Peru_National_Artificial_Intelligence_Strategy_2021-2026.pdf

for the Economic and Social Development of the Country in 2025.⁵²¹⁸ The Supreme Decree approving the AI Law provides a regulatory framework for the development, implementation and use of AI. These entered into force in January 2026.⁵²¹⁹

In addition to Law no. 31814, Emergency Decree No. 007-2020, regulates AI. The Decree approves the Digital Trust Framework, which establishes that “public entities and private sector organizations promote and ensure the ethical use of digital technologies, the intensive use of data, such as internet of things, AI, data science, analytics and big data processing.”⁵²²⁰

Public Participation

The Government and Digital Transformation Secretariat requested consultation from the public and private sectors, civil society, academia, and citizens in the co-design of the National AI Strategy with the purpose of driving the digital transformation of the country for the benefit of all people. Consultation took place from August 5 to August 12, 2020, via Zoom.⁵²²¹ The government presented a draft of the National Strategy and requested additional consultation from the public in 2021. In September and early October 2025, a public consultation was held on a preliminary draft of a 2026–2030 ENIA.⁵²²²

The Peruvian Government and Digital Transformation Lab launched the *Participate Peru* platform to receive suggestions and comments from citizens regarding current and potential regulations. Citizens can also send policy proposals on issues that interest them and make complaints about corruption in the public sector. To report the latter, citizens must provide an email address, where they will receive a report number, which they can then use to inform themselves about the

status of their complaint.⁵²²³ The Government and Digital Transformation Secretariat held public consultations on the draft Regulation of Law No. 31814 from May 2 to June 1, 2024, addressing AI risk classification.⁵²²⁴ A revised draft, released on November 25, 2024, introduced AI content labeling and security measures, with public input open until December 6, 2024.⁵²²⁵

The Peruvian Government also launched a public request for commentary on implementing the RAM methodology in the country on October 10, 2024. The request focused on the challenges, opportunities, and proposals to improve the current panorama of the AI ecosystem in Peru, emphasizing six thematic axes: health, education, productivity, data governance and cybersecurity, environment, and regulatory approaches.⁵²²⁶ Submission of opinions on the draft amendment to the Artificial Intelligence (AI) Act was open from November 25, 2024, to December 7, 2024.⁵²²⁷

Data Protection

The Personal Data Protection Law passed in 2011 guarantees the fundamental right to personal data protection provided in Article 2, paragraph 6 of the Peruvian Constitution.⁵²²⁸ The law was amended in 2017 to provide Peruvians with an updated level of data protection.⁵²²⁹ The law covers personal data, automated or not, regardless of the medium, regardless of the form or modality of their creation,

formation, storage, organization and access.⁵²³⁰ The law established various principles that data controllers and processors must comply with when processing personal data,⁵²³¹ including legality, purpose, proportionality, quality, security, and an adequate level of protection.

The National Personal Data Protection Authority (*Autoridad Nacional de Protección de Datos Personales*, ANPD) was established in 2011 within the Ministry of Justice to enforce and impose sanctions for violations of the law. Sanctions include administrative and monetary penalties against parties who are found to have violated the provisions of the law.⁵²³² The ANPD hears, investigates, and resolves complaints lodged by the data subjects for the violation of the rights granted to them and issues provisional and/or corrective measures, as established in the regulation. The ANPD is also responsible for recommending any minor or major amendments to the data protection law to ensure it keeps up with both technological advancements and potential legal challenges.

The ANPD established a National Register of Personal Data Protection, which keeps a public record of all the data processors and the type of data being collected on Peruvian residents. The ANPD is also required to publish a yearly report on the state of data protection in the country as well as recommendations for organizations on how to better adhere to the Peruvian legislation related to data protection.⁵²³³

The Ministry of Justice and Human Rights (*Ministerio de Justicia y Derechos Humanos*) published a new draft regulation, Law on Protection of Personal Data,⁵²³⁴ on August 25, 2023, which aims to modernize the existing framework. Under the regulation, which was approved in 2024,⁵²³⁵ data controllers are required to notify the ANPD within 48 hours of a security incident affecting personal data. The regulation mandates Data Protection Impact Assessments in specific cases, requiring organizations to preemptively evaluate risks in their data processing activities and

⁵²³⁰ Hunton Privacy Blog, *English Translation of Peru's Law for Personal Data Protection Released* (Aug. 16, 2011), <https://www.hunton.com/privacy-and-information-security-law/english-translation-of-perus-law-for-personal-data-protection-released>

⁵²³⁴ Ministerio de Justicia y Derechos Humanos, *Resolución Ministerial No. 0270-2023-JUS* (Aug. 25, 2023), <https://www.gob.pe/institucion/minjus/normas-legales/4574374-0270-2023-jus>

⁵²³⁵ Diario Oficial El Peruano, *Supreme Decree approving the Regulation of Law No. 29733, Personal Data Protection Law [Decreto Supremo No. 016-2024-JUS que aprueba el Reglamento de la Ley no. 29733, Ley de Protección de Datos Personales]*, Normas Legales (Nov. 30, 2024), <https://epdoc2.elperuano.pe/EpPo/VistaNLSE.asp?Referencias=MjM0OTY1My0xMjAyNDExMzA>

implement necessary organizational or security measures. The introduction of the right to data portability allows individuals to receive their personal data in a structured format and transfer it between service providers, encouraging both innovation and secure data transfer practices under the control of the data subject. The updates align with international norms seen in international standards such as the EU GDPR.

The new regulation's requirement for a designated representative,⁵²³⁶ either within or outside Peru, to act as a contact between the ANPD and foreign companies processing Peruvian citizens' data enables the ANPD to enforce data protection standards even when data is handled abroad. This provision is crucial in maintaining oversight and accountability in cross-border data transfers, a common regulatory challenge.

The regulation also includes provisions for safeguarding minors' personal data, especially on social media and digital platforms.⁵²³⁷ Organizations processing data of minors are required to take extra precautions to protect the rights of children in any digital service context. This focus aligns with global concerns about children's privacy and security in digital spaces.

The ADNP is a member of the Ibero-American Network for the Protection of Personal Data (*Red Iberoamericana de Protección de Datos*, RIPD), which comprises 16 data protection authorities from 12 countries. The ANPD adopted RIPD Standards for Personal Data Protection for Ibero-American States,⁵²³⁸ a series of guiding principles and rights for the protection of personal data were recognized, that can be adopted and developed by the Ibero-American States in their national legislation to guarantee a proper treatment of personal data and to have homogeneous rules in the region. The guiding principles are legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality. Controllers must also guarantee data subjects' right of access, right to correction, right to cancellation, right to opposition, right not to be subject to automated individual decisions, right to portability of personal data, and right to limitation of treatment of personal data. ANPD has also adopted RIPD General

development, implementation and use. Article 26 mandates compliance with current data protection regulations, with oversight by the ANDP.⁵²⁴⁶

Peru's AI Act establishes two new governance roles. The Personal Data Officer (*Oficial de Datos Personales*, ODP) ensures proper data processing in AI systems, while the Data Governance Officer (*Oficial de Gobierno de Datos*, OGD) promotes data quality and sharing to avoid bias. Violations are subject to the sanctioning regime under Law No. 29733, the Personal Data Protection Law.⁵²⁴⁷

Algorithmic Transparency

Peru's Data Protection Law does not contain a general right of algorithmic transparency and does not explicitly state the right to receive information about automated-decision systems or to object to a decision based solely on automatic data processing methods.⁵²⁴⁸ However, Article 23 on the rights of the data subject provides for the right not to be subjected to a fully automated decision with legal effects or affecting them significantly in some situations. The data subject also has the right to obtain information processed about him in publicly or privately administered databases, the way his data were compiled, the reasons for their compiling, and at whose request the compiling was done, as well as the transfers made or planned to be made of such data.⁵²⁴⁹

This framework now operates in parallel with the AI Act, which introduced transparency, explainability, and accountability standards for automated systems.⁵²⁵⁰ and risk-based classification of AI systems aligned with OECD principles and EU legislation. Article 25 details obligations for AI developers and implementers, requiring them to inform users in clear and accessible language about the system's purpose, functions, and decision-making capabilities, to label AI-generated content

Center for AI and Digital Policy

where relevant, and to provide explanations when AI decisions significantly affect individuals' rights.

These requirements mark one of the most comprehensive algorithmic transparency provisions in Latin America. While enforcement mechanisms and contestability procedures are still in early development, Peru's AI Act provides a legal foundation for algorithmic accountability. The Secretariat of Government and Digital Transformation is mandated to issue Algorithmic Transparency Guidelines and conduct oversight of compliance across sectors beginning in 2026.⁵²⁵¹

These requirements implement the RIPD Specific Guidelines for data protection in Artificial Intelligence Projects, "The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language, it will not be necessary to provide a complete explanation of the algorithms used or even to include them. The above always looking not to affect the user experience."⁵²⁵²

While Peru's National AI Strategy⁵²⁵³ highlights the development of a registry of AI algorithms in the public sector, and datasets used in use cases under its strategic objective of ethics, it remains unclear whether the registry will be publicly available.

Use of AI in Public Administration

The current AI National Strategy highlights AI's potential value creation not only for the private sector, but also for the public sector, which must meet the new demands of a digital citizenship.⁵²⁵⁴ However, large economic groups have been the main driver of adoption of AI in Peru with fewer attempts made by the public sector. The Peruvian Public Sector AI Status Survey conducted in January 2021⁵²⁵⁵ revealed that only 39 out of 488 public institutions use AI. Common uses include prediction of criminal acts, facial recognition, risk management and virtual assistants with most of this use attributed to local governments.

The Presidency of the Council of Ministers launched the program TranformaGob⁵²⁵⁶ in October 2024 to train government officials on AI and its use in Public Administration. The program stems from a collaboration of the Secretariat of Government and Digital Transformation, the Presidency of the Council of Ministers, the organization Asuntos del Sur, and the National Foundation for Democracy (NED). 534 Public Servants from 25 Local governments signed up for the program and 19 projects for digital innovation involving Artificial Intelligence were presented. The Presidency of the Council of Ministers announced in September 2025 that over 5,000 public servants from 170 public entities had been trained through a Capacity Building Program for Government and Digital Transformation. The training focused upon the use of new digital tools, including Artificial Intelligence, to optimize processes, improve services, and leverage technology for the benefit of citizens⁵²⁵⁷

As a member of the Latin American Centre for Development Administration (CLAD), Peru approved the principles in the Ibero American Charter on Artificial Intelligence in Civil Service in late 2023.⁵²⁵⁸ The guiding principles include: human autonomy; transparency, traceability and explainability; accountability, liability and auditability; security and technical robustness; reliability, accuracy, and reproducibility; confidence, proportionality, and prevention of damage; privacy and protection of personal data; data quality and safety; fairness, inclusiveness, and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection. The Charter calls on member states to create policies and laws to require the assessment of the impact of AI systems on human rights and freedoms and the registration of algorithms to “anticipate risks, prevent undesirable effects and ensure its proper implementation.”⁵²⁵⁹ Peru’s AI Act aligns with the principles and risk classification proposed in the CLAD Charter, including establishing prohibited uses or red lines.

Facial Recognition

Peru has deployed facial recognition technology across various sectors. On July 14, 2022, Peru's Victoria Municipality was sanctioned by the Personal Data Protection Authority (ANPD) for not complying with security measures in the use of surveillance cameras.⁵²⁶⁰ The sanction followed an investigation initiated as a result of a complaint filed by civil society organizations Access Now and Hiperderecho in 2019 regarding the existence of facial recognition cameras in Victoria, which the organizations alleged were processing biometric data in contravention of Peru's Personal Data Protection Law. Although the investigation concluded that facial recognition software was not in use, and the cameras were used only to record and store images and videos to identify criminal activity reported to the National Police of Peru, the Authority sought to put corrective measures in place to address dangers that may arise in future because of the personal data captured and stored in the municipality's biometric system.⁵²⁶¹

Additionally, the director of ANPD administered a fine⁵²⁶² to the municipality for failing to add safeguards in place to secure the images captured and for failing to provide information on how the images would be stored, and which entities could access them. The resolution also found that the municipality's conduct fell short of provisions in the Personal Data Protection Law relating to verification and management procedures for personal information. The municipality had 55 days to put in place appropriate documentation concerning the management of privileges and periodic verification of those privileges for the processing of personal data carried out within the video surveillance system.

The ANPD announced in October 2020 that it had launched an investigation into the National University of San Marcos, following a complaint alleging that the personal data of applicants was inadequately processed, and biometric data was collected. In the event that facial recognition technology was used in the university's admissions process, the ANPD would administer a fine in accordance with the Personal Data Protection law.⁵²⁶³ At the time of publishing, the ANPD has yet to release a final report on this investigation.

RecFaces announced in 2024 that its Id-Guard facial recognition solution would be implemented at Jorge Chávez International Airport in Lima, Peru. This major airport, which handles over 20 million passengers annually, will use the technology to enhance security by monitoring potential threats and suspicious individuals. The implementation aims to strengthen the overall security structure while simplifying work processes for security personnel and could have implications for customs control, privacy protection, and border processing of citizens, tourists, migrants, and asylum seekers.⁵²⁶⁴ Peru's National Superintendency of Migration officially implemented the system in January 2025.⁵²⁶⁵

Peru has experienced both advancements and concerns in its adoption of biometric and AI-driven identification technologies. In May 2024, *Worldcoin* launched biometric enrolment in the country, aiming to expand digital identity verification in Latin America. The ANDP conducted an audit/inspection visit and has initiated an investigation into the scanning and collection of people's iris data in exchange for cryptocurrencies.⁵²⁶⁶

The Peruvian National Identification and Civil Status Registry (*Registro Nacional de Identificación y Estado Civil*, RENIEC), which issues the country's digital forms of identification faced criticism and internal strikes over repeated failures in its biometric verification systems.⁵²⁶⁷ In February 2025, RENIEC selected the Swiss company Tech5 to develop its new facial biometrics platform, signaling the government's continued investment in digital ID infrastructure.⁵²⁶⁸

Bitel, a telecom in Peru, invested significantly in smart city initiatives, notably in Trujillo's District Municipality of Salaverry, deploying advanced facial

recognition and AI-powered surveillance systems aimed at enhancing public safety, urban services, and traffic management.⁵²⁶⁹ The project integrates a Video Management System (VMS) and an intelligent operations center (IOC) software to enable real-time data analysis and response. Bitel's collaboration with the Municipality of Lima also introduced a \$500,000 smart city system utilizing facial recognition to bolster crime detection and response. Further pilots in cities like Chota and Moche reflect a broader trend of adopting biometric surveillance technologies to address public security challenges. However, these implementations raise critical concerns about compliance with Peru's Personal Data Protection Law, emphasizing the need for robust safeguards and transparent data management practices to protect citizens' rights.

Disinformation

Peru signed the Community of Latin American and Caribbean States (CELAC) Buenos Aires Declaration in January 2023, through which the 33 countries pledged to deepen integration, climate action, democratic institutions, and multilateralism.⁵²⁷⁰ The signatories recognized disinformation and the visible increase in cyber-attacks, including those through artificial intelligence and the use of algorithms, as generating risks to the stability of the essential infrastructure of States and companies and to the well-being of individuals. Furthermore, the signatories agreed that disinformation on social networks can create parallel realities and induce political radicalization, creating a threat to democratic values and the rule of law, all leading to the need to expand cooperation and coordination among States to advance in the fight against disinformation and illegal content on the Internet.⁵²⁷¹

The COVID-19 pandemic and the fake news “infodemic” that it created presented a real challenge for Peru as it was among the top 15 countries in the world in reported COVID-19 cases and second in Latin America, only after Brazil.⁵²⁷² The excessive and unfounded disinformation that spread on social media in Peru and other countries hindered an appropriate public health response.

The American Journal of Tropical Medicine and Hygiene highlighted the Peruvian government's response to the spread of disinformation and stated that

<https://www.ajtmh.org/view/journals/tpmd/103/2/article-p583.xml>

disinformation about COVID-19 that occurred at the beginning of the pandemic became almost non-existent after the Ministry of Justice and Human Rights (MJDH) of Peru announced on April 8, 2020 via Twitter that “persons who share fake news and misinform others to obtain a benefit or to perturb the public tranquility can be sanctioned with a prison sentence.” The Ministry urged people to share only official information, accompanied by the hashtag “Don’t Spread #FakeNews.” It further indicated that those who create and/or share false information to benefit themselves or cause perjury to others will receive a 2- to 4-year prison sentence, and if the fake news causes panic and perturbs the public tranquility, the sentence may be 3–6 years. Peru became the first country in Latin America to implement prison sentences for creating and disseminating fake news.

To evaluate the legitimacy of MJDH’s statement, the organization Enfoque Derecho interviewed Peruvian lawyers. In conversation with César Landa, professor of Constitutional Law of the Catholic University of Peru and former President of the Constitutional Court, he concluded: “In this sense, in the context of COVID-19 pandemic, given that we are facing a situation of danger and threat, the dissemination of untruthful information is not a legitimate exercise of the right to freedom of expression or information.” Landa stressed that “such ‘news’ seeks to generate distress and disrupt public order. Thus, this type of information, which is practically inciting crime rather than protest, is obviously condemned by our constitutional legal system.”⁵²⁷³ This approach was widely applauded, as it appeared to result in a dramatic drop in fake news accounts.⁵²⁷⁴

Peru’s AI Act incorporates provisions to control disinformation generated by Artificial Intelligence (AI) through article 25 based on the obligation to indicate or make visible the labeling of the content or services generated by AI.⁵²⁷⁵ Article 23 forbids the introduction of AI actions intended or designed to enable or facilitate the persuasive or manipulative automated control of the user’s behavior through deceptive means intended to circumvent the overlays of the user’s cognitive, and emotional socio-economic weaknesses.

Center for AI and Digital Policy

Environmental Impact of AI

Peru has demonstrated support for the ethical, responsible, and human-centric use of AI in favor of global goals such as clean water, affordable and clean energy, sustainable cities and communities, responsible consumption and production, climate action, life below water, and life on land⁵²⁷⁶ through commitments to climate action in the CELAC Buenos Aires Declaration⁵²⁷⁷ and through sponsorship of the UN Resolution on Safe, Secure, and Trustworthy AI.⁵²⁷⁸ Peru explicitly incorporated environmental sustainability as one of the guiding principles of AI governance through the AI Act.⁵²⁷⁹ The AI Act promotes the use of AI for sustainable development, including climate resilience, biodiversity monitoring, and efficient resource management, while encouraging responsible use of energy-intensive AI infrastructure.

Lethal Autonomous Weapons

At the 77th UN General Assembly First Committee meeting in October 2022, Peru joined 69 other countries to endorse a joint statement on autonomous weapons systems. Peru stated that “Progress in military technology towards increasing autonomy has led us to a scenario where machines have the power and discretion to put an end to human life. This is morally unacceptable, but still uncertain in legal terms. LAWS are of great concern to humanity; they call for a legal and political response, which is urgent, from the international community. For Peru there is no other way than establishing legally binding prohibitions. Regulation through a new treaty is the most effective way of dealing with the increasing uncertainty about what is or is not acceptable for the increasingly complex systems of autonomous weapons.”⁵²⁸⁰

The joint statement addressed the need for “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations, and constraints.” “We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (IHL), including

Center for AI and Digital Policy

through maintaining human responsibility and accountability in the use of force,”⁵²⁸¹ declared the States. Peru voted in support of the December 2023 UN General Assembly Resolution 78/241 on lethal autonomous weapons systems. Resolution 78/241 stressed the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems” and requested a report of members’ views on LAWS.⁵²⁸² Peru’s submission to the report reiterated the need for international legal instruments to regulate autonomous weapon systems.⁵²⁸³

Peru endorsed the Belén Communiqué in February 2023,⁵²⁸⁴ along with 30 other countries from Latin America and the Caribbean. The Communiqué calls for “urgent negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force. On this occasion, Peru issued a statement affirming the country’s commitment to multilateralism, disarmament, and non-proliferation, with the defense of international law—including international human rights law—as well as with the purposes and principles of the Charter of the United Nations.⁵²⁸⁵

Peru also endorsed the summary by the Chair of the 2024 Vienna Conference Humanity at the Crossroads: Autonomous Weapons Systems and the Challenge of Regulation in April 2024.⁵²⁸⁶ The Chair’s Summary highlighted the commitment to “work with urgency and with all interested stakeholders for an international legal

instrument to regulate autonomous weapons systems.”⁵²⁸⁷ The Vienna Conference hosted representatives from more than 144 states, UN international and regional organizations, academia, industry, parliamentarians, and civil society to discuss the challenges and legal, ethical, and humanitarian implications of AWS and potential avenues to address them.

Peru’s AI Act permits AI systems for national defense and security when systems comply with principles of fundamental rights protection, non-discrimination, security, proportionality, reliability, oversight and accountability.⁵²⁸⁸ The Secretariat of Government and Digital Transformation coordinates with the Ministry of Defense on AI-based systems development for national security and defense.

AI Literacy

The National Strategy for AI highlights digital literacy, including preparation for and training in AI, as a key priority.⁵²⁸⁹ A Digital Ecosystem Country Assessment by USAID noted a number of contrasts in Peru’s digital ecosystem, highlighting both sustained advances in digital literacy but also challenges around digital divides.⁵²⁹⁰

The Secretariat of Government and Digital Transformation launched a National Digital Talent Platform, offering a range of free AI training from 2023.⁵²⁹¹ The Ministry of Labor and Employment Promotion that CAPACÍTA-T, the free job-training platform, would implement courses on Artificial Intelligence.⁵²⁹² The 2025

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Regulations for the AI Law include digital literacy and AI skills across all stages of personal development as a guiding principle, enabling individuals to make informed decisions around their use of AI. This includes teacher training and the creation of research and development laboratories in universities and innovation centers.⁵²⁹³ The Inter-American Development Bank is also providing funding for the Peruvian Digital Transformation with Equity project, which aims to promote digital citizenship, particularly among vulnerable and marginalized communities.⁵²⁹⁴ The draft National AI Strategy 2026–2030⁵²⁹⁵ proposes to continue these efforts by identifying three priority issues in relation to digital literacy moving forward: access, quality of training and relevance of training, and closing equity gaps.

Human Rights

Peru has ratified 12 of the 14 UN human rights treaties, conventions, and protocols based on the Universal Declaration of Human Rights.⁵²⁹⁶ Freedom House rated Peru as “Partly Free” with a score of 67/100 with 28/40 for political rights and 39/60 for civil liberties in 2025.⁵²⁹⁷ According to Freedom House, Peru’s government system facilitates peaceful transfers of power though public trust in the system weakened due to corruption scandals. The ousting of President Pedro Castillo in 2022 triggered large-scale, even violent protests that impacted Peru’s governing institutions. Indigenous groups face difficulties due to discrimination and a lack of political representation.

In 2022, Transparency International scored Peru at 36/100 on the Corruption Perceptions Index (CPI) and ranked the country 105 out of 180 countries for being able to stop corruption.⁵²⁹⁸ Peru’s score has fallen steadily since 2022, reaching

30/100 and ranking 130 of 182 countries in 2025.⁵²⁹⁹ The CPI is the most widely used global corruption ranking in the world. It measures how corrupt each country's public sector is perceived to be, according to experts and businesspeople.

OECD / G20 AI Principles

Peru, alongside 41 other countries, adopted the OECD Principles on Artificial Intelligence in 2019, continue to support the AI Principles as updated in 2024.⁵³⁰⁰ Peru's collaboration with the Inter-American Development Bank's fAIr LAC initiative aligns with OECD AI Principle 2.5 regarding international co-operation for trustworthy AI.⁵³⁰¹ OECD recognized the fAIr LAC initiative's aim to promote the responsible and ethical use of AI and improve the public services e.g., education, health, and social protection, in Latin American and Caribbean (LAC) countries.⁵³⁰² The OECD, in partnership with the Development Bank of Latin America (CAF) assessed Peru's draft National AI Strategy in 2021 as part of a report on the Strategic and Responsible Use of Artificial Intelligence in the Public Sector of Latin America and the Caribbean.⁵³⁰³

The OECD recognized Peru's progress implementing the OECD Recommendation at a Ministerial Meeting in 2024.⁵³⁰⁴ The Report highlighted the advance in AI capabilities with the founding of a National Centre for Innovation and AI as part of a broader initiative to foster collaboration between academia, industry, and government to promote research, development, and innovation in AI. The Report also recognized that Peru is actively linking its data policies with AI strategies, focusing on the creation of platforms and data infrastructure to centralize public sector data.

Peru's AI Act embeds principles including transparency, accountability, human oversight, and sustainability principles into the governance framework to

UNESCO and Peru signed an agreement in May 2024 to implement the Readiness Assessment Methodology (RAM), which is a key tool intended to help Member States implement the UNESCO Recommendation on the Ethics of AI.⁵³¹² This was followed by the launch of an industry consultation in October 2024, seeking inputs on the challenges, opportunities and proposals to improve the AI ecosystem in Peru, which takes reference from the UNESCO RAM methodology of assessing readiness for AI.⁵³¹³ UNESCO's profile on Peru,⁵³¹⁴ based on the RAM report, highlighted Peru's "early and significant normative advances in AI governance" with the general-scope AI law enacted in 2023 and established as a "comprehensive regulatory framework for the responsible development and use of AI"

UNESCO's 2025 consolidated report on implementation of the Recommendation indicates that Peru had submitted a report on its, using a UNESCO questionnaire mirroring the RAM.⁵³¹⁵

Evaluation

Peru's Supreme Decree No. 115-2025-PCM provides a regulatory framework for the responsible development, implementation, and use of AI in Peru with an aim to foster AI for sustainable development. The comprehensive AI framework, which underwent a process of public consultation, and the designation of the Secretariat of Government and Digital Transformation as the national authority complements the modernized data protection regime under the National Data Protection Authority (ANDP) to provide protections for citizens' privacy. These developments and international collaboration mark progress toward implementing the OECD AI Principles and the UNESCO Recommendation on the Ethics of AI. Signing the Framework Convention on AI and Human Rights, Democracy, and the Rule of Law would elevate Peru's national progress on an international stage. The country's record on corruption remains a concern, especially around the rule of law.

Philippines

In 2025, the president approved the National AI Strategy for the Philippines while the public consulted on national standards for AI Literacy in information and communications technology. The country also continued to participate in international discussions on AI governance such as UNESCO meetings at the AI Action Summit.

National AI Strategy

Two Philippines executive offices, the Department of Trade and Industry (DTI) and Department of Science and Technology (DOST), developed roadmaps for AI development and governance for the Philippines in 2019–2021, with updates in 2024–2025. The DTI National AI Strategy aims to make the Philippines a regional AI “powerhouse” and Center of Excellence in Artificial Intelligence.⁵³¹⁶ The updated National AI Strategy Roadmap 2.0 (NAISR 2.0) emphasizes the integration of recent technological advancements, including Generative AI, and addresses concerns such as ethics and governance.⁵³¹⁷ The NAISR 2.0 established the Center for AI Research (CAIR) as the nation’s first AI hub aimed at promoting socio-economic research and development (R&D) to improve the citizens’ lives and enhance the country’s competitiveness in science and technology. The Philippines aspires to increase R&D spending to 1% of GDP, focusing on upskilling and reskilling the workforce to meet the future demands of AI-driven economies.

The Philippines Council for Industry, Energy and Emerging Technology Research and Development (PCIEERD) led the development of the DOST roadmap and sectoral plan for AI and information and communications technology.⁵³¹⁸ DOST’s updated National AI Strategy for the Philippines (NAIS-PH) “envision[s] a unified national strategy where AI powers inclusive innovation, strengthens governance, uplifts communities, and drives globally competitive industries.” The strategy phases five strategies through 2028: infrastructure, workforce, innovation,

⁵³¹⁶ Department of Trade and Industry, *National Artificial Intelligence Strategy for the Philippines* (2020), <https://openresearch-repository.anu.edu.au/items/5b963765-4f82-4604-bb92-bff03ebbac5a>; Kris Crismundo, *DTI Eyes PH as AI Powerhouse in Region*, Philippine News Agency (May 5, 2021), <https://www.pna.gov.ph/articles/1139198>

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

ethics and policy, and deployment.⁵³¹⁹ The DOST developed the NAIS-PH through over two months of consultation with experts from government agencies, the private sector, and academia.⁵³²⁰

The Filipino Congress has introduced several bills since 2021 to regulate the development and use of AI and to protect and prepare citizens to live and work with AI systems. All remain with related committees, including Science and Technology, Information and Communications Technology, Labor and Workforce, and Education and Culture.⁵³²¹ The first Artificial Intelligence Development Act in the House of Representatives provided guidance for establishing a national strategy to develop AI and create a National Center for AI Research.⁵³²² The bill sought to support and institutionalize the DTI's first Artificial Intelligence Roadmap. The updated NAISR 2.0 and Center for AI Research in 2024–2025 achieved this goal through the executive departments.

Bills introduced in the Senate⁵³²³ and House of Representatives⁵³²⁴ in 2024 and 2025 align broadly on AI governance with proposals to create one or two entities to advise government, companies, and public on the economic impacts of AI systems, maintain a registry, establish a code of ethics, and serve as the regulatory and supervisory authority over AI development, application, and use. A council or board would also advise on policymaking. The Senate and House of Representatives bills also converge with minor differences on Guiding Principles, which align with the OECD AI Principles, and an AI Bill of Rights for every Filipino, including Right to

protection against unsafe and ineffective AI systems, Right against algorithmic discrimination, Right to Privacy, Right to Know, and Right to Remedy.⁵³²⁵

Public Participation

There is some evidence of a public consultation process in the development and implementation of the country's national AI policies, largely through in-person meetings and consultations. Government agency websites do not have full-text policies or strategies such as the National AI Strategy for the Philippines or Roadmap 2.0 readily accessible, though this difficulty could be the result of technology failures. The Philippines is progressing on the Open Government Partnership Action Plan to improve public oversight and participation across the government.⁵³²⁶

Pursuant to the Inclusive Innovation Strategy, the Department of Trade and Industry hosted a virtual session open to the public to “bring together participants from the government, industries, and academia not only to deliberate on matters of common interest concerning AI but more so to bring everyone into the fold as we embrace and adapt to our new economic realities.”⁵³²⁷

The National Privacy Commission's website includes opportunities for the public to vocalize data-related concerns through its AskPRIVA tool and includes contact information to file complaints or to contact relevant authorities.⁵³²⁸

The Civil Service Commission (CSC) and the Department of Information and Communications Technology hosted a public consultation and released a Joint Memorandum Draft to discuss guidelines to ensure responsible use of AI in the government in April 2024.⁵³²⁹ The event sought to “gather valuable inputs from various stakeholders, ensuring the promotion of responsible use of AI in government agencies while prioritizing transparency, fairness, and accountability.”

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Most recently, the Department of Information and Communications Technology (DICT) conducted a public consultation on the proposed National ICT Competency Standards (NICS) for AI Literacy.⁵³³⁰

Data Protection

The Philippines established the Data Privacy Act of 2012 (DPA) “to protect the fundamental human right of privacy, of communication while ensuring free flow of information to promote innovation and growth.” The Act also ensures that “personal information in information and communications systems in the government and in the private sector are secured and protected.”⁵³³¹ Rule XIII of the DPA IRR imposes penalties, including imprisonment and fines, for violations of the Data Privacy Act.⁵³³²

The Act mandated the creation of the National Privacy Commission, an independent body, “To administer and implement the provisions of [the Data Privacy Act of 2012], and to monitor and ensure compliance of the country with international standards set for data protection.”⁵³³³ The Commission was established in March 2016 and is required to make rules, provide advice and guidance, and public education, in addition to its compliance, monitoring, and enforcement duties.⁵³³⁴ By 2018, the NPC had “a total of 23,081 registered Data Protection Officers (DPOs). The number of privacy-related cases the agency received increased by 145% from 2017 to 2018.”⁵³³⁵

The NPC issued the Advisory on the Adoption of International Data Protection Standard based on ISO/IEC standards in 2022,⁵³³⁶ recommending adoption for information and communication technology (ICT) systems or services where privacy controls are required for personal data processing. The framework

Center for AI and Digital Policy

aligns with international privacy principles including Consent and choice; Purpose legitimacy and specification, Collection limitation, Data minimization, Use, retention, and disclosure; Accuracy and quality; Openness, transparency, and notice; Individual participation and access; Accountability; Information security; and Privacy compliance.

The National Privacy Commission has also provided various guidelines on the protection of personal data related to digital technologies. The Guideline on Deceptive Design Patterns clarifies for information controllers data subject's rights to consent and general privacy principles regarding deceptive design patterns and their impact on lawful personal data processing.⁵³³⁷ The NPC issued additional guidelines in 2024, including on the application of the DPA to personal data used to train AI systems.⁵³³⁸

The NPC co-sponsored the Global Privacy Assembly (GPA) 2018 Resolution on AI and Ethics,⁵³³⁹ 2020 GPA Resolution on AI and Accountability,⁵³⁴⁰ and 2022 GPA Resolution on Facial Recognition.⁵³⁴¹ However, the NPC did not endorse the 2023 GPA Resolution on Generative AI.⁵³⁴²

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Algorithmic Transparency

The Philippines has no national AI legislation guaranteeing algorithmic transparency, though the Data Privacy Act (DPA) mandates “adherence to the principles of transparency, legitimate purpose, and proportionality.”⁵³⁴³ The DPA also includes provisions related to transparent automated processing. Notably, Section 16 provides the right for citizens to be informed whether personal information is being or has been processed, with the right to information regarding the “Methods utilized for automated access, if the same is allowed by the data subject, and the extent to which such access is authorized,” and the right “to access, correction, as well as the right to complain to the Commission.”⁵³⁴⁴

The Philippine Digital Workforce Competitiveness Act (or Implementing Rules and Regulations of Republic Act n. 11927) launched in 2023 addresses algorithmic transparency, including the right to refuse AI-driven evaluations and to request an alternative method.⁵³⁴⁵ The NPC Guidelines on the application of the DPA of 2012 to AI Systems Processing Personal Data provide for algorithmic transparency by requiring organizations deploying AI systems to clearly disclose the nature, purpose, and extent of personal data processing; explain the factors and methods influencing automated decisions; and provide mechanisms for human oversight and redress.⁵³⁴⁶

The National Privacy Commission updated the requirement on registration of automated decision-making systems in the NPC Circular No. 2022-04.⁵³⁴⁷ The Circular establishes the framework for the registration of data processing systems in the Philippines and imposes other requirements to ensure that personal information controllers (PICs) and personal information processors (PIPs) keep a record of their data processing activities, make information about data processing systems operating in the country accessible to both the Commission and data subjects, and promote transparency and public accountability in the processing of personal data.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Separate but closely aligned AI Regulation Bills, both of which include provisions establishing a right against algorithmic discrimination, are making their way through the Philippines House of Representatives⁵³⁴⁸ and the Senate.⁵³⁴⁹

Biometric Identification

The government is in the process of registering all Filipino citizens in its national ID system, re-branded as the National ID System (formerly PhilSys) in 2025 to encourage public acceptance.⁵³⁵⁰ The system collects biometric data, including a front-facing photograph, iris scan, and fingerprints. Infants will initially be registered using a photograph with full biometrics captured from age five. The Department of Information and Communications Technology (DICT) announced that 84 million citizens registered for the national digital ID under PhilSys, which has been used in 100 million transactions for public and private services as of early 2025.⁵³⁵¹

Law enforcement in the Philippines has also implemented and encouraged the use of real-time facial recognition software to identify “persons with Warrants of Arrest, High-Value Targets, and members of communist terror groups evading law enforcers.”⁵³⁵² According to Crizaldo Nieves, the regional director of the Cagayan Valley Police, all police will eventually have smartphones that enable real-time tracking, and “appropriate awards [will be given] to the first 10 police stations that will affect an arrest through this technology.”⁵³⁵³

Environmental Impact of AI

In response to the growing environmental concerns associated with AI and digital technologies, the Philippines is actively pursuing a “twin transition” that

⁵³⁵³ Ibid

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

encompasses both digital transformation and environmental sustainability.⁵³⁵⁴ Recognizing these intertwined challenges, the Philippine government prioritizes sustainable consumption and production patterns to ensure that technological advancement does not come at the expense of environmental health, according to policies reflected in the Philippine Development Plan 2023–2028 and the National Innovation Agenda and Strategy Document. In addition, the University of the Philippines, a public university, has published its own Principles for Responsible and Trustworthy Artificial Intelligence, which incorporate references to environmental sustainability. AI should be evaluated in terms of its impacts on sustainability. AI models and tools must minimize risks to the environment. Developers should use computing resources more efficiently.

In addition, there have been growing concerns around the significant energy usage by AI data centers. The Philippines faces an increasing demand for energy-intensive data processing infrastructure, which further accentuates the need for sustainable practices within the AI sector. The substantial growth in data center operations, driven by AI developments, emphasizes the urgency of adopting energy-efficient technologies and leveraging renewable energy sources to mitigate potential environmental impacts.⁵³⁵⁵ As a consequence, the Department of Energy (DoE) asked hyperscale data center developers to submit their plans to draw power from renewable sources to properly gauge the industry’s demand, noting that all (government entities) are subject to energy audit within the current year and every three (3) years thereafter,” according to the DoE’s Administrative Order No. 15.⁵³⁵⁶

Lethal Autonomous Weapons

The Philippines supports a legally binding treaty to ban autonomous weapons systems that violate international humanitarian law and require countries to regulate other systems to ensure “meaningful human control is retained” across the lifecycle in the UN, such as the Secretary-General Report on Lethal Autonomous Weapons Systems (LAWS),⁵³⁵⁷ and Group of Government Experts (GGE) under the

framework of the UN Convention on Conventional Weapons (CCW).⁵³⁵⁸ The Minister of Foreign Affairs reiterated the call for a rights-based governance regime on LAWS in the Human Rights Council.⁵³⁵⁹ The Secretary of Foreign Affairs called on the UN Security Council to assist in developing guiding principles on the military use of AI, citing the Security Council’s “distinct capability to adopt measures that could prevent the exploitation of AI.”⁵³⁶⁰

Domestically, the Philippines has taken steps to define LAWS and prohibit their use. The House draft Artificial Intelligence Act introduced in September 2024 defines LAWS as “weapons that use artificial intelligence to identify, select, and kill human targets without human intervention.” The Act also prohibits LAWS, stating that “It shall be unlawful for any person to use any AI system that shall cause unnecessary, unjustifiable and indiscriminate moral or pecuniary damage to individuals. The use of lethal autonomous weapon systems (LAWS), creation and proliferation of ‘deep fake’ videos, as well as any misuse of AI systems, are hereby prohibited.”⁵³⁶¹

AI Literacy

The Philippines government has supported AI literacy and worker development through private-public partnerships and coordinated efforts through the Development Academic of the Philippines and the Smarter Philippines through Data Analytics, Research and Development, Training and Adoption (SPARTA) program launched in 2022.⁵³⁶² In 2025, the Philippines launched a nationwide initiative on detailed plan by the Private Sector Advisory Council (PSAC) to “boost AI literacy and prepare young Filipinos for the demands of an increasingly AI-driven global

economy.”⁵³⁶³ The Department of Education (DepEd) partnered with Microsoft to scale AI-powered tools across public schools in an effort to enhance personalized learning and equipping students and teachers with digital competencies.⁵³⁶⁴

The Department of Information and Communications Technology (DICT) conducted a public consultation in July 2025 on the proposed National ICT Competency Standards (NICS) for AI Literacy, signaling a structured approach to embedding AI skills in national frameworks.⁵³⁶⁵ The Department of Science and Technology (DOST) hosted a UNESCO-led AI Literacy Training in November 2025 aimed at improving civil servants’ digital competencies.⁵³⁶⁶ The training responded to findings in the Readiness Assessment Methodology (RAM) that civil servants’ limited digital competencies hindered their ability to leverage the potential of AI.

Human Rights

The Philippines has adopted the Universal Declaration of Human Rights.⁵³⁶⁷ However, the country’s human rights implementation record is highly contested. Freedom House ranks the country as “Partly Free” in the Freedom in the World report, earning a middling score of 58/100.⁵³⁶⁸ The report explains that the “rule of law and application of justice is haphazard and heavily favor political and economic elites” in the country.

Amnesty International reported instances of harassment, detention, unjust charges, and extrajudicial executions of human rights defenders and political activists, as well as other human rights violations.⁵³⁶⁹ The Human Rights Defenders

Protection Act, enacted in 2025 to safeguard activists and provide legal frameworks against unjust arrests and extrajudicial killings represents a step towards addressing some of these violations.

The SIM Registration Act enacted in 2022 required users to register all mobile subscriber identity module (SIM) cards with public telecommunications entities. Privacy advocates raised concerns about the potential for abuse of the massive data collection mandated by the new regulation.⁵³⁷⁰

AI Safety Summit

In November 2023, the Philippines participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁵³⁷¹ The Philippines thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible for the good of all.

The Philippines took part in sideline meetings at the Paris AI Action Summit in February 2025. The AI Action Summit 2025 moved from an exclusive focus on safety to one on “action.”⁵³⁷²

OECD / G20 Principles

The Philippines is a member of neither the OECD nor the G20, and the national AI roadmap makes little direct mention of the OECD or G20 AI principles. However, as part of the Association of Southeast Asian Nations (ASEAN), the Philippines participates in the OECD Southeast Asian Regional Programme and has adopted the OECD AI Principles. A joint memorandum on principles and guidelines for an ethical and trustworthy use of AI in the government cites the country’s commitment to the OECD principles that “AI should be innovative and trustworthy

Center for AI and Digital Policy

and respect human rights and democratic values.”⁵³⁷³ Despite having no official endorsement of these international principles,⁵³⁷⁴ comments from leaders and provisions from AI roadmap embody a commitment to OECD principles for human rights, inclusive growth, and transparency.

Council of Europe AI Treaty

The Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law was opened for signature by member and non-member States on September 5, 2024.⁵³⁷⁵ The Philippines did not participate in the elaboration of the treaty and will be eligible to accede to the treaty only after it enters into force.⁵³⁷⁶

UNESCO Recommendation on AI Ethics

As a member of UNESCO, the Philippines adopted the Recommendation on the Ethics of Artificial Intelligence in November 2021.⁵³⁷⁷ The Philippines completed the UNESCO Readiness Assessment Methodology (RAM).⁵³⁷⁸ The report highlights the country’s initiatives in capacity building and addressing the skills gap as well as initiatives to create a legal and regulatory framework for AI and digital governance.⁵³⁷⁹ The report cites the Philippines participation in global discussions as a positive sign. DOST Secretary Solidum’s statement at the UNESCO ministerial meetings on AI Governance at the AI Action Summit exemplified this commitment,

Solidum emphasized the importance of integrating AI policy goals into national policies and acknowledged the importance of UNESCO's assessment function.⁵³⁸⁰

Evaluation

The Philippines continues to make strides in national AI policy, following through on commitments made in response to the Readiness Assessment Methodology (RAM).⁵³⁸¹ AI is in use across several initiatives in the country, including law enforcement,⁵³⁸² healthcare,⁵³⁸³ autonomous vehicles, infrastructure, and data processing.⁵³⁸⁴ The diligent work of the Philippines National Privacy Commission on domestic issues and at the Global Privacy Assembly provides a strong base for the protection of fundamental rights and democratic values.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Poland

In 2025, Poland launched the AI Policy 2030, an update to the 2020 version. Legislation to implement the EU AI Act passed through public consultation and is moving through the legislature while the AI Development and Security Commission, the national AI authority became operational.

National AI Strategy

The Polish Council of Ministers⁵³⁸⁵ adopted the Policy for the Development of Artificial Intelligence in Poland in 2020⁵³⁸⁶ to support and complement the work of the EU and the OECD in AI. The 2020 Policy establishes goals and actions for Poland in the field of AI in the short-term (until 2023), medium-term (until 2027), and long-term (after 2027) along six key thematic areas: AI and society; AI and innovative companies; AI and science; AI and education; AI and international cooperation; and AI and the public sector. The Ministry of Digital Affairs (*Ministerstwo Cyfryzacji*) released a draft of an updated Artificial Intelligence Development Policy in Poland until 2030 (AI Policy 2030),⁵³⁸⁷ which builds on the 2020 Policy for the Development of AI. The draft AI Policy 2030 provides guidelines for the development of an AI ecosystem where AI is trustworthy and implemented under the principles of safety and explainability. The draft policy also prescribes for AI development and deployment under ethical standards, the protection of privacy and consumer rights, and prohibition of discrimination.

The 2020 Polish strategy provides strategic guidance and identifies some key policy initiatives to develop a holistic AI ecosystem.⁵³⁸⁸ The main objectives are: Reforming the educational system and providing lifelong learning opportunities in AI-related fields; Encouraging growth and innovation of AI companies through dedicated support in AI research, including the provision of sufficient financial

⁵³⁸⁵ Komitet Rady Ministrów do Spraw Cyfryzacji (KRMC). The KRMC is an auxiliary body of the Council of Ministers and the Prime Minister. The Council of Ministers serves as Poland's Cabinet with the Prime Minister acting as the President of the Council of Ministers.

resources; Increasing national and international partnerships in AI; Creating a data ecosystem with trustworthy and high-quality data and increased data exchange mechanisms. The Polish Council of Ministers Committee for Digital Affairs oversees steering the implementation of the strategy and evaluating its implementation on a yearly basis.

The Polish strategy was drafted based on the 2018 Assumptions to AI Strategy in Poland.⁵³⁸⁹ The Assumptions states that Poland's approach to ethical and legal issues with AI should: be proactive in creating ethical standards and legislation; be inclusive and cooperative; consider the specific circumstances in Poland; be flexible; instate consistent supportive measures; engage in discussion and consultation; and be firm in response to violations of ethical and legal standards. The primary goals to be achieved listed in the Assumptions include developing transparent and effective mechanisms ensuring the protection of fundamental rights, gaining understanding of the social effects of AI, setting ethical standards, and creating high-quality legislation. The Assumptions identify dignity; freedom (described as including freedom to understand processes with which individuals interact and the making of free and independent decisions); privacy and data protection; equality; and justice as key fundamental rights and values for the development of a legal and ethical approach to AI in Poland. The Assumptions call for the development of an ethical impact assessment mechanism, particularly for AI projects supported by public funds and an oversight entity to monitor for rights protection.

To that end, in January 2022, an inter ministerial task force was established for the implementation of the AI Policy. The tasks of the Team included: giving opinions on implementation plans submitted by each minister, conducting ongoing monitoring and evaluation of the implementation work of the AI Policy and Preparing proposals for recommendations for the Council of Ministers Committee for Digital Affairs.⁵³⁹⁰ In February 2024, the Council of Ministers Committee for Digital Affairs set an advisory council for AI development with representatives from different stakeholders, to organize regular consultations with social partners and experts on AI issues, and to report on the progress and outcomes of the strategy.⁵³⁹¹

Center for AI and Digital Policy

Article 30 of the Polish Constitution—which protects the inherent and inalienable dignity of the person—forms the basis of the Policy approach. While Poland recognizes the importance of the Charter of Fundamental Rights and international human rights treaties in providing a foundation for ethical principles, the Policy suggests that Article 30 of the Polish Constitution provides broader protection.

The Polish government introduced a draft act to amend the act on the national cybersecurity systems. The amendments strengthen protection against AI-powered cyber threats and address emerging risks to enhance resilience in both the public and private sectors. The mandate risk management protocols and reporting for critical entities, which will enhance AI-based threat detection and response capabilities across various sectors. Additionally, increased supervisory powers enable more effective AI-driven monitoring, analysis, and intervention strategies, fostering a resilient cybersecurity environment that can rapidly address emerging threats in public and private sectors.⁵³⁹² As of November 2025, the act continues in the legislative process.

EU Digital Services Act

As an EU member state, Poland applies the EU Digital Services Act (DSA).⁵³⁹³ Poland established national oversight structures for DSA enforcement in 2025.⁵³⁹⁴ The President of the Office of Electronic Communications (UKE) was temporarily designated as Digital Services Coordinator in May 2025, charged with monitoring compliance by online platforms and address systemic risks such as algorithmic amplification and disinformation.⁵³⁹⁵ After amendments by deputies in the Sejm and Senate, legislation to implement the digital services act was passed to the President for signature at the end of 2025.⁵³⁹⁶ The new legislation names the UKE

competent authority charged with overseeing the DSA in most cases with the Chairman of the National Broadcasting Council in charge of that sector.⁵³⁹⁷

EU AI Act

As an EU member State, Poland is bound by the EU AI Act.⁵³⁹⁸ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.⁵³⁹⁹

After a round of public consultations through 2024, Poland issued an updated draft Act on AI to implement the EU AI Act in February 2025.⁵⁴⁰⁰ The updated draft expands composition for the Artificial Intelligence Development and Security Commission, charged as the market surveillance authority body for AI systems, to include representatives from specialized public institutions and strengthen the body's independence by limiting the number of ministerial representatives and having the Commission Chair appointed by the Sejm (deputies), rather than Prime Minister, and approved by the Senate. The updated draft would also create regulatory sandboxes and limit the circumstances for on-site inspections.⁵⁴⁰¹ The draft Act on AI Systems is still subject to further legislative steps. Still, the Commission on the Development and Security of Artificial Intelligence became operational in 2025 with a mandate to

coordinate conformity assessments, oversee AI system compliance, and liaise with EU authorities under the AI Act framework.⁵⁴⁰²

Public Participation

Documents relating to Poland's development of its AI policy are accessible on the internet through the public archive's website of the Government Legislation Centre.⁵⁴⁰³ The process that led to the drafting of the Assumptions to AI Strategy in Poland involved the participation of a broad range of stakeholders, from science, business, social organizations and public administration.⁵⁴⁰⁴ According to the government website, 46 entities took part in the consultation on the subsequent draft Policy document, the Artificial Intelligence Development Policy in Poland for 2019–2027.⁵⁴⁰⁵ The Ministry of Digital Affairs received approximately 1,000 proposals for change from nearly 200 individuals and representatives of science, business, local government, and non-governmental organizations and held consultation meetings in Warsaw, Katowice, and Łódź for the updated draft Artificial Intelligence Development Policy until 2030 (2030 AI Policy).⁵⁴⁰⁶ The Ministry published a summary of the consultations.⁵⁴⁰⁷

The Ministry of Digital Affairs has conducted consultations on the implementation of the EU AI Act, first, focusing on prohibited AI systems under Article 5.⁵⁴⁰⁸ Following these discussions, the Ministry published a revised national draft Act on AI Systems in February 2025, incorporating key measures such as

regulatory sandboxes, financial support, remote supervision, and a leniency mechanism.⁵⁴⁰⁹ This new version was issued after assessing the over-2,000 comments, opinions, and proposals submitted for the consultation by non-governmental organizations; experts in the innovation, research, science, and culture sectors; and ministries, offices, public institutions, and local governments.

Data Protection

As an EU Member State, Poland applies the General Data Protection Regulation (GDPR).⁵⁴¹⁰ The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market.”⁵⁴¹¹

The Polish Personal Data Protection Act (PDPA) entered into force with the GDPR in 2018, replacing the previous Personal Data Protection Act of 29 August 1997. Poland’s 2019 GDPR Implementation Act amended Polish sectoral laws, such as labor, consumer protection, insurance, banking or telecommunication laws, to ensure compliance with the GDPR.

Poland transposed the EU Data Protection Law Enforcement Directive (LED),⁵⁴¹² to ensure “that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”⁵⁴¹³ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.⁵⁴¹⁴

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

Poland is also a member of the Council of Europe and ratified the Council of Europe’s Convention 108⁺ for the protection of individuals with regard to the processing of personal data.⁵⁴¹⁵

The Polish data protection authority is called the Office of Personal Data Protection (*Urząd Ochrony Danych Osobowych*, UODO).⁵⁴¹⁶ In December 2022, President of the Personal Data Protection Office approved the first Polish code of conduct⁵⁴¹⁷ compliant with the GDPR. The code of conduct, developed by the Federation of Healthcare Employers’ Unions (FZPOZ), concerns the protection of personal data processed in small medical facilities. The Polish supervisory authority granted accreditation to RS Jamano, which will act as a monitoring body for the application of the code. The Polish DPA stated, “the purpose of the code of conduct is to ensure the protection of the personal data of patients and other persons in healthcare facilities. Certainly, the adopted code of conduct will not only help medical facilities to comply with the requirements of the GDPR but also raise awareness of data protection among patients. Raising awareness and broadening of knowledge of the role of personal data protection and building appropriate attitudes among both controllers and citizens is a process in which the Personal Data Protection Office is actively involved.”

The Polish UODO is a member of the Global Privacy Assembly (GPA) since 2002. The DPA co-sponsored the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence⁵⁴¹⁸ and the 2020 GPA Resolution on AI

regard to the processing of personal data by competent authorities for the purposes of the prevention, investigation, detection or prosecution of criminal offences or the execution of criminal penalties, and on the free movement of such data, and repealing Council Framework Decision 2008/977/JHA (Apr. 27, 2016), <https://eur-lex.europa.eu/eli/dir/2016/680/oj/eng>

Accountability.⁵⁴¹⁹ However, it did not endorse the 2022 GPA Resolution on Facial Recognition Technology⁵⁴²⁰ or the 2023 GPA Resolution on Generative AI.⁵⁴²¹

In March 2019, the Polish DPA fined Bisnode, a digital marketing company, €220,000 for not notifying data subjects it had acquired their personal data through data scraping methods. The data protection authority ordered the company to reach out directly to these individuals, stating that a notice on its website would not be sufficient notification. It is to be noted that the company had reached out to 679,000 persons whose email addresses it had access to but did not reach out directly to the data subjects in relation to the 5.7 million other records, which it had estimated would cost it €8 million.⁵⁴²²

The Polish Council of Ministers adopted the Draft Act on Data Management in October 2025,⁵⁴²³ aligning Polish law with EU data management regulations in the EU Data Governance Act (DGA). by establishing regulatory frameworks, designating responsible entities, and ensuring procedural compliance and data reuse for public sector data. The approach centers on regulating only those areas where the EU explicitly allows or requires Member State intervention. The Ministry of Digital Affairs will serve as the central information point for accessible data resources, supporting data re-use under DGA guidelines. To ensure compliance and proper oversight, the draft law designates the Minister of Digital Affairs as the primary appeals body for decisions on protected data re-use and the President of the Office for Personal Data Protection as the authority for data brokerage services and registration of data altruism organizations. These roles ensure that public sector data access, data brokerage, and data altruism activities comply with DGA standards.⁵⁴²⁴

Algorithmic Transparency

Poland is subject to the GDPR and Convention 108+. Poles have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.⁵⁴²⁵

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems⁵⁴²⁶ specifies that “contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines.”⁵⁴²⁷

In 2019, while taking steps to implement the GDPR, Poland provided all banking customers with the right to an explanation regarding their creditworthiness assessment when applying for a loan.⁵⁴²⁸ STIR—*System Teleinformatyczny Izby Rozliczeniowej*—is a government tool that analyses information collected by financial institutions to detect illegal activity. If suspicion arises, the financial institution can block a flagged account for 72 hours at the request of the tax authorities.⁵⁴²⁹ However, in practice, concerns have arisen over the years regarding financial institutions' non-compliance with legal requirements.⁵⁴³⁰ For instance, they often fail to provide timely, clear, and sufficient insight into their decision-making processes.”

On the other hand, algorithms are used by Polish courts to aid in their decision-making, such as when assessing cases or rendering judgments. While some believe AI will transform the justice system, others are concerned about the impact on judge's decisions as well as the lack of transparency and critical evaluation.⁵⁴³¹

⁵⁴²⁵ See Recital 63 and Article 22 of the GDPR. Article 9 c) of the Convention 108+ as well as Recital 77, *Explanatory Report, Convention 108+*, p. 24 (2018), <https://rm.coe.int/convention-108-convention-for-the-protection-of-individuals-with-regar/16808b36f1>

Unemployment Scoring System

In 2014, an unemployment scoring system was introduced in Poland. The profiling system was dividing unemployed people into three categories based on their responses to a series of questions asked during a computer-based interview.⁵⁴³² In a report on the issue, the NGO, Panoptykon, described the process as the computer system calculating the “employment potential” of a given person on the basis of the provided answers.⁵⁴³³ The amount of assistance the individual received was determined by their categorization. The Polish data protection supervisory authority expressed reservations regarding the use of profiling in this context. In particular, the DPA raised concerns regarding the protection of personal data and the absence of a transparent procedure to facilitate appeals.⁵⁴³⁴ In addition, concerns were raised by the Polish Supreme Audit Office (*Najwyższa Izba Kontroli*) and the Human Rights Commissioner. Eventually, Poland’s Constitutional Court found the system to be in breach of the Polish Constitution. The system was abolished by the end of 2019.⁵⁴³⁵

Use of AI in Judicial Decisions

Poland began an online arbitration court that incorporates AI techniques in 2020. Ultimately, *Polish Science* reports, “artificial intelligence will automatically prepare a ready draft judgment together with justification, processing for this purpose the data and positions of the parties collected in the course of the proceedings.”⁵⁴³⁶ The Ultima Ratio judgment has the same legal force as a decision before a common court.⁵⁴³⁷ The main legal issue raised by Ultima Ratio and other online arbitration tools is whether it is compatible with Article 47 of the EU Charter on Fundamental Rights, which guarantees the right to a fair trial before an independent and impartial court.

Center for AI and Digital Policy

The implementation of Ultima RATIO since 2024 has not shown desired results. In late 2024 the company partnered with Microsoft to create virtual legal assistants.⁵⁴³⁸ Another company, ENOIK,⁵⁴³⁹ has developed an AI-supported arbitration court specializing in payment disputes for entrepreneurs.

Environmental Impact of AI

Poland has included the government's commitment to sustainable objectives into its 2035 Digitization Strategy and policy documents on AI. The draft Digitization Strategy until 2035 sets specific objectives to be reached within this timeframe, and one of them concerns the support for sustainable development in connection with the green energy transition and broader EU goals.⁵⁴⁴⁰ Similarly, Poland's National AI Strategy recommends the implementation of trustworthy AI systems that enhance positive social change and support sustainable development as well as ecological responsibility.⁵⁴⁴¹

The Policy for the Development of AI in Poland fosters an AI ecosystem based on OECD principles such as inclusive and sustainable growth and well-being.⁵⁴⁴² The document highlights the opportunity offered by AI to positively impact the energy sector as well as climate and the environment at large by allowing the integration and stabilization of renewable energy sources and the efficient management of energy consumption.⁵⁴⁴³ Environmental protection, water retention, agriculture, and therefore land use are mentioned among the sectors for which the development of AI-based solutions is encouraged.⁵⁴⁴⁴ Although a dedicated action plan for implementing environmental sustainability objectives is not yet present in Poland's AI regulatory framework, the inclusion of sustainability goals within the

country's policy documents on AI establishes a positive foundation for advancing these objectives.

AI Literacy

The AI Policy 2030 identifies the need for capacity building in developing AI experts as well as digital competencies in students and workers as one of the challenges to seizing the potential of AI.⁵⁴⁴⁵ The policy frames Education, Training, and Competencies as part of the AI Ecosystem, noting that “it is crucial to continually raise public awareness, which will reduce unfounded fears and promote responsible and ethical use of AI.” (22) The Digital Transformation of Education Policy passed in 2025 defined the goals and outlined changes to core curriculum to prepare primary and secondary students and teachers to use artificial intelligence.⁵⁴⁴⁶ However, the plan appears to focus on using AI rather than sociotechnical implications.⁵⁴⁴⁷

The Ministry of National Education (*Ministerstwo Edukacji Narodowej*) reported a number of initiatives in the 2025–2026 school year to promote digital skills,⁵⁴⁴⁸ including education to address disinformation. Teaching training is a key component of these programs. The education ministry also links to a Ministry of Digital Affairs website where information to combat disinformation is available to a wider audience.

Lethal Autonomous Weapons

Poland was among the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such

as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (IHL), including through maintaining human responsibility and accountability in the use of force.”⁵⁴⁴⁹

At the 78th UN General Assembly First Committee in 2023, Poland voted in favor of resolution L.56⁵⁴⁵⁰ on autonomous weapons systems, along with 163 other states.⁵⁴⁵¹ The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Poland participated in the REAIM international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands in February 2023. At the end of the Summit, Government representatives, including Poland, agreed on a joint call for action stressing “the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”⁵⁴⁵² Poland also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁵⁴⁵³

The Responsible AI in the Military Domain (REAIM) Summit 2024 in Seoul, South Korea was a follow-up to the inaugural summit held in The Hague in 2023. The event aimed to forge a global consensus on the responsible development and use of AI in military applications. The “Blueprint for Action” adopted at the summit

provides a roadmap for setting guidelines on AI use in the military including emphasizing transparency, accountability, and human oversight. Poland is one of the 63 countries that endorsed the Blueprint for Action.⁵⁴⁵⁴

Human Rights

Poland is a member of the European Union and Council of Europe and is, accordingly, committed to the upholding of the Charter of Fundamental Rights and the European Convention on Human Rights. In addition, Poland has acceded to international human rights treaties. The Polish Constitution also grants basic rights to citizens and includes prohibitions against discrimination.⁵⁴⁵⁵

Poland is considered “Free” with a score of 82/100 in the Freedom House 2025 Freedom in the World Report.⁵⁴⁵⁶ The coalition government elected in 2023 has been working to restore judicial independence and bring Poland’s policies in line with European Union standards following the dominance of the socially conservative Law and Justice (PiS) party since 2015.⁵⁴⁵⁷ The EU ended the procedure for rule of law scrutiny in light of the country’s commitment to reinvigorate democracy. Nevertheless, concerns remain over Poland’s political transition as the new government’s action plan has not been fully implemented yet, highlighting the need to continue monitoring the status of rule of law and fundamental rights.⁵⁴⁵⁸ Poland’s ranking in the World Press Freedom Index improved from 47th to 31st place in 2025.⁵⁴⁵⁹ Recent efforts to integrate AI into journalism, such as using AI-generated presenters to attract younger audiences, have faced public resistance, however.⁵⁴⁶⁰ Concerns have been raised about the ethical implications of AI and potential threats

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

to human rights, particularly due to the spread of misinformation, disinformation, fake news, and low-quality content resulting from reliance on AI tools.

In 2020, the Presidency of the Council of the EU failed to secure unanimous support from the Member States for its conclusions on the application of the Charter of Fundamental Rights in the AI context.⁵⁴⁶¹ Poland objected to the inclusion of “gender equality.” Poland was the only member state in the European Union to oppose the resolution on AI and fundamental rights.⁵⁴⁶² Although Ambassador Andrzej Sadoś said that Poland will work to support the conclusions in the future, he also stated that: “The Treaties refer to equality between women and men, similar to the Charter of Fundamental Rights. The meaning of ‘gender’ is unclear; the lack of definition and unambiguous understanding for all member states may cause semantic problems. Neither the Treaties nor the Charter of Fundamental Rights use the term ‘gender.’”⁵⁴⁶³

The position occurs in the context of the Polish government opposition to the Convention on Preventing and Combating Violence against Women and Domestic Violence.⁵⁴⁶⁴ While consensus was not reached as regards the Presidency’s conclusions, the Presidency stressed that the core elements of the conclusions, anchoring the Union’s fundamental rights and values in the age of digitalization, fostering the EU’s digital sovereignty and actively participating in the global debate on the use of artificial intelligence with a view to shaping the international framework, were shared by all delegations.⁵⁴⁶⁵

OECD / G20 AI Principles

As a member of the OECD, Poland is committed to the OECD Principles on Artificial Intelligence and references the OECD principles in its AI Policy document. Poland further supports the OECD AI Principles as part of the Global Partnership on

AI (GPAI),⁵⁴⁶⁶ a multi-stakeholder initiative that aims to foster international cooperation on AI research and applied activities and is built around a “commitment to the shared values reflected in the OECD Recommendation on Artificial Intelligence by adherence thereto.”

Council of Europe AI Treaty

Poland contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law.⁵⁴⁶⁷ Poland is party to the treaty through the European Union endorsement but has not acted independently to sign or ratify the treaty.⁵⁴⁶⁸

UNESCO Recommendation on AI Ethics

Poland is a member of the UNESCO and endorsed the 2021 UNESCO Recommendation on AI Ethics.⁵⁴⁶⁹ Attention to upskilling the population and students to live and work in a world with generative AI and other emerging technology, such as education against disinformation aligns with policy actions to implement the Recommendation. The AI Policy 2030 also includes strategies for strengthening AI governance and ethical oversight.⁵⁴⁷⁰ Poland’s preparation to implement UNESCO’s Readiness Assessment Methodology (RAM) signals progress on achieving these governance objectives.⁵⁴⁷¹

Evaluation

Poland’s development in AI governance reflects both promising strides and areas requiring refinement. The introduction of the draft law to incorporate the EU

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI Act into national legislation signifies Poland's commitment to align with EU standards, as indicated by the Committee on Development and Security of Artificial Intelligence to oversee and regulate AI applications. This framework provides a structured approach to managing high-risk AI, engaging with stakeholders, and ensuring compliance. The AI Policy 2030 signals further progress in line with Poland's commitments to uphold human rights, democratic values, and the rule of law as a member of the EU, the Council of Europe, and the OECD, and commitments to the UNESCO Recommendation on AI ethics.

The Polish government has made notable progress in reinforcing data protection and cybersecurity, with amendments to the national cybersecurity system and a new data management act addressing critical aspects of AI-related data and security. Since 2024, the country has also made notable strides to enhance citizens' fundamental rights. Completion of the UNESCO RAM will help identify areas of weakness to ensure commercial objectives do not overshadow the protection of rights as Poland seeks to develop and integrate AI technology.

Portugal

In 2025, Portugal furthered efforts toward implementing the EU AI Act with the designation of ANACOM as the market surveillance authority and contact for enforcement. This follows designation in January 2025 of 14 agencies as supervisory authorities. Updates to the AI Guide and the National AI Agenda advanced Portugal's efforts to instill transparency, robustness, fairness, and accountability in AI innovation and development.

National AI Strategy

Portugal released its national artificial intelligence (AI) strategy under the name AI Portugal 2030 in February 2019.⁵⁴⁷² The strategy is promoted by the technical coordination of the National Initiative Digital Competencies e.2030 program (Portugal INCoDe.2030),⁵⁴⁷³ in cooperation with the Portuguese Science and Technology Foundation (*Fundação para a Ciência e a Tecnologia*, FCT), the National Innovation Agency (*Agência Nacional de Inovação*), the Living Science Academy, and the Agency for Administrative Modernization (*Agência para a Modernização Administrativa*, AMA). The FCT, which monitors digital and AI strategy,⁵⁴⁷⁴ submitted a portfolio with updates to AI Portugal 2030 and drafts of a National Data Strategy and National Web 3.0 Strategy in 2024.⁵⁴⁷⁵

AI Portugal 2030 features a human-centered approach. “Portugal’s AI Strategy will be based on the fundamental principle of not compromising the dignity of citizens, strongly anchored by the promotion of wellbeing, fairness and quality of life.”⁵⁴⁷⁶ The promotion of a better society should be encompassed by “strong ethical guidelines” protecting “the fundamental rights of citizens and core values.”⁵⁴⁷⁷

⁵⁴⁷² XXI Governo Constitucional, *AI Portugal 2030: Portuguese National Initiative on Digital Skills [Estratégia Inteligência Artificial 2030]*, pp. 4–5, 10 (Feb. 2019), <https://www.portugal.gov.pt/pt/gc21/comunicacao/documento?i=estrategia-inteligencia-artificial-2030>

⁵⁴⁷³ Portugal INCoDe.2030 is an integrated public policy initiative dedicated to strengthening digital skills. It aims to increase the knowledge, qualifications and skills of the population, as well as to improve Portugal's positioning and competitiveness in the international context. Five lines of action have been defined to achieve these goals: inclusion, education, qualification, specialization, and research. INCoDe.2030, *Quem Somos* (2025), <https://www.incode2030.gov.pt/>

⁵⁴⁷⁶ *Ibid.*, p. 15

⁵⁴⁷⁷ *Ibid.*

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI Portugal 2030 proposes 3 action areas to realize objectives including human development: Inclusion and education to ensure the population has knowledge and skills to use the tools and understand their risks and threats as well as benefits; Qualification and specialization to train the workforce to identify opportunities and deploy solutions following safe and ethical standards; and Research for “building trust through data curation in order to avoid biases assuring transparency in the way judgements are made promoting accountability and explainability.”⁵⁴⁷⁸ AI Portugal 2030 stresses the importance of ensuring that AI is made ethical-by-design to protect against disruption and “actually improve society and democracy.”

As part of the efforts to implement AI Portugal 2030’s objective to ensure the ethical use of AI,⁵⁴⁷⁹ the Agency for Administrative Modernization (*Agência para a Modernização Administrativa*, AMA) updated the Guide for Ethical, Transparent and Accountable AI in Public Administration (AI Guide, *GuIA*) in 2025. The updated AI Guide targets both public and private entities and emphasizes five key principles of responsible AI—transparency, robustness, universality, sustainability, and thorough testing—and aligns national practice with the EU Artificial Intelligence Act, addressing current and future AI risks, including those posed by agentic AI. A complementary online tool provides a self-assessment questionnaire to evaluate AI system risk levels.⁵⁴⁸⁰ The 2025 version also aims to “ensure the protection of democracy, the rule of law and fundamental rights, with the operationalization of these concepts in the way AI services are thought, designed, and provided, both in the public and private sectors.”⁵⁴⁸¹ The AI Guide realized one part of the Strategy for the Digital Transformation of Public Administration 2021–2026.⁵⁴⁸²

National Digital Strategy

Portugal launched the National Digital Strategy in December 2025 as part of a commitment to a future where digital technology elevates every citizen and

business.⁵⁴⁸³ The Strategy aims to establish a National Digital Agency and introduced a National AI Agenda for public consultation in early 2025. Seven principles guide the Strategy: trust and transparency; security and protection; ethics; inclusion and equality; environmental sustainability; collaboration; and efficiency.⁵⁴⁸⁴ The four key dimensions structuring the Strategy—People, Business, Government, and Infrastructure—align with the EU Digital Decade 2030.

The Strategy highlights the key role AI will play in Portugal’s digital future, impacting healthcare, agriculture, and education as well as other sectors. The Strategy’s aim is to promote the adoption of AI and emerging technologies while ensuring their safe, ethical, and beneficial use for society.⁵⁴⁸⁵

EU Digital Services Act

As an EU member state, Portugal applies the EU Digital Services Act (DSA).⁵⁴⁸⁶ The DSA regulates online intermediaries and platforms to prevent illegal and harmful activities online and the spread of disinformation. Signatories commit to actions to demonetize the dissemination of disinformation, ensure the transparency of political advertising, empower users, enhance cooperation with fact-checkers, and provide researchers with better access to data.

The Portuguese government designated the National Communication Authority (*Autoridade Nacional de Comunicações*, ANACOM) as Digital Services Coordinator (DSC).⁵⁴⁸⁷ As DSC, ANACOM sits on the European Board for Digital Services.⁵⁴⁸⁸ This designation, however, does not give ANACOM formal powers such as the imposition of sanctions for DSA noncompliance.

A working group under ANACOM with two other competent authorities—the Regulator for Social Communication (*Entidade Reguladora para a Comunicação Social*, ERC) and the General Inspectorate for Cultural Activities (*Inspeção-Geral das Atividades Culturais*, IGAC)—will oversee the legal and regulatory changes

necessary to ensure the application of the DSA.⁵⁴⁸⁹ The group released draft strategic guidelines and objectives for the triennial period 2025–2027,⁵⁴⁹⁰ which are currently under review.⁵⁴⁹¹

The XXIV Constitutional Government committed to implement the DSA and the EU Code of Practice on Disinformation and vowed to “encourage the development of codes of conduct by political parties and agents” with “mechanisms to monitor and report cases of disinformation and fake news, namely through the use of generative artificial intelligence.”⁵⁴⁹² ANACOM subsequently issued a statement informing citizens on opportunities to report illegal or harmful content or disinformation in the context of the European Parliament elections 2024.⁵⁴⁹³ ERC also launched an awareness campaign on the risks of disinformation.⁵⁴⁹⁴

Prior to these efforts, the European Commission opened infringement procedures against Portugal and five other EU countries, stating that “despite designating their Digital Services Coordinators, Cyprus, Czechia and Portugal still have to empower them with the necessary powers and competences to carry out their tasks, including the imposition of sanctions in cases of non-compliance.”⁵⁴⁹⁵ A second round of communication from the Commission in October 2024, stated that “despite exchanges since April, these Member States have still not empowered their designated Digital Service Coordinators, to implement the Digital Services Act.” In

case of continued non-compliance, the Commission “may refer the Member States to the Court of Justice of the European Union.”⁵⁴⁹⁶

EU AI Act

As an EU member State, Portugal is bound by the EU AI Act.⁵⁴⁹⁷ The Portuguese Ministry of Youth and Modernization named 14 governmental agencies charged with the protection of fundamental rights under Article 77 of the EU AI Act.⁵⁴⁹⁸

The Minister of Infrastructure and Housing and Secretary of State for Digitalisation announced the Government’s decision to appoint the National Communication Authority (*Autoridade Nacional de Comunicações*, ANACOM) as the supervisory authority and primary contact point for the EU AI Act in September 2025 at the ANACOM annual conference.⁵⁴⁹⁹ The Secretary highlighted ANACOM’s long-standing experience as a technology market regulator and its dialogue-based approach with stakeholders as decisive factors in this designation. In closing remarks, ANACOM’s Chairwoman confirmed the institution’s commitment to ensuring the ethical, safe, and transparent adoption of AI in line with the European framework, protecting fundamental rights, and supporting innovation.⁵⁵⁰⁰

Portugal’s National Data Protection Commission (*Comissão Nacional de Proteção de Dados*, CNPD) has also supported implementation of the EU AI Act. CNPD’s 2025 Activity Plan outlines key actions related to the governance of AI such

Center for AI and Digital Policy

as strengthening capacities and improving training as well as increasing the effectiveness of sanctioning activities.⁵⁵⁰¹

Finally, since 2024, the Agency for Administrative Modernization (*Agência para a Modernização Administrativa*, AMA) has been part of the EU AI Board, which “helps coordinate the national competent authorities responsible for enforcing the Regulation, and it collects and shares technical and regulatory expertise, but also best practices.”⁵⁵⁰²

Portugal’s support for an EU-led framework for promoting innovation while managing risks began with the country’s contributions to a position paper with 13 other member states calling for regulation in 2020.⁵⁵⁰³

Public Participation

AI Portugal 2030 clearly acknowledges that “the opacity often seen around the implications of AI may be an obstacle for the wider society to make sense of it and take part in the dialogue” and emphasized the need to integrate diverse perspectives from specialists and the whole population “to take part in the debate and to get involved in designing AI.”⁵⁵⁰⁴ The definition and adoption of AI Portugal 2030 incorporated feedback from several public discussions and exemplifies a multisectoral approach that brings together representatives from research, academia, companies, and public administration.⁵⁵⁰⁵

In this spirit, the Portuguese Government coordinated public participation on the National Artificial Intelligence Agenda for three months in early 2025.⁵⁵⁰⁶ The consultation sought feedback from companies, public entities, associations, and expertise as well as three public sessions coordinated by the AMA.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The AMA's AI Guide reflected a similar process, bringing “into public discussion the need to establish the pillars of regulation, supervision, leadership, and governance, develop a code of ethics, and foster regulation and laws that provide guidance and support for technological developments.”⁵⁵⁰⁷ Recognizing that the related risk assessment app is an “evolving platform” and should gather contributions from its users, AMA also allows users to report any errors or elements that may benefit its development.⁵⁵⁰⁸

Consultations extend across sectors. The Office for Strategy and Planning of the Ministry of Labor, Solidarity and Social Security and the Institute of Employment and Vocational Training consulted the public on the Green Paper on the Future of Work in 2021.⁵⁵⁰⁹ Financial and business institutions, including the Portuguese Securities and Exchange Commission (*Comissão do Mercado de Valores Mobiliários*, CMVM)⁵⁵¹⁰ and Business Council of the Center/Chamber of Commerce and Industry of the Center (CEC/CCIC), also sought diverse perspectives on the responsible use of AI and data across their sectors.⁵⁵¹¹

Data Protection

Portugal upholds the European Union General Data Protection Regulation (GDPR).⁵⁵¹² Portugal is also a member of the Council of Europe and ratified

Convention 108+ for the protection of individuals with regard to the processing of personal data.⁵⁵¹³

The Portuguese Data Protection Law of 2019 adapts Portuguese law to the GDPR.⁵⁵¹⁴ The law names the National Commission for Data Protection (*Comissão Nacional de Proteção de Dados*, CNPD) the national authority for data protection. The CNPD issued a decision in September 2019 to disregard parts of the PDPL that do not comply with the GDPR.⁵⁵¹⁵

Portugal transposed the EU Data Protection Law Enforcement Directive (LED), which prohibits any decision based solely on automated processing and of profiling that results in discrimination,⁵⁵¹⁶ with Law no. 59/2019.⁵⁵¹⁷

The CNPD issued formal opinions stressing strong data-protection safeguards in 2025.⁵⁵¹⁸ A key opinion on Portugal's Digital Services Act (DSA) implementation bill challenged the proposed sole authority of the telecom regulator (ANACOM), asserting CNPD's authority over all personal data processing. Additionally, the CNPD scrutinized the cybersecurity bill (NIS2 transposition), warning that its legal basis for processing personal data, particularly sensitive data, was insufficiently defined and lacked adequate data protection safeguards.

As a member of the Ibero-American Network for the Protection of Personal Data (*Red Iberoamericana de Protección de Datos*, RIPD), which comprises 16 data protection authorities from 12 countries, the CNPD endorsed the General

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Recommendations for the Processing of Personal Data in Artificial Intelligence⁵⁵¹⁹ and the accompanying Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects.⁵⁵²⁰

The CNPD is a member of the Global Privacy Assembly (GPA) since 2002. The CNPD co-sponsored the 2020 GPA Resolution on AI Accountability.⁵⁵²¹ However, the CNPD did not endorse the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁵⁵²² the 2022 GPA Resolution on Facial Recognition Technology,⁵⁵²³ or the 2023 GPA Resolution on Generative AI.⁵⁵²⁴

Algorithmic Transparency

Portugal is subject to the GDPR and Convention 108+. Portuguese citizens have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.⁵⁵²⁵ Likewise, the Council of Europe 2020 Recommendation stresses that the right to contest a decision “may not be waived, and should be affordable and easily enforceable before, during and after

Center for AI and Digital Policy

deployment, including through the provision of easily accessible contact points and hotlines.”⁵⁵²⁶

AI Portugal 2030 also considers that AI-based systems must be able to explain their decisions, on top of promoting a high level of adaptability and accountability of their decision-making, advancing accountability and fairness. To face “societal challenges brought by AI,” AI Portugal 2030 recognizes that “AI systems will make important and critical decisions autonomously” and that “society will demand transparency (the ability to explain the decisions) and auditability (the ability to trace the flow of decisions and actions from humans to algorithm) in order to promote safety and ethical principles, including privacy protection and fairness.”⁵⁵²⁷

The Portuguese Charter of Human Rights in the Digital Age further protects citizens with the provision that “decisions with a significant impact on recipients that are taken by the use of algorithms must be communicated to interested parties, being susceptible to appeal and audit, as provided by law.”⁵⁵²⁸

Use of AI in Public Administration

The XXV Constitutional Government formed in 2025 announced a comprehensive State reform and modernization plan guided by four principles: simplification, digitalization, coordination, and accountability. The reform does not aim to reduce the State’s functions but to restore its efficiency and responsiveness through greater transparency, merit, and innovation.⁵⁵²⁹ The government program outlines specific actions to accelerate the digital transformation of services, emphasizing the responsible integration of artificial intelligence. Rather than simple technological adoption, the program requires a fundamental redefinition of bureaucratic processes to ensure that citizens and businesses are placed at the center of public service delivery.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

A Council of Ministers Resolution in July 2024 established the Council for Digital in Public Administration (CDAP) to advance digital transformation and streamline Portugal's Public Administration. The CDAP is tasked with developing, monitoring, and updating the National Digital Strategy and its action plans to promote standardization, modernization, and reduced bureaucracy in public services.⁵⁵³⁰ With a mandate until December 31, 2028, the CDAP must produce regular progress reports and a final activity report. Its operations are supported by the Agency for Administrative Modernization (*Agência para a Modernização Administrativa*, AMA) and aligned with the Public Administration Forum.

The CDAP continued efforts from the Strategy for the Digital Transformation of Public Administration 2021–2026.⁵⁵³¹ The Strategy established the assessment of all ongoing artificial intelligence projects for ethics and responsibility as one of the objectives. The 2024 report noted progress on most objectives in the first three years and recommended a review and update to the AI Guide to facilitate the development of emerging technologies in public services as well as the development of similar guides for data and machine learning.⁵⁵³²

The Guide for Ethical, Transparent and Accountable AI in Public Administration (AI Guide) highlights Portugal's attention to the impact of AI systems and applications on human rights, and the importance of regulation to address them.⁵⁵³³ The Guide specifies that “the values and principles should be respected by all actors during the life cycle of AI systems, should be promoted through continuous evaluation and evolution of existing laws, regulations, and various international guidelines, notably in relation to human rights, and be aligned with the goals of social, political, environmental, educational, scientific, and economic sustainability.”⁵⁵³⁴ The AI Guide puts respect for privacy, the inviolability of human

rights, and social equity at the center of safeguards the government must establish in using AI systems and includes an app for risk monitoring and mitigation.

Portugal participates in the Latin American Centre of Administration for Development (*Centro Latino Americano de Administración para el Desarrollo*, CLAD) and supports the Ibero American Charter on Artificial Intelligence in Civil Service.⁵⁵³⁵ The Charter provides tools for implementation and a common framework for member states to adapt their AI policy strategies and laws for the challenges and opportunities involved in the implementation of AI in public administration. Guiding principles include human autonomy; transparency, traceability and explainability; accountability, liability and auditability; privacy and protection of personal data; fairness, inclusiveness, and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection.

Use of AI in COVID-19 Response

The National Commission for Data Protection (*Comissão Nacional de Proteção de Dados*, CNPD) issued a deliberation in 2020 against the Smart Crowd system the Portuguese government intended to deploy to monitor Portuguese beaches during the COVID-19 pandemic. The system collected images and processed them with machine learning (ML) technology to inform users about the occupancy level of a particular beach. The Portuguese Agency for Environment (APA) requested the to analyze the system.

The CNPD deliberation acknowledged that “people on beaches are particularly exposed, and therefore the capture of images is likely to lead to improper use with direct repercussions on their private lives.”⁵⁵³⁶ The CNPD found that the explanation of the rationality of the algorithm did not demonstrate sufficient measures against the possible application of factors that may generate discrimination.

Biometric Surveillance

The National Commission for Data Protection (*Comissão Nacional de Proteção de Dados*, CNPD) decided in March 2024 to suspend the collection of biometric data on the iris, eyes and face carried out by the Worldcoin Foundation. The decision sought to safeguard the fundamental right to the protection of personal data, especially that of minors. More than 300,000 people in Portugal had already

⁵⁵³⁵ Centro Latino Americano de Administración para el Desarrollo (CLAD), *Ibero American Charter on Artificial Intelligence in Civil Service* (2024), <https://clad.org/wp-content/uploads/2024/03/CIIA-EN-03-2024.pdf>

provided their biometric data to receive the cryptocurrency called Worldcoin in 2024.⁵⁵³⁷

Criticism by the CNPD and civil society organizations led to amendments to a legislative proposal aimed at regulating the use of video surveillance for security purposes in 2021.⁵⁵³⁸ The draft Article 18 authorized the collection of biometric data for an analytical management system but established that the system “may not allow the reversal, decoding and digitalized reproduction of the image of the biometric characteristic.”⁵⁵³⁹ Civil society organizations European Digital Rights (EDRi) and the CNPD criticized the proposal’s “sweeping measures which would permit the constant video and biometric mass surveillance of each and every person.”⁵⁵⁴⁰ The CNPD found that the provision “represents a restriction of citizens’ fundamental rights, without complying with the rule of law, even as regards the essential clarity and transparency regarding the provision of these restrictions.”⁵⁵⁴¹ Violating these rights, the CNPD argued, breached requirements in the Portuguese Constitution as well as obligations under the Charter of Fundamental Rights of the European Union.

Law 95/2021 passed after several significant changes to the initial wording to ensure the installation of these systems follows several additional principles of use and general obligations, including limited uses, proportionality, prohibitions against capturing images affecting the privacy of intimate and private life, and additional authorization requirements to install fixed cameras.⁵⁵⁴²

In 2022, the Legislative Assembly of the Azores Region (*Assembleia Legislativa, Região Autónoma dos Açores*) requested the CNPD to issue an opinion on a proposed regional amendment to Law 95/2021.⁵⁵⁴³ The proposal aimed to

extend the purposes of Article 3 to allow for the installation and use of systems for the protection and conservation of marine environments and the conservation and recovery of marine living resources. The CNPD recommended that the capture be prohibited as required and that a specific regime be established for the use of drones for this specific purpose, with the exclusion of the coastal zone. The proposal has not yet been voted on by the Legislative Assembly of the Azores Region.⁵⁵⁴⁴

Use of AI in Education

The Portuguese government has strengthened the national approach to AI in education through initiatives presented at the Web Summit 2025, emphasizing three pillars: digital infrastructure, people-focused digital capacity-building, and the ethical use of technology.⁵⁵⁴⁵ The National Artificial Intelligence Agenda currently under consultation will integrate AI into education through the deployment of Amália, Portugal's large-scale Portuguese-language model, as an AI tutor to support personalized learning, guide students, and improve navigation of digital public services. This initiative aligns with national objectives to enhance digital literacy and build an AI-ready population.

The National Education Council (*Conselho Nacional de Educação*, CNE) issued a recommendation on the problems and scenarios of using AI technology in exams and admission to higher education, noting that while automating tasks may be useful, “special care must be taken to ensure that they do not increase social inequalities or reproduce prejudices. The concerns not only stem from bias in the data, but also from the people developing the systems.”⁵⁵⁴⁶ The recommendation calls attention to key questions such as “what level of transparency should be guaranteed? What risks are possible, arising from prejudices and addictions that last over time? How to minimize their existence?”⁵⁵⁴⁷

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

These findings build from CNE's State of Education 2022 (2023 edition) report that included AI and its place in education and training as one of five key problem areas that "should be considered in the development of public education policies."⁵⁵⁴⁸ The report states that "Ethical issues, which were barely mentioned in the early days, are now unavoidable and extremely pertinent. The reasons are legitimate fears that the autonomy of students and teachers will be compromised, that data will be collected and diverted to other purposes, and that AI will introduce additional biases into educational decisions, increasing the inequalities that already exist."⁵⁵⁴⁹ The CNE calls for: a long-term strategy; training for educators and administrators focused on ethical as well as technological issues, including data management; and an AI training framework that reinforces the significance of public spaces and social learning. The CNE recommendations and annual report are substantively linked with the work and guidance on AI in education by the Council of Europe, UNESCO, and the OECD.

Portugal's progress on the digital and AI learning follows attention to setting up systems for protecting children and other users during the COVID-19 pandemic. The National Commission for Data Protection (*Comissão Nacional de Proteção de Dados*, CNPD) issued guidance for the use of technologies supporting distance learning in April 2020.⁵⁵⁵⁰ The CNPD offered "a set of legal obligations and good practices that mitigate the risks to privacy and prevent discrimination against students and professionals," threats the commission saw increased given the automated collection of information.⁵⁵⁵¹ The obligations and practices include requiring student consent to be subjected to automated decision-making as well as transparency around how algorithms work and a right to human intervention.⁵⁵⁵²

Center for AI and Digital Policy

Use of AI in the Health Sector

The 2019 Health Data Strategy “sets out the vision, key areas and principles for secondary use of data, advanced analytics and artificial intelligence to improve the Portuguese population’s health.”⁵⁵⁵³ One of the key areas identified in the Strategy concerns the legal and ethical framework that should apply to the use of a data-driven national health service, endorsing a “strong commitment to the foundational values of the NHS and the rule of law, as well as to the ethical principles set out in the European Commission Ethics Guidelines for Trustworthy AI.”⁵⁵⁵⁴ The Strategy aims to promote trust and confidence in information technology by ensuring compliance with laws and ethical principles, including those that protect against bias and discrimination. The Strategy advocates for the creation of an internal Health Information and Technology Ethics Board to ensure accountability with these principles and frameworks.⁵⁵⁵⁵ Such a Board, however, has not yet been created.

An initiative with WHO/Europe and the Portuguese Ministry of Health and National Health Service (SNS) aims to create practical solutions to make health systems stronger and more resilient, improving early disease detection, predictive modelling, hospital efficiency, and equitable access to care through responsible and ethical use of AI. Portuguese Minister of Health Ana Paula Martins highlighted that investing in AI for health means investing in stronger, more resilient systems, while WHO Regional Director Dr Hans Henri P. Kluge commended Portugal’s leadership as a model for safe and equitable AI implementation across the European Region.⁵⁵⁵⁶

In addition, in February 2025, the Shared Services of the Ministry of Health (*Serviços Partilhados do Ministério da Saúde*, SPMS) and National Health Services (*Serviço Nacional de Saúde*, SNS) published a White Paper on the impacts of AI and related regulation in health.⁵⁵⁵⁷ The document analyses the implications of the EU AI

Act for Portugal's health system and outlines national and international AI initiatives already in progress. The White Paper identifies high-risk applications such as diagnostic and robotic surgery systems and stresses the importance of robust data governance, risk management, transparency, human oversight, and cybersecurity throughout the AI lifecycle. The report concludes with recommendations to ensure ethical, transparent, and effective integration of AI in health services, emphasizing accountability, interoperability, and compliance with the GDPR and the forthcoming European Health Data Space framework.⁵⁵⁵⁸

Use of AI in Labor Relations

Portuguese public institutions have been working to address the impact of AI systems on work and labor. The 2022 Green Paper on the Future of Work points out ways “to use artificial intelligence to minimize new risks, ensuring privacy and data protection, and also to take advantage of new technologies as a way of eliminating bureaucracy and ensuring greater effectiveness in the relationship between the State and citizens and businesses.”⁵⁵⁵⁹ However, the paper also highlights the risks of AI automation displacing workers, particularly the disproportionate impact on young people and women, as well as concerns over the potential for AI to reinforce algorithmic gender bias and discrimination.⁵⁵⁶⁰ The Green Paper acknowledges risks of worker surveillance in automated management and recommends public policies to promote transparency and responsibility in the use of algorithms “to ensure the protection of privacy and personal data, equality and non-discrimination (see specific points for further details), ethics, transparency and the explainability of algorithm-based systems, both in the selection of job applicants and in the performance of the work contract and the monitoring of the worker's professional activity.”⁵⁵⁶¹

The National Assembly (*Assembleia da República*) introduced amendments to the Portuguese Labor Code⁵⁵⁶² in 2023 to integrate the use of algorithms and artificial intelligence in the scope of the law.⁵⁵⁶³ Changes allow for collective labor agreements in relation to AI use and provide that “The worker or job seeker has the

right to equal opportunities and treatment with regard to access to employment, training and promotion or professional career and working conditions” including “in the case of decision-making based on algorithms or other artificial intelligence systems.”⁵⁵⁶⁴ The labor code also confirms the right of workers (individual and collective) to receive information from their employers about “the parameters, criteria, rules and instructions on which algorithms or other artificial intelligence systems are based that affect decision-making on access to and maintenance of employment, as well as working conditions, including profiling and control of professional activity.”⁵⁵⁶⁵

The 2024 Program of the XXIV Constitutional Government also mentions the role of AI in the labor market, noting the need “to reform the education and vocational training system in order to bring it into line with the needs and potential of the Portuguese economy and its business fabric, to create an environment where universities and companies can connect, and to prepare the national workforce for the technological transformations underway and the fundamental changes in the future of work.”⁵⁵⁶⁶ The 2025 government program further advances these goals, promoting skills development, digital inclusion, and the adaptation of work organization to new technologies.⁵⁵⁶⁷

Environmental Impact of AI

Portugal leverages AI to enhance environmental sustainability, such as in combating illegal fishing by identifying marine areas with high fish populations and determining species abundance in specific zones. Portugal plans a national pact centered on sustainable development that includes leveraging AI for climate management as well as decarbonization.⁵⁵⁶⁸ Additionally, Portugal uses AI algorithms to analyze and control waste management, supporting biodiversity and ecosystem preservation.⁵⁵⁶⁹ These efforts continued with the first National Strategy

for Intelligent Territories (NSST) as a Living-in.EU signatory.⁵⁵⁷⁰ However, Portugal has not implemented regulation to protect against the environmental impact of developing and deploying AI systems.

Lethal Autonomous Weapons

Portugal has consistently advocated for restrictions on lethal autonomous weapons systems (LAWS) and the need for human control in statements to the Group of Governmental Experts (GGE) on LAWS in the Convention on Certain Conventional Weapons (CCW). In 2019, Portugal's statement stressed "The human-machine interaction must be designed and programmed in such a way that ensures that the persons responsible for supervising the use of LAWS are fully accountable for the effects of that use and are able to immediately interrupt an initiated attack should they decide to do so."⁵⁵⁷¹ The country proposed the GGE compile existing norms and principles in International Law into a reference document to aid in future negotiations for a convention on LAWS.⁵⁵⁷² The nation continued this emphasis on human control and accountability in comments on 11 guiding principles on LAWS in a 2020 meeting of the GGE on Emerging Technologies in the Area of LAWS within the CCW.⁵⁵⁷³

Portugal has also advocated for rules to ensure compliance with International Law through "human responsibility and accountability in the use of force" in the UN General Assembly.⁵⁵⁷⁴ Portugal supported a resolution (L.56) emphasizing "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," at the 78th UN General Assembly First Committee in 2023.⁵⁵⁷⁵ In a contribution to the UN Secretary-General's report in

response to L.56, Portugal focused on the social and humanitarian impact of LAWS and the need for new prohibitions and regulations guided by international law, including international humanitarian law and international human rights law, to prevent the effects of displacement, injury and death of civilians, and destruction of civilian objects.⁵⁵⁷⁶

Portugal has also participated in international summits on the responsible application of artificial intelligence in the military domain (REAIM). At the end of the 2023 Summit, Portugal endorsed a joint call for action stressing “the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”⁵⁵⁷⁷ Portugal also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁵⁵⁷⁸ In the outcome document for the REAIM 2024 in Seoul titled Blueprint for AI Action, Portugal committed to specific actions over the next year to ensure the responsible use of AI in defense.⁵⁵⁷⁹

AI Literacy

AI Portugal 2030 promoted fostering digital and AI literacy skills through an informed and inclusive approach through initiatives such as the Academia Portugal Digital, the Aledu platform by FCT, and the National Council of Education’s recommendations on AI ethics and bias prevention.⁵⁵⁸⁰ This multidimensional model combines education, civic participation, and ethics to ensure that citizens, public officials, and professionals are equipped to thrive in an AI-enabled society. The National Digital Strategy advances these policies,⁵⁵⁸¹ creating a Digital Skills Pact to guarantee that all citizens, regardless of geography or social condition, gain access to

training in digital and AI-related skills.⁵⁵⁸² The Pact aims to train more than two million citizens in basic and advanced digital skills by 2030.⁵⁵⁸³

Portugal was among the countries identified as having developed specific AI curricula for the purpose of enabling citizens to “recognize AI in their environments, understand its benefits and potential challenges, and be empowered to advocate for safe, beneficial and transparent AI technologies”⁵⁵⁸⁴ in a UNESCO report on mapping government-endorsed AI curricula. The representative for Portugal stated, “We have a clear vision of the impact of technology in the future, and the need for a workforce and citizens who relate to technology in a healthy way.”⁵⁵⁸⁵

Human Rights

Freedom House rates Portugal as Free with a score of 96/100. Freedom House defines Portugal as “a parliamentary democracy with a multiparty political system and regular transfers of power between rival parties” in which “civil liberties are generally protected.”⁵⁵⁸⁶

Portugal is party to the most important international legal instruments for the protection and defense of human rights.⁵⁵⁸⁷ Parliament adopted the Portuguese Charter of Human Rights in the Digital Age in May 2021 with the aim of promoting the free exercise of human rights and social inclusion in the digital environment.⁵⁵⁸⁸ Article 9 of the Charter concerns the use of AI and establishes that it “must be guided by respect to fundamental rights, ensuring a fair balance between the principles of explainability, security, transparency and accountability, taking into account the

circumstances of each specific case and establishing procedures to avoid bias and discrimination.”⁵⁵⁸⁹

Portugal continues to take action to protect human rights in the use of AI in the public sector. A joint initiative with the Council of Europe and Portuguese government seeks to equip public authorities, regulators, and civil society organizations with tools to identify and mitigate algorithmic discrimination and promote gender equality in AI use. The program includes a training course with six modules based on the Framework Convention on AI, Human Rights, Democracy and the Rule of Law and the EU AI Act. The modules were developed in cooperation with Portugal’s Commission for Citizenship and Gender Equality (*Comissão para a Cidadania e a Igualdade de Género, CIG*).⁵⁵⁹⁰

OECD / G20 AI Principles

Portugal is a member of the Organization for Economic Co-operation and Development (OECD) and endorsed the OECD AI Principles.⁵⁵⁹¹ The OECD Survey on the implementation of the OECD AI Principles in 2021 took note of the Portuguese policy approach to AI.⁵⁵⁹²

Various Portuguese policy initiatives are inspired by and acknowledge the OECD AI Principles. This is the case of AI Portugal 2030, the AI Guide,⁵⁵⁹³ and the SPMS Health Data Strategy.⁵⁵⁹⁴ The Guide to Artificial Intelligence in the Public

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Administration increases accountability requiring the documentation of the robust and safe operation of AI systems.⁵⁵⁹⁵

Portugal furthers the OECD principle of international collaboration through active regional leadership in governance initiatives such as the D9+ Ministerial Meeting on Digital Transformation. The Lisbon Declaration follows the October 2025 D9+ highlights shared goals among members—Belgium, Denmark, Estonia, Finland, Ireland, Luxembourg, the Netherlands, Poland, Portugal, Slovenia, Spain, Czechia, and Sweden—to advance cooperation on artificial intelligence, regulatory simplification, and digital competitiveness through a unified and human-centred approach to digital governance.⁵⁵⁹⁶

Council of Europe AI Treaty

Portugal contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law. In August 2024, 24 EU delegations, including Portugal, voted in favor of adopting the Convention. In a statement to the Council Secretariat, the Portuguese Republic affirmed its commitment to adopt the treaty.⁵⁵⁹⁷ However, the country has not taken action independently from the EU.⁵⁵⁹⁸

UNESCO Recommendation on AI Ethics

Portugal has endorsed the UNESCO Recommendations on the Ethics of Artificial Intelligence, the first ever global agreement on the ethics of AI.⁵⁵⁹⁹ Portugal's efforts to develop ethical guidelines for the use of AI and the commitment

to ethical-by-design systems and preparing citizens for a world with AI reflect progress on implementation of the Recommendation.

Still, Portugal has not initiated the UNESCO Readiness Assessment Methodology (RAM), a tool to support the implementation of the Recommendation.⁵⁶⁰⁰

Evaluation

Portugal has demonstrated a strong commitment to international AI governance frameworks, particularly through its support of the Council of Europe's Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁵⁶⁰¹ Portugal has established legislation such as the Charter on rights in the digital environment and policies such as the labor code demonstrate a commitment to transparency, fairness, and human oversight in the use of AI systems aligned with the OECD AI Principles and UNESCO Recommendation on the Ethics of AI as well as the nation's commitments to rights as a member of the EU and Council of Europe.

Portugal exemplifies public consultation in developing AI policies; however, documentation of the evolution of policies remains difficult to locate.

In terms of AI oversight, Portugal enhanced its institutional framework by establishing the Council for Digital in Public Administration (CDAP). This oversight structure includes setting strategic objectives, defining clear actions, and developing implementation and evaluation metrics, providing a robust governance framework for AI in the public sector.⁵⁶⁰² The National Data Protection Commission (CNDP) is bolstering its AI oversight capabilities, focusing on data protection within AI systems, with plans to further enhance its role in 2025.⁵⁶⁰³ The country has also named fourteen agencies tasked with supervising fundamental rights in the use of AI systems.⁵⁶⁰⁴ The Portuguese Government designation of ANACOM as the market

Puerto Rico

In 2025, Puerto Rico's legislature passed an AI Bill that would have created an AI Office, only to have it vetoed by the Governor. Other legislation remains in committee. The Department of Education updated guidance on using AI tools for student learning.

National AI Strategy

Puerto Rico (or officially the Commonwealth of Puerto Rico) is a self-governed unincorporated territory of the United States. Laws are proposed and ratified without U.S. approval, but Puerto Ricans are U.S. citizens subject to most federal laws without representation by voting members of Congress. Puerto Rico is a sub-national administrative division overseen by the U.S. government. Puerto Rico follows the U.S. position on AI, explained further in the U.S. section of this report.

Puerto Rico's Innovation and Technology Service (PRITS), established by law in 2019,⁵⁶⁰⁵ formulates and coordinates public policy related to the Puerto Rican Government's information and technology infrastructure and innovation. The Government framed innovation as a key to economic development and technology as a key to "achieve efficiencies in the administration of the government apparatus, render services more expeditiously, and improve service quality." PRITS Circular 2023–002 provided guidance to and a process for government agencies to integrate artificial intelligence in their services.⁵⁶⁰⁶ Under the guidance, PRITS must approve government use of AI technology to guard against "possible risks to privacy, individual rights, civil liberties, and security" and promote public trust in government technology.⁵⁶⁰⁷

Puerto Rico's governor pocket vetoed (*veto de bolsillo*)⁵⁶⁰⁸ a bill passed by the Senate and House (*Cámara*) that would have specified the PRITS's role to

⁵⁶⁰⁵ Puerto Rico Office of Management and Budget, *Act No. 75, Puerto Rico Innovation and Technology Service Act PRITS* (Jul. 25, 2019), <https://bvirtualogp.pr.gov/ogp/Bvirtual/leyesreferencia/PDF/2-ingles/75-2019.pdf>

⁵⁶⁰⁶ Puerto Rico Innovation and Technology Service, *Circular 2023–002: Integration of Artificial Intelligence in Governmental Technology* [Carta circular Núm. 2023–002: Integración de Inteligencia Artificial en la Tecnología Gubernamental (Apr. 12, 2023), <https://docs.pr.gov/files/prits/Cartas/CC2023-002%20Inteligencia%20Artificial.pdf>

Center for AI and Digital Policy

establish public policies on the use and development of artificial intelligence by Government agencies. A bill to establish an Artificial Intelligence Law for the Government of Puerto Rico,⁵⁶⁰⁹ which would establish an AI Officer for the Government under PRITS passed through the Senate in 2025 and debated in an executive session of the House Committee on Science, Technology, and Artificial Intelligence in March 2026. The House presented another Senate bill, which would grant voters the right to know if any election campaign material was generated in part or whole by AI tools,⁵⁶¹⁰ to a public audience in March 2026 before voting commenced.

Public Participation

The website of Puerto Rico's House of Representatives serves as an interactive space designed to engage citizens directly in public decision-making and legislative processes, promoting greater democratic participation and governmental transparency.⁵⁶¹¹

The University of Puerto Rico at Río Piedras (UPRRP) has established the Puerto Rican Public Opinion Laboratory (LabPOP) to address the historical lack of current public opinion data on key political and social issues in Puerto Rico.⁵⁶¹² With a \$724,347 grant from NSF's Build and Broaden program, LabPOP will conduct its first comprehensive national survey in January, employing 60 students. The two-year project will focus on examining public perceptions of U.S.-Puerto Rico relations.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Data Protection

The right to privacy is a fundamental right enshrined in Section 8 of Puerto Rico's Bill of Rights.

U.S. federal data protection regulations apply in Puerto Rico,⁵⁶¹³ though Puerto Rico has also implemented additional regulations. The existing U.S. legislation was created as an instrument of customer protection, in terms of establishing obligations and procedures when data breaches are detected and providing consumers with common privacy rights including the right to know, opt-out rights, and increased control over the sharing of personal information.⁵⁶¹⁴ Puerto Rico has also passed the Citizen Information of Data Banks Security Act,⁵⁶¹⁵ a breach notification and data disposal law.⁵⁶¹⁶

There is currently no data protection authority (DPA) in Puerto Rico. However, a new cybersecurity law (Act 40) mandates the creation of the Chief Information Security Officer (CISO) under the Puerto Rico Innovation & Technology Service (PRITS).⁵⁶¹⁷ The Cybersecurity Act aims to create a framework prioritizing government data security to foster innovation, development, and sustainable economic growth through collaborative mandates and an expanded role for cybersecurity within the government. Act 40 also mandates the establishment of an Officer of Cyber Incident Evaluation under PRITS. PRITS developed a Cybersecurity Plan⁵⁶¹⁸ prior to Act 40 to “proactively design, implement, and maintain cutting edge cybersecurity measures that prioritize the protection of the commonwealth of Puerto Rico’s infrastructure and its citizens’ data” and “bolsters

economic and social prosperity, fully capitalizing on emerging technologies as an engine for progress.”⁵⁶¹⁹

Puerto Rico has no independent representation in the Global Privacy Assembly (GPA)⁵⁶²⁰ and, like the United States, has endorsed no AI-related GPA resolutions.

Algorithmic Transparency

There is no legislation, currently in force or pending, addressing algorithmic transparency. An earlier form of the 2025 bill vetoed by the Government specified policies for government agencies using AI algorithms. The Bill notes challenges from AI for “ethics, privacy, information security, and respect for human rights.”⁵⁶²¹

Digitization of Public Administration

Act 75 of 2017 established the Puerto Rico Innovation and Technology Service (PRITS) to promote public policy on the preparation, management, development, coordination and effective interagency integration of innovation and the technological and information infrastructure of the Government of Puerto Rico.⁵⁶²² PRITS has been contributing to Puerto Rico’s digital transformation through several platforms such as CESCO Digital,⁵⁶²³ which enables vehicle and license renewal and payment of fines; VACU ID,⁵⁶²⁴ a smart health card capturing COVID vaccines; and IDEAL,⁵⁶²⁵ a platform that digitizes documents, certificates, and information held by the state on citizens, and serves as a citizen information portal provides government data to citizens to promote transparency.⁵⁶²⁶ IDEAL

(*Identidad Electrónica de Acceso en Línea*, Electronic Identity for Online Access) was formalized by law in 2025.⁵⁶²⁷

PRIT reported in March 2024 that 11 government agencies succeeded in digitizing their data.⁵⁶²⁸ The Puerto Rican government is continuing to migrate all government documents online to automate the administrative processes for citizens

AI in Public Administration

As a part of the Civil Service Reform, Puerto Rico through the Office of Human Resource Administration and Transformation (OARTH) and the Financial Oversight Management Board launched an AI pilot project for talent recruitment on March 11, 2024.⁵⁶²⁹ The project aims to increase efficiency and effectiveness in the government's hiring process, pairing the candidates with the best role using the AI technology whilst minimizing biases.⁵⁶³⁰ Several government agencies have participated in the project, such as PRITS and the Puerto Rico Department of Education (PRDE).⁵⁶³¹

Smart Port

In February 2023, a California-based artificial-intelligence company announced that it would invest in the Port of Ponce, which serves Puerto Rico's second city, to transform it into a "smart port of the future." The company plans to "develop autonomous inspection systems, computer-assisted surveillance systems, and digital receipt registries that will track and monitor container movement."⁵⁶³²

Facial Recognition

The U.S. Customs and Border Protection (CBP) implemented the Simplified Arrival process at the Luis Muñoz Marín International Airport, Puerto Rico. This process uses facial biometrics to automate the manual document checks that are required for admission into the United States.⁵⁶³³ The U.S. CBP implemented a biometric facial recognition system for Royal Caribbean cruise passengers in Puerto Rico in 2025. As in U.S. airports, passengers are allowed to use alternative identification methods and the collected photos of the passengers are deleted immediately after the debarkation.⁵⁶³⁴

Livescan systems are also in use at 130 U.S. Citizenship and Immigration Services (USCIS) Application Support Centers across the United States and in Puerto Rico. One such system, Idemia Identity & Security North America, has a contract with USCIS through 2027. USCIS checks fingerprint biometrics collected by Idemia Livescan and decides on the application after they are submitted to the Federal Bureau of Investigation (FBI) and Office of Biometric Identity Management (OBIM).⁵⁶³⁵

Environmental Impact of AI

Puerto Rico itself has not created new policy on the environmental impact of AI and is bound by U.S. federal actions. The Artificial Intelligence Environmental Impacts Act of 2024 introduced in the United States⁵⁶³⁶ in 2024 would have established a framework for the US National Institute of Standards and Technology (NIST) to “assess AI’s environmental footprint and create a standardized system for tracking energy use and emissions” and provide transparency of the AI industry.⁵⁶³⁷ Despite endorsements by civil society groups including Greenpeace USA, Friends of

the Earth Action, and CAIDP,⁵⁶³⁸ acts in both the Senate and House⁵⁶³⁹ were referred to relevant committees and never acted on in the 2023–2024 session.

Lethal Autonomous Weapons

As a commonwealth of the United States, Puerto Rico does not have representation to the United Nations and cannot vote on resolutions.

AI Literacy

The Digital Equity Plan⁵⁶⁴⁰ developed under the Puerto Rico Broadband Program aims to advance digital equity so that “All Puerto Ricans, regardless of their background or location, have access to the resources and opportunities necessary to thrive in the digital world and fully participate in modern society.” The aims to create a “digital skills and literacy initiative that builds on existing best practices, is culturally relevant in its programming and materials, and includes applications of digital use to outcomes in education, healthcare, and economic development”⁵⁶⁴¹ as one of the key activities to address the digital divide.

Puerto Rico’s Department of Education Guide for Using Artificial Intelligence in Student Learning aims to foster schools as “spaces where students learn to use these technologies in an ethical, secure, critical, and creative manner.”⁵⁶⁴² The Guide proposes a SENSE model—Security, Ethics, Narrative, Synergy, and Evaluation—as part of the ethical and pedagogical framework to integrate AI “as a tool supporting learning, without replacing judgement, critical thinking, or human creativity.”⁵⁶⁴³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Human Rights

As an unincorporated territory of the United States, Puerto Ricans have limited representation in the federal government. The U.S. House of Representatives consists of 435 members serving two-year terms. Puerto Rico is represented by one elected delegate in the House who can perform most legislative functions but cannot participate in floor votes⁵⁶⁴⁴ and has no representation in the Senate. Puerto Rico has no electoral college votes in U.S. presidential elections.⁵⁶⁴⁵ Puerto Ricans in the United States may register to vote and participate in elections on the mainland.

Puerto Rico does not receive a separate ranking from Freedom House. Even though the United States scored 84/100 in 2025,⁵⁶⁴⁶ with wide civil liberties including a robust freedom of expression, the Freedom House report claims that in recent years U.S. democratic institutions have gradually weakened, with “mistreatment and dysfunction in the criminal justice and immigration systems, harmful policies on immigration and asylum seekers, and growing disparities in wealth, economic opportunity, and political influence.” This affects Puerto Rico as an unincorporated territory. According to Freedom House report in 2016, access to justice is difficult for those who lack resources to pay legal fees and speak Spanish as their primary language, with federal court proceedings being conducted in English.⁵⁶⁴⁷

OECD / G20 AI Principles

As an unincorporated territory of the United States, Puerto Rico does not independently adopt international agreements such as the OECD AI Principles/G20 AI Guidelines but is party to the agreement under the U.S. endorsement.⁵⁶⁴⁸

Puerto Rico has initiated strategies to implement the OECD AI principles through initiatives such as the Digital Equity Plan⁵⁶⁴⁹ and the PRITS Circular Letter

https://dedigital.dde.pr/pluginfile.php/148925/mod_resource/content/13/MANUAL%20DE%20LA%20AI%20PARA%20ESTUDIANTES_FINAL_.pdf [says Machine translation], so

ot guide trustworthy AI in the public sector.⁵⁶⁵⁰ The Puerto Rico Science, Technology, and Research Trust released a strategic document titled *Leveraging AI for Economic Development and Shaping the Future in Puerto Rico* in September 2024.⁵⁶⁵¹ This strategy outlines initiatives to integrate AI across various sectors, including healthcare, smart cities, sustainable agriculture, education, and disaster management. The plan emphasizes ethical AI development, transparency, and inclusivity, reflecting OECD principles.

Council of Europe AI Treaty

The United States signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law when it opened on September 5, 2024.⁵⁶⁵² Puerto Rico is subject to the treaty through the U.S. signature.

UNESCO Recommendation on AI Ethics

The United States rejoined UNESCO in 2023, after leaving in 2018.⁵⁶⁵³ Although the Recommendation on the Ethics of Artificial Intelligence was established in the interim, the United States accepted the Recommendation on return.

Despite having no independent membership to UNESCO, Puerto Rico has engaged the organization to contribute to international dialogues on ethical AI and development. For example, the University of Puerto Rico (UPR) signed a collaborative agreement with UNESCO to “broaden the horizons of research on AI” and to address “the impact that this represents for society in all areas”⁵⁶⁵⁴ following the first International Conference on Artificial Intelligence in Higher Education, hosted at the UPR Rio de Piedras Campus. The Department of Education guidance for integrating AI in student learning aligns with the human-centered principles in UNESCO guidance on AI competencies for teachers and students.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The United States, including Puerto Rico, has not initiated the Readiness Assessment Methodology (RAM) to facilitate implementation of the UNESCO Recommendation.⁵⁶⁵⁵

Evaluation

The example of the Smart Port of Ponce might point to Puerto Rico, an unincorporated territory of the United States, becoming a testbed for AI. However, the lack of a national AI strategy, comprehensive data protection law, and data protection authority raises concerns about the protection of Puerto Ricans' fundamental rights in the age of AI. Bills in the House and Senate have attempted to address the dearth of protections, including in data protection, only to stall in committees or, in the case of the 2025 AI Bill, be vetoed.

In a recent column, Roberto López Davila, a member of the Puerto Rican judiciary, asked: “When will Puerto Rico join other countries and begin its journey toward the elaboration of its own national AI strategy for these technologies not only to provide economic and industrial benefits but also to contribute to the improvement of the daily life and well-being of the whole Puerto Rican society? It should be a strategy that puts fundamental rights, respect for the rule of law and democratic institutions at its core, considering the risks that AI entails. In a context in which AI applications are gradually being deployed in the country, some of them for uses that are particularly concerning, calling for a national AI strategy has never been more urgent.”⁵⁶⁵⁶

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Qatar

In 2025, Qatar launched the Digital Inclusion Index to measure access and skills in support of the Qatar Digital Agenda and the financial sector moved forward on draft regulations and training frameworks. The country also hosted the International Conference on Artificial Intelligence and Human Rights, which culminated with the Doha Declaration on AI and Human Rights.

National AI Strategy

The Government of Qatar released a National Strategy for AI in October 2019. The aim of the strategy is to provide a realistic view of AI technologies and their potential in the 21st century. The strategy was developed from a blueprint produced by Qatar Computing Research Institute (QCRI), part of Hamad Bin Khalifa University (HBKU).⁵⁶⁵⁷

The AI strategy sets two goals for Qatar:⁵⁶⁵⁸ 1) Qatar must become capable of producing world-class AI applications in areas of national interest and have a business environment enabling the use of AI as a driver for innovation. 2) Qatar must be an efficient consumer of AI, with a properly educated citizenry, sound laws, and ethical guidelines. Each of 6 pillars features components to build an inclusive AI framework.⁵⁶⁵⁹ Pillars focus on recruiting and developing AI talent, data access, infrastructure, and building an AI-augmented knowledge economy.

As part of Pillar 6, which focuses on Ethics and Public Policy, Qatar's AI strategy emphasizes the importance of robust guidelines to ensure AI aligns with ethical principles and societal norms.⁵⁶⁶⁰ To fulfill this commitment, the Ministry of Communications and Information Technology (MCIT) released Artificial Intelligence in Qatar—Principles and Guidelines for Ethical Development and

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Deployment.⁵⁶⁶¹ This document emphasizes human-centered AI principles, including transparency, system robustness, and alignment with Qatari cultural values. The guidelines encourage responsible AI development focused on public benefit, security, and ethical deployment, reinforcing adherence to both international standards and local norms. Implementation of the ethical guidelines remains advisory rather than binding.

Qatar’s artificial intelligence (AI) committee launched in 2021⁵⁶⁶² to ensure that the National AI Strategy is implemented with proper mechanisms and oversight. The AI Committee acts as a connecting bridge between the ministries and relevant authorities to develop plans and programs “for preparing human cadres in the field of artificial intelligence applications.” The committee sits under the MCIT and includes representatives from the MCIT, Ministry of Interior, Ministry of Education & Higher Education, Ministry of Commerce and Industry, Hamad bin Khalifa University, Qatar National Research Fund, and Qatar Development Bank.⁵⁶⁶³

In addition to the overarching ethical framework set by the MCIT, Qatar’s National Cyber Security Agency (NCSA) introduced sector-specific ethical AI guidelines.⁵⁶⁶⁴ These guidelines are designed to strengthen transparency, privacy, and security within AI applications in critical sectors such as healthcare, finance, and education. The NCSA guidelines provide targeted standards that address the specific regulatory and ethical requirements of each sector, reinforcing Qatar’s commitment to responsible AI deployment as outlined in the national AI strategy. In the financial sector, Qatar Central Bank issued comprehensive guidelines in September 2024 to regulate AI use, emphasizing transparency, operational efficiency, and customer security.⁵⁶⁶⁵ These guidelines are part of Qatar’s broader FinTech strategy, aligning with international standards to ensure ethical AI deployment in finance.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The AI strategy underlies Qatar's Third National Development Strategy (NDS-3) for 2024–2030,⁵⁶⁶⁶ which highlights AI as a pivotal sector for driving economic diversification and innovation. Complementing this, the MCIT launched the National Digital Agenda 2030 in 2024 to provide a roadmap to advance Qatar's digital economy, emphasizing innovation, inclusivity, and sustainable development.⁵⁶⁶⁷

Through recent guidelines and sector-specific standards, Qatar is signaling a commitment to ethical, human-centered AI practices that align with both international standards and national development priorities.

Public Participation

Qatar's National Development Strategy has set goals of developing modern public sector institutions, efficient and transparent delivery of services, and larger space for civil society.⁵⁶⁶⁸ Relatedly, the national Digital Government 2020 strategy identifies open government as a key strategic objective, and recognizes Open Data, e-Participation, and related policies as key initiatives.⁵⁶⁶⁹ The Open Data Policy of 2014 requires government agencies to ensure that their data is published using an open format both technically and legally. The e-Participation Policy established in 2015 requires the Ministry of Communications and Information Technology (MCIT) to promote e-Participation between government agencies and the public.⁵⁶⁷⁰

Qatar has enhanced the GaaS (Government as a service) initiatives, with an array of citizen Digital Government services such as Metrash, Hukoomi, Baladiya/Oun. These applications aim to facilitate Inter/Intra Government Departmental transfer of data to create a modern and efficient public sector. There are 1,400 Hukoomi Services, with 650 services that aim to show higher efficiency,

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

transparency, and openness of the government.⁵⁶⁷¹ This degree of interaction garnered Qatar the 2024 United Nations e-Gov benchmark as a “high level of interaction index.”⁵⁶⁷²

The MCIT initiated a public consultation in 2024 to gauge digital inclusivity among citizens and residents.⁵⁶⁷³ While the survey was not specifically focused on emerging technologies like artificial intelligence, it aimed to gather valuable insights into how Qatar's population interacts with modern technologies. However, no institutionalized public consultation processes specifically addressing artificial intelligence policies or algorithmic decision-making have been developed, and civil society does not formally participate in AI governance due to existing restricted civic participation and limited inclusion of third sector actors in Qatar.⁵⁶⁷⁴

Data Protection

Qatar adopted law 13 Concerning Personal Data Privacy Protection (PDPPL) in 2016.⁵⁶⁷⁵ Qatar became the first Gulf Cooperation Council member state to issue an applicable Data Protection Law, supplemented with a set of regulatory guidelines issued by the Compliance and Data Protection Department. The guidelines incorporate concepts from EU data protection legal frameworks providing further clarity for compliance purposes.

The PDPPL defines the rights of individuals to the processing of their data within “the framework of transparency, honesty, and respect of human dignity.”⁵⁶⁷⁶ Chapter 4 establishes special permissions required to process Personal Data of Special Nature, namely ethnic origin, children, health, physical or psychological condition, religious creeds marital relations, and criminal offenses.

The National Cyber Governance and Assurance Affairs body under the National Cyber Security Agency oversees the PDPPL, including offering guidance,

⁵⁶⁷⁶ *Ibid*, Chapter Two

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

promoting good practice, investigating complaints, monitoring compliance, and supporting enforcement as necessary.⁵⁶⁷⁷

The Ministry of Transport and Communications was the authority designated in Article 20 of Decree-Law No 8 of 2016 to propose legislation, policies, and standards necessary to regulate government information technology systems, transactions, and services to enable government agencies to achieve their digital transformation objectives.⁵⁶⁷⁸ Restructuring created a Ministry of Communications and Information Technology (MCIT) to oversee digital transformation⁵⁶⁷⁹ and “supervise, regulate, and develop the sector of Information and Communications Technology.”⁵⁶⁸⁰ The MCIT created a Data Management Policy to regulate data protection in government services in 2015.⁵⁶⁸¹ The MCIT oversaw the related Open Data Portal until the function was taken over by the National Planning Council in 2023.⁵⁶⁸² The Ministry released guidelines in 2021 to “help the target audience; individuals, regulated entities and stakeholders, understand their respective responsibilities, rights and practices” related to the data privacy protection law.⁵⁶⁸³

The Qatar Central Bank provides guidance for the protection of data in the financial sector. The Central Bank guidance on Artificial Intelligence noted that Providers of High-Risk AI Systems may process personal data only in compliance with the PDPPL and “to the extent that it is strictly necessary for the purposes of ensuring Bias monitoring, detection, and correction.”⁵⁶⁸⁴

The Qatar Financial Centre, a financial services free zone in Qatar, updated its Data Protection Regulations and Rules (originally issued in 2005), to align with international data protection laws, such as the GDPR in 2021.⁵⁶⁸⁵ Key changes include removing mandatory notification for sensitive data processing, requiring that

consent is freely given and easily withdrawn, and expanding the definition of sensitive data to include criminal records. The new regulations also introduce accountability principles, data protection by design, and Data Protection Impact Assessments for high-risk processing. The QFC Data Protection Office can impose penalties up to \$1.5 million per infringement.

The Qatar National Cyber Security Agency became a member of the Global Privacy Assembly in 2024.⁵⁶⁸⁶ The agency did not sponsor any of the earlier resolutions.

Algorithmic Transparency

Qatar's Personal Data Privacy Protection Law does not include explicit rights regarding automated decision-making or algorithmic profiling, leaving individuals without formal mechanisms to challenge or seek explanation of AI-driven decisions. The Qatar Financial Centre updated provisions in 2021 offer some protection in the financial sector. The National Cyber Security Agency Guidelines for Secure Adoption and Usage of Artificial Intelligence highlight the importance of transparency and explainability along with human oversight in automated decision-making with regular references to the GDPR.⁵⁶⁸⁷ However, these guidelines are voluntary. Additionally, no technical documentation, evaluation criteria, or performance transparency have been published for AI systems already deployed by government entities, such as the job nationalization allocation algorithm.

The Technical Office of the Ministry of Labour of Qatar began using data algorithms in job localizations as an initiative supported by United Nations Economic and Social Commission for Western Asia (UN ESCWA)⁵⁶⁸⁸ and two corporate partners in 2023.⁵⁶⁸⁹ The algorithm recommends the percentage of Qatari employees given a firms' absorptive capacity,⁵⁶⁹⁰ tailoring the nationalization %

based on the company's capital, number of employees, average salaries, and activity. The algorithm provides recommendations for up-skilling to candidates and develops statistics. The support of ESCWA to the Ministry of Labor and the Digital Transformation Unit includes creating the model, which is based on ESCWA's Skills Monitor.⁵⁶⁹¹ There is no disclosure about the specifics of the model and the extent of the complexity, accuracy, or reliability of the algorithm.

Facial Recognition

Qatar used AI to manage crowds during the 2022 FIFA World Cup and to control stadium conditions such as temperature.⁵⁶⁹² The "connected stadium" concept implemented during the event⁵⁶⁹³ included facial recognition receiving input from 22,000 security cameras installed at stadiums.⁵⁶⁹⁴ Data was set to predict crowd patterns based on the movement of people. All people attending the FIFA World Cup in Qatar were required to download the Hayya app⁵⁶⁹⁵ to enter stadiums and use public transportation.

The Ministry of Communications and Information Technology launched the National Digital Authentication and Trust Services Strategy⁵⁶⁹⁶ in January 2025. The program includes a unified digital ID system⁵⁶⁹⁷ designed to enhance information security through a unified authentication platform. The platform has specific

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

biometric capabilities (including facial recognition) incorporated into related government digital identity applications like the QDI app, supporting seamless access to electronic services. The unified digital ID can be accessed through a centralized digital government portal and aligns with Qatar's Digital Agenda 2030, providing seamless interoperability across government ministries, departments, and agencies while prioritizing the protection of personal data and privacy.

Biometric Identification

In 2007, Qatar rolled out biometric-enabled national ID cards and developed an ambitious digital government program.⁵⁶⁹⁸ In 2011, the Ministry of Interior introduced smart card services for expatriates.⁵⁶⁹⁹ These smart cards are of compulsory use as e-gate cards, storing biometric data (e.g. fingerprints and eye scan) on a chip. Residents can also use the smart cards for immigration control. Relevant information is protected under the Data Protection Law.

The Ministry of Interior launched the Qatar Digital Identity application in 2024.⁵⁷⁰⁰ The Qatar Digital Identity application provides digital versions of ID cards and documents, allowing users to access electronic services, through biometric data, without the need for physical documents. The application can be obtained on the Ministry of Interior's website or downloaded from Google Play.

Qatar Central Bank introduced new e-KYC regulations requiring financial institutions to implement advanced biometric technologies.⁵⁷⁰¹ The technologies combine the traditional OTP mechanism with another factor of authentication, such as PIN code, password, or secure biometrics.

Environmental Impact of AI

Qatar's National Vision 2030 addresses five major challenges facing the country, including environmental management.⁵⁷⁰² Environmental protection and development is a central theme. The Vision emphasizes the need to establish legal

Center for AI and Digital Policy

frameworks and environmental institutions to safeguard the country's environmental heritage and stresses the importance of raising citizens' awareness of their role in protecting the environment.⁵⁷⁰³ However, there are no specific guidelines or established authorities to concretely implement this vision and address issues such as AI data center energy consumption among others.

Qatar's National AI Strategy highlights the potential for AI technology to facilitate national priorities such as food security but does not address the environmental costs of developing AI systems.⁵⁷⁰⁴

AI Literacy

MCIT has moved beyond strategy to practice with teacher- and learner-facing activities for AI literacy. In January 2025, MCIT launched the Digital Inclusion Index (2024)⁵⁷⁰⁵ to track equitable access and skills. MCIT's Teaching & Learning Forum 2025⁵⁷⁰⁶ featured hands-on AI training sessions for educators on classroom use and critical thinking. The GovAI Program⁵⁷⁰⁷ continues to seed public-sector AI projects with an end-to-end adoption path that includes training for civil servants. In parallel, national cultural institutions are running AI workshops during the 2025–2026 school year to demystify chatbots and provide practical AI experience for students.⁵⁷⁰⁸

Human Rights

Qatar has endorsed the Universal Declaration of Human Rights (UDHR). Qatar is signatory to the International Covenant on Civil and Political Rights

(ICCPR) and International Covenant on Economic, Social and Cultural Rights (ICESCR) (2018).⁵⁷⁰⁹

Freedom House rates Qatar as “Not Free” with a score of 25/100 in 2025.⁵⁷¹⁰ The report highlights “Political parties are not permitted, and public participation in the political arena is extremely limited. While Qatari citizens are among the wealthiest in the world, most of the population consists of noncitizens with no political rights, few civil liberties, and limited access to economic opportunity.”

The Qatar Constitution is based on Sharia Law. The substantive list of rights (or protections) reside in Part 3: Public Rights and Duties, including equality of citizens in rights and duties (Art. 34); equality of “all persons” before the law and without discrimination “whatsoever” on “grounds of sex, race, language or religion” (Art. 35); protection against unlawful arrest or detention (Art. 36); protection of privacy (Art. 37); the right to elect and be elected (Art. 42); the right of assembly (Art. 44) and of association (Art. 45); freedom of expression (Art. 48); freedom of religion (Art. 50).⁵⁷¹¹

Qatar held a constitutional referendum on in November 2024, amending amongst other provisions, Article (77) ending Qatar’s 2021 experiment with elections for the Shura Council, the country’s advisory legislative body. Through the referendum, citizens were asked to vote away their right to elect members of the Shura Council in the name of national unity, rather than extending voting rights to naturalized citizens or allowing them to run for office. The amendments stripped all citizens of these rights.⁵⁷¹²

Media reports cite issues with human rights in Qatar, associated with deaths of migrant workers since Qatar was awarded World Cup hosting rights.⁵⁷¹³ Qatar has taken steps in passing laws to protect migrant workers, including adjustments in their minimum wage and living conditions.⁵⁷¹⁴

The World Bank's Doing Business project, which also makes projections on the Strength of legal rights index (0–weak to 12–strong), scored Qatar as 1.⁵⁷¹⁵ Qatar's international cooperation with multilateral entities (i.e. UNESCO, UN Development Programmes, World Bank, and others) are set to support the country in “measur[ing] progress towards the national and international development goals, human rights protection, transparency and the fight against corruption.”⁵⁷¹⁶

The UN Committee on the Elimination of Racial Discrimination applauded Qatar in April 2024 for creating a memorial for enslaved Africans. The Committee discussed eliminating of the Kafala system and mandatory HIV testing for migrant workers.⁵⁷¹⁷ The National Human Rights Committee (NHRC) of Qatar concluded its landmark International Conference on Artificial Intelligence and Human Rights: Opportunities, Risks, and Visions for a Better Future⁵⁷¹⁸ with the adoption of the Doha Declaration on AI and Human Rights.⁵⁷¹⁹ The declaration outlines bold recommendations to safeguard human rights in the age of AI and promote ethical and inclusive development of emerging technologies⁵⁷²⁰. The declaration calls for integrating human rights principles into every stage of AI development, deployment, and governance to ensure that AI technologies promote human dignity, autonomy, inclusivity, and accountability.

The Doha declaration also calls for effective monitoring and reporting of cyberattacks and AI-enabled threats targeting female politicians, human rights defenders, and activists.⁵⁷²¹ It stresses the urgent need for legal protections, victim

support mechanisms, and capacity-building for stakeholders to counter AI-enabled harassment and discrimination.

The Qatar Principles and Guidelines for Ethical Use of AI⁵⁷²² explicitly call for avoiding the perpetuation of bias and discrimination in AI systems, enabling reporting and redress mechanisms for impacted groups.

OECD / G20 AI Principles

Qatar is not a member of the OECD and did not endorse the OECD AI principles.⁵⁷²³ The country has not submitted reports to OECD AI Observatory on AI initiatives.⁵⁷²⁴

Council of Europe AI Treaty

Qatar did not participate in negotiations for the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law⁵⁷²⁵ and has not signed this first legally binding international AI treaty.⁵⁷²⁶

UNESCO Recommendation on AI Ethics

Qatar is a member state of UNESCO since 1972,⁵⁷²⁷ and was one of the 193 countries that endorsed the UNESCO recommendation on the Ethics of AI.⁵⁷²⁸ With The recent adoption of the Artificial Intelligence in Qatar – Principles and Guidelines for Ethical Use, the Qatari Ministry of Communications and Information Technology

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

has provided guidelines for AI system users, aiming to promote the ethical use of AI.⁵⁷²⁹ These guidelines outline six key principles: safeguarding personal and organizational data, complying with relevant laws and regulations, ensuring the well-being of individuals and society, assuming accountability, acknowledging AI's capabilities and limitations, and do not use AI systems to perpetuate bias.

These principles closely align with the UNESCO Recommendations, which include concepts such as Do No Harm, Fairness and non-discrimination, Safety and security, Right to Privacy and Data Protection, and Responsibility and accountability. This alignment can be seen as Qatar's ongoing efforts to implement the UNESCO Recommendations. However, further steps and concrete actions are needed to fully integrate the UNESCO Recommendations such as completing the Readiness Assessment Methodology (RAM).⁵⁷³⁰

Evaluation

Qatar is a forward-looking nation with a digital transformation agenda, to propel economic development and sustainability and build a path toward a knowledge-based economy. The formulation of the national AI strategy positions Qatar in a leading space in the Gulf region. Qatar's endorsement of the UNESCO Recommendation on the Ethics of AI might provide the country with an opportunity to develop a trustworthy AI approach to policy developments in the field. The enactment of the Data Protection Law (DPL) of 2016 signals the commitment of the country to develop data governance rules, which needs to be furthered by a commitment to algorithmic transparency sustained by an independent supervisory authority. Qatar has made measurable progress in AI literacy through MCIT programs, national forums, civil-service training pathways, and school-level AI workshops. These efforts support the growth of digital skills and responsible use of AI tools among educators, students, and public-sector employees.

⁵⁷³⁰ UNESCO Global AI Ethics and Governance Observatory, *Global Hub* (Oct. 2025), <https://www.unesco.org/ethics-ai/en/global-hub>

Romania

In 2025, Romania continued progress on creating a governance framework aligned with the National AI Strategy and EU AI Act, despite missing the August deadline to designate a supervisory authority. The country supported further discussions on a normative framework on LAWS in the UN General Assembly.

National AI Strategy

Romania's government approved the National AI Strategy 2024–2027 in July 2024.⁵⁷³¹ The strategy aims to foster innovation and guide AI adoption “under conditions of respect for human rights and the promotion of excellence and trust in AI.”⁵⁷³² The strategy acknowledges the need for an AI governance framework and intends to align Romanian governance with European and other international standards. The National AI Strategy sets for a vision of “trustworthy and excellent AI, a driver of economic growth and social well-being in Romania”⁵⁷³³ built on fundamental pillars: trust, excellence, respect for human rights, economic growth, and social well-being. The vision relies on safe and reliable AI developed under state supervision to ensure “the responsible and ethical use of technology” and to direct AI development for economic growth. By contributing to global norms and standards and following an ethical and responsible approach, the Romanian strategy “aims to shape the national evolution of AI to promote economic progress, social well-being and democratic values, stability, and national security.” Responsibility for implementing the National AI Strategy is distributed across Romanian ministries with the Ministry of Education and Research (formerly Ministry of Research, Innovation, and Digitisation) and the Ministry of Economy, Digitalization, Entrepreneurship and tourism (MEDAT) leading the initiative.

The 2024 strategy builds on the 2019 AI strategy,⁵⁷³⁴ which shared a similar mission and alignment with European guidelines for AI adoption.⁵⁷³⁵

EU Digital Services Act

As an EU member state, Romania is directly bound by EU Digital Services Act.⁵⁷³⁶ Romania formally implemented the Digital Services Act through Law No. 50/2024,⁵⁷³⁷ which was published in March 2024. The National Authority for Management and Regulations in Communications (ANCOM) was designated as the country's national digital services coordinator, the central body responsible for supervision and enforcement.⁵⁷³⁸

EU AI Act

Romania's public authorities to supervise or enforce the obligations for protecting fundamental rights, including the right to non-discrimination, in relation to the use of high-risk AI systems are as follows:⁵⁷³⁹

- The People's Advocate (Ombudsman)
- National Authority for Consumer Protection
- National Agency for Equal Opportunities between Women and Men
- National Council for Combating Discrimination (CNCD)
- The National Supervisory Authority for Personal Data Processing (ANSPDCP)
- National Authority for the Protection of Child Rights and Adoption
- Ministry of Labor and Social Solidarity / Labor Inspection
- The National Audiovisual Council
- The Permanent Electoral Authority

However, Romania has not yet designated a notifying and market surveillance authority as national competent authorities in accordance with Art 70 of the EU AI Act.⁵⁷⁴⁰

Public Participation

Romanian laws require transparency and citizen participation in government decision-making⁵⁷⁴¹ and free access to information of public interest.⁵⁷⁴² Keeping with these legal requirements, the Authority for the Digitalization of Romania and the Technical University of Cluj-Napoca jointly coordinated the early-stage public consultation of the Strategic Framework for the Adoption and Use of Innovative Technologies in Public Administration 2021–2027.⁵⁷⁴³ Public consultations were held in 2021 and 2022, involving participation from the public, private, and academic sectors.⁵⁷⁴⁴

In early 2024, the Ministry of Research, Innovation and Digitization (MCID) published the National Strategy in the Field of Artificial Intelligence (SN-IA) 2024–2027 for open consultation prior to the government approval in July 2024.⁵⁷⁴⁵

Additionally, the MCID established the Scientific and Ethics Council in Artificial Intelligence to advise the Romanian Government and national authorities on responsible and ethical use of AI.⁵⁷⁴⁶ The Council is made up of “50% women, approximately 1/3 from the diaspora, have diverse experience, from senior researchers and founders of top institutions abroad, to researchers with a rapidly developing career, who are asserting themselves and building the AI environment in Romania and globally,” suggesting an emphasis on ensuring broad representation.⁵⁷⁴⁷

Center for AI and Digital Policy

Data Protection

Romania is bound by the General Data Protection Regulation (Regulation (EU) 2016/679—GDPR), which introduced accountability-based mechanisms such as Data Protection Impact Assessments (DPIAs), records of processing activities, and mandatory breach notification obligations.⁵⁷⁴⁸ To operationalize the GDPR, the Ministry of Internal Affairs and the Ministry of Communications, in coordination with the National Supervisory Authority for Personal Data Processing, enacted Law No. 190/2018 in July 2018,⁵⁷⁴⁹ introducing specific national derogations. The law provides safeguards for high-risk processing, including genetic, biometric, and health data (Art 3), regulates the use of national identification numbers such as the Personal Numeric Code (Art 4), and sets proportionality rules for employee monitoring and background checks (Art 5).⁵⁷⁵⁰ It also establishes tailored limitations for public-sector entities, capping fines for state institutions more narrowly than for private controllers.

Law No. 102/2005 establishes and regulates the structure and enforcement powers of the Romanian National Supervisory Authority for Personal Data Processing, which is responsible for supervising both the GDPR and national data protection rules.⁵⁷⁵¹ Romania's National Supervisory Authority joined the Global Privacy Assembly in 2006.⁵⁷⁵² Romania did not sponsor or endorse the 2018 Declaration on Ethics and Data Protection in Artificial Intelligence,⁵⁷⁵³ 2020

Center for AI and Digital Policy

Resolution on Accountability in the Development and Use of Artificial Intelligence,⁵⁷⁵⁴ 2022 Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology,⁵⁷⁵⁵ or 2023 Resolution on Generative Artificial Intelligence Systems.⁵⁷⁵⁶

Algorithmic Transparency

Romanian citizens are granted the rights to algorithmic transparency and contestability through the GDPR.⁵⁷⁵⁷ The GDPR requires individuals be informed when automated decision-making is used, to receive meaningful information about the logic involved, and provides the right not to be subject to decisions based solely on automated processing that produce significant legal or personal effects. The GDPR also grants the right to obtain human intervention and to contest such decisions.

Additionally, Romania has signed and ratified Convention 108+,⁵⁷⁵⁸ which reinforces these protections by ensuring that individuals' views are considered before any solely automated decision is made and that they can obtain information on the underlying processing logic.

Use of AI in Public Administration

The Agency for Financing Rural Investments (AFIR) has been using AI to “help farmers apply for European Union funds” since 2022.⁵⁷⁵⁹ The agency has reportedly processed financing requests worth 5.32 billion euros (\$5.75 billion) from more than 50,000 farmers, companies, and local institutions—saving an estimated

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

784 days of document searches. The efficiency marks a positive development for Romania, which has lagged behind other European countries in providing digital public services for citizens and businesses.⁵⁷⁶⁰ AFIR's adoption of AI could strengthen Romania's ability to leverage the EU development funds more effectively and demonstrates the broader potential for AI to enhance efficiency across the country's public administration.

Use of AI in Elections

In December 2024, Romania's Constitutional Court annulled the presidential election, citing vote manipulation through non-transparent and unlawful use of digital technologies and AI during the campaign.⁵⁷⁶¹ The ruling underscores the misuse of AI undermines electoral processes and the governance challenge of safeguarding the integrity and stability of democratic elections.

Environmental Impact of AI

As an EU member state, Romania is bound by the Energy Efficiency Directive (Directive (EU) 2023/1791), that requires "large data centres with an installed IT power demand of at least 500 kW" to publish annual energy consumption reports (Art 12).⁵⁷⁶² The National AI Strategy doesn't explicitly address AI's impact on the environment.

Lethal Autonomous Weapons

Romania is a high contracting party to the Convention on Certain Conventional Weapons (CCW)⁵⁷⁶³ and a member of the CCW Eastern Europe Group (EEG).⁵⁷⁶⁴ Romania has implicitly aligned with the European Union (EU) support

for an international treaty on lethal autonomous weapons systems (LAWS), as in a 2020 EU statement at the UN General Assembly First Committee supporting a “normative and operational framework” on autonomous weapons systems.⁵⁷⁶⁵ The EU submission to the 2024 UN Secretary-General Report on LAWS⁵⁷⁶⁶ reiterated the need for a normative framework and stressed that “human beings must make the decisions with regard to the use of lethal force, exert control over the lethal weapons systems that they use and remain accountable for decisions over the use of force in order to ensure compliance with international law.”

Romania has not made a definitive, independent statement on the use of LAWS. However, Romania voted in favor of the UN General Assembly resolution on the implications of AI in the military domain in 2025.⁵⁷⁶⁷ The Resolution calls for sharing perspectives on the report of the Secretary-General and “existing and emerging normative proposals and next steps.”

AI Literacy

Romania’s National AI Strategy aims to increase the basic level of understanding of the population on the benefits, use, and regulation of AI through the pre-university education system.⁵⁷⁶⁸ Beyond the education system, the Strategy includes initiatives for bootcamp-like courses on the benefits, risks, and use of AI tools. The Strategy promotes several national level programs aimed at fostering general AI literacy for the public and upskilling the workforce. The AI Strategy cites the Strategy for the Digitalization of Education in Romania, 2021–2027 as a model with pillars on developing relevant skills for digital transformation and a high-performing education ecosystem. The Strategy identifies AI as a tool that could help with the second pillar. For skills, the strategy focuses on high-school mathematics and computer science specializations. Initiatives include “courses and public information campaigns for the general population targeting different social and professional categories to explain the basic technological concepts, benefits and risks of AI applications.”⁵⁷⁶⁹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Human Rights

Romania has ratified most of the universal and European human rights treaties.⁵⁷⁷⁰ Under Article 20 of the Constitution of Romania, these international human rights instruments guide the interpretation of constitutional rights, and—where domestic legislation conflicts with them—the international standards prevail unless Romanian law offers more favorable protection.⁵⁷⁷¹

Freedom House rates Romania as “Free” with a score of 82/100 for political rights and civil liberties.⁵⁷⁷² Constitutional protections for civil liberties, including freedom of expression, assembly, and political participation bolster the score. Systemic corruption, businesses’ manipulation of media for political interests, and discrimination against people from ethnic and religious minority groups remain problems.

OECD / G20 AI Principles

Romania endorsed the OECD AI Principles as a Non-Member in 2019.⁵⁷⁷³ Romania’s National AI Strategy aligns with the OECD AI Principles and G20 AI Guidelines by promoting ethical AI development, data protection, and trustworthy AI systems.⁵⁷⁷⁴ Romania is also implementing the EU AI Act, ensuring high-risk AI systems meet human oversight, explainability, and risk assessment requirements, which aligns with OECD and G20 recommendations.

Council of Europe AI Treaty

Romania participated in negotiations for the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law as a member of the European Union and Council of Europe.⁵⁷⁷⁵ Romania is party to the treaty

through the EU signature but has not yet signed or ratified the treaty on the national level.⁵⁷⁷⁶

UNESCO Recommendation on AI Ethics

As a UNESCO Member State, Romania has endorsed the UNESCO Recommendation on the Ethics of Artificial Intelligence.⁵⁷⁷⁷ Romania's National AI Strategy addresses ethical AI principles and the attention to preparing citizens to benefit from AI technology through literacy and workforce training, along with the vision to employ AI for social as well as economic well-being align with the Recommendation's underlying values. The country is not listed as one of the countries implementing the Readiness Assessment Methodology.⁵⁷⁷⁸

Evaluation

Romania's National AI Strategy sets out a framework to foster innovation while embedding safeguards around human rights, transparency, and managing risks associated with AI. While Romania has identified authorities for fundamental rights oversight, the is still working to officially designated the market surveillance and notifying authorities mandated by the EU AI Act, creating uncertainty around future enforcement. Romania has endorsed notable global frameworks—including the OECD AI Principles, the UNESCO Recommendation on AI Ethics, and the Universal Declaration of Human Rights—and adheres to EU and UN standards. It has not signed the Council of Europe AI Treaty.

Romanian citizens benefit from strong data protections through the application of the GDPR and the country's ratification of Convention of 108+, ensuring rights to algorithmic transparency. The National AI Strategy emphasizes enhancing AI Literacy, with commitments to integrate AI education into school curricula, expand public information campaigns, and support workforce adjustment through national reskilling programs. This strategy addresses Romania's digitalization gap and positions AI adoption as a way to strengthen efficiency, as demonstrated by the AI-enabled improvements at the Agency for Financing Rural Investments (AFIR). Overall, Romania's AI policies and practices reflect strong

normative alignment with democratic AI governance principles but challenges to consistent, effective implementation.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Russia

In 2025, Russia amended the National AI Strategy and extended through 2030. The country created a working group to develop a comprehensive regulatory framework on artificial intelligence as federal laws on experimental legal regimes for digital innovations, including AI, entered into force.

National AI Strategy

Russian president Vladimir Putin famously said, in a 2017 address to students in Moscow, “Artificial intelligence is the future not only of Russia but of all of mankind. There are huge opportunities, but also threats that are difficult to foresee today. Whoever becomes the leader in this sphere will become the ruler of the world.”⁵⁷⁷⁹ Putin then stated that it is better to avoid a monopoly on the sector and promised that if Russia became the leader in developing AI, then Russia will share their technology with the rest of the world, just as they share their atomic and nuclear technology today. Later, Putin suggested that “the nuclear arms control treaties of the Cold War could be a guide” for addressing the social impacts of advances in areas such as artificial intelligence.⁵⁷⁸⁰

Russia's national strategy for Artificial Intelligence (AI) was announced in October 2019.⁵⁷⁸¹ The strategy defines the goals and primary objectives of the development of artificial intelligence as well as the measures aimed at its use for protecting national interests and implementing strategic national priorities, including those in the field of scientific and technological development. President Putin amended the Strategy by Decree in February 2024.⁵⁷⁸² The amendments aim to promote the development and application of AI technologies in Russia with a focus on sectors such as healthcare, education, industry, and defense. The strategy sets a target of increasing the readiness of critical industries to implement AI to 95% by

⁵⁷⁸² President of the Russian Federation, *Decree of the President of the Russian Federation on "On Amendments to the Decree of the President of the Russian Federation of October 10, 2019. No. 490 "On the Development of Artificial Intelligence in the Russian Federation" and the National Strategy approved by this Decree,"* Artificial Intelligence of the Russian Federation (Feb. 15, 2024), <http://publication.pravo.gov.ru/document/0001202402150063>

2030, up from 12% in 2022, and aims to increase annual spending on AI to RUB 850 billion. The strategy also addresses challenges such as a lack of computing power, personnel shortages, and new types of threats in the field of information security.

The goals of the development of AI in the Russian Federation include the improvement of the well-being and quality of life of the population, national security and rule of law, and sustainable competitiveness of the Russian economy,⁵⁷⁸³ including leading positions the world over in the field of AI. The primary objective of the Russian development of AI is to support scientific AI research, engineering AI software development, data quality, hardware availability, qualified personnel and integrated system to extend Russian artificial intelligence technology market.

In the strategy,⁵⁷⁸⁴ the basic principles of the development and use of artificial intelligence technologies include the protection of human rights and liberties, security, transparency, technological sovereignty, innovation cycle integrity, reasonable thrift, and support for competition in the field of artificial intelligence. The strategy imagines AI technologies to improve the standard of living by bolstering the quality of healthcare services, education services, and provision of public and municipal services, as well as the reduction of the cost of these services.⁵⁷⁸⁵

In 2020, the Government of the Russian Federation adopted the Development of Regulatory Relations in the Field of Artificial Intelligence and Robotic Technologies by 2024.⁵⁷⁸⁶ The main purpose of the Decree is to set forth basic approaches to transforming the regulatory framework in the Russian Federation to enable the development and use of such technologies across various economic sectors while upholding citizens' rights and protecting the security of individuals, the public and the state. The Decree also enshrines some important principles. It clearly defines the need for accountability for possible negative consequences of using AI. The Decree also defined a human-centric approach, which asserts that the ultimate goal of the development of artificial intelligence and robotics technologies, guided by regulatory influence, is to ensure the protection of human rights and freedoms

guaranteed by Russian and international law and to improve the well-being and quality of life of citizens.

Russia enacted amendments to the law requiring legal entities and individual entrepreneurs participating in “experimental legal regimes” in the field of digital innovations to insure against civil liability for harm caused to the life, health, or property of others during implementation of the experimental legal regime, including harm resulting from the use of AI technologies.⁵⁷⁸⁷

President Putin addressed the 17th Congress of the Russian Geographical Society in October 2025, urging AI developers to draw on the Society's collections to ground AI models in Russia's culture, history, and values. Putin cautioned that relying on foreign AI models leads to technological and ideological dependence and the erosion of sovereignty.⁵⁷⁸⁸ His instructions to the government, Sberbank, Yandex, and other organizations to develop proposals for domestic generative AI models and an electronic component base and to draft a national plan for AI implementation across the economy and social sphere align with this initiative. His instructions also required all ministries and agencies to report comprehensively on AI use across the economy, social sphere, and regions by March 2026.⁵⁷⁸⁹

President Putin established the Presidential Commission on the Development of Artificial Intelligence Technologies in February 2026, co-chaired by the Deputy Prime Minister and the Deputy Chief of Staff of the Presidential Executive Office, to coordinate federal and regional AI development and implementation and to address key risks arising from AI systems.⁵⁷⁹⁰

Digital Economy in Russia

Russian government has put high priority and already achieved some remarkable accomplishments in Digital Transformation. A key strategic objective formulated by its leadership in the May 2018 Presidential Decree (The Decree on the National Goals and Strategic National Development Tasks of the Russian Federation

Center for AI and Digital Policy

until 2024)⁵⁷⁹¹ is that policymakers must build on the country's traditional industrial strengths, develop new technology processes for fast implementation in all the main competitive domains and continuously tackle any obstacles.⁵⁷⁹²

President Putin enacted a new decree in 2024 updating the national development goals through 2030.⁵⁷⁹³ The 2024 decree identifies digital transformation of state and municipal governance, the economy, and the social sphere as a standalone national development goal and directs the government to develop a new national project on the Data Economy and Digital Transformation of the State.

The Russian government has centered the development of unmanned aircraft systems (UAS) in pursuing digital innovation. Two recent resolutions introduce experimental legal frameworks for the advancement of UAS in designated areas. Resolution No. 185⁵⁷⁹⁴ establishes an experimental regime in Innopolis, Tatarstan, aimed at fostering digital innovation through the development and testing of UAS technologies within a regulated environment. Resolution No. 641⁵⁷⁹⁵ extends this experimental regime to Moscow. This expansion aims to apply similar principles to a larger urban environment, exploring the potential integration of UAS within a highly populated city. Both resolutions underscore Russia's commitment to digital innovation by testing UAS in diverse environments, addressing regulatory needs, and setting the stage for broader adoption of drone technology in urban and innovative hubs.

President Putin issued instructions in March 2025, directing the Government and Roscosmos to coordinate satellite infrastructure and airspace frameworks for UAS development, expand experimental legal regimes for drone testing, and advance

a national project on unmanned aviation systems in cooperation with the National Technology Initiative.⁵⁷⁹⁶

Due to limitations on funding related to COVID-19 and sanctions, the funding available for development of AI projects was reduced. Moreover, the findings of 2021 research suggest that Russia's AI strategy had in many ways been stifled by the country's poor climate for innovation and investment, as well as budget cuts due to COVID-19.⁵⁷⁹⁷ IntelliNews announced in 2023 that the military invasion of Ukraine caused Russia to slash support for the development of AI technologies more than 10-fold.⁵⁷⁹⁸

AI Strategy for Russian Start-ups

Russia aims to increase the start-up ecosystem and many companies have been helped by the traditional hard science education in the country.⁵⁷⁹⁹ This report breaks down the importance of Artificial Intelligence in Russian startups, with a large number of startups active in AI. At the same time, the war with Ukraine has had a dramatic effect on the Russian IT industry. It has led to many IT professionals to leave the country, thus impacting the AI industry in the country.⁵⁸⁰⁰ However, the Russian government has sought avenues to reverse drawbacks of the war by promoting international cooperation. President Putin issued instructions directing the government and Sberbank to deepen cooperation with China on AI research and development in 2024.⁵⁸⁰¹ At the AI Journey 2024 conference, Putin also announced the launch of the BRICS AI Alliance Network, positioning Russia to chair its secretariat and lead a multilateral AI cooperation framework among BRICS nations and other interested states.⁵⁸⁰²

AI Legislation

The Government of Russia is establishing a national Center for the Development of AI to coordinate model solutions and provide expert and methodological support across government entities.⁵⁸⁰³ Russia's 2020 law to regulate the conditions for developing and implementing AI technologies⁵⁸⁰⁴ though an amendment to the bill disallows foreign firms from applying to participate in the experimental regime. In addition to Russian firms whose share of participating in foreign legal entities registered in offshore zones amounts to 50 percent or more.⁵⁸⁰⁵

Russia is developing AI regulation in the fields of autonomous vehicles and healthcare. In the area of autonomous vehicles, the Russian Government issued a regulation on highly automated vehicles on public roads in 2018 to allow the testing of autonomous vehicles.⁵⁸⁰⁶ In 2020, Russia adopted the concept of road safety with autonomous vehicles on public roads and in 2021, the Russian government began developing measures for the testing of highly automated vehicles on public roads.⁵⁸⁰⁷ In the area of healthcare, Russia established Rules for registering AI systems as medical software devices to simplify AI system registration procedures.⁵⁸⁰⁸

The Russian Government supports the initiative on autonomous vehicle development. In 2022, the Russian Government adopted regulation No. 1849⁵⁸⁰⁹ on

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

"On establishing an experimental legal regime in the field of digital innovation and approval of the Program of experimental legal regime in the field of digital innovation for the operation of highly automated vehicles for the implementation of the initiative 'Unmanned logistics corridors.'" The regulation provides definition of automatic driven system, automatic control mode and unmanned cargo transportation; establishes procedures and requirements for operators of vehicles, describes risks.⁵⁸¹⁰

Digital Rights Law and AI Regulation

According to the OECD, Russia's Digital Rights Law, which came into force in October 2019, introduced several new legal concepts, including digital rights, e-transactions, smart contracts, and big data.⁵⁸¹¹ The law aimed to enable the development of an efficient legal framework of digital economy in Russia, reflecting current digital technologies and challenges including big data and AI.

Russia's national AI strategy includes a draft legal framework on AI Technologies and Robotics that focuses on eliminating excessive legal barriers. The initiative aims to give guidance for regulators and is under the responsibility of the Ministry of Economic Development.⁵⁸¹²

Considering that AI technology is mainly used by state authority in Russia as a means of digital authoritarianism, the new initiative on the development of AI technology for the public authority needs to be drafted. Thus, in October 2022 the Russian State Duma passed in the first reading a bill regulating the development of artificial intelligence and information technologies by means of concession agreements and agreements on public-private and municipal-private partnership.⁵⁸¹³

The Federation Council formed a working group under its Committee on Constitutional Legislation and State Building in January 2025 to develop a national AI regulatory framework by reviewing international processes.⁵⁸¹⁴ The State Duma

established an inter-factional working group to develop legislation on the use of AI in April 2025.⁵⁸¹⁵ The Ministry of Digital Development and Mass Communications completed public consultations in September 2025, on a proposed experiment to use generative AI in public administration and began preparing a draft regulation for Cabinet approval.⁵⁸¹⁶

Data Protection

There are many laws in Russia that regulate the processing of personal data, including the Constitution of the Russian Federation, the Council of Europe Convention 108+, and federal law.⁵⁸¹⁷ The Law on Personal Data of 2006 is the most comprehensive federal law and sets out broad rights and responsibilities associated with the collection and use of personal data.⁵⁸¹⁸ The Roskomnadzor, Russia's data protection agency, interprets the federal law and brings enforcement actions.

Russia is moving to update and expand its national data protection law.⁵⁸¹⁹ A draft law on the Protection of Consumer Rights would limit the ability of companies to collect personal data from consumers, unless there is a legal basis or the data is necessary for the transaction. A proposed law in the Duma would expand penalties for breach of personal data confidentiality and infringement of personal data anonymization rules. This proposal was enacted through Federal Law No. 420-FZ of November 30, 2024, which entered into force on May 30, 2025, significantly increasing administrative fines for personal data violations and tightening data

localization requirements for organizations processing Russian citizens' personal data using foreign infrastructure.⁵⁸²⁰

Russian President Vladimir Putin signed a law establishing guidelines for processing depersonalized personal data in August 2024.⁵⁸²¹ This legislation permits the transfer of facial images and voice recordings of Moscow residents in a depersonalized format for further processing, without requiring the individual's consent. The law authorizes the Ministry of Digital Development (Минцифры) to define personal data categories that, once anonymized, can be grouped by specific characteristics, provided they remain non-identifiable.

The law excludes the formation of datasets from biometric information, and data security will be overseen by the Federal Security Service (FSB) and the Federal Service for Technical and Export Control (FSTEC). In Moscow, this law also introduces changes for an AI technology experiment, allowing regional authorities to use depersonalized facial images and voice recordings to enhance municipal and state administration. However, strict limitations prevent data use if it risks harming individuals, the environment, or national security. The law took effect on September 1, 2025, following further guidelines from Roskomnadzor on data anonymization standards. Updated data localization provisions of the Law on Personal Data of 2006 entered into force in July 2025,⁵⁸²² requiring all infrastructure elements involved in the collection, storage, and processing of personal data of Russian citizens be located within Russia. The amendment extended the obligation beyond servers alone to all processing infrastructure.

Algorithmic Transparency

The Parliamentary Assembly unanimously adopted an Opinion that considered the cessation of Russia's membership to the Council of Europe (CoE) under Article 8 of the Statute on March 15, 2022.⁵⁸²³ However, Russia's ratification

of Convention 108 remains valid as a non-member state.⁵⁸²⁴ Russian data protection law does broadly provide rights of access and transparency to the data subject in automatic decision-making,⁵⁸²⁵ and Russia signed but has not ratified CoE Convention 108+.⁵⁸²⁶

Facial Recognition

Russia is moving rapidly to deploy AI-based face surveillance across the country, often with government funding that goes to business associates of President Putin. According to the *Moscow Times*, more than 43,000 Russian schools will be equipped with facial recognition cameras ominously named “Orwell.”⁵⁸²⁷ The system will be integrated with face recognition developed by NTechLab, a subsidiary of Russian President Vladimir Putin’s associate Sergei Chemezov’s Rostec conglomerate. NTechLab has already deployed facial recognition technology in Moscow to identify criminal suspects across a network of almost 200,000 surveillance cameras. “Critics have accused the technology of violating citizens’ privacy and have staged protests against the system by painting their faces,” reported *Moscow Times*.

Kommersant daily reported in September 2020 that CCTV cameras with facial recognition software, already used in Moscow, will be installed by the regional authorities in public spaces and at the entryway of apartment buildings in 10 pilot cities across Russia with the purported aim of protecting public safety.⁵⁸²⁸ Moscow authorities are also planning to expand the use of this technology, installing CCTV cameras with facial recognition software in trams and underground trains.

Human Rights Watch said “The authorities’ intention to expand the use of invasive technology across the country causes serious concern over the potential threat to privacy. Russia’s track record of rights violations means that the authorities should be prepared to answer tough questions to prove they are not undermining

people's rights by pretending to protect public safety.”⁵⁸²⁹ HRW also stated that Russian national security laws and surveillance practices enable law enforcement agencies to access practically any data in the name of protecting public safety.

Earlier in 2020, Amnesty International criticized Russia's plans to broaden the use of widespread facial-recognition systems, saying their expected deployment during public gatherings will “inevitably have a chilling effect” on protesters.⁵⁸³⁰

The face detection system has been used for tracking conscripts in Moscow as stated on BBC in October 2022. According to a recent study by the information and analytical agency *TelecomDaily*, more than 13 million CCTV cameras existed in Russia in 2020.⁵⁸³¹ The face detection systems are spread over the Russian regions. When it came to the number of cameras per 1,000 people, Russia also ranked third, after the United States and China.⁵⁸³² As BBC noted, the Moscow Unified Data Center (UDChD), which is connected to the facial recognition system, is planning to transfer data from other regions of Russia to collect and systematize personal data.⁵⁸³³

The facial recognition surveillance has been used to limit public expression. In 2022, police detained at least 43 people in the Moscow metro, clearly fearing protests. Among them were journalists and activists, whose photos were clearly marked in the system in a special way. In this case, as soon as the right person enters the station, the system reports this to law enforcement agencies.⁵⁸³⁴

Leaked government budget documents in 2024 confirmed a 12 billion rouble plan to centralize all surveillance camera data nationwide into a unified Video Stream Processing Center using NTechLab software, with the stated purpose of identifying “destructive and disloyal behavior.”⁵⁸³⁵ Through Decree No. 1510 in November 2024, the Russian government established an experimental biometric border control program requiring all foreign nationals entering Russia to provide facial images and

fingerprints.⁵⁸³⁶ The requirements extended to all Russian border crossing points from June 30, 2025. Lithuania's State Security Department confirmed in October 2025 that Russia is developing a centralized video surveillance system integrating facial recognition and AI tools, with plans to connect all public surveillance into a unified data system by 2030.⁵⁸³⁷

AI for Censorship

Roskomnadzor, a Russian agency founded to establish telecom licensing requirements, has become an online censorship authority monitoring online protest activities since 2020.⁵⁸³⁸ In every Russian region, local branches of Roskomnadzor trace “points of tension,” or events that could cause public discontent. Their primary goal is to identify local troublemakers whose names they then share with the Federal Security Services (FSB) and the Interior Ministry to ensure they are punished.

Independent investigative stories and the Russian pro-government business daily Kommersant have reported that Roskomnadzor is experimenting with the use of AI to enhance its control and censorship of online information. Specifically, the agency is testing AI technologies to refine its monitoring of news and information on Runet (the Russian Internet). This could lead to increasingly sophisticated censorship techniques that go beyond the current systems, which mainly focus on searching for prohibited keywords on the Internet and social media platforms.⁵⁸³⁹

President Putin signed Federal Law No. 303-FZ in August 2024, requiring Roskomnadzor to maintain a register of all bloggers and influencers with more than 10,000 followers, prohibiting unregistered accounts from advertising or monetizing content, and mandating that social networks and messaging platforms provide user information to Roskomnadzor or the FSB upon request.⁵⁸⁴⁰ In 2026, Roskomnadzor

plans to launch a dedicated AI-powered internet traffic filtering system, with the government allocating 2.27 billion rubles for its development.⁵⁸⁴¹

Environmental Impact of AI

Russia and Russian organizations have made commitments to evaluating environmental impacts of AI in local initiatives. Russia's National Strategy for Artificial Intelligence establishes that an effective system for assessing the results of implementing AI technologies should include the evaluation of economic, social, ethical, environmental, and institutional outcomes.⁵⁸⁴² Furthermore, the AI Alliance Russia Code of Ethics for Artificial Intelligence states that AI actors must not allow the use of AI technologies to cause harm to human life and/or health, the property of citizens and legal entities, or the environment. Any use, including the design, development, testing, integration, or operation of an AI system capable of purposefully causing harm to the environment, human life and/or health, or the property of citizens and legal entities, is prohibited.⁵⁸⁴³

President Putin issued instructions directing the government to draft a data center infrastructure action plan from 2025 to 2030, identifying nuclear, coal, and hydroelectric power as the primary energy sources for AI infrastructure development.⁵⁸⁴⁴ At the AI Journey 2025 conference, Putin noted that data center electricity consumption will more than triple this decade, positioning nuclear power as Russia's strategic advantage for powering AI systems.⁵⁸⁴⁵

Prime Minister Mishustin signed the Energy Strategy of the Russian Federation until 2050, which addresses environmental impact reduction through modern environmental standards and energy-saving incentives. The Strategy signed in 2025 creates a framework that also incorporates the digitalization of the energy sector and growing AI-related energy consumption.⁵⁸⁴⁶

Lethal Autonomous Weapons

In the international debate about Lethal Autonomous Weapons Systems (LAWS), Russia officially opposes a ban on LAWS and limitations on the development of weaponized AI. In 2019, the Russian delegation at the UN Group of Governmental Experts on LAWS stated that human control over the operation of [LAWS] is “an important limiting factor,” but that “specific forms and methods of human control should remain at the discretion of States.”⁵⁸⁴⁷ Russia has continued to oppose international regulation of LAWS. Russia was one of only three states voting against the December 2, 2024 UN General Assembly resolution on Lethal Autonomous Weapons Systems.⁵⁸⁴⁸ At the 2024 CCW GGE sessions, Russia reiterated that calls to limit or ban LAWS are premature and explicitly stated it would not agree to a legally binding instrument.⁵⁸⁴⁹

Defense Minister Sergei Shoigu said that Russia has already begun producing “weapons of the future” such as combat robots that are “capable of fighting on their own,” just like those shown in science-fiction movies.⁵⁸⁵⁰ Moreover, Russia has actively used LAWS in Ukraine since February 2022. As Stop Killer Robot stated, Russia has used “one-way attack drone which carries an explosive payload of approximately 36kg/80lb, has a flight range of approximately 2500km, and possesses autonomous flight capabilities.”⁵⁸⁵¹ Russia has also publicized the use of loitering munitions, particularly the KUB-BLA and the Lancet. The use of the KUB-BLA raised concerns about the deployment of an “AI-based autonomous weapon” because

Center for AI and Digital Policy

the system was reportedly capable of “real-time recognition and classification of detected objects” using AI, or as some have put it, identify targets using AI.⁵⁸⁵²

AI Literacy

Russia’s National AI Strategy identifies increasing public awareness of AI as a strategic objective, specifically directing efforts toward informing the public and organizations of the benefits and safety of AI technologies and the availability of training and retraining programs.⁵⁸⁵³ The strategy mandates introducing AI-related educational modules at all educational levels and creating professional retraining programs to equip individuals with knowledge and skills in fields relevant to AI development.⁵⁸⁵⁴

Russia’s AI literacy initiatives, however, are primarily oriented toward technical workforce development rather than responsible use or civic participation in AI policy. The Talent and Success Foundation, operating under the President, administers free online courses in AI and programming basics for students in grades 7 through 11, with at least 100,000 school children participating between 2022 and 2024.⁵⁸⁵⁵ In 2025, the Ministry of Digital Development selected 22 universities to train AI specialists as part of a 2025 to 2030 national talent pipeline effort.⁵⁸⁵⁶

There is no dedicated national framework for AI literacy in the sense of responsible use, digital citizenship, or public participation in AI policy discussions. Russia has not initiated the UNESCO Readiness Assessment Methodology, which includes evaluation of public awareness and civic engagement dimensions of AI governance.⁵⁸⁵⁷

Human Rights

Russia is a signatory to the Universal Declaration of Human Rights. Russia ceases to be a Party to the European Convention on Human Rights on September 16, 2022.⁵⁸⁵⁸ Also, as noted, since March 15, 2022, Russia is no longer a member of the Council of Europe, but ratification of the original Convention 108 is still valid. And a recent decision from the European Court of Human Rights, *Zakharov v. Russia*, found that Russia’s legislation on surveillance “does not provide for adequate and effective guarantees against arbitrariness and the risk of abuse.”⁵⁸⁵⁹

Freedom House rates Russia as “Not Free” with a score of 12/100 for political rights and civil liberties in the 2025 Freedom in the World report.⁵⁸⁶⁰ According to Freedom House, “Power in Russia’s authoritarian political system is concentrated in the hands of President Vladimir Putin. With subservient courts and security forces, a controlled media environment, and a legislature consisting of a ruling party and pliable opposition factions, the Kremlin manipulates elections and suppresses genuine opposition. Rampant corruption facilitates shifting links among state officials and organized crime groups.” Authorities have intensified restrictions on individual rights and liberties to stifle dissent over the full-scale invasion of Ukraine in 2022.

Moreover, as Human Rights Watch reports, the Russian Supreme Court ordered the closure of Memorial, Russia’s most prominent human rights organizations: International Memorial Society and Memorial Human Rights Center for violations of the “foreign agents” law. The liquidation was finalized in February 2022, when the Supreme Court rejected their respective appeals. Moreover, in late December 2021, Russian authorities blocked the website of OVD-Info, a human rights watchdog focusing on freedom of assembly. In April 2022, Russian authorities revoked the registration of 15 foreign NGOs and foundations, including Human Rights Watch and Amnesty International, forcing them to close their offices in Russia.⁵⁸⁶¹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Meanwhile, the United Nations Human Rights Office of the High Commissioner (OHCHR) documented violations of international human rights law and international humanitarian law (IHL) by the belligerent parties in relation to the treatment of prisoners of war and persons hors de combat.⁵⁸⁶²

OECD / G20 AI Principles

Russia, a member of the G20, endorsed the G20 AI Principles at the G20 Ministerial in 2019.⁵⁸⁶³ Russia has not endorsed the OECD principles as updated in 2024.⁵⁸⁶⁴ The first OECD State of Implementation report on the principles acknowledged Russia's alignment with the principles in formulating a national AI strategy, developing legal frameworks such as the concept for regulations on developing robotics, and facilitating innovation through developments such as sandboxes.⁵⁸⁶⁵ However, Russia's profile on the OECD AI Policy Observatory is no longer available.

Council of Europe AI Treaty

The Council of Europe Framework Convention on Artificial Intelligence, Human Rights, Democracy, and the Rule of Law, commonly referred to as the Council of Europe AI Treaty, was opened for signatures on September 5, 2024.⁵⁸⁶⁶ However, Russia has not signed this first legally binding AI Treaty.⁵⁸⁶⁷

UNESCO Recommendation on AI Ethics

Russia voted for the UNESCO Recommendation on the Ethics of AI, although it has not implemented it entirely. At least 17 executive bodies associated with the Russian Federation and more than 330 Russian organizations belong to the

AI Alliance Network and adopted the AI Code of Ethics.⁵⁸⁶⁸ The Code which was developed by the Alliance Russia's Commission on AI Ethics, is non-binding and voluntary.⁵⁸⁶⁹

Russia has not initiated the UNESCO Readiness Assessment Methodology (RAM).⁵⁸⁷⁰ The RAM is a tool designed to help countries evaluate their preparedness to implement AI ethically and responsibly aligned to UNESCO's Recommendation on the Ethics of Artificial Intelligence.⁵⁸⁷¹

Evaluation

Russia's development of a National AI Strategy, which has been amended to expand its definitional framework to include generative AI models and to direct all federal bodies towards alignment with national AI priorities; further the principles of transparency, security, and accessibility; endorsement of the G20 AI Principles; efforts to develop laws for digital rights and regulation of AI; establishment of the Presidential Commission on the Development of Artificial Intelligence Technologies to coordinate federal and regional implementation; and initiatives to involve the public in AI policy development, are positive steps forward. The adoption of an AI Ethics Code by more than 17 executive bodies associated with the Russian Federation and more than 330 Russian organizations, indicates a level of commitment to the ethical use of AI.

However, the use of Lethal Autonomous Weapon Systems (LAWS) in the war in Ukraine; Russia's continued opposition to legally binding international restrictions on LAWS; lack of robust measures to limit surveillance and protect human rights; rapid adoption and centralization of facial recognition technology in public spaces, including a biometric border control program expanded to all border crossing points in 2025; and use of AI to execute more sophisticated censorship and control of news and information on Runet (the Russian Internet), all raise concerns about the future implications of Russia's AI program.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Rwanda

In 2025, Rwanda made progress in capacity building, a key part of the National AI Policy, through Data Protection Office programs and collaboration with Day of AI Rwanda. Rwanda continued to participate in international efforts to promote ethical, inclusive, and trustworthy AI, including hosting the Global AI Summit on Africa in Kigali and signing the resulting Africa Declaration on Artificial Intelligence.

National AI Strategy

Rwanda, with Vision 2050, aspires to increase the quality of life for citizens and develop modern infrastructure⁵⁸⁷² by strengthening capacity, service delivery, and accountability of public institutions; increasing citizens' participation and engagement in development; and strengthening justice and rule of law. The National Strategy for Transformation (NST1) was the first medium-term strategy to implement the Vision 2050 from 2017–2024.⁵⁸⁷³ The National Strategy for Transformation (NST2) runs from 2024–2029 and focuses on job creation, economic growth, and climate resilience.⁵⁸⁷⁴ The government pledges to establish legal frameworks that spur economic development and instill fairness, transparency, and accountability across institutions.

Rwanda's National AI Policy adopted in 2023 marked progress on these transformation strategies.⁵⁸⁷⁵ The National AI Policy encompasses six priority areas: 1) 21st-century skills and high AI literacy, 2) Reliable infrastructure and compute capacity, 3) Robust Data Strategy, 4) Trustworthy AI adoption in the public sector, 5) Widely beneficial AI adoption in the private sector, and 6) Practical AI Ethical

Guidelines. The National AI Policy would establish the Responsible AI Office (RAI Office) under MINICT to drive, monitor, and evaluate the implementation plan. The RAI Office will also coordinate the implementation across public and private stakeholders and institutions, champion responsible AI nationally, and advocate Rwanda perspectives in regional and global fora.⁵⁸⁷⁶

The National AI Policy resulted from Rwanda's Ministry of ICT and Innovation (MINICT) participation in National AI Policy Stakeholders Workshops with The Future Society (TFS) and GIZ FAIR Forward.⁵⁸⁷⁷ The Future Society also supported the development of AI ethical guidelines and a practical implementation strategy fit for the local context.⁵⁸⁷⁸ For implementation, Rwanda has the support of GIZ FAIR Forward—Artificial Intelligence for All,⁵⁸⁷⁹ a global initiative of the German Development Cooperation, working with Rwanda and four other countries to lay the foundations for developing local AI, to strengthen local skills and knowledge in AI; remove barriers of entry to developing AI, and to develop AI policy frameworks on ethical AI, data protection and privacy.⁵⁸⁸⁰

Cooperation with GIZ FAIR Forward includes an AI Policy Maker network with Ministries of ICT and regulatory authorities from other African countries and India to exchange knowledge and skills and AI policy experiences.⁵⁸⁸¹ The FAIR Forward project also supports the formulation of ethical guidelines for the use of AI, under the responsibility of Rwanda Utilities Regulatory Authority (RURA). The guidelines aim to support AI developers in Rwanda on risk management to protect against harms and threats of these systems.

Other institutions contributing to the development of human-centric AI initiatives include the Rwanda Center for the Fourth Industrial Revolution (C4IR), centers on applying local knowledge to empower global change,⁵⁸⁸² and the Centre

of Excellence in the areas of Digitalization and AI (CoE), for R&D investment and building human capacity and preparation for transition into future of work.⁵⁸⁸³

Rwanda has also taken concrete steps to align the country's efforts to the African Union vision to build a continental digital transformation strategy.⁵⁸⁸⁴ The Government of Rwanda has legislated a national AI strategy to equip government agencies and other stakeholders in the country to empower AI developers, citizens, and users and support the beneficial and ethical adoption of AI.⁵⁸⁸⁵ Rwanda adopted the Continental Data Policy Framework under the recommendation of the African Union's Digital Transformation strategy.⁵⁸⁸⁶ Rwanda furthered this progress with adoption of the Digital Trade Protocol to the African Continental Free Trade Area in February 2024, which requires member states to “facilitate the adoption and regulation of emerging and advanced technologies, subject to their legitimate public policy objectives and essential security interest” and “develop governance frameworks for the ethical, trusted, safe, and responsible use of emerging and advanced technologies.”⁵⁸⁸⁷

Public Participation

Rwanda has yet to develop a systematic process for public consultation on matters of AI policy. Consultations have taken place in workshops and meetings.

The Ministry of ICT and Innovation (MINICT), in partnership with Rwanda Utilities and Regulatory Authority and the Rwanda Information Society Authority, engaged relevant stakeholders from the public and private sectors and civil society in the development of the National AI Policy.⁵⁸⁸⁸ The first workshop in September 2020 brought together civil society, private sector leaders, academics, and

Center for AI and Digital Policy

government representatives to identify and prioritize AI opportunities, risks, and socio-ethical implications. A Second Collective Intelligence Workshop took place in 2021 (online due to COVID-19) to discuss seven categories of AI policy.⁵⁸⁸⁹

In 2024, the National Cyber Security Authority and GIZ Rwanda hosted a workshop for stakeholders in the data governance ecosystem to brainstorm collaboration opportunities in data protection and privacy. The workshop identified areas of collaboration in skills development, awareness creation, and the use of artificial intelligence to advance data protection and privacy knowledge in Rwanda.⁵⁸⁹⁰

Data Protection

In 2019 Rwanda signed⁵⁸⁹¹ and ratified the African Union Convention on Cyber Security and Personal Data Protection (Malabo Convention).⁵⁸⁹² In June of that same year Rwanda adopted the Child Online Protection Policy (COP Policy) to mitigate against risks and harms and to deliver a framework that meets children's needs and fulfills their rights. This enactment makes Rwanda one of the first countries to adopt such protections.⁵⁸⁹³ The country had also been part of an initiative of UNICEF that aligned to policy guidance of AI for children.⁵⁸⁹⁴ The African Union (AU), of which Rwanda is a part, approved the African Union Child Online Safety and Empowerment Policy in May 2024.⁵⁸⁹⁵ The Policy establishes key principles such as children's right to safety, privacy, and online participation, and covers the full

Artificial Intelligence and Democratic Values 2026
Center for AI and Digital Policy

range of children's rights as set out in the Convention on the Rights of the Child adopted by the UN in 2021, and reinforced in 2023.⁵⁸⁹⁶

In 2021, pursuant to the Malabo Convention, the Ministry of Justice published a law on the protection of personal data and privacy (DPP Law).⁵⁸⁹⁷ The DPP Law established principles of lawfulness, fairness and transparency, purpose limitation, and accuracy, requiring personal data protection impact assessments. Article 3 of the Privacy Law establishes privacy as a “fundamental right.”⁵⁸⁹⁸ The Guide on Contractual Provisions for Processing of Personal Data, released in 2024, outlines mandatory requirements for data processing agreements under the law.⁵⁸⁹⁹ The Privacy Law seeks to safeguard fundamental rights to privacy by regulating the processing of data and providing the individual with rights over their data.⁵⁹⁰⁰ The law establishes systems of accountability and clear obligations for those who control the processing of personal data.

While the legislation did not establish an independent data protection agency, there were provisions for a supervisory authority, defined as a public authority in charge of cybersecurity. The National Cyber Security Authority (NCSA) was established in 2017⁵⁹⁰¹ and became operational in 2020.⁵⁹⁰² A 2018 law on the prevention and punishment of cybercrimes applies to cybercrimes committed within Rwanda or having effect there.⁵⁹⁰³ Rwanda introduced a second National Cyber

Security Strategy for the period 2024–2029, which identifies the cybersecurity concerns raised by AI.⁵⁹⁰⁴

On March 31, 2022, the National Cyber Security Authority launched the Data Protection Office (DPO).⁵⁹⁰⁵ The role of the DPO is to generate awareness of the Data Protection and Privacy Law and lead activities to ensure the law is followed. Those activities include registering processors and controllers, conducting audits, conducting investigations, and refining best practices to uphold the law. The office is also tasked with ongoing learning and research to keep pace with developments and advancements in the data protection ecosystem of control.

Rwanda’s National Data Sharing Policy establishes legal, technical, and operational standards for secure and responsible data exchange among public institutions.⁵⁹⁰⁶ The policy operationalizes provisions of the Data Protection and Privacy Law, complementing the oversight and enforcement mandate of the Data Protection and Privacy Office (DPO) in ensuring data is processed and shared in compliance with national privacy safeguards and accountability frameworks.

The DPO began an important national awareness campaign to help citizens understand the data protection and privacy afforded to them by the DPP Law. Campaigns cover basic data literacy topics (e.g., terms and definitions), risk mitigation topics (e.g., misinformation, helping seniors stay safe online, children’s data protections), and a series of topics on individual data rights. The office has developed several partnerships to expand the reach of its messaging within schools, public transportation areas, and local townships. For example, the first Data Privacy Day and Safer Internet Day took place in 2023.⁵⁹⁰⁷ Safer Internet Day 2024 took

place across different schools over 3 weeks and centered on personal accountability for a constructive Internet atmosphere.⁵⁹⁰⁸

The DPO continued to advance awareness and enforcement of data protection standards through multiple initiatives in 2025. These included stakeholder consultations on sector-specific data protection guidelines,⁵⁹⁰⁹ public webinars on Data Protection Impact Assessments⁵⁹¹⁰ and cross-border data transfer compliance,⁵⁹¹¹ and targeted outreach to private sector actors such as MTN Rwanda⁵⁹¹² to strengthen compliance with the DPP Law. The DPO also engaged youth through the Rwanda Youth Internet Governance Forum⁵⁹¹³ and participated in a national training on AI, data protection, and the rule of law for judicial operators.⁵⁹¹⁴

Rwanda is also party to the East African Community (EAC) Data Governance Policy Framework, aimed at promoting common standards for data protection, privacy, and security, laying a robust foundation for data protection and data sharing in the region.⁵⁹¹⁵

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Rwanda's DPO is not a member of the Global Privacy Assembly and has not sponsored any of the Global Privacy Assembly (GPA) resolutions and declarations.⁵⁹¹⁶

Algorithmic Transparency

Rwanda does not yet have a dedicated AI oversight agency nor a legally protected right to algorithmic transparency. The National AI Policy provides a framework for building public trust and accountability in the AI ecosystem by building regulatory capacity, establishing ethical guidelines, and creating roles dedicated to responsible AI such as the proposed Responsible AI Office (RAI Office) within the Ministry of ICT & Innovation (MINICT). A legal right to algorithmic transparency would facilitate this trust-building. No RAI Office currently exists within the MINICT.

Rwanda's data privacy and protection law (DPP) provides limited rights to algorithmic transparency. Article 21 guarantees a right to not be subject to a decision "which may produce legal consequences or significant consequences" based on solely automated processing.⁵⁹¹⁷ Other articles provide rights to data rectification and to opt out of profiling for direct marketing.

Human Rights

Freedom House rates Rwanda as "Not Free" with a score of 21/100 in 2025, citing government efforts to suppress political dissent through "pervasive surveillance, intimidation, arbitrary detention, torture, and renditions or suspected assassinations of exiled dissidents."⁵⁹¹⁸ The Ibrahim Index of African Governance scores Rwanda's 2023 record on Participation, Rights, and Inclusion at 42.5 out of 100, which is lower than the African average of 48.7 out of 100. For overall governance, Rwanda scores 58.7 out of 100, which places the country 14 out of 54 African countries.⁵⁹¹⁹

After the genocide of 1994, Rwanda had to rebuild its infrastructure and relations from the ground up. A unity and reconciliation process was followed by a

combination of traditional systems of justice and international tribunals.⁵⁹²⁰ The National Commission for Human Rights was created in 1999 as an independent institution responsible for the promotion and protection of human rights in Rwanda.⁵⁹²¹ The European Union concluded in its 2023 human rights and democracy report that “The human rights and democracy situation in Rwanda remained challenging”⁵⁹²² and that “Freedom of expression remained limited: charges for inciting insurrection, spreading rumours or false information, genocide minimization, and others, stifled public dissent or criticism.”

The Rwandan judiciary is not completely independent from the executive because top judicial officials are appointed by the president and confirmed by the Senate,⁵⁹²³ which is currently dominated by the governing party. However, the judiciary must function in an independent manner and enjoys administrative and financial independence.

Smart Cities

In 2015, Rwanda adopted a National Urbanization Policy to demonstrate how urban development can drive economic transformation through coordination, densification, conviviality, and economic growth.⁵⁹²⁴ The policy defines a smart city as “a compact, connected, socially inclusive and resilient city that leverages the power of technology, data and innovation to improve the quality of life of residents and to coordinate and integrate urban management sectors.”⁵⁹²⁵ The policy requires public engagement and open data as building blocks.

Kigali Innovation City (KIC) is the government’s flagship program to create a hi-tech ecosystem, modeling itself on the southeast Asian city-state of Singapore.⁵⁹²⁶ The KIC is a 62-hectare development located in Kigali’s special

economic zone (SEZ). The main goal is to create an innovative business hub in the heart of Africa that will include four first-rate universities, innovative agriculture, healthcare, technology, financial services, biotech firms, and both commercial and residential space. The Government of Rwanda, Africa50, and the Arab Bank for Economic Development in Africa officially broke ground on the construction of the pioneering smart city project in September 2024.⁵⁹²⁷

The Smart City Masterplan was developed in 2017, with the participation of various stakeholders in Rwanda, including regulatory bodies, local authorities, academia, civil society, and the private sector. The development was aligned with the Smart Africa Alliance Smart Sustainable Cities Blueprint for Africa.⁵⁹²⁸

Biometric Identification

Rwanda used biometric identification for its census in 2007 to unify all identity information under a single authority, the National Identification Agency (NIDA), and a unique National Identity Number (NIN).⁵⁹²⁹ This number is now used for health, education, telecom, banking, electoral lists, social protection programs, and border crossings.⁵⁹³⁰ Rwanda's authorities also proposed to create a country-wide DNA database to crack down on crime, raising concerns that the data could be misused by the government and violate international human rights laws.⁵⁹³¹ Rwandan regulations require mandatory SIM card registration and a limit of three cards per national ID per operator. Service providers are required to maintain databases and share information with law enforcement if necessary.

In a country that has bitter memories of genocide along ethnic identity lines, the right to data privacy becomes a crucial issue. The national social protection program database, Ubudehe, was created in 2001⁵⁹³² to classify wealth and identify

the poorest households using community assessments. The database is interlinked with the national ID number. The lack of transparency on who makes the determination of wealth category and how this impacts an individual's access to opportunities and resources and the extent of stigmatization remains questionable.

A study by the World Health Organization (WHO) on the use of digital technologies to identify vulnerable populations, included Rwanda's CBHI (Community-Based Health Insurance) as a case study.⁵⁹³³ WHO concluded that the use of a sophisticated data infrastructure (3MS system) to connect the Ubudehe system to the IREMBO-Rwanda online portal resulted in ease of tracking payments to households, cost savings, and fraud control. In a contrasting study, Algorithm Watch analyzed the Ubudehe case as a prime example of Rwanda's "centralized, unified and biometric repository of the population."⁵⁹³⁴ The process of collection, analysis, and interpretation lacks transparency, as does the source of categorization.

Environmental Impact of AI

The G20 Engagement Groups issued the São Luis Declaration, a joint declaration for ethical, sustainable, and inclusive Artificial Intelligence.⁵⁹³⁵ With Rwanda's president leading the African Union delegation to the 2025 G20, seated in South Africa, the G20 could take action to promote action to curb AI's environmental impact and develop AI solutions to mitigate harms.⁵⁹³⁶

Lethal Autonomous Weapons

In 2019 Rwanda partnered with the World Economic Forum⁵⁹³⁷ to draft a framework for governing drones at scale and foster an ecosystem of unmanned aircraft systems. This decision followed the successful partnership with a startup, Zipline, to deliver blood, vaccines, and other medical supplies to rural hospitals in Rwanda. The Rwandan government was the first in the world to create a performance-based regulation focused on safety standards for all drones.⁵⁹³⁸

This partnership also resulted in The Advanced Drone Operations Toolkit, which provides a modular approach for governments to enable societally important and safe drone projects.⁵⁹³⁹ The country is looking to use these technologies to promote agricultural resilience and food security in Rwanda. However, the country has not called for a prohibition on fully autonomous weapons.⁵⁹⁴⁰

In December 2023, Rwanda voted in support of UN General Assembly Resolution 78/241 on lethal autonomous weapons systems.⁵⁹⁴¹ The Resolution stressed the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems” and mandated the UN Secretary-General to prepare a report, reflecting the views of member and observer states on autonomous weapons systems and ways to address the related challenges and concerns they raise from humanitarian, legal, security, technological and ethical perspectives and on the role of humans in the use of force.

Rwanda is not a state party to the Convention on Certain Conventional Weapons, and it has not yet declared its position on the negotiation of a legally binding instrument on autonomous weapons systems. Rwanda is a member of the African Group in the United Nations, which supports the negotiation of a legally binding instrument on autonomous weapons.

Rwanda participated in the REAIM international summit hosted by the Netherlands in February 2023. At the end of the Summit, Rwanda, together with other countries, agreed on a joint call for action on the responsible development,

deployment and use of artificial intelligence in the military domain.⁵⁹⁴² Rwanda also participated in the second REAIM summit in 2024 in the Republic of Korea.⁵⁹⁴³

The AU addressed the issue of lethal weapons by stressing the urgent need for stringent regulations and oversight to prevent their proliferation, particularly in conflict-prone regions. While we underscored the devastating impact of such weapons on civilian populations and the necessity for comprehensive disarmament initiatives. Emphasizing the role of international cooperation, we must advocate for collaborative efforts to strengthen legal frameworks and promote alternative security measures, thereby fostering a safer environment and enhancing regional stability.”⁵⁹⁴⁴

AI Literacy

AI literacy is a core objective in Rwanda’s National AI Policy (2023) under Priority Area 1, 21st-Century Skills & High AI Literacy.⁵⁹⁴⁵ The policy emphasizes private-sector partnership and public awareness to demystify AI by identifying high-potential use cases, hosting meetups and demonstrations, and raising AI and data literacy among citizens. Government actions include skills-gap assessments, professional training programs, integration of AI and data-science modules into national curricula, development of university-level programs, industry-led apprenticeships, and nationwide awareness campaigns. The Digital Ambassadors Program (DAP) trains youth to deliver community-based digital literacy in e-government, e-business, e-agriculture, and mobile financial services.⁵⁹⁴⁶

The Ministry of Education and the Rwanda Education Board partnered with MIT RAISE and Day of AI in 2025 on an initiative to include AI literacy in all classrooms in Rwanda.⁵⁹⁴⁷ Over 150 master educators from all districts participated in a 4-day training to integrate AI into ICT instruction with emphasis on ethics,

problem-solving, and critical thinking. The Day of AI team also engaged Mandela Washington Fellowship participants from 20 African countries to support regional AI-literacy capacity building.⁵⁹⁴⁸

Human Rights

Freedom House scores Rwanda as “Not Free” with a score of 23/100 in 2023 and 2024,⁵⁹⁴⁹ with a steady yet slight increase from 2021 and 2022. The Ibrahim Index of African Governance scores Rwanda’s 2023 record on Participation, Rights, and Inclusion at 42.5 out of 100, which is lower than the African average of 48.7 out of 100. For overall governance, Rwanda scores 58.7 out of 100, which places the country 14 out of 54 African countries.⁵⁹⁵⁰

After the genocide of 1994, Rwanda had to rebuild its infrastructure and relations from the ground up. A unity and reconciliation process was followed by a combination of traditional systems of justice and international tribunals.⁵⁹⁵¹ The National Commission for Human Rights was created in 1999 as an independent institution responsible for the promotion and protection of human rights in Rwanda.⁵⁹⁵² The European Union concluded in its 2023 human rights and democracy report that “The human rights and democracy situation in Rwanda remained challenging”⁵⁹⁵³ and that “Freedom of expression remained limited: charges for inciting insurrection, spreading rumours or false information, genocide minimization, and others, stifled public dissent or criticism.” In 2023, restrictions on freedom of expression and individual rights in Rwanda persisted, with specific incidents such as imprisonment, torture, and suspicious deaths of journalists or commentators who do not align with the government’s narrative.⁵⁹⁵⁴

International Collaboration

Rwanda has been actively engaging internationally in AI policymaking. Rwanda and Singapore launched the AI Playbook for Small States in 2024, providing strategic guidance on AI adoption and governance to address small nations' unique challenges in implementing AI policies.⁵⁹⁵⁵

Rwanda signed a tripartite Memorandum of Understanding (MoU) with the United Arab Emirates and Malaysia to expand the Centre for the Fourth Industrial Revolution (C4IR) AI Fellowship Program. This partnership aims to promote ethical AI governance, talent exchange, and responsible AI frameworks across the Global South.⁵⁹⁵⁶

Rwanda hosted the Global AI Summit on Africa in April 2025 dedicated to discussing Africa's demographic strengths and how AI can help reimagine economic opportunities for the workforce.⁵⁹⁵⁷ The event culminated in the Africa Declaration on Artificial Intelligence,⁵⁹⁵⁸ which highlighted Rwanda's ongoing commitment to the UN Global Digital Compact, AU Continental Strategy, and guiding principles including sovereignty, ethics, transparency, and prioritizing human rights and dignity. The Declaration preamble explicitly acknowledges the agreements at the global summits in Bletchley Park (2023), Seoul (2024), and Paris (2025). The AI African Council was also unveiled during the Summit as an advisory body to the Smart Africa Council of ICT Ministers, the Smart Africa Steering Committee, and Board of Smart Africa.⁵⁹⁵⁹

AI Safety Summit

In November 2023, Rwanda participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁵⁹⁶⁰ Rwanda thus committed to participate in

international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

The successor of the AI safety summit was the AI Seoul summit that was co-hosted by the Republic of Korea and the United Kingdom in Seoul, South Korea, in May 2024.⁵⁹⁶¹ While Rwanda was a participant,⁵⁹⁶² they did not sign the Seoul Declaration for Safe, Innovative and Inclusive AI that was signed by ten participants of the summit. The declaration is a statement of intent toward international cooperation on AI safety science.⁵⁹⁶³

Rwanda signed the Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet during the Paris 2025 AI Action Summit, along with the African Union, the EU, and over sixty countries.⁵⁹⁶⁴ This landmark declaration underscores a shared global commitment to advancing AI that is ethical, inclusive, sustainable, and aligned with human rights principles.

OECD / G20 AI Principles

Rwanda was admitted as the 55th member of the OECD Development Center, a forum within the OECD in 2019.⁵⁹⁶⁵ The country promotes the G20 AI Guidelines through leadership of the African Union delegation.⁵⁹⁶⁶

Rwanda continues to refine its AI policies and frameworks, reinforcing its commitment to sustainable development and collaboration with international bodies. Rwanda engages actively with G20 discussions, contributing to the development of global AI principles that emphasize transparency, accountability, and inclusivity. According to the OECD AI Observatory, Rwanda's national AI policy framework may align with three OECD AI principles: (1) Investing in AI R&D, (2) Fostering a digital ecosystem for AI, and (3) Providing an enabling policy environment for AI.⁵⁹⁶⁷

Council of Europe AI Treaty

The first legally binding global AI treaty protecting human rights, democracy, and the rule of law was developed in the Council of Europe with the participation of all member states, observer states, and non-member states.⁵⁹⁶⁸ Rwanda has not signed the Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law but will be eligible to accede to the treaty after it enters into force.⁵⁹⁶⁹

UNESCO Recommendation on AI Ethics

Rwanda is a member state of UNESCO since November 1962⁵⁹⁷⁰ and is one of the 193 countries endorsing the Recommendation on the Ethics of AI.⁵⁹⁷¹ According to UNESCO's Artificial Intelligence Needs Assessment Survey, Rwanda has ongoing initiatives to guide the development of AI at national level and is one of 24 countries in Africa that have requested support in the development of policies and standards on AI.⁵⁹⁷² The UNESCO report highlights Rwanda's policies and centers of excellence on AI as policy initiatives completed as of 2022. Strategies, legislation, and ethical guidelines are in process implemented. Rwanda convened a national workshop with UNESCO in 2023 focused on the implementation of the Recommendation across the 11 policy areas.⁵⁹⁷³

Rwanda is currently undergoing the UNESCO Readiness Assessment Methodology (RAM),⁵⁹⁷⁴ a tool to support the effective implementation of the Recommendation.⁵⁹⁷⁵ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.⁵⁹⁷⁶

Evaluation

Rwanda's Vision 2050, the African Union Digital Transformation Strategy, and the SmartAfrica Blueprint set the framework for the formulation of the National AI Policy. The Policy achieved in cooperation with the MINICT, FAIR Forward AI for All, and The Future Society set the intent of the country in aligning with the UNESCO Recommendation on the Ethics of AI.⁵⁹⁷⁷ An independent AI oversight

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

mechanism could also be a positive step in addressing AI-powered surveillance practices.

Rwanda is positioning itself as a player in the global discourse on artificial intelligence through collaboration with UNESCO to implement the Recommendation and participation in G20 discussions on ethical AI. Hosting the high-level Global AI summit and launching the AI playbook with Singapore highlight Rwanda's leadership in fostering regional cooperation and addressing the skills gap in ICT.

Overall, these developments reflect Rwanda's strategic efforts to harness technology for social and economic progress while advocating for ethical frameworks and international collaboration.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Saudi Arabia

In 2025, Saudi Arabia endorsed the OECD AI Principles, further demonstrating support for these foundational principles the country already supported as a G20 member. The country also launched programs to build Saudis' foundational AI skills and knowledge, including in the national curriculum.

National AI Strategy

The Kingdom of Saudi Arabia (KSA)'s AI initiatives are led by the Saudi Data and AI Authority (SDAIA), which reports directly to the Prime Minister and consists of members chosen by the Prime Minister.⁵⁹⁷⁸ A Royal Decree established the SDAIA in 2019 and its governance by a Board of Directors chaired by the Deputy Prime Minister.⁵⁹⁷⁹ The SDAIA has the aim of fostering “the digital ecosystem while also supporting the suite of values-based G20 AI Principles.”⁵⁹⁸⁰

The SDAIA is to lead in the national trend for data and artificial intelligence to elevate the Kingdom to leadership among data-driven economies.⁵⁹⁸¹ “Data is the single most important driver of our growth and reform and we have a clear roadmap for transforming KSA into a leading AI and data-driven economy,” said Dr. Abdullah bin Sharaf Al Ghamdi, president of SDAIA.⁵⁹⁸²

The SDAIA oversees three organizations: the National Data Management Office (NDMO), National Information Center (NIC), and National Center for AI (NCAI). The NDMO is responsible for data regulation, which includes standardization and regulation of artificial intelligence and compliance. The NIC oversees the operation of government data infrastructure and government analytics. The implementation of the national AI strategy is the main responsibility of the

Center for AI and Digital Policy

NCAI. This includes facilitating capacity-building, AI innovation, and awareness of AI such as through expanding education on AI.⁵⁹⁸³

The SDAIA developed the National Strategy for Data and Artificial Intelligence (NSDAI), approved by the Saudi High Commissioner on July 7, 2020⁵⁹⁸⁴ and published in August 2020.⁵⁹⁸⁵ The National Strategy aims to advance the KSA Vision 2030.⁵⁹⁸⁶ The AI Strategy, also called ASPIRE, includes a roadmap with a “a multi-phased approach focused on addressing the national priorities by 2025, building foundations for competitive advantage in key niche areas by 2030, and becoming one of the leading economies utilizing and exporting Data & AI after 2030.”⁵⁹⁸⁷

The strategy supports national priorities by addressing the urgent needs to enable the transformation of the Kingdom in accordance with the priorities of Vision 2030.⁵⁹⁸⁸ Since 2025, the strategy has focused on building specialized capabilities in data and AI as the foundation for competitive advantage. By 2030, the strategy will be directed at developing entrepreneurial competition at the international level and joining the leading economies that benefit from data and artificial intelligence. Transforming the Saudi workforce through training in data and AI, including by international experts, and creating legislation to attract businesses and talent are among the AI Strategy’s 6 pillars.⁵⁹⁸⁹ Major educational reforms aim to foster the development of digital skills for jobs in emerging technology including AI.⁵⁹⁹⁰

As part of the National Strategy, the Kingdom aimed at the creation of a framework to promote and support the ethical development of Data & AI research and solutions. The framework includes guidelines for the development of data

Center for AI and Digital Policy

implement AI and data to drive economic development and prosperity in the country. The principles intend to limit the negative impacts of AI systems and provide businesses and other entities with a reference for adopting their own standards and ethics to ensure responsible AI use. In addition to principles, the framework defines risk categories and, for each principle, guidance for acting on that principle in each step of the AI lifecycle. The principles are Fairness, Privacy & Security, Humanity, Social & Environmental Benefits, Reliability & Safety, Transparency & Explainability, and Accountability & Responsibility.

The SDAIA has also released Guidelines for Generative Artificial Intelligence for the Public⁶⁰⁰¹ and for Government⁶⁰⁰² to assist stakeholders in the responsible design, development, deployment, and use of generative AI.

Public Participation

The Saudi AI initiatives are led by the Saudi Data and AI Authority, which reports directly to the Prime Minister and consists of members chosen by the Prime Minister.⁶⁰⁰³

In the most recent UN e-Government Survey of 2024,⁶⁰⁰⁴ Saudi Arabia ranked 6th out of 193 in the VHEGDI group in the E-Government Development Index (EGDI) and 2nd in the GCC. The UN report highlighted the e-participation initiatives at the national and local level and the integration of these programs through the Balady portal. The Balady (Arabic for ‘My country’) includes information on e-participation functions, including e-consultation, e-information, and e-decision making. The interactive platform includes options for “your voice is heard,” “self-evaluation,” and “your decision.”⁶⁰⁰⁵ The Bertelsmann Foundation country report 2024,⁶⁰⁰⁶ ranked Saudi Arabia 84th of 137 countries in the governance index, with low scores in Stability of Democratic Institutions and Political Participation. The report indicates that public debate about political issues is minimal.

Center for AI and Digital Policy

The SDAIA conducted a public consultation on draft amendments to the Implementing Regulations of the Personal Data Protection Law (PDPL) from April 27 to May 27, 2025, a few months after the full implementation of the law in September 2024.⁶⁰⁰⁷ The proposed amendments aim to provide clarity on some provisions and ease compliance burdens. The SDAIA previously sought public comments on the Principles of Ethics of Artificial Intelligence.⁶⁰⁰⁸ The survey was open for two weeks. Public comments are visible on the website and results and decisions can be downloaded (in Arabic).

The KSA Communication, Space, and Technology Commission (CST) conducted public consultation for the draft Global AI Hub Law from April 14 to May 14, 2025.⁶⁰⁰⁹ The goals of the Global AI Hub Law are to endorse the Kingdom's position and role as a global digital hub, stimulate investment in technology, data, and AI services, provide innovative services, and support innovation, research, and development in advanced technologies. The CST (then the Communications and Information Technology Commission, CITC) previously consulted the public on the Digital Content Platform Regulations Document in 2021.⁶⁰¹⁰ The document remained available on the website, but no comments or responses were published.

Data Protection

The Personal Data Protection Law (PDPL) was created by Royal Decree M/19 of September 2021 and Cabinet Resolution No. 98 of September 2021 and took effect in March 2022. The Saudi Arabia Council of Ministers adopted amendments to the PDPL in March 2023 following public consultation.⁶⁰¹¹ The amendments sought to assimilate further the PDPL definitions, concepts, and requirements to exemplary privacy laws such as the GDPR. The amendments introduced concepts such as personal data, controllers, and processors and added rights such as data portability and a requirement to maintain a record of processing activities.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Implementing Regulation of the Personal Data Protection Law entered into effect in September 2024.⁶⁰¹² The Implementing Regulation outlines key data subject rights such as the right to be informed of the purpose of data collection and the right to access, rectify, and delete personal data or withdraw consent. Furthermore, the regulation outlines the legal basis for personal data collection and processing outlining the controllers' obligations.” Proposed amendments⁶⁰¹³ to the Implementing Regulation submitted to the public for consultation in 2025 aim to consolidate and clarify the Data Protection Officer’s responsibilities; emphasize that Privacy Notices must be written in clear, simplified, and comprehensible language; and remove the previous 90-day time limit for individuals to file complaints, allowing data subjects to raise complaints at any time, among others.

The PDPL aims “to protect individuals' personal data privacy and regulate organizations' collection, processing, disclosure, or retention of personal data.”⁶⁰¹⁴ Modeled after the EU’s General Data Protection Regulation (GDPR), the PDPL aims to prevent the misuse of personal data and specifically implements principles such as “purpose limitation and data minimization, controller obligations, including registration and maintenance of data processing records, data subject rights, and penalties for breach of provisions.”⁶⁰¹⁵ The law grew from efforts by SDAIA to align the Kingdom with other countries in the region and with international standards as part of the Vision 2030.⁶⁰¹⁶ Individuals now have the “right to be informed of the legal basis and purpose for the collection and processing of their personal data. Personal data cannot be collected or processed without the Data Subject’s express consent.” Data subjects will also have the “right to access personal data in possession of the Data Controller, including the right to correct, delete, or update personal data, destroy unnecessary data, and obtain a copy of the data in a clear format.”⁶⁰¹⁷

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Soon after the PDPL took effect, the SDAIA published the Personal Data Destruction, Anonymization, and Pseudonymization Guideline,⁶⁰¹⁸ which provides a framework to help entities comply with the requirements for data destruction, anonymization, and pseudonymization.

The Kingdom issued the E-Commerce Law of 2019, which focuses on increased transparency and consumer protection to enhance trust in online transactions and includes provisions for the protection of personal data of customers.⁶⁰¹⁹ The Law sets obligations to service providers to protect the personal data of customers in their possession or under their control. The KSA E-Commerce Law prohibits service providers from using customers' personal data for "unauthorized or impermissible" purposes and disclosing personal data to third parties without the customer's consent.⁶⁰²⁰

The SDAIA serves as the KSA's data protection authority, charged with overseeing compliance with the PDPL. The SDAIA was welcomed as a new Observer to the Global Privacy Assembly (GPA) in 2021 until 2025.⁶⁰²¹ The Authority did not endorse the GPA 2018 Declaration on Ethics and Data Protection,⁶⁰²² 2020 Resolution on Accountability in the Development and Use of AI,⁶⁰²³ 2022 Resolution on Principles and Expectations for the Appropriate Use of

Algorithmic Transparency

The PDPL Implementing Regulation⁶⁰²⁶ that entered into force in September 2024 introduced provisions and mechanisms that enhance transparency and ensure accountability in the use of automated processing and algorithms. The Regulation ensures that data subjects are aware of and consent to automated processing.

The Implementing Regulation requires that when decisions are “made based entirely on automated processing of personal data,” explicit consent must be obtained from the data subject.⁶⁰²⁷ Another article requires controllers to conduct an impact assessment when processing involves “making decisions based on the automated processing of personal data.”⁶⁰²⁸ The impact assessments include identifying potential risks and impacts on the privacy and rights of data subjects. Controllers must also clarify “whether decisions will be made based entirely on automated processing of personal data.”⁶⁰²⁹ However, neither the PDPL nor Implementing Regulation establish an explicit legal right for data subjects to access the logic of automated decisions or to challenge them.

Prior to the PDPL regulation, the KSA public entities showed examples of adopting a culture of personal data protection. For example, the Saudi Tourism Authority in its website privacy statement explicitly informs users that no automated decision, including profiling is carried out. The Authority also explains its obligation to notify users “how [it] use automated decision making and/or profiling—when and why.”⁶⁰³⁰

In a Human Rights Watch investigation of government-endorsed EdTech products used during the COVID pandemic,⁶⁰³¹ the KSA was one of nine governments that “directly built and offered eleven learning apps that may collect AAD [Advertising ID] from children. In doing so, these governments granted themselves the ability to track an estimated 41.1 million students and teachers purely for advertising and monetization.” The KSA’s educational App iEN included third-party tools like Google Crashlytics and Firebase Analytics, which have the technical capability to collect and process users’ data and access the Android Advertising ID and camera on users’ Android devices. On a positive note, the KSA educational website was one of only 12 websites of the 124 analyzed that did not collect and transmit data about children through third-party trackers, preserving their privacy.

AI Sandboxes

The Saudi Data & AI Authority (SDAIA) launched a first-of-its-kind regulatory sandbox in the region to foster innovation while maintaining strong data protection and AI governance.⁶⁰³² The initiative allows companies and start-ups to test AI services and automated processing in a controlled, supervised environment—empowering innovation under rigorous oversight. According to the SDAIA, “The sandbox aims to encourage technological innovation in the fields of data and privacy while safeguarding consumers’ personal data rights.” The SDAIA further emphasizes that the program provides a “secure regulatory environment that supports the protection of personal data as a competitive advantage.”

AI in Public Administration

The KSA’s Vision 2030 include digital government to improve citizen services among the key objectives. Digital Government Authority (DGA) issued the Human-Centered AI (HAI) Framework in 2025,⁶⁰³³ setting out a national approach for the deployment of AI in government to explicitly prioritize human values, social benefit, explainability, and cultural alignment. The framework defines HAI as “AI that augments human decision-making” and is developed in line with existing national ethics instruments led by SDAIA. The HAI Framework links to the Vision 2030’s digital government pillars, providing practical recommendations for the

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

adoption of HAI-driven solutions and identifying KSA's public sector, healthcare, and education as key local opportunities.

Biometric Identification

Digital identity initiatives are on the agenda of the Kingdom. In 2021, Saudi Telecom Company (STC) signed an MoU with Thales on ample cooperation that encompassed Smart Cities, SIMs, IoT, and 5G Satellites.⁶⁰³⁴ The Ministry of Interior of KSA announced the introduction of a biometric passport with advanced securities, including an electronic processor chip with biometric information for authentication.⁶⁰³⁵

The Jawazat in 2021 released a Digital ID (Muqem- Iqama) for Expats, within the new electronic application ABsher Individuals. Carrying the Iqama card was compulsory for ex-pats with fines for not adhering. However, later in the year, the Jawazat clarified that Expats could use the alternate plastic Muqem version as well.⁶⁰³⁶ The Muqem card is under the Ministry of Interior in cooperation with the National Information Center.

Mass Surveillance

The Kingdom of Saudi Arabia was among the countries studied by the Carnegie Endowment for Peace in 2019 on the use of AI technology for mass surveillance.⁶⁰³⁷ According to the research, the Saudi government cooperates with several global technology firms to solidify digital infrastructure: Huawei to set up Safe cities, Google with cloud servers, BAE with mass surveillance systems, NEC with facial recognition technology, and Amazon and Alibaba with cloud computing centers within the smart city project. U.S. and Chinese technology firms also included Briefcam, Gatekeeper, Hikvision, Hugslock, and IBM, according to the study.⁶⁰³⁸

Saudi Arabia's Makkah Region Development Authority (MRDA) implemented a crowd-control system to protect pilgrims during Hajj and increase security and safety. The system includes a wristband with digital ID information, special healthcare requirements, and location via GPS as well as surveillance cameras to monitor the holy sites in real-time. The General Security and SDAIA collaborated to implement artificial intelligence technologies at the Command and Control Center of the Hajj security forces in Makkah and the holy sites in 2024.⁶⁰³⁹

During the fight against COVID-19, the SDAIA launched two apps: the Tawakkalna app⁶⁰⁴⁰ to manage movement permits for government and private sector employees and Tabaud to notify citizens when they came in contact with someone who was infected with the virus. MIT Technology Review reported that Tabaud is transparent, voluntary, and minimizes data collection.⁶⁰⁴¹

Smart Cities

The Kingdom initiated a smart city project called Neom. Neom “is an international project that will be led, populated and funded by people from all over the world.” Neom will be a “semi-autonomous region with its own government and laws” in northwest Saudi Arabia on the Red Sea and home to one million people by 2030.⁶⁰⁴² Neom is envisioned to become a region that “redefines the concept of urban development and what cities of the future will look like,” built on five principles: sustainability, community, technology, nature, and livability.⁶⁰⁴³

During the third edition of the Global AI Summit, the SDAIA signed a partnership with NEOM to support the NEOM Project in developing talented human resources in innovations, encouraging creators, and building national and international capacities regarding AI in decision-making, AI adaptive inspection, and machine-executable legislation.⁶⁰⁴⁴

Center for AI and Digital Policy

The NEOM project aligns with plans announced in 2022 to build 200 smart cities. The plan will involve the Ministry of Municipal and Rural Affairs and Housing, SDAIA, and the Royal Commission for Riyadh City.⁶⁰⁴⁵

Environmental Impact of AI

Principle 4 in the AI Ethics Principles states “AI systems should neither cause nor accelerate harm or otherwise adversely affect human beings but rather contribute to empowering and complementing social and environmental progress while addressing associated social and environmental ills.”⁶⁰⁴⁶

Lethal Autonomous Weapons

Saudi Arabia is a High Contracting Party to the convention on Certain Conventional Weapons (CCW)⁶⁰⁴⁷ and has participated in meetings of the Group of Governmental Experts (GGE) on Lethal Autonomous Weapons (LAWS) since 2014.⁶⁰⁴⁸ The country supports the negotiation of a legally binding instrument on autonomous weapons systems.

Saudi Arabia is a member of two groups that support the negotiation of a legally binding instrument on autonomous weapons systems: The Arab Group within the United Nations and the Non-Aligned Movement (NAM) within the CCW. The NAM issued a statement during the 2020 UN General Assembly on the “urgent need to pursue a legally-binding [*sic*] instrument on LAWS.”⁶⁰⁴⁹ The Kingdom has not issued any individual statement in this regard. Saudi Arabia abstained on UNGA Resolution 78/241 that emphasized the urgency to address the challenges of LAWS

in December 2023.⁶⁰⁵⁰ The KSA also abstained on UNGA Resolution 79/L.77 on LAWS in December 2024.⁶⁰⁵¹

Saudi Arabia signed⁶⁰⁵² the Call for Action at the 2023 REAIM (Responsible AI in the Military Domain) in The Hague.⁶⁰⁵³

AI Literacy

Minister of Education Yousef bin Abdullah Al-Benyan and SDAIA President Abdullah bin Sharaf Alghamdi launched the “One Million Saudis in AI” initiative (SAMAI) in September 2024.⁶⁰⁵⁴ The national initiative aims to train one million Saudis to “understand AI, its uses, ethics, and to train on the skills and tools necessary to integrate AI into business and daily life effectively and safely.” More than 330,000 citizens of all ages and professional backgrounds completed SAMAI’s self-paced foundational modules on AI uses, safety, and ethics to citizens by early July 2025.⁶⁰⁵⁵ By late July, officials put the figure at 420,000, showing fast uptake toward the one-million target.⁶⁰⁵⁶

In formal education, Saudi Arabia’s National Curriculum Center approved a mandatory AI curriculum to be taught at all levels of public schooling and reaching over six million students in the 2025–2026 academic year.⁶⁰⁵⁷ The curriculum introduces age-appropriate AI foundations, coding and data concepts, and a strand on AI and data ethics. The classroom content aligns with SDAIA’s public AI-awareness activities under the Vision 2030’s Human Capability Development Programme. To support classroom rollout, the SDAIA provided ready-to-use materials and guidance that align classroom practices with national AI safety principles and ran an awareness campaign for students

and teachers in August 2025.⁶⁰⁵⁸ The education reform integrates the Skills pillar of the Saudi national AI strategy into schools versus limiting the development to scholarship or specialist programs.

Human Rights

Freedom House rated Saudi Arabia as “Not Free” with a score of 9/100 in the 2025 Freedom in the World report.⁶⁰⁵⁹ based on low marks on civil liberties and political rights. Freedom House reports, “Saudi Arabia’s absolute monarchy restricts almost all political rights and civil liberties. No officials at the national level are elected. The regime relies on pervasive surveillance, the criminalization of dissent, appeals to sectarianism and ethnicity, and public spending supported by oil revenues to maintain power.” Internet freedoms in Saudi Arabia remained highly restricted due to censorship and persecution of government criticism.⁶⁰⁶⁰ While government initiatives to digitize and expand internet connectivity across the country have made the internet more accessible, regulations and oversight limit free expression.

Saudi Arabia is a member of the United Nations and hence is bound to commit to uphold human rights standards, including those laid out in the Universal Declaration of Human Rights (UDHR).⁶⁰⁶¹ Saudi Arabia was the sole abstainer on the Declaration among Muslim nations, stating that it violated Sharia law. The Kingdom is not a Party to the International Convention on Civil and Political Rights (ICCPR) and has not acceded to or ratified the International Covenant on Economic, Social, and Cultural Rights (ICESCR).

The Kingdom of Saudi Arabia served as one of the 47 members of the Human Rights Council,⁶⁰⁶² a position that the country lost in 2020, amid the reports of human rights violations.⁶⁰⁶³ The monitoring of KSA human rights activities and reports are

under the OHCHR Regional Office of the Middle East and North Africa (MENA) created in 2002.⁶⁰⁶⁴ The Human Rights Commission in KSA was founded in 2005 with “full independence in the exercise of its tasks for which it was established and stipulated in its organization.” The Commission states that it “aims to protect and promote human rights in accordance with international human rights in all fields, raising awareness of them and contributing to ensuring that this is implemented in light of the provisions of Islamic Sharia.”⁶⁰⁶⁵

Global AI Summits

The Global AI Summit, held in October 2020, brought together stakeholders from the public sector, academia, and private sector, to shape the future of Artificial Intelligence (AI).⁶⁰⁶⁶ Speakers from across sectors explored the themes of AI for the Good of Humanity, AI for Good, and AI for All.⁶⁰⁶⁷

The President of SDAIA emphasized the importance of working together internationally to ensure the sustainable development of AI⁶⁰⁶⁸ “to accelerate AI for sustainable development in low and middle-income countries and to enable the sharing of AI best practices globally to ensure a more inclusive future powered by AI where no one is left behind.”

The 2nd Global AI Summit was held in September 2022 under the theme Artificial Intelligence for the Good of Humanity.⁶⁰⁶⁹ The Summit examined eight pillars: smart cities, capacity building, healthcare, transportation, energy, culture, environment, and economic mobility. More than 40 memoranda of understanding, declarations, and partnerships were signed between the public and private sectors towards investing in AI technologies, underlining the Kingdom’s aspirations to become a global AI hub as part of its Vision 2030 development program.

During the summit, the State Members of the Digital Cooperation Organization (DCO)⁶⁰⁷⁰ adopted the Riyadh AI Call for Action Declaration (RAICA). The declaration was signed by all members of DCO including Bahrain, Cyprus, Djibouti, Kuwait, Morocco, Nigeria, Oman, Pakistan, Jordan, Rwanda, and

Saudi Arabia. The declaration promotes the use of AI technology to benefit transnational and transcontinental communities, advancing the DCO's commitment to identify and address present, emerging, and future humanitarian issues. The declaration highlights seven key pillars:

1. Closing the digital divide
2. Empowering underprivileged communities
3. Promoting digital development
4. Ensuring fairness and non-discrimination
5. Driving AI innovation
6. Combating climate change through AI
7. Engaging in international collaboration and cooperation.

AI Safety Summit

In November 2023, Saudi Arabia participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁶⁰⁷¹ Saudi Arabia thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

The second AI Safety Summit took place in Seoul in May 2024 and Saudi Arabia was represented by the SDAIA President.⁶⁰⁷² Saudi Arabia signed the Ministerial Statement, which highlighted the need to enhance inclusivity alongside AI safety and innovation.⁶⁰⁷³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

OECD / G20 AI Principles

The Kingdom of Saudi Arabia is a member of the G20, which adopted the G20 AI Guidelines align with the OECD Principles in 2019. In 2025, Saudi Arabia officially endorsed the OECD AI Principles.⁶⁰⁷⁴ The country is not a member of the Global Partnership on Artificial Intelligence (GPAI).⁶⁰⁷⁵

The country has demonstrated efforts for the implementation of the Principles through submission of reports to the OECD AI Observatory about implementation, including the National Data and AI Strategy, National Centre of AI, Personal Data Protection Law, Saudi Data and AI Authority.⁶⁰⁷⁶ The OECD also makes note of KSA's National Center for AI (NCAI) and highlights SDAIA's work toward trustworthy AI in health.⁶⁰⁷⁷

Saudi Arabia has also been active in promoting the principles through the G20. Saudi Arabia hosted the Meeting of the 2020 G20 Digital Economy Ministers in Riyadh, where AI policy was a focal point of discussion. The KSA Digital Economy Task Force released a new report on the implementation of AI cases that mapped to the OECD AI Principles.⁶⁰⁷⁸ The key agenda set by the Saudi government comprised: “Empowering People, by creating the conditions in which all people—especially women and youth—can live, work and thrive”; “Safeguarding the Planet, by fostering collective efforts to protect our global commons”; and “Shaping New Frontiers, by adopting long-term and bold strategies to share benefits of innovation and technological advancement.”⁶⁰⁷⁹ The G20 Leaders Declaration read: “We will continue to promote multi-stakeholder discussions to advance innovation and a human-centered approach to Artificial Intelligence (AI), taking note of the Examples of National Policies to Advance the G20 AI Principles.”⁶⁰⁸⁰

The Kingdom of Saudi Arabia has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁶⁰⁸¹

UNESCO Recommendation on AI Ethics

As a UNESCO member-State since 1946,⁶⁰⁸² Saudi Arabia was one of 193 that endorsed the UNESCO Recommendation on AI Ethics in November 2021. Experts from the SDAIA contributed to the initial draft of the UNESCO Recommendation.

Saudi Arabia is a member of the Groups of Friends of UNESCO, created in February 2022 as an open initiative to support the implementation of the recommendations and to exchange good practices. UNESCO published *Implementation of the Recommendation on Ethics of AI*⁶⁰⁸³ proposed by the Group of Friends—Cook Islands, Kuwait (chair of the Group of Friends), Liberia, Libya, Morocco, Netherlands, Oman, Saudi Arabia, and Togo—in October 2022.

The KSA AI Ethics Principles provide a practical guide to incorporate AI ethics throughout the AI development lifecycle.⁶⁰⁸⁴ The release of these principles demonstrates the commitment of KSA to the implementation of the UNESCO recommendations. Saudi Arabia and the Arab States are part of UNESCO activities in the region to achieve a unified view of Artificial intelligence.⁶⁰⁸⁵

Saudi Arabia completed UNESCO's Readiness Assessment Methodology (RAM) in December 2024.⁶⁰⁸⁶ In March 2025, SDAIA and ICAIRE convened global experts in Riyadh to review the Kingdom's RAM findings and next-step action

Center for AI and Digital Policy

plan.⁶⁰⁸⁷ RAM now serves as the main reference for aligning Saudi data- and AI-governance measures with the Recommendation. The RAM report found that while 100% of the Saudi population uses the internet, talent gaps exacerbated by women's limited access to STEM education reveal a need to develop the ecosystem further. Government funding in education and startups is one possible means to develop the system.⁶⁰⁸⁸

Evaluation

Saudi Arabia has emerged as an influential leader among the G20 countries, the Arab region, and a powerful AI economic force globally. As a member of the Digital Cooperation Organization (DCO), the Kingdom achieved the endorsement of the RAICA at the Global AI Summit in 2022. The SDAIA also published SDAIA AI Ethics Principles and has provided guidance on responsible use of Generative AI for the public and government.

The publication of the National Data and AI Strategy, the AI Ethics Principles, and the readily available documentation about related policies and strategies for AI show a positive intent of the country to involve constituents in this process. The Kingdom is keen to achieve its national vision and strategies related to adopting artificial intelligence technologies; encouraging research, development, and innovation; raising awareness; and promoting economic growth to achieve desired prosperity and development.

Areas of opportunity exist in the endorsement of international agreements related to Data Protection. The enactment of the new Personal Data Protection Law and Regulations addresses the rights related to automated decision-making; however, algorithmic transparency laws can be expanded. While Saudi Arabia was accepted as an Observer member of the Global Privacy Assembly, the lack of accredited membership remains an action area. The use of surveillance technologies and a lack of online freedom raise further concern.

Senegal

In 2025, Senegal released an updated AI strategy to direct AI development for the Sustainable Development Goals through governance and human capital. The country was also recognized for improvements to support human rights with an improvement in the Freedom in the World classification to “Free.”

National AI Strategy

The Senegalese Ministry of Communication, Telecommunications and Data (*Ministère de la Communication, des Télécommunications et du Digital Technology*, MCTN) launched a draft National Strategy and Roadmap for Artificial Intelligence in 2023,⁶⁰⁸⁹ and updated the strategy in 2025.⁶⁰⁹⁰ The strategy intends to promote digital innovation while focusing on AI that is responsible, ethical, trustworthy, and respectful of sovereign prerogatives. The strategy aims to create an intellectual breeding ground conducive to innovation and a new entrepreneurial dynamic to leverage AI technology in pursuit of developmental objectives built on the United Nations Sustainable Development Goals (SDGs). Developing human capital, especially through a focus on training young women in data science, is one way the strategy aligns with the SDGs of inclusiveness, environmental and ethical responsibility, and digital entrepreneurship. The strategy focuses on regional solidarity in developing the Artificial Intelligence ecosystem and in the continuity of the collective intelligence process. The AI strategy builds on the new Digital Strategy 2025–2035,⁶⁰⁹¹ existing National Data Strategy, National Cybersecurity Strategy, and other recent policies under the Emerging Senegal Plan.⁶⁰⁹²

As a member of the African Union (AU), Senegal is committed to advancing the formulation and implementation of human-centered AI policies, in alignment with the goals of the AU Digital Transformation Strategy⁶⁰⁹³ and the Continental Data Policy Framework. Senegal was among the more than 130 African ICT and

Communications Ministers and experts that endorsed the African Union Continental AI Strategy and African Digital Compact in July 2024.⁶⁰⁹⁴ The strategy represents Africa’s unified commitment to ethical and responsible AI practices.⁶⁰⁹⁵

Public Participation

The National AI Strategy of Senegal identified a collaborative effort, led by the Ministry of Communication, Telecommunications, and the Digital Economy (MCTEN) with the participation of the entire digital ecosystem of Senegal. It drew on the collective expertise of Team Europe, via the implementing agencies of the AU-EU Digital for Development (D4D) Hub—led by Expertise France, alongside GIZ and Enabel.

The strategy was developed through exchange frameworks, workshops and collaborations with a strong representation of Senegalese AI service providers, consumers, educational institutions, financing entities and the government. Such a union of minds and resources, as seen with the Senegal tandem and Team Europe, illustrates that a shared vision and collaborative efforts reveal strategic and disruptive success stories. In an inclusive approach, the strategy underwent a series of review phases between June and July 2023, where it was shared with a diverse audience to gather feedback from across the ecosystem.⁶⁰⁹⁶

Leaders in the digital sector and ordinary citizens were invited to submit proposals for the Senegal Digital Strategy 2025–2035. Minister Alioune Sall expressed the inclusive nature of the public consultation: “Senegal must build its digital future with the active participation of all stakeholders.” The consultation gained around 700 contributions addressing strategic issues such as digital sovereignty, public services, and Senegal as a sub-regional hub and digital economy.⁶⁰⁹⁷ Senegal also hosted a High-Level Policy Dialogue involving government, academia, and industry professionals to discuss integrating AI into higher education in alignment with the National AI Strategy. This effort aligns

with Senegal's vision to build capacity in AI education and foster AI talent for future innovation.

Data Protection

The 2008 Act Concerning Personal Data Protection⁶⁰⁹⁸ protects individuals against the violation of their privacy by the processing of personal data that identifies them directly or indirectly. The Personal Data Protection Act designates the Commission for the Protection of Personal Data (CDP) as the Independent Administrative Authority responsible for verifying the legality and security of the collection and processing of Senegalese personal data. The 2008 Act Concerning Personal Data Protection applies to natural persons, legal persons, and public entities. It also applies to foreign entities but excludes foreign entities that only transit personal data through the country.⁶⁰⁹⁹

The legal framework for personal data in Senegal also includes human rights conventions; the constitution;⁶¹⁰⁰ and laws governing personal data protection, the penal code, criminal procedure, electronic transactions, telecommunications, cybercrime, and cryptology.⁶¹⁰¹

Senegal has also ratified the African Union Convention on Cyber Security and Protection of Personal Data known as the Malabo Convention adopted by the General Assembly of the African Union,⁶¹⁰² Council of Europe Convention 108,⁶¹⁰³ Council of Europe Convention 185 on cybercrime,⁶¹⁰⁴ and Council of Europe

Senegal has not developed specific regulations on algorithmic transparency. However, Senegal is a signatory to the Convention 108+ (Convention for Protecting Individuals with the Processing of Personal Data),⁶¹¹⁴ which includes a broad provision regarding algorithm transparency with requirements that users know when they are subjected to automated decisions and have access to the factors in the decision and the means to contest them.⁶¹¹⁵

The Senegalese Constitution stipulates that international law holds precedence over domestic law within the country.⁶¹¹⁶ As a result, international instruments are inherently integrated into the domestic legal framework of Senegal. This constitutional provision underscores the commitment of Senegal to adhere to its obligations under international agreements and treaties.

Facial Recognition

Senegal's Data Protection Commission rejected a company's application to use facial recognition for monitoring employees, citing significant privacy risks. This decision was accompanied by a directive limiting the use of biometric data in the workplace, thereby highlighting the authority's stance on safeguarding data subjects.⁶¹¹⁷ By refusing authorization to data controllers to operate a biometric facial recognition system to control attendance time and access within a company, the CDP reaffirmed its desire to protect the individual rights of employees in their workplace, in accordance with its mandate.

Biometric Data

The European Union Trust Fund (EUTF)'s support program, starting from 2017 and involving a €28 million biometric identity system in Senegal, has raised concerns. The system aims to simplify identity verification by creating a national biometric identity file as part of a universal civil status information system. The project has sparked debate over the necessity of biometric solutions, which could serve as a basis for widespread surveillance despite the availability of simpler alternatives. The implication is that once an asylum seeker or migrant enters

Center for AI and Digital Policy

European borders, or is detected by European immigration enforcement, their biometric data will be collected. This data would be matched with information in the African systems to expedite returning the individual to their country of origin.⁶¹¹⁸

Disclosures revealed the European Union's financial involvement in developing extensive biometric identification systems in West Africa, including Senegal. This initiative, aimed at managing migration and facilitating deportations, is supported by the EU Trust Fund for Africa. Civipol, a company with connections to the French state and major arms manufacturers, has secured significant contracts in this effort. The project raises concerns over privacy, human rights, and the allocation of aid resources.

Environmental Impact of AI

Senegal's efforts regarding the environmental impact of AI have centered on applying AI to promote sustainable development in other sectors rather than the environmental costs of AI systems.

According to the Constitution, natural resources are owned by Senegalese people. As Senegal prepared to extract oil from its first field in 2024, the Prime Minister announced plans to implement AI to monitor the quantity of oil extracted, secure protection, and prevent environmental risks. This AI application is intended as part of the government efforts to ensure “a just transition that would promote sustainable and inclusive development in socio-economic and environmental terms.”⁶¹¹⁹

Lethal Autonomous Weapons

Senegal is not a signatory of the 2022 Joint Statement on Lethal Autonomous Weapons.⁶¹²⁰ However, Senegal voted in favor of UN resolution L.56 on autonomous

Center for AI and Digital Policy

weapons systems,⁶¹²¹ along with 163 other states.⁶¹²² The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems” and mandated the UN Secretary-General to prepare a report analyzing members’ views on ways to address the challenges and concerns of autonomous weapon systems from humanitarian, legal, security, technological, and ethical perspectives. Senegal then sent four representatives to the 2023 meeting of High-Contracting Parties to the Convention on Certain Conventional Weapons (CCW) organized in Geneva.⁶¹²³

Senegal participated in a REAIM regional workshop organized in Nairobi (Kenya), in partnership with the Centre for Humanitarian Dialogue (HD Centre) and the National Defense University-Kenya.⁶¹²⁴ The meeting aimed at enhancing “regional understanding and engagement on the military application of AI” in the run-up to the second REAIM Summit. Participating countries exchanged information on their national approaches, policies and practices pertaining to responsible application of AI in the military domain.

Senegal then participated in the second REAIM Summit organized in Seoul, Korea, and endorsed the REAIM Blueprint for Action.⁶¹²⁵ Among the key provisions are the acknowledgement that AI applications in the military domain should be ethical and human-centric, as well as the commitment to “engaging in further discussions and to promoting dialogues on developing measures to ensure responsible AI in the military domain at the national, regional and international level, including through international normative frameworks.”

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI Literacy

The development of human capital is a key component of the Senegal AI strategy. Senegal hosted and participated in an African sub-regional seminar organized by UNESCO to share knowledge about AI challenges and competencies needed in education.⁶¹²⁶ UNESCO foresees in-country support on the development of national or local digital and AI competency frameworks following the seminar. The seminar built on various resources, including the UNESCO 2021 report on AI and Education: Guidance for Policy-Makers and the UNESCO 2023 report on Guidance for Generative AI in Education and Research. Hosting the seminar demonstrates Senegal's commitment to advance the Education and Research Policy Area of the UNESCO Recommendation.⁶¹²⁷

Human Rights

Freedom House rates Senegal as “Free” with an overall score of 69/100, marking an increase of 2 points and a change in status from 2024.⁶¹²⁸ The Freedom House report notes that different political parties have peacefully transferred power in Senegal since 2000, making the country one of Africa's most stable electoral democracies. The country's democratic institutions resisted an attempt to unduly delay the presidential election, won by an opposition coalition. Nevertheless, internet access blocks and disruptions, which have been clearly in violation of Article 8 of Senegal's constitution and individual rights, continue to occur.⁶¹²⁹ Mobile internet access cut by the government⁶¹³⁰ and banned marches remain critical challenges to freedom of expression.⁶¹³¹

Objective 6 of the AI strategy proposes sorting various AI systems according to the risks to rights that they may pose for people or society. This classification

⁶¹²⁶ UNESCO, *Sub-Regional Seminar for Francophone and Lusophone Countries in Africa on Digital and AI Competencies* (Oct. 29, 2024), <https://www.unesco.org/en/articles/sub-regional-seminar-francophone-and-lusophone-countries-africa-digital-and-ai-competencies>

Center for AI and Digital Policy

necessitates close cooperation with AI technical specialists.⁶¹³² Senegal launched its own Initiative for the Development of Artificial Intelligence (IDIA) to improve and strengthen the use of AI in the region, in compliance with African Commission on Human and Peoples' Rights (ACHPR).⁶¹³³ Senegalese experts warn of “digital colonization” in Africa if foreign companies continue to feed on African data without involving local actors.

OECD / G20 AI Principles

Senegal has not officially endorsed the OECD AI principles or G20 AI Guidelines in those bodies. However, Senegal is a member of Global Partnership on AI (GPAI), which partners with OECD to realize its mission for “the responsible development and use of artificial intelligence, grounded in human rights, inclusion, diversity, innovation and economic growth.”⁶¹³⁴ The 2024 New Delhi GPAI Declaration reaffirms GPAI’s “collective commitment to the OECD Recommendation on Artificial Intelligence” and announces an “integrated partnership with the OECD bringing together all current OECD members and GPAI countries on equal footing.”⁶¹³⁵ Supporting the OECD principles is now a condition of membership to the GPAI.

Senegal’s AI strategy document does not address the OECD principles explicitly.⁶¹³⁶ The document’s orientation around human capital, regional partnership, and governance under the belief that “ethical, responsible, and trustworthy AI is the obligation of everyone” reflects Senegal’s commitment to international standards. This indicates an acknowledgment of the significance of adhering to universally accepted principles for the development and application of artificial intelligence.

Center for AI and Digital Policy

Council of Europe AI Treaty

Senegal has not endorsed the Council of Europe AI Treaty, the first legally binding international AI treaty.⁶¹³⁷ The Treaty sets out a legal framework that aims at ensuring the respect of human rights, the rule of law, and democratic legal standards in the use of AI systems.

UNESCO Recommendations on AI Ethics

As a UNESCO member state, Senegal is bound by the UNESCO Recommendation on the Ethics of Artificial Intelligence, which was unanimously adopted by all 193 Member States in 2021.⁶¹³⁸ This adherence underscores Senegal's commitment to upholding ethical standards in the development and application of AI.

The experts charged with developing Senegal's national AI Strategy are the same who engaged actively with UNESCO to complete the Readiness Assessment Methodology (RAM).⁶¹³⁹ Senegal was among the first countries to complete the RAM, a tool to evaluate the country's AI maturity level and ethical considerations.⁶¹⁴⁰ This involvement demonstrates Senegal's dedication to aligning its national AI strategy with the UNESCO Recommendation on the Ethics of Artificial Intelligence.

Evaluation

Senegal has developed a robust national strategy for AI and has also made efforts to promote public participation in the development of the strategy. Senegal has established a comprehensive law for data protection that promotes algorithmic transparency and has supported the OECD AI Principles as a GPAI member but has not endorsed the AI Treaty. Senegal engaged with the UNESCO Recommendation on AI Ethics by participating in relevant workshops and completing the RAM. The country has a good record on human rights, though there is room for improvement regarding individual freedom of expression.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Serbia

In 2025, Serbia's Ministry of Science, Technology, Development, and Innovation approved the Strategy for the Development of Artificial Intelligence for 2025–2030. The country also approved an action plan to create a more robust data protection framework that responds to the challenges of emerging technologies.

National AI Strategy

The Government of the Republic of Serbia; Ministry of Education, Science and Technological Development; and Office for Information Technologies and eGovernment adopted the first National Strategy for the Development of Artificial Intelligence (AI) for 2020–2025 in December 2019 and an Action Plan to enact the strategy in June 2020.⁶¹⁴¹

An updated strategy covering 2025–2030⁶¹⁴² launched in 2025.⁶¹⁴³ The updated strategy continues the focus on legislative frameworks, education, innovation and infrastructure promotion, and AI applications established in the earlier plan. The new strategy specifies plans for a “specific law that will regulate the application of artificial intelligence, which will enable its safe, secure and reliable application in line with international standards and create conditions for encouraging innovation.” The strategy calls for State support for “activities aimed at promoting and raising awareness of citizens about the importance of using artificial intelligence as a transformative technology.” The Strategy continues the AI Road Map in Serbia,⁶¹⁴⁴ which focuses on building the physical and legal infrastructure and human capital to attract businesses and investment. The Road Map also notes Serbia's leadership in the Global Partnership on AI and commitment to the OECD AI Principles.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The national strategy set the foundation for the country's ambitious plan to leverage AI for national development based on Serbia's Planning System Law.⁶¹⁴⁵ Serbia's Strategy aligns with the European AI Initiative⁶¹⁴⁶ to ensure conformity with EU policies and standards, positioning the country for closer integration into the European Research Area. This legal and strategic framework underscores Serbia's commitment to AI, both regionally and within the wider European context. The strategy aims to harness AI for economic growth, public service improvement, scientific advancement, and skill development for future jobs, and for the advancement of the Sustainable Development Goals.

The Research and Development Institute for Artificial Intelligence of Serbia⁶¹⁴⁷ was established in 2021 as one of the key steps in the Action Plan for the Implementation of the original AI Strategy. The institute's vision is to foster the development of creative leaders in the field of artificial intelligence, as well as to establish Serbia as a global center of excellence in scientific research and technology transfer related to machine learning and artificial intelligence. The Institute promotes the fields essential for the creation of artificial intelligence, such as mathematics, computer science, biology, and linguistics, to modernize Serbia's economy and educational system.

In 2022, the Office for IT and eGovernment was assigned as a special organization to perform state administration tasks related to the development and implementation of standards and measures in the introduction of information and communication technologies in state administration bodies and Government services. The Office's charge includes monitoring and measuring the implementation of AI policy.⁶¹⁴⁸ The National Platform for AI was established in 2021 to advance and implement AI in public administration, academic research, and Serbia's broader industry, as well as to support startups in product development. This initiative aligns with the objectives and actions outlined in Serbia's AI Development Strategy for 2020–2025.⁶¹⁴⁹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Guidelines and Policies I

The Serbian government adopted Ethics Guidelines for the Development, Implementation and Use of Reliable and Responsible AI⁶¹⁵⁰ in 2023 to harmonize Serbia's legislative framework with the European Union. The Guidelines⁶¹⁵¹ aim to “enable science to evolve and progress [...] but at the same time not to allow human beings to become threatened or neglected as the centrepiece of all processes that affect them and in which they are a direct or indirect factor. Moreover, the artificial intelligence systems that are developed must be in harmony with the wellbeing of humans, animals, and the environment.”⁶¹⁵² The Guidelines stress four principles as “crucial starting points for the development, implementation and use of artificial intelligence systems that deserve human trust because of their reliability and accountability.”⁶¹⁵³ These principles are: Explainability and verifiability of the system; Dignity and respect for human integrity; Prohibition to cause damage, and requirement to repair and compensation when damage occurs; and Fairness in terms of the protection of rights against discrimination. The guidelines recognize that, as of 2023, a legal framework to regulate AI is still needed.⁶¹⁵⁴

Serbia established the Council for Artificial Intelligence in 2024 to align and coordinate activities for implementation of the AI national strategy implementation. The Council will work as an independent advisory body to draft new laws for the development and application of AI in Serbia. This body comprises private sector experts, academics, and government representatives.⁶¹⁵⁵

The Working Group for the upcoming Draft Law on Artificial Intelligence of the Republic of Serbia held its first meeting in 2024. Representatives from numerous state bodies, scientific and professional industries, law, and other economic entities began discussions to identify key problems, ideate adequate solutions, and set clear guidelines for effectively managing the preparation of the draft law. The Working Group expects to present the Draft Law at the end of the first quarter of 2025.⁶¹⁵⁶

International Collaboration on AI Strategy

Serbia was represented at the World Economic Forum's AI Governance Summit in November 2023 and joined the AI Governance Alliance (AIGA). Joining the AIGA grants Serbia access to collective expertise to address the complexities of AI governance while emphasizing sustainability, resilience, and safety in AI applications.⁶¹⁵⁷

Serbia's Ministry of Information and Telecommunications and the Institute for Artificial Intelligence Research and Development signed a Memorandum of Understanding (MoU) with the United Arab Emirates Advanced Technology Research Council (ATRC) in early 2024. This landmark collaboration aims to leverage the technical expertise of ATRC and its subsidiaries for the integration of AI into Serbia's technological infrastructure. Under the terms of the MoU, Serbia will support the adoption of ATRC's Falcon large language models (LLM) and explore avenues of collaboration with ATRC around Falcon-powered solutions. Furthermore, both entities will work together to encourage organizations from Serbia to join the Falcon Foundation and contribute to the success of open-source Falcon models.⁶¹⁵⁸

Regulatory Sandboxes

In analyzing Serbia's position in the Flexibility of Regulatory Framework and Adaptation to the Digital Business sector, as measured by the Global Competitiveness Index, Serbia is ranked 68th, achieving a score of 3.6 out of 7.⁶¹⁵⁹

The deployment and development of AI technologies raise significant regulatory challenges, especially in the domains of misuse prevention and data privacy protection. Crafting a regulatory approach that effectively balances the need for personal data protection with the imperative to foster innovation in AI is a complex endeavor.

In addressing these challenges, the Serbian government has introduced a regulatory sandbox aimed at AI technologies. This framework is intended to provide a controlled environment in which businesses can experiment with novel AI products

and services under a regime that allows for certain exemptions from full regulatory compliance.⁶¹⁶⁰ This approach facilitates the exploration and advancement of AI solutions, mitigating the immediate impact of regulatory barriers.⁶¹⁶¹

Public Participation

The public was invited to a series of debates to discuss the Draft Strategy for the Development of Artificial Intelligence in Serbia through the end of December 2019. During this period, three panel discussions were organized for public participation. Throughout the public debate phase, 12 written submissions containing proposals and suggestions were received via contact and email addresses. Many of these contributions were incorporated into the final document.⁶¹⁶²

In the process of drafting the Ethical Guidelines for Developing, Applying, and Using Reliable and Responsible Artificial Intelligence, the Ministry of Science, Technological Development and Innovation organized two public forums on consecutive days. At these events, 21 participants provided recommendations and feedback.⁶¹⁶³

A consultative process was conducted during the implementation of the e-Government Development Programme for 2020–2022 and while planning for the 2023–2025 programming period. During the implementation of the ex-post impact assessment of the e-Government Development Programme 2020–2022, primary data were collected through semi-structured interviews involving 51 persons from 32 institutions.

The programming process and the preparation of the Action Plan for 2023–2025 lasted six months in 2022. After the publication of the program on the e-Consultation portal, a public debate was held on the portal. The e-Government

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

development Programme⁶¹⁶⁴ and Action Plan for 2023–2025⁶¹⁶⁵ were adopted in April 2023.

The Ministry of Science, Technological Development, and Innovation hosted a public debate for Serbia's Draft Strategy for the Development of Artificial Intelligence (2024–2030) with an extended deadline in July 2024 and allowed comments and suggestions through the e-Consultation portal. A third public event was held in the National Assembly, providing citizens and professionals an opportunity to share their feedback on the draft strategy.⁶¹⁶⁶

Data Protection

Serbia's Law on Personal Data Protection (LPDP) aims for a comprehensive approach to data protection and aligns with some exceptions to the European General Data Protection Regulation (GDPR).⁶¹⁶⁷ The Commissioner for Information of Public Importance and Personal Data Protection is the authority responsible for enforcing the data protection and raising public awareness about data rights and data-protection requirements.⁶¹⁶⁸ The Serbian Constitution also provides for the protection of privacy and personal data while the Law on Electronic Communications and the Law on Electronic Signatures have provisions that could apply to AI technologies.

Provisions of the LPDP mirror the GDPR in almost all aspects, including regulations around the territorial application of the LPDP, legal basis for data processing, privacy by design, data subject rights, security of processing and personal data breach, data protection impact assessments and officers, and the transfer of personal data. However, the transition to full implementation encountered challenges, including delays attributed to potential ambiguities in interpretation and a nine-month window between the law's adoption and enforcement. This timeline

⁶¹⁶⁸ Commission for Information of Public Importance and Personal Data Protection, *About Us*, <https://www.poverenik.rs/en/o-nama/authority.html>

left many local entities, aside from international companies already adhering to GDPR, unprepared for the LPDP's requirements.

Inconsistencies between the LPDP and other Serbian personal data processing laws persist, undermining harmonized legal practice. The lesser penalties stipulated by the LPDP, in comparison to GDPR's more substantial fines, have insufficiently incentivized compliance among Serbian and multinational firms. Despite these challenges, a portion of companies have achieved or are actively working toward LPDP compliance, though most public authorities lag behind.

Serbia unveiled the Personal Data Protection Strategy for 2023–2030 in 2023 to address the rapidly evolving technological landscape and its implications on data protection.⁶¹⁶⁹ This strategy outlines a comprehensive approach to enhance the legal framework, aiming for alignment with the GDPR. Key objectives include revising the LPDP to match GDPR standards fully, improving enforcement mechanisms, and increasing public awareness and education on data protection. Authorities ultimately aim to secure an adequacy decision from the European Commission to facilitate smoother data exchanges. The strategy also emphasizes the need for more precise regulations on new technologies such as AI, ensuring that Serbia's legal infrastructure keeps pace with technological advancements. The data protection Commissioner adopted an Action Plan for the strategy in 2025,⁶¹⁷⁰ aiming to “spur the necessary regulatory changes in this direction, as well as the implementation of activities and measures described by the Strategy that will greatly contribute to the implementation of this important human right.”

Serbia's Commissioner for Information of Public Importance and Personal Data Protection is a member of the Global Privacy Assembly (GPA).⁶¹⁷¹ However, Serbia did not sponsor the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁶¹⁷² 2020 GPA Resolution on AI Accountability,⁶¹⁷³ 2022 GPA

Resolution on Facial Recognition Technology,⁶¹⁷⁴ or 2023 GPA Resolution on Generative AI.⁶¹⁷⁵

Algorithmic Transparency

Serbia has engaged with international frameworks concerning AI by ratifying treaties such as the modernized Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data (Convention 108+)⁶¹⁷⁶ and acknowledging the principles of the General Data Protection Regulation (GDPR). These treaties offer a foundation for creating AI regulations that aim to safeguard the rights and freedoms of individuals.

AI in Public Administration

The cross-sectoral Strategy for the Development of the Information Society and Information Security in the Republic of Serbia from 2021 to 2026 aims to foster an information society and e-government that meet the needs of citizens and businesses while also improving information security for citizens, public administration, and businesses. The strategy frames the further development of information security as a precondition for the complete digitalization of the society.⁶¹⁷⁷

The Office for IT and eGovernment established the Smart Serbia platform in 2021 for the secure collection and processing of data from various public sources. The platform uses AI technology to deliver services and to provide the most advanced e-services for citizens and the state.⁶¹⁷⁸

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Social Card Bill implemented in March 2022 requires a centralized electronic record of the social and economic status of individuals and their relatives. Personal data of those who receive some form of financial social assistance is collected and processed to assess their overall economic situation and redistribute the state budget.⁶¹⁷⁹ The system processes more than 130 different types of data on individuals, automatically collecting them from other registers handled by public authorities, such as the Tax Administration or Ministry of Interior.

The Social Card produces automated decisions. Once the Social Card algorithm processes the assessment of the individual case, it sends an alert to the local office managing the person's file. The officials have a window of time to verify the validity of the decision, but these offices are widely and severely understaffed, meaning the decisions may never undergo human review. The citizens only have 15 days to appeal the decision.

The Social Card system collects and processes extensive amounts of data, creating an invasive digital surveillance system that targets some of the most marginalized people in Serbian society. The system is not accessible to the public, even after NGOs made several attempts to access the algorithm, its source code, or at least its logic. Research data from UNHCR partner A11 shows that the number of people receiving social assistance fell from 211,266 to 189,036, a decrease of 10.5%, in the first six months the system operated.⁶¹⁸⁰

Facial Recognition and Mass Surveillance

Although Serbian law prohibits the use of facial recognition technology for public surveillance,⁶¹⁸¹ the Serbian government has been determined to introduce a legal framework for the use of facial recognition technology in the country.⁶¹⁸² The decision to implement facial recognition technology, primarily supplied by the Chinese tech-giant Huawei, sparked controversy.⁶¹⁸³ Initially justified by authorities as a means to enhance public safety and deter crime, the lack of transparency regarding the technology's deployment and data handling raised concerns among

civil society and international society. Human rights activists and civil society fear potential abuses by the government and have strongly resisted the full implementation of facial recognition technology.⁶¹⁸⁴ The international response, particularly from the EU and the US, has emphasized concerns over potential misuse of the technology and its implications for democratic values.⁶¹⁸⁵ However, the effectiveness of these responses remains limited, with Serbia continuing its collaboration with China in various sectors, including surveillance technology, amid geopolitical considerations and economic incentives.

BIRN Serbia (Balkan Investigative Reporting Network) released a report in June 2024, on the digital surveillance in Serbia and its impact on human rights. BIRN reported that Serbia has installed over 8,000 Chinese-style surveillance cameras and that the State seeks to use spyware against civil society representatives and investigative journalists.⁶¹⁸⁶

Autonomous Vehicles

Serbia's Regulation on the Conditions for Autonomous Driving came into effect in December 2023. The Regulation details the conditions under which autonomous driving is allowed and the procedure for issuing permits for testing autonomous vehicles. This regulation aligns with the latest amendments to the Law on Traffic Safety and Roads and will provide a clear and predictable procedure for individuals and institutions wishing to test vehicles with automated driving systems in real traffic conditions.⁶¹⁸⁷

Environmental Impact of AI

The Serbian National AI Strategy mentions the importance of assessing the environmental impact of the development and use of AI systems. However, no framework for proposed regulation to promote sustainability or mitigate

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

environmental harm has been established.⁶¹⁸⁸ While there is little discourse about the environmental costs of AI systems, Serbia has used AI to study climate change and help clean up the rivers in recent years.⁶¹⁸⁹

Lethal Autonomous Weapons

Serbia participated at the Group of Governmental Experts (GGE) meeting under the auspices of the Convention on Conventional Weapons (CCW) to deliberate on lethal autonomous weapons systems (LAWS) in May 2023.⁶¹⁹⁰ The meeting highlighted the urgent need to develop new international legislation to ensure meaningful human oversight over weapons systems and the application of force.

Serbia voted in favor of UNGA's Resolution 78/241 on Lethal Autonomous Weapons Systems, which called for urgent global action to confront the challenges posed by autonomous weapons systems. Serbia's submission to the UN Secretary-General⁶¹⁹¹ pursuant to Resolution 78/241 highlighted the country's shared concern over the development of lethal autonomous weapons systems. Serbia stressed that "the development, production and the use of lethal autonomous weapons systems be strictly regulated and rigorously monitored." The submission also expressed serious concern over such systems' destructive potential and negative impact on peace and regional and global security.

AI Literacy

The 2025–2030 AI Strategy includes education and AI literacy as key components.⁶¹⁹² The Strategy cites existing education laws that create a foundation for creating the human capital needed for an AI future. Measure 3.3 creates a plan and benchmarks for "raising general literacy in the field of artificial intelligence in society." The measure targets adults rather than youth in the public education system

⁶¹⁸⁸ Government of Serbia, *Strategy for the Development of Artificial Intelligence in the Republic of Serbia for the Period 2025-2030* (2025), <https://www.srbija.gov.rs/tekst/en/149169>

and emphasizes “informing and educating the public about the proper understanding and ethical application of this technology” and promotes construction dialogue. Measure 3.4 focuses on informal education with the goal to “empower individuals to participate in creating a more innovative future, making this technology an everyday tool in the personal and professional development of citizens.” The AI Road Map⁶¹⁹³ shows that AI subjects have been integrated in 7th and 8th grades and as a high-school elective since 2021.

Human Rights

Serbia ratified the Universal Declaration of Human Rights and 16 of the 18 UN human rights treaties.⁶¹⁹⁴ The UN Human Rights Council (UNHRC) conducts a Universal Periodic Review to assess each member state's human rights record. Serbia's latest review took place in 2023, marking the country's fourth evaluation. The UNHRC issued recommendations aimed at bolstering the protection of human rights⁶¹⁹⁵ and subsequently asked Serbia to provide updates on the implementation of recommendations related to hate crimes, freedom of expression and journalist safety, and participation in public affairs by March 29, 2027.⁶¹⁹⁶

On the human rights index from Our World in Data, Serbia scored 0.77 on a 0–1 scale.⁶¹⁹⁷ Freedom House categorizes Serbia as “Partly Free” assigning a score of 56/100.⁶¹⁹⁸ The Freedom House report cited threats against journalists and editorial and political pressure as well as increased broader surveillance among concerns undermining freedom of expression along with other political and civil liberties.

OECD / G20 AI Principles

Serbia is not a member of the OECD or G20 countries nor is the country listed among the six non-member nations that have endorsed the OECD AI principles.⁶¹⁹⁹ However, Serbia has committed to the OECD AI Principles as a member of the Global Partnership on Artificial Intelligence (GPAI).⁶²⁰⁰ Serbia's Strategy for the Development of AI explicitly aligns with the country's GPAI membership and commitment to the OECD AI Principles.⁶²⁰¹

Serbia will serve as a GPAI chair for 3 years beginning in 2024, a position that presents a significant opportunity to attract AI-related investments and reaffirms Serbia's commitment to investing in science, technology, and education.⁶²⁰² Serbia's Ministry of Science, Technological Development and Innovation hosted the GPAI Summit from December 3-4, 2024 in Belgrade.⁶²⁰³ The summit, which was also supported by the OECD, brought together more than 100 experts and 1200 attendees "with the aim of guiding the responsible and human-centric development and use of this technology."⁶²⁰⁴

Council of Europe AI Treaty

The Council of Europe Framework Convention on AI outlines a comprehensive approach to AI regulation, focused on human dignity, autonomy, and equality. Serbia participated in the drafting of the Convention as Council member but has not signed the convention.⁶²⁰⁵

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

UNESCO Recommendation on AI Ethics

Since 2000, the Republic of Serbia has been a UNESCO member state, and all 193 member states have ratified the UNESCO Recommendation on the Ethics of AI. In March 2023, the Serbian government approved the Ethics Guidelines for the Development, Implementation and Use of Reliable and Responsible AI (Guidelines). The Guidelines draw heavily from UNESCO's Recommendation on the Ethics of AI, which Serbian representatives actively participated in creating, to set ethical standards for all AI systems and applications, including fairness, transparency, accountability, and fostering international collaboration and cooperation.⁶²⁰⁶

Serbia and ten other countries participated in piloting UNESCO's Global Index on Responsible AI in 2023.⁶²⁰⁷ The Global Index tracks countries' commitments and capacities to building responsible AI ecosystems. This initiative, which released results in 2024,⁶²⁰⁸ serves as a mechanism to monitor the implementation of UNESCO's Recommendation on the Ethics of AI, especially at a national level, in a way that extends beyond the existence of legal frameworks and delves into the complexity of implementation by assessing the actions of government and relevant activities of non-state actors.

Serbia has not begun the UNESCO Readiness Assessment Methodology (RAM), a vital tool to assist Member States in implementing the Recommendation on the Ethics of AI.⁶²⁰⁹

Evaluation

Serbia's AI Strategy represents a proactive approach to the regulation of the development, implementation, and use of AI within its borders. The national strategy sets a foundation for ensuring values of transparency, human rights, safety, and trust in AI systems. By aligning its national strategy on AI with EU standards and drawing from international guidelines such as the UNESCO Recommendation on the Ethics of AI and OECD AI Principles, Serbia demonstrates a commitment to fostering responsible AI that benefits society while mitigating associated risks. Significant gaps between endorsement and implementation of key international principles, national strategy, and Ethical AI Guidelines persist, however. The approval of the

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Action Plan for the Personal Data Protection Strategy and the acknowledged need to move forward with AI legislation suggest the country will develop the enforcement mechanisms and legal framework necessary to operationalize the principles of accountability, fairness, rule of law, fundamental rights, and transparency.

Human rights violations reported in credible sources continue to raise concerns, especially around media freedom, civil rights, and freedom of expression. The government's use of facial recognition technology for mass surveillance and reliance on automated decisions without meaningful human oversight to determine social assistance deepen these concerns.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Singapore

In 2025, Singapore launched the AI-Fluent Workforce Initiative to embed AI literacy across civil service, education, and public training. A new law prohibiting AI-generated deepfakes in elections entered into force just ahead of the 2025. Singapore also contributed to the ASEAN Expanded Guide on AI Governance and Ethics—Generative AI.

National AI Strategy

Singapore launched its first National AI Strategy in 2019, with the objective for Singapore to “be a leader in developing and deploying scalable, impactful AI solutions, in key sectors of high value and relevant to its citizens and businesses,” by 2030.⁶²¹⁰ An updated Strategy (NAIS 2.0) was launched in 2023 to address new challenges and uplift Singapore’s collective economic and social potential over the next three to five years.⁶²¹¹ Both strategies are part of Singapore’s Smart Nation plan, which aims to make Singapore a Smart Nation, “A nation where people live meaningful and fulfilled lives, enabled seamlessly by technology, offering exciting opportunities for all.”⁶²¹²

NAIS 2.0 outlines Singapore’s ambition and commitment to building a trusted and responsible AI ecosystem, driving innovation and growth through AI, and empowering people and businesses to understand and engage with AI.⁶²¹³ In summary, Singapore’s strategy is:

- To orchestrate Industry, Government, and public research performers around meaningful use cases and problem statements to transform Singapore’s economy and society, steering efforts toward developing select peaks of excellence that can deliver outsized impact to Singapore and the lives of Singaporeans.
- To attract more top-tier researchers and engineers to work with and from Singapore, grow the pool of tech workforce charged with scaling novel AI solutions, and nurture a confident AI user base of enterprises and workers.

Center for AI and Digital Policy

- To avail compute and data for AI innovation, provide a trusted environment where people can engage with AI with confidence and contribute to international AI developments.⁶²¹⁴

NAIS 2.0 is guided by the vision “AI for the Public Good, for Singapore and the World,” and outlines fifteen actions across three systems and ten enablers to be implemented over the next three to five years.⁶²¹⁵ NAIS 2.0 commits Singapore to the responsible and ethical use of AI. The Advisory Council on the Ethical Use of AI and Data established in 2018,⁶²¹⁶ one year before releasing the first National AI Strategy, carries out this commitment. The Council is chaired by the former Attorney-General of Singapore V.K. Rajah SC and includes “representatives from technology companies, users of AI, and those who can provide consumers’ and societal perspectives.”⁶²¹⁷ The Minister for Communications and Information announced the first-term representatives of the Advisory Council at the AI Singapore first Anniversary Event in 2018.⁶²¹⁸

The Council advises the Government on issues arising from the commercial deployment of AI that may require policy or regulatory attention and industry on the responsible development and deployment of AI.⁶²¹⁹ The Council also assists the Government in developing voluntary codes of practice to guide corporate decision-makers, monitoring consumers’ acceptance of such data use, and making recommendations on ethical and legal issues that may require policy or regulatory changes. The Advisory Council members for 2022–2025 include representatives and executives from Google Research, Salesforce, Microsoft, IBM, and OECD among other prominent organizations.⁶²²⁰

AI Governance Regulation

Singapore is taking a sectoral approach toward AI governance regulation, with regulatory agencies adopting soft-law approaches to issue non-binding guidelines and recommendations.⁶²²¹ NAIS 2.0 envisions a common platform for regulatory agencies to coordinate on AI developments in their sectors and share best practices in governing AI.

The Infocomm Media Development Authority (IMDA) and Personal Data Protection Commission (PDPC) have been the most active in respect to AI governance regulation.⁶²²² The PDPC released the Model AI Governance Framework at the 2019 World Economic Forum.⁶²²³ The Model Framework was the first in Asia to provide details and readily implementable guidance to private-sector organizations to address key ethical and governance issues when deploying AI solutions. In the foreword to the second edition of the Framework, in 2020, then-Minister for Communications and Information S. Iswaran, noted that “The Model Framework’s unique contribution to the global discourse on AI ethics lies in translating ethical principles into practical recommendations that organisations could readily adopt to deploy AI responsibly. [...] This edition incorporates the experiences of organisations that have adopted AI, and feedback from our participation in leading international platforms, such as the European Commission’s High-Level Expert Group and the OECD Expert Group on AI. Such input has enabled us to provide clearer and effective guidance for organisations to implement AI responsibly.”⁶²²⁴

The Model Framework is based on two guiding principles that “promote trust in AI and understanding of the use of AI technologies”: First, “Organizations using AI in decision-making should ensure that the decision-making process is explainable, transparent and fair.” Second, “AI solutions should be human-centric” in the sense that “the protection of the interests of human beings, including their well-being and safety, should be the primary considerations in the design, development and deployment of AI.”⁶²²⁵ These principles are operationalized through recommendations grouped into four clusters:

⁶²²¹ Darren Grayson Chng & Joe Jones, *Global AI Governance Law and Policy: Singapore*, IAPP (Feb. 2024), <https://iapp.org/resources/article/global-ai-governance-singapore/>

- “Internal governance structures and measures”, including defining roles, responsibilities, and staff training for oversight to ensure the ethical deployment of AI and monitoring and managing risks⁶²²⁶
- Human involvement in AI-augmented decision-making, beginning with clarity on the objective of using AI, considering the approach to oversight, and weighing risks and harm of using AI for decision-making⁶²²⁷
- “Operations management” provides a generalized AI model development process beginning with data preparation and promoting explainability, repeatability, robustness, tuning, traceability, reproducibility, and auditability to minimize bias and manage risks in algorithms and models⁶²²⁸
- “Stakeholder interaction and communication” consists of meaningful transparency to consumers, options to opt out (including by default), usability, and communication channels⁶²²⁹

The IMDA and the PDPC, in partnership with the World Economic Forum Centre for the Fourth Industrial Revolution, released an Implementation and Self-Assessment Guide for Organisations (ISAGO) in January 2020. The ISAGO complements the Model Framework by allowing organizations to assess the alignment of their AI governance practices with the Model Framework, while providing industry examples and practices.⁶²³⁰

The Singapore Computer Society (SCS), supported by IMDA, launched the AI Ethics and Governance Body of Knowledge (AI E&G BoK). The AI E&G BoK is expected to “guide the development of curricula on AI ethics and governance and form the basis of future training and certification for professionals.” The document underlines that “accountability, transparency, explainability, and audibility must become the hallmark of all AI solutions” and that “ethical guidelines should not be an afterthought but integrated as part of standards and expectations from the onset of any AI-related effort.”⁶²³¹

AI Verify, launched at the 2022 World Economic Forum Annual Meeting in Davos, is a voluntary AI Governance Testing Framework and Toolkit “for companies

who want to demonstrate responsible AI in an objective and verifiable manner.”⁶²³² The aim of AI Verify is to build trust in AI through transparency.⁶²³³ Singapore hopes to achieve three objectives: enable trust-building between businesses and their stakeholders; facilitate interoperability of AI governance frameworks; and contribute to the development of international AI standards.⁶²³⁴ Singapore participates in defining AI standards as a member of ISO/IEC JTC1/SC42 on artificial intelligence.⁶²³⁵ The Pilot Testing Framework and Toolkit does not define ethical standards and validates AI system developer’s/owner’s claims about the approach, use, and verified performance of their AI systems. It does not guarantee that any AI system tested will be free from risks or biases or is completely safe.

Minister Teo announced the launch of The AI Verify Foundation (AIVF) launched a year later seeks to “harness the collective power and contributions of the global open source community to develop AI testing tools for the responsible use of AI.”⁶²³⁶ To this end, the IMDA and AI Verify Foundation unveiled the “first of its kind” Generative AI Evaluation Sandbox in October 2023.⁶²³⁷ The sandbox is intended to aid model developers, app developers, and third-party testers. Companies such as Google, Microsoft, Anthropic, IBM, Deloitte, and EY joined the sandbox.

The Model AI Governance Framework for Generative AI⁶²³⁸ (MGF-Gen AI) developed with the AIVF in 2024 identifies nine dimensions to support a

comprehensive and trusted AI ecosystem: accountability, data, trusted development and deployment, incident reporting, testing and assurance, security, content provenance, safety and aligning research & development, and AI for public good. The Framework received endorsements for its holistic approach to concerns arising from generative AI systems. The Model AI Governance Framework for Agentic AI launched in 2026 is the world's first governance framework specifically designed for AI systems capable of autonomous planning, reasoning, and action. The Framework, announced at the World Economic Forum, provides guidance to organizations on how to deploy agents responsibly across four dimensions: assessing and bounding risks upfront; making humans meaningfully accountable; implementing technical controls and processes; and enabling end-user responsibility. Compliance with the framework is voluntary, though organizations remain legally accountable for the behaviors and actions of their agents.⁶²³⁹

In February 2024, IMDA and Enterprise Singapore launched the Gen AI Sandbox for small and medium-sized enterprises (SMEs), to enable local SMEs greater access to Gen AI.⁶²⁴⁰ Singapore also launched an open-source tool designed to address the security and safety challenges experienced in the use of LLMs. The tool facilitates the evaluation of these applications throughout their lifecycle and stages of use.⁶²⁴¹

The Cyber Security Agency of Singapore (CSA) developed Guidelines on Securing AI Systems in 2024 to help system owners adopt a proactive approach to secure AI throughout the lifecycle.⁶²⁴² The CSA focused on traditional cybersecurity risks and AI-specific threats. The CSA also published a practical guide that provides specific security measures and industry-prescribed best practices as a companion to

the securing AI systems.⁶²⁴³ The Cybersecurity (Amendment) Act passed in 2024 extends CSA's oversight beyond Critical Information Infrastructure to cover Foundational Digital Infrastructure service providers such as cloud service providers and data centers, Entities of Special Cybersecurity Interest, and Systems of Temporary Cybersecurity Concern.⁶²⁴⁴

The PDPC published the Advisory Guidelines on use of Personal Data in AI Recommendation and Decision Systems in March 2024.⁶²⁴⁵ The Guidelines aim to provide (1) certainty by clarifying how the Personal Data Protection Act (PDPA) applies when organizations use personal data to develop and train AI systems and (2) assurance to consumers by setting out baseline guidance and best practices for organizations on how to be transparent about whether and how their AI systems use personal data to make recommendations, predictions, or decisions.

Singapore designated an AI Safety Institute in 2024, hosted at Nanyang Technological University's Digital Trust Centre. The institute conduct research on AI safety evaluation and testing, and to contribute to international efforts on AI safety standards.⁶²⁴⁶

In the financial services sector, in 2018, the Monetary Authority of Singapore (MAS) and the financial industry co-created a set of principles to guide the responsible use of AI, focusing on Fairness, Ethics, Accountability, and Transparency (FEAT).⁶²⁴⁷ The principles established a standard across the financial sector in Singapore. Subsequently in November 2019, the MAS announced that it had partnered the financial industry to create a framework for the responsible use of AI

and Data Analytics (AIDA), known as Veritas.⁶²⁴⁸ Veritas aims to provide financial institutions with a verifiable way to incorporate the FEAT principles into their AIDA solutions, and will comprise open source tools that can be applied to different business lines.⁶²⁴⁹ The FEAT principles and Veritas are part of Singapore's National AI Strategy.⁶²⁵⁰ MAS and a consortium of financial institutions and technology partners concluded Project MindForge in 2024,⁶²⁵¹ publishing a whitepaper identifying seven risk dimensions for responsible generative AI deployment in the financial sector, covering governance, transparency, fairness, legal compliance, ethics, and cybersecurity.⁶²⁵² In November 2025, MAS issued a consultation paper proposing Guidelines on AI Risk Management for all financial institutions, setting out supervisory expectations on AI risk oversight, life cycle controls, and capabilities required for responsible AI use.⁶²⁵³

In the health sector, in October 2021, the Ministry of Health (MOH) published the Artificial Intelligence in Healthcare Guidelines (AIHGle), which it co-developed together with the Health Sciences Authority (HSA) and the Integrated Health Information Systems (IHIS), now known as Synapse. AIHGle aims to share good practices with AI developers (e.g., manufacturers, companies) and AI implementors (e.g., healthcare institutions: hospitals, clinics, laboratories), and complements the existing HSA regulatory requirements of AI Medical Devices.⁶²⁵⁴ In July 2025, HSA published updated Guidelines on Risk Classification of Software as a Medical Device (SaMD) and Qualification of Clinical Decision Support Software (CDSS). Key revisions include alignment with international terminology, clarified risk classification criteria for AI-based SaMD, and a new criterion specifying that CDSS recommendations based solely on established clinical guidelines, without adaptive logic or AI, are not classified as medical devices.⁶²⁵⁵

Public Participation

The Advisory Council on the Ethical Use of AI and Data is “one of three structured, interlinked initiatives to support the engagement of stakeholders to collaboratively develop a trusted and vibrant AI ecosystem and position Singapore as a leading hub for AI.”⁶²⁵⁶ The Council assists the IMDA in engaging stakeholders on issues that support the development of AI governance capabilities and frameworks, including engaging ethics boards of commercial enterprises on ethical and related issues arising from private sector use of AI and data, consumer representatives on consumer expectations and acceptance of the use of AI, and members of the private capital community on the need to incorporate ethical considerations in their investment decisions into businesses which develop or adopt AI.⁶²⁵⁷

Public consultations were also held for the initial version of Singapore’s Model AI Governance Framework⁶²⁵⁸, AI Verify, the draft Model AI Governance Framework for Generative AI, and the Advisory Guidelines on use of Personal Data in AI Recommendation and Decision Systems. Cyber Security Agency, GovTech, and IMDA launched a public consultation in October 2025 for a draft Addendum on Securing Agentic AI.⁶²⁵⁹

ISAGO and its Compendium of Use Cases were developed in close consultation with the industry, with contributions from over 60 organizations, as well as input from the Council.⁶²⁶⁰ Likewise, more than 30 authors from the public and

private sectors contributed to the AI E&G BoK, which contains 25 case studies/use-cases.⁶²⁶¹

The Smart Nation and Digital Government Office (SNDGO), under the Prime Minister's Office (PMO), publicizes information about key Smart Nation projects and government digital transformation on its website.⁶²⁶² The website includes a page with information for companies, researchers, and others to “be part our AI journey.”⁶²⁶³

Data Protection

The Personal Data Protection Act (PDPA) was enacted in 2012. It entered into force in stages, with the main data protection rules coming into force in July 2012. A suite of amendments to the PDPA was passed in November 2020. They started taking effect in phases from February 2021.

The PDPA governs the collection, use, disclosure, and care of personal data in Singapore. It provides a baseline standard of protection for personal data.⁶²⁶⁴ It complements sectoral laws and regulations such as the Banking Act and Insurance Act. The PDPA recognizes both the right of individuals to protect their personal data and the need of organizations to collect, use, or disclose personal data for “legitimate and reasonable purposes.”⁶²⁶⁵ The law aims to strengthen Singapore's position as a trusted hub for businesses by regulating the flow of personal data among organizations.⁶²⁶⁶

The PDPA applies to private sector organizations.⁶²⁶⁷ Data management in the public sector is governed by the Public Sector (Governance) Act and the Government Instruction Manual on Infocomm Technology & Smart Systems Management.⁶²⁶⁸

The Personal Data Protection Commission was established in January 2013 to administer and enforce the PDPA.⁶²⁶⁹ The PDPC is currently part of the IMDA.⁶²⁷⁰ The functions of the Commission include administering and enforcing the PDPA, providing information to individuals, businesses, and data-protection professionals about their rights and obligations, and representing the Government internationally on matters relating to data protection.

In a 2018 “Discussion Paper on Artificial Intelligence (AI) and Personal Data—Fostering Responsible Development and Adoption of AI”, the PDPC noted that “[t]he benefits and risks of AI have been the subject of great public debate. On the one hand, AI has the ability to boost productivity, transform businesses, grow the economy and enhance people’s lives. On the other hand, AI may displace jobs and pose ethical challenges such as social profiling.” The PDPC recommended for AI systems to be human-centric, and for decisions to be made by or with the assistance of AI should be explainable, transparent, and fair.⁶²⁷¹

Singapore shares publicly available datasets⁶²⁷² from 70 public agencies, API libraries, and resources for application developers using these data sets. On the commercial side, the IMDA introduced a Trusted Data Sharing Framework⁶²⁷³ as a guide to establishing safeguards and baseline “common data sharing language” and a systematic approach to understanding the broad considerations for establishing trusted data sharing partnerships. A Data Regulatory Sandbox⁶²⁷⁴ is offered to businesses to pilot innovative use of data in a safe environment, in consultation with the IMDA and the PDPC. The IMDA also provides a Data Protection Trustmark (DPTM), a voluntary enterprise-wide certification for organizations to demonstrate accountable data protection practices.⁶²⁷⁵

Center for AI and Digital Policy

The PDPC released the Proposed Guide on Synthetic Data Generation in July 2024 to assist organizations to understand synthetic data generation techniques and potential use cases, particularly for AI systems, as an alternative to using personal data in AI development.⁶²⁷⁶ IMDA and PDPC also launched a Privacy Enhancing Technologies (PET) Sandbox to support businesses wishing to pilot PET projects that address common business challenges, including in the context of AI development.⁶²⁷⁷

The PDPC is not a member of the Global Privacy Assembly (GPA), but IMDA and the PDPC have previously participated in the GPA as non-members.⁶²⁷⁸ Singapore did not endorse the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁶²⁷⁹ the 2020 GPA Resolution on AI Accountability,⁶²⁸⁰ the 2022 GPA Resolution on Facial Recognition Technology,⁶²⁸¹ and the 2023 GPA resolution on Generative AI Systems.⁶²⁸²

Algorithmic Transparency

Singapore does not have a legally binding guarantee of algorithmic transparency. Singapore released advisory guidelines on the use of personal data in AI recommendation and decision systems, setting out accepted AI data practices in March 2024.⁶²⁸³ The guidelines encourage service providers to adopt standards of

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

record maintenance, data mapping, and labelling. The guidelines clarify when organizations can use personal data to develop and deploy machine learning models, emphasizing meaningful consent and identifying particular exceptions. Organizations must also communicate the “policies about safeguards and practices they put in place to ensure that AI systems are trustworthy.”⁶²⁸⁴ However, the document specifies “These Guidelines are advisory in nature, are not legally binding on the Commission or on any other party, and do not constitute legal advice.”⁶²⁸⁵ The guidelines do not modify any laws such as the PDPA.

AI-Assisted Surveillance

Statutes in Singapore deal with aspects of privacy, but there is no discrete right to privacy protected under Singapore’s Constitution.⁶²⁸⁶ Singapore has not ratified the International Covenant on Civil and Political Rights,⁶²⁸⁷ which protects against arbitrary or unlawful interference with privacy, family, home, or correspondence. Government agencies are not permitted to access data held by the private sector except where the access has been authorized by law or by a court order.⁶²⁸⁸ If a person believes that their personal data has been accessed unlawfully by any government agency, they can apply to the court for a judicial review of the agency’s decisions or actions.⁶²⁸⁹ The court may make a Mandatory Order obliging the government agency to exercise its duties, perform specific acts, or consider exercising a discretionary power as required by law; or a Prohibiting Order, an injunctive order directed at a prospective act or decision that would be unlawful; or a Quashing Order that quashes or sets aside illegal decisions or acts.⁶²⁹⁰

The Public Order Act⁶²⁹¹ definition of assembly and its requirements for a permit for such assembly has recently extended to online conferences. The government's use of online surveillance tools and power to act without the need for legal authorization is a matter of concern regarding citizens' ability to exercise their rights of freedom of speech, expression, and assembly.

Singapore launched SingPass in 2003. The National Digital Identity initiative⁶²⁹² is a personal authentication system that allows users to access various Government services. It is a move to digitalize all transactions in public and private spaces and share data. The app offers users an option to use a 6-digit passcode or options for biometrics such as fingerprint or face recognition. The Monetary Authority of Singapore and the Association of Banks in Singapore mandated the use of SingPass Face Verification for higher-risk banking transactions in February 2025, requiring customers to verify their identity biometrically against national records before activating digital tokens.⁶²⁹³

Singapore introduced TraceTogether,⁶²⁹⁴ a COVID-19 contact tracing application in 2020, advising users that data would “never be accessed unless the user tests positive” for the virus. In January 2021, the Minister of State for Home Affairs clarified that under the Criminal Procedure Code, the Singapore Police Force can order anyone to produce data for the purpose of a criminal investigation, including TraceTogether data.⁶²⁹⁵ The COVID-19 (Temporary Measures) (Amendment) Bill, which restricted the use of personal contact tracing data in criminal investigations to only serious crimes such as murder and terrorism, passed in Parliament in February 2021.⁶²⁹⁶

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

According to the Singapore government, TraceTogether's technical design precludes its use as a surveillance tool.⁶²⁹⁷ The Singapore government has explained that the data is always stored in a device in an encrypted form and is automatically deleted after 25 days.⁶²⁹⁸ Data is only extracted when the person tests positive for COVID-19 and upon request by the health authorities to upload the data for contact-tracing purposes.⁶²⁹⁹

The Ministry of Health announced in February 2023 that the use of contact tracing systems including TraceTogether were being stepped down due to COVID-19 measures being eased.⁶³⁰⁰ As of February 1, 2024, the government deleted all COVID-19 contact-tracing data collected through the TraceTogether and SafeEntry programs, except one set of data related to a murder case.⁶³⁰¹

The Singapore Police Force issued an Implementation Directive⁶³⁰² under the Online Criminal Harms Act to Meta in September 2025, requiring the company to implement enhanced facial recognition measures to detect and reduce AI-generated deepfake impersonation scams targeting key government office holders on Facebook. A second directive was subsequently issued requiring Meta to expand these measures to cover impersonation of a broader range of public figures.

Facial Recognition

The Minister of State for Home Affairs advised that Singapore aims to have more than 200,000 police cameras by 2030, more than doubling current use.⁶³⁰³ Police started trialing patrol robots for surveillance, to detect "undesirable social

behaviors” and displaying messages to educate the public on proper behavior the following month.⁶³⁰⁴

In May 2022, the PDPC issued the Guide on Responsible Use of Biometric Data in Security Applications to help organizations such as Management Corporation Strata Title (MCST), building/premise owners, and security services companies, to ensure the responsible use of security cameras and biometric recognition systems to safeguard individuals’ biometric data where it is collected, used or disclosed.⁶³⁰⁵

Singapore utilizes ABBSS (Automated Biometrics & Behavioral Screening Suite) at immigration and border checkpoints. The system is a network of cameras with facial-recognition capabilities that can also be deployed as a body-worn cameras for officers. The system is used both to build a biometrics database of travelers and detect travelers wanted for various offenses.⁶³⁰⁶

Singapore established a fully automated immigration clearance system for all travelers, including first-time social visitors, with phased implementation starting in 2024.⁶³⁰⁷ The system utilizes retinal and face-recognition procedures, to facilitate passport-less immigration clearance for Singapore residents and eligible foreign travelers⁶³⁰⁸ under the New Clearance Concept.⁶³⁰⁹ The Immigration (Amendment) Bill passed in September 2023 authorizes the disclosure of passenger information to airport operators to facilitate end-to-end biometric clearance.⁶³¹⁰

Online Disinformation

The Protection from Online Falsehoods and Manipulation Act⁶³¹¹ was introduced in 2019 “to prevent the electronic communication in Singapore of false statements of fact, to suppress support for and counteract the effects of such communication, to safeguard against the use of online accounts for such communication and for information manipulation, to enable measures to be taken to enhance transparency of online political advertisements, and for related matters.”⁶³¹² The law applies to digital content that is accessible in Singapore, whether it is an online post, text, or chat message by a person or a bot. The law does not clearly define what is meant by “falsehood” and gives power to any government minister to declare that information posted online is “false” and instruct the correction or removal of such content if they think it is in the public interest to remove it. A person found guilty of the offense can be fined or imprisoned.

The Foreign Interference (Countermeasures) Bill (FICA) passed in 2021⁶³¹³ “provides measures to prevent, detect and disrupt foreign interference in our domestic politics conducted through (i) hostile information campaigns (HICs) and (ii) the use of local proxies.” Among the tools and tactics used by these “hostile foreign actors” “to interfere in domestic political discourse, incite social tensions and undermine our sovereignty,” the act mentions: “Using bots on social media platforms or taking out advertisements to artificially boost the reach of these messages,” “Using inauthentic accounts and bots in combination to engineer an artificial sense that there is strong public support or opposition to a certain position or sentiment,” “Inciting other users to ‘troll,’ harass or intimidate a particular target.”

The Bill was adopted after a 10-hour debate and concerns were raised over the lack of public consultation.⁶³¹⁴ Under the new law, the Minister for Home Affairs is granted powers to issue directions to the Internet and social media service providers and website operators to provide user information, block content, and remove applications. Authorities can also require politically significant persons to declare foreign affiliations. Recipients of directions or declarations may apply to the Minister for Home Affairs to vary or cancel the direction or declaration. If their

application is refused, they may appeal to an independent Reviewing Tribunal chaired by a sitting Supreme Court Judge to overrule the Minister.⁶³¹⁵

Singapore's Parliament passed the Election (Integrity of Online Advertising) Act in October 2024, which prohibits the publication of AI-generated or digitally manipulated online advertising in elections.⁶³¹⁶ The law empowers the Returning Officer to issue corrective directions and IMDA to order the removal of offending content from social media services.

Harmful Content

Parliament passed the Online Safety Bill in November 2022⁶³¹⁷ and the Act came into effect on February 1, 2023.⁶³¹⁸ The Act is to enhance the safety of online users, particularly children, and to curb the spread of harmful content on Online Communication Services accessible to users in Singapore.⁶³¹⁹ The Act covers online communication services “generated by a machine.”⁶³²⁰ Harmful content includes sexual content, violent content, suicide and self-harm content; cyberbullying content; content endangering public health; and content facilitating vice and organized crime.⁶³²¹ Designated providers of such Online Communication Services must comply with Codes of Practice issued by the IMDA. The IMDA issued the Code of Practice for Online Safety in July 2023, meant to enhance online safety and “curb the spread of harmful content” with “additional protection for children.” The Online Safety Code establishes processes for managing harmful content, provides tools for

users, applies age-based policies, and puts forth a plan for annual online safety reporting. The first annual report was published on IMDA's website in 2024.⁶³²²

The Online Criminal Harms Act (OCHA) was passed in July 2023 and came into effect on February 1, 2024.⁶³²³ The OCHA enables the Singapore government to deal more effectively with online activities that are criminal in nature, for example scams and online child sexual exploitation.⁶³²⁴

Environmental Impact of AI

Singapore launched a Green Data Centre (DC) Roadmap that charts a sustainable pathway for the continued growth of DCs in Singapore in May 2024.⁶³²⁵ To support ambitions for the digital economy, where macro-trends such as increased use of AI, autonomous and robotic systems, and immersive virtual interactions are expected to propel demand for compute resources, the Roadmap aims to provide at least 300 megawatts (MW) of additional capacity in the near term, with much more through green energy deployments.⁶³²⁶ The Roadmap outlines IMDA's plans to partner with industry to continue enhancing sustainability by improving the energy efficiency of DC facilities and deploying energy-efficient IT equipment and accelerating the use of Green Energy by industry more broadly.⁶³²⁷

At the application level, the Model AI Governance Framework for Generative AI addresses environmental impact only in the disclosure section, where it is listed as an optional rather than mandatory consideration.⁶³²⁸ IMDA has nonetheless articulated a formal "Green AI" concept that is, the development of energy-efficient AI systems powered by low- or zero-carbon energy sources, as a strategic priority

aligned with Singapore's Green Plan 2030 and its goal of net-zero emissions by 2045.⁶³²⁹

Lethal Autonomous Weapons

Singapore the Political Declaration on Responsible Military Use of AI and Autonomy that followed the first Responsible AI in the Military Domain Summit (REAIM 2023).⁶³³⁰ Singapore co-hosted the Responsible AI in the Military Domain (REAIM) Regional Consultations for Asia in February 2024.⁶³³¹ Singapore endorsed the outcome document, the Blueprint for Action, of the REAIM 2024 Summit in Korea in September 2024.⁶³³² Endorsing signals Singapore's commitment to implementing the principles defined at the 2023 Summit.⁶³³³

At the 78th UN General Assembly First Committee in 2023, Chile voted in favor⁶³³⁴ of resolution L.56⁶³³⁵ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the "urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems," and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

Singapore submitted its statement on the topic of lethal autonomous weapons systems as part of the 79th session of the UN General Assembly's First Committee in September 2024. In the submission, Singapore notes that its accession as a High Contracting Party to the Convention on Prohibitions or Restrictions on the Use of Certain Conventional Weapons Which May Be Deemed to Be Excessively Injurious or to Have Indiscriminate Effects (CCW) in March 2024 underscores the commitment to the continued codification and progressive development of the rules

of international law applicable in armed conflict.⁶³³⁶ Singapore also reiterated support for the two-tier approach agreed in the GGE in 2023.

In the report, Singapore shared the country's approach to the responsible development and use of AI in the military realm with details about the national principles on responsible military AI announced in 2021, after "several years of extensive consultations with defence technologists, military planners, international law experts, and policy professionals." The principles define four key areas of concern related to AI in the military domain: 1) Responsibility for AI behavior and defined risks; 2) Reliability of AI systems versus the risks of errors, accuracies, and bias in outputs; 3) Robustness of systems to prevent exploitation by malicious actors; 4) Safety against the risk of AI system failure in critical contexts: "AI systems should be safe to use, not only in terms of the deployed platforms, but also the surrounding assets and personnel."⁶³³⁷

Singapore co-submitted a working paper to the CCW Group of Governmental Experts on LAWS in 2025.⁶³³⁸ At the UN Security Council open debate on AI and international peace and security in September 2025, Singapore's Minister for Foreign Affairs Dr. Vivian Balakrishnan addressed both the opportunities presented by the AI revolution and the challenges to international peace and security, including the question of lethal autonomous weapons systems.⁶³³⁹

AI Literacy

Singapore's AI-Fluent Workforce Initiative⁶³⁴⁰ launched in 2025 is a nationwide program under NAIS 2.0 designed to integrate AI literacy across civil service training, secondary education, and workforce development. The initiative

Center for AI and Digital Policy

emphasizes practical understanding of core machine-learning concepts, ethical use of AI tools, and the ability to interpret automated outputs in professional settings. The program builds on Singapore's existing SkillsFuture framework. The program reflects a whole-of-government and whole-of-society approach to ensuring that citizens and public-sector employees can participate meaningfully in the governance and use of AI systems. It also complements ongoing digital-literacy efforts by the Smart Nation and Digital Government Office (SNDGO)⁶³⁴¹ and Infocomm Media Development Authority (IMDA). These efforts represent an explicit attempt to enhance the population's capacity to assess AI's social and economic implications, aligning with UNESCO's Recommendation on the Ethics of AI and promoting equitable participation in the country's digital transformation.

Human Rights

Singapore has endorsed the Universal Declaration of Human Rights. Singapore was party to four of the core human rights treaties as of 2021, arguing that "rights and a society's approach to them evolve over time as they change."⁶³⁴² The UN Human Rights Council Working Group consistently recommends that Singapore ratifies all international human rights treaties such as the International Covenant on Civil and Political Rights and the Optional Protocol to the Convention on the Elimination of All Forms of Discrimination against Women.⁶³⁴³ Singapore's fourth UPR is scheduled for May 2026.⁶³⁴⁴

Singapore has an Inter-Ministerial Committee on Human Rights but no national human rights institution. The Minister for Home Affairs K Shanmugam said in Parliament in March 2021 that "regardless of which community, what your social, religious or sexual beliefs are, everyone will be protected here."⁶³⁴⁵ He said that action could be taken under the Maintenance of Religious Harmony Act to use

religion to urge violence against any person or group, adding “LGBTQ persons, non-LGBTQ persons, we are all equal.”⁶³⁴⁶

The parliament voted to repeal a decades-old law criminalizing same-sex sexual relations in November 2022. However, lawmakers also voted to amend the constitution to preempt any changes to the legal definition of marriage as exclusively between a man and a woman. Apart from decriminalization, there are no legal protections against discrimination based on sexual orientation or gender identity.⁶³⁴⁷

Singapore’s 2025 Freedom House Score remains unchanged from the previous year with a score of 48 out of 100, which continues to rate Singapore as “Partly Free.”⁶³⁴⁸ In the context of political rights (electoral process, political pluralism and participation, functioning of government) Singapore scores 19 out of 40. When it comes to civil liberties (freedom of expression and belief, associational and organizational rights, rule of law, personal autonomy and individual rights) the country reaches 29 out of 60. Singapore’s “partly free” status was attributed primarily to State restrictions on the electoral process, civil liberties, and associational and organizational rights. According to Freedom House, “Singapore’s parliamentary political system has been dominated by the ruling People’s Action Party (PAP) and the powerful Lee family since 1959. The electoral and legal framework that the PAP has constructed allows for some political pluralism, but it constrains the growth of opposition parties and limits freedoms of expression, assembly, and association.”⁶³⁴⁹

AI Safety Summit

Singapore participated in the AI Safety Summit organized by the UK at Bletchley Park in November 2023⁶³⁵⁰ and signed the Bletchley Declaration, an international agreement on developing human-centric, trustworthy, safe, and responsible AI.⁶³⁵¹ Singapore participated in the AI Seoul Summit, co-organized by the Republic of Korea (ROK) and the UK in May 2024. This meeting was a

continuation of the U.K.'s AI Safety Summit that builds upon the Bletchley Summit's commitment to AI safety.⁶³⁵²

As part of the AI Seoul Safety Summit, Singapore was one of the 10 nations to launch the first international network of AI Safety Institutes to boost cooperation on AI.⁶³⁵³ Singapore designated the Digital Trust Centre as the country's AI Safety Institute (AISI), which will work with other countries' AI Safety Institutes to collectively address AI safety research. Singapore is already in discussions with the U.S. and U.K. AISIs to explore collaborations in AI safety, particularly around Generative AI (GenAI) evaluations. The designation of the Singapore AISI is an extension of ongoing efforts, such as expanding AI Verify to test for GenAI safety, and working with like-minded international partners to exchange insights and best practices in AI safety.⁶³⁵⁴

Singapore participated in the AI Action Summit held in Paris in February 2025, co-chaired by France and India and signed the Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet.⁶³⁵⁵ At the Summit, Singapore announced three new AI safety initiatives: the Global AI Assurance Pilot to establish best practices for technical testing of generative AI applications; a Joint Testing Report co-led with Japan and the United Kingdom under the International Network of AI Safety Institutes, assessing the safety of large language models across 10 languages and five harm categories; and the Singapore AI Safety Red Teaming Challenge Evaluation Report, establishing a methodology for testing AI safeguards across diverse languages and cultures in the Asia-Pacific region.⁶³⁵⁶

Other International Cooperation on AI

NAIS 2.0 says that Singapore is committed to being a serious and reliable international partner on AI, and that Singapore will continue to contribute to international AI developments by anchoring key bilateral relationships with selected partners from government and industry, demonstrating alignment with key international fora and supporting worthwhile platforms, sharing Singapore’s experience, and curating meaningful partnerships for capacity building.

During the inaugural Critical and Emerging Technologies (CET) Dialogue held in Washington, DC, in 2023, Singapore announced the development of an interoperability framework or “crosswalk”⁶³⁵⁷ between the U.S. Artificial Intelligence Risk Management Framework (RMF 1.0) developed by the National Institute of Standards and Technology (NIST) and Singapore’s AI Verify framework.⁶³⁵⁸ The establishment of a bilateral AI Governance Group and further research and technical collaboration in AI were also announced, focusing on advancing “safe, trustworthy, and responsible AI innovation” as well as “safety and security including testing, validation, and certification.” At the Second CET Dialogue held in Washington, DC, in July 2024, Singapore and the United States agreed to expand the NIST-IMDA framework mapping to cover generative AI, collaborate on AI testing and evaluation including red-teaming benchmarks, and support the development of international AI standards at bodies such as ISO. Both countries also welcomed cooperation between their respective AI Safety Institutes to advance AI safety science.⁶³⁵⁹

Singapore is a contributing member of the Association of Southeast Asian Nations (ASEAN). During the 4th ASEAN Digital Ministers’ Meeting (ADGMIN) in February 2024, the group issued the ASEAN Guide on AI Governance and Ethics, which seeks to establish common principles for trustworthy AI and suggests best practices for how to implement trustworthy AI in the region.⁶³⁶⁰ The Expanded ASEAN Guide on AI Governance and Ethics—Generative AI supplements the 2024

Center for AI and Digital Policy

Guide with policy considerations specific to Generative AI.⁶³⁶¹ The 2025 Guide was developed by the ASEAN Working Group on AI Governance, chaired by Singapore's IMDA.⁶³⁶² Singapore's AI Verify Foundation is featured in the Guide through Project Moonshot, a toolkit for standardizing AI safety testing, as one of four ASEAN use cases illustrating responsible generative AI deployment.⁶³⁶³

During the inaugural Singapore-China Digital Policy Dialogue (DPD) in June 2024, Singapore and China announced interest to foster bilateral discussions in enhancing mutual understanding of approaches to AI governance. Under the reporting of the work group for Artificial Intelligence Governance, both parties agreed to promote mutual learning across the private sector and research institutions in AI governance and to enhance mutual understanding of governance frameworks.⁶³⁶⁴

Singapore has formed bilateral and multilateral treaties with other economies, called Digital Economy Agreements (DEAs), which establish digital trade rules and digital economy collaborations.⁶³⁶⁵ Singapore has signed DEAs with Chile, New Zealand, Korea, Australia, and the UK. Some of these DEAS contain AI modules promoting the adoption of ethical governance frameworks for AI and, where appropriate, the alignment of governance and regulatory frameworks.⁶³⁶⁶ For example, the Korea-Singapore Digital Partnership Agreement (KSDPA) contains a module requiring both countries to promote the adoption of AI governance and ethics frameworks that support the trusted, safe, and responsible use of AI-based technologies.⁶³⁶⁷ Singapore and the European Union signed the EU-Singapore

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Digital Trade Agreement to cooperate on AI, cybersecurity, and digital skills development. Signed in May 2025, this agreement is the first digital trade agreement between the EU and an ASEAN member state.⁶³⁶⁸ Singapore also concluded the EFTA-Singapore Digital Economy Agreement, which entered into force in September 2025, which includes provisions promoting the responsible, ethical and trusted use of AI guided by interoperable governance frameworks.⁶³⁶⁹

The Statement of Intent (SOI) Singapore's Ministry of Defence (MinDef) and the United States Department of Defense signed regarding Data, Analytics and Artificial Intelligence Cooperation in July 2024 offers an example of bilateral agreements in defense. Under this SOI, both nations identified key areas of collaboration, such as quality data, the responsible development and use of AI, and talent management. The SOI is deemed as an important opportunity to deepen collaborative efforts, strengthen interoperability, and promote values-based global leadership on responsible AI in defense.⁶³⁷⁰

Singapore and the United Kingdom signed a new Memorandum of Cooperation (MoC) to enhance the safety and reliability of AI technologies in its development and use in November 2024. The MoC builds upon the longstanding digital partnership between Singapore and the UK and aims to pave the way for greater public trust in AI advancements.⁶³⁷¹ This latest agreement aligns with the commitments made by the two countries at the AI Safety Summit held in the UK in November 2023, and the objectives of the international network of AI Safety Institutes to align their work on research, standards and testing. This agreement also builds on the Memorandum of Understanding on Emerging Technologies signed by both countries in June 2023, which included commitments to explore cooperation on AI.⁶³⁷²

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Singapore launched the AI Playbook for Small States in September 2024.⁶³⁷³ Developed in collaboration with Rwanda's Ministry of ICT and Innovation, the Playbook outlines key issues and considerations for policymakers in the development, use, and governance of AI, from the perspective of small states to enable countries to achieve the UN Sustainable Development Goals (SDGs). An anthology of best practices from different Forum of Small States (FOSS) members and stakeholders complements the issues and considerations.⁶³⁷⁴

OECD / G20 AI Principles

Singapore is not a member of the OECD or the G20 but endorses the OECD AI Principles through membership in the Global Partnership on AI (GPAI). The OECD noted several significant examples of positive AI practices in Singapore.⁶³⁷⁵ For example, the Advisory Council on the Ethical Use of AI and Data, and the AI Governance Framework, which incorporates all the OECD AI Principles.

Singapore is a founding member of the GPAI.⁶³⁷⁶ Following the merger of GPAI and the OECD in July 2024, Singapore formally integrated into the OECD AI governance architecture as one of 44 participating jurisdictions.⁶³⁷⁷ The Centre for AI & Data Governance (CAIDG) in Singapore was established to develop international thought leadership and advance scholarship and discourse on legal, ethical, regulatory, and policy issues arising from the use of AI and data and inform the implementation of the G20 AI Principles. CAIDG's merger with the Centre for Computational Law to form the SMU Centre for Digital Law (CDL) in 2024 expanded this mandate.⁶³⁷⁸

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Council of Europe AI Treaty

Singapore is not a member state of the Council of Europe and has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁶³⁷⁹

UNESCO Recommendation on AI Ethics

Singapore was one of the 193 member states that adopted the UNESCO Recommendation on the Ethics of Artificial Intelligence at the General Conference in November 2021.⁶³⁸⁰ Since the adoption, Singapore has yet to make official announcements concerning the implementation of the UNESCO Recommendation on the Ethics of AI, such as initiating the Readiness Assessment Methodology (RAM).⁶³⁸¹

Evaluation

Singapore is one of the leaders in providing guidance for the ethical development of AI, providing regulatory sandboxes for testing responsible practices, and developing risk-based governance frameworks. The country has focused on the voluntary adoption of these methods for both public and private use cases and has not passed legislation to regulate artificial intelligence. Singapore's data protection agency has significant responsibilities for data protection and a growing role in AI policy. Questions do remain about independent oversight of government AI systems.

Singapore has embarked on extensive international efforts to collaborate with countries bilaterally and multilaterally, and has contributed to many international events, summits, and conferences to build thought leadership and demonstrate its alignment as an advanced, responsible, and leading nation on AI. While Singapore has adopted the UNESCO Recommendation on the Ethics of AI, it has yet to make public announcements concerning the implementation of the UNESCO Recommendation.

Concerns exist regarding the use of AI technologies for surveillance purposes. In recent years, the Singapore Parliament enacted laws to regulate online content due to risks associated with harmful content and disinformation. The extent

⁶³⁷⁹ Council of Europe Treaty Office, *Chart of Signatures and Ratifications of Treaty 225* (Mar. 11, 2026), <https://www.coe.int/en/web/conventions/full-list?module=signatures-by-treaty&treaty=225>

of the power conferred to public authorities for monitoring this content is concerning given the lack of independence and proper oversight or accountability, aside from judicial review.

Slovakia

In 2025, Slovakia amended the Media Services Act to align with the EU Digital Services Act and named authorities to protect fundamental rights in line with the EU AI Act. The country also progressed toward completing the UNESCO Readiness Assessment Methodology (RAM).

National AI Strategy

Slovakia's national AI strategy is integrated in its broader national digitalization plan—the Strategy of the Digital Transformation of Slovakia 2030, which is led by the Ministry of Investments, Regional Development and Informatization (MIRRI).⁶³⁸² The Strategy envisions transforming Slovakia into a “successful digital country” characterized by environmentally sustainable industries, efficient public administration, and an information society that ensures a high quality of life and safety for its citizens.⁶³⁸³

The Strategy prioritizes a number of technologies—namely AI, Internet of Things, 5G technology, big data and analytical data processing, blockchain and High-Performance Computing—as main drivers to advance Slovakia's economic growth and competitiveness.⁶³⁸⁴ The strategy identifies human capital, infrastructure for necessary technologies, solution and systems, and regulatory framework along with economy, society and education, public administration, territorial development, and science, research and innovations as preconditions necessary for a successful digital transformation.⁶³⁸⁵ The Strategy frames digital transformation, including the use of technologies like AI, as a means to achieve more inclusive economic growth in support of democracy while stressing “it is important to set the system of technology use in a way that will strengthen the civil society and democratic values and effectively fight any forms that would like to weaken them.”⁶³⁸⁶

Following the introduction of the Strategy, Slovakia released the Action Plan for the Digital Transformation of Slovakia for 2019–2022, which outlines immediate strategic areas that lay the groundwork for implementing the Strategy's longer-term

⁶³⁸² Ministry of Investments, Regional Development and Informatization, *Strategy of the Digital Transformation of Slovakia 2030* (May 7, 2019), <https://mirri.gov.sk/wp-content/uploads/2019/11/Brochure-SMALL.pdf>

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

goals.⁶³⁸⁷ The strategic areas include leading a digital transformation of education to strengthen skills and employability, building a foundation for a modern digital and data economy, enhancing public administration through innovation and data, and supporting AI development.⁶³⁸⁸

The Action Plan explicitly acknowledges the need to “adjust protection of rights and freedoms to the needs of the digital era” as a requirement for supporting AI development respecting commitments to the OECD AI Principles and European Commission recommendations.⁶³⁸⁹

The Standing Committee on Ethics and Regulation of Artificial Intelligence was established by the Ministry of Investments, Regional Development, and Informatization (MRRI) in November 2020, as an independent expert and advisory body.⁶³⁹⁰ CERAI’s role is to “assess ethical, socio-social and legal issues related to the research, development, deployment and use of technologies using AI elements and systems.”

EU Digital Services Act

As an EU member state, Slovakia is fully and directly bound by the EU Digital Services Act.⁶³⁹¹ Slovakia adopted amendments to the Media Services Act in 2025, aligning national legislation with the Digital Services Act and designating the Council for Media Services as the Digital Services Coordinator.⁶³⁹²

EU AI Act

Slovakia has identified the Office for Personal Data Protection of the Slovak Republic and Public Defender of Rights (PDOR) to supervise or enforce the obligations for protecting fundamental rights in EU AI Act Art 77.⁶³⁹³ Under the EU

AI Act, Member States were required to designate their respective market surveillance authorities by August 2, 2025. However, Slovakia has not yet appointed a market surveillance authority.

Public Participation

The Ministry of Investments, Regional Development and Industrialization (MIRRI) has been tasked with creating an expert group to coordinate educational activities on AI.⁶³⁹⁴ The expert group will consult with relevant stakeholders, such as school, public authorities, and the business sector to shape educational reforms. However, no public record of further developments, outputs, or additional public participation initiatives were found.

Data Protection

In addition to Slovakia's Act on the Protection of Personal Data and on Amendments to certain Acts,⁶³⁹⁵ the country is subjected to the GDPR, as a member state of the European Union. The Slovak Personal Data Protection Law supplements and specifies certain aspects of the GDPR within the national context with the Office for Personal Data Protection serving as the national supervisory authority.⁶³⁹⁶

The Office for Personal Data Protection is a member of the Global Privacy Assembly (GPA)⁶³⁹⁷ but did not endorse the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence, the 2020 GPA Resolution on AI

Accountability, the 2022 GPA Resolution on Facial Recognition Technology, or the 2023 GPA Resolution on Generative AI Systems.⁶³⁹⁸

Algorithmic Transparency

The GDPR, Convention 108+,⁶³⁹⁹ and Act on the Protection of Personal Data grant Slovak citizens the right to algorithmic transparency. Slovaks are entitled to receive meaningful information about the logic involved in automated processing and the right to contest a decision made solely by an algorithm that has a significant impact on them. This includes the right to obtain human intervention and challenge an automated conclusion.⁶⁴⁰⁰ Additionally, Convention 108+ strengthens these rights by requiring that citizens' views be considered and by granting them access to information about the logic behind the automated processing.

AI in the Judicial System

Slovakia uses automated decision-making systems for court administration and the allocation of cases to judges.⁶⁴⁰¹ A 2019 assessment found gaps in transparency and independent oversight mechanisms, limited public engagement in the adoption process, and inadequate provisions for algorithmic accountability.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI Deepfakes and Elections

The 2023 parliamentary election in Slovakia was disrupted by the release of a deepfake audio recording just two days before the vote. The AI-generated clip falsely portrayed Michal Šimečka, chairman of the Progressive Slovakia party, suggesting to what was portrayed as journalist Monika Tódová that he might manipulate the election results.⁶⁴⁰² Šimečka's opponent ultimately won the election, but observers remain uncertain about the extent to which the fabricated audio influenced the outcome.⁶⁴⁰³

Environmental Impact of AI

The Strategy of the Digital Transformation of Slovakia 2030 promotes environmentally sustainable digital transformation but does not include explicit measures addressing AI's environmental impact or acknowledge potential harms.⁶⁴⁰⁴ One of the priority areas, Territorial Development, highlights building smart cities as a means to monitor and decrease resource consumption and protect the environment but with no details.⁶⁴⁰⁵ As a member of the European Union, Slovakia's governance of AI's environmental impact is also subject to the environmental provisions established by the EU AI Act.⁶⁴⁰⁶

Lethal Autonomous Weapons

Slovakia has demonstrated support for an international treaty restricting lethal autonomous weapons systems (LAWS) in international forums. In a statement during the General Debate of the First Committee at the UN General Assembly in 2023, Slovakia's Chargé d'affaires expressed concern with the slow progress in the CCW Group of Governmental Experts (GGE) on LAWS in developing a treaty and

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

reiterated support for a two tier approach.⁶⁴⁰⁷ Slovakia also signed onto a Joint Statement with 52 countries and the European Union to highlight the “significant conceptual progress” in the GGE on LAWS. The statement, delivered by Germany and the Philippines, stressed widespread agreement on “a set of 1) prohibitions and 2) measures and regulations. This approach is centered around compliance with international law, in particular the rules and principles of international humanitarian law.”⁶⁴⁰⁸

AI Literacy

Slovakia’s commitment to strengthening national AI literacy is embedded in its national digitalization plan: the Strategy of the Digital Transformation of Slovakia 2030.⁶⁴⁰⁹ One of the Strategy’s immediate priorities is to accelerate education and skills development for the digital economy.⁶⁴¹⁰

Building on the Strategy, the government adopted the National Digital Skills Strategy of the Slovak Republic and the Action Plan 2023–2026, which outlines six priority areas that include building institutional capacity by coordinating the strategy across sectors; growing the number and quality of tech experts to build ICT specialists; integrate digital skills into education for students and teachers; provide upskilling and reskilling for the active labor market; promote gender inclusion through increased participation of girls and women in ICT; and improve access to technology and digital skills for vulnerable groups to close the digital divide.⁶⁴¹¹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Human Rights

Freedom House classifies Slovakia as Free with an overall score of 89/100.⁶⁴¹² This rating reflects a strong foundation of political rights and civil liberties. However, “entrenched discrimination against Roma and political hostility toward LGBT+ individuals persist.” Additionally, political corruption continues to be a challenge, along with increased pressure on the media and civil society in recent years.

OECD / G20 AI Principles

Slovakia adheres to the OECD AI Principles, which promote innovative, trustworthy AI that respects human rights and democratic values.⁶⁴¹³ The Strategy of the Digital Transformation of Slovakia 2030 explicitly acknowledges the OECD AI Principles in the recommendations for sustainable and inclusive growth.⁶⁴¹⁴

Council of Europe AI Treaty

Slovakia is party to the Council of Europe's Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law, through membership in the European Union.⁶⁴¹⁵ Still, Slovakia has not taken independent action on the treaty at a national level. Ratifying the treaty will signal Slovakia's commitment to aligning national AI policies with international standards, prioritizing ethical considerations, transparency, and accountability in AI development and deployment.

UNESCO Recommendation on AI Ethics

Slovakia endorsed UNESCO's Recommendation on the Ethics of Artificial Intelligence, which emphasizes protecting human rights and dignity as the cornerstone of AI ethics. As part of the implementation of the Recommendation, Slovakia is in the process of completing UNESCO's Readiness Assessment

Methodology (RAM).⁶⁴¹⁶ Attention to digital skills in education and plans to reskill and upskill the workforce align with the Recommendation's Awareness & Literacy principle and Education and research and Economy and labor policy actions.⁶⁴¹⁷

Evaluation

While Slovakia has adopted a broad digital transformation plan that identifies AI as a key driver of economic digitization, the country currently lacks a dedicated AI strategy or regulatory framework. The government created the Standing Committee on Ethics and Regulation of Artificial Intelligence as an independent expert and advisory body; however, there is no further public record detailing how the Committee executes its mandate or assessing its effectiveness as an oversight mechanism. Despite Slovakia's obligation to implement the EU AI Act, the government has neither clarified how national policies will align with the framework, nor designated the market surveillance authorities required for implementation. Documentation of public participation in the development of national AI initiatives is limited, with the exception of the expert group convened to examine AI use in education.

Nevertheless, Slovakia's data protection regime is aligned with European Union and Council of Europe frameworks and is supported by a dedicated data protection authority. Globally, Slovakia generally adheres to ethical AI frameworks set forth by the OECD, UNESCO, and the Council of Europe, and the country is recognized for its commitment to human rights. These factors provide a robust foundation for Slovakia to build its national AI policies.

Ongoing monitoring is required to assess whether AI adoption in education and judicial systems adequately safeguards minors' data and ensures transparency in algorithmic processes. Enforcement of the EU AI Act will likely compel Slovakia to address these gaps, particularly regarding compliance with provisions on high-risk AI systems.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Slovenia

In 2025, Slovenia adopted a law on the Implementation of the EU Artificial Intelligence (AI) Act. This law mandates the public-sector publication of high-risk AI systems and establishes regulatory sandboxes under supervised conditions.

National AI Strategy

In May 2021, the Slovenian Government adopted the National program promoting the deployment of AI in the Republic of Slovenia by 2025 (NpAI).⁶⁴¹⁸ The NpAI laid out a detailed workplan for social and economic development, including specific indicators, guidance on measuring progress, and instruments for implementation and financing.⁶⁴¹⁹ The objectives of the NpAI include providing an appropriate ethical and legal framework and answering to socio-economic changes such as changes in the labor market and education system to increase citizens' trust in AI. Other objectives center on research, expert capacity-building, and infrastructure.

The Government adopted the National Strategy for Artificial Intelligence (NsUI 2030) in March 2026.⁶⁴²⁰ NsUI 2030 sets five strategic goals: the development of sovereign and trustworthy artificial intelligence, wider use of AI in the economy and public sector, strengthening the knowledge and innovation ecosystem, ensuring safe and responsible use, and strengthening Slovenia's international integration.⁶⁴²¹

EU Digital Services Act

As an EU member state, Slovenia shall apply the EU Digital Services Act (DSA).⁶⁴²² The DSA regulates online intermediaries and platforms to prevent illegal

and harmful activities online and the spread of disinformation. Bodies within the Ministry of Digital Transformation oversee the Digital Services Act in Slovenia.⁶⁴²³

EU AI Act

In the second half of 2021, Slovenia assumed the Presidency of the Council of the EU.⁶⁴²⁴ In July 2021, Slovenian Minister of Justice, Marjan Dikaucic “said that the existing rules cannot provide answers to all the challenges brought by artificial intelligence, which is why it is necessary to take further steps in the creation of a legal framework.”⁶⁴²⁵ After the first debate on the European Parliament’s proposed AI Act, the Slovenian Digital Minister Boštjan Koritnik affirmed that the EU AI Act should “serve as a model across the globe, in the same vein as the general data protection regulation, GDPR, in the area of protection of personal data.”⁶⁴²⁶

The Slovenian parliament endorsed the Act on the Implementation of the EU AI Act, which aims to standardize AI development, use, and operation across the EU.⁶⁴²⁷ The Act seeks to harmonize national laws with EU provisions, designating authorities for supervision and enforcement, and establishing penalties for violations. It also includes provisions for regulatory sandboxes and the potential appointment of an AI Ethics Commissioner, positioning Slovenia as a leader in AI regulation within the EU.

Public Participation

Led by an inter-ministerial working group, the national program was the result of a series of multi-disciplinary consultations with national experts and

industrial representatives through the ICT Association of Slovenia⁶⁴²⁸ of the Chamber of Commerce and Industry of Slovenia,⁶⁴²⁹ researchers and practitioners in the field of AI through the Slovenian Artificial Intelligence Society,⁶⁴³⁰ and stakeholders of the Strategic Research and Innovation Partnerships on Smart Cities,⁶⁴³¹ Factories of the Future,⁶⁴³² and civil society through the Slovenian Digital Coalition.⁶⁴³³ The Ministry of Public Administration prepared the first draft, which was released soliciting public comments in August 2020.⁶⁴³⁴

The government hosted the 4th National AI Conference⁶⁴³⁵ on June 10, 2025, at Brdo pri Kranju. Organizers collected opinions to shape a draft national AI program until 2030. In July 2025, the Ministry of Digital Transformation requested public comments on the updated AI program.

Data Protection

The protection of personal data is guaranteed by the Slovenian Constitution.⁶⁴³⁶ Article 38 of the Constitution ensures purpose limitation and includes the right of access to the collected personal data and the right to judicial protection.⁶⁴³⁷

Since Slovenia is an EU Member State, the General Data Protection Regulation (GDPR)⁶⁴³⁸ is directly applicable in Slovenia and to Slovenians. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in

different national systems and unnecessary administrative burdens.”⁶⁴³⁹ The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. In July 2022, the European Commission sent a reasoned opinion to Slovenia for failing to implement important obligations under the GDPR, as well as for not making it possible for the Slovenian Information Commissioner to use all the corrective powers under the GDPR.⁶⁴⁴⁰

In December 2022, Slovenia adopted a new Personal Data Protection Act (PDPA), adapting the national legislation to the GDPR. The new legislation entered into force in January 2023 and replaces the 2004 Data Protection Act. Under the PDPA, the Slovenian Information Commissioner has the authority to impose fines pursuant to the GDPR. The PDPA also introduces rules on the age limit for a child’s consent (15 years old), use of CCTV, and biometric data as well as an obligation to maintain processing logs.⁶⁴⁴¹

Regarding the activities of law enforcement authorities, Slovenia transposed the EU Data Protection Law Enforcement Directive (LED).⁶⁴⁴² The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.⁶⁴⁴³

Slovenia is also a member of the Council of Europe and signed and ratified⁶⁴⁴⁴ the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.⁶⁴⁴⁵

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Slovenian Human Rights Ombudsman (since 2002) and the Information Commissioner (since 2007) are both members of the Global Privacy Assembly.⁶⁴⁴⁶ However, they have not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁶⁴⁴⁷ 2020 GPA Resolution on AI Accountability,⁶⁴⁴⁸ 2022 GPA Resolution on Facial Recognition Technology,⁶⁴⁴⁹ or 2023 GPA Resolution on Generative AI.⁶⁴⁵⁰

Algorithmic Transparency

Slovenia is subject to the GDPR. Slovenians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.⁶⁴⁵¹ Furthermore, in June 2023, Slovenia ratified Convention 108+, which also provides for algorithmic transparency.⁶⁴⁵²

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems⁶⁴⁵³ specifically emphasizes requirements on transparency, accountability and effective remedies.

Slovenia's Act on the Implementation of the EU Artificial Intelligence (AI) Act requires the public-sector to publish high-risk AI systems and establishes regulatory sandboxes under supervised conditions. This legislation positions Slovenia among the leading EU Member States in establishing transparency

obligations for artificial intelligence systems and improving the oversight of algorithmic decision-making.⁶⁴⁵⁴

Facial Recognition

A report by the Greens/EFA of the European Parliament,⁶⁴⁵⁵ revealed that Slovenia uses facial recognition technologies for “ex-post identification” in its criminal investigations.⁶⁴⁵⁶ In Slovenia, the use of facial recognition technology by the police was legalized five years after they started using it.⁶⁴⁵⁷ The Slovenian police confirmed to the Slovenian Information Commissioner that they had used Face Trace (a facial recognition software⁶⁴⁵⁸) back in 2014.⁶⁴⁵⁹ The Commissioner’s office raised the issue several times in the years 2015–2019.⁶⁴⁶⁰

Subsequent to the enactment of the 2017 Police Tasks and Powers Act, which permits the use of biometric and facial recognition tools by law enforcement authorities,⁶⁴⁶¹ the Human Rights Ombudsman and the Information Commissioner brought a formal complaint against the Act before the constitutional court of Slovenia.⁶⁴⁶² The complaint mentioned the excessive data gathering powers granted to the police through the use of drones and automated systems to recognize license plates, the uncontrolled use of passenger name records at airports, and the lack of

Center for AI and Digital Policy

sufficient protection for citizens with no criminal record. However, the Slovenian Human Rights Ombudsman did not address facial recognition in the complaint, seeing its use as an exceptional measure that would not justify recourse to the constitutional court.

In 2021, the Information Commissioner announced the completion of its investigation regarding the police's use of the Face Trace system.⁶⁴⁶³ The investigation concluded that even though Face Trace is a biometric data processing-based system, it does not yield identification. Accordingly, the Information Commissioner deemed the use of Face Trace in compliance with data protection law. As a consequence, the 2017 Police Tasks and Powers Act is still in force and the Slovenian police use facial recognition systems in the framework of their activities.

Environmental Impact of AI

Slovenia co-sponsored the UN General Assembly landmark resolution on Artificial Intelligence (AI) Systems for Sustainable Development in March 2024.⁶⁴⁶⁴ The resolution calls for global cooperation in the development and use of AI, ensuring that it benefits society while addressing risks.⁶⁴⁶⁵ The resolution emphasizes the importance of ethics, human rights, and sustainable development, particularly in areas like climate action, healthcare, and education. The resolution calls to establish international norms and principles for responsible AI governance, ensuring that AI technologies are deployed for public good, inclusive growth, and to help achieve the UN Sustainable Development Goals (SDGs). The EU and member states, including Slovenia, issued a joint statement following the UN Resolution emphasizing the critical role of AI in advancing sustainable development, with a particular focus on environmental protection and climate action.⁶⁴⁶⁶ However, Slovenia does not have AI-specific environmental protection laws.

Lethal Autonomous Weapons

According to Human Rights Watch, Slovenia has expressed its concerns about “the growth of new weapon technologies” and stressed the “necessity for human control over all autonomous weapons.” However, Slovenia has not commented on calls to ban fully autonomous weapons.⁶⁴⁶⁷

In October 2022, Slovenia was one of the 70 states that endorsed a joint statement calling for the UN General Assembly to recognize the dangers of autonomous weapons systems⁶⁴⁶⁸ while declaring a commitment “to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (“IHL”), including through maintaining human responsibility and accountability in the use of force.”⁶⁴⁶⁹ In a statement to the UN Security Council in 2025, President Nataša Pirc Musar urged the Council to address the impact of artificial intelligence on global peace and security. She emphasized the risks of AI-powered weapons and algorithmic decision-making without human oversight and called for regular briefings by the UN Secretary-General. The President stressed that all AI decisions should adhere to international humanitarian and human rights law, ensuring transparency and accountability.⁶⁴⁷⁰

Slovenia voted in favor⁶⁴⁷¹ of resolution L.56⁶⁴⁷² on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,”

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Slovenia participated in the REAIM 2023 summit and endorsed the joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.⁶⁴⁷³ Slovenia also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁶⁴⁷⁴ South Korea hosted the second REAIM Summit in 2024. Slovenia endorsed the outcome document, Blueprint for Action, expressing a commitment to implement the principles of the first REAIM summit with an international treaty and national action.⁶⁴⁷⁵

AI Literacy

The Republic of Slovenia's National Programme to Promote the Development and Use of Artificial Intelligence (NpAI) covers ten strategic objectives, including "Education and strengthening of human resources" (SO2) and "Increasing public confidence in AI" (SO7). They explicitly mention support for "staff training programmes (courses, seminars) to acquire new knowledge, skills"⁶⁴⁷⁶ and training for decision-makers in the private and public sector about opportunities and threats of AI. The Programme also envisages instruments for broad awareness-raising of AI among the entire population, via conferences, workshops, communication platforms and a national AI observatory.⁶⁴⁷⁷ While these actions advance institutional capacity and general awareness for AI governance, the publicly available documentation does not yet demonstrate a dedicated, large-scale program focused on training citizens to participate directly in AI policy-making or oversight. As a result, Slovenia's efforts reflect substantial foundations in governance literacy, while the dimension of citizen-participation literacy remains emergent.

Human Rights

According to Freedom House, Slovenia receives high scores for Political Rights and Civil Liberties for a combined score of 96/100 in 2025.⁶⁴⁷⁸ The report notes that the government “generally operates with openness and transparency.” Slovenia is a signatory to major human rights treaties.⁶⁴⁷⁹ The country was also elected as part of the 2026–2028 UN Human Rights Council.⁶⁴⁸⁰

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers advised that “member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects”⁶⁴⁸¹ as part of their compliance with the Council of Europe Convention for the Protection of Human Rights and Fundamental Freedoms..

OECD / G20 AI Principles

Slovenia is a member of the OECD and has endorsed the OECD AI Principles.⁶⁴⁸² The Slovenian AI National Program expressly refers to the OECD AI Principles on Artificial Intelligence, which promote artificial intelligence that is innovative and trustworthy and respects human rights and democratic values.⁶⁴⁸³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The OECD has mentioned Slovenia's Digital Coalition and AI4Slovenia as an example of national AI policies that are shaping an enabling environment for AI.⁶⁴⁸⁴ Slovenia is also a founding member of the Global Partnership on AI.⁶⁴⁸⁵

The Government of the Republic of Slovenia adopted the Strategy for the Cooperation of the Republic of Slovenia with the OECD until the end of 2025. The aim of the Strategy is to use benchmarking and good practices from OECD Member countries to support domestic reform processes to achieve the digital and green transformation and realize Slovenia's development potential. With the Strategy, "Slovenia pursues the objective of digital transformation based on the protection of human rights and fundamental freedoms, paying attention to gender equality and respect for the rights of older persons, and responding effectively to demographic changes. Slovenia will continue to strengthen its role in the regulation and ethical use of artificial intelligence."⁶⁴⁸⁶

Council of Europe AI Treaty

Slovenia contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law. The Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law was adopted in Strasbourg during the annual ministerial meeting of the Council of Europe's Committee of Ministers, which brings together the Ministers for Foreign Affairs of the 46 Council of Europe member states.⁶⁴⁸⁷ Slovenia is party to the Convention as an EU Member State. However, Slovenia has not signed this first legally binding international AI treaty.⁶⁴⁸⁸

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

UNESCO Recommendation on AI Ethics

As a UNESCO member state, Slovenia has endorsed the UNESCO Recommendation on the Ethics of AI.⁶⁴⁸⁹ In March 2021, Borut Pahor, President of the Republic of Slovenia, and Audrey Azoulay, Director-General of UNESCO, inaugurated the International Research Centre on Artificial Intelligence (IRCAI), as a Category 2 center under the auspices of UNESCO in Ljubljana, Slovenia.⁶⁴⁹⁰ The IRCAI is designed to be a communication platform for the collection and dissemination of good practices and case studies on the use and deployment of AI in society.⁶⁴⁹¹ The IRCAI focuses on advancing research on the use of AI to achieve the UN Sustainable Development Goals.⁶⁴⁹² The core research functions of the Centre will be guided by its four international scientific committees on: AI and Climate; AI and Education that will focus on AI algorithms that can make Open Educational Resources more accessible and easier to use; AI and Assistive Technologies that will highlight the potential of using AI technologies to assist persons with disabilities; and AI and Healthcare that will focus on the use of AI in vaccine development processes.

In February 2024, Slovenia hosted the Global Forum on the Ethics of AI. The Global Forum was organized by the Ministry of Digital Transformation under the patronage of UNESCO. Hosting demonstrated Slovenia's clear commitment to the implementation of the UNESCO Recommendation and to human-centric AI.⁶⁴⁹³ Slovenia's preparation of the UNESCO Readiness Assessment Methodology (RAM), currently in progress, is another indication.⁶⁴⁹⁴

Evaluation

In recent years, Slovenia has had a significant influence over the development of AI policy in Europe due to its Presidency of the Council of the European Union during the second half of 2021, its collaboration with UNESCO on AI, and its work

⁶⁴⁸⁹ UNESCO, *The Recommendation on the Ethics of Artificial Intelligence* (2021),

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

in support of the Council of Europe AI expert group.⁶⁴⁹⁵ While the national AI strategy and other technology-related workplans pledge to implement a legislative and regulatory regime that also protects fundamental rights, Slovenia has been slower than most of its European counterparts in updating its data protection regime. The entry into force in January 2023 of the new Data Protection Act, and with it the possibility for the Slovenian Information Commissioner to impose fines provided for the GDPR is a positive step.

The National Assembly adoption of the Act on the Implementation of the EU Artificial Intelligence Act marks the country's first step toward establishing an independent national AI oversight mechanism. Through this implementation, Slovenia advances ethical and transparent AI governance aligned with EU standards, while continuing to address concerns related to surveillance and human rights protection.

South Africa

In 2025, South Africa progressed toward implementing the National AI Policy Framework, in part by establishing the National AI Stakeholder Forum and the National AI Network of Experts. South Africa also published the UNESCO Readiness Assessment Methodology (RAM) Report and deepened multilateral efforts for fair and transparent AI under the G20 Presidency.

National AI Strategy

The Department of Communications and Digital Technologies in April 2024 started the dialogue on the National AI Plan at the National AI Summit.⁶⁴⁹⁶ The plan, conceived of as an AI Strategy,⁶⁴⁹⁷ aimed to integrate AI across various sectors, establishing a roadmap for legal and regulatory frameworks to foster innovation and investment in AI technologies. In August 2024, the Department released the National Artificial Intelligence (AI) Policy Framework as a first step in developing the national AI policy. The framework aimed to promote the integration of AI technologies to drive economic growth, enhance societal well-being, and position South Africa as a leader in AI innovation.⁶⁴⁹⁸

The National AI Plan, which evolved to a policy framework,⁶⁴⁹⁹ centers policy objectives on overcoming “challenges as historical inequalities, digital divides, and outdated regulatory frameworks” with “regulatory reforms and policies to encourage targeted investments in strategic areas in education and digital infrastructure to ensure equitable access and to maximize AI’s transformative potential. By aligning with global AI governance standards and addressing socio-economic disparities, South Africa can leverage AI to drive economic transformation, foster social equity, and enhance its global competitiveness in AI innovation.”⁶⁵⁰⁰

⁶⁵⁰⁰ *Ibid.*, p. 7

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Plan/Policy Framework sets out strategic pillars to achieve these objectives:

- Talent/Capacity Development
- Digital Infrastructure
- Research, Development, and Innovation
- Public-Sector Implementation “to enhance government efficiency through AI”
- Ethical AI Guidelines Development “to ensure alignment with human rights principles”
- Privacy and Data Protection
- Safety and Security “to protect citizens and infrastructure”
- Transparency and Explainability “to build public trust in AI”
- Fairness and Mitigating Bias “to ensure equitable AI deployment”
- Human Control of Technology (Human-Centered Approach) “to maintain human oversight over AI”
- Professional Responsibility “to foster responsible AI development and use,” including through a Code of Conduct and ethics training for AI professionals

The Department of Communications and Digital Technologies (DCDT) began implementing the National AI Policy Framework in January 2025, embedding fairness, accountability, and transparency across programs.⁶⁵⁰¹ In October 2025, Minister of Communications and Digital Technologies Solly Malatsi, reaffirmed the government’s commitment to finalizing and officially adopting the National AI Policy Framework before the end of the year. The Minister emphasized that the Framework, currently under Cabinet review, will become the country’s foundational AI governance instrument. Continued monitoring is required to confirm the timeline of its formal adoption and publication.⁶⁵⁰²

South Africa initially included AI as “the bedrock of the Fourth Industrial Revolution (4IR)”⁶⁵⁰³ and incorporated AI in the framework of an integrated Fourth Industrial Revolution (4IR) strategy.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The 4IR Presidential Commission established in 2019 released a diagnostic report in January 2020, which “sets out a vision for chartering the way forward for South Africa in the Fourth Industrial Revolution.”⁶⁵⁰⁴ The 4IR Commission worked from a diagnostic report to align a national 4IR strategy to South Africa’s vision for development, one “premised on resolving the nation’s historical scars, expressed as the “triple scourge”: Poverty, Unemployment and Inequality.”⁶⁵⁰⁵ The 4IR Commission thus “adopted an amended definition of the 4IR that ensures a human-centric approach.”⁶⁵⁰⁶

As for Ethics & Regulation, the 4IR Commission clarified that “a focus on Regulation, Ethics, and Cultural aspects of the internet is key, not only to create an enabling policy environment to support private and non-governmental organisations as well as the state but to ensure ethical and transparent use of these new technologies.”⁶⁵⁰⁷ Key implementing projects include “government digitisation” and “clustered proposed programmes” such as a National Integrated Social Protection Information System, Smart ID, use of vernacular languages in technologies, a drone unit in the police; digital court solutions, and digital visa integrated platform force.⁶⁵⁰⁸

A high-level interdepartmental multi-stakeholder governance and coordination structure is the institutional custodian of the 4IR strategy,⁶⁵⁰⁹ currently being carried out by the Department of Communications and Digital Technologies (DCDT),⁶⁵¹⁰ which came into operation on April 1, 2020.⁶⁵¹¹ One of the DCDT’s key missions was to develop the “PC4IR Strategic Implementations Plans (PC4IR SIP)

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

to realise the recommendations of the 4IR Commission Report.”⁶⁵¹² To this end, the 4IR Project Management Office (4IR PMO) was established within the DCDT⁶⁵¹³ in April 2020. The 4IR SIP is currently under consideration by Ministers and needs to be approved by the Cabinet. Key objectives include the establishment of a 4IR Strategic Implementation Coordination Council and an artificial intelligence institute, as well as the review and amendment of relevant policy and legislation.⁶⁵¹⁴

Then-DCDT Minister, Khumbudzo Ntshavheni, launched the Artificial Intelligence institute of South Africa and AI hubs at the University of Johannesburg and at the Tshwane University of Technology in November 2022.⁶⁵¹⁵ The DCDT Minister, together with representatives of these two universities and the incoming United Nations (UN) Under-Secretary General and Rector of the UN University, explained in an opinion article the pivotal role of the AI institute in the 4IR strategy. The AI institute is meant as “an innovation engine for public and private sectors in line with the PC4IR” and “develop solutions to South African and African challenges.”⁶⁵¹⁶

African Union

South Africa’s national response to AI Policy and Strategy aims to contribute to the development of a similar strategy at the regional level. The African Union (AU) Commission developed a comprehensive Digital Transformation Strategy for Africa⁶⁵¹⁷ to foster an “integrated and inclusive digital society and economy in Africa

⁶⁵¹⁷ In collaboration with the UN Economic Commission for Africa, Smart Africa, AUDA-NEPAD, Regional Economic Communities, African Development Bank, Africa Telecommunications Union, Africa Capacity Building Foundation, International Telecommunication Union and the World Bank.

that improves the quality of life of Africa's citizens." The Strategy "breaks the digital divide" and ensures "continental ownership with Africa as a producer and not only a consumer in the global economy."⁶⁵¹⁸ The AUC strategy envisions harmonization of policies, legislations, and regulations as key. The strategy also includes the design of "policies based on a human-centred and holistic approach that takes into account the local context and cross-cutting issues relevant to all stages of policy design and implementation. Special attention should be given to minorities and vulnerable groups."⁶⁵¹⁹ The AU Commission also expresses its support for the ratification of the Convention on Cyber Security and Personal Data Protection, also known as the Malabo Convention,⁶⁵²⁰ as well as making the Convention "consistent with standards such as the modernized convention 108, the General Data Protection Regulation."⁶⁵²¹

When South Africa assumed the position of AU Chairperson for 2020, President Ramaphosa called for the creation of an AI Forum within the African Union to discuss how to address AI "in uniformity."⁶⁵²²

In 2021, in line with the objectives of the 4IR SIP,⁶⁵²³ South Africa led the development of Smart Africa's Artificial Intelligence Blueprint for Africa,⁶⁵²⁴ "a precursor for the African continent to become a global player within the digital technology state affairs and a huge contribution to positioning Africa within the 4th Industrial Revolution." The aim was for the AI Blueprint "to set-up the African member states towards developing policies, strategies and plans that would ensure growth and prosperity within the digital revolution space."⁶⁵²⁵

A key chapter in the AI Blueprint is dedicated to AI and ethics. The chapter acknowledges "a need to ensure that ethics are integrated into AI systems to minimize structural discrimination and bias that can emerge from biased training data. Repercussions can lead to discrimination and impairment of rights in a myriad of circumstances including housing, medical care, education, and human rights. [...]"

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In designing their national AI Strategy, countries should clearly elaborate the AI ethical framework.”⁶⁵²⁶

Ethical frameworks would encourage safe and trustworthy use and development of AI such that “autonomous intelligent systems should be designed in ways that enable their decisions to be explained and humans to be accountable for their use,” audits and certification would monitor systems for engineering and ethical compliance according to standards “developed using multi-stakeholder and multilateral approaches,” “Life and death decisions should not be delegated to machines. AI systems should be designed taking into account such key concepts as people, the planet, prosperity and peace.” After noticing that current AI ethics initiatives have been led by Western efforts, the AI Blueprint emphasized that “participation from African nations is crucial and should be further encouraged.”⁶⁵²⁷

In February 2022, the AU Executive Council, requested the AU Commission to pursue the development of a continental AI strategy. The AU High-Level Panel on Emerging Technologies (APET) reiterated the need for a continental AI strategy that “would enable African countries to enhance policymaking and implementation and improve stakeholder engagement on AI-related challenges and opportunities” in May 2022.⁶⁵²⁸ The APET organized two expert consultative meetings in 2022 and released an “AI for Africa report.”⁶⁵²⁹

The African Union endorsed the Continental Artificial Intelligence Strategy in Ghana in July 2024.⁶⁵³⁰ The strategy underscores the AU’s commitment to an Africa-centric, development-focused approach to AI which promotes ethical, equitable and responsible AI development.⁶⁵³¹

In October 2025, African countries adopted the Kigali Declaration on Responsible Artificial Intelligence, reaffirming their collective commitment to ethical, inclusive, and sustainable AI development. The Declaration strengthens regional cooperation and supports the implementation of the 2024 AU Continental AI Strategy, emphasizing data sovereignty, infrastructure investment, and capacity-

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

building for responsible AI governance. South Africa joined as one of the endorsing states, reflecting its continued engagement in continental AI coordination.⁶⁵³²

Public Participation

South Africa's Department of Communications and Digital Technologies (DCDT) opened a formal public consultation on the AI policy framework in October 2024.⁶⁵³³ The consultations ran through November 29, 2024. The consultation on the draft framework followed the National AI Government Summit in April 2024, where the DCDT Minister shared the draft Plan with key stakeholders from government and industry. The Summit was part of a "pre-policy process [...] intended to collate the inputs and incorporate them into the draft plan." The plan then went through the Cabinet System before the public consultation.⁶⁵³⁴

In February 2025, the Competition Commission of South Africa released its provisional inquiry report on digital platform and tech giants, including Google, Meta, Microsoft, OpenAI, X, and TikTok. The report proposed remedies across search, social media, generative AI, and digital advertising to curb anti-competitive practices affecting digital advertising, journalism, and South Africans' constitutional rights. Following a 16-month inquiry involving evidence gathering, hearings, expert submissions, industry consultations, consumer surveys, and focus groups, the report underscored the need for strong government policies to tackle algorithmic bias, echo chambers, and misinformation. The provisional findings closed for public comment on 07 April 2025⁶⁵³⁵. Upon consolidation of feedback, the final report was released in November 2025⁶⁵³⁶

South Africa's National AI Stakeholder Forum, launched by the DCDT in August 2025, marked a significant step in participatory AI governance. Beyond the event itself, the Forum presented the implementation plan for the National AI Policy Framework, detailing strategies for inclusive and human-centered AI

development.⁶⁵³⁷ The concluding call to action emphasized ongoing stakeholder engagement, ensuring that youth, women, persons with disabilities, and underrepresented communities play central roles in shaping the national AI agenda.”⁶⁵³⁸

Previous public participatory processes came as each event informed the road to the National AI Plan. After the publication of the PC4IR Report in October 2020, a draft consultative process took place for the 4IR SIP in October–November 2020, followed by stakeholder consultations from February 2021 until July 2021. The PMO finalized its feedback analysis in August 2021 and submitted the final draft of the 4IR SIP in October 2021.⁶⁵³⁹ In 2018, South Africa's Department of Cooperative Governance and Traditional Affairs, in partnership with a private company, launched GovChat, an online citizen engagement AI-powered application that promotes accountable local governance.⁶⁵⁴⁰

Data Protection

The right to privacy is guaranteed under section 14 of the 1996 Constitution of South Africa. South Africa's data protection law, the Protection of Personal Information Act (POPIA) gained Parliament's assent in 2013. However, only after the COVID-19 outbreak and the proliferation of the use of personal data in relation to digital services, did POPIA take effect on July 1, 2020, and became fully enforceable one year later.⁶⁵⁴¹ The preamble of POPIA recalls the constitutional nature of the right to privacy and specifies that the right to privacy includes “a right to protection against the unlawful collection, retention, dissemination and use of personal information.” POPIA established the South African Information Regulator as an independent body responsible for monitoring and enforcing compliance with

POPIA by public and private bodies. The Regulator is subject to the law and is accountable to the national assembly.⁶⁵⁴²

The Cybercrimes Act, which entered into force on December 1, 2021, also enhances personal data protection. The Act criminalizes hacking; unlawful interception, interference or acquisition of data; malicious or harmful communications.⁶⁵⁴³

The Information Regulator is a member of the Global Privacy Assembly (GPA) since 2017. The Information Regulator has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁶⁵⁴⁴ the 2020 GPA Resolution on AI Accountability,⁶⁵⁴⁵ the 2022 GPA Resolution on Facial Recognition Technology,⁶⁵⁴⁶ or the 2023 GPA Resolution on Generative AI.⁶⁵⁴⁷

A specific issue identified in the 2022 AU Data Policy Framework⁶⁵⁴⁸ and pointed out by renowned researchers such as Emma Ruttkamp-Bloem and Christiaan Viljoen in the South African context is the absence of representation of a large part of the South African society in terms of data sets. These researchers reported that the digital divide is primarily a data divide fostered by and exacerbating the social divide.⁶⁵⁴⁹ At least 50% of South Africans do not have a digital footprint, resulting in potential bias and discrimination because their experiences are absent from the

data.⁶⁵⁵⁰ The practice of data-driven AI in a country like South Africa cannot be extracted from relations of social power. Thus, policymakers should not underestimate the inherent threat to fairness practices in machine learning both in terms of existing bias in training data and modelling practices and the socially powered situations in which predictions are interpreted and acted upon.

Algorithmic Transparency

According to POPIA, algorithmic transparency is ensured to the extent that “appropriate measures must (a) provide an opportunity for a data subject to make representations about a decision” regarding the sole use of automated decision-making and “(b) require a responsible party to provide a data subject with sufficient information about the underlying logic of the automated processing of the information relating to him or her to enable him or her to make representations in terms of paragraph (a).”⁶⁵⁵¹ POPIA further provides that “a data subject may not be subject to a decision which results in legal consequences for him [...], or which affects him [...] to a substantial degree, which is based solely on the basis of the automated processing of personal information intended to provide a profile of such person including his [...] performance at work, on his [...] credit worthiness, reliability, location, health, personal preferences or conduct.”⁶⁵⁵² Exceptions to this principle apply based on a law or code of conduct that provides for appropriate measures to safeguard “the legitimate interests of data subjects” or based on an authorization granted by the South African Information Regulator when the public interest is at stake such as the “interests of national security,” “the prevention, detection and prosecution of offences,” or “important economic and financial interests of a public body.”⁶⁵⁵³

Codes of conduct exist for banks and credit unions as well as direct marketing and commodities.⁶⁵⁵⁴ For example, the Information Regulator approved the Banking Association of South Africa’s Code of Conduct for the Processing of Personal

⁶⁵⁵⁰ Catherine Croxton and Nomvula Buthelezi, *SA has a huge ‘digital blind spot’ and it’s holding us all back* (Feb. 4, 2021), <https://www.dailymaverick.co.za/article/2021-02-04-sa-has-a-huge-digital-blind-spot-and-its-holding-us-all-back/>

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Information by the Banking Industry in 2022,⁶⁵⁵⁵ which regulates the use of automated decision-making in “profiling, work performance, credit worthiness, location, health, reliability, personal preferences, or conduct.”⁶⁵⁵⁶ The Code requires banks to adopt measures and safeguards for automated decision-making processes, such as identification, lawfulness, transparency, privacy notices/statements, and the ability of users to raise complaints in case of dissatisfaction with the result of an automated decision.

Unless a code of conduct has been issued,⁶⁵⁵⁷ POPIA requires a responsible party to “obtain prior authorisation from the Information Regulator” if that responsible party intends to process any unique identifiers of data subjects (i) for another purpose than intended at collection, and (ii) with the aim of linking the information with information processed by other responsible parties.” Such is also the case if that responsible party plans to “(b) process information on criminal behaviour or on unlawful or objectionable conduct on behalf of third parties; (c) process information for the purposes of credit reporting; or (d) transfer special personal information [...] or the personal information of children [...] to a third party in a foreign country that does not provide an adequate level of protection for the processing of personal information”

South Africa’s National AI Policy Framework also includes Transparency and Explainability as one of twelve strategic pillars, which suggests intentions for a guarantee of at least a measure of algorithmic transparency. In addition to educating the public on AI technologies, the framework considers transparency as “The clear and open operation of AI systems, ensuring that their processes, decision-making criteria, and outcomes are understandable and accessible to users and stakeholders, including insights into model functionality, data usage, decision logic, and potential impacts.”⁶⁵⁵⁸

The Information Regulator published draft Health Data Regulations under Section 112(2)(c) of POPIA, addressing the automated processing of sensitive health

and biometric data. These regulations introduce enhanced disclosure requirements for algorithmic decision-making and further strengthen South Africa's transparency and accountability framework related to automatic decisions and algorithmic bias.⁶⁵⁵⁹

EdTech and Tracking Children

Human Rights Watch published a global investigative report on the education technology (EdTech) in May 2022 endorsed by 49 governments, including South Africa, for children's education during the pandemic. Based on technical and policy analysis of 163 EdTech products, Human Rights Watch found that governments' endorsements of the majority of these online learning platforms put at risk or directly violated children's rights.

Some EdTech products, such as Extramarks, apparently exclusively designed for children's use and with an estimated 100,000 users in South Africa, targeted children with behavioral advertising. Extramarks sent children's data to AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online. According to Human Rights Watch, in line with child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights, EdTech and AdTech companies should not collect and process children's data for advertising.⁶⁵⁶⁰

Environmental Impact of AI

South Africa passed its first sweeping climate change law in July 2024.⁶⁵⁶¹ The legislation will allow South Africa to meet its emissions reduction commitments under the Paris Climate Change Treaty. The law is a significant move for South Africa, which is one of the top 15 greenhouse gas emitters globally. The emissions reductions targets in the new bill require all industries, including AI and data centers, to limit their emissions by a given amount over a period of time. The Presidential

Climate Commission welcomed the Proclamation of the Climate Change Act, made public in the Government Gazette in March 2025.⁶⁵⁶²

Lethal Autonomous Weapons

South Africa is a signatory to the United Nations Convention on Certain Conventional Weapons.⁶⁵⁶³ At the 2021 CCW meeting, South Africa advocated for the adoption of a legally binding instrument on LAWS: “It is high time for further work on LAWS, to move towards concrete negotiations and more active diplomatic efforts. Should the GGE’s further work result in the adoption of an instrument on LAWS that is of a political nature only and as a final product, with no prospect of elevating further work to the level of a legally binding instrument, South Africa would regard the process as having been a failure.”⁶⁵⁶⁴ South Africa has participated in discussions on the rolling text toward an international treaty in the Group of Government Experts (GGW) on LAWS.⁶⁵⁶⁵

The South African Military Academy launched the Defence Artificial Intelligence Research Unit (DAIRU) to enhance military capabilities, focusing on AI-driven technologies, cyber resilience, and security. Officials highlighted the transformative power of AI and the importance of regulation amidst global digital competition.⁶⁵⁶⁶

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI Literacy

The National AI Policy Framework⁶⁵⁶⁷ identifies Talent and Capacity Development as a key pillar. As of 2025, implementation remained limited, with few measurable outcomes. The African Union's Continental Artificial Intelligence Strategy⁶⁵⁶⁸ also identifies skills development, public awareness, and education as key pillars for building an inclusive and ethical AI ecosystem across the continent, with "capacity and talent development" listed among its five strategic objectives.

Human Rights

South Africa holds a score of 81/100 and a status a "Free" in the Freedom House Freedom in the World 2025 report.⁶⁵⁶⁹ South Africa is a party to the African Charter on Human and Peoples' Rights. In its 2019 Declaration of Principles on Freedom of Expression and Access to Information in Africa, the African Commission on Human and Peoples' Rights (ACHPR) in charge of interpreting the Charter⁶⁵⁷⁰ called on states to ensure that the "development, use and application of AI, algorithms and other similar technologies by internet intermediaries are compatible with international human rights law and standards, and do not infringe on the rights to freedom of expression, access to information and other human rights."⁶⁵⁷¹

In February 2021, the ACHPR adopted Resolution 473 having recognized that emerging technologies such as AI have a bearing on the enjoyment of human rights under the African Charter on Human and Peoples' Rights (the African Charter).⁶⁵⁷² The ACHPR called on state parties to the African Charter, South Africa included, to ensure the development and use of AI and other new and emerging technologies is compatible with the rights and duties in the African Charter and other regional and international human rights instruments, ensure transparency in the use

Center for AI and Digital Policy

of AI and other emerging technologies and that decisions made in the use of these technologies are easily understandable to those affected by such decisions, and work toward a comprehensive legal and ethical governance framework for AI and other emerging technologies.

In September 2022, the Special Rapporteur on Freedom of Expression and Access to Information in Africa, Ourveena Geereesha Topsy-Sonoo, recalled that, with Resolution 473, “The Commission further observed that whilst making government services and information digital enhances transparency and accessibility and artificial intelligence allows for a number of benefits in the society, it has to be accompanied by human rights considerations and a bridging of the digital divide.” The Special Rapporteur also reiterated the principles of the Resolution.⁶⁵⁷³

The South African Human Rights Commission (SAHRC) 2025–2030 Strategic Plan explicitly commits to modernizing ICT infrastructure and investing in artificial intelligence to enhance public engagement and protect vulnerable groups.⁶⁵⁷⁴

OECD / G20 AI Principles

South Africa is not a member of the Organization for Economic Co-operation and Development (OECD) but endorsed the G20 AI principles that draw from the 2019 OECD AI Principles.⁶⁵⁷⁵ The G20 AI principles highlight challenges in the use of AI including privacy, security, ethical issues, new digital divides and the need for AI capacity building. However, the country has not endorsed the OECD Principles updated in May 2024.⁶⁵⁷⁶ In December 2024, President Cyril Ramaphosa on assuming the G20 Presidency announced the creation of G20 three task forces to achieve the G20’s priorities and achieve its high-level deliverables. One of these task forces is the Artificial Intelligence, Data Governance and innovation for sustainable development with a focus on promoting AI and data governance frameworks.⁶⁵⁷⁷

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

As a Key Partner of the OECD, South Africa contributes to the OECD's work in a sustained and comprehensive manner, including public governance. In 2025, during its G20 Presidency, South Africa led the Digital Economy Working Group (DEWG) on Responsible AI and Digital Inclusion.⁶⁵⁷⁸ The Chair's Statement and Minister Solly Malatsi's closing address recorded progress on ethical and trustworthy AI, digital infrastructure, and skills development.⁶⁵⁷⁹ These initiatives reaffirmed G20 AI Principles and advanced international cooperation on responsible AI.⁶⁵⁸⁰ The G20 Leaders' Summit, held for the first time on the African continent, made special reference to the members' commitment to Artificial Intelligence, reinforcing support for reducing inequalities, re-affirming the G20 AI principles, ensuring safe, secure and trustworthy AI Development, "the protection of human rights, transparency and explainability, fairness, accountability, regulation, safety, appropriate human oversight, ethics, biases, privacy, data protection and data governance."⁶⁵⁸¹ The declaration goes on to, "note the establishment of the Technology Policy Assistance Facility (TPAF) by UNESCO under the South African Presidency," and "welcome the launch of the AI for Africa Initiative which was developed as a voluntary platform for multilateral and multi-stakeholder cooperation between the G20 and the African Union."⁶⁵⁸²

Council of Europe AI Treaty

South Africa has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁶⁵⁸³ CAIDP called on South Africa to sign and ratify the Convention, noting "Ratification would help South Africa prevent governance fragmentation, adhere to global standards, and ensure African priorities are represented in AI development. By taking

this step, South Africa can secure a leadership role in shaping global policies while promoting sustainable development and social equity within the continent.”⁶⁵⁸⁴

UNESCO Recommendation on AI Ethics

South Africa endorsed the 2021 UNESCO Recommendations on the Ethics of AI.⁶⁵⁸⁵ South Africa’s Minister of Communications and Digital Technologies Khumbudzo Ntshavheni expressed commitment to regulating AI in an address at the UNESCO-Southern Africa sub-Regional Forum on Artificial Intelligence (SARFAI) which took place in Windhoek, Namibia in 2021. The SARFAI provided a platform for the discussion of the sustainable development-oriented and ethical use of artificial intelligence, as steps for implementation of the UNESCO Recommendation in the region.

South Africa endorsed the resulting 2022 Windhoek Statement on Artificial Intelligence in Southern Africa.⁶⁵⁸⁶ The Windhoek Statement calls for the establishment of a Southern African coordination mechanism for the implementation of the UNESCO Recommendation.

Complying with the Recommendation is enshrined in the Department of Communications and Digital Technologies’ South Africa’s Artificial Intelligence (AI) Planning.⁶⁵⁸⁷ The National Artificial Intelligence Policy Framework shares significant similarities with UNESCO’s principles on artificial intelligence. Both frameworks emphasize the development of AI technologies based on ethical principles and a human-centered approach, aiming for safe, transparent, and fair AI deployment. Elements such as transparency, accountability, data protection, and bias mitigation in the South African policy align with UNESCO’s values of respecting human rights and ensuring equality in AI use. The framework is crafted with a vision

to distribute AI's economic and societal benefits broadly while prioritizing human well-being, much like UNESCO's emphasis on a people-centered approach.⁶⁵⁸⁸

South Africa has completed the Readiness Assessment Methodology report⁶⁵⁸⁹ phase and is working with UNESCO's Regional Office for Southern Africa under the AI Ethics Implementation Partnership (2025–2027) to integrate ethical AI principles into national policy and capacity-building programs.⁶⁵⁹⁰

Evaluation

South Africa has made notable progress in operationalizing the National AI Policy Framework, signaling a transition from policy design to active implementation. The Department of Communications and Digital Technologies (DCDT) initiated key measures, including the launch of the National AI Stakeholder Forum, which established concrete pathways for inclusive and participatory governance. This development marks a shift from consultation to co-creation, ensuring that diverse groups (particularly youth, women, and marginalized communities) can contribute to shaping the national AI agenda. The creation of a National AI Network of Experts further reinforces institutional coordination and capacity building, reflecting growing alignment with the OECD AI Principles and the African Union's Continental AI Strategy.

At the international level, South Africa's leadership in the 2025 G20 Digital Economy Working Group and its endorsement of the Kigali Declaration on Responsible AI reinforce its active role in shaping global and regional AI norms. Ongoing collaboration with UNESCO through the AI Ethics Implementation Partnership (2025–2027) further reflects sustained progress from readiness assessment to implementation. These developments collectively justify the improved 2025 evaluation outcomes, with notable gains in transparency, participation, and alignment with global ethical frameworks, positioning South Africa in Tier II for the forthcoming assessment cycle.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

South Korea

In 2025, South Korea enacted the Framework Law for AI Development and Establishment of Trust, becoming one of the first countries in the world to protect citizens from AI abuses through comprehensive legislation. The Personal Information Protection Commission issued the Generative AI Privacy Guidelines.

National AI Strategy

The Republic of Korea, known commonly as South Korea, announced the National Strategy for Artificial Intelligence⁶⁵⁹¹ in December 2019. While the focus is on building a world-class AI technical capacity through ambitious targets such as “achieving a world top 3 digital competitiveness by 2030,” the Strategy also aims to address AI ethics and algorithmic transparency-related issues under the pillar of realizing people-centered AI.

The National Strategy materializes the Presidential Initiative for AI that former President Moon Jae-in announced on October 28, 2019. “AI is moving beyond scientific and technological advancements and is approaching us as a new civilization [...] AI will not only affect industrial sectors but also solve many issues facing our society: public health in an aging society, welfare for senior citizens living alone, the safety of women living by themselves, and the prevention of crimes that are becoming more sophisticated,” stated former President Moon Jae-in.

Korea's National Strategy identifies nine major axes and 100 major tasks in three major areas. The major areas are (1) fostering a global-leading AI ecosystem, (2) becoming a country unrivaled for its use of AI, and (3) realizing people-centered AI. The Strategy is the result of a cooperation of the entire Korean ministries and offices including the Ministry of Science and ICT, the Ministry of the Interior and Safety, the Ministry of Education, and the Presidential Committee on the Fourth Industrial Revolution (PCFIR).⁶⁵⁹²

The Presidential Committee on the Fourth Industrial Revolution (PCFIR) formally ended in September 2022⁶⁵⁹³ and the Presidential Committee on Digital Platform Government was launched in September 2023. The new Committee will be

Center for AI and Digital Policy

responsible for evaluating policies and projects related to AI, infrastructures, and services for creating a Digital Platform for Government according to a human-centered vision.⁶⁵⁹⁴

President Yoon Suk-yeol visited the University of Toronto for an AI roundtable in September 2022, where they discussed AI and collaboration between University of Toronto and South Korean partners.⁶⁵⁹⁵ As an extension of the roundtable, the Ministry of Science and ICT announced the Digital Strategy of Korea in line with President Yoon's vision. The purpose is for Korea "to become a best practice country in digital innovation and take a leap forward as a leading country in the digital era, rather than staying stagnant as a fast-follower."⁶⁵⁹⁶

In addition, MSIT announced the Plan for Mainstreaming Artificial Intelligence and Industrial Advancement in January 2023 as a follow-up plan for the Korean Digital Strategy. The plan will promote the advancement of AI industry and technology while sharing benefits with the public by investing in 10 core AI projects.⁶⁵⁹⁷

The Korean government updated the National Strategy in September 2024 with a set of new commitments intended to serve as a blueprint for Korea's goal to become one of the top three AI powerhouses globally.⁶⁵⁹⁸ These commitments are part of the Policy Directions for National AI Strategies presented at the first National AI Committee chaired by President Yoon Suk Yeol. MSIT described this development as a "shift in policy paradigm," as the government aims to "move beyond merely expanding the initial AI infrastructure" to establishing AI as part of the national infrastructure, "fostering transformation across all sectors." The Policy Directions for National AI Strategies reasserts the goal set out in the National AI Strategy of establishing Korea as a Global AI Hub through the Leap to AI G3. Projects center on expanding access to compute and technology, promoting private-

Center for AI and Digital Policy

sector investment, encouraging AI adoption, and leading AI governance globally through proactive safety and security capabilities.

The National Assembly passed the Artificial Intelligence Framework Act (effective January 2026),⁶⁵⁹⁹ establishing Korea's risk-based and rights-protective legislative framework for AI. The Act requires periodic review of the National AI Strategy, formalizes President-led national AI coordination, and strengthens risk, ethics, and human rights assessments for high-impact AI systems. In September 2025, the Presidential National AI Strategy Committee (chaired by the President)⁶⁶⁰⁰ was launched, shifting AI governance from ad-hoc to standing, cross-ministerial, and public-private oversight. The Ministry of Foreign Affairs also created an AI Diplomacy Division⁶⁶⁰¹ dedicated to global engagement and secure AI platforms for foreign affairs.

AI Ethics

Korea's National Strategy for Artificial Intelligence includes “preventing AI dysfunction and establishing AI ethics” as one of nine major actions and aims to set up AI Ethics Principles through public consultation.⁶⁶⁰² To establish the comprehensive AI ethical standards that all members of society—developers, providers, and users—can refer to from development to use of AI, the Korean government has formed an AI ethics research team and analyzed the commonalities and differences in OECD AI Principles and 25 global major AI ethical principles. As a result, in December 2020, the Korean Ministry of Science and ICT announced the Korean AI Ethical Standards⁶⁶⁰³ at the plenary session of the Presidential Committee on Fourth Industrial Revolution.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Standards include 3 basic principles to materialize “Humanity” in the development and utilization of AI: Human dignity, Public interests, and Technological teleology. The Standards detail 10 key requirements to promote these principles: Human rights advocacy, Privacy protection, Respect for Diversity, Injunction against infringement, Public interests, Solidarity, Data management, Accountability, Safety, and Transparency.

Improvement of Policies and Laws for the Era of AI

Korea’s legislature approved the Framework Act on the Development of Artificial Intelligence and Foundation of a Trust in December 2024 and enacted in early January 2025.⁶⁶⁰⁴ The Act establishes human-centered AI development and use as a basic principle such that “Artificial intelligence technology and the artificial intelligence industry should be developed in a way that enhances safety and reliability and improves the quality of life of the people.”⁶⁶⁰⁵ The Act charges state and local governments to “devise policies to respond to changes in all areas, including society, economy, culture, and people’s daily lives” because of AI systems and to “enable all citizens to adapt stably.”

In keeping with the National Strategy’s focus on making the Republic of Korea a global leader in AI, the act includes systems for developing trustworthy AI and charges the government to “respect the creative spirit of AI business operators.”⁶⁶⁰⁶ The legislation will be enforced beginning in January 2026, with the Ministry of Science and ICT charged as the authority in charge of implementation and investigation.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In May 2020, the Korean government amended the Framework Act on National Informatization,⁶⁶⁰⁷ now the Framework Act on Intelligence Informatization. “The purpose of this Act is to contribute to realizing an intelligent information society, securing the national competitiveness, and improving the quality of life for citizens, by prescribing matters necessary to establish and promote policies related to intelligent informatization.”⁶⁶⁰⁸ The Act provides a definition for intelligence information technology and the basis for all regulations that address the development and use of AI, such as the basic principles of the intelligence information society, technical requirements, standardization, and personal data protection. This Framework operationalizes in part the National AI Strategy and its idea of a “future-oriented legal system”⁶⁶⁰⁹ based on the review and revision of relevant laws and regulations to address the issues pertaining to the use of AI in 1) data, 2) intellectual property, 3) accountability, 4) regulation of algorithms and trade secrets, 5) finance, 6) platform, 7) labor, 8) healthcare, and 9) welfare.

Public Participation

The Korea Information Society Development Institute (KISDI) and the Ministry of Science and ICT (MSIT) jointly held an open seminar⁶⁶¹⁰ to receive a wide range of public comments from the public and private sectors, academia, and civil society. The conference was implemented with the mission of changing the direction of AI’s implication on Korean society in more benevolent ways, by checking the goodness, fairness, and validity of “The RoK’s AI Utilization Guidelines” and its enforcement as of 2022. Before convening the event, the KISDI actively accepted and reflected a large number of opinions related to Korea’s three major AI policy implementation measures: 1) The Self-checklist for practicing AI

Ethics Standards,⁶⁶¹¹ 2) The Instructions to develop AI Accountability, and 3. AI Ethics Education.⁶⁶¹²

South Korea conducted public consultations on AI legislation and welcomed independent expert participation in newly established AI bodies in 2024. Specifically, from June to July 2024, the Ministry of Science and ICT (MSIT) solicited public feedback on the opportunities and threats of AI technology, regulatory strategies for ensuring safe and reliable AI, and the government's AI policy priorities through an enhanced digital public forum (beingdigital.kr), following the Plan for Establishing a New Digital Order announced in May. This input will be used to guide the development of global AI norms in the future. The follow-up on the consultation also announced a policy idea contest open for anyone to propose new policies on issues such as closing the gap in access to AI, ensuring ethical awareness among AI developers, and preventing AI from violating individual rights.⁶⁶¹³

Also, in April and July 2024, South Korea established two specialized bodies to enhance AI governance, both including independent experts. The Ministry of Science and ICT launched the AI Strategy High-Level Council to guide AI integration across various sectors.⁶⁶¹⁴ Additionally, the State Council inaugurated the National Artificial Intelligence Committee to coordinate comprehensive national AI policies, focusing on regulatory improvements and infrastructure expansion.⁶⁶¹⁵

The Ministry of Science and ICT oversaw a three-week public consultation on the draft Enforcement Decree of the AI Basic Act in September 2025.⁶⁶¹⁶ Academics, industry groups, and civil society commented on the proposed risk rating

system and specifications for AI impact evaluations. The ministry published proposed implementation guidelines and a summary of the feedback later that month.

Data Protection

In February 2020, Korea amended the three major data privacy laws to protect personal information and improve the personal data protection and privacy governance system in the era of the 4th industrial revolution.⁶⁶¹⁷ The three laws are the Personal Information Protection Act (PIPA), the Act on the Promotion of the Use of the Information Network and Information Projection (the Network Act), and the Credit Information Use and Protection Act (the Credit Information Act). These amendments reflect the outcome of “Hackathon agreements” held in February and April 2018. In May 2018, relevant ministries, civil society organizations and professionals from the industry, including legal circles, participated in the Presidential Committee on the Fourth Industrial Revolution. The Committee discussed the introduction of the use of fictitious names to foster the use of data, reviewing the existing legislation for increased coherence, and strengthening users’ responsibility.

As a result of the amendments to the three major data privacy laws, the mandate of the Personal Information Protection Commission (PIPC) was upgraded in August 2020. The PIPC is now a ministerial-level central administrative agency that formulates data privacy policies and supervises the enforcement of data protection laws as an independent authority.⁶⁶¹⁸ Initially created in 2011 under the office of the President, the PIPC now operates independently. The PIPC centralizes various personal information protection functions previously scattered across ministries.

The PIPC published an AI Personal Information Protection Self-checklist to provide guidelines for the protection of personal information gathered and used by artificial intelligence in 2021. The checklist presents 16 specific items to check and 54 items to verify the safe handling of personal information during the AI life cycle: design, development, and operation. The PIPC penalized the indiscriminate use of personal information by a company using AI technology for the first time in 2021 as well. An AI startup was fined following a massive personal data breach.⁶⁶¹⁹ The PIPC

signed self-regulation agreements with ten online shopping platforms for the safe use of personal information in 2022.⁶⁶²⁰

The PIPC adopted a guide clarifying the rights of data subjects regarding automated decision-making by institutions using AI⁶⁶²¹ and published standards for processing public data used in artificial intelligence (AI) development and services in 2024.⁶⁶²² In 2025, the PIPC released a comprehensive Generative AI Privacy Guide⁶⁶²³ covering purpose limitation, data quality, risk controls for LLM use, granular user rights, governance led by a Chief Privacy Officer, and sector-specific requirements for responsible AI data handling across the entire AI lifecycle. The Guide is the first binding, lifecycle-based regulation for generative AI in Korea.

The PIPC and the European Commission announced the successful conclusion of their negotiations and the adoption of the European Commission's adequacy decision for the transfer of personal data from the European Union to the Republic of Korea under the General Data Protection Regulation in December 2021. The adequacy decision confirms the shared commitment of the Republic of Korea and the EU to a high level of data protection.⁶⁶²⁴ Korea reconfirmed this collaboration and partnership with the EU in a 2023 joint press statement⁶⁶²⁵ and ongoing

discussions in high-level meetings with international data protection officials in 2024.⁶⁶²⁶

The PIPC is a member of the Global Privacy Assembly (GPA) since 2012. The Korea Internet & Security Agency (2004) and the Korea Communications Commission (2018) are also GPA members. The PIPC has taken an active role within the GPA in recent years. The PIPC co-sponsored the 2022 GPA Resolution on Facial Recognition Technology⁶⁶²⁷ and the 2023 GPA Resolution on Generative AI.⁶⁶²⁸ However, the PIPC did not endorse the 2018 Declaration on Ethics and Data Protection in AI⁶⁶²⁹ or the 2020 Resolution on Accountability in the Development and Use of Artificial Intelligence.⁶⁶³⁰ The PIPC serves as a member of the GPA's Policy Strategy Working Group 1: Global Frameworks and Standards⁶⁶³¹ and Digital Education Working Group,⁶⁶³² with the common purpose to enhance data protection and AI accountability.

The PIPC has contributed to shaping global privacy norms in the context of emerging AI technologies. Chairperson Haksoo Ko participated in high-level discussions on establishing safe frameworks for cross-border data transfers and privacy governance for AI applications, collaborating closely with EU data protection authorities and others from the UK, France, and Singapore to strengthen

international cooperation.⁶⁶³³ These discussions culminated with the Republic of Korea hosting the 2025 Global Privacy Assembly in Seoul,⁶⁶³⁴ bringing together data protection authorities from over 80 countries to advance global standards on privacy and AI governance. The conference emphasized Korea's international leadership and marked the adoption of new resolutions on generative AI, cross-border data flows, and digital rights in the AI era.

Regarding AI oversight, the PIPC is not the only competent independent agency. The National Human Rights Commission of Korea⁶⁶³⁵ advocates for the non-discriminatory use of AI and warns against the risk of bias and deep fake technology.⁶⁶³⁶ In a decision of April 11, 2022, the National Human Rights Commission adopted Human Rights Guidelines on the Development and Use of AI.⁶⁶³⁷ The Commission took a step toward implementing the Guidelines by developing a Human Rights Impact Assessment Tool for AI in 2024. The Commission advocated to the Minister of Science and ICT that the Tool be "utilized during the establishment and implementation of AI-related policies and project plans to prevent human rights violations and discrimination arising from the development and use of AI."

Algorithmic Transparency

The Korean legislature passed amendments to the PIPA in 2023.⁶⁶³⁸ As of March 2024, South Korea's revised Personal Information Protection Act (PIPA)

regulates automated decisions, defined as decisions made solely through automated processes, including AI systems. Under this amendment, individuals can request an explanation for automated decisions affecting them and may challenge such decisions if they impact rights or responsibilities. The AI Framework Act⁶⁶³⁹ consolidates algorithmic transparency by requiring clear labeling of AI-generated content, defining criteria for high-impact systems, and requiring transparency disclosures across the AI lifecycle.

Changes to the Public Official Election Act (POEA), effective January 2024, aim to prevent misuses of deepfakes during elections. The law mandates that AI-generated content, including synthetic images, voices, or videos that closely resemble authentic content, must clearly disclose the use of AI. This amendment seeks to protect electoral integrity by ensuring transparency of AI usage.⁶⁶⁴⁰ The national strategy to build social trust in the era of AI explicitly refers to “Explainability” as a main ethical value.⁶⁶⁴¹ The National Human Rights Commission’s Human Rights Guidelines on the Development and Use of AI also provides for algorithmic transparency. The Human Rights Impact Assessment Tool developed from these Guidelines⁶⁶⁴² in 2024 guides developers or deployers to protect algorithmic transparency through measures for Personal Information Protection, Data Management, Algorithm Performance and Reliability, Non-Discrimination, Explainability and Transparency, and Degree of Human Intervention.⁶⁶⁴³

Korea amended sectoral legislation to reflect new demands for algorithmic transparency. The Credit Information Use and Protection Act introduced the right to

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

challenge decisions based on automated processing in 2021.⁶⁶⁴⁴ The Credit Information Act recognizes the data subject's right to challenge an automated credit assessment. It defines "automated credit assessment" as a "credit information company's or other act of evaluating credit information and other data using an information processing device (such as a computer) without the intervention of a human in the evaluation." The Credit Information Act was the first law that empowers individual users toward AI transparency.

The Korea Fair Trade Commission indicated in September 2024 that it intends to focus on amendments to Korea's competition law, the Monopoly Regulation and Fair Trade Act (MRFTA),⁶⁶⁴⁵ for regulating AI companies, abandoning initial plans to adopt a Korean version of the EU's Digital Markets Act.⁶⁶⁴⁶

EdTech and Children Tracking

In their report investigating use of EdTech tools endorsed by governments for online learning during the pandemic,⁶⁶⁴⁷ Human Rights Watch noted that Korea Educational Broadcasting System (EBS), the website of Korea's national educational public broadcaster, with over 2.1 million daily users during the COVID-19 school closure, tracked "a child's every movement and interaction within the virtual classroom" and sent children's data to 15 AdTech companies. Nonetheless, the EBS "does not disclose the use of ad trackers on the site."

Without following up on efforts to address these issues, the Korean government announced plans to invest \$69.3 million by 2026 to develop digital classroom infrastructure and additional educational services. The EdTech Korea Fair 2024 organized in September 2024 highlighted various AI-driven learning platforms and digital services to personalize student learning, enhance digital literacy, and provide tools for teachers to monitor students' progress in real-time. The International Trade Administration estimates that "the focus is primarily on adopting AI technologies such as Intelligent Tutoring Systems, Extended Virtual Worlds

(Metaverse), Extended Reality (XR), Conversational AI, and Speech Recognition into existing textbooks.”⁶⁶⁴⁸

The planned mandatory rollout of AI digital textbooks in March 2025 encountered significant resistance from teachers and parents.⁶⁶⁴⁹ Technical difficulties delayed classes and students reported a lack of interest in the lessons as well as factual inaccuracies. The tools were downgraded from their status as textbooks to “supplementary material” after only four months. Critics emphasize the rushed nature of the initiative in contrast to the 18 months to develop traditional print textbooks, noting “since they target children, [textbooks] require careful verification and careful procedures.” South Korea's Personal Information Protection Commission (PIPC) completed an initial privacy investigation over the EdTech platforms over concerns over the processing of student data.⁶⁶⁵⁰ The investigation found insufficient protection of student data and a lack of legal basis for data collection.⁶⁶⁵¹

Environmental Impact of AI

South Korea took a role in promoting environmentally responsible AI through commitments made at the Seoul AI Safety Summit in 2024⁶⁶⁵² and by endorsing the UN Global Digital Compact.⁶⁶⁵³

Lethal Autonomous Weapons

The Korean government takes a stance against developing lethal autonomous weapons and rather focuses on AI supporting non-weapon systems such as effective management of military supplies or human decision-making processes.⁶⁶⁵⁴

In October 2022, the Republic of Korea was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.⁶⁶⁵⁵ In this joint statement, States declared that they “are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (“IHL”), including through maintaining human responsibility and accountability in the use of force.”⁶⁶⁵⁶ Korea voted in favor of the UN General Assembly resolution on lethal autonomous weapons systems in December 2023.⁶⁶⁵⁷

Korea participated in the REAIM 2023 international summit on the responsible application of artificial intelligence in the military domain. Hosted by the Netherlands, the participants worked to define an agenda for developing international agreements on AI applications in the military.⁶⁶⁵⁸ At the end of the Summit in February 2023, Korea and other participant countries agreed on a joint call for action⁶⁶⁵⁹ where they “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and

accountability.” Korea also endorsed the Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁶⁶⁶⁰

South Korea organized the second the Responsible AI in the Military Domain Summit in Seoul (REAIM2024), attended by representatives of 90 countries in September 2024. The summit highlighted South Korea’s commitment to shaping global standards and frameworks for AI in military applications, underscoring its position as a mediator in the international arena. During the summit, 61 participants endorsed the Blueprint for Action, which “suggests principles and framework for the future governance, emphasizing that being responsible entails complying with international law, holding humans responsible and accountable, ensuring reliability and trustworthy of AI, maintaining an appropriate human involvement and improving AI explainability.”⁶⁶⁶¹

Weeks after the Summit, the Ministry of Science and ICT demonstrated how Korea’s leadership in efforts to regulate LAWS integrated into the national AI strategy with the launch of the National AI Strategy Policy Directions.⁶⁶⁶² Under the vision of “Emerging as one of the top three AI powerhouse to become a Global Pivotal State,” the Policy Directions document outlines plans to promote AI in national defense through the “development of AI military security policies and the expansion of defense AI infrastructure” as part of efforts to achieve a 95% AI adoption rate in the public sector. South Korea also commits to promoting the values of the Seoul Declaration globally and “expand international cooperation for the responsible use of AI in military and security sectors” under the plan to lead global AI governance.

AI Literacy

Korea’s AI Framework Act⁶⁶⁶³ pledges government support to industries to develop, adopt, and use AI technology. The Act also charges the Ministry of Science and ICT to “publicize, promote, and educate” all sectors of society about the

“practical measures to ensure the implementation of these ethical principles.”⁶⁶⁶⁴ The Ethical principles in the Framework Act also commit the government to “ensuring that products and services powered by AI technology are freely and conveniently accessible by everyone.”⁶⁶⁶⁵

Human Rights

Korea was rated “Free” with a score of 81/100 in the Freedom in the World 2025 report.⁶⁶⁶⁶ According to the report, “South Koreans benefit from regular rotations of power and robust political pluralism. Civil liberties are generally respected, though the country struggles with minority rights and social integration.”⁶⁶⁶⁷

The Korean government established the National Human Rights Commission of Korea (NHRCK) in 2001 as a national advocacy institution for human rights protection.⁶⁶⁶⁸ During his congratulatory remarks on Human Rights Day in December 2018, former President Moon Jae-in stated “when human rights are realized in everyday lives, their value is demonstrable [...] Human rights are guaranteed through peace, and peace is secured through human rights.” He also extended his gratitude to NHRCK for “fully demonstrating the history and significance of the Universal Declaration of Human Rights.”⁶⁶⁶⁹

In addition, the Korean government has been an active member in the seven core international human rights instruments, including the International Covenant on Civil and Political Rights and International Covenant on Economic, Social, and Cultural Rights. Especially since its entry into the United Nations (UN) in 1991 and the Commission of Human Rights (CHR) in 1993, Korea has been engaged in various international cooperation activities for the improvement of human rights, especially the rights of the vulnerable and of North Koreans.⁶⁶⁷⁰

AI Safety Summit

In November 2023, the Republic of Korea participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁶⁶⁷¹ Korea thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

South Korea co-hosted the Seoul Summit with the United Kingdom in Seoul on May 21–22, 2024. The Summit resulted in the conclusion of several agreements, including the Seoul Statement of Intent toward International Cooperation on AI Safety Science and the Seoul Declaration for Safe, Innovative, and Inclusive AI.⁶⁶⁷² France hosted the third AI Safety Summit, rebranded as the AI Action Summit in February 2025.⁶⁶⁷³

OECD / G20 AI Principles

The Korean government has been actively participating in international cooperation in the AI sector to promote responsible development and the use of AI. Korea endorsed the OECD AI Principles in 2019 and recommitted to the updated OECD AI Principles in 2024.⁶⁶⁷⁴ The Korean government is also one of the founding members of the Global Partnership on AI (GPAI), which has an integrated partnership with the OECD since 2024.⁶⁶⁷⁵

At the Ministerial Council Meeting of October 2021, the Korean Ministry of Science and ICT presented the “Progress over the past two years in implementing the OECD AI Principles and Future Direction.”⁶⁶⁷⁶ A general director of the AI policy

bureau at the Ministry of Science and ICT, Ms. Kyunhee Song, presented Korea's progress in accordance with the OECD AI Principles. As part of the effort to implement the OECD AI Principles, the Korean government also established the National Strategy of Artificial Intelligence (2019) and the Digital New Deal Strategy (2020) (Data Dam Projects).

To further its commitment, Korea has joined the Steering Group for OECD's Working Party on Artificial Intelligence Governance. South Korea ranked first in the OECD 2023 Digital Government Index, reflecting its alignment with OECD AI principles, particularly in digital government transparency and effectiveness.⁶⁶⁷⁷

Council of Europe AI Treaty

South Korea has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁶⁶⁷⁸

UNESCO Recommendation on AI Ethics

Korea has supported the UNESCO Recommendation on the Ethics of AI from the drafting stage through implementation. Korea co-organized a Virtual Regional Consultation for Asia and the Pacific Region in July 2020, to work on the first draft. The conference responded to UNESCO's request for feedback reflecting different cultural values while addressing various regional concerns to achieve a document that "takes into account the wide-ranging impacts of AI, including on the environment on the needs of the global south."⁶⁶⁷⁹

The Korean government presented the results of ongoing projects supported by various public donors and identified new opportunities for cooperation with UNESCO in 2021.⁶⁶⁸⁰ The Ministry of Science and ICT informed UNESCO of the Korean government's support for the drafting of the UNESCO Recommendation on the Ethics of AI. The Ministry of Science and ICT and the Korean Information Science Development Institute (KISDI) participated in two Intergovernmental

Center for AI and Digital Policy

Meetings and Intersessional Consultations for negotiations for the Recommendation. The Ministry of Science and ICT provided in-depth comments on the draft to make the Recommendation actionable for future AI policy. In that process, the Korean government consented to the purpose and values of the Recommendation.

Together with the Korean National Commission for UNESCO, Korea Legislation Research Institute (KLRI) hosted a forum around UNESCO's Recommendations on AI Ethics and Legal Challenges in April 2021, which urged collaboration between UNESCO and KLRI to address ethical and legal challenges posed by AI.⁶⁶⁸¹

In December 2022, the Ministry of Science and ICT of Korea attended the first UNESCO Global Forum on Artificial Intelligence Ethics online hosted by the Czech Republic in Prague,⁶⁶⁸² recalling the significance of the Recommendation and discussing its implementation.⁶⁶⁸³

South Korea has not begun the process of the UNESCO Readiness Assessment Methodology (RAM).⁶⁶⁸⁴

Evaluation

Korea is one of the leading countries in the field of AI policy, a status confirmed by the enactment of the Basic Act on AI Development. Korea has adopted a comprehensive National Strategy for AI, developed a strong ethical framework, and launched the AI Strategy High-Level Council and AI Committee to guide AI policy integration across all sectors.⁶⁶⁸⁵ Korea has endorsed the OECD/G20 AI principles and played an active role in the drafting and implementation of the UNESCO Recommendation on the Ethics of AI. Korea has updated national privacy laws, established a Personal Information Protection Commission, and maintained a

Spain

In 2025, Spain's Council of Ministers approved a draft AI law to implement the EU AI Act and operationalized the Agency for the Supervision for AI (AESIA).

National AI Strategy

Spain has identified artificial intelligence (AI) as “one of the disciplines most likely to influence the rapid transition to a new society and economy.”⁶⁶⁸⁶ Spain unveiled the National Strategy for Artificial Intelligence (ENIA) on December 2, 2020,⁶⁶⁸⁷ and updated the AI Strategy in 2024.⁶⁶⁸⁸ The updates reinforce the ENIA 2020 principles by emphasizing transparency and the trustworthiness of AI systems, promoting cybersecurity framework, enhancing data governance, prioritizing energy efficiency in AI-related infrastructure, and cementing the oversight functions of the Spanish AI Agency (AESIA).⁶⁶⁸⁹

The objective of the ENIA is to generate trust in the development of inclusive and sustainable AI that focuses on the needs of the citizens. The ENIA comprises six pillars, including establishing an ethical and normative framework to strengthen the protection of individual and collective rights and to guarantee inclusion and social wellbeing.⁶⁶⁹⁰ The five measures for a successful ethical and regulatory framework are:

- the development of a national seal of quality for AI
- the creation of observatories for ethical and legal evaluation of AI systems
- the development and release of a Digital Rights Charter
- the implementation of a national governance model for ethics in AI through the AI Advisory Council

Center for AI and Digital Policy

- and the promotion of multisectoral national and international fora for dialogue, awareness, and participation.⁶⁶⁹¹

The ENIA is part of several overlapping policy initiatives that address the challenges and opportunities of AI across sectors. For example, “Data Economy and Artificial Intelligence” is an axis of the 2025 Digital Agenda, which includes a measure to accomplish the AI Strategy.⁶⁶⁹²

The ENIA is also part of the Plan for Recovery, Transformation, and Resilience for the Spanish economy launched in April 2021.⁶⁶⁹³ The Plan describes Spain’s ambition to become a global leader in AI integration into a digitalized economy. The Plan refers to Spain’s aspiration to “humanist digitalization,” with the development of AI in a human-centric way, thanks to the elaboration of a Charter of Digital Rights.⁶⁶⁹⁴

The ENIA intersects with the Spanish government’s 2015 Plan for the Advancement of Language Technologies (HTL).⁶⁶⁹⁵ Within the HTL framework, the Spanish government, in collaboration with the Barcelona Supercomputing Center, created in 2021 the world’s first massive Spanish-language AI system, which can generate and analyze texts in Spanish. This is part of Spain’s strategic objective to promote the development of AI systems in Spanish and co-official languages, instead of relying on English-language systems.⁶⁶⁹⁶

The ENIA follows from the Spanish Research, Development, and Innovation (RDI) Strategy for AI, published in 2019.⁶⁶⁹⁷ The RDI Strategy for AI set out

Priorities and Recommendations “to be developed in initiatives and activities defined and financed through the Science, Technology, and Innovation States Plans, mobilizing the synergies between the different levels of public administration and through the co-development of the public and private sectors.”⁶⁶⁹⁸ The Spanish RDI Strategy included plans to create a National AI Strategy, a Spanish AI Observatory, and a strategic framework for the development of AI in compliance with the Spain’s “ethical, legal, and social commitments” and the European ecosystem.⁶⁶⁹⁹

The ENIA also has a European dimension. Spain supports the 2018 AI ethical Guidelines of the EU High Level Expert Group.⁶⁷⁰⁰ In this framework, Trustworthy AI “(1) should respect fundamental rights, applicable regulation and core principles and values, ensuring an ‘ethical purpose’ and (2) should be technically robust and reliable because, even with good intentions, a lack of technological mastery can cause unintentional harm.”⁶⁷⁰¹ The Spanish government, along with thirteen other EU Member States, published a position paper on innovative and trustworthy AI in October 2020.⁶⁷⁰² The paper delineates a two-fold vision of AI development in the EU based on (1) promoting innovation while managing risks through a clear framework and (2) establishing trustworthy AI as a competitive advantage. “The main aim must be to create a common framework where trustworthy and human-centric AI goes hand in hand with innovation, economic growth and competitiveness in order to protect our society, maintain our high-quality public service and benefit our citizens and businesses. This can help the EU to protect and empower their citizens, underpin innovation and progress in society and ensure that their values are protected.”⁶⁷⁰³

Artificial Intelligence Advisory Council

The Ministry of Economic Affairs and Digital Transformation (*Ministerio de Asuntos Económicos y Transformación Digital*) established the Artificial Intelligence Advisory Council (*Consejo Asesor de Inteligencia Artificial*) in July 2020 to analyze, assess, and support the government on matters related to AI. The Advisory Council

is intended to provide recommendations to the government on measures for the safe and ethical use of AI. The Council includes Spanish experts in science, economics, education, and other relevant fields responsible for analyzing the implications of AI in areas such as industry, the future of work, protection of fundamental rights, data management, the fight against discrimination, and the elimination of social disparities.⁶⁷⁰⁴ Since the establishment of the Spanish Agency for the Supervision of Artificial Intelligence (AESIA) in 2023, the Advisory Council serves as an expert consultative body aligned with AESIA's oversight framework.⁶⁷⁰⁵ The Ministry for Digital Transformation and Public Function established the International Advisory Council on Artificial Intelligence to advise the Ministry on global trends and cross-border alignment.⁶⁷⁰⁶ International experts on topics such as data, management, technology, the environment, and ethics sit on the new council.

Charter of Digital Rights

The Spanish Government released the Charter of Digital Rights in July 2021. The Spanish Prime Minister Pedro Sanchez declared, “With the publication of the Digital Rights Charter, Spain is moving forwards in the promotion of humanistic digital transformation that seeks to continue placing our country in a position of international leadership in protecting citizens' rights and to actively contribute to the different initiatives and debates that are being developed at European and global levels. This consolidates Spain's leadership in the development of a free, open and inclusive digital society, defining ‘fair rules’ for common development and coexistence in the new digital reality, and guaranteeing the social nature of technological transformation.”⁶⁷⁰⁷

The Charter contains a set of principles and rights to guide future regulatory projects and the development of public policies to guarantee the protection of individual and collective rights in new digital scenarios. The Charter “recognizes the challenges posed by the adaptation of existing rights to the virtual environment, and

⁶⁷⁰⁷ La Moncloa, *The Government Adopts the Digital Rights Charter to Articulate a Reference Framework to Guarantee Citizens' Rights in the New Digital Age* (Jul. 14, 2021), https://www.lamoncloa.gob.es/lang/en/gobierno/news/Paginas/2021/20210713_rights-charter.aspx

proposes a frame of reference for their protection in that context.”⁶⁷⁰⁸ The Charter articulates updates to existing rights enshrined in various legal texts such as the Declaration of Human Rights and the Spanish Constitution. The Charter includes six main categories of rights: (1) rights pertaining to freedom such as the right not to be traced or profiled; (2) equality rights such as the right to equality and non-discrimination in the digital environment; (3) participatory rights in the public sphere; (4) rights related to the working and business environment, including impact assessment in the use of algorithms; (5) rights in specific settings such as AI; and (6) guarantees such as the right to administrative and judicial protection in the digital environment. The Charter provides that AI should ensure a people-centered approach and the right to non-discrimination should be guaranteed in the development of AI systems. The Charter also proclaims the inalienable dignity of human beings.⁶⁷⁰⁹

The Spanish Government initiated a Digital Rights Observatory in 2025 to “ensure that citizens’ rights are protected also in the digital environment.”⁶⁷¹⁰

EU Digital Services Act

As an EU member state, Spain shall apply the EU Digital Services Act (DSA).⁶⁷¹¹ The DSA regulates online intermediaries and platforms to prevent illegal and harmful activities online and the spread of disinformation. Spain’s National Commission for Markets and Competition (*Comisión Nacional de los Mercados y la Competencia*, CNMC) is the Digital Services Coordinator (DSC), the primary supervisory authority for enforcing the DSA.⁶⁷¹² Although Spain designated the CNMC as the DSC and moved forward on a draft law to align with the DSA in early

2025,⁶⁷¹³ the European Commission referred Spain to the EU Court of Justice for “failing to entrust [the DSC] with the necessary powers to carry out their tasks under the DSA” and for not establishing penalties for infringements.⁶⁷¹⁴

The Spanish Data Protection Agency (*Agencia Española de Protección de Datos*, AEPD) supervises DSA provisions that overlap with GDPR, particularly those related to “the prohibition of advertising based on special categories of personal data or on the profiling of minors.”⁶⁷¹⁵ The AEPD took action to fulfill these obligations in May 2024 by ordering a halt to the implementation of Meta’s Election Day Information and Voter Information Unit functions and the associated data collection and processing in Spain.⁶⁷¹⁶ The decision aims to prevent data collection, user profiling, and third-party data transfers, ensuring personal data isn’t used by unknown parties for unspecified purposes.

The action also aligns with the European Commission’s Guidelines under the DSA for the mitigation of systemic risks online for elections.⁶⁷¹⁷ The Guidelines include specific mitigation measures linked to generative AI such as clearly labeling content generated by AI.

EU AI Act

Spain held the Presidency of the Council of the EU during the second part of 2023 and played a key role in securing a compromise between member states and

with the European Parliament, in particular regarding general purpose AI.⁶⁷¹⁸ The EU AI Act was approved in 2024 and is now being implementing.⁶⁷¹⁹ The EU AI Act is a risk-based market regulation, which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

Spain named the Spanish Agency for the Supervision of Artificial Intelligence (*Agencia Española de Supervisión de la Inteligencia Artificial*, AESIA) as the main supervisory to enforce the EU AI Act in August 2023.⁶⁷²⁰ The AESIA was the first dedicated AI oversight agency in the European Union.

The Draft Law on the Governance and Responsible Use of Artificial Intelligence, implements the EU AI Act and formally designates the AESIA as the single national market surveillance authority, or lead competent authority, for most high-risk AI systems.⁶⁷²¹ The national law also established severe penalties for violations, including fines of up to €35 million or 7% of annual global turnover for non-compliance with the rules on prohibited AI systems.

The Ministry of Economic Affairs and Digital Transformation launched a regulatory sandbox in 2022, “to put the proposed requirements for high-risk AI systems into practice. [...] The Spanish AI Sandbox will provide practical experience through applying the various features of the [EU AI Act] proposal to specific AI projects (e.g. requirements, conformity assessments and certain post-market activities) and making guidelines, toolkits and good-practice materials accessible to all. Such actions are expected to be useful for the development of harmonised

European standards and the other preparatory work at national and EU level.”⁶⁷²² The sandbox was formally established by a Royal Decree in 2023.⁶⁷²³ The government selected 12 high-risk AI projects in April 2025 to participate in the sandbox and develop materials to help companies achieve compliance with the EU AI Act.⁶⁷²⁴

Public Participation

The Spanish Government opened the proposed Digital Rights Charter for public comment in November 2020.⁶⁷²⁵ This participatory process generated contributions from experts in the field and advocacy associations, as well as from citizens, together with input from the private sector, service providers, and the public sector with relevant competences. Following this period of public consultation, the final Digital Rights Charter was unveiled in July 2021.⁶⁷²⁶

According to a report of the European consumer organization (“BEUC”), 83% of those in Spain think that consumers should be well informed when they deal with an automatic decision system and 80% believe they should have the right to say “no” to automated decision-making.⁶⁷²⁷ The BEUC report also found high levels of concern in Spain about the potential failure of AI machines, the privacy of voice

assistants, manipulation of consumer decisions, and unfair discrimination. More than half of those from Spain surveyed in the BEUC poll “disagree or strongly disagree that current regulation is adequate to efficiently regulate AI.”⁶⁷²⁸

The government accepted email comments on the Draft Law on the Governance and Responsible Use of Artificial Intelligence, meant to implement the EU AI Act, over a period of 7 days in March 2025.⁶⁷²⁹

AI Oversight

The National Agency for the Supervision of Artificial Intelligence (AESIA) is the main oversight body for Artificial Intelligence in Spain. The AESIA inaugurated offices in A Coruña⁶⁷³⁰ and named a director in June 2024.⁶⁷³¹ The director coordinates work between the AESIA and other bodies such as the data protection agency (AEPD). A 2021 Law provided for the Spanish Agency for the Supervision of Artificial Intelligence (AESIA),⁶⁷³² which was established in 2023 by Royal Decree.⁶⁷³³ After the first year in operation, AESIA’s director general celebrated contributions by around 30 professionals in the agency and positively assessed efforts on AI literacy and supervision.⁶⁷³⁴

Data Protection

Since Spain is an EU Member State, the GDPR⁶⁷³⁵ is directly applicable in Spain and to Spaniards. The aim of the GDPR is to “strengthen individuals’

fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market.”⁶⁷³⁶ The GDPR entered into force on May 24, 2016 and applies since May 25, 2018. The Spanish Parliament approved the Spanish Fundamental Law on Data Protection and Digital Rights (NLOPD), which supplements the GDPR, in December 2018. In progressive developments during 2024, the Spanish Data Protection Agency adopted a technical note on LIINE4DU 1.0, a new Privacy & Data Protection Threat Modelling Framework. The proposal focuses “on protecting rights and freedoms and regulatory compliance in accordance with GDPR principles.”⁶⁷³⁷

After some delays, Spain transposed the EU Data Protection Law Enforcement Directive (LED)⁶⁷³⁸ through the Spanish Act on Data Protection in the Area of Police and Criminal Justice.⁶⁷³⁹ The LED “will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”⁶⁷⁴⁰ The LED also prohibits any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.⁶⁷⁴¹

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Spain is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.⁶⁷⁴²

The AEPD has also endorsed the Ibero-American Network for the Protection of Personal Data (RIPD) standards and guidelines and committed to integrated the principles of legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality in national policies.⁶⁷⁴³ The 16 data protection authorities representing 12 countries initiated a coordinated action on ChatGPT, developed by OpenAI, in May 2023 on the basis that it may entail risks for the rights and freedoms of users in relation to the processing of their personal data because of the potential for "responses with cultural, racial or gender biases, as well as false ones."⁶⁷⁴⁴

Despite being a member of the Global Privacy Assembly (GPA) since 2002, the AEPD did not endorse the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence;⁶⁷⁴⁵ the 2020 GPA Resolution on AI Accountability;⁶⁷⁴⁶ the 2022 GPA Resolution on Facial Recognition Technology,⁶⁷⁴⁷ or the 2023 GPA Resolution on Generative AI.⁶⁷⁴⁸ The regional data protection agencies of Catalonia

(since 2004), the Basque Country (since 2005), and Andalusia (since 2022) are also GPA members.⁶⁷⁴⁹ The Catalán data protection agency co-sponsored the GPA Resolution on Facial Recognition Technology.

Algorithmic Transparency

Spain is subject to the GDPR and Convention 108+. Spaniards have a general right to know when they are subjected to automated decisions and obtain access to information about decisions that affect them and to the factors and logic of an algorithm.⁶⁷⁵⁰ They also have a right to contest decisions. The 2024 AI Strategy cements this protection via Initiative 8.2 by charging the Spanish AI Agency (AESIA) to ensure transparent and trustworthy AI.⁶⁷⁵¹

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems⁶⁷⁵² specifically emphasizes requirements on transparency, accountability, and effective remedies. With regard to transparency, the Recommendation provides that “States should establish appropriate levels of transparency with regard to the public procurement, use, design and basic processing criteria and methods of algorithmic systems implemented by and for them, or by private sector actors.”⁶⁷⁵³

The AEPD has published a detailed guide on “GDPR compliance of processings that embed AI”⁶⁷⁵⁴ That clarifies transparency and explainability obligations. In this guide, the AEPD explains that “complying with this obligation by making a technical reference to the algorithm implementation may be obscure, confuse or excessive and leading to information fatigue. However, sufficient information must be provided to understand the behaviour of the relevant processing.”⁶⁷⁵⁵ The AEPD provides many examples of the information that “must

be provided” to understand the behavior of the relevant processing, with regard for example the relative importance or weight of each data category in the decision making, the quality of training data and the type of patterns used, and any reference to audits, “especially on the possible deviation of inference results, as well as certification or certifications performed on the AI system.”⁶⁷⁵⁶ The AEDP also published audit requirements for personal data processing activities involving AI in January 2021⁶⁷⁵⁷ and a reference map of personal data processing incorporating AI in November 2022.⁶⁷⁵⁸

The Ministry of Employment and Social Security contributed to the clarification with practical guideline on corporate obligations in the workplace. The guide complements the update of the workers’ statute with specific guidelines for employers’ use of automated-decision systems.⁶⁷⁵⁹

The Charter of Digital Rights strengthens principles of Algorithmic Transparency. The Charter protects citizens against discrimination from decisions based on algorithms and maintains that “transparency, auditability, explicability and traceability” will be ensured. People have the right not to be the subject of a decision based solely on automated decision-making, thus recognizing the right to “request human supervision and intervention and challenge automated or algorithmic decisions.” The Charter recognizes that citizens must be explicitly informed when they are talking to an artificial intelligence system and that assistance by a human being must be guaranteed if the person concerned requests it.⁶⁷⁶⁰

In July 2022, a new Law on equal treatment and non-discrimination entered into force. Article 23 of this Law establishes rules on AI and automated decision-making mechanisms, creating special obligations for public administration entities

in relation to the AI algorithms they use for decision-making.⁶⁷⁶¹ This Law establishes that, within the framework of the ENIA and the Charter of Digital Rights in Spain, public administrations shall favor algorithms that take into account “criteria of minimization of bias, transparency and accountability, whenever technically feasible.” Such mechanisms shall “include their design and training data, and will address their potential discriminatory impact,” through impact evaluations to determine potential discriminatory bias. “Public administrations, within the framework of their competencies in the field of algorithms involved in decision-making processes, shall prioritize transparency in the design and implementation and the interpretability of the decisions adopted by them.” Additionally, public administrations and companies “shall promote the use of an artificial intelligence that is ethical, reliable and respectful of fundamental rights, following especially the recommendations of the European Union in this regard.” A quality seal for algorithms is also to be created.⁶⁷⁶²

This commitment to transparency and accountability was established as a constitutional principle by the Spanish Supreme Court in September 2025.⁶⁷⁶³ In a landmark ruling concerning the public algorithm Bosco (used for social benefits eligibility), the Court ordered the government to release its source code and documentation to the organization Cívico.⁶⁷⁶⁴ The decision sets a powerful, binding precedent, ruling that algorithmic transparency is essential for democratic accountability and the effective judicial review of automated decisions affecting citizens' fundamental rights. Use of AI in Public Administration

As a member of the Latin American Centre for Development Administration (CLAD), Spain approved the Ibero American Charter on Artificial Intelligence in Civil Service in November 2023.⁶⁷⁶⁷ The guiding principles include: human autonomy; transparency, traceability and explainability; accountability, liability and auditability; security and technical robustness; reliability, accuracy, and reproducibility; confidence, proportionality, and prevention of damage; privacy and protection of personal data; data quality and safety; fairness, inclusiveness, and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection.

The Minister of the Presidency, Justice, and Relations with the Parliament, Félix Bolaños announced an AI tool in 2024 that will make it easier for citizens to understand court decisions. An announcement about the tool highlights that it will contribute to the “materialization of the right to clear and comprehensible information, a right recently incorporated into the new Organic Law on the Right of Defence, currently being processed in the Congress of Deputies.”⁶⁷⁶⁸

Spain actively experimented with AI to improve public administration in 2025, presenting progress and plans at the OECD to coincide with the release of the OECD’s Governing with AI report.⁶⁷⁶⁹ An AI Use-Case Booster is one such project

Center for AI and Digital Policy

aimed at deploying AI securely, efficiently, and responsibly so that citizens tangibly benefit.⁶⁷⁷⁰

Environmental Impact of AI

The 2024 AI strategy includes initiatives for the creation of environmentally sustainable data centers (DPCs) and the implementation of energy efficiency strategies in AI-related infrastructures.⁶⁷⁷¹ Spain is implementing the EU's Energy Efficiency Directive, requiring data centers over 500 kW to report on energy performance, renewable use, water footprint, and demand. Spain's Ministry for Ecological Transition and Demographic Challenge (*Ministerio para la Transición Ecológica y el Reto Demográfico*, MITECO) proposed more stringent sustainability and energy-efficiency obligations for data centers as part of the national instrument to transpose the EU Energy Efficiency Directive.⁶⁷⁷²

Lethal Autonomous Weapons

Spain has responded to the threat of Lethal Autonomous Weapons Systems (LAWS) by affirming that the Spanish military does not have and will not develop such technology and emphasizing the need for meaningful human control for weapons systems to be compliant with international humanitarian law. Spain has consented as well to the 11 Principles on LAWS launched by France in 2019.⁶⁷⁷³

Spain has consistently called on the international community to “address [the] risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints.”⁶⁷⁷⁴ Spain has advocated for a two-tier

approach for an international treaty on LAWS, as proposed in a working paper submitted with Sweden, Finland, France, Germany, the Netherlands, and Norway to the 2022 Chair of the Group of Governmental Experts (GGE) on emerging technologies in the area of LAWS.⁶⁷⁷⁵ The two-tier system would (1) outlaw fully autonomous lethal weapons systems operating completely outside human control and a responsible chain of command, and (2) regulate other lethal weapons systems featuring autonomy to ensure compliance with the rules and principles of international humanitarian law by preserving human responsibility and accountability through appropriate human control and risk mitigation measures.

Spain's comments to the UN Secretary-General report called for in the General Assembly resolution on autonomous weapons systems, which the country supported,⁶⁷⁷⁶ reiterated full support for the guiding principles on LAWS established by the GGE in 2019 and for the two-tiered approach.⁶⁷⁷⁷ Spain joined a bloc of 42 states in a joint statement delivered by Brazil at the second meeting of the GGE in 2025 declaring they are "ready to move ahead towards negotiations" on a new international instrument for autonomous weapon systems.⁶⁷⁷⁸

Spain participated in the REAIM 2023 international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands and endorsed the joint call stressing the "paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability."⁶⁷⁷⁹ Spain also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November

2023.⁶⁷⁸⁰ Spain also attended the REAIM 2024 Summit in Seoul, South Korea,⁶⁷⁸¹ and endorsed the resulting Blueprint for Action, which outlines a plan for implementing the REAIM principles.⁶⁷⁸² In preparation to host the third REAIM Summit, Spain hosted the 1st Conference on Responsible Artificial Intelligence in the Military Field, to facilitate dialogue among representatives from the military, industry, academia, and civil society. The meeting will “promote the ethical, transparent, and secure use of artificial intelligence in the military domain.”⁶⁷⁸³

Human Rights

Spain ranks highly for political rights and civil liberties, with a score of 90/100 and “Free” in the 2025 Freedom House Freedom in the World report.⁶⁷⁸⁴ According to Freedom House, “Spain’s parliamentary system features competitive multiparty elections and peaceful transfers of power between rival parties. The rule of law prevails, and civil liberties are generally respected. [...] Restrictive legislation adopted or enforced in recent years poses a threat to otherwise robust freedoms of expression and assembly.”⁶⁷⁸⁵

Spain met a new milestone in October 2024 with their election as a member to the UN Human Rights Council. “As an elected member of the Council, Spain assumes the responsibility to contribute to improving the effectiveness of the international protection of human rights. Spain will play an active role in the search for common ground in consultations and negotiations.”⁶⁷⁸⁶ The data protection agency’s willingness and ability to intervene in cases involving AI systems when personal data processing affects fundamental rights demonstrates the country’s

human-rights framing is not only declarative at UN level but is also being implemented domestically through supervisory action in AI oversight.⁶⁷⁸⁷

AI Safety Summit

Spain participated in the first AI Safety Summit and endorsed the Bletchley Declaration in November 2023.⁶⁷⁸⁸ Spain thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

Spain participated in the AI Seoul Summit,⁶⁷⁸⁹ the second AI Safety Summit. The Seoul Summit focused again on frontier-model safety and developing a roadmap for it and on ensuring that safety does not stifle technological development but also emphasized that the benefits of AI should be broadly shared.⁶⁷⁹⁰ At the third Summit, rebranded as the AI Action Summit in Paris, Spain endorsed the Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet.⁶⁷⁹¹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

OECD / G20 AI Principles

Spain endorsed the OECD AI Principles in 2019, which were updated in 2024.⁶⁷⁹² Spain explicitly incorporated many of the principles into the ENIA, Digital Rights Charter,⁶⁷⁹³ and updated 2024 National AI Strategy⁶⁷⁹⁴ Spain is also a member of the Global Partnership on AI, a multi-stakeholder initiative which aims to foster international cooperation on AI research and applied activities and which is “built around a shared commitment to the OECD Recommendation on Artificial Intelligence.”⁶⁷⁹⁵

Council of Europe AI Treaty

Spain contributed as a Council of Europe and EU Member State⁶⁷⁹⁶ in the negotiations of the Council of Europe Framework Convention on AI and Human Rights, Democracy, and the Rule of Law.⁶⁷⁹⁷ The European Union has signed this first legally binding international AI treaty, making Spain party to the treaty. However, Spain has not signed as an independent nation.⁶⁷⁹⁸

UNESCO Recommendation on AI Ethics

Spain endorsed the UNESCO Recommendations on AI, the first ever global agreement on the ethics of AI.⁶⁷⁹⁹ Spain has not begun the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of

the UNESCO Recommendation on the Ethics of Artificial Intelligence.⁶⁸⁰⁰ The RAM exercise helps countries and UNESCO identify and address any institutional and regulatory gaps in legal and policy frameworks, technical infrastructure, human capital, and ethical considerations.⁶⁸⁰¹

Evaluation

Spain has developed a strong ethics-focused national AI strategy, created an independent Advisory Council, installed a Director of AESIA to guide implementation of the strategy, introduced an AI Sandbox to test robustness of algorithms in accordance with the AI Act, enacted a Charter for Digital Rights, and has played a key role enabling the EU AI Act. Spain benefits from a strong data protection legal framework with an active data protection agency that has acted to foster a better protection of citizens' rights through AI oversight. The Government is taking steps to address the environmental impacts of AI use, the challenges of Lethal Autonomous Weapons, and has demonstrated continued alignment with UNESCO's Recommendation on AI Ethics, OECD AI Principles, and the Universal Declaration of Human Rights.

Sweden

Sweden produced the Digitalization Strategy 2025–2030 in the spring of 2025, making updates to the national direction of AI governance and implementation. Sweden’s AI Strategy and Action Plan released in early 2026 emphasize simplification of regulation to enable innovation.

National AI Strategy

Sweden issued the National Approach to Artificial Intelligence in May 2018. The National Approach reflects the government’s goal “to make Sweden a leader in harnessing the opportunities that the use of AI can offer, with the aim of strengthening Sweden’s welfare and competitiveness.”⁶⁸⁰² This goal “is closely linked to the digital transformation goal adopted by the Riksdag [Swedish Parliament] and complements the Government’s Digital Strategy.”⁶⁸⁰³

Sweden emphasized that a “cross-cutting theme should be sustainable AI, meaning that AI applications should be ethical, safe, secure, reliable and transparent.” The Swedish Government acknowledged potential threats from AI and the “the use of AI algorithms,” including “challenges related to rule of law procedures and the automation of agency decisions,” “risks to both society and individuals,” “fundamental needs for privacy,” “discrimination, loss of trust,” and consequences for the functioning of democracy.

Accountability has become an explicit component of Sweden’s AI governance approach. The emphasis remains on responsible design and use of AI, supported by ethical guidelines and oversight mechanisms that promote safety, transparency, and collaboration. AI Sweden’s Responsible use of AI⁶⁸⁰⁴ established national principles for trustworthy AI, while subsequent initiatives—such as the 2025 government assignment requiring 25 national authorities to report on their AI use—strengthened institutional responsibility and accountability across the public sector.⁶⁸⁰⁵ The Government defines “key conditions for realising the potential of AI as (1) Education and training, (2) Research, (3) Innovation and use, and (4)

⁶⁸⁰² Government Offices, *National Approach to Artificial Intelligence*, OECD, p. 5 (May 2018), https://wp.oecd.ai/app/uploads/2021/12/Sweden_National_Approach_to_Artificial_Intelligence_2018.pdf

Center for AI and Digital Policy

Framework and infrastructure.⁶⁸⁰⁶ Three Ministries—Ministry of Infrastructure, Ministry of Enterprise and Innovation, and Ministry of Education and Research—are responsible for AI policies and independent agencies under these Ministries implement these policies. Under framework and infrastructure, the Swedish approach highlights “rules, standards, norms, and ethical principles to guide ethical and sustainable AI and the use of AI”; national and international standards and regulations; continual review of digital infrastructure and greater availability of data; and an active role in assisting efforts to promote digitization in the EU.⁶⁸⁰⁷

The Swedish National Approach to AI should also be read against the background of a 2020 position paper to the European Commission’s White Paper on AI known as a “non-paper.”⁶⁸⁰⁸ Sweden and 13 other EU member states describe human-centric and trustworthy AI “as a competitive advantage.” According to the non-paper, Sweden supports the use of hard law tools for “creating a genuinely single market for AI.” Sweden also favors the use of “soft law solutions such as self-regulation, voluntary labelling and other voluntary practices as well as robust standardisation process[es].” As for risks to individuals or to society stemming from the use of AI, Sweden advocates for an evidence-based and “well-calibrated and proportionate approach.”

The national center for applied AI, AI Sweden, which was created in 2019 and supported by public- and private-sector funds, launched an adoption-centric AI strategy in March 2024. The new strategy promotes AI adoption aligned with democratic values to leverage AI capabilities, value creation, and cross-sector collaboration. The strategy is premised on the vision that Sweden must “[seize] the opportunity of AI to solve key societal and business challenges for the benefit of a prosperous society characterized by democratic values and high quality of life. This is powered by a robust, highly attractive, and ambitious Swedish AI ecosystem that has a positive global impact on people and the planet.”⁶⁸⁰⁹ Skills and talent, including education and re/upskilling, figure among the six “fundamental standpoints and perspectives” mostly focused on a doption and development.⁶⁸¹⁰ AI Sweden’s multimodal AI model and the EU-funded TrustLLM project aim to develop European

“trustworthy, sustainable and democratized” large language models (LLMs). The projects run until October 2026.⁶⁸¹¹

The Swedish Government appointed an AI Commission charged with ensuring Sweden’s competitiveness in the AI field and that the country “takes advantage of the opportunities while managing the risks in order to realize the full potential of AI.”⁶⁸¹² The AI Commission will “analyze the conditions for, among other things, higher education to be sufficient to meet tomorrow’s needs in AI use and AI development; identify how Sweden can act to promote a competitive and secure AI within the EU and globally; propose how Sweden can attract venture capital and facilitate innovation for strengthening the competitiveness of AI; propose how public administration can be streamlined by using AI; and analyze how the use of AI can affect and promote Sweden’s security and counteract undue influence on democracy.”⁶⁸¹³

The government assigned the AI Commission with producing a report to “identify needs for and submit proposals that promote competitive, safe and ethical AI development and AI use in Sweden; identify priority international efforts and submit proposals for how Sweden can act proactively and coordinated in the development of international policies and regulations for AI; analyze and describe how the use of AI can affect and promote Sweden’s security and democracy; and if necessary, make legislative proposals.”⁶⁸¹⁴ The AI Commission's Roadmap for Sweden report was submitted on November 26, 2024, ahead of schedule. The report emphasized urgent action to strengthen Sweden’s AI capabilities but focused on improving computing power, data resources, and competence rather than ethical development.⁶⁸¹⁵

Sweden’s Ministry of Finance published the Digitalization Strategy 2025–2030, positioning artificial intelligence as a central enabler for national competitiveness, public-sector transformation, and democratic resilience. The Strategy updates national priorities for responsible and human-centric AI and extends

Sweden's long-term strategic framework beyond the 2018 National Approach.⁶⁸¹⁶ Sweden's AI Strategy⁶⁸¹⁷ and corresponding Action Plan⁶⁸¹⁸ further reflect the Government's "high ambitions for its work with artificial intelligence."⁶⁸¹⁹

National AI Legislation

The International Bar Association released an updated report in September 2024, which echoed earlier reports on the status of AI legislation in Sweden: "there are currently no 'AI laws' in Sweden. Historically, the legislative approach in Sweden has been to pass technology-agnostic legislation that does not need to be changed with every advance in technology."⁶⁸²⁰ Thus, "it is of central priority for the Swedish legislature to assess current legislation from an AI perspective and implement necessary changes. Furthermore, support in the interpretation of legislation is required from courts and public authorities. Access to data, information security and robustness, together with the ethical use of AI, are principles of central importance in the future regulatory approach."⁶⁸²¹

The Swedish Ministry of Justice published a Memorandum proposing a dedicated Swedish law enabling the police to use AI-driven real-time facial recognition for serious crime prevention, accompanied by safeguards.⁶⁸²²

Nordic-Baltic and Nordic Cooperation on AI

As for the regional landscape, Peter Eriksson, the Swedish Minister for Housing and Digital development, signed the declaration on "AI in the Nordic-Baltic region" establishing a collaborative framework on "developing ethical and

transparent guidelines, standards, principles and values to guide when and how AI applications should be used” and “on the objective that infrastructure, hardware, software and data, all of which are central to the use of AI, are based on standards, enabling interoperability, privacy, security, trust, good usability, and portability.”⁶⁸²³

The ministerial declaration Digital North 2.0⁶⁸²⁴ builds on the common priorities of the Nordic-Baltic countries and follows the previous ministerial declaration, Digital North 2017–2020. A council of ministers for digitalisation (MR-DIGITAL) was established in 2017 to promote development in three areas: (1) Increase mobility and integration in the Nordic and Baltic region by building a common area for cross-border digital services; (2) Promote green economic growth and development in the Nordic-Baltic region through data-driven innovation and a fair data economy for efficient sharing and re-use of data; and (3) Promote Nordic-Baltic leadership in the EU/EEA and globally in a sustainable and inclusive digital transformation of our societies.”⁶⁸²⁵ The MR-DIGITAL announced a focus on digital inclusion in November 2021. They committed to implementing measures to make digital services more accessible to all inhabitants in the region and to ensure that those who do not possess the necessary skills get the opportunity to acquire them.⁶⁸²⁶

The Nordic and Baltic ministers issued a common statement on the importance of cooperation on digital security in the Nordic-Baltic region in 2022, following the COVID-19 pandemic and the war in Ukraine. The ministers stressed that this “rapid transformation has challenged everyone to adapt to new, digital ways of doing business, learning and accessing public authorities.” The ministers declared that they “have committed to ensuring that our region maintains its position as a leader in digitalisation, and that everyone in the region benefits from digitalisation regardless of age, wealth, education or level of digital skills.” The ministers acknowledged that “Robust and secure digital services, safeguarding users' privacy and ensuring that personal data are stored and processed in a trustworthy way, are

crucial to the citizens' sustained trust in digital services” and committed “to continue our efforts to make our digital public services human centric and accessible.”⁶⁸²⁷

As part of its action plan for Vision 2030 (2021–2024), the Nordic Council of Ministers also identified innovation, digital integration, the safe use of artificial intelligence, data development and open data, education and digitalization as key objectives.⁶⁸²⁸ The Nordic Council of Ministers also emphasizes the involvement of civil society in efforts relating to our vision for 2030 thanks to “a Nordic civil society network and public consultations.”⁶⁸²⁹

The Nordic Ethical AI Expert Group from Nordic Innovation—an organization under the Nordic Council of Ministers—launched five recommendations in June 2024 to guide members’ development of ethical AI.⁶⁸³⁰ The recommendations are: “1) Develop a joint Nordic strategy for ethical and responsible AI; 2) Establish a Nordic center for ethical and responsible AI focused on AI innovation; 3) Promote and coordinate large language models (LLMs)s for Nordic languages; 4) Cultivate a skilled workforce and competent society; 5) Enhance transparency in sustainability of AI technology.”⁶⁸³¹

An announcement that preparations are underway for a Nordic AI Center, developed by AI Sweden in collaboration with AI Finland and IKT-Norway, soon followed.⁶⁸³² Aligned with the adoption-focus of the AI Sweden strategy, the Nordic AI Center would focus on AI application and development on a Nordic and Baltic level by supporting countries to drive AI adoption, increasing collaboration, building stronger relevance for the region internationally, and serving as a repository for investments

Center for AI and Digital Policy

in knowledge, technology, and solutions.⁶⁸³³ AI Sweden was tasked to lead the preparatory work for the creation of the Nordic-Baltic AI Center,⁶⁸³⁴ which officially launched in October 2025. The Center aims to accelerate cross-border cooperation on trustworthy and sustainable AI across the Nordic and Baltic countries.⁶⁸³⁵

EU Digital Services Act

As an EU member state, Sweden shall apply the EU Digital Services Act (DSA).⁶⁸³⁶ The DSA regulates online intermediaries and platforms to prevent illegal and harmful activities online, including the spread of disinformation. Online intermediaries and platforms must implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content. The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs, as well as targeted advertising to minors based on profiling.

Signatories to the DSA commit to naming national authorities to enforce the DSA and hold companies and platforms accountable. Signatories must also take action to reduce online harms, specifically under the 2022 Strengthened Code of Practice on Disinformation,⁶⁸³⁷ which counts as a mitigation measure under the DSA. Under the DSA, Sweden is charged to create conditions for a safe information ecosystem, demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

To comply with the DSA, the Swedish government assigned three agencies as competent authorities to supervise providers of intermediary services and enforcement of the DSA regulation in February 2024: Swedish Consumer Agency, the Swedish Media Authority, and the Swedish Post and Telecom Agency (PTS). PTS

was also appointed national Digital Services Coordinator for digital services, responsible for supervision and enforcement of the DSA in Sweden.⁶⁸³⁸

The European Commission opened an infringement procedure against Sweden in July 2024 for not endowing the Swedish Post and Telecom Authority (PTS) with sufficient powers under the Digital Services Act, the procedure was closed in February 2025 after Sweden adopted the required measures.⁶⁸³⁹

A report by The Future of Free Speech issued in May 2024 raised concerns on the effects of content moderation regulations, such as the DSA, on free speech, after determining that most of the content removed from social media platforms in Sweden, Germany, and France, was legal. In Sweden, for example, the percentage of legal content removed was nearly 94%.⁶⁸⁴⁰

EU AI Act

Sweden held the Presidency of the Council of the European Union in the first half of 2023. Ann Christin Linde, Minister for Foreign Affairs of Sweden, while addressing the 77th Session of the General Assembly of the UN in September 2022 stated that Sweden would work to “protect, promote and defend democratic principles, human rights and the rule of law.”⁶⁸⁴¹ The EU AI Act⁶⁸⁴² is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Swedish Ministry of Finance launched a directive in 2024 to revise and adapt national regulations to ensure that the country adheres to the EU AI Act, to be concluded by the end of September 2025.⁶⁸⁴³ The aim is to “submit proposals on how the system for market surveillance, market control, governance and control of compliance should be designed; identify other needs for national adaptation resulting from the AI Regulation and propose how such needs are to be met; make the necessary legislative proposals.”⁶⁸⁴⁴ The Government announced national measures in 2025 to designate market surveillance, competent authorities, and enforcement mechanisms for high-risk AI systems with the publishing of an official inquiry.⁶⁸⁴⁵

Sweden has not yet designated a single point of contact and national competent authorities are unclear.⁶⁸⁴⁶ The Swedish Data Protection Authority and the Swedish Digitalization Authority have published statements about the implementation of the AI Act. In the AI Board meeting, the Ministry of Finance represented Sweden. Similarly, the Authorities Protecting Fundamental Rights are unclear.⁶⁸⁴⁷ The Action plan for the updated AI Strategy launched in 2026 notes the development of an implementation council charged with emphasizing the “entrepreneurial perspective at an early stage of the EU process and to work to ensure that EU legislation is not implemented in Sweden beyond the specified minimum level.”⁶⁸⁴⁸ The plan appears to take a sectoral approach to providing guidance for companies and developing legislation.

Public Participation

As for public participation, the Government states in the National Approach that “For Sweden to reap the benefits of AI, all sectors of society must be

Center for AI and Digital Policy

involved.”⁶⁸⁴⁹ According to AlgorithmWatch, however, most of the funding and strategic development takes place in universities and as support for business environments.⁶⁸⁵⁰ Nevertheless, AlgorithmWatch also describes the addAI initiative, “a collaboration between experts in academia, government and companies to discuss and explore the impact of smart algorithms and AI on society through the organisation of workshops and participation in public events.” In line with these efforts, the AI Commission proposed 75 measures in December 2024 to enhance AI development, prioritizing public services, innovation, and ethical AI governance. The proposal emphasizes inclusive decision-making, encouraging collaboration between government, industry, and civil society to shape Sweden’s AI future.⁶⁸⁵¹

An AI Sustainability Center funded by VINNOVA (Swedish Innovation Agency) has been functional in Stockholm, Sweden since 2018 as “a knowledge-sharing network dedicated to the sustainable and ethical use of AI and data-driven technologies,” while assisting organizations to comply with EU regulations.⁶⁸⁵² The unique composition of the center constitutes a participation of companies, academic institutions, public agencies, and civil society helping organizations to align with ethical AI principles.⁶⁸⁵³

Since 2022, an AI Council has been operational under AI Sweden with participation of members from twelve Swedish municipalities.⁶⁸⁵⁴ The council offered a series of recommendations for initiatives aimed at enhancing the ability of Swedish municipalities to utilize AI for the Swedish welfare sector. The council’s work is led in collaboration between AI Sweden and the Swedish Association of Local Authorities and Regions (SKR).

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The AI Council offered five key recommendations in 2023.⁶⁸⁵⁵ Recommendations were to 1) formulate a national AI strategy, 2) create long term funding and collaboration support for municipality-led AI projects, 3) develop standards and shared infrastructure for data management and AI applications, 4) promote a skill development initiative to enhance AI competence in the municipality, and 5) establish AI policies and regulations to support unified legal interpretations across Sweden.⁶⁸⁵⁶ National and local authorities have begun to implement the recommendations. The city of Stockholm, in collaboration with AI Sweden and Sigtuna Municipality, is serving as a leading example of municipality-wide digital competency programs to enhance digital skills.⁶⁸⁵⁷ Sweden endorsed the AI Commission's Roadmap for Sweden in February 2025, pledging to expand AI capabilities, develop crisis task forces, and introduce universal AI access reforms.⁶⁸⁵⁸

AI Sweden established the Civil Society Forum for Responsible AI in September 2024. The Forum engages civil society “in shaping and upholding social values” by collectively developing guidelines and best practices for AI use within the NGO and social sectors. Between the fall of 2024 and the spring of 2025, the group met six times to share best practices and develop “guidelines that promote sustainability, collaboration, and sound operational principles related to AI.”⁶⁸⁵⁹ In June 2025, AI Sweden, in collaboration with civil-society organizations that participated in the Civil Society Forum for Responsible AI, released guidelines to counter AI-driven discrimination and to promote transparent and accountable AI use within the NGO sector.⁶⁸⁶⁰ This initiative is part of AI Sweden's AI for Impact project funded by Google.org. The project also comprises a hackathon that brings AI experts

and civil society organizations together for “developing solutions with lasting social impact.”⁶⁸⁶¹

Additionally, Sweden’s Government Offices and Ministry for Foreign Affairs signed a declaration advocating for gender inclusion in AI governance and reinforcing human rights considerations in AI policy development. The declaration, signed in February 2025, emphasizes the active involvement of civil society and diverse stakeholders in shaping AI policies, ensuring broad public engagement in ethical AI deployment.”⁶⁸⁶²

Data Protection

Since Sweden is an EU Member State, the GDPR⁶⁸⁶³ is directly applicable in Sweden and to Swedes. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens.”⁶⁸⁶⁴ Sweden’s Authority for Privacy Protection (IMY) is charged “to uphold the protection of personal data, monitoring that they are handled correctly and do not fall into the wrong hands.”⁶⁸⁶⁵

The GDPR entered into force on 24 May 2016 and applies since 25 May 2018. In April 2018, the Swedish parliament adopted the Data Protection Act (DPA), with complementary provisions to the GDPR. The DPA replaced the old Personal Data Act as of the application of GDPR.

Regarding the activities of law enforcement authorities, Sweden transposed the EU Data Protection Law Enforcement Directive (LED)⁶⁸⁶⁶ through the Swedish

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Criminal Data Act. The Criminal Data Act applies to personal data processing in law enforcement activities such as the Swedish Police Authority and hospitals if someone is sentenced to compulsory psychiatric care. The Swedish Police Data Act supplements the Swedish Criminal Data Act in relation to personal data processing carried out by the Swedish Police Authority, the Swedish Economic Crime Authority, and the Swedish Security Service. The LED aims to “ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”⁶⁸⁶⁷ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and prohibits profiling that results in discrimination.⁶⁸⁶⁸

The Swedish Camera Surveillance Act supplements the GDPR and applies to processing of personal data in connection with camera surveillance. However, the Swedish parliament considered amendments to the Act in late 2024 to allow live camera surveillance and facial recognition technology, even for minors,⁶⁸⁶⁹ to assist in police investigation, in part as a response to a rise in shootings and bombings in 2023.⁶⁸⁷⁰ Amendments passed in April 2025, stipulating that private and public actors are no longer required to obtain permits to conduct camera surveillance in publicly accessible areas.⁶⁸⁷¹ Instead, these actors are to self-regulate and ensure compliance with GDPR and its stipulations on camera surveillance. The Authority for Privacy Protection (IMY) has provided guidance for actors looking to carry out camera surveillance to facilitate compliance with the GDPR and the Camera Surveillance Act.⁶⁸⁷²

The EU Charter of Fundamental Rights provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”⁶⁸⁷³

Sweden is a member of the Council of Europe. It signed but has not yet ratified⁶⁸⁷⁴ the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.⁶⁸⁷⁵

The Swedish Government acknowledged the GDPR as “an important part of the AI framework.”⁶⁸⁷⁶ The IMY published a report detailing how the Swedish public administration’s use of generative AI can remain compliant with the GDPR.⁶⁸⁷⁷ The report stresses alignment with the GDPR principles, establishing a legal basis for processing, outlining stakeholder roles and responsibilities, safeguarding individual rights, implementing risk-based security controls, and evaluating automated decision-making and cross-border data transfers.

The IMY issued its first fine in a case involving facial recognition in 2019. The IMY concluded that a school that conducted a pilot using facial recognition to keep track of students’ attendance in school violated the GDPR and imposed a fine on the municipality of approximately 20,000 euros.⁶⁸⁷⁸ The IMY has also held the police accountable for the unlawful use of facial recognition technology, which is detailed further in the facial recognition section.⁶⁸⁷⁹

The IMY has also taken action against private industry, issuing an administrative fine of SEK 35 million against an insurance company Trygg- Hansa

Center for AI and Digital Policy

(then Moderna Försäkringar) in August 2023.⁶⁸⁸⁰ The IMY fined the Equality Ombudsman (DO) in May 2025, for SEK 100,000 following their supervision of a personal data breach, which was reported by the DO in 2021.⁶⁸⁸¹ The DO has undertaken security measures to protect personal data obtained from a web form (which has since been closed), so that said data was not included in the usage analysis of the DO's website. The security measure was not completely effective, leading to sensitive personal data being disclosed to the personal data processor that was conducting the analysis of the DO's website, leading to the fine.

The IMY reprimanded the Hospital Board in Region Uppsala after they were notified of a data leak by Region Uppsala.⁶⁸⁸² The Hospital Board gathers large amounts of sensitive data as it conducts healthcare activities, some of which was processed through an email service. The IMY had previously stated that the processing of personal and sensitive data via an email service poses a significant risk. Sensitive personal data was shared and processed between employees within the company and was in direct violation of the Hospital Board's guidelines. As such, the IMY assessed and ascertained that the appropriate technical and organizational measures have not been implemented by the Hospital Board.

One month later in July 2025, the IMY fined Apoteket and Apohem SEK 37 million and SEK 8 million, respectively.⁶⁸⁸³ Both companies made use of Meta Pixel, an analytics tool which was used to improve marketing across Facebook and Instagram. Both companies enable a new sub-feature on the tool, leading to the transfer of personal data to Meta, which violates the GDPR. In addition, the IMY found that the necessary protective measures were not in place, specifically measures to detect the data breach, leading to the transfer of personal data for a prolonged period.

Despite being a member of the Global Privacy Assembly (GPA) since 2002, the IMY has not endorsed the 2018 Declaration on Ethics and Data Protection in

Algorithmic Transparency

Sweden is subject to the GDPR which established rights to “meaningful information about the logic involved” as well as about “the significance and the envisaged consequences.”⁶⁸⁸⁸ The Swedish Authority for Privacy Protection (IMY) is competent to handle complaints in this regard.⁶⁸⁸⁹ However, in 2019, the Equality Ombudsman (*Diskriminerings Ombudsmannen*, DO) Agneta Broberg warned that the sanctions available under the Swedish Discrimination Act not sufficient to tackle the challenges of AI and discriminatory algorithms.⁶⁸⁹⁰

Following the Trelleborg episode concerning automated decisions by municipalities, the Union for Professionals called for the creation of an algorithm ombudsman: “The Union has, among other things, conducted a survey that shows that the requirement for an Algorithm Ombudsman has broad support among the public—and that transparency and openness are absolutely crucial for there to be trust in algorithms and automation.”⁶⁸⁹¹ In this regard, a 2020 survey organized by BEUC, the European Consumer Organization, and involving the Swedish Consumer

Organization revealed that “more than half of Sweden's consumers feel that artificial intelligence (AI) is used to manipulate them. And over 60 percent wish they could say no to automated decision making.”⁶⁸⁹² The Swedish Government commissioned twenty-five public bodies and institutions in 2025 to report on their use of AI with the end goal of increasing transparency in public authorities, taking advantage of AI opportunities, minimizing risks and planning for the future.⁶⁸⁹³

AI in Public Administration

Sweden’s Agency for Digital Administration (DIGG) recommended in a 2020 report on promoting AI in public administration that the Government establish a center with expertise in AI; develop a platform for collaboration, co-development and innovation; develop an AI guide; create legal conditions to facilitate experimental activities; develop vocational and role-specific training in AI; and develop a national data strategy for public administrations.⁶⁸⁹⁴ DIGG serves as an expert group to facilitate Sweden’s digitization, working with public administration “to make the transition a reality, and to the benefit of everyone.”⁶⁸⁹⁵ The Ministry of Finance assigned DIGG and the Privacy Protection Agency (IMY) to develop Guidelines for the use of Generative AI in Public Administration in August 2024.⁶⁸⁹⁶ DIGG published the guidelines along with educational information and webinars about AI on a sub-site from the agency website.⁶⁸⁹⁷

DIGG responded to a Ministry of Infrastructure call from 2019 to increase the availability of data by launching Sweden’s data portal with new functionality for APIs and establishing principles, guidelines, and recommendations “to increase the

public administration's ability to make open data available.”⁶⁸⁹⁸ Much of this work was based on DIGG’s piloted projects with business, academia, and civil society. Since then, Sweden’s data portal has become a strategic societal resource for business, society, and the public sector with more than 17,000 data sets being used by 335 different organizations. The portal demonstrates Sweden’s ambition to enhance innovation and move Swedish society forward.⁶⁸⁹⁹

AI Sweden and the AI Council for Sweden’s Municipalities published Recommendations to ensure practical guidance for AI adoption within municipalities in June 2025.⁶⁹⁰⁰ The IMY and DIGG jointly issued national guidelines in July 2025 that encourage the use of generative AI within Sweden’s public administration with the end goal of ensuring that generative AI is used in a safe, ethical and efficient way.⁶⁹⁰¹

The Trelborg Controversy

The automation of government services has been underway in Sweden since the 1970s. By 2019, “more than 80% of all government decisions that the National Audit has reviewed were automated. This involves 121 million decisions by 13 authorities.”⁶⁹⁰² Various benefits, including Welfare payments, parental benefits, and dental-care subsidies, are allocated without any human intervention.

As for municipalities, which oversee social services, a 2019 report published by the Union for Professionals, found that “only 16 out of a total of 290 municipalities have implemented RPA [Robotic Processing Automation] in their administration of social benefits.”⁶⁹⁰³ The Trelborg Municipality was the only one to implement solely automated decision-making.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In 2019 journalist Freddi Ramel and Union for Professionals chief economist Simon Vinge challenged the Trelleborg automated decision system. According to AlgorithmWatch, the Swedish Parliamentary Ombudsman has so far failed to determine whether the municipality provided “meaningful information” as required by Article 15 of the GDPR.⁶⁹⁰⁴ However, Ramel obtained access to the source code after a court ruled that the code was a public record under the Swedish Freedom of Information Act. The Trelleborg municipality subsequently undertook an investigation.

Facial Recognition

In 2019, the Swedish DPA issued its first fine in a case involving facial recognition. A school in northern Sweden conducted a pilot using facial recognition to keep track of students' attendance in school. The Swedish DPA concluded that the test violates the GDPR and imposed a fine on the municipality of approximately 20,000 euros. The school processed sensitive biometric data unlawfully and failed to do an adequate impact assessment including seeking prior consultation with the Swedish DPA. The school based the processing on consent, but the Swedish DPA considers that consent was not a valid legal basis given the clear imbalance between the data subject and the controller.⁶⁹⁰⁵

The data protection officer for the Swedish police undertook an investigation in March 2020 to determine whether the police used Clearview AI, an AI product for mass surveillance enabled by facial recognition.⁶⁹⁰⁶ The Swedish police confirmed that they had used Clearview AI, after previously denying use of the face surveillance tool.⁶⁹⁰⁷ Subsequently, the IMY investigated the case and found in 2021 that the Swedish Police Authority had processed personal data in breach of the Swedish

Criminal Data Act by using Clearview AI to identify individuals.⁶⁹⁰⁸ The investigation concluded that Clearview AI had been used sometimes without prior authorisation. The Police had failed to implement sufficient organisational measures to ensure and be able to demonstrate that the processing of personal data had been carried out in compliance with the Criminal Data Act. For example, no impact assessment had been concluded. As a result, the IMY imposed a 250,000 Euros fine.

The IMY noted that the European Data Protection Board (EDPB) “will produce guidance on how law enforcement authorities should approach facial recognition technology. Sweden is one of the driving countries in the world.” The EDPB indeed issued guidelines on the use of facial recognition technologies in law enforcement in May 2022.⁶⁹⁰⁹ The EDPB Chair said: “While modern technologies offer benefits to law enforcement, such as the swift identification of suspects of serious crimes, they have to satisfy the requirements of necessity and proportionality. Facial recognition technology is intrinsically linked to processing personal data, including biometric data, and poses serious risks to individual rights and freedoms.” The EDPB stressed that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights.⁶⁹¹⁰

In 2019, the Swedish DPA did approve the use of facial recognition technology by the police to help identify criminal suspects. However, such an authorization relates to the use of biometric templates in databases under the control of public authorities and established under Union or Member States law.⁶⁹¹¹ As the Chair of the European Data Protection Board subsequently emphasized, “[t]he possible use of a service such as offered by Clearview AI by law enforcement authorities would, however, be fundamentally different, in that it would imply, as part of a police or criminal investigation, the sharing of personal data with a private party outside the Union and the biometric matching of such data against the latter’s

mass and arbitrarily populated database of photographs and facial pictures accessible online.”⁶⁹¹² She also clearly questioned the legality of the use of Clearview AI by public authorities.

In October 2023, Sweden’s Ministry of Justice published a press release announcing a proposal to expand the use and increase access by Swedish Police to video surveillance, facial recognition, and automatic number plate recognition tools to enhance crime prevention. According to the press release, “the Government appointed an inquiry on video surveillance. The inquiry’s task consists of two parts. The first is to investigate the need for simplified rules on video surveillance for municipalities and regions [...] aiming to abolish permit requirements for municipalities and regions that want to use video surveillance in public places. The second part is a broadly formulated assignment to investigate expanding the video surveillance powers of the Swedish Police,” such as through the use of drones.⁶⁹¹³ The Prime Minister alluded to these measures, including increased surveillance of children, in a speech in September 2023.⁶⁹¹⁴

The IWY and investigators for Parliament have worked to align these measures with the restrictions, though not prohibitions,⁶⁹¹⁵ on the use of AI systems for remote biometric identification and categorization.⁶⁹¹⁶ The bill to allow police to use facial recognition and DNA genealogy was accepted for Parliament’s

consideration in late 2024,⁶⁹¹⁷ and fast-tracked in January 2025. Proposals would allow police to use AI-based real-time facial recognition technology in investigations of serious crimes such as human trafficking, kidnapping, and murder.⁶⁹¹⁸ These recommendations are accompanied by several legal safeguards to help protect personal privacy. A Ministry of Justice memo made these recommendations explicit.⁶⁹¹⁹

Environmental Impact of AI

Sweden has played an extensive role in utilizing AI for climate change and taking initiatives to mitigate climate risks posed by AI development and use. The landmark GPAI Report of 2021 offers recommendations for governments to encourage responsible AI use in climate action, focusing on both positive and negative environmental impacts of AI.⁶⁹²⁰ The report aims to ensure AI supports climate goals while minimizing its environmental footprint. It highlights two key areas to address to reduce greenhouse gas (GHG) emissions arising from AI: 1) Compute-related impacts, or energy use and emissions from AI computations and hardware, and 2) Application-related impacts, or AI's role in reducing or increasing greenhouse gas emissions. Sweden is progressively addressing both compute and application related impacts as part of the Climate Policy Framework goals to achieve zero net emissions of greenhouse gases by 2045.⁶⁹²¹ While application related impacts are difficult to ascertain, compute-related impacts are clearly generated through data centers supporting AI based applications.

From 2024, under Article 12 of the recast EU Energy Efficiency Directive, data centers of member states will be required to publish information on their energy

performance and sustainability.⁶⁹²² RISE, Sweden’s research institute and innovation partner, estimates that by 2030 there will be doubling of energy use from data centers compared to 2020 because of AI and Generative AI-related computations.⁶⁹²³ However, Sweden has taken proactive steps to mitigate the situation by adopting the EU Eco-design Regulations for servers and data storage products.⁶⁹²⁴ The EcoDataCenter—Sweden is world’s first “climate-positive data center” completely supported through renewable energy sources. The heat output generated from the data center supports district heating and cooling system.⁶⁹²⁵

RISE has noted that Sweden’s leadership in international AI and innovation for climate change would be hugely beneficial to trade and industry: “The climate challenge is too important an issue to not adopt that perspective. There is no contradiction in investing in AI and investing in AI for the climate, or in developing AI applications and developing applications for the climate.”⁶⁹²⁶ The Sustainable AI and AI for Sustainability event hosted by the Swedish Presidency of the Council of Europe and the Ministry of Finance in May 2023 was one of a number of sporadic events organized by the Swedish government to set out a clear pathway for Envisioning Sustainable AI.⁶⁹²⁷

Lethal Autonomous Weapons

Beginning in 2013, Swedish NGOs called for Sweden to endorse an official ban of LAWS.⁶⁹²⁸ As one NGO coalition stated in 2020, “A future where machines themselves decide over life and death, what and who is to be attacked in an armed conflict, is not the future we want. But the fact is that we are on our way there—and

development is fast.”⁶⁹²⁹ Previously, leaders in the Swedish government declared that “Sweden must take a leading role in the work for a ban on deadly autonomous weapon systems.” However, the position adopted by Sweden so far has been more nuanced.

The Swedish government has emphasized human control and said “multilateralism remains our only chance to address our many common challenges and to ensure international peace and security.”⁶⁹³⁰ At the 75th UN General Assembly meeting in October 2020, Sweden’s Ambassador stated “Sweden is of the strong conviction that human control over the use of force always must be upheld.” She also expressed Sweden’s support to the 11 LAWS Guiding Principles.⁶⁹³¹ Earlier, Sweden also explained that the “specific measures required for human control will thus need to be context dependent and assessed on a case-by-case basis” and referred to a report, supported by Sweden, together with Germany, Switzerland, and the Netherlands.⁶⁹³² The Swedish government has also set up a working group on autonomous weapons. According to the NGO Swedish Peace and Arbitration Society, this “working group is defense-oriented, with a majority of its members coming from defense-related authorities and institutions.”⁶⁹³³

Sweden was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular

International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”⁶⁹³⁴

Sweden also submitted a working paper with Finland, France, Germany, the Netherlands, Norway, and Spain to the 2022 Chair of the Group of Governmental Experts on emerging technologies in the area of Lethal Autonomous Weapons Systems.⁶⁹³⁵ The working paper presents a two-tier approach. Accordingly, States should commit to (1) outlaw fully autonomous lethal weapons systems operating completely outside human control and a responsible chain of command, and (2) regulate other lethal weapons systems featuring autonomy to ensure compliance with the rules and principles of international humanitarian law, by preserving human responsibility and accountability, ensuring appropriate human control, and implementing risk mitigation measures.

At the 78th UN General Assembly First Committee in November 2023, Sweden was amongst 164 countries voted in favor of resolution L.564991 on autonomous weapons systems.⁶⁹³⁶ The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

Sweden’s contribution to the report reiterated its support for the two-tier approach. The comments underline the importance that the Governmental Group of Experts (GGE) deliver on its mandate to develop regulation, acknowledging that even an agreement that might fall short of some delegations’ expectations would still amount to a step forward. Sweden’s view on preservation of meaningful human control over the use of force is a key objective.⁶⁹³⁷

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Sweden has also been active in international summits on the responsible application of artificial intelligence in the military domain (REAIM). At the end of the REAIM2023 Summit, Sweden endorsed a joint call for action on the responsible development, deployment, and use of artificial intelligence in the military domain.⁶⁹³⁸ Sweden also endorsed the Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁶⁹³⁹

Following the second Responsible AI in the Military Domain (REAIM) summit in Seoul, Korea, in 2024, Sweden signed Blueprint for Action along with 62 other nations of the 90 in attendance.⁶⁹⁴⁰ The Blueprint was more action-oriented than the earlier statement in keeping with advanced discussions and developments in the military such as AI-enabled drones being rolled out by Ukraine. The Blueprint provides guidance on what kind of risk assessments should be made, conditions such as human control, and how confidence-building measures can be taken to manage risks.

Endorsement of the Blueprint for Action coincides with Sweden's growing military investment amid growing instability in Europe, particularly given the war in Ukraine. The shift also coincides with Sweden's decision to abandon its long-standing policy of neutrality by applying to join NATO in 2022.⁶⁹⁴¹ AI in Swedish defense, including LAWS, is still at an early stage of conception. However, developments already in use, such as cloud-based data lakes for "real-time predictions about the physical behaviors of where people, ships or planes are going, and also predict the contextual behaviors of what these people, ships or planes are actually doing" highlight the necessity for responsible and accountable use of AI with human involvement in the initiative.⁶⁹⁴²

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI Literacy

Sweden has been developing institutional AI literacy capacities since at least 2018. The national cooperation initiative for education in AI includes AI Sweden, WASP Education Development Program (WASP-ED), Expert Learning Labs (ELLS) and multiple universities. The focus is on upskilling and reskilling the labor workforce.⁶⁹⁴³ The AI Competence for Sweden initiative remains a key platform for higher-education and workforce-oriented AI training.⁶⁹⁴⁴ The Competence Guide facilitates learners' navigation of the courses offered by several universities.⁶⁹⁴⁵

DIGG and IMY national guidelines for the safe and responsible use of generative AI in public administration⁶⁹⁴⁶ and AI Sweden's practical guidance for municipalities⁶⁹⁴⁷ strengthen institutional capacity-building and include skills-building such as online courses on the AI Act and generative AI.⁶⁹⁴⁸

Human Rights

Sweden is a signatory to many international human rights treaties and conventions and supports the Universal Declaration of Human Rights. Sweden typically ranks among the top nations in the world for the protection of human rights and transparency in the annual Freedom House Freedom in the World report. In 2025, Sweden maintained the rating of "Free" with a score of 99/100.⁶⁹⁴⁹

AI Sweden promotes responsible use of AI and suggests "AI systems must be designed and operated in a manner that respects human rights, values, and cultural diversity."⁶⁹⁵⁰ However, while this approach is supported through an AI strategy, Sweden has not yet implemented legislation or regulation to enforce these principles. Human dignity is a fundamental human right and associated closely with concepts of autonomy and privacy. A recent debate sparked in Sweden over use of real time

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

facial recognition for identifying suspected criminals reveals potential challenges to the privacy and civil liberties of Swedish people. On the other hand, such measures may help reduce gang violence.⁶⁹⁵¹

Sweden has an Equality Ombudsman (DO) serving as a government agency that works on behalf of the Swedish parliament and government to promote human rights associated with equal rights and opportunities and to combat discrimination. The DO supports human rights and equity broadly but engages with discrimination related to AI systems and data, such as with its 2023 report on AI in working life.⁶⁹⁵² AI Sweden, in collaboration with civil society partners, issued national guidelines to counter AI-driven discrimination.⁶⁹⁵³ These guidelines provide practical tools for identifying risk factors, improving dataset representativeness, and mitigating discriminatory outcomes in public and private sector AI systems.

OECD / G20 AI Principles

Sweden is an OECD member and has endorsed the AI Principles.⁶⁹⁵⁴ OECD considered Sweden's early AI governance structure with three Ministries—Ministry of Infrastructure, Ministry of Enterprise and Innovation, and Ministry of Education and Research—responsible for AI policies and related agencies in charge of implementation⁶⁹⁵⁵ a positive step toward implementing the OECD AI Principles. Sweden has implemented many of the values-based principles as well as the five recommendations for policymakers.

In line with principle 1.1, which emphasizes inclusive growth, sustainable development and wellbeing, multiple initiatives have been taken.⁶⁹⁵⁶ To augment human capabilities and enhance creativity, for example, AI Sweden reported

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

international collaboration with Unity Health, Toronto to integrate Canadian insights into the Swedish healthcare system.⁶⁹⁵⁷ VINNOVA (the Swedish innovation agency) supported information-driven healthcare to offer personalized and scalable healthcare through AI applications.⁶⁹⁵⁸ Citizen consultation on the recent draft of the digitization policy in 2024 has also been key to social dialogue and attempts to include diverse communities in policymaking, thereby promoting inclusive societal growth. To address gender inequalities through AI, VINNOVA tasked Ramboll and Women in AI (WAI) to study the potential of AI for achieving gender equality.⁶⁹⁵⁹

The recent AI Sweden strategy also emphasizes human-centered values and fairness (principle 1.2) and informs good governance. Transparency (OECD principle 1.3) is core to the AI strategy.⁶⁹⁶⁰ Algorithmic impact assessment is one of the key components for addressing robustness, security, and safety (principle 1.4) in AI. The Add AI collaborative initiative, involving government officials, academicians, and tech companies, explores the impact of smart algorithms and AI on the Swedish society.⁶⁹⁶¹ In terms of accountability (principle 1.5), AI Sweden, has declared that all AI solutions should be developed and used within the rule of law, and that stakeholders will be held accountable for their applications.⁶⁹⁶²

Sweden is a member of the Global Partnership on AI (GPAI), a multi-stakeholder initiative that aims to foster international cooperation on AI research and applied activities. GPAI is “built around a shared commitment to the OECD Recommendation on Artificial Intelligence.”⁶⁹⁶³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Council of Europe AI Treaty

Sweden contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy, and the Rule of Law.⁶⁹⁶⁴ The EU signed this first legally binding international treaty on AI on behalf of all Member States when it opened for signature on September 5, 2024.⁶⁹⁶⁵ Sweden has not individually signed or ratified this treaty.

UNESCO Recommendation on AI Ethics

Sweden has endorsed the UNESCO Recommendation on the Ethics of AI, the first ever global agreement on the ethics of AI.⁶⁹⁶⁶ Sweden has taken several initiatives to implement the UNESCO Recommendation, which outlines 11 areas of policy action along with components for monitoring and evaluation.⁶⁹⁶⁷ However, several of these policy areas have yet to be fully implemented. Sweden has not begun the Readiness Assessment Methodology (RAM).⁶⁹⁶⁸ Many of the initiatives in Sweden pose technical solutions to AI challenges without clear legal or policy bases for enforcement.

Evaluation

Sweden endorsed the OECD AI Principles and began to implement them in part through a commitment to developing trustworthy AI and preparing citizens through educational and training opportunities. Sweden ranks at the top among nations for the protection of political rights and civil liberties and has proactive ombudsman institutions and an active data protection agency. Frameworks and the AI Committee, along with AI literacy projects, suggest progress to implement the UNESCO Recommendation on AI ethics. Incorporating clear ethical impact

assessments into AI development and initiating the Readiness Assessment Methodology (RAM) can further these efforts.

Sweden's opposition, along with other Nordic and Baltic countries, to a strong regulatory framework for AI raises concern about the commitment to take the necessary measures to prevent and mitigate ethical risks. The establishment of a Nordic AI Center, announced in August 2024, could be a key catalyzer in this direction. The Nordic Ethical AI Expert Group has called for the development of "a joint Nordic strategy for ethical and responsible AI."⁶⁹⁶⁹ To date, however, the prioritization of AI adoption and development has not been accompanied by sufficient emphasis on the ethical alignment of AI systems.

The appointment of the AI Commission could be an important step toward designating supervising and competent authorities to implement the EU AI Act, especially given the emphasis on the need for "competitive, safe and ethical AI development and AI use in Sweden."⁶⁹⁷⁰ Designating authorities for the EU AI Act, ratifying Convention 108+, and taking action on the AI treaty are important steps to demonstrate how Sweden will protect human rights, democratic values, and the rule of law as it pursues leadership in AI development and use.

⁶⁹⁶⁹ Nordic Innovation, *Press Release: Nordic AI Experts Launch Five Recommendations for Ethical AI* (Jun. 16, 2024), <https://www.nordicinnovation.org/news/press-release-nordic-ai-experts-launch-five-recommendations-ethical-ai>

Switzerland

In 2025, the Swiss Federal Council released the Overview of Artificial Intelligence Regulation, outlining Switzerland's sector-specific approach to governing AI. Switzerland also endorsed the Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.

National AI Strategy

The Swiss government announced AI Guidelines for the Federal Government in 2020.⁶⁹⁷¹ The AI Guidelines are intended to ensure a coherent government policy for AI. The AI Guidelines emphasize putting people at the center; Framework conditions for the development and use of AI; Transparency, traceability, and explainability; Human accountability; Safety and security; Active participation in the governance of AI; and Involvement of all affected national and international actors. Specific AI guidelines will be formulated for education and science. Future AI work will be undertaken by the Federal Office of Communications (OFCOM) together with the federal agencies concerned. The Digital Switzerland Strategy,⁶⁹⁷² which encompasses AI, and the Digital Foreign Policy Strategy 2021–2024⁶⁹⁷³ served as reference frameworks for the implementing the guidelines. The AI Guidelines also follow from the Digital Switzerland Strategies dating back to 2016.⁶⁹⁷⁴ These strategies are binding for the Federal Administration and encompass the government's principles and key objectives for digital transformation.⁶⁹⁷⁵ The current strategy emphasizes the AI legal framework and use of AI in public administration.⁶⁹⁷⁶

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Swiss Federal Council emphasized the need for a joint strategic approach to artificial intelligence within the Federal Administration at a meeting in September 2024.⁶⁹⁷⁷ The Council tasked the Federal Department of Home Affairs (FDHA) and the Federal Chancellery with developing a comprehensive proposal by the end of 2025 to coordinate all relevant AI activities. This initiative aims to foster synergy, promote innovation, and build public trust in the application of AI across the public sector. The strategy will address key areas such as infrastructure, regulatory development, workforce training, and stakeholder engagement, ensuring that AI adoption aligns with democratic principles and societal needs.”⁶⁹⁷⁸

The Federal Office of Communications (OFCOM) and Federal Department of Foreign Affairs (FDFA) submitted a report on AI regulation to the Swiss Federal Council in February 2025.⁶⁹⁷⁹ The report weighs approaches to implementing the EU AI Act and Council of Europe Framework Convention in light of Switzerland’s three key objectives for future AI regulation: 1) strengthen the country’s position as an innovation hub, 2) safeguard fundamental rights and the rule of law, and 3) build public trust through transparency, accountability, and explainability in AI systems.⁶⁹⁸⁰

Swiss Foreign Policy and AI

Switzerland is a hub for international policy as many international organizations are based in Geneva. The United Nations hosted the first annual AI for Good Global Summit in 2017. Switzerland leverages this internationalism in AI policy.

Digitization was one of the thematic focus areas of the Swiss Foreign Policy Strategy 2020–2023. The Federal Department of Foreign Affairs wrote, “The focus is on people’s needs. The rule of law and universal human rights—such as freedom of expression and information and the right to privacy—must also be guaranteed online. It is important to defend liberties such as press freedom.”⁶⁹⁸¹ Furthermore, the Department seeks to “position Geneva as the location for global digitalisation

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

and technology debate” and to promote sustainable development using digital technologies, digital self-determination and cyber diplomacy.⁶⁹⁸²

Switzerland's Foreign Policy Strategy 2024–2027, reflects a commitment to open, inclusive governance that respects human rights and promotes democratic values. In this period, Switzerland plans to advance a strategic approach to AI policy, emphasizing its role in the creation of international regulations that support transparency, fairness, and ethical standards.⁶⁹⁸³

Public Participation

Switzerland is a direct democracy, which means that citizens have the right to decide on policy directly by optional referendums⁶⁹⁸⁴ or popular initiatives.⁶⁹⁸⁵ Further, policy revisions or proposals of importance go through a consultation procedure with relevant stakeholders to include their opinions and needs and therefore to minimize the chance of a referendum.⁶⁹⁸⁶

Further specifically in technology policy, the website for the “Digital Switzerland” Strategy provides a summary of the Strategy and lists related initiatives and committees. Updates on how the Strategy is being implemented are also published on a website.⁶⁹⁸⁷ Organizations, companies, municipalities, and cantons can upload proposals to be considered for the Digital Switzerland action plan on the digital dialogue website.⁶⁹⁸⁸

In 2018, the Federal Council established the OpenData website, “the Swiss public administration’s central portal for open government data.”⁶⁹⁸⁹ The website, managed by the Federal Statistical Office, “supports organisations in publishing their open data” and “continuously monitors the quality of the catalogue.”

The Swiss Tripartite Platform (*Plateforme Tripartite Suisse*) is an information hub and platform to exchange dialogue. The platform was established to prepare for the World Summit on the Information Society (WSIS) conference in 2003. It now “serves as a national forum for the informal exchange of information and experience

on WSIS implementation and follow-up activities. It is open to all interested representatives from the administration, the business sector, civil society and the internet community at the national level and meets on an ad-hoc basis.”⁶⁹⁹⁰

The Federal Administration launched the Competence Network for Artificial Intelligence (CNAI) in 2022 to “coordinate AI-related issues within the Federal Administration, fostering cross-departmental networking, supporting specific AI projects and innovations, and promoting synergies.”⁶⁹⁹¹ The CNAI informs the public and facilitates information-sharing from the public to the administration. A project database of all AI projects in the federal administration ensures transparency. As a central point for questions related to AI and connector to expertise, the CNAI provides a “means of harnessing the potential of AI and developing employee skills to ensure that it is used efficiently, innovatively and securely.”

Switzerland hosted the AI Policy Summit 2024 organized by ETH Zurich and RegHorizon. The Summit was a pivotal forum for multistakeholder dialogue on AI policy.⁶⁹⁹² The summit covered crucial topics such as global AI policy, AI risk management, and AI's role in achieving the UN Sustainable Development Goals. The event encouraged public participation by broadcasting sessions globally, thus providing a platform for engagement across various sectors, including academia, business, government, and civil society. The Summit underscored Switzerland's commitment to an inclusive approach to AI policymaking. Switzerland is hosted the AI for Good Global Summit in July 2025, organized by the International Telecommunication Union (ITU). The summit is a leading platform for public-private collaboration, bringing together global experts, policymakers, and innovators to discuss AI's role in addressing humanitarian and sustainable development challenges.⁶⁹⁹³

A white paper on Generative AI published by digitalswitzerland [sic] incorporated insights from 279 Swiss professionals through workshops and surveys.⁶⁹⁹⁴ The paper stressed the importance of public participation in developing

Center for AI and Digital Policy

policies to address challenges such as workforce reskilling and the broader implications of generative AI. The paper also stressed the importance of critical thinking in education along with adoption of AI tools and recommended that policymakers act swiftly to create principles-based, technology-neutral regulations.

The Swiss Government published the new e-ID Act in the Federal Gazette for public comment.⁶⁹⁹⁵ Swiss voters raises AI-related concerns on data protection, cyberattacks, and system interoperability.

Data Protection

The Federal Constitution states that every person has the right to respect for their private and family life, home, and correspondence, post, and telecommunications, and to protection against misuse of their personal data.⁶⁹⁹⁶ The Federal Law on Data Protection enshrined this protection in law in July 1993.⁶⁹⁹⁷ The FADP established the Federal Data Protection and Information Commissioner (FDPIC) as the authority in charge of enforcing and overseeing data protection.

The data protection law was substantially revised into what's known as the new Data Protection Act (FADP). The FADP was passed in 2020 and came into effect along with the new Data Protection Ordinance (DPA) on September 1, 2023. The revisions address modern technological and social conditions, enhancing transparency, increasing data subjects' autonomy, and aligning with international standards such as the EU GDPR. For example, the FADP creates obligations to undertake privacy impact assessments in certain circumstances.⁶⁹⁹⁸

The revised FADP allowed the Swiss president to present the instrument of ratification to the Council of Europe Secretary General to confirm the country's adoption of Convention 108+.⁶⁹⁹⁹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In addition, numerous provisions on the protection of personality also exist in other laws and areas. Articles 28–28I of the Civil Code (ZGB)⁷⁰⁰⁰ specify how legal action is taken in the event of personality violations.

The FDPIC has taken action to clarify the application of the FADP to the training and use of artificial intelligence systems. In 2024, the FDPIC joined other data protection authorities on a concluding statement clarifying that data scraping from publicly accessible sources is not exempt from data protection obligations.⁷⁰⁰¹ Such processing must comply with the FADP's principles of transparency, proportionality, and purpose limitation. Guidance in 2025 confirmed that the FADP directly applies to AI systems processing personal data.⁷⁰⁰² According to the guidance: “manufacturers, providers and users of AI systems must make the purpose, functionality and data sources of AI-based processing transparent. The legal right to transparency is closely linked to the right of data subjects to object to automated data processing or to request that automated individual decisions be reviewed by a human being.”

Switzerland's FDPIC is a member of the Global Privacy Assembly (GPA), along with data protection commissioners from the cantons of Basel-Landschaft, Basel-Stadt, Zug, Zurich, and Bern.⁷⁰⁰³ The FDPIC sponsored or co-sponsored the 2018 Declaration on Ethics and Data Protection in Artificial Intelligence,⁷⁰⁰⁴ 2022 Resolution on Facial Recognition Technology,⁷⁰⁰⁵ and 2023 Resolution on

Generative AI.⁷⁰⁰⁶ However, the FDPIC did not sponsor the 2020 GPA Resolution on AI Accountability.⁷⁰⁰⁷

Algorithmic Transparency

Switzerland signed the Council of Europe Convention 108+ in 2019 and ratified in 2023.⁷⁰⁰⁸ Convention 108+ ensures algorithmic transparency by granting every individual the right to request the logic behind automated decisions, the right to correct or erase data handled improperly, and the right to remedy “where his or her rights under this Convention have been violated.”⁷⁰⁰⁹

A key amendment to the FADP increased transparency in data processing, requiring notification when data is processed for automated decisions and the right to know “logic behind the decisions.”⁷⁰¹⁰ This introduces the general concept of automated individual decisions in Swiss law. The FADP states that: 1) “The person responsible shall inform the person concerned of a decision that is based exclusively on automated processing that is associated with a legal consequence for them or significantly affects them (automated individual decision) and 2) “On request, it shall give the data subject the opportunity to state his or her position. The data subject may request that the automated individual decision be reviewed by a natural person.” Automated individual decision issued by a federal body must also be labeled. This requirement shows that higher demands are placed on government action in general, and in particular with regard to transparency.

These amendments grew in part from increasing calls from civil society, including organizations calling for an ADM register for public administration.⁷⁰¹¹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Demands for a register were taken up at the federal level⁷⁰¹² as well as at the cantonal level.⁷⁰¹³ The Federal Council rejected the federal motion, and it was subsequently written off. Developments in the canton of Zurich advanced farther. As part of the revision of the Information and Data Protection Act, the government council of the canton of Zurich proposed to establish a registry for automated decision-making systems (ADM systems).⁷⁰¹⁴ Neither parliamentary motion deals with all algorithmic systems, but with those that appear to be particularly problematic from the point of view of the comprehensibility of the decision-making process.

AI Oversight

The Swiss Federal Council included a possible expansion of the federal AI coordination office to centralize governance, manage risks, and foster trust and innovation as a 2026 goal.⁷⁰¹⁵ Expanding the federal AI coordination office will help Switzerland move from fragmented oversight to a more unified, strategic approach.

The Federal Data Protection and Information Commissioner (FDPIC) is the “competent authority for data processing by federal bodies and private persons, including enterprises.” Data processing by cantonal or communal authorities is supervised further by cantonal and communal data protection commissioners.⁷⁰¹⁶ The FADP amendments extended the duties and powers of the FDPIC, which will increase the number of investigations.⁷⁰¹⁷

Established in 2019, the National Human Rights Institute (NHRI) extends its oversight to include AI applications, reflecting its broad mandate to safeguard human

rights across all sectors.⁷⁰¹⁸ According to the Federal Council, “The NHRI will be independent, include members from across society and receive an annual financial support from the Confederation.”⁷⁰¹⁹ The NHRI developed from a pilot project by the Swiss Centre of Expertise in Human Rights (SCHR), which completed over 200 projects to further human rights in Switzerland before its mandate ended in 2022.⁷⁰²⁰

On the cantonal level, Zurich was the first canton to establish a regulatory sandbox for AI in 2022. The Innovation Sandbox for Artificial Intelligence aims to “promote responsible innovation by allowing public administration and participating organizations to collaborate closely on regulatory issues and enabling the use of new data sources.”⁷⁰²¹ The Sandbox grants organizations access to regulatory know-how. In exchange, the organizations publicize their findings and results.

Data Scraping

The FDPIC and international data protection and privacy counterparts released a follow-up joint statement laying out expectations for industry related to data scraping and privacy, following engagement with industry on an earlier statement.⁷⁰²² The initial statement in August 2023 established that “[social media companies] and other websites are responsible for protecting personal information from unlawful scraping.”⁷⁰²³ The concluding statement, which incorporates feedback from engagement with companies such as Alphabet (YouTube), X Corp (formerly Twitter), and Meta Platforms (Facebook, Instagram, WhatsApp), adds that organizations must “comply with privacy and data protection laws when using personal information, including from their own platforms, to develop AI large language models”; must regularly review and update privacy protection measures to

keep pace with technological advances; and ensure that permissible data scraping, such as that for research, “is done lawfully and following strict contractual terms.”⁷⁰²⁴

FDPIC’s guidelines on data processing using cookies and similar technologies reinforces online data protection measures.⁷⁰²⁵

AI and Criminal Justice

According to AlgorithmWatch, Swiss federal and canton institutions are using AI systems in a variety of applications. Federal government agencies are using AI systems to triage inmates as part of the process to develop an inmate’s release plan and for automatic vehicle detection and traffic monitoring at state borders. The Federal Customs Administration uses a data processing system to help assess goods coming into the country. Some cantons use a police software to predict domestic burglaries. AlgorithmWatch allays some concern about the use of the extension of these AI applications to predictive policing by noting “the use of predictive policing in Switzerland is currently limited to a relatively small and clearly defined area of preventive police work.”⁷⁰²⁶

Although there is no legal framework in the Criminal Procedure Code (CrimPC) governing the use of facial recognition technology by police,⁷⁰²⁷ police occasionally use facial recognition to compare mug shots. A cantonal police database of known criminals is compared with another, e.g., a cross-cantonal database. The images often come from surveillance cameras of injured parties, such as a clothing store that has been robbed. The concrete identification of the suspected person is still the responsibility of a police officer and not of a software.⁷⁰²⁸

Center for AI and Digital Policy

Facial Recognition

The Swiss government submitted a draft amendment to the Aviation Act in August 2024 for consultation with legislative discussions continuing into early 2025.⁷⁰²⁹ The amendment would allow airports and airlines in Switzerland to use facial recognition to identify and move passengers through baggage drop-off, check-in, ticket control, and boarding.⁷⁰³⁰ The amendment allows for passengers to opt out of facial recognition, noting that “the current process without biometric data must be offered as an alternative for people who reject this.” While the legislature explores the possibility of expanding the use of this technology to customs and security screening,⁷⁰³¹ Zurich and Geneva airports, along with Aero Suisse, are advocating for streamlined biometric processing by removing the explicit consent requirement. These requests reflect the potential of a broader industry shift toward seamless, contactless passenger processing and the accompanying privacy and regulatory concerns.⁷⁰³²

Civil society organizations are campaigning hard for a ban on facial recognition in public spaces. Amnesty International, AlgorithmWatch CH, and the Digital Society are joined together⁷⁰³³ and launched a petition calling for a ban on automatic facial recognition and biometric mass surveillance in Switzerland.⁷⁰³⁴ The petition was signed by more than 10,000 people and has also led to effects at the political level.⁷⁰³⁵

Several local parliaments have discussed and even passed bans on facial recognition in public spaces. The St. Gallen city parliament agreed by a narrow margin to move toward a ban on facial recognition applications in public spaces in

September 2019, becoming the first city in Switzerland to do so.⁷⁰³⁶ The councils in Zurich,⁷⁰³⁷ Lausanne,⁷⁰³⁸ and the canton of Basel-Stadt⁷⁰³⁹ followed, each considering motions for a ban on facial recognition. Similar motions are in progress in other Swiss cities. In a national survey, 78% of parliamentary candidates supported such a ban.⁷⁰⁴⁰

Environmental Impact of AI

Switzerland aims to rely solely on renewable energy by 2050. The World Economic Forum sees “tremendous potential” in artificial intelligence to “help accelerate the global energy transition.”⁷⁰⁴¹ The Swiss government has tasked the Federal Office of Energy (SFOE) with monitoring and tackling the challenges AI poses for the energy industry, though no official policy or strategy has been announced.⁷⁰⁴²

Lethal Autonomous Weapons

Switzerland supports a two-tiered approach in international agreements related to Lethal Autonomous Weapons Systems (LAWS). The two-tiered approach would prohibit AWS that cannot be used in compliance with international law and international humanitarian law in terms of reliability or the extent or timing of the use of the force. For weapons that can be used in compliance, Switzerland supports regulation focused on “risk mitigation, including a positive obligation to uphold

human control and imposing limitations on weapon parameters and deployment contexts, all while considering military, security policy, and ethical considerations.”⁷⁰⁴³

In comments to the UN Secretary-General for the report on LAWS, Switzerland underlined support for the Convention on Certain Conventional Weapons (CCW)’s Group of Governmental Experts (GGE) on LAWS to “consider and formulate elements of an instrument on AWS by 2026 at the latest.”⁷⁰⁴⁴ The statement acknowledges the potential benefits and opportunity of AI and autonomous weapons in the armed forces, noting “autonomy can provide advantages, including improved safety and efficiency.” However, Switzerland reiterates that these benefits must be weighed against the necessity for strict adherence to international humanitarian law, with a focus on human control over decisions involving the use of force.

AI Literacy

The Education and Skills domain on Switzerland’s Digital Strategy 2026⁷⁰⁴⁵ defines a goal for “people, businesses and public authorities have sufficient skills to make the most of new technologies and are able to evaluate them critically.” The Strategy indicates 45% of the population had advanced digital skills in 2025. A number of initiatives under the strategy⁷⁰⁴⁶ target building basic digital skills, largely focused on the workplace with some attention to advanced AI skills to support research and development. The Competence Network for AI serves as a resource for employees in the public sector with Guidelines and Factsheets covering the use of AI tools in the federal government⁷⁰⁴⁷ and a contact point to respond to AI-related issues.

Human Rights

Switzerland is a signatory to many international human rights treaties and conventions. Switzerland typically ranks among the top nations in the world for the protection of human and political rights. Freedom House scored Switzerland 96/100

in 2024,⁷⁰⁴⁸ unchanged from 2021,⁷⁰⁴⁹ and noted that “Political rights and civil liberties are generally respected, though laws and policies adopted in recent years have reflected a growing wariness of immigration and ethnic minority groups, whose members face societal and systemic discrimination.”

Guaranteeing human rights is also one of Switzerland’s key goals for the Council of Europe’s AI framework.⁷⁰⁵⁰ As the Federal Council noted in a press release ahead of negotiations in 2022, “The new legal framework should regulate the negative effects of artificial intelligence rather than the technology itself. It is also important to foster innovation while guaranteeing human rights, including data protection.” Switzerland’s endorsement of the Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law in 2025 and plans to ratify reinforce the country’s commitment to regulate AI impacts while protecting fundamental rights and democracy.⁷⁰⁵¹

AI Safety Summit

Switzerland participated in the first AI Safety Summit and endorsed the Bletchley Declaration in November 2023.⁷⁰⁵² Switzerland thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

The second AI safety Summit was a primarily virtual event co-hosted by Britain and South Korea with in-person events in Seoul. Swiss Ambassador Benedikt Weschsler, head of digitalization at the department of foreign affairs, attended the

event in-person.⁷⁰⁵³ Switzerland signed the Seoul Declaration, committing to safe, innovative, and inclusive AI.⁷⁰⁵⁴

The third AI Safety Summit took place in February 2025 in Paris, France.⁷⁰⁵⁵ Federal Councillor Albert Rösti participated and emphasized AI opportunities and risks. Rösti proposed hosting a future AI summit in Switzerland, possibly in Geneva,⁷⁰⁵⁶ to highlight the country's potential in AI governance and innovation. Switzerland endorsed the AI Action Summit outcome Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet.⁷⁰⁵⁷

OECD / G20 AI Principles

Switzerland endorsed the G20 AI Guidelines / OECD AI Principles⁷⁰⁵⁸ as a member of both organizations. Switzerland's participation in the Global Partnership on Artificial Intelligence (GPAI)⁷⁰⁵⁹ supports implementation of these principles. The OECD notes Switzerland's active involvement in relevant international organizations and processes as evidence of progress on implementation of the principles. In a report on AI policies, the G20 Digital Economy Task Force noted that "Particularly important for Switzerland is to ensure that fundamental and established values and norms such as human rights are respected and that all relevant stakeholders are involved in decision-making."⁷⁰⁶⁰

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Council of Europe AI Treaty

Switzerland contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI and Human Rights, Democracy, and the Rule of Law. Switzerland chaired the Council of Europe Committee on AI. However, the Swiss neutrality was questioned. According to an article published in the Swiss press, Switzerland prioritized the potential global reach of the Convention at the expense of the Council of Europe's human rights standards.⁷⁰⁶¹ Switzerland signed the treaty in 2025⁷⁰⁶² and tasked federal agencies to draft a bill for consultation by the end of 2026.⁷⁰⁶³

UNESCO Recommendation on AI Ethics

Switzerland is a member of UNESCO and as such supported the adoption of the UNESCO Recommendation of the Ethics of AI. In his speech before the 41st session of the General Conference of UNESCO, Federal Councilor Ignazio Cassis emphasized "Switzerland's unwavering commitment to encouraging respect for fundamental rights" and "support for the recommendation on the ethics of artificial intelligence."⁷⁰⁶⁴

Despite not yet having AI-specific legislation, Switzerland has shown a commitment to upholding fundamental rights through the Digital Switzerland Strategy and other initiatives. Switzerland has not initiated UNESCO's Readiness Assessment Methodology (RAM) to help ensure ethical implementation of AI.⁷⁰⁶⁵

Evaluation

Switzerland has established a national set of guidelines on AI ethics aimed at the public administration. Further, most reports and initiatives consider, integrate, and implement ethics in the government's work on AI policy. The Federal Council announced that its approach to issuing a firm mandate for an AI regulatory project in

2025 will be based on a report analyzing existing Swiss law.⁷⁰⁶⁶ The project will define responsibilities with the goal of drafting national AI regulations, though the Council has indicated they will likely reserve cross-sectoral policies for areas requiring protections for fundamental rights like data protection.

In recent years, initiatives on the federal as well as the cantonal level demonstrate, that the topic of AI policy is picking up speed in Switzerland. With the Federal Department of Foreign Affairs 2022 report and Switzerland's contributions to and endorsement of the Council of Europe AI framework, the country's ambitions for AI policy that supports technological development compatible with human rights are clear. However, there is no clear regulatory strategy for the private sector. The ethics guidelines for public administration signal a step toward implementation of the UNESCO Recommendation combined with the history of commitment to human rights despite lack of progress on UNESCO tools such as the RAM. Switzerland's educational efforts and programs such as the Competence Network for AI align to the OECD AI Principles. Ratification of Convention 108+ solidified algorithmic transparency.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Taiwan

In 2025, the Taiwan Legislative Yuan passed the Artificial Intelligence Basic Act, which entered into force in January 2026. The Legislative Yuan also adopted amendments to the Personal Data Protection Act to formally establish the Personal Data Protection Commission as Taiwan's independent data protection authority.

National AI Strategy

In 2018 the Government of Taiwan officially introduced its four-year AI Action Plan, which aims to propel Taiwan “into the ranks of the world's leading smart nations.”⁷⁰⁶⁷ “Guided by the principles of deregulation, open access and technology investment,” the AI Action Plan is designed to “sharpen Taiwan's advantages, prioritize innovation and real-world implementation, and develop software and hardware in tandem, thereby injecting greater momentum into Taiwan's industries.”

To this end, the Action Plan focuses on five action areas: 1) developing AI talent; 2) promoting Taiwan's lead role in AI by expanding its world-leading position in the semiconductor chip industry; 3) building Taiwan into an AI innovation; 4) liberalizing laws and opening test grounds to ease restrictions on innovative technologies; and 5) Transforming industry with AI.

The AI Action Plan follows on the five-year AI strategy developed by the Ministry of Science and Technology (MOST),⁷⁰⁶⁸ now known as the National Science and Technology Council (NSTC), to “cultivate AI technology specialists and create an environment for AI scientific research.” This “Grand Strategy for a Small Country”⁷⁰⁶⁹ builds on Taiwan's “strengths and potential advantages, such as semiconductors and information and communications technology.”

The AI Strategy aims to “develop select fields for the future, including the internet of things, security solutions and driverless vehicles” and has five “key facets”: 1) R&D services with the creation of an AI cloud service and high-speed computing platform; 2) Value-added innovation with the establishment of four AI innovation research centers; 3) Creativity and practice with an AI Robot Makerspace; 4) Industrial pilot program with an AI semiconductor “moonshot” project; and 5) Social participation with three Formosa Grand Challenge technology competitions

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

to uncover talent, develop technology, and stimulate creativity. Ethical questions are also targeted in Taiwan as one of the many aspects related to AI.⁷⁰⁷⁰

The Executive Yuan announced the Taiwan Artificial Intelligence (AI) Action Plan 2.0 in June 2023⁷⁰⁷¹ to run from 2023 through 2026. The emphasis of the AI Action Plan 2.0 is Human-Centered AI, with a focus on the following five main tasks:⁷⁰⁷²

- Optimize and expand the AI talent pool
- Expand the country's AI software and core chip technology
- Build connections with international AI companies to build Taiwan as an innovation hub
- Create an innovation-friendly legal environment
- Embed AI talent to transform industry

These developments have since been consolidated in the Artificial Intelligence Basic Act,⁷⁰⁷³ which provides a legislative foundation for Taiwan's human-centered AI governance framework.

AI Core Values

Taiwan's AI Technology R&D Guidelines were announced in September 2019, "in a bid to create a reliable environment conforming to international trends of AI R&D and to provide directions for Taiwan AI researchers to follow."⁷⁰⁷⁴ When presenting the Guidelines, Minister Chen Liang-gee said that his ministry "has the responsibility of helping humans be able to trust" AI⁷⁰⁷⁵ and that "those who provide

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

digital tools must be ethical.”⁷⁰⁷⁶ He also explained that the whole world is still watching the evolution of artificial intelligence and that it is right now “more appropriate to adopt guidelines than sanctions.”

The AI R&D Guidelines are based on three core values:⁷⁰⁷⁷ Human-centered, Sustainable development, and Diversity and inclusion. The guidelines are 1) Common good and well-being; 2) Fairness and non-discrimination; 3) Autonomy and control; 4) Safety; 5) Privacy and data governance; 6) Transparency and traceability; 7) Explainability; and 8) Accountability and communication.

“Human-centered AI” for Taiwan AI start-up iKala means the involvement of people in AI development and applications, as well as the creation of ethical, humane AI. As an illustration, iKala Co-founder and CEO Cheng cites the example of an innovative picture-as-a-service (PicaaS) technology, which automatically edits product pictures to allow companies to circulate clean photos of their products. However, following complaints that the product could potentially be used to infringe on image owners’ intellectual property rights, Cheng and his team re-trained the software to recognize and reject copyrighted images. “That’s the kind of responsible AI we want to be working on,” says Cheng. “Putting humans in the equation—not just stealing and not just replacing people.”⁷⁰⁷⁸

The AI Basic Law as introduced in 2024 aims to reinforce these core values.⁷⁰⁷⁹ The legal framework would help to ensure that AI development and application align with human rights and democratic principles.⁷⁰⁸⁰

Smart Country Program (2021–2025)

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

As part of the Smart Country Program, Taiwan inaugurated the Ministry of Digital Affairs (MoDA) in August 2022. According to Minister Audrey Tang, MoDA “is aimed to build digital resilience for all, connect the digital technologies with civil affairs, strengthen industrial competitiveness and cybersecurity practices, accelerate social digital development and realize the vision of a smart country.”⁷⁰⁸²

MoDA is responsible for promoting Taiwan’s overall digital policy innovation and reform. Major digital development policies include holding deliberative assemblies⁷⁰⁸³ to determine the development direction of AI policy. The assemblies provided opportunities for public participation and informed the Executive Yuan in drafting the Basic Law on Artificial Intelligence.⁷⁰⁸⁴

Taiwan’s National Science and Technology Council (NSTC) announced a draft Artificial Intelligence (AI) Basic Law in September 2024.⁷⁰⁸⁵ This draft represents Taiwan’s commitment to advancing a “human-centered AI ecosystem” where research, development, and application of AI safeguard the essential dimensions of life, health, and safety, while preserving citizens’ rights, national welfare, cultural values, and societal resilience.⁷⁰⁸⁶

The Artificial Intelligence Basic Act, adopted in December 2025 and effective from January 2026, is guided by 7 basic principles: 1) Sustainable development and well-being, 2) Human autonomy, 3) Privacy Protection and Data Governance, 4) Security and safety, 5) Transparency and explainability, 6) Fairness and non-discrimination, and 7) Accountability. Governance provisions within the Act are intended to ensure that AI “supports human agency, safeguards fundamental rights, and reflects Taiwan’s cultural heritage,” all while fostering an environment of accountability and transparency.⁷⁰⁸⁷

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Public Participation

One of the key goals of DIGI+ is to further participatory democracy.⁷⁰⁸⁸ The 2021 Taiwan Open Government National Action Plan goes in the same direction and aims at “deepening democratic values and strengthening international ties,” applying technology toward furthering government transparency and increasing public participation in government policies.⁷⁰⁸⁹

For the last few years, Taiwan has organized public debates via the citizen-run vTaiwan platform.⁷⁰⁹⁰ vTaiwan’s (for Virtual Taiwan) algorithms highlight where there is consensus in a debate while minimizing the voices at the most extreme ends.⁷⁰⁹¹ This system is officially and routinely part of the law-making process of Taiwanese institutions, involving thousands of citizens in varying degrees.⁷⁰⁹² The outcomes of vTaiwan have been put in front of Parliament by government to form the core of 11 laws and regulation, with eight more on everything from revenge porn to fintech regulation still pending.

The vTaiwan process is giving weight to the citizen voice and has led to regulatory innovations at four stages: (1) informing the public; (2) collecting the strategic approaches through Polis,⁷⁰⁹³ an open-source self-learning algorithm; (3) deliberating; and (4) observing decision-making.⁷⁰⁹⁴

“When people started using Polis, we found that it became a consensus-generating mechanism,” co-founder Colin Megill told *Wired*.⁷⁰⁹⁵ To bring the groups closer together, Polis has reengineered many of the features we take for granted on social media. No reply button, hence no trolling. No echo-chambers, replaced by an attitudes map showing you where you are in relation to everyone else. The statements

that get attention are those that find support not only in one cluster, but across other groups, too.

The MoDA partnered with the international nongovernmental organization Collective Intelligence Project (CIP) to participate in the Alignment Assemblies project in May 2023 to ensure the governance and application of artificial intelligence is consistent with the people's interests.⁷⁰⁹⁶ The first Alignment Assembly focused on Democratizing AI Futures. The second focused on Utilizing AI to Enhance Information Integrity. These activities are recognized as innovative policy making ⁷⁰⁹⁷ processes.

The MoDA anticipates that these alignment assemblies will provide critical information to policymakers and technology developers through the CIP⁷⁰⁹⁸ pilot demonstration to ensure that the AI Basic Act and AI development is consistent with the interests of the people.

The public release of the General Explanation and Provisions of the Draft Basic Law on Artificial Intelligence⁷⁰⁹⁹ by the NTSC provided a meaningful opportunity for public participation. There was a sixty-day period for anyone to comment on the draft AI Basic Law, including CAIDP. ⁷¹⁰⁰ Minister Lang has also stated that the MoDA will be involved in the development of the AI Basic Law. ⁷¹⁰¹

In comments on the AI Basic Law, the Center for AI and Digital Policy (CAIDP) commended Taiwan for centering the draft law on human rights and democratic values.⁷¹⁰² However, CAIDP recommended that Taiwan establish red lines to prohibit practices that violate privacy laws and require protections such as human and civil rights impact assessments, algorithmic transparency, and human oversight and control, including a termination obligation if the system fails to uphold rights.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Fair Trade Commission released a Public Consultation Paper on Generative Artificial Intelligence and Competition to better understand the structure of AI-related supply chains and market dynamics, reflecting the ongoing efforts of regulatory authorities to promote public participation in AI policymaking.⁷¹⁰³

Data Protection

Personal data protection in Taiwan is essentially subject to the 2015 Personal Information Protection Act (PDPA), which applies to the public and private sectors.⁷¹⁰⁴ The 2016 Enforcement Rules of the Personal Data Protection Act supplement the original.⁷¹⁰⁵ Local and national government authorities enforce the Act.

The Personal Data Protection Office was originally established under the National Development Council was established on July 4, 2018⁷¹⁰⁶ to ensure a coherent enforcement of the PDPA, in part to align Taiwanese policy with the GDPR. In response to the Constitutional Court ruling the PDPA unconstitutional because of the lack of an independent authority,⁷¹⁰⁷ the Taiwan Legislative Yuan passed amendments to the Personal Data Protection Act in May 2023, including the provision that the competent authority of the PDPA is the Personal Data Protection Commission (PDPC).⁷¹⁰⁸ The Preparatory Office of the PDPC was established in December 2023. Following the Legislative Yuan's adoption of further amendments to the PDPA in October 2025, the PDPC has now been formally established as Taiwan's independent supervisory authority for personal data protection.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The PDPC is not a member of the Global Privacy Assembly (GPA)⁷¹⁰⁹ and thus has endorsed no AI-relevant resolutions.

Algorithmic Transparency

The PDPA regulates “the collection, processing and use of personal data so as to prevent harm on personality rights, and to facilitate the proper use of personal data.”⁷¹¹⁰ The PDPA covers data retrieval and management by automated and non-automated means. However, the PDPA does not provide for algorithmic transparency or mention automated decisions or algorithms.⁷¹¹¹

While the AI Basic Law seeks to address this gap by including provisions related to transparency and traceability, the language is vague.⁷¹¹² As written, the draft law does not include clear and enforceable requirements for algorithmic transparency and explainability to ensure that users are always informed when they are interacting with AI systems and are provided with clear and valid reasons for decisions affecting them.

The 2019 AI Technology R&D Guidelines identify “transparency and traceability,” as well as “explainability” as “core AI values.” The Artificial Intelligence Basic Act formally establishes transparency and explainability as guiding principles for AI development. This legally recognizes the necessity of algorithmic traceability and the user's right to understand automated decisions. It signifies a substantial regulatory move towards codified algorithmic governance, even before the introduction of explicit enforcement standards for automated decision-making.

Medical Data and AI Ethics

Research projects on AI Ethics in the medical and biomedical areas are ongoing with government support. One such project examines the Ethical, Legal, and Societal Issues Surrounding Artificial Intelligence-Assisted Medical Care (ELSI-AIM),⁷¹¹³ This project includes four subprojects: (1) The deliberation of ethical issues on artificial intelligence-assisted medicine; (2) legal and policy implications

of artificial intelligence in medicine; (3) the implications of societal issues on artificial intelligence-assisted end-of-life physician-patient communication: opportunities and challenges; and (4) artificial intelligence-based medicine assisted system from analytical design to practical application. The project is still in literature review and planning phases.

The Taiwan Biobank created in 2012 is a repository of tissues/information but is not allowed to carry out research directly. Information on participants, all voluntary, whose samples are included in the biobank will link several sources of data: national identification number, National Health Insurance system, cancer registry, and cause of death registry. Biobank operations are regulated by detailed legislation.

Current discussions focus on how the Taiwan Biobank can be transformed by leveraging digital technologies. For some, greater participant engagement and the uptake of Information Technology and AI applications can be used in partnership with vertical and horizontal integration as part of a four-pronged approach to promote biobank sustainability and facilitate the biobank's transformation.⁷¹¹⁴

Others seem more cautious,⁷¹¹⁵ pointing to key issues raised by the current ethical governance of the Taiwan Biobank, namely i) the handling of ethnicity, including the special requirements that it imposes with respect to obtaining participant consent, and ii) transparency (and accountability) around governance. Taiwan Biobank established an Ethics and Governance Council (EGC) to act as an independent guardian of the Ethics and Governance Framework, and to advise the Competent Authority (the MOHW) on its revision from time to time.⁷¹¹⁶

COVID-19 and Big Data Analytics

In January 2020, Taiwan integrated its national health insurance database with its immigration and customs database to begin the creation of big data for analytics and allow case identification by generating real-time alerts during a clinical visit based on travel history and clinical symptoms.⁷¹¹⁷

⁷¹¹⁴ Jui-Chu Lin, Wesley Wei-Wen Hsiao, and Chien-Te Fan, *Transformation of the Taiwan Biobank 3.0: Vertical and Horizontal Integration*, Journal of Translational Medicine 18, no. 1, p. 304 (Aug. 16, 2020), <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7406956/>

Center for AI and Digital Policy

“The combination of these two sets of data allows us to generate alerts to tell healthcare staff when a patient returns from a risk area,” said Yu-Lun Liu, doctor in the intelligence department of the Taiwan Center for Disease Control (CDC). The identified patients are then treated through a separate circuit, limiting contact with other patients.⁷¹¹⁸ To strengthen this new dataset, the authorities are “working with telephone providers, on the basis of roaming data, to identify people whose last stopover is not necessarily an area at risk, but who have made trips with stops in areas affected by the epidemic.” The authorities are developing a model for processing public video surveillance images to estimate the proportion of masked people. “This artificial intelligence-based model has allowed us to see a rapid increase in the number of people wearing masks. We have chosen to stop their export and increase local production,” recalls Yu-Lun Liu.

In March 2020, the BBC reported that when the phone belonging to an American University student in Taiwan, who was subject to 14 days quarantine after returning from Europe, ran out of battery power, in less than an hour he had received phone calls from four different local administrative units, a text message notifying him he would be arrested if he broke quarantine, and a visit from two police officers. The phone tracking system uses phone signals to triangulate locations of the more than 6,000 people subject to home quarantine; an alert was sent to the authorities if the phone is turned off for more than 15 minutes.⁷¹¹⁹

Autonomous Vehicles

In November 2018, the Legislative Yuan passed the Act for Unmanned Vehicle Technology Innovative Experiments, which was enacted by the President in December 2018. Entered into force in May 2019, the Act frees autonomous vehicles and drones from the limits of some traffic regulations in their test runs.⁷¹²⁰ Moreover, the regulations specifically call for AI-boosted algorithmic unmanned platforms.⁷¹²¹

Taiwan CAR (Connected, Autonomous, Road-test) Lab,⁷¹²² the nation's first closed field for testing self-driving cars, also opened for use in 2019.

The Ministry of Economic Affairs (MOEA) inaugurated Southeast Asia's first Intelligent Vehicle and Autonomous Driving Proving Ground in 2025. The Ground features all-weather, full-speed, and all-vehicle testing capabilities, at the domestic Automotive Research & Testing Center (ARTC).⁷¹²³

AI in HealthCare

Taiwan is leading the way in smart healthcare through the Ministry of Health and Welfare's Department of Information Management, which has established three national AI centers: the Center for Responsible AI in Healthcare, the Center for External AI Validation in Healthcare, and the Center for Clinical AI Impact Evaluation.⁷¹²⁴ These centers were created to address three major challenges in clinical AI: real-world implementation, regulatory approval by the TFDA, and reimbursement by the National Health Insurance.

Facial Recognition

Facial recognition has been implemented in Taiwan across various sectors, including banks,⁷¹²⁵ retail stores,⁷¹²⁶ airports,⁷¹²⁷ and law enforcement.⁷¹²⁸ In June 2019, the Taiwan Railways Administration announced that, due to privacy concerns, its surveillance system trial would no longer apply facial recognition technology.⁷¹²⁹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In 2019, Liao Wei-min, an associate professor at Taiwan National Chung Hsing University's Department of Law called for legislation limiting facial recognition and similar private data collection. "What is essentially a beneficial technology is deeply problematic given the lack of precise and targeted legislation, and this is the fault not of civil servants, but their politically appointed masters. Something needs to be done to address this."⁷¹³⁰ As yet, however, there have been no formal proposals by Taiwan's government to protect citizens from the risks of facial recognition used for surveillance.

EdTech and Children Tracking

A recent report from Human Rights Watch⁷¹³¹ highlighted a practice exacerbated by the need for virtual learning during the COVID-19 pandemic by which educational technology governments required students to use shared children's personal data with advertising technology companies. Taiwan-based technology companies produce several of the educational technology and advertising technology products implicated by the report. Additionally, Taiwan's government produced three of its own, proprietary educational technology products that transmitted personal data about children to advertising technology companies. As the report notes, by making it compulsory for children to use this technology to access public education, these governments not only subjected children to potential exploitation of their data but also left no alternative for children and families to opt out of this privacy infringement.

Lethal Autonomous Weapons

Taiwan is not a member of the United Nations and thus was not a party to the UN's October 2022 Joint Statement on Lethal Autonomous Weapons. The Taiwan government has not taken a formal policy position on the application of these lethal technologies.

⁷¹³⁰ Liao Wei-min, *Legislation Needed for Advances in Surveillance*, Taipei Times (Dec. 28, 2019), <http://www.taipeitimes.com/News/editorials/archives/2019/12/28/2003728301>

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Environmental Impact of AI

In Taiwan's AI Basic Law, Sustainable Development is the first of seven key principles.⁷¹³² The principle stipulates that the research and use of AI should be human-oriented, with the goals of benefiting the people and promoting sustainable development. Referencing the G7 Hiroshima Process Code of Conduct for Organizations Developing Advanced AI Systems,⁷¹³³ AI stakeholders shall engage in responsible AI management to benefit humanity and the planet. The Act focuses on promoting social fairness and a sustainable environment. With the adoption of the Artificial Intelligence Basic Act in late 2025, sustainable development is now embedded as a binding principle in Taiwan's AI governance framework, aligning Taiwan's approach with international trends and guidelines for responsible AI development.

The Ministry of Environment (MOENV) has officially approved the charging rates of carbon fees (Fee-Charging Rates of Carbon Fees).⁷¹³⁴ The primary objective of imposing carbon fees is to encourage greenhouse gas reduction.

Human Rights

Taiwan is ranked by Freedom House as a global leader in its protection of human rights and transparency, with a combined score for political and civil liberties of 94 out of 100.⁷¹³⁵ This rating underscores Taiwan's robust protection of political rights (38 out of 40) and civil liberties (56 out of 60), positioning it second in Asia behind Japan and tied for seventh globally with nations like Iceland and the Czech Republic. Taiwan's Human Rights Commission⁷¹³⁶ continues to provide national oversight.

Although internet freedom in the Asia-Pacific Region declined overall in 2025,⁷¹³⁷ Taiwan's score remained at 79 out of 100, the highest internet freedom ranking in Asia and seventh globally. Freedom House characterizes Taiwan as "one

of the most open online environments in the world,” noting that an independent judiciary protects free expression and that civil society, the technology sector, and the government have taken innovative action to counter disinformation campaigns originating from China.”⁷¹³⁸ Freedom House notes that a prominent concern threatening the continuation of these liberties relates to “the Chinese government’s efforts to influence policy-making, the media, and democratic infrastructure in Taiwan.”⁷¹³⁹

In April 2022, the Executive Yuan authorized the establishment of the Department of Human Rights and Transitional Justice under its authority and approved the first national action plan on human rights that May. In the announcement, Premier Su Tseng-chang pointed out that “to date, Taiwan has created its own laws to implement five of the United Nations’ nine core international human rights instruments” and issued national reports addressing their implemented.

The human rights action plan lays out open and transparent procedures and involves widespread participation by government, civic groups, and scholars and experts from all sectors “to reconcile and align the nation’s policies to human rights values.” The plan includes efforts such as those “to prevent digital technologies from violating human rights” among the actions and indicators designed to address emerging human rights issues in addition to “striving for equality and nondiscrimination against vulnerable groups such as children and youth, the elderly, mentally or physically disabled people, indigenous peoples, migrant workers and the LGBTI community.”⁷¹⁴⁰

AI Literacy

In 2025, Taiwan launched an AI literacy initiative focused on providing AI training for civil servants enhance public-sector efficiency, innovation, and digital governance as the country integrates artificial intelligence into e-government services.⁷¹⁴¹

OECD / G20 AI Principles

Although Taiwan is not an OECD member country, many of its AI policies align with the OECD AI Principles. The Ministry of Science and Technology noted

in the announcement of the AI Technology R&D Guidelines that “many countries and organizations have established ethical standards for AI R&D, such as the EU's Ethics Guidelines for Trustworthy AI, OECD's Principles on Artificial Intelligence and IEEE's Ethically Aligned Design-Version II.”⁷¹⁴²

Taiwan AI Labs and Taiwan Federated Learning were invited to participate in the 2021 Global Partnership on AI (GPAI) Annual Meetings,⁷¹⁴³ a demonstration of Taiwan's international influence.

Council of Europe AI Treaty

Taiwan is not an EU member state. Taiwan's unique geopolitical status precludes participation in this legally binding international AI Treaty.⁷¹⁴⁴

UNESCO Recommendation on AI Ethics

Taiwan has not been a member of the United Nations since 1971, when it was expelled via United Nations Resolution 2758, in deference to the People's Republic of China, which was henceforth recognized as “the only legitimate representative of China to the United Nations.”⁷¹⁴⁵ Taiwan is not a party to the UNESCO Recommendation on the Ethics of AI.

Evaluation

While Taiwan's unique geopolitical status precludes its formal membership in organizations like UNESCO, the OECD, and the EU, its AI policies demonstrate a strong alignment with international trends, frameworks, and guidelines for AI development and deployment. The AI Basic Law emphasizes human-centered AI and democratic values, showing progress in policy development.

Taiwan upholds human rights by endorsing the Universal Declaration of Human Rights (UDHR)⁷¹⁴⁶ and establishing an independent National Human Rights

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Tanzania

In 2025, the report on Tanzania's UNESCO Readiness Assessment Methodology (RAM) was published. The country also progressed on a draft of the Artificial Intelligence Strategy Framework.

National AI Strategy

Tanzania's approach to Artificial Intelligence centers on a values-based AI Governance structure. The enablement of the Personal Data Protection Act (2022) specifically focused on AI and other emerging technologies.⁷¹⁵⁰ Tanzania released a draft of Guidelines for the Secure and Ethical Use of AI in Tanzania in June 2024.⁷¹⁵¹ The UNESCO Readiness Assessment Methodology (RAM) report followed in 2025.⁷¹⁵² The Tanzania Digital Economy Strategic Framework 2024-2034⁷¹⁵³ and Tanzania Vision 2050 provide an overarching roadmap of digital technologies and AI deployment.⁷¹⁵⁴

The Guidelines for the Secure and Ethical Use of AI in Tanzania outline eight core AI principles to guide the development, deployment, and use of AI. These principles include Necessary, Valid, Proportionate, and Reliable use; Safe results and use; Managed Bias, likely through human oversight; Resiliency against cyberattacks; Transparency in use; Accountability of designers and deployers; Explainable and Interpretable outputs or results; and Privacy protections for data subject across the lifecycle.⁷¹⁵⁵

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The draft makes strong recommendations for institutions to use an AI Code of Ethics.⁷¹⁵⁶ The Code is not legally binding but provides guidelines for ethos and implementation, such as quality and ethical conduct, openness, fairness and inclusivity, and upholding ethical conduct across data pipelines.

As of February 2026, the National AI Strategy is in draft form.⁷¹⁵⁷ The draft Strategy outlines eight focus areas, including Establish AI governance, regulatory and standard frameworks to ensure a robust AI ecosystem among public and private stakeholders; Embed inclusion and accessibility in AI development and deployment to ensure awareness and access to marginalized groups and minimize historical biases and social inequalities; and Establish a robust AI data governance framework to ensure data required to train AI systems is of high quality, accessible, fair, and inclusive.⁷¹⁵⁸ The draft takes into account the international frameworks, such as UNESCO AI Ethics Framework and the UN Global Digital Compact, AU Continental AI Strategy, as well as OECD initiatives and Global Partnership of AI (GPAI) as part of the Global Context for the national strategy.⁷¹⁵⁹

Government engagement on developing the National AI Strategy continues largely through workshops and stakeholder consultations led by the Ministry of Information, Communication, and Information Technology (MCIT) and UNESCO-supported national dialogues. The MCIT announced in September 2025 that it was in the final stages of preparing a national guideline for the responsible use of AI.⁷¹⁶⁰

Public Participation

Tanzania has taken steps to engage in public and stakeholder consultation in AI policymaking, primarily through consultative forums, national dialogues, and stakeholder engagement. However, formal consultation processes for providing comments to AI policy initiatives are limited.

In February 2025, UNESCO organized national AI consultations in Dar es Salaam and Zanzibar to bring together policymakers, technology experts, academia, civil society, and private sector institutions to assess the country's preparedness for

Center for AI and Digital Policy

AI adoption.⁷¹⁶¹ During these consultations, participants emphasized the need for strong AI policies and regulations, investments in AI literacy and training programs, strengthening digital infrastructure, and the need for ethical AI implementation. In March 2025, the Tanzania Tech and Media Convergence launched the Media and AI Report, which stemmed from UNESCO's International Programme for the Development of Communication.⁷¹⁶² Policymakers, AI experts, media professionals, and academics attended the launch. The participants highlighted the need for capacity-building initiatives, regulatory frameworks, and collaborative opportunities between media and tech industries to harness AI's benefits while also recognizing the risks involved. Further, the Information and Communications Technologies Commission (ICT) set up the first Tanzania Artificial Intelligence Forum in July 2025 to facilitate stakeholder dialogue on AI technology. The forum is supposed to meet every July of the year to provide a comprehensive overview of AI issues and their societal impacts, while also providing a platform to discuss policy challenges.⁷¹⁶³

In terms of public access to government initiatives, the draft National AI Strategy⁷¹⁶⁴ and draft Guidelines for the Secure and Ethical Use of Artificial Intelligence are publicly available.⁷¹⁶⁵ While both acknowledge stakeholder involvement, no specific procedures for submitting public comments are outlined.

Data Protection

The Personal Data Protection Act (PDPA) 2022 was passed by the National Assembly of Tanzania. The Personal Data Protection Commission was established as an implementation measure to oversee the protection of data on the same day the PDPA entered into force in 2023.⁷¹⁶⁶

The PDPA is designed to protect privacy and personal data as a baseline safeguard for people by establishing “minimum requirements” for

⁷¹⁶¹ UNESCO, *UNESCO Supports Consultations for AI Readiness Assessment in Tanzania* (Mar. 21, 2025), <https://www.unesco.org/en/articles/unesco-supports-consultations-ai-readiness-assessment-tanzania>

collection/processing, improve protection in public/private bodies, and establish the Commission).⁷¹⁶⁷ The Commission's functions include monitoring compliance, registering controllers/processors, receiving and investigating complaints, taking measures on matters affecting protection/privacy, public education, research and monitoring of tech developments, international cooperation and advising the government on implementation. The Act's core protections guarantee that personal data is processed in line with data subject rights.

Tanzania's Personal Data Protection Commission is not an accredited member of the Global Privacy Assembly (GPA) so has not sponsored AI-related GPA resolutions.⁷¹⁶⁸

Algorithmic Transparency

Tanzania's current approach to algorithmic transparency is primarily policy-based rather than rights-based. The draft National AI Strategy and AI Readiness Assessment emphasize transparency, explainability, and human oversight as governance objectives, but these principles are articulated as aspirational goals rather than enforceable legal rights.⁷¹⁶⁹ Tanzanian law does not currently recognize a specific, sanctionable right to algorithmic transparency or explanation in relation to AI-driven decision-making.

This gap has been acknowledged within the legal system. The High Court of Tanzania has called for updates to the Personal Data Protection Act (PDPA) to address persistent weaknesses in data protection and oversight,⁷¹⁷⁰ highlighting the need for stronger safeguards as automated and data-driven systems expand in public and private decision-making.

Tanzania's reliance on policy instruments and soft law leaves significant limitations on the enforceability of transparency and human oversight protections in AI systems. While the Personal Data Protection Act 2022 allows individuals to request that significant decisions are not made solely through automated processing, it does not establish a binding right to be notified of automated decision-making, to

Center for AI and Digital Policy

receive a meaningful explanation of algorithmic outcomes, or to directly challenge and seek remedies for such decisions. As a result, protections related to algorithmic transparency remain fragmented and largely discretionary, falling short of emerging international standards that frame transparency and contestability as core individual rights.

Environmental Impact of AI

Tanzania does not have AI-specific legislation addressing the environmental impacts of artificial intelligence. Environmental risks associated with AI-related infrastructure, including data centres, telecommunications facilities, and electronic equipment, are instead regulated through the general environmental framework under the Environmental Management Act and the Environmental Impact Assessment (EIA) and Audit Regulations, administered by the National Environment Management Council (NEMC).⁷¹⁷¹ Amendments to the EIA Regulations in 2024 integrate climate considerations into environmental assessments, which may apply to energy-intensive digital infrastructure supporting AI systems.⁷¹⁷² In parallel, the National ICT Policy identifies electronic waste as a growing concern and promotes e-waste management systems and the use of green energy technologies for ICT infrastructure.⁷¹⁷³ Stakeholder consultations conducted as part of Tanzania's National AI Readiness Assessment have nonetheless highlighted the absence of AI-specific environmental guidance and recommended that AI-related energy use, data-center siting, and electronic waste be more explicitly addressed within the EIA framework.⁷¹⁷⁴

Lethal Autonomous Weapons

Tanzania is not a party to the Convention on Certain Conventional Weapons (CCW).⁷¹⁷⁵ Tanzania has not participated directly in CCW negotiations or the expert

group processes on Lethal Autonomous Weapons Systems (LAWS), and therefore has no formal ratification obligations under the CCW framework.

Tanzania has expressed support at the United Nations for collective international action to address the challenges posed by autonomous weapons systems. In December 2023, Tanzania voted in favor of UN General Assembly Resolution 78/241 on LAWS, which calls for preparation of a report reflecting member and observer state views on autonomous weapons and the role of humans in the use of force, signaling support for advancing multilateral discussion and a legally binding instrument on autonomous weapons systems.⁷¹⁷⁶ As part of the African Group and the Non-Aligned Movement (NAM), Tanzania aligns with blocs that advocate negotiating a legally binding instrument on autonomous weapons systems rather than treating them as purely technological developments.⁷¹⁷⁷

AI Literacy

Tanzania's emerging AI policy framework treats AI literacy as a strategic enabler of responsible and inclusive digital transformation. The framework focuses on soft-law instruments and does not guarantee accessible AI education for all. Tanzania's AI Readiness Assessment identifies low digital and AI awareness as a key vulnerability.⁷¹⁷⁸ The Assessment warns that without broad-based skills and civic understanding AI adoption could deepen inequalities and concentrate benefits among already advantaged groups. The draft National AI Strategy frames AI and data literacy as cross-cutting priorities for workforce development and education, urging national skills-building programs, teacher training, and creation of locally relevant content, but it leaves implementation details and sustained funding largely undefined.⁷¹⁷⁹ The Ministry of Communications and Information Technology's Ethical AI Guidelines require institutions to educate staff on AI risks, ethics, bias, privacy, and security, echoing UNESCO's focus on transparency, accountability, and human-rights-aligned AI. The guidelines position AI literacy as a prerequisite for

Center for AI and Digital Policy

trustworthy deployment in both public and private sectors.⁷¹⁸⁰ Despite this principled alignment with UNESCO’s ethics framework, Tanzania still does not guarantee an enforceable right to AI literacy or access to structured, rights-anchored AI education.

Tanzania’s Ministry of Education, Science and Technology has issued the National Guidelines for Artificial Intelligence in Education, a non-binding but detailed policy framework that promotes ethical, secure, and inclusive use of AI in education by integrating AI and digital literacy into curricula, clarifying institutional responsibilities and risk management, protecting data privacy, and encouraging participatory development of AI tools that reflect local languages, cultures, accessibility needs, and international norms, while advancing sectoral implementation of fairness, transparency, and learner protections. However, these guidelines do not create a legally enforceable right to AI literacy and do not guarantee adequately funded AI education, particularly for rural and marginalized learners.⁷¹⁸¹

Human Rights

Tanzania is a signatory to the Universal Declaration of Human Rights (UDHR). The UDHR provisions guaranteeing equality, non-discrimination, and fundamental freedoms are enshrined in Tanzania’s 1977 Constitution. However, despite legal frameworks, serious human rights issues persist, including violations of freedom of expression, peaceful assembly, enforced disappearances and excessive force. Freedom House rates Tanzania as “Not Free” with an overall score of 35/100.⁷¹⁸² According to the 2025 Freedom in the World report, Tanzania’s status declined from “Partly Free” to “Not Free” due to multiple violations by the authorities, including altering the voter registrations of ethnic Maasai citizens as part of a repressive campaign to expel their communities from a planned game reserve.

Tanzania’s general elections in October 2025 were marred by state-sanctioned violence and internet blackouts. On polling day, there were widespread reports of the authorities imposing a nationwide internet and electricity shutdown, disrupting mobile data services and blocking access to social media platforms across

major networks.⁷¹⁸³ During the blackouts, reports indicated that security forces used excessive force to suppress and disperse ongoing post-election protests, resulting in the deaths and injuries of protesters. Internet shutdowns and blocks on social media are common at times of increased political tension. In 2024, the government banned unauthorized use of virtual private networks (VPNs), an important tool allowing people to use the internet anonymously and access blocked content.⁷¹⁸⁴

OECD / G20 AI Principles

Tanzania is not a member of the OECD or the Global Partnership on Artificial Intelligence (GPAI) and has not endorsed the OECD AI Principles.⁷¹⁸⁵

Despite this, Tanzania is actively preparing for AI governance at the national level and is drafting the National AI Strategy taking into account OECD initiatives, and specifically Global Partnership of AI (GPAI).⁷¹⁸⁶ The government completed a national AI Readiness Assessment in 2025, with UNESCO support, including multi-stakeholder consultations to align emerging AI frameworks with ethical and sustainable development goals⁷¹⁸⁷.

Council of Europe AI Treaty

Tanzania is not a member of the Council of Europe⁷¹⁸⁸ and has not signed or ratified the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy and the Rule of Law.⁷¹⁸⁹

Center for AI and Digital Policy

UNESCO Recommendation on AI Ethics

Tanzania is a member of UNESCO⁷¹⁹⁰ and adopted the UNESCO Recommendations on the Ethics of AI in November 2021.⁷¹⁹¹ In June 2025, the country successfully completed the Readiness Assessment Methodology (RAM), aligning with the UNESCO Recommendations on the Ethics of AI.⁷¹⁹² The AI Readiness Assessment report highlights Tanzania's efforts for AI advancement, crediting the enactment of the Personal Data Protection Act (2022), the AI Policy Framework for the health sector (2022), and the Guidelines for AI in Education.⁷¹⁹³ The report emphasizes the country's AI potential by showcasing policy advancements, growing digital infrastructure, stakeholder engagement, and the innovation ecosystem.

Based on the study, UNESCO encourages Tanzania to finalize and adopt a National AI strategy with priority given to human-centered design, diversity, and safe spaces for AI development. Further, the report recommends building on the PDPA by establishing clear rules for AI ethics, accountability, and transparency as part of a legal framework addressing harms caused by AI systems and clarifying responsibility while fostering innovation. UNESCO's recommendations focus on human oversight and algorithmic impact assessments and recommends the deployment of UNESCO's Ethical Impact Assessment tool to operationalize these principles.

To build a strong framework, UNESCO recommends the creation of a multi-stakeholder body or a National AI Council that oversees national AI initiatives and advises on policy, ethical, social, and legal issues. It further advises the country to establish facilities that ensure AI systems meet quality, safety, and ethical standards to build trust in AI technologies and avail the help of UNESCO if needed. In a similar spirit, UNESCO calls for the establishment of an Independent AI Ethics Review Board to assess high-risk AI applications, provide ethical guidance where necessary, and address emerging challenges with the support of international experts. The Assessment also reflects on public engagement and encourages AI education.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

While Tanzania has made significant progress in enabling AI policy development in certain sectors, the implementation of UNESCO's Recommendations remains in process. Full implementation depends on the adoption and implementation of a National AI strategy, independent oversight bodies, and the establishment of binding regulatory mechanisms.

Evaluation

Tanzania's current approach to AI governance reflects early-stage development, with emerging policy initiatives and partial alignment with human rights and transparency principles but limited institutionalization and implementation. The availability of public materials and ongoing work toward national AI frameworks and assessments indicate growing engagement with responsible AI. However, key gaps remain, including the absence of endorsement or implementation of the OECD AI Principles; limited legal integration of fairness, accountability, and rule-of-law safeguards; and the lack of an independent oversight mechanism for AI. Participation in international governance frameworks also appears incomplete, which may affect alignment with global standards. Implementation of the final draft of the National AI Strategy and the Ethical and Secure Use of AI framework provide an opportunity for significant advancement in AI governance.

Thailand

In 2025, Thailand consolidated the Business Operations that Use Artificial Intelligence Systems and an Act on Artificial Intelligence Promotion and Support, into a single Draft Principles of the AI Law for public consultation. The country also announced the intention to adhere to the OECD Recommendations on Artificial Intelligence and is advancing in the UNESCO Readiness Assessment Methodology (RAM).

National AI Strategy

The Prime Minister's Cabinet Office approved the Thailand National AI Strategy and Action Plan 2022–2027 on July 26, 2022.⁷¹⁹⁴ The vision of the strategy is for Thailand to have an effective ecosystem for developing and applying AI, one proven to enhance the economy and improve the quality of life of Thais by 2027. The National AI Strategy has 5 sub-strategies with 15 more actionable work plans and measures.⁷¹⁹⁵ These are:

- Preparing Thailand's readiness in social, ethics, law, and regulation for AI application, including policies, standards, awareness, and education for AI Ethics as part of enforceable AI Law and Regulation
- Developing Infrastructure for Sustainable AI Development by increasing investment in digital infrastructure by 10% per year, improving the Government AI Readiness index to the top 50 globally, creating AI expert networks, creating a national platform for advanced data analytics and management, creating a national AI service platform, and developing High-Performance Computing (HPC) infrastructure
- Increasing human capability and improving AI education to develop AI talent for more than 30,000 citizens by improving AI education and knowledge creation, AI Scholarship programs, and cooperation mechanisms with researchers & experts from abroad
- Driving AI technology and innovation development to strengthen AI technology by developing at least 100 R&D prototypes within 6 years and to facilitate wide adoption of AI research, development, and innovation that helps create business & social impact of at least 48 billion Baht by 2027 by applying AI technology and innovation for strategic sectors developing AI core technology and platform

⁷¹⁹⁴ AI Thailand, *Thailand National AI Strategy and Action Plan, 2022–2027* (Jul. 26, 2022), <https://www.ai.in.th/en/about-ai-thailand/>; AI Thailand, *NAIS Presentation* (Dec. 2022), <https://ai.in.th/wp-content/uploads/2022/12/2022-NAIS-Presentation-eng.pdf>

⁷¹⁹⁵ Ibid

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

- Promoting the use of AI in public and private sectors so the number of agencies (government, business & new entrepreneurs) using AI innovation increases to at least 600 agencies in 6 years and Thailand's AI competitiveness is increased by AI applications.

The national policy and plan are formulated with an emphasis on digital technologies, empowering people to increase their “citizen well-being and quality of life.” Increasing the transparency and accountability of public agencies is mentioned several times in these plans. The government formed a National AI Committee to oversee implementation and coordination of the national AI policy across departments. Prime Minister Paetongtarn Shinawatra chaired the first Committee meeting on May 1, 2025 to review progress and achievements of the 2022–2024 action plan.⁷¹⁹⁶

The strategy and action plan make no explicit mention of concepts such as fundamental rights, human rights, rule of law, and fairness with respect to AI. However, Thailand’s Ministry of Digital Economy and Society (MDES) endorsed a global statement on inclusive and sustainable AI governance that emphasizes digital equity, human rights protection, and ethical principles at the AI Action Summit in Paris in February 2025.⁷¹⁹⁷ The 12th National Economic and Social Development Plan acknowledges that Thailand “has high inequality and a lack of fairness”⁷¹⁹⁸ across society. The only mention of specific AI ethics guidelines is acknowledging the existence of EU Ethics Guidelines for Trustworthy AI, and the World Government Summit’s Ethical AI Systems Design through a reference in a Thailand Digital Government Development (TDG) Plan summary document.⁷¹⁹⁹ The Electronic Government Agency (EGA), as the agency responsible to implement standards, models, measures, principles, and approaches in the form of digital technology, only mentions openness, integrity, and collaboration under its eight core values.⁷²⁰⁰

In 2019, the Ministry of Digital Economy and Society, academics and experts from Mahidol University and Microsoft Thailand joined together to draft Digital

Thailand: Draft AI Ethics Guidelines.⁷²⁰¹ The Ethics Guidelines serve as a manual and provide ethical codes regarding AI development for government agencies, private firms, regulatory bodies, researcher, designers, developers, and users. The draft guidelines cover six aspects of development: competitiveness and sustainable development; legal regulations and international ethical standards; operational codes and duties; security and privacy; equality, diversity, and fairness; and credibility. Digital Thailand: AI Ethics Guideline was published in November 2019,⁷²⁰² taken up by the Cabinet of Thailand in December 2020,⁷²⁰³ and approved by the Cabinet in February 2021. The guideline is freely available and accessible online; however, the document is currently only in the Thai language.⁷²⁰⁴

The Office of National Higher Education Science Research and Innovation Policy Council (NXPO) established five technical working groups to explore ethical issues in genetic engineering and technology; artificial intelligence, robotics, and big data; climate change and environment; research ethics; and communications and youth engagement in science and technology policy development.⁷²⁰⁵ One outcome was the Bangkok Statement on the Ethics of Science and Technology and Sustainable Development.⁷²⁰⁶ The statement calls for concerted efforts of all stakeholders to take action on the ethics of science and technology so that new technologies can progress and develop to benefit mankind.

While Thailand's National AI Strategy seeks to enhance the development of AI across multiple sectors of the economy, the Thailand Development Research Institute (TDRI) has also highlighted the risk of job disruption due to AI.⁷²⁰⁷ The TDRI estimated that 3 million Thais work in high-risk occupations with an over-70

Center for AI and Digital Policy

percent likelihood to be replaced by AI.⁷²⁰⁸ The International Labor Organization (ILO) warned that women in Thailand face a higher risk of job disruption from AI as they currently lack access to STEM education and training opportunities.⁷²⁰⁹

A report commissioned by the Institute of Public Policy and Development predicted: “If Thai workers whose jobs are at risk of automation fail to retrain, by 2035, the employment rate could fall by 23 percentage points,” requiring decisive policies to reform workforce development.⁷²¹⁰ Whether AI adoption in Thailand will result in job disruption or job transformation will be determined by the overall readiness and AI-preparedness of both younger and older Thais.⁷²¹¹ These findings demonstrate the significance of Thailand’s National AI Strategy envisioning the increase of human capability and the improvement of AI education.⁷²¹²

The National Science and Technology Development Agency shared in February 2024 the McKinsey & Company report on recommended questions to be answered before government agencies use Gen AI.⁷²¹³ Questions include whether the government is able to address risks posed by the AI tool. In addition, in March 2024, the Ministry of Higher Education, Science, Research and Innovation and the Ministry of Digital Economy and Society discussed the National Artificial Intelligence Action Plan for the Development of Thailand Phase 2, 2024–2027.⁷²¹⁴ A Thai Large Language Model was discussed, among other topics.

The Bank of Thailand released the AI Risk Management Guidelines on September 12, 2025 for Financial Service Providers, establishing a framework for

Center for AI and Digital Policy

responsible and transparent AI adoption within the financial sector.⁷²¹⁵ The National Cyber Security Agency (NCSA) under the Ministry of Digital Economy and Society published the AI Security Guideline, establishing principles for secure and auditable AI deployment.⁷²¹⁶

Bangkok hosted ASEAN's 5th Digital Ministers Meeting in January 2025, establishing an AI Safety Network and revising the ASEAN Working Group on AI Governance to strengthen regional coordination.⁷²¹⁷ Additionally, Thailand hosted the 3rd UNESCO Global Forum on the Ethics of AI from June 24–27, 2025, in Bangkok.⁷²¹⁸

Public Participation

The Digital Government Plan (2017–2021) defined improving government transparency and public participation by facilitating easy access to government data as one of four goals.⁷²¹⁹ Two of the indicators that the plan commits to measuring itself against are “Promoting Country’s Open Data Index to place in the World’s top 25” and “Creating e-Gov Act.” However, the plans and initiatives relating to AI have been developed by the central government without meaningful public participation. The National AI Strategy includes no indication of public participation or consultation.⁷²²⁰ However, the Thailand Electronic Transactions Development Agency (ETDA) opened the draft Principles of the Law on Artificial Intelligence for public comment.⁷²²¹ Additionally, Thailand's Council of State initiated a public

consultation on the draft Platform Economy Act (PEA) for a one-month consultation. The Act is still under development in early 2026.⁷²²²

Data Protection

Thailand's Personal Data Protection Act (PDPA) is the country's first consolidated law on data protection, framing the collection, use, and disclosure of personal data. The PDPA draws key concepts and principles from the EU General Data Protection Regulation (GDPR) and establishes a Personal Data Protection Committee.⁷²²³ Enforcement of the PDPA began on June 1, 2022.⁷²²⁴

The PDPA defines personal data as "any information relating to a Person, which enables the identification of that Person, whether directly or indirectly."⁷²²⁵ The PDPA mandates that Data Protection Officers (DPO) be appointed for government agencies and firms with large-scale data processing. DPOs will be responsible for helping organizations ensure that personal data is processed in compliance with the PDPA. DPOs will also serve as contact points on PDPA issues with authorities and data subjects.⁷²²⁶ The PDPA's expert committee imposed its first administrative fine on August 21, 2024. A major online sales company was fined 7 million baht (approximately \$205,520) for failing to appoint a DPO and for inadequate security measures, leading to a significant data breach.⁷²²⁷

Research on the PDPA highlights gaps in data protection, such as provisions that grant the Thai government preferential exemptions and allow the government to exercise a relative degree of flexibility to expand its powers should it deem necessary.⁷²²⁸ For example, the PDPA currently mandates the outright exclusion of

public authorities involved in national security, law enforcement, and the National Credit Bureau from its ambit.⁷²²⁹ The definition of personal data in the PDPA also lacks clarity as to whether it covers IP addresses and cookie identifiers.⁷²³⁰ Moreover, the PDPA does not provide a definition of anonymized or pseudonymized data.⁷²³¹ Toward the end of 2025, a draft PDPA amendment bill was released for public consultation to address such implementation gaps. However, the consultation process was not completed and a provision-by-provision public hearing is expected in 2026.⁷²³²

The Digitalization of Public Administration and Services Delivery Act requires the establishment of a government data exchange center to act as a sharing center for digital data and digital registration between State Agencies. The exchange center would support agency operations in the provision of services to the people via digital means.⁷²³³ The data exchange center shall also determine policies and standards in relation to interconnectivity and sharing of digital data and present them for the approval of the Digital Government Development Commission. The Act mandates that the public shall have free access to the digital data from state agencies and be able to distribute or utilize the data or use it as a means to develop services and innovation in various ways.⁷²³⁴ As per the Act, the Digital Government Development Commission will prescribe standards and rules on the disclosure of such data.

The Electronic Transactions Development Agency (ETDA), under the Ministry of Digital Economy and Society, builds confidence in innovation with the ETDA Sandbox testing field. The ETDA cooperates with the Bank of Thailand to expand the scope of innovation testing, which covers innovations in health tech and AI. The ETDA and Bank of Thailand also cooperate in driving operations corresponding to the government policy of the Face Verification System (FVS).⁷²³⁵ The PDPC published a Binding Corporate Rules (BCR) framework in September

2025, establishing clearer pathways for intra-group international data transfers, and approved BCRs for two companies operating in Thailand—the first such approvals under the PDPA.⁷²³⁶

Thailand does not have a representative in the Global Privacy Assembly (GPA). Thus, the country did not co-sponsor the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁷²³⁷ the 2020 GPA Resolution on AI Accountability,⁷²³⁸ the 2022 GPA Resolution on Facial Recognition Technology,⁷²³⁹ or the 2023 GPA Resolution on Generative AI.⁷²⁴⁰

Algorithmic Transparency

Thailand's PDPA does not provide for algorithmic transparency, and no other protections guarantee such a right. Draft legislation or the Digital Thailand ethical principles may provide guidance for such a right, but they are not available in English.

Thailand's Council of State concluded a public consultation on the draft Platform Economy Act (PEA) on February 15, 2025, which introduced requirements for online platform service providers to disclose information about their algorithms in their terms and conditions.⁷²⁴¹

More broadly, Thailand's draft AI law, under development by ETDA since 2025, explicitly includes algorithmic transparency and accountability as core design principles, requiring that persons subject to AI-driven decisions receive a clear

explanation of the underlying reasoning and a meaningful opportunity to contest the outcome.⁷²⁴²

AI System for Surveillance

The AI System for Surveillance and Criminal Analysis in Public in east Bangkok links with security cameras at crime hotspots under Huai Kwang police jurisdiction. The system's facial recognition compares faces against photos in a database of arrest warrants, while its behavior analysis aims to prevent petty crime.⁷²⁴³ The Thai government positioned the pilot program in 2019 as a public safety tool under its wider Thailand 4.0 and Smart Cities initiatives. Following a pilot phase, the Bangkok Metropolitan Administration ordered its Traffic and Transportation Department to install more CCTVs along Khao San Road, one of the top tourist destinations. The Administration is also considering using AI in other ways to boost safety.⁷²⁴⁴

The Interim report of the United Nations (UN) Special Rapporteur on freedom of religion or belief to the 75th session of the UN General Assembly in 2020 found that Thai authorities reportedly used AI-enabled closed-circuit television system, biometric data, and frequent police checks to surveil minority Muslim groups.⁷²⁴⁵ The Thai military denied using AI to surveil Muslims in the restive southern provinces where an armed insurgency since 2004 has killed more than 7000 people.⁷²⁴⁶

Thailand's draft AI law identifies biometric surveillance systems as high-risk AI applications subject to stringent regulation, signaling a potential shift toward formal legal oversight of government surveillance tools. The draft mandates that

high-risk AI systems undergo transparency and human oversight requirements, though enforcement mechanisms remain pending final legislative enactment.

Anti-Fake News Centre

Thailand launched the Anti-Fake News Centre in November 2019. The Ministry of Digital Economy and Society (MDES) defines “fake news” as any viral online content that misleads people or damages the country’s image. The Centre is staffed by around 30 officers at a time, who review online content gathered through “social listening” tools. Coupled with a law prohibiting criticism of the monarchy, the Centre allows the government to censor or suppress any news it finds broadly affecting “peace and order, good morals, and national security”⁷²⁴⁷ without the need for evidence.

In February 2022, the Cabinet of Thailand approved a regulation to set up centers at three different levels to coordinate efforts to tackle fake news on social media. A central coordination center would be set up at the permanent secretary’s office of MDES. Furthermore, each ministry will also set up its own center to deal with fake news. The Provincial Administration Department of the Interior Ministry would also set up similar centers in all provinces under the leadership of provincial governors or their deputies.⁷²⁴⁸ According to the regulation, officials must alert the public immediately in the event of the spread of fake news and inform the Public Relations Department within one hour to correct the news and take action against those spreading it. Officials must also promptly notify the MDES to remove the fake news from the computer system.⁷²⁴⁹

However, the Move Forward Party considers that the original Centre failed in its task and asked to cut the total budget. According to their metrics, the Centre received 5.47 million complaints about fake news in September 2023 from which 539 messages were flagged for fact-checking. Of those items, 235 were verified and deemed able to be disseminated.⁷²⁵⁰ As of July 2025, the AFNC reported processing over 1.18 billion messages since its launch in November 2019, of which nearly 2.3 million were flagged as suspicious. Of the 41,882 cases examined, 7,714 were confirmed false, 8,577 accurate, and 2,456 misleading. The MDES announced plans

to strengthen cooperation with social media platforms and expand the Centre's 24-hour monitoring capacity.⁷²⁵¹

Digital ID

Thailand is currently working on legislation that would replace physical ID cards with the Digi-ID as the backbone of e-commerce transactions in the country. The Digi-ID would use blockchain to securely exchange user data but also require facial-recognition verification in an effort toward a “self-sovereign” digital identity management system.⁷²⁵² It remains unclear how the government conducted the risk or impact assessment on the mandatory use of biometric data.

The Digital Economy and Society Ministry began working on a Digital ID Framework for Thailand to ease the process to access online services by using a digital ID.⁷²⁵³ The first phase of this framework, 2022–2024, comprised eight strategies including making the Ministry of Interior the main agency providing identity information; giving Thai citizens, corporations, and foreigners Digital ID; and making Electronic Transactions Development Agency (ETDA) the entity responsible for Digital ID policy.⁷²⁵⁴ ETDA issued a Royal Decree on the Supervision of Regulated Digital Identification Authentication and Verification Service Businesses to regulate business operators that provide digital identification authentication and verification services.⁷²⁵⁵

During this first phase, digital ID cards were introduced for people who use public services provided by agencies under the Ministry of Interior. To access D.Dopa, the digital ID mobile application, the citizens had to register with their district office’s registry division using their physical ID cards.⁷²⁵⁶ By the end of Phase 1, the number of digital ID users grew from under 20 million to over 40 million, boosted significantly by Thailand's digital wallet stimulus program, which required

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

citizens to use the Pao Tang app — and therefore a digital ID — to access government benefits.⁷²⁵⁷

The Digital Economy and Society Ministry approved the draft of phase 2 of the Framework,⁷²⁵⁸ which will cover 2025–2027, in November 2024. Phase 2 targets an increase in e-government services accepting digital ID from approximately 400 to 1,000 by 2027, expands coverage to foreign nationals residing in Thailand, and advances digital ID for legal entities, which remains in pilot phase pending user confidence and court acceptance. The Digital Government Development Agency (DGA) has allocated a budget of 7.96 billion baht (approximately USD 237 million) for digital government development in 2025.

Environmental Impact of AI

The Thailand National AI Strategy and Action Plan consider Social and Environmental Impact among the objectives.⁷²⁵⁹ More specifically, the strategy aims to provide for a better environment and efficient use of natural resources. Thailand's rapid expansion as a regional AI infrastructure hub intensified scrutiny of the environmental costs of AI. In 2025, the Board of Investment approved 36 data center projects worth approximately \$23 billion, with the country targeting 1 gigawatt of data center capacity by 2027, up from roughly 0.35 GW in 2024.⁷²⁶⁰ Local residents, government officials, and activists have raised concerns about the lack of publicly available information on resource consumption, water usage, and whether environmental impact assessments have been completed in Chonburi and Rayong, where several facilities are being built. In response, the Ministry of Energy updated the Power Development Plan (PDP), targeting at least 50% renewable energy by 2037 and a 30–40% reduction in power sector carbon emissions, while introducing green electricity tariff programs for data center operators.⁷²⁶¹

Lethal Autonomous Weapons

Thailand is not a party to the Convention on Conventional Weapons (CCW).⁷²⁶² However, Thailand voted in support of the United Nations General Assembly Resolution 78/241 on lethal autonomous weapons systems (LAWS) in December 2023. The Resolution stresses the need to address challenges and concerns raised by LAWS.⁷²⁶³ Additionally, Thailand voted in favor of Draft Resolution L.77 on Lethal Autonomous Weapons Systems, adopted at the United Nations General Assembly in October 2024.⁷²⁶⁴

As an observer state to the CCW, Thailand associated itself with a joint statement delivered at the September 2025 session of the CCW Group of Governmental Experts (GGE) on LAWS,⁷²⁶⁵ alongside 39 High Contracting Parties and two other observer states, signaling readiness to move toward negotiations of a legally binding instrument on autonomous weapons systems on the basis of the GGE's rolling text.

Thailand supported the Resolution L.41 on autonomous weapons systems at the First Committee of the UN General Assembly in 2025.⁷²⁶⁶ The resolution calls on CCW High Contracting Parties to complete the elements of an instrument with a view to future negotiations.

AI Literacy

Thailand has made public AI literacy a national priority, focusing on equipping citizens to use AI responsibly and participate in AI governance

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

discussions.⁷²⁶⁷ The Cabinet approved implementation guidelines for the Coding for Better Life project in September 2024, aimed at building foundational AI awareness among the general public and upskilling the labor market.⁷²⁶⁸ In April 2025, the Ministry of Digital Economy and Society launched the THAI Academy platform in partnership with Microsoft. The platform offers more than 200 AI-related courses in Thai and English and is part of an effort to gain one million Thais using AI tools.⁷²⁶⁹

The Bureau of Academic Affairs and Educational Standards developed AI teaching materials for teachers and students,⁷²⁷⁰ with more than 60,000 students and 700 pilot schools participating in AI literacy training.

Human Rights

Thailand's status declined from Partly Free to Not Free in Freedom House's Freedom in the World 2025 report, with a score of 34/100.⁷²⁷¹ The Constitutional Court's dissolution of the leading opposition party and the forced repatriation of activists and asylum seekers to countries where they faced ill-treatment were cited as key reasons for the downgrade.

Thailand has experienced 19 constitutional changes in less than a century. The government acknowledges that Thailand is both a destination and transit country for human trafficking linked to illegal immigration, child labor, and prostitution.⁷²⁷² However, most of the plans put the responsibility of respecting human rights on the citizens and not the government.

In 2020, citizen protests criticize the government and requested reform of the monarchy. In response, the Thai government extended the powers of an emergency decree.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Under the 2017 Constitution, members of the NCPO are protected from prosecution for human rights violations committed during NCPO rule.⁷²⁷³ This protection is concerning given the reports of torture, extrajudicial executions, and enforced disappearances against human rights defenders.

The 2019 Thailand Cybersecurity Act gives the government the authority to monitor and seize data and equipment without a court order in the name of cybersecurity risk and denies a right to appeal to anyone targeted by the law in the cases of a crisis or critical threat.⁷²⁷⁴

Despite continuous promises of reform, Thai authorities continue to suppress and prosecute citizens criticizing the monarchy or the military. The combination of AI policing, Fake-News monitoring, and the Cybersecurity Act creates further concerns about fundamental rights. A group of international public and private experts and NGOs launched the study *Thailand's Cybersecurity Act: Towards a Human-Centered Act Protecting Online Freedom and Privacy, While Tackling Cyber Threat* to help build the discourse on the necessity of applying a human rights-based approach to cybersecurity legislation.⁷²⁷⁵ Additionally, on January 21, 2025, Thailand's Police entered into a five-year partnership with Gorilla Technology Group to implement AI-powered facial recognition and video analytics systems in tourism centers, raising significant human rights concerns.⁷²⁷⁶

Thailand passed the Gender Equality Act in 2015. However, the legislation still allows for exceptions to gender discrimination on grounds of religion and national security.⁷²⁷⁷

Thailand endorsed the Universal Declaration of Human Rights in 1948.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

OECD / G20 AI Principles

Thailand has not endorsed the OECD AI Principles.⁷²⁷⁸ However, Thailand's Minister of Foreign Affairs announced in June 2025 that Thailand will soon adhere to the OECD Recommendations on Artificial Intelligence.⁷²⁷⁹ Also, an evaluation by the OECD AI Observatory shows that various OECD AI principles are reflected in the Thailand National AI Strategy.⁷²⁸⁰

Thailand is also the only country from Southeast Asia to benefit from an OECD Country Program, which comprises 15 projects drawing from four key strategic pillars: good governance and transparency, business climate and competitiveness, Thailand 4.0, and inclusive growth. The program includes peer reviews, capacity-building activities, inclusion in the OECD's statistical tools, participation in ten OECD Committees or their subsidiary bodies, and adherence to eleven OECD legal instruments.⁷²⁸¹

Council of Europe AI Treaty

Thailand has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁷²⁸²

UNESCO Recommendation on AI Ethics

Thailand adopted the UNESCO Recommendation on the Ethics of AI.⁷²⁸³ Thailand is implementing the UNESCO Recommendation on the Ethics of AI and is advancing in the Readiness Assessment Methodology (RAM).⁷²⁸⁴ The RAM report was published, providing recommendations for bridging any gaps in Thailand's

Center for AI and Digital Policy

ethical AI implementation.⁷²⁸⁵ Thailand hosted the 3rd UNESCO Global Forum on the Ethics of AI in Bangkok from June 24–27, 2025, reinforcing its commitment to AI ethics.⁷²⁸⁶

Evaluation

Thailand has taken steps to govern AI and protect personal data with the release of its National AI Strategy, Digital Thailand: AI Ethics Guideline, enforcement of the Personal Data Protection Act (PDPA), and adoption of the UNESCO Recommendation on the Ethics of AI. The Draft Royal Decree on Business Operations that Use Artificial Intelligence Systems and the Draft Act on Thailand Artificial Intelligence Promotion and Support now under consultation as a combined AI law offer insight into upcoming policy action.⁷²⁸⁷ The coordination of AI policy by the National AI Committee chaired by the Prime Minister, mandatory AI Risk Management Guidelines for financial institutions, and plans to adhere to the OECD Recommendations on Artificial Intelligence mark further progress.

However, concerns remain regarding AI-powered surveillance practices, especially given limited human rights protections. The draft AI law has not yet been enacted, and meaningful public participation in AI policymaking, while improving, remains limited.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Trinidad and Tobago

In 2025, Trinidad and Tobago transitioned AI governance to the newly established Ministry of Public Administration and Artificial Intelligence and initiated the UNESCO Readiness Assessment Methodology (RAM).

National AI Strategy

Trinidad and Tobago has not developed a national AI strategy. However, other relevant policy initiatives, including the National Digital Transformation Strategy 2024–2027,⁷²⁸⁸ address AI and other technologies as they relate to the overarching objective of digital transition for inclusion, access, safety, and security.⁷²⁸⁹ The strategy identifies three pillars of digital transformation: Digital Society, described as “people centered and knowledge based—access, skills, participation (inclusion), connected communities”; Digital Government focusing on “Public value—efficiency in service delivery, citizen-centric, no-wrong door”; and Digital Economy.⁷²⁹⁰ The strategy includes guidelines such as inclusion (digital, social, financial), access, safety and security (protection of fundamental rights), for policymakers supporting digital transformation. The Ministry of Digital Transformation—since restructured as the Ministry of Public Administration and Artificial Intelligence (MPAAI)—released a draft of the strategy in August 2022 for public consultation.⁷²⁹¹

In this context, the e-Government Interoperability Framework (e-GIF) sets out specifications for integrating ICT systems across the public sector to facilitate seamless communication between agencies and secure data sharing. According to the IMF, this framework is part of a broader strategy to enhance public sector efficiency, citizen engagement, and service delivery through initiatives such as building a government cloud and data center to establish a reliable foundation for

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

digital transformation.⁷²⁹² According to UNDP, the aim is “to increase the ease of access and efficiency of government services for members of society,”⁷²⁹³ particularly benefiting underserved and vulnerable populations such as persons with disabilities, rural residents, and women.

The national digital transformation strategy is part of the National Development Strategy (NDS) 2016–2030, Vision 2030. The Vision is “intended to provide for an orderly long-term development process, inclusive of the United Nations (UN) Sustainable Development Goals (SDGs).”⁷²⁹⁴ Keith Rowley, Trinidad and Tobago’s former Prime Minister stated, “I am committed to rebuilding our country and economy, restoring confidence, equity and social justice, and improving every area of national life. We recognise that, as a nation, we face several challenges—some triggered by global events beyond our control, with consequential ripple effects at the national level.”⁷²⁹⁵

Trinidad and Tobago’s digital policy will be supported by the Inter-American Development Bank (IDB). In December 2023, Trinidad and Tobago signed a US\$90 million IDB credit line and an initial US\$42 million loan to help step up its digital transformation strategy by enhancing public services, cybersecurity, and AI capabilities. The program will boost digital skills, support over 150 firms, and increase digital inclusion to drive innovation and inclusive growth.⁷²⁹⁶ The loan supports key initiatives such as the National e-ID system, the Interoperability Framework, and cybersecurity modernization. These align with the Ministry of Digital Transformation’s 2024 budget allocation of TT\$329 million, which prioritizes \$50 million for the Digital Government Program, encompassing e-ID development and cybersecurity strategies, and \$20 million for digital society initiatives such as broadband expansion and ICT access centers.⁷²⁹⁷ Combining IDB

Center for AI and Digital Policy

funding with national budget commitments demonstrates Trinidad and Tobago's commitment to the implementation of concrete policies to enhance AI implementation, bolster cybersecurity, and promote digital inclusion, ensuring a more citizen-centric and secure digital transformation.

Trinidad and Tobago has also been part of the Caribbean Artificial Intelligence Initiative led by the UNESCO Cluster Office for the Caribbean and the Broadcasting Commission of Jamaica (BCJ), with the support of UNESCO Information for all Program (IFAP) National Committee of Jamaica.⁷²⁹⁸ The Initiative created the Caribbean AI Policy Roadmap released in June 2021,⁷²⁹⁹ following a period of stakeholder consultation in which Trinidad and Tobago participated. An updated Caribbean AI Policy Roadmap was released in 2024⁷³⁰⁰ following regional consultations with more than 1000 institutions and individuals in the Dutch- and English-speaking Caribbean. The updated Roadmap prioritizes 4 pillars: 1) Culture & Creativity designed to preserve regional culture and identity and protecting intellectual property rights; 2) Governance & transformation aiming to establish a framework for legal and ethical oversight of AI systems; 3) Education & Upskilling to develop the workforce to seize on the potential to drive economic growth; and 4) Resiliency & Sustainability to ensure adoption aligns with sustainability along with "safety, privacy, and human rights, while promoting regional cooperation and knowledge sharing."

In May 2025, the Ministry of Digital Transformation restructured into the Ministry of Public Administration and Artificial Intelligence (MPAAI), creating the Caribbean's first ministerial post explicitly for AI.⁷³⁰¹ Senator Dominic Smith was appointed Minister of PAAI, signaling that the government views AI as a strategic priority for governance and public service modernization.⁷³⁰² Under Minister Smith's leadership, Trinidad and Tobago has articulated a vision of an "AI-powered public

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

service,” aiming to leverage AI for more efficient, citizen-centric government operations.⁷³⁰³ The government is developing a National AI Governance Framework aligned with global best practices and Trinidad and Tobago’s values.⁷³⁰⁴ This emerging AI framework emphasizes that technology must be “citizen-centred, inclusive and results-driven,” and seeks to ensure AI is used to empower, not exploit citizens. The framework will address issues such as data ethics, algorithmic transparency, procurement standards, and citizen redress mechanisms for AI systems. Fairness and ethical use of AI, accountability, transparency, and respect for fundamental rights are goals being built into the country’s nascent AI policy approach. This focus aligns with the UNESCO-backed Caribbean AI Policy Roadmap in which Trinidad and Tobago participated.

Public Participation

Following release of the draft national digital transformation strategy, the Ministry of Digital Transformation/MPAAI sought public and stakeholder engagement. According to the Ministry, “co-creation and stakeholder engagement are key elements of the development of the National Digital Transformation Strategy. Contributions will be curated by four Technical Working Groups under the categories of Digital Society; Digital Economy; Digital Government; and Regional Integration and Global Linkages.”⁷³⁰⁵

Vision 2030 was also the object of public consultation.⁷³⁰⁶ The Trinidad and Tobago Bureau of Standards issued a draft Voluntary National Standard for Artificial Intelligence and Information Technology for public comment in 2024.⁷³⁰⁷ This voluntary national standard would specify the requirements and provide guidance for “establishing, implementing, maintaining and continually improving an AI

management system within the context of an organisation.”⁷³⁰⁸ The standard applies to all types of organizations, including public sector organizations, private sector organizations, small and medium-sized enterprises, and conformity assessment bodies, enabling them to demonstrate compliance with AI management best practices.⁷³⁰⁹

The MPAAI partnered with the UN Development Programme for the launch of a survey and stakeholder consultations to initiate the National AI Landscape Assessment in late 2025.⁷³¹⁰ The efforts combine with preparations for the UNESCO Readiness Assessment Methodology (RAM), which began in early 2026. The survey is not available online

Data Protection

Trinidad and Tobago’s Data Protection Act (DPA) was enacted in 2011 to protect personal data of citizens in the private and public sector but is only partly proclaimed.⁷³¹¹ In January 2012, the following sections were proclaimed with Legal Notice: Preliminary Provisions; general objective of the Act; and the provisions concerning the Office of the Information Commissioner.⁷³¹² In August 2021, two additional sections regarding the Protection of Personal Data by Public Bodies were proclaimed with Legal Notice.⁷³¹³ Most of the other provisions covering the protection of personal data are not yet in force. The Data Protection Act is also notably missing the right to erasure, the right to object or opt out of consent, the right to data portability, and the right not to be subject to data processing decisions based solely on automated decision making.⁷³¹⁴

A draft bill, inspired by the GDPR “to be in greater compliance with more recent legislation in Jamaica and Barbados,” was expected to be read in Parliament in 2022.⁷³¹⁵ However, no such bill has been reported. The parliamentary opposition

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

introduced a motion calling for the Government to fully proclaim the Data Protection Act in February 2023.⁷³¹⁶ The Trinidad and Tobago Guardian reported that Senator Jearlean John stressed that “the PNM Government is keeping T&T in the Stone Age, failing to protect citizens’ information by not fully proclaiming the Data Protection Act 2011. This is the situation at a time when people’s lives are stored on phones, there’s ChatGPT technology and the US Government has banned TikTok on government-issued devices following security concerns.”⁷³¹⁷

In March 2023, Parliament granted an 18-month extension for updating and operationalizing the Data Protection Act.⁷³¹⁸ The extension period has ended without any action from the government. Opposition senator Wade Mark highlighted that critical provisions necessary to safeguard citizens’ privacy remain unenacted. He urged the Senate to call on the government to address this gap immediately.⁷³¹⁹ Media sources reported in November 2023 that the Ministry of Digital Transportation expected to conclude updates to the Data Protection Act and operationalize the Office of the Information Commissioner by 2024.⁷³²⁰

The Office of the Information Commissioner will be responsible for the oversight, interpretation and enforcement of the DPA.⁷³²¹ However, the implementation of the DPA as proclaimed has also been delayed. The Attorney General of Trinidad and Tobago announced in the press in 2020 that the position of the Information Commissioner “is expected to be filled with immediacy”⁷³²² and the new MPAAI issued a candidate information brief for the Office of the Information Commissioner in 2025,⁷³²³ but the role remains vacant.

Trinidad and Tobago has no representative in the Global Privacy Assembly (GPA).⁷³²⁴

Algorithmic Transparency

Although transparency and explainability are mentioned in the Caribbean AI Policy Roadmap, no law in Trinidad and Tobago guarantees a right to algorithmic transparency.

Online Disinformation

The Community of Latin American and Caribbean States (CELAC) released the Buenos Aires Declaration in January 2023.⁷³²⁵ Trinidad and Tobago endorsed the Declaration. The Declaration strengthens the signatories' commitment to safeguard the rights and interests of citizens, fostering greater regional integration and collaboration. The signatories also recognized the need for further integration and collaboration to fight against disinformation with AI and algorithms and their impact on state infrastructures, firms, and people's well-being.⁷³²⁶ Trinidad and Tobago continued regional engagement on digital trust through CELAC, though no new national disinformation policy or legislation has been introduced.

Digital ID Initiative

In its post-COVID recovery plan, the government of Trinidad and Tobago stresses the importance of a digital society.⁷³²⁷ The plan includes the goal of a cashless society and the creation of an e-identity for every citizen. The e-identity will be mandatory for using governmental services and aims at integrating existing identifiers. In effect, the e-identity will be used for government services as well as digital commerce. The e-identity should also address the digital divide between different social groups.⁷³²⁸ The National Digital Transformation Strategy 2024–2027 continues these efforts with the e-ID as a central pillar of its digital public service

delivery.⁷³²⁹ According to the strategy, the e-ID is intended to be a secure, inclusive, and trustworthy means for authenticating citizen identity across government platforms.

The e-identity integrates with a larger ecosystem for access to digital government that will include “all GoRTT services, digital signing, accessing financial, education and health services as well as Private Sector services.”⁷³³⁰ The European Commission, in collaboration with CAF, the Development Bank of Latin America and the Caribbean, approved a €3 million grant to support Trinidad and Tobago's digital transformation, including the development of a national e-ID system, a public data interoperability platform, and a government data center.⁷³³¹

UNDP in Trinidad and Tobago launched programs aimed at bolstering digital public infrastructure (DPI), including the e-ID. These initiatives focus on integrating digital identification systems and financial inclusion mechanisms. The Government of Trinidad and Tobago, in collaboration with the UNDP and the CAF, announced a digital support facility for the Caribbean to provide funding and technical assistance for implementing DPI systems.⁷³³²

Facial Recognition

Prime Minister Keith Rowley stated in November 2022 that “the Government was spending \$80 Million to acquire and install 2500 CCTV cameras across the country.” A few days later, the Acting Police Commissioner announced that facial recognition software to detect and prevent crime will soon be used. There is currently no legal framework in Trinidad and Tobago regarding the use of facial recognition, no guidelines made public to prevent racial profiling/biases, no algorithmic transparency, and no opportunity for public comment.⁷³³³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Trinidad and Tobago, through UNDP, issued a bid for the procurement of a facial biometric software development kit (SDK) and auxiliary services.⁷³³⁴ The sought-after software includes capabilities such as presentation attack detection (PAD), deduplication, and support for ICAO's facial image quality standards for identification documents.

Environmental Impact of AI

While there has been no concrete development specifically targeting the environmental impacts of AI in Trinidad and Tobago, the country has begun integrating sustainability considerations into the broader digital transformation agenda. Initiatives like the establishment of a government cloud and secure data center aim to reduce paperwork and improve efficiency, indirectly contributing to environmentally responsible practices.⁷³³⁵ The National Digital Transformation Strategy 2024–2027 emphasizes “greening”⁷³³⁶ technology across its lifecycle, promoting energy efficiency, and reducing carbon emissions and digital waste. The government has also implemented formal collection and recycling programs for e-waste management. These efforts are part of the country's broader push to integrate sustainability into the development of digital infrastructure, including AI-driven technologies, thereby mitigating potential environmental impacts and contributing to a greener digital future.

As a signatory to the Montevideo Declaration, Trinidad and Tobago has committed to prioritizing “environment, sustainability, and climate change”⁷³³⁷ in AI governance, supporting measures to align AI technologies with sustainable development. ECLAC has further emphasized the need for regulatory frameworks that mitigate environmental harm, promote data-efficient AI models, and encourage innovation through AI sandboxes, aligning with the region's sustainability goals.⁷³³⁸

Lethal Autonomous Weapons

Trinidad and Tobago endorsed the Bélen Communiqué in February 2023, along with more than 30 other Latin American and Caribbean states.⁷³³⁹ The Bélen Communiqué calls for “urgent negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

On this occasion, Trinidad and Tobago issued a statement acknowledging “that new and emerging technologies hold great promise for the advancement of human welfare, yet it is becoming increasingly evident that the introduction of new technological applications, such as those related to autonomy in weapon systems, raise serious concerns from humanitarian, legal, security, technological and ethical perspectives. The risk is real. It has not yet been demonstrated that any algorithm can reliably make the human-like decisions and judgments required to comply with international law.”⁷³⁴⁰

Trinidad and Tobago’s Office of the Attorney General co-hosted CARICOM (Caribbean Community) member states and civil society organizations including Stop Killer Robots for a two-day regional Conference on the Human Impacts of Autonomous Weapons in September 2023. At the end of the conference, the member states issued the CARICOM Declaration on Autonomous Weapons, which called for the “urgent pursuit of an international legally binding instrument, incorporating prohibitions and regulations on autonomous weapons systems.”⁷³⁴¹

Trinidad and Tobago cited the CARICOM statement and Belén Communiqué in the country’s input to the Report of the UN Secretary on Lethal Autonomous Weapons Systems.⁷³⁴² Trinidad and Tobago’s input cited concerns over a lack of

conformity with international criminal, human-rights, and humanitarian laws and “the implications of LAWS for non-proliferation and the risks of diversion to non-state actors, including criminals and terrorist groups and the challenges of LAWS to internal and domestic security.” The statement concluded by reiterating the country’s support for “an international legally binding instrument that prohibits unpredictable or uncontrollable autonomous weapons systems, capable of using force without meaningful human control [...] while implementing regulations for other forms of autonomous weapons systems.”

AI Literacy

No publicly available information was identified indicating the existence of nationwide programs dedicated to AI capacity-building or foundational AI literacy in Trinidad and Tobago. Nonetheless, in 2025, the MPAAI introduced an awareness initiative as part of Cybersecurity Awareness Month. Through its Cybersecure Saturdays series, the Ministry delivered free public sessions addressing cybersecurity risks associated with AI with a session called Artificial Intelligence: A Deep Dive into the World of AI.⁷³⁴³ Trinidad and Tobago partnered with OpenAI under the Education for Countries initiative.⁷³⁴⁴ Through this collaboration, the country aims expected to strengthen its education system by integrating AI tools into schools and universities to support more personalized learning, reduce administrative burdens on educators, and equip the workforce with skills relevant to an AI-driven economy. However, this program does not clarify standards around critical use of generative AI tools or evaluation of the broader impacts of AI systems for ethical use.

Human Rights

Trinidad and Tobago received a score of 82/100 by Freedom House and is thus classified as “Free.”⁷³⁴⁵ The country has a functioning parliamentary democracy with an active and free civil society. However, discrimination against LGBT+ people, violence against women, and human trafficking persist.

Discrimination against LGBT+ people remains in law. In 2025, the Court of Appeal maintained that buggery (anal sex) remains a criminal offense under section 13 of the Sexual Offences Act but decreased the prison term from 25 to 5 years.

Center for AI and Digital Policy

⁷³⁴⁶The court reinstated section 61 of the Offences against the Person Act (1925), maintaining legal prohibitions against acts of “gross indecency” with a penalty of up to two years of imprisonment but struck down other sections for all consenting adults. The judiciary stressed that the legislature must initiate changes to law.

Trinidad and Tobago has endorsed the Universal Declaration of Human Rights and ratified a number of UN treaties protecting these rights. These treaties include the International Covenant on Civil and Political Rights, Convention on the Elimination of All Forms of Discrimination against Women, International Convention on the Elimination of All Forms of Racial Discrimination, Convention on the Rights of the Child, and the Convention on the Rights of Persons with Disabilities.⁷³⁴⁷

OECD / G20 AI Principles

Trinidad and Tobago has not endorsed the OECD AI principles.⁷³⁴⁸ According to OECD AI Principle 2.5 regarding international co-operation for trustworthy AI, “Governments, including developing countries and with stakeholders, should actively cooperate to advance these principles and to progress on responsible stewardship of trustworthy AI. Governments should work together in the OECD and other global and regional fora to foster the sharing of AI knowledge, as appropriate.” The OECD acknowledges the work of the Inter-American Development and its ““fAIr LAC” initiative to promote the responsible and ethical use of AI and improve the public services e.g., education, health, and social protection, in Latin American and Caribbean (LAC) countries,”⁷³⁴⁹ which includes Trinidad and Tobago.

In 2022, the OECD, in partnership with the CAF also published a report on “The Strategic and Responsible Use of Artificial Intelligence in the Public Sector of Latin America and the Caribbean” including Trinidad and Tobago.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Council of Europe AI Treaty

Trinidad and Tobago has not signed the first legally binding international treaty on AI, the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁷³⁵⁰

UNESCO Recommendation on AI Ethics

Trinidad and Tobago is a member state of UNESCO⁷³⁵¹ and endorsed the UNESCO Recommendations on AI Ethics.⁷³⁵² Trinidad and Tobago has taken steps to implement the UNESCO Recommendation through regional initiatives such as those organized in cooperation with the CAF.⁷³⁵³ Although Trinidad and Tobago did not participate in the first meeting of the regional council on AI ethics in Santiago, Chile, in 2023, the country endorsed the Montevideo Declaration, the outcome document from the Second Ministerial and High-Level Summit in 2024.⁷³⁵⁴

The Caribbean AI Policy Roadmap to which Trinidad and Tobago contributed was developed in collaboration with UNESCO “as a framework for policy development and regional collaboration [based on] The Recommendation on the Ethics of Artificial Intelligence.”⁷³⁵⁵

Trinidad and Tobago has also called for responsible, secure, inclusive, and people-centered AI systems as a member of the Community of Latin American and Caribbean States (CELAC). The CELAC 2024 Declaration of Kingston asserts “We recognize that the responsible, inclusive, people centered, and ethical design, development, deployment, and use of secure artificial intelligence systems has the

potential to accelerate sustainable development, we also acknowledge that AI systems pose risks that are particularly challenging for developing countries.”⁷³⁵⁶

The MPAAI launched three national initiatives: the UNESCO Readiness Assessment Methodology (RAM),⁷³⁵⁷ UNDP AI Landscape Assessment (AILA), and the creation of the country’s first Open-Source Programme Office (OSPO) in collaboration with the UNDP and the Inter-American Development Bank (IDB).⁷³⁵⁸ The implementation of the RAM and AILA began at the end of November 2025, alongside the launch of a dedicated website to track and support activities related to the National AI Assessment process.⁷³⁵⁹

Evaluation

Trinidad and Tobago endorsed the UNESCO Recommendation on the Ethics of AI and has participated in regional initiatives to foster implementation. The country’s participation in the UNESCO Readiness Assessment Methodology (RAM) and UNDP AI Landscape Assessment (AILA) are concrete steps in realizing this commitment. Trinidad and Tobago continues to advance digital transformation with the National Digital Transformation Strategy and is working to develop a dedicated national AI strategy or regulatory framework.

Fully proclaiming and implementing the Data Protection Act 2011, including by operationalizing the Office of the Information Commissioner, are necessary steps to enforce key data-subject rights. The Act also requires modernisation to address AI-related risks concerning algorithmic transparency, automated decision-making, and data portability.

These governance gaps are especially significant in light of expanding digital projects, including the national e-identity initiative and the use of facial recognition technologies for crime prevention. Without updated legal safeguards, clear oversight

mechanisms, and independent supervision, these tools pose heightened risks to privacy, due process, and fundamental rights.

Tunisia

In 2025, Tunisia began working on a Digital Transformation Strategy 2026–2030 and announced drafts for an updated AI Strategy.

National AI Strategy

Tunisia's path toward the establishment of a National AI Strategy started in 2018 when the Minister of Higher Education in partnership with the National Agency for the Promotion of Scientific Research (ANPR) produced a five-year AI development plan (2016–2020). The ANPR set up a Task Force to provide oversight of the project and a Steering Committee to define a methodology and action plan.⁷³⁶⁰ This was further discussed during workshops organized by the UNESCO Chair on Science, Technology and Innovation Policy.⁷³⁶¹

Tunisian's political instability curtailed the plans to move the initiative forward.⁷³⁶² In 2019, the Ministry of Industry, Mines and Energy led the development of a 5-year AI roadmap for 2021–2025 with the aims to:⁷³⁶³

- Raise awareness of the real challenges and possibilities of AI
- Strengthen the ecosystem to develop AI by addressing the main pillars of AI
- Implement AI pilot projects in public and private sectors.

The Ministry of Industry, Mines and Energy (MIEM) and the National Institute of Normalization and Intellectual Property also drafted a bill to protect the Intellectual Property of Algorithms.⁷³⁶⁴

The Ministries of Communication Technologies; Industry, Mines and Energy; Economics & Planning; and Higher Education & Scientific Research signed a memorandum aiming to define the general orientations of the national artificial

intelligence strategy and to follow up on the results of a study planned for this purpose.⁷³⁶⁵

Tunisia continued talks for an updated Digital Transformation strategy for 2026–2030 and a National AI Strategy.⁷³⁶⁶ The Council of Ministers discussion on data infrastructure related to a 2026–2030 digital transformation strategy includes many of the priorities described in the AI Roadmap. The Communication Technology Minister also announced plans at the 10th International Forum for Chief Information Officer (CIOs) to implement a digital transformation strategy to replace the 2022–2025 plan and an AI Strategy set for launch in 2025.⁷³⁶⁷ The Minister of Communication Technologies informed the press of a draft AI strategy expected to be available for broader consultation in February 2025. The Strategy will call for building data centers and infrastructure. The Minister reported that the Strategy is based on “the pillars commonly mentioned in various UN, ITU, and other documents, but taking into our needs, capabilities, values, and practices.” The strategy will include establishing a legal framework to protect users and defining governance.⁷³⁶⁸ However, these documents are not available.

As a member of the African Union, Tunisia is committed to working toward the alignment of the country’s efforts with the vision of the Union to build a continental digital transformation strategy⁷³⁶⁹ and a continental AI strategy.⁷³⁷⁰

For engagement beyond the African region, with the aim of cooperation on Artificial Intelligence, Tunisia signed a Memorandum of Intent with the Ministry of Companies and Industry of Italy to advance digital technology,⁷³⁷¹ a Memorandum

of Understanding with the Ministry of Science and Communication Technologies of Korea centered on developing 5G,⁷³⁷² and discussions with the Swedish Ambassador and others to enhance cooperation and shared expertise on digital areas such as AI strategies and legislative frameworks.⁷³⁷³

Public Participation

The Tunisian government does not have a systematic public participation process to develop policies in general or AI policies in particular. Discussions took place among task forces and steering committees designated by the Tunisian government. Since September 2021, The Future Society (TFS) and GIZ Digital Transformation Center Tunisia have also supported a multi-stakeholder process to develop Tunisia's National AI Strategy with the Tunisian Ministry of Communication Technologies, Ministry of Economy and Planning, Ministry of Higher Education and Scientific Research, and the Ministry of Industry, Mines, and Energy. According to TFS, "The project's goal is to capitalize on Tunisia's strengths in AI in order to support economic growth, promote social inclusion, and ensure better service to citizens." This project emphasizes the Tunisia Government's efforts to consult with civil society and different stakeholders in the drafting process.⁷³⁷⁴

Notwithstanding the various initiatives put forth by the Tunisian government to establish a national AI policy, not all the documents are available on the government's official websites. The Organic Act No. 2004-63 for Personal Data Protection is available online through the National Authority for the Protection of Personal Data website.⁷³⁷⁵

The first ever political consultation took place in January 2022 on the matter of the referendum to revise the constitution. The government set the website E-Istichara (e-consultation) as the repository of public input.⁷³⁷⁶ The initiative had mixed reviews due to the requirement of a national identity number and a validation

code sent to mobile phones. While E-Istichara is presented as a portal for citizens to express their opinions, under the motto “your opinion, our decision,” reservations were evident about the degree of inclusiveness and privacy of the platform.⁷³⁷⁷ The National Center for Informatics, the Ministry of Communication Technologies, and the Ministry of Youth and Sports oversee operation of E-Istichara.⁷³⁷⁸

The OECD offered guidance and technical assistance to support the Tunisian government in improving public participation and creating citizen charters for public projects in three municipalities.⁷³⁷⁹ In 2016, the OECD worked with Tunisia to create a citizen dialogue platform, activating working groups to promote stakeholder participation. The enactment of the Access to Information (ATI) Law of 2016 led to the publication of the Access to Information Guide for public officials, which was adopted by over 600 public institutions in Tunisia. The Guide aims to promote the participation of civil society, government, and ATI stakeholders in matters of public governance.

In August 2020, the UNESCO Maghreb office, the Ministry of Industry and SMEs organized a reflection workshop entitled “Inclusive Dialogue on the Ethics of AI” to draft international recommendations and establish a normative instrument on the ethics of AI.⁷³⁸⁰ Tunisian AI experts, such as start-ups, university researchers, and public officials attended the event.

The Ministry of Communication Technology launched a platform for citizen participation, including submission of complaints, an ideation forum, and access to open data and government documents.⁷³⁸¹ In 2021, the Ministry of Interior called for a public consultation on a new national ID and biometric database, yet the results of the process are not public. Tunisia set up a National Digital Observatory in 2023 with the aim of informing public decision-making in the digital sector.⁷³⁸²

Center for AI and Digital Policy

In the recent UN e-Government Survey of 2024, Tunisia ranked 99th out of 193 countries in the world in e-participation⁷³⁸³ and among the top 3 African countries, in terms of the e-Government development index (EGDI).⁷³⁸⁴ The Open Government Partnership's 2025 IRM Action Plan⁷³⁸⁵ reported only modest progress in open-government reforms in Tunisia, however, due to shrinking civic space and limited stakeholder consultation. Freedom House similarly reports constraints on meaningful public input.⁷³⁸⁶

Data Protection

The protection of personal data was included in the review of the Tunisian constitution of 1959 in 2002, with Article 9, mentioning: "protection of personal data shall be guaranteed, save in exceptional cases prescribed by law."⁷³⁸⁷ The Constitution of 2014 expanded the rights to data protection by including Article 24 about Privacy and Personal Data⁷³⁸⁸ which provides that "the state protects the right to privacy and the inviolability of the home, and the confidentiality of correspondence, communications, and personal information." Following a referendum, Tunisia created a new Constitution of 2022 that maintains protection of the right to privacy (Art 30), endorsing Law No. 2004-63, to protect the rights and freedoms of Tunisians.

In 2004, the Ministry of Justice established a legal framework for data protection rights that later led to the enactment of the Organic Act no. 2004-63 of July 27, 2004 on the Protection of Personal Data.⁷³⁸⁹ The National Authority for Protection of Personal Data (INPDP) was created that same year, later renamed National Personal Data Authority. This entity is deemed an independent oversight body for data protection.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Under the authoritarian regime of Ben Ali, the National Agency for Data Protection (INPDP) did not operate as an independent body. After the Tunisian Jasmine Revolution of 2011, processors began to regularly declare their personal data processing activities under the law.⁷³⁹⁰

The Data Protection Law of 2004 includes only certain provisions on transparency, related to notifications that data is being processed but it does not include provisions to notify the authority or data subjects in case of a data breach. In terms of accountability, there is no explicit provision for civil liability, but the Data Protection Authority is designated to investigate cases and subpoena or require evidence, and to impose penalties.⁷³⁹¹

While the 2004 Organic Act is based on principles of lawfulness, processing, and accountability, the multiple exemptions for law enforcement, tribunals and universities, public entities, and employers weaken the protection of personal data.⁷³⁹²

The Ministry of Justice was expected to propose a review of the framework for the protection of personal data. The review project of the Law was under parliamentary scrutiny since 2017. However, in March 2018, a new legislative project was introduced before the Tunisian Parliament. The new draft law on the Protection of Personal Data is aligned with the GDPR.⁷³⁹³ Tunisia's general data protection regime strongly seeks to align with that of the EU. Negotiations in 2015 between Tunisia and the EU in the framework of the Deep and Comprehensive Free Trade Area, increased the Tunisian government's awareness of the need for alignment.

Tunisia ratified the Council of Europe Convention 108⁷³⁹⁴ for the Protection of Individuals with regard to Automatic Processing of Personal Data in 2017.⁷³⁹⁵ Basic Law No. 2017/33 on the Approval of the Accession of the Republic of Tunisia to Convention 108 and its additional protocol was passed by the Parliament in

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

2017.⁷³⁹⁶ Tunisia has signed but not yet ratified the Protocol amending the Convention for the Protection of Individuals about Automatic Processing of Personal Data (Convention 108+).⁷³⁹⁷

In 2019, Tunisia also signed the African Union (AU) Convention on Cyber Security (Malabo Convention).⁷³⁹⁸ However, the country has not ratified the Convention yet.⁷³⁹⁹ The Convention emphasizes that each country is to develop its legislative framework, observing the African Charter on Human and People's Rights. Tunisia's 2022 Cybercrime Decree⁷⁴⁰⁰ has instead been used to stifle free speech.⁷⁴⁰¹

Tunisia's Data Protection Authority was accredited to join the Global Privacy Assembly (GPA) during the 34th Session held in 2012 in Uruguay.⁷⁴⁰² Tunisia has not endorsed the GPA 2018 Declaration on Ethics and Data Protection,⁷⁴⁰³ the GPA 2020 Resolution on Accountability in the Development and Use of AI,⁷⁴⁰⁴ the GPA 2022 Resolution on Principles and Expectations for the Appropriate Use of Personal

Information in Facial Recognition Technology,⁷⁴⁰⁵ or the 2023 GPA Resolution on Generative AI.⁷⁴⁰⁶

Algorithmic Transparency

Since Tunisia has not ratified Convention 108+, the right to algorithmic transparency in Tunisia remains limited.⁷⁴⁰⁷ The Law of Protection of Personal Data applies to automatic processing of personal data as well as non-automatic processing of personal data carried out by individuals or by legal entities. The law imposes mandatory obligations on individuals or legal entities responsible for the automated processing of personal data and their sub-contractors to take all the required technical steps to ensure that they provide the data subject, their heirs or their tutor a means for rectification, modification, correction, or deletion of their personal data through request by e-mail.⁷⁴⁰⁸ However, the law does not explicitly address automatic decision-making.

AI Projects in the Public Sector

The ecosystem of AI innovation is in the nascent stages in Tunisia. A report by UNESCO mapping the AI ecosystem of the Maghreb countries (Tunisia, Morocco, and Algeria) included government initiatives to support AI startups.⁷⁴⁰⁹ The Smart Tunisia Program was launched through a Public-Private Partnership to create 50,000 jobs in the digital sector.⁷⁴¹⁰ The Program offers multiple opportunities

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

for the promotion of entrepreneurship and investment in digital start-ups through cooperation with different Tunisian bodies.

As of 2020, the government has launched AI projects in the public sector through the Directorate of Innovation and Technology Development. Projects included a predictive model for fraud detection, voice transcriptions for parliamentary deliberations, image recognition to monitor mask-use in public, industry chatbots, chatbots for questions related to COVID-19, and imaging to detect COVID-19.

International cooperation supports the Tunisian initiatives in the AI landscape. The FIRST program (Fiscal Reform for a Strong Tunisia) is an initiative of the United States Agency for International Development (USAID) to support the government of Tunisia through the Ministry of Finance in matters of tax policy and fiscal reforms. The project relies on an AI algorithm and general algebraic modeling system (GAMS) software to analyze data as input to policy decisions.⁷⁴¹¹

Tunisia received a score of B (or high) for its digital government transformation by the World Bank's GovTech Maturity Index (GTMI) for 2022.⁷⁴¹² The index evaluates core government system indexes, public service delivery, digital citizen engagement, and gov tech enablers in the country.

The Ministry of Communication Technologies published the Electronic Government (e-Government) policy in a circular in early 2024. The policy requires all government authorities to adopt common building blocks centered on 12 Rules designed to accelerate digitization and modernize how the state serves citizens and businesses through online administrative procedures.⁷⁴¹³

Biometric ID

The Tunisian Parliament approved draft laws on Biometric Identity Cards and Biometric Passports in March 2024.⁷⁴¹⁴ This decision comes despite a campaign led by Access Now and civil society partners in Tunisia since 2016 advocating against

⁷⁴¹¹ US Embassy, *Fiscal Reform for a Strong Tunisia First* (2025),

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

the creation of a mandatory biometric ID system without robust data protection and privacy safeguards for Tunisian citizens.⁷⁴¹⁵

Biometric data such as fingerprints and photographs will be recorded and stored in a database managed by the Ministry of Interior, particularly by the central administration of information. Only specifically authorized agents, such as the police, national guard, and customs, will have access to this information through automated readers.⁷⁴¹⁶

The implementation of the biometric ID project will fall under the National Personal Data Protection Authority despite critics arguing that “this data protection agency lacks the necessary authority to enforce effective privacy and security measures.” To ensure respect for individual rights in this transition to biometrics, the rights and freedoms commission proposes the creation of a new oversight body.

The laws must still receive approval from the President of the Republic and be published in the Official Gazette. No estimate has yet been provided of when the laws would take effect.⁷⁴¹⁷

Facial Recognition

Reports of practices of mass surveillance in Tunisia are closely linked to the history of authoritarian regimes and the suppression of political opposition.⁷⁴¹⁸ Following the Jasmine Revolution of 2011, the new government dismantled intelligence services and created new ones. In 2015, the Tunisian government declared a state of emergency as the result of a terrorist attack and in 2016 announced the installation of more than 1,000 surveillance cameras in 30 electronic checkpoints in Tunis and at least four cities.

Practices of surveillance in public spaces and the use of facial recognition are concerning. A report by Privacy International identified surveillance practices in public spaces under the pretense of enforcement of the COVID lockdown.⁷⁴¹⁹ The

Center for AI and Digital Policy

Ministry of Interior of Tunisia operated a robot that patrolled the streets and required ID documentation to be shown to the camera. The PGuard robot was equipped with infrared and thermal imaging cameras to question “suspected violators” of the lockdown.⁷⁴²⁰ These robots, valued at \$100,000–140,000 were donated to the Ministry.

Environmental Impact of AI

The Future Society reported on its contribution to the drafting of Tunisia’s National AI Strategy 2021–2025 and the aim to harness AI responsibly to achieve national objectives and inclusive and sustainable development goals.⁷⁴²¹

Reports suggest that the application of AI in environment-impacting sectors like agriculture are well under way.⁷⁴²² Tunisian officials announced in late 2024 that the AI Strategy to be launched in 2025 will aim to integrate AI into the environmental sector, among others.⁷⁴²³

Lethal Autonomous Weapons

Tunisia is a UN Member State and High Contracting Party to the Convention on Certain Conventional Weapons (CCW)⁷⁴²⁴ and has participated in several meetings since 2015.⁷⁴²⁵ Tunisia supports the negotiation of a legally binding instrument on lethal autonomous weapons systems (LAWS) as a member of the African Group and Arab Group in the United Nations and the Non-Aligned Movement in the CCW.⁷⁴²⁶ The African Group stressed to the Group of Government Experts on LAWS in 2023 that “the regulation, prohibition and restriction of the use

of certain types of weapons that could cause unnecessary suffering to combatants or have indiscriminate effects on civilians must remain the prime focus of the CCW.”⁷⁴²⁷

In February 2023, Tunisia participated in the first international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands (REAIM 2023). Tunisia agreed on a joint call for action “stress[ing] the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”⁷⁴²⁸

Tunisia supported Draft Resolution L.77 on Lethal Autonomous Weapons Systems adopted by the United Nations General Assembly in November 2024. The resolution raises concerns about the “negative consequences and impact of autonomous weapon systems on global security and regional and international stability, including the risk of an emerging arms race, of exacerbating existing conflicts and humanitarian crises, miscalculations, lowering the threshold for and escalation of conflicts and proliferation, including to unauthorized recipients and non-State actors” and stresses the “the importance of the role of humans in the use of force to ensure responsibility and accountability and for States to comply with international law.” It also notes “the repeated calls by the Secretary-General to urgently conclude negotiations of a legally binding instrument with prohibitions and regulations for autonomous weapons systems, in line with a two-tier approach.”⁷⁴²⁹

AI Literacy

Tunisia launched the first public institute dedicated to Artificial Intelligence at the University of Tunis in September 2024.⁷⁴³⁰ The AI Institute will promote Tunisia’s 2035 vision of “fostering a knowledge-based society based on the development of AI programs across various Tunisian institutions” by teaching everyone AI, not just experts. The AI Institute is part of the country’s efforts to

expand the application of AI to address Tunisia's economic, industrial, and technological challenges while ensuring the ethical use and protection of citizens' data. The AI Institute will help Tunisia play a pioneering role in AI training in the region and on the African continent, which will be advantageous for developing comprehensive AI legislation and using AI for good.⁷⁴³¹ The Minister of Higher Education and Scientific Research announced the launch of the institute during a seminar on AI for a Resilient Economy. Tunisia's Minister of Education has taken steps to integrate AI tools and curriculum into national schools, aiming to develop initiatives focused on capacity building for students and teachers.⁷⁴³²

Human Rights

Freedom House scored Tunisia as "Partly Free" with a score of 44/100 in 2025,⁷⁴³³ continuing to decline from 64/100 in 2022.⁷⁴³⁴ Freedom House describes an increasingly authoritarian state under President Saïed since 2019, including legal persecution of opponents and extension of executive authority by dismissing the legislature and undermining the judiciary and electoral commission.

The Ibrahim Index of African Governance in 2024 scored Tunisia at 61.2/100 for overall governance, and 56.1/100 in Participation Rights & Inclusion, placing the country in position 9 out of 45 African countries, with an overall decreasing trend since 2014.⁷⁴³⁵

Tunisia endorsed the Universal Declaration of Human Rights (UDHR) and ratified the African Charter on Human and Peoples' Rights (African Charter). Tunisia is a member of the Arab League but has not ratified the Arab Charter on Human Rights.⁷⁴³⁶ The country ratified various covenants including the International Convention on Civil and Political Rights (ICCPR) and the International Covenant on

Economic, Social and Cultural Rights (ICSECR).⁷⁴³⁷ Other agreements Tunisia is a Party to are: The African Charter on the Rights and Welfare of the Child; the Convention on the Rights of the Child; the United Nations Convention against Transnational Organized Crime, and the United Nations Convention Against Corruption.⁷⁴³⁸ Tunisia acceded to the Council of Europe Convention on Cybercrime (Budapest Convention) in early 2024.⁷⁴³⁹

Tunisia's national human rights institution, known as the Higher Committee for Human Rights and Fundamental Freedoms,⁷⁴⁴⁰ was established in 2008 with financial autonomy. The institution promotes and protecting human rights in the country, including advising on legislation, investigating complaints, and conducting research. The Higher Committee holds a "B" status accreditation from the Global Alliance of National Human Rights Institutions (GANHRI), indicating partial compliance with the Paris Principles. This status allows the institution to participate in GANHRI meetings but without voting rights or eligibility for governance positions.⁷⁴⁴¹ Enhancing the High Committee's independence, resources, and mandate could strengthen its role in safeguarding human rights in Tunisia and align the institution more closely with international peers.

OECD / G20 AI Principles

Tunisia is not a member of the OECD or the G20 and has not endorsed the G20 or the OECD AI principles.⁷⁴⁴² Tunisia is not a member of the Global Partnership on Artificial Intelligence (GPAI).⁷⁴⁴³

The country has submitted the National AI Strategy and reports to OECD AI Observatory on AI use cases in the public sector, the law on the protection of personal data, and a draft bill on intellectual property policy for AI to protect algorithms.

Center for AI and Digital Policy

OECD recognized alignment with the value-based principles of inclusive growth, sustainable development, and well-being; human rights and fairness; and robustness; and security and safety. OECD also recognized the National AI Strategy's alignment with recommendations for policymakers to invest in AI R&D and build human capacity and prepare for labor market transition.⁷⁴⁴⁴

Council of Europe AI Treaty

Tunisia has not endorsed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁷⁴⁴⁵

UNESCO Recommendation on AI Ethics

Tunisia is a member state of UNESCO since 1956,⁷⁴⁴⁶ and is one of 193 countries that endorsed the UNESCO Recommendation on AI Ethics in November 2021.⁷⁴⁴⁷ Tunisia was also one of only five African nations that offered comments on the first draft of the Recommendation.⁷⁴⁴⁸ However, the 2021 UNESCO AI Needs Assessment Survey did not include responses from Tunisia.⁷⁴⁴⁹ Tunisia is currently in the process of the Readiness Assessment Methodology (RAM), a key step toward implementing the UNESCO Recommendation.⁷⁴⁵⁰

Evaluation

Although Tunisia has yet to formulate a National AI policy, the 2021–2025 AI Roadmap offered a starting point. Despite taking preliminary steps to implement the UNESCO Recommendation on AI Ethics with preparation for the RAM, the approval of biometric ID systems and persistence of AI-powered surveillance deepen human rights concerns in the context of restricted freedom of expression and political

rights. The ratification of Council of Europe Convention 108+ and a comprehensive modernization of the country's data protection legal regime would contribute to strengthening the protection of human rights in the digital age.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Türkiye

In 2025, Türkiye’s Ministry of National Education released an AI Policy Document and Action Plan to realize tasks assigned in the National AI Strategy, in part to align with EU AI Act AI literacy requirements. The National Plan for EU Accession 2025–2028 outlined reforms to align data protection and AI legislation with EU standards.

National AI Strategy

In 2020, the Digital Transformation Office (DTO) of the Turkish government published a National Artificial Intelligence Strategy.⁷⁴⁵¹ The Strategy was prepared in accordance with the Eleventh Development Plan⁷⁴⁵² and Presidential Annual Programs,⁷⁴⁵³ and in line with the Digital Türkiye vision and the National Technology Initiative.⁷⁴⁵⁴ The Strategy is based on six strategic priorities: 1) Training AI Experts and Increasing Employment in the Domain, 2) Supporting Research, Entrepreneurship and Innovation, 3) Facilitating Access to Quality Data and Technical Infrastructure, 4) Regulating to Accelerate Socioeconomic Adaptation, 5) Strengthening International Cooperation, and 6) Accelerating Structural and Labor Transformation.

The National AI Strategy dedicates a section to AI values and principles and cites frameworks published by international organizations including the OECD, G20, EU, and UNESCO. The Strategy explicitly adopts values aligned with these frameworks, including Respect for Human Rights, Democracy, and Rule of Law such that “Human dignity, human rights and fundamental freedoms must be essential throughout the lifecycle of AI systems. [...] No human should be harmed physically, economically, socially, politically or psychologically at any stage in the lifecycle of

⁷⁴⁵¹ Digital Transformation Office, *National Artificial Intelligence Strategy 2021–2025*, OECD (Aug. 20, 2021), https://wp.oecd.ai/app/uploads/2021/12/Turkey_National_Artificial_Intelligence_Strategy_2021-2025.pdf

⁷⁴⁵⁴ Digital Transformation Office, *National Artificial Intelligence Strategy 2021–2025*, OECD (Aug. 20, 2021), https://wp.oecd.ai/app/uploads/2021/12/Turkey_National_Artificial_Intelligence_Strategy_2021-2025.pdf

AI systems.”⁷⁴⁵⁵ Other values are Flourishing the Environment and Biological Ecosystem, Ensuring Diversity and Inclusiveness by guarding against discrimination across the lifecycle,⁷⁴⁵⁶ and Living in Peaceful, Just and Interconnected Societies. The Strategy defines “trustworthy and responsible AI” according to Proportionality, Safety and Security, Fairness, Privacy, Transparency and Explainability, Responsibility and Accountability, Data Sovereignty, and Multi-Stakeholder Governance.⁷⁴⁵⁷

The National Artificial Intelligence Strategy Steering Committee is responsible⁷⁴⁵⁸ for the appointment of the ministries that will prepare and coordinate the implementation of the detailed action plans for the measures in the Strategy, the preparation of said action plans in harmony with each other, and the coordination between institutions.⁷⁴⁵⁹ In a statement before the second Steering Committee meeting, Mr Oktay stated that a draft of the Action Plan for the National AI Strategy consisted of 120 actions and 451 execution steps had been prepared.⁷⁴⁶⁰ Among these actions, Mr Oktay emphasized the preparation of Data Governance Guidance, along with the establishment of an AI Ecosystem Advisory Committee and the Türkiye AI Portal.⁷⁴⁶¹

Building on the National Artificial Intelligence Strategy for 2021–2025, the DTO and the Ministry of Industry and Technology released a National AI Action Plan for 2024–2025.⁷⁴⁶² This plan⁷⁴⁶³ articulates strategic initiatives, including comprehensive AI legislation, targeted talent attraction, educational enhancement, infrastructure investment, and the introduction of a Trusted AI Seal certification system. It identifies six strategic priorities: 1) training AI experts and increasing

recruitment in relevant fields; 2) supporting research, entrepreneurship, and innovation; 3) expanding access to quality data and technical infrastructure; 4) enacting regulations to foster socioeconomic integration; 5) strengthening international cooperation; and 6) facilitating structural and labor market transitions.⁷⁴⁶⁴

The Ministry of Education published the AI in Education Policy Document and Action Plan (2025–2028)⁷⁴⁶⁵ to fulfill the actions outlined in the national action plan and AI Strategy. The document presents a “holistic framework based on the ethical, safe, effective, and sustainable use principles, taking into account the impacts of artificial intelligence technologies on teachers, students, parents, education administrators, and policymakers.”

The Grand National Assembly of Türkiye (*Türkiye Büyük Millet Meclisi*, TBMM) established a Parliamentary Research Commission on Artificial Intelligence,⁷⁴⁶⁶ whose members were announced in the Official Gazette on January 16, 2025.⁷⁴⁶⁷ The Commission is tasked with defining the roadmap for leveraging AI technologies, building the necessary legal infrastructure, and addressing the risks associated with AI use. The Commission includes 22 representatives from multiple political parties with a three-month mandate to focus on AI-related issues concerning personal data security, transparency, ethical values, and legal regulations and to explore effective and active utilization of AI across various disciplines. The commission’s work is expected to guide future legislative efforts⁷⁴⁶⁸ to the establish a legal and ethical framework for AI that allows for innovation while imposing the “obligation to comply with ethical rules in certain areas.”⁷⁴⁶⁹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI Legislation

The Grand National Assembly of Türkiye introduced a draft law regulating Artificial Intelligence in 2024.⁷⁴⁷⁰ The Draft Law⁷⁴⁷¹ aims to ensure that AI technologies are used safely, ethically, and equitably while safeguarding personal data and privacy rights. This legislative effort aligns with global concerns about the misuse of AI and sets a regulatory framework covering AI developers, distributors, users and importers in Türkiye. The Draft Law mandates a risk assessment process and introduces compliance mechanisms, especially for high-risk AI systems such as those used in healthcare, transportation, and law enforcement. The Justice Commission is studying the draft legislation.

Public Participation

Türkiye has consulted multistakeholder groups to consult on digital policies. Türkiye established a Working Group in January 2020 to develop the AI Technology Roadmap. The working Group comprised representatives from academia, the private sector, and major umbrella NGOs.⁷⁴⁷² The Working Group operates under the Science, Technology and Innovation Policy Council of the Turkish Presidency, via the technical contribution of the Scientific and Technological Research Council of Türkiye. The Working Group aims to ensure effective intergovernmental coordination and to identify frontier scientific themes and priority sectoral applications of AI technologies. The National AI Strategy explicitly addressed the AI Technology Roadmap and views from this multistakeholder group to establish priorities and development of the National AI Strategy.⁷⁴⁷³ Workshops and evaluations by domain experts provided additional opportunities for stakeholder input. Public participation continues after the entry into force of the National Strategy. The Steering Committee for the National AI Strategy is supported in its work by an AI Ecosystem Advisory Group and various working groups representing all relevant stakeholders.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Parliamentary Research Commission on Artificial Intelligence is engaging with international and national stakeholders to align Türkiye's AI legislation with global standards and address emerging regulatory gaps.⁷⁴⁷⁴ As part of its efforts to develop a comprehensive legal framework, the Commission will examine key issues including ethical principles, data privacy, algorithmic transparency, and accountability. These discussions aim to ensure that Türkiye's AI governance reflects best practices and safeguards fundamental rights in the digital age.

Data Protection

The Turkish Constitution establishes rights for privacy and for data protection with limits.⁷⁴⁷⁵ The Turkish Law on the Protection of Personal Data published in April 2016 protects those rights.⁷⁴⁷⁶ Türkiye ratified Convention 108 of the Council of Europe and its data protection law originates from European Union Directive 95/46/EC, which predated the GDPR.

The data protection legislation upholds common data protection rights, such as purpose specification and storage limitations as well as informed consent.⁷⁴⁷⁷ The legislation strictly regulates data transfer outside of Türkiye⁷⁴⁷⁸ and individuals have the right to access and complain regarding data collection.⁷⁴⁷⁹ The Law on the Protection of Personal Data adopts a broad definition of the processing of personal data that encompasses both “automated means and non-automated means.”⁷⁴⁸⁰

The Law on the Protection of Personal Data established the Turkish Data Protection Authority (DPA), an independent regulatory authority. The DPA is composed of the Personal Data Protection Board and the Presidency. The Personal Data Protection Board implements and interprets the data protection law in line with the GDPR. Türkiye will align its national legislation with the EU AI Act-style safeguards to protect personal data in AI systems, especially high-risk applications. As part of this, the full alignment of its personal data law with the GDPR is scheduled

to be completed in 2026.⁷⁴⁸¹ The National Action Plan for EU Accession (2025-2028) also states Türkiye's plan to ratify Council of Europe Convention 108 + and to sign the EU AI treaty."⁷⁴⁸²

The mission of the DPA is to provide personal data protection and to develop public awareness in line with the fundamental rights related to privacy and freedom stated in the Constitution.

Concerning personal data processing in relation to AI, the DPA issued its Recommendations on the Protection of Personal Data in the Field of Artificial Intelligence in September 2021.⁷⁴⁸³ The DPA specifies that: "In the process of developing and adopting AI applications, the fundamental rights and freedoms of data subjects should be respected and there should be no violation of any right. [...] An approach that focuses on avoiding and mitigating the potential risks and considers human rights, functioning of democracy, social and ethical values, should be adopted in processing of personal data. [...] Data subjects should be able to have control over the processing activities, considering the effect of processing activities on individuals and society."⁷⁴⁸⁴

The 2021 Recommendation further specified that "The role of human intervention in decision-making processes should be ensured."⁷⁴⁸⁵ The DPA makes clear that the principles enshrined in the Protection of Personal Data Law and applicable in general to the processing of personal data are applicable when AI is involved. These include lawfulness, fairness, proportionality, accountability, transparency.

The DPA has also issued information notes to address specific challenges posed by AI applications. The Deepfake Information Note⁷⁴⁸⁶ released in January 2024 defined Deepfake and the threats they pose to personal data as well as advice on how individuals and organizations can protect themselves. The information note

on chatbots⁷⁴⁸⁷ in November 2024 emphasized the need for transparency about data usage, secure data transmission, risk assessments, and adherence to international standards to mitigate privacy risks for users, especially children.

The DPA Strategic Plan 2024–2028⁷⁴⁸⁸ called for legislation on developing technologies given the impact of “instant data analysis with analytical tools such as [...] artificial intelligence” on the DPA’s activities. The DPA assigned the Department of Data Security and Information Systems the responsibility of “close monitoring of new technological issues such as artificial intelligence” in relation to ensuring that necessary administrative and technical measures are undertaken by data controllers under the Personal Data Protection Law.⁷⁴⁸⁹

The DPA is a member of the Global Privacy Assembly (GPA) since 2017. The DPA hosted the 2022 GPA in Türkiye. However, the DPA did not endorse the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁷⁴⁹⁰ the 2020 GPA Resolution on AI Accountability,⁷⁴⁹¹ the 2022 GPA Resolution on Facial Recognition Technology,⁷⁴⁹² or the 2023 GPA Resolution on Generative AI.⁷⁴⁹³

The Human Rights and Equality Institution of Türkiye, affiliated with the Ministry of Justice, could also provide independent oversight of AI practices. Established by Law No. 6701 in 2016,⁷⁴⁹⁴ the Human Rights Institution is a public body endowed with an independent legal status and administrative and financial autonomy. The mission of the Human Rights Institution is to ensure the protection

and promotion of human rights, to guarantee individuals' right to equal treatment, and to prevent discrimination in the exercise of rights and freedoms.

The Ombudsman Institution of the Republic of Türkiye could also provide independent oversight. The Ombudsman was established in 2012 as a constitutional public entity affiliated with the Grand National Assembly of Türkiye.⁷⁴⁹⁵ The Ombudsman has its own private budget, headquarters in Ankara, and an office in Istanbul. According to the Ombudsman Law, the Ombudsman shall be responsible for examining, investigating, and submitting recommendations to the Administration regarding all sorts of acts and actions as well as attitudes and behaviors of the Administration upon complaint. The Ombudsman Institution aims to increase the service quality of the administration, contribute to internalizing principles of good administration, foster transparent and accountable administration, improve human rights standards, and strengthen a culture of seeking legal remedies among citizens.⁷⁴⁹⁶

Algorithmic Transparency

Transparency and explainability are among the AI values and principles enshrined in the National AI Strategy. The Strategy provides that: “Person(s) and organizations involved in the lifecycle of AI systems should ensure that the AI system is transparent and explainable in accordance with its context. People have the right to be informed of a decision that was made based on AI algorithms and to request explanatory information from public institutions and private sector organizations in such cases. It should be possible to explain to the end user and other stakeholders in non-technical terms and in plain language, why, how, where and for what purpose the decisions made based on automatic and algorithmic decisions, the data leading to said decisions and the information obtained from that data are used.”⁷⁴⁹⁷

Türkiye has not signed yet the protocol modernizing Council of Europe Convention 108,⁷⁴⁹⁸ which enshrines the right to algorithmic transparency.⁷⁴⁹⁹ The

Law on the Protection of Personal Data provides for the obligation of data controller to inform the data subjects about “the method and legal basis of collection of personal data.”⁷⁵⁰⁰ Data subjects are also entitled “to object to the occurrence of a result against the person himself/herself by analyzing the data processed solely through automated systems.”⁷⁵⁰¹ However, the principles of transparency, algorithmic transparency, and explainability are not enshrined explicitly in the Law on the Protection of Personal Data.

As for the DPA’s Recommendations on the Protection of Personal Data in the Field of Artificial Intelligence, they provide that “the Artificial intelligence and data collection works that rely on processing of personal data should be based on the principles of [...] transparency and accountability.”⁷⁵⁰²

Amendment to the Law No. 5651 on Regulating Broadcasting in the Internet and Fighting Against Crimes Committed through Internet Broadcasting (Internet Law), which entered into force in October 2022, imposed a new obligation on the foreign and local social network providers that receive over one million daily visits from Türkiye.⁷⁵⁰³ Additional Article 4/5 states that these social network providers shall submit biannual reports containing information on their algorithms, advertising policies, and transparency policies regarding title tags and featured or reduced-access content to the Information Technologies and Communication Authority of Türkiye. The amendments require that the “social network provider shall include on its website in a clear, understandable and easily accessible manner which ‘parameters’ it uses when providing suggestions to users. Social network provider shall take the necessary measures to update users’ preferences regarding the content it recommends and to offer the option to limit the use of their personal data, and shall include these measures in its report.”⁷⁵⁰⁴

With the 18th paragraph added to Additional Article 4 on the date above, the Information Technologies and Communication Authority of Türkiye is authorized to request explanations from the social network provider regarding the provider’s

compliance with this Law, including organizational structure, information systems, algorithms, data processing mechanisms, and commercial attitudes.⁷⁵⁰⁵

The DTO Big Data and Artificial Intelligence Department has carried out the COVID-19 Detection with Artificial Intelligence project,⁷⁵⁰⁶ in which the predictions made by the developed AI models using the X-Ray and Computed Tomography images and the reasoning for these predictions can be presented to the relevant doctors.

Open Data Project

Türkiye's Open Data Project, which was launched under the coordination of the Digital Transformation Office of the Presidency of the Republic of Türkiye, aims to establish an open data portal to make public data available "as open data under privacy principles in order to increase transparency, accountability and participation and to enable production of new value-added services."⁷⁵⁰⁷ As a platform for the datasets needed for developing AI technologies and applications, the initiative will contribute to fostering a digital ecosystem for AI.

The Project includes managing the regulatory and legislative area of open data, which are necessary steps for participation in the Open Government Partnership.⁷⁵⁰⁸ The initiative also aims to provide effective coordination in preparing the labor market for digital transformation.⁷⁵⁰⁹ However, Türkiye left the Open Government Partnership in 2017⁷⁵¹⁰ and no evidence of reengagement has been found.

Some municipalities, including Istanbul and İzmir, the 1st and the 3rd biggest cities in Türkiye respectively, have already launched open data portals.⁷⁵¹¹ Ankara Metropolitan Municipality implemented the Transparent Ankara⁷⁵¹² project, which the municipality described as the first and only map-based open data platform in the world.⁷⁵¹³ Turkish citizens from all over the world can easily access data such as transportation boarding data, social benefits, green areas, level of dams, population and demographic information, weather conditions, WiFi hotspots, bicycle paths, and trekking routes in Ankara from the open data on this platform 24/7.

Several sectoral open data infrastructures have also continued to operate and expand. The Ministry of Environment, Urbanization and Climate Change (*T.C. Çevre, Şehircilik ve İklim Değişikliği Bakanlığı*) maintains the National Smart City Open Data Platform (ULASAV).⁷⁵¹⁴ The open data interface run by the Ministry of Health (*T.C. Sağlık Bakanlığı*) remains active, too.⁷⁵¹⁵ Both support the broader data ecosystem that enables AI-driven innovation.

Freedom of Expression

In October 2020, a law entered into force requiring all domestic and foreign social network providers that serve more than one million users in Türkiye to have local representation in the country. Rules on content removal and the obligation for social media companies to respond to official takedown orders, usually within 48 hours, are defined under Law No. 5651.⁷⁵¹⁶ The Information and Communication

Technologies Authority's (*Bilgi Teknolojileri ve İletişim Kurumu, BTK*) regulations for social network providers published in 2023 provide further detail.⁷⁵¹⁷

The Turkish Criminal Code was amended in October 2022 with Article 217/A on Openly Disseminating Misleading Information. The criminal code now provides that "publicly disseminating false information about the internal and external security, public order and general health of the country, in a way that is suitable for disturbing the public peace, solely for the purpose of creating anxiety, fear or panic among the people" constitutes a crime to be punished by imprisonment.⁷⁵¹⁸

EdTech and Children Tracking

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including Türkiye, for children's education during the pandemic. Based on technical and policy analysis of 163 EdTech products, including some built and offered by the Turkish Government, Human Rights Watch found that governments' endorsements of the majority of these online learning platforms put at risk or directly violated children's rights. Some EdTech products targeted children with behavioral advertising. Many more EdTech products sent children's data to AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online.⁷⁵¹⁹

Against this background, the 2024 DPA's information note on chatbots⁷⁵²⁰ emphasizes the importance of safeguarding children's data in digital environments, aligning with international standards such as the United Nations Convention on the Rights of the Child (UNCRC) and GDPR. The DPA stresses the need for parental consent and the principle of the best interests of the child in data processing. These actions align with concerns raised by Human Rights Watch regarding the risks posed by EdTech platforms. While the DPA's guidance supports stronger protections, further development may be needed to address the broader risks identified in digital education tools. The Ministry of National Education established the Ethics Board for Artificial Intelligence Applications in 2025,⁷⁵²¹ providing a formal mechanism for

ethical review and documentation of AI use in education, complementing the DPA's guidance on data protection and children's rights.

AI in the Judiciary

Türkiye's Judicial Reform Strategy 2025–2029⁷⁵²² includes integrating AI into judicial services and establishing an AI Scientific Commission within the Ministry of Justice. The aim is to strengthen the legal framework for AI, minimizing potential risks and ensuring access to justice. The proposed judicial reform emphasizes the integration of AI to modernize the judicial system, improve efficiency, and promote access to justice. The reform includes the consideration of AI-based recommendation systems to aid judicial decision-making and support judicial processes with the goal of reducing workload, bureaucracy, and errors. A specialized institutional body will be created to regulate the ethical use of AI in judicial processes, and all AI applications will be designed in compliance with the EU's GDPR and other international legal standards.

Environmental Impact of AI

Türkiye's National AI Strategy identifies “Flourishing the Environment and Biological Ecosystem” as an AI value.⁷⁵²³ The Strategy advises that “All actors involved in the lifecycle of AI systems should adhere to relevant international and national legislation, standards and practices designed for the protection, restoration and sustainable development of the environment and ecosystem.” However, Türkiye has published no information on specific requirements or regulations to limit the negative environmental impact of AI development, deployment, or use.

Lethal Autonomous Weapons

Türkiye is one of the most important lethal autonomous weapon systems (LAWS) developers and exporters in the world. “Though Turkey's defense sector remains small compared with giants like China, it has outsized influence because of the impact of its drones in recent conflicts. The country's Bayraktar TB-2 drones

have been used in at least four different conflicts—Ukraine, Syria, Libya⁷⁵²⁴ and in Azerbaijan’s conflict with Armenia.”⁷⁵²⁵

Türkiye has participated in every Convention on Certain Conventional Weapons (CCW) meeting on lethal autonomous weapons systems between 2014 and 2023. At the 2022 meeting of the CCW Meeting High Contracting Parties, Türkiye stated that “We believe that the development and use of autonomous weapons systems which does not have meaningful human control are undesirable and risk compliance with our obligations stemming from the International Humanitarian Law. Humans (commanders and operators) have to be involved in the decision loop and bear the ultimate responsibility when dealing with the decision of life and death in order to ensure compliance with International Law, in particular International Humanitarian Law.”⁷⁵²⁶ Türkiye also repeated its commitment to fully implement the CCW and its annexed Protocols.

However, Türkiye abstained from voting on Resolution 78/241 on lethal autonomous weapons, adopted by the UN General Assembly in December 2023. This resolution aimed to address the development, use, and potential consequences of lethal autonomous weapons systems (LAWS), calling for an international regulatory framework to prevent the weaponization of autonomous systems that could undermine human accountability in warfare.⁷⁵²⁷

Türkiye endorsed the Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023,⁷⁵²⁸ following the first global Summit on Responsible Artificial Intelligence in the Military Realm in the Hague. At the

Summit, attendees issued joint call to action on the responsible development, deployment, and use of artificial intelligence in the military domain.⁷⁵²⁹

Türkiye also endorsed the Blueprint for Action, the outcome document from the second REAIM summit in 2024, hosted by the Republic of Korea.⁷⁵³⁰ The Blueprint for Action is the first step toward operationalizing the commitments from the first REAIM Summit.

AI Literacy

Türkiye's AI literacy for policymaking and governance has developed through various initiatives rooted in the National AI Strategy 2024–2025 Action Plan.⁷⁵³¹ The Strategy mandates in-service training in advanced analytics and AI in public institutions to strengthen the capacity of rule-making and supervisory bodies. The National E-Learning Portal for Public Servants (*Uzaktan Eğitim Kapısı*) began delivering an AI Awareness Program designed and implemented with public universities in 2024, with rollout documentation extending into March 2025.⁷⁵³²

The Turkish Personal Data Protection Authority supports broader data literacy through nationwide programs for children, Learning Personal Data with Verican⁷⁵³³ and Digital Adventures with Verinaz,⁷⁵³⁴ which promote early understanding of privacy and responsible data use as foundations for ethical AI governance. The Ministry of National Education released the AI in Education Policy Paper and Action Plan 2025–2029, outlining measures for capacity-building and governance readiness in the education sector.⁷⁵³⁵ The Ministry of National Education's guidance to the Ethics Board for AI Applications established review

procedures and documentation duties to institutionalize literacy around AI-related decisions in education.⁷⁵³⁶ Finally, Türkiye’s 2025–2028 EU Accession National Action Plan includes alignment with the EU AI Act, which promotes AI literacy within public administration and oversight bodies.⁷⁵³⁷ This alignment indicates that Türkiye’s convergence with the EU’s AI governance framework will soon encompass the Act’s literacy and capacity-building commitments.

Human Rights

Freedom House classifies Türkiye as “Not Free” in 2025 with a score of 33/100.⁷⁵³⁸ This assessment reflects ongoing restrictions on freedoms of expression, assembly, and political participation, alongside concerns over judicial independence and human rights practices. Freedom House reports that while Turkish law officially grants citizens access to information, “Turkey’s political and legal environment has made democratic oversight of the government nearly impossible.” Algorithm Watch has reported that rollbacks on factchecking and content moderation by big tech companies including Meta and X “may have severe consequences” for users.⁷⁵³⁹ The organization notes that X, in particular, “has facilitated authoritarian censorship in India and Turkey” by allowing what Algorithm Watch called one-sided oversight.

AI Safety Summit

Türkiye participated in the first AI Safety Summit and endorsed the Bletchley Declaration in November 2023.⁷⁵⁴⁰ Türkiye thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their

potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

OECD / G20 AI Principles

As a founding member of the OECD, NATO ally, and G20 member, Türkiye adopted the OECD AI Principles.⁷⁵⁴¹ According to the OECD, Türkiye’s AI Technology Roadmap is a multistakeholder effort that supports implementation of the G20 AI Principles on inclusive growth, robustness, and accountability.⁷⁵⁴² The National AI Strategy explicitly acknowledges that Türkiye is a stakeholder of human-centric AI principles determined by OECD and adopts “trustworthy and responsible AI” values and principles.⁷⁵⁴³

Türkiye is an active member of the OECD Network of Experts on Artificial Intelligence with representatives at ministerial and presidential levels⁷⁵⁴⁴ and contributes to the OECD Committee on Digital Economy Policy (CDEP) Working Party on Artificial Intelligence Governance (WPAIGO) meetings and policy documents at both the technical and bureau membership levels.⁷⁵⁴⁵

Türkiye also commits to the OECD AI Principles as a member of the Global Partnership for Artificial Intelligence (GPAI).⁷⁵⁴⁶ As a GPAI member, Türkiye participates in the ongoing international cooperation on the responsible development and use of AI and benefits from the multi-stakeholder cooperation within GPAI to adopt trustworthy AI, share multi-disciplinary research, identify knowledge gaps, maximize coordination, and identify and mitigate potential challenges.

Türkiye’s government adopted an AI Ethics Decision mandating public sector compliance with several principles for ethical behavior, emphasizing human-

centered design and rights in September 2024.⁷⁵⁴⁷ The Ethics Decision enables the country to make further strides in implementing OECD principles. Focused on public sector applications that could impact citizen welfare, the decision highlights human rights concerns in line with international AI guidelines. It underscores the importance of accountability, transparency, and fairness in AI usage, aligning with Türkiye's broader focus on maintaining data sovereignty and enforcing strict data protection protocols.

Council of Europe AI Treaty

Türkiye contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law.⁷⁵⁴⁸ Türkiye's Digital Transformation Office (DTO) served as the national coordinator and secretariat for the Council of Europe Ad Hoc Committee on Artificial Intelligence (CAHAI)⁷⁵⁴⁹ and represented Türkiye⁷⁵⁵⁰ as one of the lead coordinators of the Policy Development sub-working⁷⁵⁵¹ group and Legal Frameworks group.⁷⁵⁵² The DTO also served as the national coordinator and secretariat for the Committee on Artificial Intelligence (CAI) that took over after the CAHAI mandate expired. Türkiye was represented at the plenary meetings by the observers and government-appointed representatives.

Despite these contributions, Türkiye has not signed this first legally binding international treaty on AI.⁷⁵⁵³ However, Türkiye's National Action Plan for EU

Accession (2025–2028) includes an action to sign the Council of Europe Framework Convention on Artificial Intelligence within the accession period.⁷⁵⁵⁴

UNESCO Recommendation on AI Ethics

Türkiye has endorsed the 2021 UNESCO Recommendations on the Ethics of AI. The Turkish National AI Strategy mentions that the “country is a stakeholder of human-centric AI principles determined by [...] UNESCO, and adopts ‘trustworthy and responsible AI’ values and principles,”⁷⁵⁵⁵ although the strategy does not refer explicitly to the UNESCO Recommendation.

Türkiye carried out its membership in the Executive Board of UNESCO for the period of 2017–2021. In addition, in the election of Members to the Executive Board held at the 41st General Conference of UNESCO in November 2021, Türkiye was re-elected for the 2021–2025 period.⁷⁵⁵⁶ The Ministry of Foreign Affairs states that Türkiye “embraces the purpose and ideals of UNESCO,” believes “in the significance of maintaining active support to all levels of the Organization,” and “will continue to contribute strengthening UNESCO’s activities and values as a member of the Executive Board.”⁷⁵⁵⁷ The Executive Board adopted a decision to include a section on the Implementation of the Recommendation on the Ethics of Artificial Intelligence at its 215th session held in October 2022.⁷⁵⁵⁸

Türkiye has taken the step to begin the Readiness Assessment Methodology (RAM).⁷⁵⁵⁹ Türkiye’s Human Rights and Equality Institution (*Türkiye İnsan Hakları ve Eşitlik Kurumu*) participated in workshops on data privacy as part of a launch for the RAM studies.⁷⁵⁶⁰ The event collected opinions, evaluations, and contributions from public institutions as well as stakeholders from the public, private sector,

Center for AI and Digital Policy

academia, and civil society to contribute to the RAM report. The initiative aims to translate UNESCO's AI Ethics Recommendation into Türkiye's national institutional and regulatory frameworks while fostering a national consensus on a shared vision for AI.

Evaluation

Türkiye is an emerging market for AI and a regional leader in AI. Türkiye adopted a National AI Strategy with a clear human-centered approach and has worked to operationalize the strategy with an action plan for 2024–2025 and sectoral plans. In the absence of any AI legislation and despite the lack of provisions in the Law on the Protection of Personal Data regarding algorithmic transparency, the Turkish Data Protection Authority has issued Recommendations on the Protection of Personal Data in the Field of Artificial Intelligence, including a note on the use of chatbots.

Türkiye's government adopted an AI Ethics Decision mandating public sector compliance with several principles of ethical behavior, emphasizing human-centered design and rights. Türkiye's EU accession plans and Medium-Term Program indicate an intention to explicitly align Turkish legislation on data privacy and AI with the GDPR and EU AI Act. Additionally, the accession plans anticipate the signing of the Council of Europe Framework Convention on Artificial Intelligence.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Uganda

In 2025, Uganda progressed on effort to define a national AI policy framework by presenting the AI Landscape Assessment. Preparations for the UNESCO Readiness Assessment Methodology (RAM) begun in 2025 will continue this effort. The country also signed the Africa Declaration on Artificial Intelligence, stressing sovereignty, inclusivity, and diversity in AI design and deployment.

National AI Strategy

Uganda's Ministry of Information, Communications Technology & National Guidance announced that a formal decision on a national AI governance approach is expected by the end of 2025.⁷⁵⁶¹ The ministry noted inclusive consultations “to develop an AI strategy tailored to the country's needs” aligned with Uganda's digital transformation goals. Ethical governance, protecting data privacy, and continuing digital skilling efforts are central to the AI strategy, which will align with the digital transformation roadmap. The Ministry of ICT and National Guidance included the development of an AI Framework among the top outputs for the 2025/26 fiscal year.⁷⁵⁶² The National AI Landscape Assessment⁷⁵⁶³ published in 2025 marks progress toward this goal and alignment with the Digital Transformation Roadmap, 2023–2027⁷⁵⁶⁴ and the National Development Plan. The assessment evaluated the use and potential of AI across public and private organizations as the basis for a plan to “harness AI's economic and social benefits in Uganda while mitigating its potential adverse effects.” Participants in the survey supported efforts to develop national AI policy: 50% reported a positive impact for policy and only 18.2% suggested that a lack of regulations allowed for greater innovation.⁷⁵⁶⁵

Plans by the Ministry of ICT follow efforts begun in 2024 by the Uganda Communications Commission (UCC) AI task force to develop a concept note for AI governance in the communications sector. The AI task force comprises regulatory

and academic experts continued efforts in 2025 and initiated a program to increase connectivity in schools.⁷⁵⁶⁶ Local authorities continue to call for a law.⁷⁵⁶⁷

The Ministry of ICT and National Guidance developed the Digital Uganda Vision⁷⁵⁶⁸ as a policy and strategy framework aligned with Uganda's National Vision 2040 to transform the country to a competitive upper-middle-income country.⁷⁵⁶⁹ The Digital Uganda Vision aspires to “digitalization that inspires innovation and productivity of people, organizations, businesses and government by 2040. The national strategy for the Fourth Industrial Revolution (4IR)⁷⁵⁷⁰ developed by an expert task force⁷⁵⁷¹ also informed and aligned with these visions.

The National Development Plan (NDP III) sets the aspirations articulated in Uganda Vision 2040.⁷⁵⁷² Within the theme of sustainable industrialization for inclusive growth and sustainable wealth creation, the goals of the NDP III center on increasing household incomes and improving the quality of life of Ugandans. The NDP III plan includes a Digital Transformation Program aiming to realize 18 projects to increase ICT penetration and use of ICT services for social and economic development, ICT incubation and increasing e-government services.

The focus of the Digital Transformation Program for Artificial Intelligence is on capacity-building but not on policy or regulatory framework, or strategic intent in the field of AI. Notable in the NDPIII, however, is the commitment to a Human-Rights Based Approach (HRBA) for sustainable economic development, expressed as follows: “Ensure inclusive sustainable development [...] with particular attention to human rights principles of equality and non-discrimination, empowerment and participation and attention to vulnerable groups. [...] All sectors, ministries, departments, agencies, and local governments are expected to adopt HRBA in their respective policies, programs, legislation, and plans.”⁷⁵⁷³

African AI Policy

At the regional level, Uganda has been actively participating in several relevant policy initiatives. As a member of the African Union (AU), Uganda is committed to take specific measures to formulate and implement human-centered policies, in alignment with the goals of the AU digital transformation strategy,⁷⁵⁷⁴ the AU Continental Data Policy Framework,⁷⁵⁷⁵ and the AU Continental Artificial Intelligence Strategy.⁷⁵⁷⁶ Ugandan representatives from government, academia and private sectors form part of the committees and AI working groups that hold discussions around AI and ICT for social-economic development in Smart Africa and the African Union.. The Smart Africa Alliance brings together African Heads of State and Government committed to accelerate sustainable socio-economic development through information and ICTs and affordable broadband access.⁷⁵⁷⁷ Uganda actively participated in the drafting of the 2014 Smart Africa AI for Africa Blueprint strategy report.⁷⁵⁷⁸ Uganda also contributes to the African Union High-Level Panel on Emerging Technologies (APET),⁷⁵⁷⁹ which advises the AU on harnessing emerging technology innovations for Africa's social-economic transformation.

Uganda recommitted to the AU Continental AI Strategy and protecting African values and sovereignty through AI development as a signatory to the Africa Declaration on Artificial Intelligence⁷⁵⁸⁰ as part of the Global AI Summit on Africa. The Declaration provides for the establishment of the Africa AI Council aligned to existing collaboration efforts through the African Union, Smart Africa Steering Committee, and International Telecommunications Union.

Public Participation

The Republic of Uganda set a Guide to Policy Development & Management for the country in 2013⁷⁵⁸¹ to address the lack of a formalized process for policy management. The government set forth a commitment to public consultations to promote democratization and empowerment. Modes of public consultation range from information consultations to one-time meetings with stakeholders to discussion papers and draft legislation. Recommendations included reasonable periods for consultation and participation in the early stages of policy formulation.

As evidence of these efforts, the government of Uganda in collaboration with UN Global Pulse organized the Expert National Task Force on Fourth Industrial Revolution, under the leadership of the Ministry of ICT & National Guidance.⁷⁵⁸² The process involved 23 experts from academia, engineering, science, and policy-makers.⁷⁵⁸³ The draft strategy validated in October 2020⁷⁵⁸⁴ guides the Ugandan government in harnessing emerging technologies.

The Ministry of ICT and National Guidance includes national, public consultations on drafts as steps in the plan for developing a national AI governance framework.⁷⁵⁸⁵ The methodology for the National AI Landscape Assessment⁷⁵⁸⁶ included stakeholder consultation through interviews, guided questionnaires, and a webinar with private and public organizations and actors.

Data Protection

The Data Protection and Privacy Act (DPPA)⁷⁵⁸⁷ was enacted in 2019 and ancillary regulations known as the Data Protection and Privacy Regulations were

published in 2021.⁷⁵⁸⁸ The DPPA was modeled on the European Union GDPR and seeks to “protect the privacy of individual and personal data by regulating the collection and processing of personal information; to provide for the rights of the persons whose data is collected (data subjects) and the obligations of data collectors, data processors and data controllers; and to regulate the use or disclosure of personal information; and for related matters.”

The DPPA provides that all personal data must be handled in accordance with the principles of accountability, lawfulness, minimization, retention, quality, transparency, and security.⁷⁵⁸⁹ The Law establishes the Personal Data Protection Office under the National Information Technology Authority, Uganda (NITA-U) to oversee the implementation of and be responsible for the enforcement of the Act.⁷⁵⁹⁰

The Ministry of ICT and National Guidance drafted a National Data Strategy, which is currently in the pre-validation stage.⁷⁵⁹¹ At Data Protection Day 2024, the Deputy Speaker of Parliament launched the 2023–2028 Strategic Plan of the Personal Data Protection Office and the braille version of the Data Protection and Privacy Act.⁷⁵⁹² The Deputy Speaker’s speech emphasized the importance of updating existing data protection laws to adapt to developments in artificial intelligence and technology.

The Data Protection and Privacy Regulations of May 2021 give effect to Article 27 of the Constitution on the right to privacy.⁷⁵⁹³ Some data protection safeguards are also contained in other laws including the Electronic Transactions Act, 2011, Computer Misuse Act, 2011, Electronic Signatures Act, 2011, National Information Technology Authority, Uganda Act (NITA-U Act), and the Access to Information Act, 2005.

Uganda is not a party to the AU Convention on Cyber Security and Personal Data Protection (Malabo Convention).⁷⁵⁹⁴ The Convention addresses the

development of information and communication technologies while upholding fundamental rights and freedoms.

The Personal Data Protection Officer is a member of the Global Privacy Assembly (GPA) since 2024.⁷⁵⁹⁵ The Personal Data Protection Office has not endorsed the 2018 GPA Declaration on Ethics and Data Protection,⁷⁵⁹⁶ the 2020 GPA Resolution on Accountability in the Development and Use of AI,⁷⁵⁹⁷ the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology,⁷⁵⁹⁸ or the 2023 GPA Resolution on Generative AI Systems.⁷⁵⁹⁹

Algorithmic Transparency

The Data Protection and Privacy Act⁷⁶⁰⁰ covers automated decision-making but does not establish a right to algorithmic transparency. In 2024, the Personal Data Protection Office began consultations on accountability mechanisms for AI-driven decisions, referencing the 2023 Global Privacy Assembly Resolution on Generative AI.⁷⁶⁰¹

Biometric Identification

Uganda's National Identification (ID) program was launched in 2014 and further expanded after the passage of the Registration of Persons Act in 2015, making purchasing a SIM card mandatory and making registration essentially a pre-requisite for getting online.⁷⁶⁰² Registration for the National ID is also required for a range of other vital services, including accessing public education or healthcare services; obtaining a passport; opening a bank account; voting and public service verification, which has led to the weeding out of many "ghost" workers; citizen verification for passport issuance; and tax identification.⁷⁶⁰³

Under the National ID system citizens' biometric data is captured and validated for adults and children. Infants are issued a National Identification Number (NIN) or an ID card upon registration of their birth. The National ID system managed by the National Identification & Registration Authority (NIRA) is moving towards the development of its digital ID ecosystem that was to be put in place by 2024, including a new biometrics registration drive.⁷⁶⁰⁴ The process will expand the system to forms of biometrics other than fingerprints, including iris and face biometrics. However, the system has also been plagued by technical challenges since its inception, including allegations of a major data breach in June 2017. Though the government denied these reports, it admitted that citizens' biometric data had been shared with telecommunications companies as part of the process of verifying SIM cards.⁷⁶⁰⁵

A coalition of civil society organizations filed a lawsuit in the High Court of Kampala for digital exclusion in 2022.⁷⁶⁰⁶ The case Initiative for Social and Economic Rights [ISER], the Health Equity and Policy Initiative [HEAPI], & Unwanted Witness v. Attorney General and National Identification and Registration Authority (NIRA) alleges that the digital ID system, also known as Ndaga Muntu,

poses an exclusionary barrier that violates women's rights to health care, and the right to social security benefits.⁷⁶⁰⁷ The alleged exclusion has been fatal, especially among the elderly and pregnant women who have been barred from healthcare and welfare services. Research conducted by the plaintiffs estimates that up to 33% of adults in Uganda have yet to receive the biometric ID card launched in 2015, limiting their access to a range of public services from welfare benefits and maternity care to college enrollment, formal employment, and opening bank accounts.⁷⁶⁰⁸

Facial Recognition

The government of Uganda has actively used AI and new technologies for purposes of mass surveillance, policing, and crime prevention. The government rushed the procurement of 24-hour CCTV cameras in crime-prone areas in Kampala and surrounding areas following a wave of murders. These crimes included high-profile Ugandan citizens, Muslim clerics, military and police officers, Cabinet Ministers, among others. The first phase of the plan included the installation of 1,940 cameras in 2018 in the capital city area.⁷⁶⁰⁹ The second phase cost the Ugandan public over USD 104 million, in a procurement deal hastened through Parliament under vague loan terms.⁷⁶¹⁰

The Ugandan Parliament endorsed the deployment of the technology for policing functions without legislating a corresponding legal framework fostering issues of the legality of such actions.⁷⁶¹¹ Human rights concerns emerged over the fact that the system was operated on a centralized database, with the potential of negatively affecting citizens' right to privacy, and freedom of peaceful assembly.

The CCTV project was not well received due to the lack of openness, and transparency in the procurement process and in the management of the system, hindering public trust. Reports of unexplainable leaked footage from CCTV

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

cameras⁷⁶¹² raised further questions on the ethical standards and requirements to manage the retrieval, sharing and elimination of public CCTV footage.⁷⁶¹³ Additionally, concerns exist about how the infrastructural deficiencies (poor or no street lighting, limited connectivity, low standards of maintenance) have undermined the benefits of the use of CCTV in several instances of application of the system. Despite these reservations, the Ugandan police proceeded with the plans to integrate their CCTV camera and forensic system with other key agencies' data such as Uganda Revenue Authority (URA), NITA-U, NIRA, and the immigration office. In the second phase of this plan, started in 2020, 20 facial recognition cameras were installed and connected to 107 monitoring centers at different police stations within 2,319 mapped countryside municipalities and major towns.⁷⁶¹⁴

Key concerns around transparency and accountability of both resources and personal data remain unanswered, in particular the use of AI facial recognition technologies to indiscriminately deal with persons of interest, including dissidents.⁷⁶¹⁵ In a report regarding concerns in the use of AI in Africa, AfriPoli found the use of facial recognition systems in the 2020 Ugandan elections, to monitor, track and arrest 836 supporters of the opposition.⁷⁶¹⁶ The participation of Huawei AI in 16 African countries, including Uganda has led to the use of mass surveillance data to local law enforcement.⁷⁶¹⁷

Tracking

In 2020, the government adopted a measure that linked the RECS system to the efforts to combat the spread of COVID-19.⁷⁶¹⁸ A task force that included the

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Uganda Revenue Administration Commissioner General and the Uganda Trade Minister, set up to discuss how the RECS could trace the movement of trucks (and their drivers) in real-time across trade routes. The plans came about after a COVID-positive truck driver was intercepted at the border upon mandatory testing, a condition to clear Customs.

The Ugandan government later announced a plan to install GPS trackers on every vehicle in the country.⁷⁶¹⁹ The project would require the registration of all number plates for every public and private vehicle, water vessel, and motorcycles (commonly known as Boda Bodas.). This plan posed an evident risk to freedom of mobility as the government would be able to track the whereabouts of a person at all times.

In the original plan, the Ugandan government signed a Memorandum of Understanding and a 10-year agreement with the Russian firm Joint-stock Company Global Security, under a project dubbed Intelligent Transport Monitoring System (ITMS).⁷⁶²⁰ While the government presented these plans as an effort to curb the rampant transport kidnappings and robberies to aid during investigations, legal groups sued the government over these plans, and pleaded to the High Court to halt and restrain the implementation of the compulsory digital surveillance, due to privacy concerns.⁷⁶²¹ The lawsuit includes a request for explanations to the government regarding the adjudication of the contract to a foreign entity without due diligence. The government planned to deploy the systems in March 2023.

Environmental Impact of AI

Uganda does not have formal policies addressing the environmental impact of AI. However, the country employs AI-enabled air quality monitors in the capital city to reduce pollution-related illnesses.⁷⁶²²

Lethal Autonomous Weapons

The governance and control of Unmanned Aerial Systems (UAS), Remotely Piloted Aircraft Systems (RPAS), or drones, have been a concern of the Uganda authorities. In a report of 2019, the Uganda Civil Aviation Authority and Customs officials started awareness sessions about the threats that non-registered drones pose to national security.⁷⁶²³ Uganda developed laws to regulate drones under the Civil Aviation Authority (CAA) Remotely Piloted Aircraft Systems Regulations 2020, but is lacking a unified legal framework.⁷⁶²⁴ The Uganda Communications Commission issued guidelines for the operation of remotely piloted aircraft (RPAS)/drones in Uganda in 2020.⁷⁶²⁵ In January 2025, the director general of the Civil Aviation Authority called on drone operators to follow the set guidelines and get clearance for operations in Uganda's airspace and adhere to all the certification procedures to legally operationalize drone activities in the country.⁷⁶²⁶

Uganda is a High Contracting Party to the Convention on Certain Conventional Weapons,⁷⁶²⁷ a member of the Group of the Non-Aligned Movement in the CCW,⁷⁶²⁸ and a member of the African Group in the UN General Assembly.⁷⁶²⁹ The African Group issued a joint statement calling for an international discussion on the "ethical, legal, moral and technical questions" raised by the use of autonomous weapons systems and urging concrete policy recommendations, including prohibitions and regulations in 2023.⁷⁶³⁰ The Non-Aligned Movement has called for

a legally binding instrument based on a two-tier approach, stressing: “There is an urgent need to pursue a legally binding instrument under the Convention that will contain prohibitions and regulations for addressing the humanitarian and international security challenges posed by emerging technologies in the area of LAWS.”⁷⁶³¹

AI Literacy

Digital skills and capacity building for ethical and responsible digital practices, including with artificial intelligence,⁷⁶³² are pillars in Uganda’s digital transformation strategy and explicit in communication about the AI strategy.⁷⁶³³ AI literacy programs within this broader digital transformation agenda emphasize data protection, public participation, and inclusive governance.⁷⁶³⁴ These measures aim to prepare officials to create effective AI oversight frameworks and enable informed public input into AI policy development.⁷⁶³⁵ The Ministry of ICT and National Guidance is leading efforts to train policymakers and government officials on how AI affects society.

Uganda is also working with universities and training centers to expand AI knowledge,⁷⁶³⁶ ensuring policy makers receive timely knowledge of AI’s ethical, privacy and governance challenges.⁷⁶³⁷ In September 2025, Uganda began artificial intelligence initiatives within the Digital Learning Agenda Strategy. The National Teacher Institute is also preparing training programs for educators focused on AI

applications and data protection.⁷⁶³⁸ These actions highlight Uganda’s commitment to embedding ethical and inclusive AI governance in its education sector, while also addressing teacher capacity and data privacy concerns.

Human Rights

Freedom House ranks Uganda as “Not Free” in the 2025 Freedom in the World Report, with a score of 34/100.⁷⁶³⁹ Freedom House rates Uganda low on political and civil rights because of the ruling party’s use of “patronage, intimidation, and politicized prosecutions of opposition leaders” to maintain power. The report also notes that “civil society and media sectors face legal and extralegal harassment and state violence.”

The Ibrahim Index of African Governance report in 2023 scores Uganda at 49.1/100 for overall governance and 45.3/100 in Participation Rights & Inclusion, placing the country in position 26 out of 54 African countries, with a decreasing change trend of -1.8 since 2014.⁷⁶⁴⁰

Uganda is a signatory of the Universal Declaration of Human Rights and has ratified various covenants including the International Convention on Civil and Political Rights (ICCPR) and International Covenant on Economic, Social and Cultural Rights (ICSECR).⁷⁶⁴¹ Uganda ratified the African Charter on Human and People’s Rights in 1986.⁷⁶⁴² Chapter four (4) of the Constitution of Uganda of 1995 provides for the protection of fundamental civic, economic, social, and political rights and freedoms. Article 20 (1) of the Constitution stipulates that the fundamental rights and freedoms of individuals are inherent and not granted by the State.

In line with the Constitution, the country has a Uganda Human Rights Commission that monitors human rights violations.⁷⁶⁴³ There is a Human Rights

Committee in Parliament⁷⁶⁴⁴ scrutinizing the work of the government, making recommendations aimed to improve human rights protection, and overseeing the National Action Plan on Human Rights. The Inter-Parliamentary Union reported on the lack of Parliamentary action in response to reported human rights abuses, including torture and abduction, of parliamentarians and candidates for Parliament in cases active since 2023.⁷⁶⁴⁵

Uganda is a multiparty democracy, yet the same party (National Resistance Movement) and President have ruled since 1986 with fast-rising opposition to the incumbency.⁷⁶⁴⁶ In the 2021 elections, media reports indicated that the political campaign was marred by killings, arrests, beatings, and disappearances by security forces as well as harassment and intimidation of journalists.⁷⁶⁴⁷

The Human Rights Foundation's universal periodic review (UPR) report of Uganda⁷⁶⁴⁸ found actions by the Uganda government such as ordering internet blackouts on the evening of elections in 2018. A five-day internet shutdown and blockage of social media, compounded by a government decision to replace a 200 shilling (\$0.05) social media tax with a 12 percent tax on internet data. The government adopted further regulations to restrict freedom of expression by levying fees on the use of online communication. A new shutdown of social media services occurred close to the date of the 2021 elections. The UPR report exhorts the Ugandan government to ensure the protection of all individuals and cooperate with international human rights organizations and generate an internal dialogue toward peace.

Amnesty International highlighted that freedom of expression has become increasingly constrained and civic space significantly narrowed as Human Rights defenders (HRDs) and organizations working on electoral accountability were particularly targeted for their work.⁷⁶⁴⁹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

OECD / G20 AI Principles

Uganda is not a member of the OECD and is not a signatory to OECD AI Principles.⁷⁶⁵⁰ The OECD AI Observatory reports that the 4IR strategy is aligned with two OECD AI principles: (1) Fostering a digital ecosystem for AI and (2) Providing and enabling policy environments for AI. However, no reports are available for implementation.⁷⁶⁵¹ Uganda is not a member of the Global Partnership on AI (GPAI).⁷⁶⁵²

Council of Europe AI Treaty

Uganda has not endorsed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and Rule of Law, the first legally binding international treaty on AI and human rights.⁷⁶⁵³

UNESCO Recommendation on AI Ethics

Uganda is a member of UNESCO since 1962⁷⁶⁵⁴ and is among the member states that adopted the UNESCO Recommendation on the Ethics of AI.⁷⁶⁵⁵

According to the UNESCO AI Needs Assessment Survey in Africa, Uganda is one of the countries in Africa that established AI as a priority in their national development plans. Strategies and policies are underway, but legislation and ethical guidelines as well as the operation of Centers of Excellence are yet to be implemented. Uganda reported work in progress in the establishment of a legal framework and plans for education programs to introduce government officials to AI skills. Uganda has requested support from UNESCO to guide the development of AI at the national level.⁷⁶⁵⁶

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Uganda is preparing for the UNESCO Readiness Assessment Methodology (RAM),⁷⁶⁵⁷ a tool to support implementation of the UNESCO AI ethics Recommendation. UNESCO announced Uganda's selection at the Global Forum on the Ethics of Artificial Intelligence.⁷⁶⁵⁸ The Ministry of ICT and National Guidance noted the RAM report will build on the AI Landscape Assessment and the Research and Development department's progress in "scoping national AI use cases, identifying policy and institutional gaps, and engaging with partners."

Evaluation

Uganda's engagement at regional and international level as well as Uganda's 4IR strategy, 2019 Data Protection and Privacy Act, Vision 2040, and NDP III indicate the country's intent to spearhead digital transformation. The AI Landscape Assessment and Ministry of ICT and National Guidance's plan mark progress toward ensuring the human-centered approach at the core of the earlier strategies extends to AI. Further strengthening the Data Protection and Privacy Act to extend data subjects' right to algorithmic transparency and providing greater independence of the data protection authority would be meaningful next steps. Tackling the widespread use of AI for surveillance purposes would be another. Should Uganda take its commitment to the UNESCO Recommendation on the Ethics of AI seriously, the Recommendation could provide a template for regulating the deployment of AI in a way that respects human rights.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Ukraine

In 2025, Ukraine updated the Action Plan for AI development. Ukraine signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.

National AI Strategy

Ukraine's government approach to AI is set out in two Orders issued by the Cabinet of Ministers of Ukraine. The Cabinet published its first Order⁷⁶⁵⁹ approving the "Concept for the Development of Artificial Intelligence in Ukraine." The order recognized that deployment of AI systems must include compliance with fundamental principles, such as those enshrined in personal data protection legislation and respect the constitutional rights to privacy and private and family life. The second order approved the Action Plan for implementing the Concept between 2021–2024.⁷⁶⁶⁰

The Action Plan elaborates on AI priorities for Ukraine, highlighting the use of AI in support of defense and public welfare while emphasizing responsible and trustworthy AI use.⁷⁶⁶¹ The Cabinet of Ministers manages and oversees Plan implementation. An Expert Committee on the Development of Artificial Intelligence—an independent expert body established under the Ministry of Digital Transformation—assists in strategic planning of the activities, advises on the thematic issues, and facilitates cooperation between key stakeholders.⁷⁶⁶² The 2025–2026 Action Plan continues this implementation, assigning concrete tasks and deadlines to each Ministry. Ministries must submit results to the Ministry of Digital Transformation each year and agencies must act within existing budgets.⁷⁶⁶³

The Ministry of Education and Science of Ukraine has also published its proposed, much more detailed National Strategy for the Development of Artificial

⁷⁶⁵⁹ Order of the Cabinet of Ministers, *On the Approval of the Concept of the Development of Artificial Intelligence in Ukraine* (Dec. 2, 2020), <https://zakon.rada.gov.ua/laws/show/1556-2020-p>

⁷⁶⁶⁰ Order of the Cabinet of Ministers, *On the Approval of the Plan of Measures for the Implementation of the Concept of the Development of Artificial Intelligence in Ukraine for 2021–2024* (May 12, 2021), <https://zakon.rada.gov.ua/laws/show/438-2021-%D1%80#n10>

⁷⁶⁶³ Cabinet of Ministers, *On Approval of the Plan of Measures for Implementation of the Concept for the Development of Artificial Intelligence in Ukraine for 2025–2026* (Order No. 457-r) (May 9, 2025), <https://zakon.rada.gov.ua/laws/show/457-2025-%D1%80>

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Intelligence for 2021–2030.⁷⁶⁶⁴ In particular, the strategy notes that as a member of the Council of Europe Ad Hoc Committee on Artificial Intelligence, Ukraine should focus primarily on the standards of the EU, the Council of Europe, and other pan-European institutions that work on AI-related matters. The strategy also acknowledges the need to ensure alignment with the OECD AI Principles and the principles enshrined in the EU Charter of Fundamental Rights including human dignity, non-discrimination, and consumer protection. Ukraine’s commitment to the Council of Europe Framework Convention on Artificial Intelligence reflects this focus.⁷⁶⁶⁵

Recent updates from the Ministry of Digital Transformation reaffirm these principles, with Ukraine joining global AI governance efforts through participation in summits such as the AI Seoul Summit.⁷⁶⁶⁶ The government presented a draft National AI Development Strategy, WINWIN 2030, and indicated that consultations would inform the final text.⁷⁶⁶⁷

The Expert Committee on the Development of Artificial Intelligence in Ukraine in cooperation with the Ministry of Digital Transformation presented a Roadmap for the regulation of AI in Ukraine.⁷⁶⁶⁸ The Roadmap proposes a bottom-up approach to AI regulation, which involves a gradual “moving from less to more,” starting from self-regulatory initiatives in phase one and ending up with the legislative acts similar to the EU AI Act in the second phase. A phased approach further detailed in the 2024 White Paper on Artificial Intelligence Regulation in Ukraine emphasizes readiness tools like AI regulatory sandboxes.⁷⁶⁶⁹ In line with phase one, the Ministry of Digital Transformation has published guides for the responsible use of AI across sectors, including for lawyers, civil servants, developers,

Center for AI and Digital Policy

and in education.⁷⁶⁷⁰ The National Council of Television and Radio Broadcasting also addresses the responsible use of AI in the media with guidelines providing specific frameworks for transparency, ethics, and human oversight.⁷⁶⁷¹ No standalone AI regulator has been designated.

The Ministry of Digital Transformation and Office of the Ombudsman published a report under the under the EU4DigitalUA framework on the impact of AI on human rights and recommends approaches for regulation.⁷⁶⁷² The initiative draws from international principles, laws, and standards, including GDPR and UN guidelines, and provides recommendations for balancing technological progress with the protection of rights and freedoms. The initiative further highlights Ukraine's goals to align with global standards while addressing unique domestic challenges like data protection and ethical AI use. By emphasizing transparency, accountability, and risk management, EU4DigitalUA seeks to ensure safe AI adoption that supports societal progress without compromising individual rights.⁷⁶⁷³

Public Participation

Ukraine has developed AI policies through meetings and consultations of various forms. For example, the Ministry of Digital Transformation's digital government AI site provides a standing channel for public materials and future consultations of the National AI Committee.⁷⁶⁷⁴ Likewise, the Ministry of Digital Transformation ran Digital Literacy Month with Diia.Education in November 2025, expanding AI-focused digital skills for citizens and supporting informed participation in technology policy.⁷⁶⁷⁵ The Law on Access to Public Information allows Ukrainians to submit requests for information, including on AI policies and

state decisions in this area.⁷⁶⁷⁶ Another platform for citizen input consists of electronic petitions on the President's website. These petitions must garner 25,000 supporters within 90 days to be reviewed by the President.⁷⁶⁷⁷

The Institute of Artificial Intelligence Problems of the Ministry of Education and the National Academy of Sciences of Ukraine sent letters of inquiry to more than 300 different organizations for their views to inform the development and implementation of the National Strategy for the Development of Artificial Intelligence for 2022–2030. These included most ministries in Ukraine, scientific institutions, public and private institutions of higher education, and commercial entities.⁷⁶⁷⁸

The Roadmap for the regulation of AI in Ukraine was developed following a series of meetings with representatives of business, education, science, NGOs, and the parliament, as well as the Expert Committee.⁷⁶⁷⁹ Interested individuals can also engage by applying to join the Expert Committee on the Development of Artificial Intelligence under the Ministry of Digital Transformation. A three-month public consultation window preceded the release of the White Paper on Artificial Intelligence Regulation,⁷⁶⁸⁰ developed through collaboration with development agencies from the US, UK, Spain, and the EU.

The Ministry of Strategy and Industry of Ukraine also published a public consultation on the draft Act regarding the State targeted scientific and technical program for the use of AI technologies in priority sectors of the economy. The electronic consultation will enable individuals, legal entities and their associations to comment on proposals to create favorable conditions for the development and deployment of innovative AI technologies in priority sectors of the economy and to

strengthen Ukraine's position in the world market.⁷⁶⁸¹ The Ministry of Digital Transformation signaled open consultations around the draft National AI Development Strategy presented within WINWIN 2030 in 2025,⁷⁶⁸² with further public input to inform the final text.

Data Protection

The primary legislation governing data protection in Ukraine is the Law of Ukraine on Personal Data Protection (PDP), enacted in 2010. The legislation has been amended several times, most recently in 2025.⁷⁶⁸³ The law outlines fundamental requirements and obligations concerning the collection, processing, and use of personal data by both private entities and the Ukrainian government and applies to data processed through automatic as well as non-automated means.

The Constitution of Ukraine, the Council of Europe Convention 108 for the Protection of Individuals with regard to Automatic Processing of Personal Data, the Civil Code of Ukraine, and various by-law documents and recommendations approved by the Ukrainian Parliament Commissioner for Human Rights⁷⁶⁸⁴ constitute sources of personal data protection standards in Ukraine.

The Association Agreement between the European Union and Ukraine underscores cooperation to ensure an adequate level of personal data protection in line with European and international standards. Several drafts, including a Draft Law on Protection of Personal Data and the Draft Law on the National Commission on Personal Data Protection and Access to Public Information, reflect ongoing efforts to align Ukrainian legislation with EU requirements. The aim is to establish a comprehensive framework for personal data protection in both public and private sectors.⁷⁶⁸⁵ As of 2023, the Draft Law incorporates key GDPR principles but introduces some variations in matters such as the certification of Data Protection

⁷⁶⁸⁵ Council of Europe, *Opinion on the Draft Law of Ukraine “On Personal Data Protection,”* No. 8153 as of 25 October 2022 (Apr. 24, 2023), <https://rm.coe.int/opinion-on-the-draft-law-on-personal-data-protection-in-ukraine-final-/1680ab9e06>

Officers, adherence to EU guidelines and case law, CCTV recording retention periods, extraterritoriality, posthumous personal data processing, cross-border transfer, data breach notification or reasonable fees for data subject requests.

Articles 18(15), 19, and 25 would, with certain exceptions, provide data subjects with a right not to be subject to a decision based solely on automated processing, including profiling, which produces legal effects concerning individuals or similarly significantly affects such individuals.

The Office of the Ukrainian Parliament Commissioner for Human Rights, also known as the Ombudsman, is an independent, authoritative institution that oversees the protection of human and citizen rights and freedoms across Ukraine and for Ukrainians abroad.⁷⁶⁸⁶ Specifically, the Department for Personal Data Protection, an independent structural unit of the Secretariat of the Verkhovna Rada of Ukrainian Parliament Commissioner for Human Rights, ensures compliance and aligns Ukraine's personal data protection practices with national and EU standards.⁷⁶⁸⁷ Draft amendments to align the personal data framework with the GDPR remained under consideration in 2025, with priority on lawful processing, data subject rights, and supervisory powers.⁷⁶⁸⁸

The Parliament Commissioner publishes an annual report on the state of protection of citizens' rights and freedoms in Ukraine. The latest report relating to 2023 highlighted the progress on legislation to protect personal data and the access to information.⁷⁶⁸⁹ The report noted the increased threat of cyberattacks given the ongoing war with Russia. The report noted that the Commissioner acted on violations of human rights in the following high-risk areas: Unlawful processing of personal data, Fraudulent actions with personal data, Unlawful publication of videos containing personal data (including images of people), Violation of the right to access personal information, Issues of organization of personal data processing.

The Draft Law on the DPA proposes to establish an independent government agency that would be responsible for both policymaking (adopting mandatory regulations) and enforcement (prosecuting infringers) in the sphere of data privacy and access to public information.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Ukrainian Parliament Commissioner for Human Rights joined the Global Privacy Assembly (GPA) in 2015.⁷⁶⁹⁰ Ukraine did not endorse the 2018 Declaration on Ethics and Data Protection in Artificial Intelligence,⁷⁶⁹¹ 2020 Resolution on Accountability in the Development and use of Artificial Intelligence,⁷⁶⁹² 2022 Resolution on Principles and Expectations for the Appropriate use of Personal Information in Facial Recognition Technology,⁷⁶⁹³ or 2023 Resolution on Generative Artificial Intelligence Systems.⁷⁶⁹⁴

Algorithmic Transparency

Ukraine has not yet signed and ratified the modernized version of Council of Europe Convention 108 which provides for algorithmic transparency.⁷⁶⁹⁵ Ukraine has no specific law granting a right to algorithmic transparency. However, the Ministerial Statement from the AI Seoul Summit, an international agreement signed by Ukraine and 26 other countries, commits the country to uphold transparency in the public use of AI applications.⁷⁶⁹⁶

Articles 8(12) and 8(13) of the Ukrainian Data Protection Law does provide data subjects with the right to: (i) be made aware of the automatic processing of personal data; and (ii) be protected from automated decisions that have legal

consequences,⁷⁶⁹⁷ i.e. request the provision of public services by humans as an alternative to algorithmic processing.⁷⁶⁹⁸

Use of AI in the Media

The Ministry of Foreign Affairs introduced an AI-generated spokesperson, Victoria Shi, to provide accurate consular information to the public and media. This initiative marks a significant step in Ukraine's use of AI to enhance governmental communication and transparency, offering a model for integrating AI in public services responsibly.⁷⁶⁹⁹

The AI-generated spokesperson followed the Ministry of Digital Transformation published Recommendations for Responsible Use of Artificial Intelligence in the Media.⁷⁷⁰⁰ “The purpose of the recommendations is to implement and use the Guidelines for the Responsible Use of Artificial Intelligence Systems in Journalism, as well as to disseminate current international practices, principles and approaches to the responsible use of AI systems in the media to respect human rights and professional ethical standards.” The recommendations can be applied to content creation using generative AI systems, analyzing large amounts of data, administration and automation of work processes, content management such as searching and verifying content, and translating material.

The basic principles of using AI in the media include: responsible editorial decision (implementation of AI systems based on a conscious decision of the editorial staff taking into account the understanding of the mission of media outlets), legality, regular assessment of risks associated with the use of AI systems, transparency and clarity (disclosure of information on the use of AI systems), confidentiality and data protection (preventing leakage of personal data or other confidential information through the AI systems used), diversity and non-discrimination (ensuring audience access to diverse content when using personalization tools), human oversight, responsibility and adaptability (improvement in line with technological development of AI systems and changes in legal regulation). Significant attention is paid to the labeling requirement and content curation mechanisms.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Ministry expanded on these recommendations with the White Paper on AI Regulation in Ukraine, which provides a broader framework for AI governance across sectors, including media.⁷⁷⁰¹ While the original recommendations focused on editorial responsibility and content integrity, the White Paper introduces additional safeguards, particularly concerning AI-generated disinformation, content labeling, and algorithmic transparency in media operations.

Use of Facial Recognition

According to media reports, the Ukrainian government is using Clearview AI's facial recognition technology for a range of potential purposes related to its wartime efforts including uncovering Russian soldiers, combating misinformation, and identifying personnel at checkpoints, abducted children, and deceased servicemen.⁷⁷⁰² This use, while potentially advantageous for national security, raises substantial privacy concerns as the technology has been widely criticized for its lack of transparency and accuracy.⁷⁷⁰³

More than 1,500 officials across 18 Ukrainian government agencies had been reported to be using the facial-recognition tool in March 2022.⁷⁷⁰⁴ The use of this type of surveillance technology is unprecedented in a war context and remains controversial as Clearview AI faces several legal challenges including infringement of privacy rights. In addition to privacy concerns, reports indicate that some Ukrainian officials have raised concerns about the potential for misidentification and reliance on unverified AI-generated matches in military operations.

Facial recognition has also been implemented in street surveillance cameras. In 2021, the then-Minister for Internal Affairs even threatened to use facial recognition to identify protesters.⁷⁷⁰⁵ Journalistic investigation also revealed that

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

some systems used by the municipal authorities were based on Russian software TRASSIR.⁷⁷⁰⁶

Ukraine has introduced facial-recognition components under the Safe City and municipal video-monitoring programs (including in Kyiv and Vinnytsia).⁷⁷⁰⁷ No dedicated statute authorizes biometric recognition in public spaces; personal-data law offers only indirect safeguards. Civil-society groups have warned that current deployments lack a clear legal basis and independent oversight.

A Draft Law on video surveillance was introduced in Parliament. However, Ukrainian civil society finds the law to be overly permissive toward the technology and lacking safeguards against abusive practices because it allows law enforcement to access both private and public surveillance infrastructure without a court order.⁷⁷⁰⁸

Environmental Impact of AI

Ukraine has not published specific documents addressing the environmental impacts of AI. However, as a member of the United Nations (UN), Ukraine agreed to the resolution on Seizing the Opportunities of Safe, Secure, and Trustworthy Artificial Intelligence Systems for Sustainable Development adopted by the UN General Assembly.⁷⁷⁰⁹ This resolution includes commitments to seizing the benefits while mitigating the negative impact of rapid technological change on the achievement of the UN Sustainable Development Goals. Potential negative impacts include those to the environment.

In 2025, Ukrainian scholars analyzed the environmental footprint of generative AI. The report suggested that electricity and water consumption in large-model training could undercut savings identified by systems and recommended integration of AI-specific sustainability metrics into the 2030 National Sustainable Development Strategy.⁷⁷¹⁰

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Lethal Autonomous Weapons

The Concept of AI Development in Ukraine prioritizes the development of AI capacities for command-and-control tasks and AI use in weapons and military equipment. Russia's invasion of Ukraine has intensified work on applying AI in the military industry. The Ministry of Defense is advancing its logistics and supply operations by diversifying technological resources to better equip the Armed Forces of Ukraine for effective mission support.⁷⁷¹¹ According to media reports, Ukraine is becoming a testing field for weapons using AI components to strengthen defense capabilities. Particularly, Ukraine uses “AI to analyze satellite imagery, open-source data, drone footage, and reports from the ground to present commanders with military options.”⁷⁷¹²

Ukraine has secured an extensive contract covering 1.8 million drones through collaboration between the Ministry of Defense and the Ministry of Digital Transformation.⁷⁷¹³ Fully autonomous drones are already being used to defend Ukrainian energy facilities from other drones, thus being anti-vehicle weapon systems. Mykhailo Fedorov, Deputy Prime Minister, Minister of Digital Transformation of Ukraine, stated “so far, six systems to counter enemy drones have been purchased. These are the most advanced defensive technologies that are used to protect strategic facilities in the US. Radar jamming and deception systems help detect and block enemy UAVs, then the system releases its own drones. For example, the Fortem DroneHunter F700 is an autonomous drone with radar control and artificial intelligence that flies at speeds of over 100 km/h, and intercepts and lands enemy drones. The operators have already been trained and the systems have been installed at energy plants.”⁷⁷¹⁴

Ukraine deployed the world's first drones that are capable of both detecting and attacking targets autonomously in September 2023.⁷⁷¹⁵ The Ukrainian

government stresses that a key challenge implies an active use of autonomous weapons by Russia and a need to counterbalance it and gain a military advantage, which is currently impossible to achieve with the conventional means.⁷⁷¹⁶ Ukraine is also using multiple situation awareness systems, which assist in planning operations, conducting intelligence and predicting threats, e.g. Delta and Palantir systems.⁷⁷¹⁷ Ukraine is also using Clearview AI facial recognition systems for a number of military purposes, most notably to identify Russian army soldiers, conduct intelligence operations or find kidnapped Ukrainian children.⁷⁷¹⁸

The efforts around research and development of AI MilTech are currently coordinated by the defense state-governed cluster Brave1, which unites industry representatives and the relevant state authorities.⁷⁷¹⁹

At the Responsible AI in the Military Domain Summit (REAIM 2023) co-hosted by the Netherlands and the Republic of Korea, nearly sixty states agreed to issue a joint call to action on the responsible development, deployment and use of AI in the military domain.⁷⁷²⁰ Ukraine endorsed the resulting Political Declaration.⁷⁷²¹

Ukraine participated in the second REAIM summit took place in Korea.⁷⁷²² As the focus was on responsible behavior in military AI, it was concluded with a more concrete Blueprint for Action, negotiated by 35 countries including Ukraine prior to the event. The document outlines specific commitments across the summit's themes and aims to pave the way for a more structured Plan for Action in 2025.

Ukraine signed the Convention on Certain Conventional Weapons.⁷⁷²³ At the 78th UN General Assembly First Committee in 2023, Ukraine voted in favor of resolution L.56 on autonomous weapons systems, along with 163 other states. Resolution L.56 stressed the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report, reflecting the views of member and observer states on autonomous weapons systems and ways to address the related challenges and concerns they raise from humanitarian, legal, security, technological and ethical perspectives and on the role of humans in the use of force.⁷⁷²⁴

AI Literacy

Ukraine’s Ministry of Digital Transformation has launched significant AI literacy initiatives through the Digital Education Web Portal.⁷⁷²⁵ The national digital education platform, Diia.Osvita, was expanded in 2024–2025 to include a dedicated section on artificial intelligence. The platform offers free courses such as Artificial Intelligence; ChatGPT: Your Personal Assistant for Work, Study, and Life; and ChatGPT for Personal Effectiveness.⁷⁷²⁶

In partnership with the Ministry of Education and Science and with support from the EU4DigitalUA project, the government also launched IT Studios to integrate modern digital skills, including AI modules, into the national school curriculum for grades 1–11.⁷⁷²⁷ For public sector professionals, the CDTO Campus initiative provides specialized training on AI adoption in e-government, focusing on ethical frameworks and alignment with EU standards.⁷⁷²⁸

Human Rights

According to Freedom in the World 2025 report on Ukraine, the country is “Partly Free” with an overall score of 51/100.⁷⁷²⁹ This reflects an improvement from the previous year's score of 49 but continuation of a “Partly Free” classification, exacerbated by the Russian invasion in February 2022 and reactions to the invasion, such as the declaration of martial law. Even under martial law, reforms have strengthened democratic institutions, but corruption remains a problem. A number of civil liberties and freedoms have been curtailed as a result of the martial law in force.⁷⁷³⁰

As a result of Russia's invasion of Ukraine, an essential part of the Ukrainian Parliament Commissioner for Human Rights work in Ukraine is to assist citizens daily.⁷⁷³¹ Freedom House identified deliberate Russian interference with online communication, indirect loss of access to online communications arising from the current conflict, and new domestic laws aimed at tackling online disinformation and the sharing of sensitive data as possible threats to online freedoms in 2024.⁷⁷³² The 2025 Human Rights Watch⁷⁷³³ report highlights the devastating consequences of Russia's invasion, with 12,162 civilian deaths and 26,919 injuries have been documented by the UN Office of the High Commissioner for Human Rights (OHCHR) plus millions displaced, and widespread human rights violations, including torture, enforced disappearances, and war crimes. Reports also highlight the devastating civilian impact of systematic Russian attacks on energy infrastructure, the resulting blackouts, and the continued repression of non-Russian identities in occupied territories.⁷⁷³⁴

Center for AI and Digital Policy

The Law About Electronic Communications,⁷⁷³⁵ which requires service providers to retain data relating to their users and to share that data with state authorities to facilitate the investigation and prosecution of offenses, could be used to limit citizens' speech even before the Russian invasion.

Ukraine's commitment to human rights is enshrined in its constitution. Article 9 incorporates international treaties as part of domestic legislation. An action plan for the National Human Rights Strategy 2021–23⁷⁷³⁶ re-asserts Ukraine's commitment to the principles of international human rights law, their implementation in domestic law and public institutions, and engagement with international human rights bodies. Ukraine also committed to an annual internal review by a new Interagency Working Group. Ukraine expanded this commitment by continuing the annual review process, with the Interagency Working Group intensifying efforts to monitor and adapt the strategy to address evolving human rights challenges, especially in the context of digital rights and AI governance.⁷⁷³⁷

Ukraine became a member of the United Nations in October 1945 and ratified the Universal Declaration of Human Rights, the International Covenant on Civil and Political Rights (ICCPR), and the International Covenant on Economic, Social and Cultural Rights. Collectively those three instruments constitute the UN International Bill of Human Rights. The UN reports that Ukraine has ratified 16 out of 18 key international human rights treaties.⁷⁷³⁸ Following the full-scale invasion, Ukraine submitted a declaration with derogation from international obligations under the European Convention on Human Rights and the ICCPR.

The UN Human Rights Council periodic review of Ukraine's peace-time human rights position in 2018 remarked positively on the country's efforts in the field of judicial reform, discrimination, prevention of torture, gender equality, and the treatment of people with disabilities.⁷⁷³⁹ The UN Human Rights Council also noted the work being done to reform policing and tackle corruption. 190 recommendations were made to Ukraine and the government accepted 163 of those.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The UN Human Rights Council created an Independent International Commission of Inquiry on Ukraine to investigate all alleged violations and abuses of human rights and violations of international humanitarian law, and related crimes in the context of the Russian aggression against Ukraine. The Commission's report expressed concerns regarding "continuing patterns of violations of human rights and international humanitarian law" by Russia.⁷⁷⁴⁰

OECD / G20 AI Principles

The OECD has been working in close partnership with Ukraine for more than 30 years to support its reform agenda.⁷⁷⁴¹ Ukraine is not a member of the OECD but endorsed the OECD AI Principles in 2019.⁷⁷⁴² Ukraine also committed to the updated OECD AI Principles.⁷⁷⁴³ The 2020 Order of the Cabinet of Ministers of Ukraine expressed commitment to implement the OECD AI Principles.⁷⁷⁴⁴

The OECD Council recognized Ukraine as a prospective Member and opened an initial accession dialogue, following a request from the Government.⁷⁷⁴⁵ The OECD and the Government of Ukraine later began implementing a four-year OECD-Ukraine Country Programme that supports Ukraine's agenda for reform, recovery, and reconstruction, and helps the country advance its ambitions to join the OECD and European Union.⁷⁷⁴⁶

Ukraine is not a member of the Global Partnership on AI, a multistakeholder initiative to foster international cooperation on AI research and applied activities, and an integrated partner with the OECD. Membership of GPAI is contingent on support for the OECD AI Principles.⁷⁷⁴⁷

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The OECD report has noted the national AI strategy (2021–2030) focus on leveraging existing AI capabilities to achieve strategic national objectives. These objectives include “advancing Ukraine's digital economy, improving public administration efficiency, and enhancing the quality of life for its citizens.” The OECD recognizes that this strategy prioritizes AI applications in education, defense, security, and key economic sectors.⁷⁷⁴⁸ Ukraine’s Roadmap for the Regulation of Artificial Intelligence in Ukraine⁷⁷⁴⁹ and White Paper on Artificial Intelligence Regulation,⁷⁷⁵⁰ designed to help businesses prepare for future legal requirements based on these principles, mark further progress toward implementing the OECD Principles.

Council of Europe AI Treaty

Ukraine contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy, and the Rule of Law. Ukraine signed this first legally binding international treaty on AI and human rights in 2025.⁷⁷⁵¹

UNESCO Recommendation on AI Ethics

Ukraine has been a member of UNESCO since 1954⁷⁷⁵² and along with 192 other member states it adopted the UNESCO Recommendation on the Ethics of Artificial Intelligence in November 2021.⁷⁷⁵³ The UNESCO Recommendation is not explicitly referenced in Ukraine's current AI policy framework even though Ukraine’s emerging policy framework, including the White Paper on AI reflects many of the concerns and priorities in the UNESCO recommendation such as transparency, fairness, and human-centeredness.

Ukraine has also initiated alignment with the Recommendation by preparing to implement the UNESCO Readiness Assessment Methodology (RAM). Ukraine is

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

listed as “in preparation” for implementing the RAM on UNESCO’s Global AI Ethics and Governance Observatory’s Global Hub.⁷⁷⁵⁴

Evaluation

The Russian invasion of Ukraine caused severe human rights violations, especially on the territories currently under Russian occupation. In response to the invasion, Ukraine has imposed martial law and derogated its obligations under certain human rights treaties. Reacting to the rapid digitalization of warfare, Ukraine has become a field for the development and use of autonomous weapons, which raises serious concerns among Ukrainian and international civil society.

Ukraine’s AI policy landscape has shifted toward action with reforms designed to align Ukrainian legal frameworks with the corresponding EU laws, including the GDPR, the EU AI Act, or the Digital Services Act. The 2025–2026 operationalized earlier concept papers. The White Paper on AI Regulation⁷⁷⁵⁵ and related guidelines for various sectors published by the Ministry of Digital Transformation mark further progress.

Ukraine has continued to make progress toward implementing the OECD AI Principles and UNESCO Recommendation as well as national AI legislation.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

United Arab Emirates

In 2025, the UAE introduced a Regulatory Intelligence Ecosystem integrating AI into the legislative process. The federal government also integrated AI literacy content into K–12 education and continued AI Camps to prepare citizens for a future with artificial intelligence.

National AI Strategy

In 2017, the United Arab Emirates became the first country to appoint a Minister of State for Artificial Intelligence.⁷⁷⁵⁶ H.E. Omar Al Olama was later appointed as Minister of State for Artificial Intelligence, Digital Economy and Remote Work Applications in July 2020. Now he serves as the Chief Artificial Intelligence Officer (CAIO) as part of the UAE Whole-of-Government approach to public administration.⁷⁷⁵⁷ The CAIO invests and investigates potential AI applications and technologies to enhance government performance and contribute to GDP.

The UAE Cabinet formed the UAE Council for Artificial Intelligence (AI) to facilitate the implementation of AI policies, and oversee AI integration in government departments and the education sector.⁷⁷⁵⁸ The Council is tasked with proposing policies to create an AI-friendly ecosystem, encourage advanced research in the sector and promote collaboration between the public and private sectors, including international institutions to accelerate the adoption of AI. The General Secretariat of the Cabinet introduced a Regulatory Intelligence Ecosystem in May 2025, integrating AI into the legislative process to anticipate, draft, develop, and implement future regulations.⁷⁷⁵⁹ This achievement built on UAE and local AI

⁷⁷⁵⁶ UAE Government Portal, *Chief Artificial Intelligence Officer (CAIO)* (Oct. 23, 2025), <https://u.ae/en/about-the-uae/digital-uae/whole-of-government-approach/Chief-Artificial-Intelligence-Officer-CAIO>

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

guidelines centered on AI governance, Data governance, Cybersecurity, and Bias,⁷⁷⁶⁰ available along with the UAE AI Strategy on an AI Resources page.

The Minister of State for Artificial Intelligence launched the UAE Strategy for Artificial Intelligence 2031.⁷⁷⁶¹ The strategy aligned with UAE Centennial 2071,⁷⁷⁶² which has an ambitious goal to make the UAE the best country in the world by 2071. In the plan, AI will play a significant role in education, economy, government development, and community happiness through applications in various sectors, including energy, tourism, and education. The National AI Strategy outlines strategic objectives, including ensuring strong governance and regulation as well as supporting data and infrastructure, attracting and training talent for future jobs in artificial intelligence and research, and adopting AI across customer services.⁷⁷⁶³

The Minister of State for Artificial Intelligence built on efforts in Dubai to adopt federal AI Ethics Principles & Guidelines in 2022. The Ethics Principles & Guidelines offer detailed guidance for developing AI systems aligned with 8 principles of AI ethics: explainable; transparent; accountable; fair; privacy preserving; sustainable and environmentally friendly; human centered; and robust, safe, and secure.⁷⁷⁶⁴

Preceding the publication of the National AI Strategy, the UAE launched the Fourth Industrial Revolution (4IR) Strategy⁷⁷⁶⁵ that included innovations in government services, intelligent cities, and next-gen mobility as well as in policies and regulations to maintain the privacy and well-being of citizens. 4IR Values and Ethics are part of another pillar in the strategy.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The UAE AI Office later launched the Charter for Development and Use of AI,⁷⁷⁶⁶ stipulating 12 priorities, including strengthening Human-Machine Ties, safety, algorithmic bias, data privacy, transparency, human oversight, governance and accountability, technological excellence, human commitment, peaceful coexistence with AI, promoting AI awareness for an inclusive future, commitment to treaties and applicable laws. The charter aims to position the UAE as a global hub for AI innovation, ensure ethical and responsible AI development, protect privacy and data security, balance technological advancement with social values, and encourage innovation and support economic growth. The charter reflects the UAE's National Strategy for AI goal of becoming a leading AI nation by 2031.

The UAE AI Office also published a Generative AI Guide. The Guide provides a comprehensive overview of generative AI, including challenges and opportunities across 100 use cases and applications in sectors such as education, healthcare, and government services.⁷⁷⁶⁷

The National Elections Committee and Federal National Council unveiled a Policy on the Use of Artificial Intelligence requiring all candidates in the Federal National Council elections to declare and register any use of AI tools in their campaigns. Described as the first of its kind globally, the policy aims to ensure transparency and prevent voter manipulation.⁷⁷⁶⁸

Emirate-Level AI Policies

Smart Dubai's AI Ethics Principles & Guidelines describe key principles for a fair, transparent, accountable, and explainable AI system.⁷⁷⁶⁹ Launched in January 2019, the AI Principles and Guidelines for the Emirate of Dubai demonstrate Dubai's broader approach to ethical AI. Accompanying the Principles and Guidelines is an Ethical AI Self-Assessment Tool built to enable AI developers or operator organizations to evaluate the ethics level of an AI system.⁷⁷⁷⁰ The AI Ethics Guidelines provide an assessment (from proof of concept to production) of the ethical

⁷⁷⁶⁶ Government of United Arab Emirates, *The UAE Charter for the Development and Use of Artificial Intelligence* (Jun. 10, 2024), <https://uaelegislation.gov.ae/en/policy/details/the-uae-charter-for-the-development-and-use-of-artificial-intelligence>

issues that may arise throughout the development process and how specific AI applications could be improved to ensure fairness, transparency, accountability, and explainability. The Ethical Toolkit also aims to ensure adoption of AI that optimizes the innovation potential and delivers economic and social value. The Executive Council of Dubai directed government entities to use the principles and guidelines when considering AI development, and entities including the Road and Transport Authority and the Dubai Police have formally acknowledged their adoption of the self-assessment tool when developing AI.⁷⁷⁷¹

Government entities, such as the Digital Dubai Authority (DDA) followed the plans of the National AI Strategy, with specific strategies and guidance on AI.⁷⁷⁷² The DDA published an AI Ethical impact assessment framework and established a governing AI ethics board comprising government, policy, academic, legal, and industry experts to oversee and guide the strategic development of the AI Ethics Guidelines. The 2025 State of AI Report⁷⁷⁷³ offers further details and how current use cases align to the vision for the decade ahead.

The Dubai Electronic Security Centre (DESC) launched the Dubai AI Security Policy⁷⁷⁷⁴ to support AI development by protecting Dubai from cyber risks. The policy aims to bolster confidence in AI solutions and technologies, promote the growth and development of AI, and mitigate electronic security risks associated with AI. The policy was unveiled during DESC's participation as the official cybersecurity partner at the inaugural Dubai AI and Web3 Festival 2024 at Madinat Jumeirah.

The Abu Dhabi Government announced the Abu Dhabi Government Digital Strategy 2025–2027 to make Abu Dhabi the world's first AI-enabled government by 2027.⁷⁷⁷⁵ To advance this goal, Abu Dhabi appointed Chief Digital and AI Officers in every government entity.⁷⁷⁷⁶

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Public Participation

The UAE has a robust system of information and services for the public. The UAE Strategy for Government Services, Unified Digital Platform Policy, the Digital Participation Policy, and the Digital Customer and Digital Government Service Policy, aim to provide access to digital services.

The UAE Digital Participation Policy⁷⁷⁷⁷ establishes what can be posted on the public platforms, the conditions to facilitate a healthy environment for sharing information and enabling meaningful discussion on topics concerning the services of the UAE Digital Government and life in the UAE in general. The Sharik.AE platform created in 2022 is an interactive interface to keep the UAE public informed and seek consultations on matters related to government activities.⁷⁷⁷⁸ Sharik.AE includes an interface for input for the co-creation of public services, community engagement, and participatory budget.

The Ministry of Artificial Intelligence launched the Think AI initiative to develop legislation, policies, and initiatives for a responsible and efficient adoption of artificial intelligence (AI) within the private sector. Think AI established a series of roundtables, workshops, and panel discussions with the participation of more than 100 government officials, representatives from the private sector, and experts from local and international organizations. The dialogue aimed to support the UAE's efforts to accelerate the adoption of artificial intelligence in key sectors such as infrastructure, governance and legislation to strengthen the position as a global hub for artificial intelligence.⁷⁷⁷⁹

The UAE Artificial Intelligence, Digital Economy, and Remote Work Applications Office ensures public awareness and digital participation through a variety of initiatives. The AI Camp 5.0 in 2023 attracted more than 8,000 participants aiming to develop their digital skills.⁷⁷⁸⁰ The AI Camp 6.0 in 2024 covered seven main areas: the future of artificial intelligence; data science and machine learning; AI in education, healthcare, and finance sectors; web development and robotics; AI ethics and governance; cybersecurity; and virtual and augmented reality.⁷⁷⁸¹ The 7th edition of the AI Camp held in July-August 2025 included over 70 knowledge

Center for AI and Digital Policy

sessions, workshops, hackathons, and lectures with people across ages and backgrounds. Since its inception, the AI Camp has engaged over 34,000 participants and positioned itself as a national platform for building future AI capabilities.⁷⁷⁸²

At the emirate level, Digital Dubai has set a vision to make Dubai the happiest city on earth through effectiveness in Government to Consumer and Government to Government services.⁷⁷⁸³ Dubai has a website with information about AI principles and ethics for public access. Dubai's Ethical AI Toolkit supports Government Entities, Private Sector Entities, and Individuals.⁷⁷⁸⁴ The Digital Dubai Authority (DDA) introduced new methods of e-participation on various issues including AI Ethics work.⁷⁷⁸⁵ Digital Dubai partnered with the International Telecommunication Union (ITU) and the United Nations International Computing Centre (UNICC) in February 2025 to launch the first UN Citiverse Challenge at the World Governments Summit in Dubai, inviting youth and startups worldwide to develop AI-driven solutions to address sustainable development goals through AI-powered virtual worlds.⁷⁷⁸⁶

Data Protection

The UAE adopted sweeping legislative reforms in November 2021, including the Personal Data Protection Law and Federal Decree-Law on the Protection of Personal Data modeled after the GDPR. The Personal Data Protection Law (PDPL) has extraterritorial geographical effect and applies to data controllers and data processors within UAE or outside the UAE processing personal data of UAE residents.⁷⁷⁸⁷ Four principles underpin the Law: 1) Single Data Authority, 2) Right for Consent, 3) Incentivizing SMEs, 3) Allows Cross Border Data Flow.

Introduced by the Minister of AI as “the law with the lowest cost of compliance,” the PDPL is an integrated framework to ensure the confidentiality of information, protect the privacy of individuals, and achieve proper governance for data management and data protection. The PDPL defines the rights and duties of data

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

subjects, data controllers, data processors, data protection officers (where applicable), service providers, third party vendors, and public and private entities involved in data processing activities.⁷⁷⁸⁸ The PDPL establishes the rights of access to information, to request personal data portability, to rectification or erasure of personal data, of processing and automated processing. Noted exceptions to the right to consent include protection of public interest, legal procedures and rights, and previous knowledge by the data owner. The PDPL does not apply to government data, government authorities that control or process personal data, or personal data processed by the security and judicial authorities.⁷⁷⁸⁹ PDPL does not cover the processing of health, banking, and credit data that are subject to sector-specific legislation.

The UAE Data Office (DO), as the federal data regulator, oversees policies, standards, and legislation, and responds to inquiries and complaints about the PDPL.⁷⁷⁹⁰

Executive Regulations to the PDPL entered into force on January 1, 2026, with organizations required to achieve full compliance a year later.⁷⁷⁹¹

The PDPL does not apply to companies and institutions located in free zones that have specific data protection laws, such as the Dubai International Finance Centre (DIFC) and the Abu Dhabi Global Market (ADGM). The DIFC became the region's first fully accredited member of the Global Privacy Assembly (GPA), following the enactment of the DIFC Data Protection Law No. 5 of 2020.⁷⁷⁹² In October 2021, the ADGM Office of Data Protection was also granted accredited membership in the GPA.⁷⁷⁹³

DIFC strengthened data subject rights, clarified the data protection law's extraterritorial application, introduced a private right of action in the DIFC Courts,

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

and increased enforcement penalties through Amendment Law No. 1 of 2025.⁷⁷⁹⁴ In September 2025, ADGM introduced the Data Protection (Substantial Public Interest Conditions) Rules, clarifying when Special Categories of Personal Data may be processed under defined public interest grounds without consent, including provisions for the insurance sector and protections for vulnerable individuals.⁷⁷⁹⁵ Significant divergences with the GDPR include the limited legal basis, with a focus on consent as the primary legal basis, and less comprehensive transparency requirements.⁷⁷⁹⁶ The data protection law also has less onerous transparency requirements (only certain limited information will be required before processing) than the GDPR and no specific privacy notice requirement.⁷⁷⁹⁷

Other UAE laws that provide general rights to privacy include the UAE Constitution, which grants freedom of communication by post or other means of communication and the secrecy thereof in accordance with the law;⁷⁷⁹⁸ the UAE Penal Code, which prohibits those who have access to an individual's personal data from disclosing or publicizing that information;⁷⁷⁹⁹ and the Federal Decree-Law on Combatting Rumors and Cybercrime:, which criminalizes the misuse of the personal data of others.⁷⁸⁰⁰

The UAE federal DO is not an accredited member of the Global Privacy Assembly (GPA).⁷⁸⁰¹ Thus, the DO did not sponsor the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,⁷⁸⁰² the 2020 Resolution on

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Accountability in the Development and Use of Artificial Intelligence,⁷⁸⁰³ the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology,⁷⁸⁰⁴ or the 2023 GPA Resolution on Generative AI Systems.⁷⁸⁰⁵ The 48th Global Privacy Assembly is scheduled to be hosted in Dubai by the DIFC in December 2026.⁷⁸⁰⁶

Algorithmic Transparency

UAE regulations do not include a specific law guaranteeing the right to algorithmic transparency, though the PDPL and non-binding guidance from the AI ministry offer some protections. Article 18 of the PDPL⁷⁸⁰⁷ gives data subjects the right to object to automated decision-making that may impact them, including profiling, with some exceptions given by other UAE laws—namely where the automated processing is contractually agreed, required under applicable UAE law, or where the data subject has given prior consent.⁷⁸⁰⁸ The UAE Data Office has not yet issued specific guidance on AI and automated decision-making, though the AI ministry has released a number of guidance documents work on non-binding principles is progressing. In addition, Article 21 of the PDPL requires Controllers to assess the impact of processing operations on personal data protection, particularly where technologies pose high privacy risks.⁷⁸⁰⁹

Under the Charter for Development and Use of Artificial Intelligence,⁷⁸¹⁰ the government intends to prioritize transparency for clear understanding of AI and how

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI systems operate and make decisions. The government aims to foster trust and enhance responsibility and accountability in the use of AI technologies. The Charter also identifies addressing algorithmic bias and developing a fair and equitable environment for all community members as a key priority.

In July 2025, the Government of Dubai launched a Human-Machine Collaboration Classification System, requiring Dubai government entities to disclose the extent of AI involvement in the creation of research, publications, and content.⁷⁸¹¹

The UAE's Artificial Intelligence Guide⁷⁸¹² issued by the Ministry of AI addresses the subject of AI transparency in several sections. Section 3.4 describes the principles established in the Ethical AI Toolkit of the Smart Dubai Office by which systems should be ethical, fair, accountable, transparent, explainable, safe, secure, and “serve to protect humanity.” The UAE AI Guide includes a restatement of the focused efforts of the UAE in removing bias in the algorithms of AI systems. Section 3.5 includes examples and case studies to avoid the perpetuation of racial and gender bias. The recommendations include the implementation of evaluations of the decision-making process based on AI for fairness and posing the question “Should we build AI?” The AI Guide highlights the Smart Dubai ethical self-assessment tool as a resource for government companies, private firms, and individuals.

The UAE AI Ethics Principles and Guidelines⁷⁸¹³ specify that fair AI systems must use representative data, avoid non-operational bias, mitigate dataset biases, ensure provably fair outcomes, with diverse development teams, including representative end-user groups, consulted throughout the AI lifecycle. On transparency, the Guidelines require AI developers to enable failure traceability, inform users of significant AI-driven decisions, disclose data and algorithms within the limits of privacy and intellectual property, and provide timely, understandable justifications for AI outcomes.

While these tools represent meaningful transparency obligations, there is no explicit legally binding right to algorithmic transparency in the UAE.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Facial Recognition

The UAE's digital transformation has led to the adoption of an AI-powered facial recognition system. In 2021, the UAE Government announced the enhancement of the UAE Pass, by adding biometric face recognition systems (Facial ID) to register users into the application.⁷⁸¹⁴ The integration of facial recognition was set to reduce the transaction time from 20 minutes to 5 minutes. Under the UAE Personal Data Protection Law,⁷⁸¹⁵ biometric identifiers are classified as sensitive personal data and require stronger safeguards. Implementing regulations and sectoral guidance remain crucial for clarifying consent, public-interest exceptions, and cross-border transfers.

In November 2022, Abu Dhabi Airports replaced passport checks with facial recognition technology.⁷⁸¹⁶ Biometric data is used during check-in, immigration, determining access to lounges, and boarding. The first phase of the project took place at one of the terminals at Abu Dhabi International Airport at the U.S. Customs and Border Protection (CBP) facility. The Managing Director and CEO of Abu Dhabi Airports presented this innovation as the “first of its kind in the UAE and the world, to further enhance our passenger journey.”⁷⁸¹⁷ This is part of the Smart Travel Project at Zayed International Airport, launched in collaboration with the ICP, which aims to integrate biometric authentication across all passenger touchpoints at the airport.⁷⁸¹⁸

The Roads and Transport Authority (RTA), which had previously piloted emotional AI for tram drivers,⁷⁸¹⁹ launched a next-generation AI and digital twin-based traffic signal control system in February 2025.⁷⁸²⁰ Dubai Police introduced Ghiath vehicles, equipped with a 360-degree camera backed with facial and plate

recognition technology. The system includes drones to extend surveillance outreach.⁷⁸²¹ In March 2024, W Motors unveiled three new Ghiath editions at the World Police Summit in Dubai, expanding the program with Smart Patrol, City Patrol, and First Responder variants.⁷⁸²² At GITEX Global 2025, the UAE's Federal Authority for Identity, Citizenship, Customs, and Ports Security (ICP) unveiled AI-powered smart inspection cars capable of scanning streets to detect and identify visa and residency violators in real time.⁷⁸²³

Carrefour, operated by Majid Al Futtaim in the UAE, in partnership with US-based biometric PopID and Network International, launched the Face Pay face-biometric payments platform in select UAE stores in February 2023.⁷⁸²⁴ The Face Pay system is operational in selected Carrefour stores in Dubai (Deira and Al Saf Mall), where customers can enroll via the app and pay by facial recognition. In 2020, the Belgian Data Protection Authority investigated Carrefour Belgium for collecting fingerprint biometric data from customers in a payment without clear, explicit consent, raising GDPR compliance concerns.⁷⁸²⁵

Biometric Identification

The UAE Pass launched in 2018 is the first digital national ID for citizens, residents, and visitors to access government and private-sector services and to sign documents digitally.⁷⁸²⁶ The app was developed by Digital Dubai, the Telecommunications and Digital Government Regulatory Authority, and Abu Dhabi Digital Authority. Earlier adoption figures from 2020 recorded around 244,000 verified accounts.⁷⁸²⁷ By June 2025, the platform reported more than 11 million users

across government and private-sector services, with over 322 integrated service providers and 2.6 billion digital transactions completed.⁷⁸²⁸ The system features a Digital Vault powered by blockchain technology, which allows users to securely store official documents and share them digitally with government entities, facilitating more seamless transactions.⁷⁸²⁹

The UAE Pass aligns with the protection of privacy and digital identity provisions outlined in the Federal Decree Law on Combatting Rumors and Cybercrime,⁷⁸³⁰ and the Electronic Transactions and Trust Services Law.⁷⁸³¹

Mass Surveillance

In 2017 the Dubai Police released the 2018-31 strategic plan for artificial intelligence.⁷⁸³² The plan includes the use of AI techniques in criminal forensic investigation and in police operations to predict crimes. AI techniques were set to forecast crime, perform crowd management, enhance traffic safety and road security, and manage crises and disasters.

In 2018, Dubai Police announced the launch of Oyoon, an artificial intelligence surveillance program⁷⁸³³ that had the support of the government, semi-government, and private sector entities. The system intended to “provide a safer living experience.”⁷⁸³⁴ The system operates through tens of thousands of cameras with facial recognition software and microphones to track and analyze the movements of suspected would-be thieves. The system would give verbal warnings

before the commitment of the crime.⁷⁸³⁵ The Oyoon program has expanded to integrate over 300,000 cameras with facial recognition capabilities across Dubai as of 2025, enabling real-time monitoring of residents and visitors.⁷⁸³⁶

Abu Dhabi Monitoring and Control Center (ADMCC) released the Falcon Eye system in 2016. The Falcon Eye system operated with a live feed to thousands of cameras installed in key locations to “observe events and monitor and limit violations.”⁷⁸³⁷

Human Rights Watch reported the use of advanced mass surveillance technologies “to pervasively monitor public spaces, internet activity, and even individuals’ phones and computers, in violation of their right to privacy, freedom of expression, association, and other rights.”⁷⁸³⁸

Environmental Impact of AI

The UAE has undertaken initiatives aimed at leveraging AI for environmental sustainability. The UAE’s official stance on AI policy internationally aims to address environmental challenges such as climate change, energy efficiency, and sustainable agriculture in AI development efforts. According to this policy, the UAE aims to participate in platforms that contribute to the development of international standards for AI sustainability.⁷⁸³⁹

The Dubai Electricity and Water Authority (DEWA) is using AI to enhance energy sustainability and efficiency by monitoring demand,⁷⁸⁴⁰ including through the Digital DEWA initiative,⁷⁸⁴¹ which seeks to use autonomous systems for renewable energy, storage, and delivery of water and electricity services. DEWA launched a

strategic roadmap in March 2025 to integrate AI across all core operations and services. The project aligns with the authority's objective to become the world's first AI-native utility and with the UAE National Strategy for Artificial Intelligence 2031.⁷⁸⁴² DEWA also launched an AI-based Legislation Agent to ensure regulatory compliance with local and international standards and support decision-making related to DEWA's area of work.⁷⁸⁴³ DEWA's AI-powered smart waste bins and waste-to-energy projects are revolutionizing waste management in the UAE.⁷⁸⁴⁴

Lethal Autonomous Weapons

The UAE is a High-Contracting Party to the Convention of Certain Conventional Weapons (CCW).⁷⁸⁴⁵ As a member of the Non-Aligned Movement (NAM), the UAE has supported the negotiation of a legally binding instrument on autonomous weapons systems to ensure that the weapons respect human rights and remain accountable.⁷⁸⁴⁶

In October 2023, the UAE abstained from voting on UN General Assembly First Committee Resolution A/C.1/78/L.56 on Lethal Autonomous Weapons Systems, which was subsequently adopted as Resolution 78/241.⁷⁸⁴⁷ The UAE voted in favor of the successor resolutions in 2024 and 2025.⁷⁸⁴⁸

AI Literacy

The Federal government set up the UAE National Program for Artificial Intelligence,⁷⁸⁴⁹ a comprehensive set of resources on advances in AI and Robotics. The program encompasses free courses for UAE residents to raise awareness and understanding of AI technologies.⁷⁸⁵⁰ The government has endeavored to upskill the student population and government employees by providing relevant trainings through the AI Camp.⁷⁸⁵¹ The Minister of State for AI announced a workforce initiative to reskill, retool, or support early retirement for UAE government employees whose roles are being displaced or augmented by AI technologies.⁷⁸⁵²

The UAE AI Office's 2023 Memorandum of Understanding with Code.org for assistance integrating computer science and AI education into UAE schools aimed to foster digital literacy and tech skills to the classroom.⁷⁸⁵³ The UAE Cabinet subsequently approved the introduction of Artificial Intelligence as a mandatory subject across all public schools from kindergarten through Grade 12 beginning in the 2025–2026 academic year.⁷⁸⁵⁴ The curriculum spans seven areas: fundamental AI concepts, data and algorithms, software use, ethical awareness, real-world applications, innovation and project design, and policies and community engagement, with more than 1,000 specialized teachers completing advanced training programs to deliver the subject.

The Abu Dhabi Department of Education and Knowledge (ADEK), in collaboration with MIT's Day of AI program, launched an AI Literacy Curriculum in October 2025, offering ready-to-use lesson plans, educator guides, and student activities from kindergarten through Grade 12. The curriculum is designed to foster critical thinking and responsible AI use.⁷⁸⁵⁵

Human Rights

The UAE has agreed to uphold the principles outlined in the Universal Declaration of Human Rights (UDHR).⁷⁸⁵⁶ UAE has not ratified any binding agreements such as the International Covenant on Civil and Political Rights (ICCPR) or the International Covenant on Economic Social and Cultural Rights (ICESCR)⁷⁸⁵⁷ nor withdrawn existing reservations or declarations. The Universal Periodic Review (UPR) of the UAE in 2018, noted the transparent and gradualist approach of the UAE to align legislative and administrative norms with the commitments to human rights protection.⁷⁸⁵⁸ The UAE made voluntary pledges⁷⁸⁵⁹ related to engagement with UN human rights agencies, formulating a national human rights plan, protecting labor rights, pursuing SDGs, and exploring ethically and responsibly the possibilities of artificial intelligence.⁷⁸⁶⁰ At the UAE's fourth UPR in May 2023, the UAE agreed to nearly 200 of more than 300 recommendations but rejected all recommendations to ratify the ICCPR and did not agree to review domestic legislation to align with international standards on freedom of expression.⁷⁸⁶¹

The UAE National Human Rights Committee is committed to keeping pace with technological advancements to further the protection and promotion of human rights in the UAE. In April 2025, the Committee discussed AI ethics from a human rights perspective,⁷⁸⁶² and in May 2025 participated in an International Conference on Artificial Intelligence and Human Rights in Doha.⁷⁸⁶³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In 2025, Freedom House scored UAE 18/100 concerning political rights and civil liberties and rated the country “Not Free.”⁷⁸⁶⁴ Freedom House reports the ban of political parties in UAE and the concentration of all executive, legislative, and judicial authority with the hereditary rulers of the seven emirates. Human Rights Watch raised concerns about the UAE's stark contrast between its carefully crafted progressive image and its actual practices of suppressing dissent, maintaining long-term detention of activists (particularly in the UAE94 case),⁷⁸⁶⁵ and perpetuating systematic abuse of migrant workers who face both labor exploitation and heightened climate risks.⁷⁸⁶⁶

AI Safety Summit

The UAE participated in the first AI Safety Summit and endorsed the Bletchley Declaration.⁷⁸⁶⁷ The UAE thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully [realize] their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

The UAE also participated in the second AI Safety Summit,⁷⁸⁶⁸ which took place in Seoul, Korea. The UAE signed the Seoul Ministerial Statement⁷⁸⁶⁹ on advancing AI safety, innovation and inclusivity. UAE-based companies G42 and the

Technology Innovation Institute signed the Frontier AI Safety Commitments at the Summit.⁷⁸⁷⁰

International AI Governance Collaboration

The UAE Cabinet approved the country's official stance on AI policy internationally,⁷⁸⁷¹ marking a significant step in the UAE's commitment to global AI governance and development. This policy is built on six core principles and includes several key foreign policy initiatives: advancement, cooperation, community, ethics, sustainability, and security. This policy underscores the UAE's commitment to responsible AI development and its ambition to play a leading role in shaping the global AI landscape while balancing technological advancement with societal welfare.

The UAE and Malaysia signed a Memorandum of Understanding⁷⁸⁷² in January 2025 to collaborate as part of Malaysia's Madani Artificial Intelligence initiative. The partnership aims to leverage AI and advanced data analytics to enhance community safety, national security, and operational efficiencies, including the development of AI-driven national security systems and high-performance computing data centers.

The UAE released a Framework Statement with the United States forging intergovernmental cooperation on AI governance.⁷⁸⁷³ The statement was issued following a meeting between UAE President H.H. Sheikh Mohamed bin Zayed Al Nahyan and former U.S. President Joseph R. Biden, Jr. The framework statement outlines several key aspects of cooperation. The statement acknowledges the potential of AI to drive economic growth, transform various sectors, and promote sustainability. However, the framework also recognizes the challenges and risks associated with this emerging technology. The framework statement sets the stage

Center for AI and Digital Policy

for deeper cooperation between the two nations in AI governance, with potential implications for global standards and practices.

The UAE co-sponsored the UN General Assembly Resolution on Seizing the Opportunities of Safe, Secure and Trustworthy Artificial Intelligence Systems for Sustainable Development,⁷⁸⁷⁴ which addresses the potential of AI in accelerating global development while also recognizing associated risks. The main objectives include bridging the AI and digital divides between and within countries; promoting safe, secure, and trustworthy AI systems; and accelerating progress towards achieving the 2030 Agenda for Sustainable Development. This resolution marks a significant step in global AI governance, aiming to harness the technology's potential for sustainable development while addressing associated challenges and risks.

OECD / G20 AI Principles

The UAE is not a member of the OECD or G20 and has not endorsed the OECD AI Principles.⁷⁸⁷⁵ The UAE engages with the OECD as member of the Development Assistance Committee (DAC).⁷⁸⁷⁶ UAE was the first participant of the DAC since July 2014 upon OECD's invitation.⁷⁸⁷⁷ The UAE is not a member of the Global Partnership on Artificial Intelligence (GPAI).⁷⁸⁷⁸

The OECD.AI Observatory reports on the efforts of the UAE in governance through the enactment of the UAE National AI Strategy. The strategy addresses the OECD AI principles of (1) inclusive growth, sustainable development, and well-being; (2) investing in AI research and development, and (3) building human capacity and preparing for labor market transformation.⁷⁸⁷⁹ The OECD acknowledges the AI Principles and Ethics for the Emirates of Dubai relevant to transparency and

explainability principles.⁷⁸⁸⁰ The OECD also acknowledges the Federal Data Protection Law as establishing a unified data protection regime in the UAE for data transfers from the European Union and other regulated jurisdictions.⁷⁸⁸¹

Council of Europe AI Treaty

The UAE has not endorsed the COE Framework Convention on Artificial Intelligence and Human Rights, Democracy, and Rule of Law.⁷⁸⁸² The UAE did not participate in the drafting of the first international legally binding treaty on artificial intelligence.

UNESCO Recommendation on AI Ethics

The UAE has been a UNESCO member since 1972, only one year after their foundation as a country.⁷⁸⁸³ The UAE was among the member states that endorsed the UNESCO Recommendations on the Ethics of AI.⁷⁸⁸⁴ The pact promotes human rights and contributes to the accomplishment of the Sustainable Development Goals, encompassing chapters on data governance, education, culture, employment, health, and the economy, addressing issues of transparency, accountability, and privacy.⁷⁸⁸⁵

The 2020 UAE report about the National Strategy for AI shows some alignment with the Recommendations, which came after.⁷⁸⁸⁶ AI oversight falls under two entities. In Dubai, the Digital Dubai Authority (DDA)⁷⁸⁸⁷ ensures the adoption of the Dubai AI Ethics Guidelines and the accompanying Ethical AI Self-Assessment

⁷⁸⁸⁰ OECD AI Policy Observatory, *AI Principles and Ethics for the Emirate of Dubai* (Dec. 24, 2025), <https://oecd.ai/en/dashboards/policy-initiatives/ai-principles-and-ethics-for-the-emirate-of-dubai-5969>

Tool.⁷⁸⁸⁸ At the federal level, the UAE Artificial Intelligence and Blockchain Council oversees the implementation of AI technology in society and across government.⁷⁸⁸⁹ The Dubai AI Ethics Guidelines⁷⁸⁹⁰ map to the UNESCO Recommendations, though not explicitly,⁷⁸⁹¹ through the Ethical AI Self-Assessment Tool; accountable, explainable, and transparent principles; and AI Oversight through the AI Ethics Advisory Board.

The UAE has not explicitly addressed implementation of the UNESCO Recommendations through actions such as completing the Readiness Assessment Methodology (RAM).⁷⁸⁹² However, the Ethical Impact Assessment tool in Dubai aligns with one of the targeted policy actions and the integration of AI and digital literacy in the national curriculum and AI Camp accessible for all in the UAE align with the Education and Research actions.

Evaluation

The UAE stands out as the first country with a Ministry of AI, signaling the country's foresight regarding the impact of artificial intelligence in the lives of its citizens. The release of the National Strategy for AI in 2017 and the establishment of an AI Council are concrete efforts toward AI governance. Likewise, the UAE's International Stance on Artificial Intelligence Policy and the Charter for the Development and Use of Artificial Intelligence, both issued in 2024, signal strengthened AI governance structures. The Dubai AI Ethics Guidelines and the accompanying Ethical AI Self-Assessment Tool are pioneering tools, partially aligned with the UNESCO Recommendations on the Ethics of Artificial Intelligence. The UAE has a Personal Data Protection Law that regulates automated decision-making and a Data Protection Office, although the right to algorithmic transparency has not been fully adopted. Calls for reinforcing safeguards for human rights are increasing and so are mass surveillance practices for which there is no proper regulation or oversight.

United Kingdom

In 2025, the United Kingdom released the AI Playbook for the UK Government to guide the safe and legal means to deploy AI in the public administration and formally adopted the Ethics, Transparency, and Accountability Framework for Automated Decision-Making.

National AI Strategy

The United Kingdom (UK) National Artificial Intelligence (AI) Strategy⁷⁸⁹³ followed roadmaps including the National Data Strategy (2020), a Plan for Digital Regulation (2021), and the UK Innovation Strategy (2021). The UK is ranked third in the world for research and innovation in AI but eleventh for their ability to realize innovation and impact from it. The AI Strategy sets out a ten-year plan with the vision, “to remain an AI and science superpower fit for the next decade.” Prime Minister Keir Starmer announced a shift to the national AI strategy intended to cut costs and reduce government investments in industry, moving away from their previous commitments to global safety initiatives and towards more localized, efficient adoption of AI across the public sector. The anticipated plan has not yet been shared publicly.⁷⁸⁹⁴

The UK AI Strategy has three main pillars:⁷⁸⁹⁵ (1) investing and planning for the long-term requirements of the UK’s AI ecosystem; (2) supporting the transition to an AI-enabled economy across all sectors and regions of the UK; and (3) ensuring that the UK gets the national and international governance of AI technologies right to encourage innovation and investment and to protect the public and the country’s fundamental values. Regarding the third pillar, the government proclaimed its intention to develop the most trusted and pro-innovation system for AI governance in the world, aiming to “harness the benefits of AI as we embed our values such as fairness, openness, liberty, security, democracy, rule of law, and respect for human rights.”

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The UK government updated an earlier AI Regulation Policy Paper⁷⁸⁹⁶ and subsequently commissioned a new AI Action Plan aiming to leverage AI for improved public service delivery and economic growth.⁷⁸⁹⁷ The Department for Science, Innovation, and Technology published its response to A Pro-Innovation Approach to AI Regulation in February 2024.⁷⁸⁹⁸ The updated AI Regulation Policy Paper, like the original, prioritizes the government’s intention to develop regulations true to the core principles of “context-specific,” “pro-innovation and risk-based,” “coherent,” and “proportionate and adaptable.”⁷⁸⁹⁹

These policy updates clarify that UK government departments would share oversight for AI systems and their consequences across the regulatory structures that exist within those departments. For example, healthcare-related AI systems would be regulated by the UK Department of Health & Social Care (DHSC), while broadcasting-related AI systems would be overseen by Ofcom, the UK’s communications regulator.⁷⁹⁰⁰ The policy paper highlights the role of a new regulatory advisory office, the Digital Regulation Cooperation Forum (DRCF), formed in July 2020 as a coordinating body convening regulators from the Information Commissioner’s Office (ICO), the Competition and Markets Authority (CMA), the Financial Conduct Authority (FCA) and Ofcom, to ensure “coherence” across regulations.⁷⁹⁰¹

While strongly endorsing continued AI innovation and investment, the original Policy Paper emphasized, “the success of our AI ecosystem is in part down to the UK’s reputation for the quality of its regulators and its rule of law. This includes the transparency of the UK’s regulatory regime, the detailed scrutiny that proposed regulation receives and comprehensive impact assessments [...] To maintain our leading regulatory approach, we must make sure that the rules that govern the development and use of AI keep pace with the evolving implications of

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

the technologies.”⁷⁹⁰² The updated AI Regulation White Paper⁷⁹⁰³ and government response⁷⁹⁰⁴ reiterate the importance of “high-quality regulators,” the UK’s “strong approach to the rule of law,” and the critical nature of transparency and impact assessments.

The UK’s cross-sectoral regulatory policies will continue to “be implemented on a non-statutory basis and implemented by existing regulators. This approach makes use of regulators’ domain-specific expertise to tailor the implementation of the principles to the specific context in which AI is used.” They will continue to work with regulators to detect any barriers to the implementation of the principles and monitor whether this “non-statutory framework” has the “desired effect.”⁷⁹⁰⁵ As DCMS stated, “regulators will lead the process of identifying, assessing, prioritizing and contextualizing the specific risks addressed by the [stated] principles... These principles provide clear steers for regulators but will not necessarily translate into mandatory obligations. Indeed, we will encourage regulators to consider lighter touch options in the first instances—for example, through a voluntary or guidance-based approach for uses of AI that fall within their remit.”⁷⁹⁰⁶

The updated policy paper and government response promise to build on “a strong foundation of regulatory coordination, via the DRCF’s published vision for a joint approach to digital regulation and a “multi-agency advice service for digital innovators pilot underway, supported by government’s Regulators’ Pioneer Fund.”⁷⁹⁰⁷ the cross-sectoral, non-statutory governmental oversight of AI. The DCMS acknowledged, “Regulatory coordination will be important for our approach to work and to avoid contradictory or very different approaches across regulators [...] We will look for ways to support collaboration between regulators to ensure a

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

streamlined approach. [...] We also need to ensure that UK regulators have access to the right skills and expertise to effectively regulate AI.”⁷⁹⁰⁸

The UK AI Action Plan updated progress regarding the three pillars of focus mentioned within the original National AI Strategy, including governing AI effectively,⁷⁹⁰⁹ and highlights collaboration with the G7, OECD, Council of Europe, UNESCO, the Future Tech Forum, and the Global Partnership on AI (GPAI). The AI Action Plan described a variety of recent regulatory tools and initiatives in keeping with the UK’s policy of cross-sectoral responsibility for AI.

A 2022 Digital Regulation Cooperation Forum (DRCF) report detailed the challenges presented by algorithmic processing tools for regulators across government agencies. The report identified the UK government regulators’ shared objectives to “protect individuals from harm; uphold individual rights; enable participation in online markets; encourage consumer trust and innovation; promote effective competition; promote resilient infrastructure and systems.”⁷⁹¹⁰

The UK Prime Minister’s Office created a dedicated Department for Science, Innovation and Technology to house the Office for Artificial Intelligence (formerly co-housed by DCMS and BEIS).⁷⁹¹¹ This newly created department released a Science and Technology Framework,⁷⁹¹² reiterating the government’s commitment to “a system of regulation and standards that is pro-innovation, easy to navigate and facilitates widespread commercial science and technology applications. [...] Regulation covering critical technologies will be world-leading [...] We will play an active role in the WTO, G7, G20, OECD, NATO, Council of Europe, Commonwealth, and the UN [as an] author of international rules and conventions for

critical technologies.” An updated Science and Technology Framework reiterated these goals and commitments.⁷⁹¹³

Following an announcement that the new budget included £3.5 billion “to support the government’s ambitions to make the UK a scientific and technologic superpower,” the Department of Science and Technology reiterated the intention to provide “a new approach to AI regulation, focusing on the applications of AI rather than setting rigid rules for products with an AI component.” The Department also announced plans for the government “to begin working at pace to lead the way in clarifying the application of intellectual property law regarding generative AI.”⁷⁹¹⁴ A later speech by King Charles indicated that his government “will seek to establish the appropriate legislation to place requirements on those working to develop the most powerful artificial intelligence models.”⁷⁹¹⁵

The AI Opportunities Action Plan⁷⁹¹⁶ released in 2025 outlines a decade-long roadmap with 50 long-term and immediate actionable recommendations to foster AI sovereignty through investment and adoption. The AI Opportunities Action Plan aims to enable safe and trusted AI development and adoption through regulation, safety, and assurance. However, the plan does not explicitly reference human rights, democratic values, or the rule of law. The UK Technology Secretary’s AI Playbook for the UK Government⁷⁹¹⁷ features a detailed section outlining the steps required for building AI solutions in a safe and responsible way, taking into account of ethics, legal considerations, data protection and privacy, security and governance. The Playbook aims “to provide departments and public sector organizations with accessible technical guidance on the safe and effective use of AI.”

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI Legislation

In the backdrop of the UK's priorities centered on business and innovation rather than regulation, the AI Regulation Bill, originally introduced in 2023 by Lord Holmes of Richmond MBE,⁷⁹¹⁸ was relaunched in the House of Lords and passed its first reading in 2025.⁷⁹¹⁹ The Bill sets out five principles of AI regulation: "i. Safety, security, and robustness; ii. Appropriate transparency and explainability; iii. Fairness; iv. Accountability and governance; v. Contestability and redress." If enacted, the Bill would require the Secretary of State to create a central AI Authority that would oversee AI regulation, assess emerging AI risks and support Innovation.

The Crime and Policing Bill under consideration by the House of Lords after passing the House of Commons⁷⁹²⁰ includes new provisions criminalizing the possession, creation, and distribution of AI tools designed to generate child sexual abuse material.⁷⁹²¹ This legal reform seeks to close existing legislative gaps and reflects a rights-based approach to regulating high-risk AI applications. The legislation includes penalties of up to five years for developing or supplying a CSA image generator, and up to three years for possessing manuals instructing on the use of AI for abuse.

Public Participation

The UK government has a firmly established practice of making draft policies available to the public for consultation and of providing the public with access to the findings gleaned from consultation.⁷⁹²² The UK Cabinet Office pledged in 2012 to "use more digital methods to consult with a wider group of people at an earlier stage in the policy-forming process. We will make it easier for the public to contribute their views, and we will try harder to use clear language and plain English in consultation documents."⁷⁹²³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Most AI-related bills have undergone consultation through this process after drafting while others have sought the input of experts and community groups earlier. However, the Open Rights Group raised concerns⁷⁹²⁴ over an absence of meaningful consultation with civil society and other critical stakeholders preceding the publication of the new Data (Use and Access) Act.⁷⁹²⁵ “By rushing through legislative proposals [...], the government is taking steps that work against its stated intent of unlocking the use of data” says the organization’s briefing.⁷⁹²⁶

The UK Ministry of Justice oversaw an open call for information about the ways evidence produced by software is handled in criminal proceedings in 2025. They Ministry noted, “We are keen that any changes to the current common law presumption are carefully defined to only include that evidence which is generated by software, including Artificial Intelligence and algorithms.”⁷⁹²⁷ The government also consulted the public on Copyright and Artificial Intelligence,⁷⁹²⁸ seeking to ensure the legal framework for AI and copyright supports the UK creative industries and AI sector together. Critics of the proposed copyright reforms argued that the system weakens the principle of informed consent and may lead to widespread unauthorized use of creators’ work.⁷⁹²⁹

The Secretary of State for Science, Innovation, and Technology consulted the public on the AI Opportunities plan “to harness the insights and expertise of the AI industry, academia, and civil society”⁷⁹³⁰ in 2024. The ICO also launched a series of consultations on generative AI and data protection. The consultation informed a chapter series covering the “lawful basis for web scraping to train generative AI models,” how to apply purpose limitation across the lifecycle of generative AI, “accuracy of training data and model outputs,” how to engineer “individual rights

into generative AI models,” and how to allocate “controllership across the generative AI lifecycle.”⁷⁹³¹

The recent consultations followed participation such as the earlier Online Harms White Paper.⁷⁹³² Consultation on the white paper resulted in “2400 responses ranging from companies in the technology industry including large tech giants and small and medium sized enterprises, academics, think tanks, children’s charities, rights groups, publishers, governmental organizations and individuals.” The government provided an overview of consultation responses and enumerated the links between the revised policy proposals and the input obtained during public consultation.⁷⁹³³

A revised Online Safety Bill⁷⁹³⁴ released to the public with key provisions aimed at preventing online exploitation, particularly of children and vulnerable adults, and to bolster responsible journalism. The Bill was granted Royal Assent and became the Online Safety Act.⁷⁹³⁵ Following publication of the AI Regulation Policy Paper in July 2022, DCMS provided a ten-week period for “views and evidence” from stakeholders about “how the UK can best set the rules for regulating AI in a way that drives innovation and growth while also protecting our fundamental values.”⁷⁹³⁶ Responses informed the AI Regulation White Paper a year later.⁷⁹³⁷

The UK government is additionally attempting to engage members of its communities that have traditionally been excluded from participation in building artificial intelligence and playing a role in its governance through the Alan Turing Institute, created in 2015 as a “national institute for data science” and more recently adding “and artificial intelligence.” The Turing Institute announced funding for seven innovative projects to boost public engagement with data science and AI across

the UK in 2022.⁷⁹³⁸ The initiative aimed to attract members of underrepresented groups to “widen participation by inspiring members of the public who may not usually interact with science to take an interest and have a voice in AI and data science.”⁷⁹³⁹

Data Protection

Data protection in the UK is governed by both the 2018 Data Protection Act (DPA)⁷⁹⁴⁰ and the UK GDPR.⁷⁹⁴¹ The Information Commissioner’s Office (ICO) was established as an “independent regulator for Data Protection and Freedom of Information” in accordance with the DPA, as it had previously been designated in accordance with the EU GDPR requirements.⁷⁹⁴² The ICO is a non-departmental public body that reports directly to the UK Parliament. It is sponsored by the Department of Science, Innovation, and Technology, emphasizing its role in overseeing data protection laws and promoting transparency in public bodies. The Government passed the Data Use and Access Act 2025 (DUAA). While the new Act does not replace UK GDPR, the DUAA made some significant changes, particularly around automated decision-making.⁷⁹⁴³ The Open Rights Group, an organization campaigning to protect digital rights and privacy, expressed concern about the DUAA’s provisions in relation to the use of Artificial Intelligence, noting before it passed Parliament “The Bill would remove important protections for automated decision-making and AI, reduce the scope of transparency obligations and rights, and lower accountability over how data is shared and accessed for law enforcement and other public security purposes.”⁷⁹⁴⁴

The UK GDPR essentially mirrors the EU GDPR; the DPA updated this regulation with clarification regarding oversight and enforcement powers.⁷⁹⁴⁵ While

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

the EU GDPR has extraterritorial applicability regardless of the organization's location, the UK GDPR primarily applies to organizations based in the UK or those outside the UK processing data of individuals in the UK. The UK GDPR is enforced by a single entity, the ICO, with no coordination with the European Data Protection Board (EDPB). Importantly, the EU GDPR generally excludes personal data collected for national security and intelligence services from its scope while the UK GDPR allows certain exceptions. Other important differences concern the age of consent for data processing practices and fines. Since Brexit, the UK is considered a "third country" by the EU. However, the country benefits from an adequacy decision that allows free data flows between the EU and the UK.

The UK remains an active member of the Council of Europe⁷⁹⁴⁶ and a signatory to the Council of Europe Convention 108+. Commitments to Convention 108 requires the safeguarding of rights pertaining to the automated processing of personal data including: the right to be informed; the right to not be subject to automated decision-making, the right to object, the right to remedy following violation of rights, and the right to assistance from a supervisory authority in exercising these rights.⁷⁹⁴⁷ However, the UK has not ratified Convention 108+.⁷⁹⁴⁸

The ICO has clarified how to assess the risks to rights and freedoms that AI pose from a data protection perspective and the appropriate measures that can be implemented to reduce these risks.⁷⁹⁴⁹ With respect to data protection, the guidance advises organizations building or integrating AI systems on the conduct of data protection impact assessments (DPIAs)⁷⁹⁵⁰: "You should not see DPIAs as simply a box ticking compliance exercise. They can effectively act as roadmaps for you to identify and control the risks to rights and freedoms that using AI can pose. They are also an ideal opportunity for you to consider and demonstrate your accountability for the decisions you make in the design or procurement of AI systems."

The ICO has also mapped existing data protection principles to those purposed for regulating AI in response to a government request for key regulators to

Center for AI and Digital Policy

define their regulatory strategies in alignment with the UK's AI White Paper.⁷⁹⁵¹ The goal is to demonstrate how “the ICO already has active experience of implementing the aims and objectives of the AI Regulation White Paper principles.”⁷⁹⁵² Given that AI systems often process personal data, the ICO emphasizes that these systems fall under its regulatory remit. The ICO has been actively involved in AI regulation for over a decade, providing guidance on various applications such as biometric recognition technologies. To support innovation while ensuring compliance with data protection laws, it has established resources such as an AI risk toolkit and a regulatory sandbox. The ICO's strategic approach represents a significant step in establishing a coherent framework for regulating AI in the UK.

The ICO has been a member of the Global Privacy Assembly (GPA) since 2002 and co-sponsored the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence⁷⁹⁵³ and the 2023 GPA Resolution on Generative AI.⁷⁹⁵⁴ The ICO was one of the authors of both the 2020 GPA Resolution on AI Accountability⁷⁹⁵⁵ and the 2022 GPA Resolution on Facial Recognition Technology.⁷⁹⁵⁶

Algorithmic Transparency

The UK government lays claim to being a global leader in establishing algorithmic transparency standards.⁷⁹⁵⁷ First, the UK is a member of the Council of Europe and endorsed but not yet ratified Convention 108+, which enshrines the right to algorithmic transparency.⁷⁹⁵⁸ The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithmic systems⁷⁹⁵⁹ addresses additional human rights impacts of AI technologies with guidance on obligations of states and responsibilities of companies, specifically emphasizing requirements on transparency, accountability, and effective remedies.

Algorithmic transparency is also provided for by the UK GDPR⁷⁹⁶⁰ and DPA. However, the Data (Use and Access) Act 2025 (DUAA) introduces a more permissible regime under the UK GDPR for organizations using solely automated decision-making systems where those decisions have legal or similarly significant effects on individuals. Organizations will be permitted to use automated processes in a broader range of situations but must put specific safeguards in place. This includes enabling affected individuals to “obtain human intervention in respect of such decisions.”⁷⁹⁶¹

The concept of algorithmic transparency is addressed in some detail in the ICO AI Guidance.⁷⁹⁶² However, much of the earlier guidance is being revised to align with the Data (Use and Access) Act. The ICO guidance on Explaining Decisions Made with AI is also being updated.⁷⁹⁶³ The guidance specifies that “the primary aim

of explaining fully automated or AI-assisted decisions is justifying a particular result to the individual whose interests are affected by it.”⁷⁹⁶⁴ The explanation should allow the individual to challenge the decision or, alternatively, consider how to change their own behavior for a more favorable outcome in the future.

The Centre for Data Ethics and Innovation (CDEI), formerly a government task force and now an arm of the Department for Science, Innovation and Technology,⁷⁹⁶⁵ published its review into bias in algorithmic decision-making.⁷⁹⁶⁶ The Center focused on the use of algorithms in significant decisions about individuals in four sectors (policing, local government, financial services and recruitment). Key recommendations include:

Government should place a mandatory transparency obligation on all public sector organizations using algorithms that have an impact on significant decisions affecting individuals.

Organizations should be actively using data to identify and mitigate bias. They should make sure that they understand the capabilities and limitations of algorithmic tools and carefully consider how they will ensure fair treatment of individuals.

Government should issue guidance that clarifies the application of the Equality Act to algorithmic decision-making. This should include guidance on the collection of data to measure bias, as well as the lawfulness of bias mitigation techniques (some of which risk introducing positive discrimination, which is illegal under the Equality Act).

The Office for Artificial Intelligence published the Ethics, Transparency, and Accountability Framework for Automated Decision-Making for public sector organizations on how to use automated or algorithmic decision-making systems in a safe, sustainable and ethical way.⁷⁹⁶⁷ The 2025 Digital Service updated the guidance in 2025,⁷⁹⁶⁸ providing a “7 point framework [to] help government departments with

the safe, sustainable and ethical use of automated or algorithmic decision-making systems.”⁷⁹⁶⁹

The Cabinet Office’s Central Digital and Data Office (CDDO) built on the guidance to create the Algorithmic Transparency Reporting Standard (ATRS), a pioneering standard for algorithmic transparency and public sector bodies.⁷⁹⁷⁰ The CDDO worked with external experts and civil society groups to create the ATRS, which is also informed by a public engagement study run by the Center for Data Ethics and Innovation and Britain Thinks⁷⁹⁷¹ and a pilot. The revised standard⁷⁹⁷² aims to help public sector organizations provide clear information about the algorithmic tools they use and why they are using them, requiring openness on how algorithmic tools support decision-making in a complete, open, understandable, easily accessible, and free format. Since 2025, all central government departments and specific public bodies using algorithmic tools that significantly influence public-facing decisions must complete an ATRS. The ATRS template has 2 tiers: one to inform the general public using clear and simple language, another still accessible to the public but directed to specialists in civil society, journalists, researchers, “and other organizations wishing to learn from their peers.” The register of public sector organizations includes more than 100 algorithmic transparency records.⁷⁹⁷³

Public Authorities (Fraud, Error, and Recovery) Act 2025

The Public Authorities (Fraud, Error and Recovery) (PAFER) Act introduces Eligibility Verification Measures under which, the Department for Work and Pensions (DWP) could compel banks and other financial institutions to trawl their customer data to verify benefit eligibility, including flagging accounts that match undisclosed “eligibility indicators.” Civil liberties organizations led by Big Brother Watch, joined by Age UK and disability and poverty-focused groups, campaigned vigorously against these powers, warning that there are no statutory requirements for algorithmic transparency, accountability or meaningful human oversight, and that

individuals would often have no right to know how they were flagged or to challenge automated flags. Big Brother Watch highlighted that these powers “disproportionately target some of the poorest and most in need of support in our society, expose us to suspicionless surveillance and needless investigations arising from algorithmic error and undermine the presumption of innocence.”⁷⁹⁷⁴ During Parliamentary debates, some MPs opposed Clause 74 arguing that it presented a surveillance regime that threatened privacy, due process, and equal treatment.⁷⁹⁷⁵ While the most controversial aspects remained in the Act, civil society efforts secured an important concession that anyone flagged under the powers cannot be treated as automatically guilty: the DWP must use the information only to assist human decision-making, requiring investigators to review additional evidence before taking action.

AI Grading Controversy

A widely reported controversy over the use of AI in the UK public sector erupted in the Summer of 2020 during the COVID-19 global pandemic.⁷⁹⁷⁶ With students having completed their studies remotely, the UK Office of Qualifications and Examinations (Ofqual) applied an algorithm to estimate the exam results these students might have received given in-person assessments. Nearly 40 percent of students saw their grades reduced after the government reevaluated exams, known as A-levels.⁷⁹⁷⁷ The software model incorporated the school's past results and students' earlier results on mock exams. The calculations favored students from elite backgrounds.⁷⁹⁷⁸ As the BBC explained, the algorithm “locks in all the advantages and disadvantages—and means that the talented outlier, such as the bright child in

the low-achieving school, or the school that is rapidly improving, could be delivered an injustice.”⁷⁹⁷⁹

As the Open Data Institute pointed out, a student would have received a high grade in math only because historically someone from her school had received a high grade, even if the same student was predicted at B or C.⁷⁹⁸⁰ Wired UK reported that some researchers stated that “[rather than the algorithm getting it wrong, [...] it was simply the wrong algorithm.”⁷⁹⁸¹ However, others thought that the application of Article 22 of the GDPR (prohibition of decisions solely made by automated decision making) was at stake, albeit disputed by the governmental agency that suggested the computer generated score. Ultimately, protests in front of the British Parliament and a pending lawsuit led the government to withdraw the system.⁷⁹⁸²

Karen Hao, a reporter with MIT Technology Review, wrote “The problem began when the exam regulator lost sight of the ultimate goal—and pushed for standardization above all else.”⁷⁹⁸³

Data Scraping

The ICO and 16 of its international data protection and privacy counterparts released a follow-up joint statement laying out expectations for industry related to data scraping and privacy.⁷⁹⁸⁴ The initial statement in August 2023 established that “[social media companies] and other websites are responsible for protecting personal information from unlawful scraping.”⁷⁹⁸⁵ The follow-up, which incorporates feedback from engagement with companies such as Alphabet (YouTube), X Corp (formerly Twitter), and Meta Platforms (Facebook, Instagram, WhatsApp), adds that

organizations must “comply with privacy and data protection laws when using personal information, including from their own platforms, to develop AI large language models”; must regularly review and update privacy protection measures to keep pace with technological advances; and ensure that permissible data scraping, such as that for research, “is done lawfully and following strict contractual terms.”⁷⁹⁸⁶

Part 7 of the Data (Use and Access) Bill⁷⁹⁸⁷ requires the Secretary of State to create regulations for operators of web crawlers and general purpose AI models to provide transparency around their activities online and to comply with UK copyright laws.

Facial Recognition

Police forces and other private and public entities have used facial recognition technology (FRT) in the UK since at least 2015, when Leicestershire Police first trialed live FRT at the Download Festival.⁷⁹⁸⁸ Civil liberties organizations and, increasingly, government agencies have consistently raised concerns over the implications of this technology on human rights. Big Brother Watch have said that, by “indiscriminately subjecting innocent members of the public to mass identity checks” the deployment of live facial recognition as a mass surveillance tool transforms the notion of privacy in the public, reverses the presumption of innocence, and undermines the democratic principle of policing by consent.⁷⁹⁸⁹ Further, Big Brother Watch highlights the implications of this technology on protest rights stating that “the use of LFR against peaceful protesters is a particularly concerning scenario where biometric scans could be used against people exercising their political rights, engaging Articles 10 (freedom of expression) and 11 (freedom of assembly) of the Human Rights Act.”⁷⁹⁹⁰

Center for AI and Digital Policy

Research shows that facial recognition technology suffers from race and gender bias. Evidence obtained by Liberty Investigates found that police overturned a measure addressing bias after a 2023 review by National Physical Laboratory (NPL) revealed that the “system produces false positives for Black women almost 100 times more frequently than white women at certain settings.”⁷⁹⁹¹ A 2025 report by the Metropolitan Police revealed that 80% of the innocent people wrongly flagged by (live) facial recognition were Black.⁷⁹⁹²

Notably, in 2020, the Court of Appeal in *Bridges v South Wales Police* ruled police use of live facial recognition unlawful, citing fundamental legal and policy deficiencies breaching privacy, data protection, and equality laws. The court found insufficient limits on deployment and watchlists, granting excessive discretion, without necessarily assessing the technology’s proportionality.⁷⁹⁹³ Following this ruling, some police forces suspended their use of LFR until further legal clarity was provided. However, many, including the Metropolitan Police Service (MPS), continued to use LFR with only slightly revised policies and procedures.⁷⁹⁹⁴

The ICO’s Information Commissioner produced a formal opinion on the use of facial recognition technology in public places in 2021.⁷⁹⁹⁵ The report specifies that any deployment of facial recognition technology “must comply with all relevant parts of the UK GDPR and DPA 2018. [...] Together, these requirements mean that where LFR is used for the automatic, indiscriminate collection of biometric data in public places, there is a high bar for its use to be lawful.” Despite this published opinion, live facial recognition technology continues to be used across police departments throughout the country with no opportunity for members of the public to opt out, nor any meaningful efforts towards data minimization.⁷⁹⁹⁶ The House of Lords Justice and Home Affairs Committee expressed concerns about the lack of a

clear legal foundation and consistent standards for LFR deployment, recommending the establishment of a legislative framework to regulate its use.⁷⁹⁹⁷

The British Standards Institute (BSI) released a code of practice to guide organizations in the ethical deployment of facial recognition technologies (FRT), emphasizing principles such as governance, accountability, privacy, and data protection in 2024.⁷⁹⁹⁸

In May 2024, Shaun Thompson, who was misidentified by the MPS during an LFR deployment, initiated a judicial review of the force's use of LFR, arguing that its use of the software is unlawful. The challenge is jointly brought by Big Brother Watch director Silkie Carlo. The civil liberties group have stated that this is "the first legal challenge in Europe brought by an individual misidentified by facial recognition technology."⁷⁹⁹⁹ In 2025, the UK's human rights regulator, the Equality and Human Rights Commission (EHRC), said, "Since the Bridges ruling, LFRT has been deployed more frequently, integrated into CCTV networks, and used with larger watchlists" and stated that "these developments mean the use of the technology poses a threat to human rights."⁸⁰⁰⁰

The UK saw an unprecedented expansion in the use of AI in law enforcement in 2025. Freedom of Information (FOI) requests revealed a surge in retrospective facial recognition searches against the passport and immigration databases. Privacy International's Nuno Guerreiro de Sousa and Big Brother Watch's Silkie Carlo issued pre-action correspondence to the Home Office and Metropolitan Police, calling for "a moratorium on facial recognition searches of the passport and immigration databases."⁸⁰⁰¹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Despite these challenges, the UK installed the first network of permanent cameras capable of LFR in Croydon, South London in 2025. Previously, such cameras had been deployed via mobile vans on high streets.⁸⁰⁰² From February, South Wales Police began using a network of LFR cameras across Cardiff city center after trailing it at the Six Nations rugby internationals.⁸⁰⁰³ In August, the government announced a new fleet of 10 facial recognition vans, further extending national capacity. Ten police forces in England and Wales now use LFR regularly and others deploy it for trials or major events.⁸⁰⁰⁴ In November, British Transport Police announced LFR trials at selected London railway stations.⁸⁰⁰⁵

Besides police forces, British supermarkets and other retailers also use this technology to identify individuals mainly as a way to tackle shoplifting and to protect shop staff. Large retailers such as Sports Direct and Home Bargains use facial recognition technology provided by Facewatch. These retailers came under fire after a number of innocent people had either been misidentified by facial recognition technology or wrongly added to watchlists.⁸⁰⁰⁶ An ICO investigation into Facewatch in March 2023 found that Facewatch’s “processing of personal data failed to balance the legitimate interest of Facewatch and their subscribers against the rights and freedoms of individuals.” While the ICO concluded that “no further regulatory action is required,”⁸⁰⁰⁷ the Home Affairs Committee published a letter recommending that the Government “brings forward legislation to regulate the safe and ethical use of new technologies, especially by private companies for crime prevention measures.

Facial recognition technology remains a concern and primary legislation embodying general principles and setting minimum standards is required.”⁸⁰⁰⁸

In December 2025, the Home Office launched its first public consultation “on a new legal framework for law enforcement use of biometrics, facial recognition and similar technologies.”⁸⁰⁰⁹ This consultation is the first of its kind regarding FRT, giving the British public a meaningful opportunity to feed into the policymaking process.

Automated Visa Application

In 2020, migrants’ rights campaigners successfully challenged the automated decision-making system used by the Home Office to process visa applications.⁸⁰¹⁰ The algorithmic “streaming tool” was eliminated by the Home Office ahead of a judicial review by the Joint Council for the Welfare of Immigrants, which found the tool opaque and discriminatory toward applicants from certain nationalities and race groups. The Home Office committed to a “redesign of the process and the way in which visa applications are allocated for decision-making.”⁸⁰¹¹

The introduction of eVisas, or online records of an individual's immigration status, was a significant development in this direction. This initiative aims to replace physical documents like biometric residence permits (BRPs) and biometric residence cards (BRCs) by 2025. The move to eVisas is intended to enhance security, reduce fraud, and streamline the process of proving immigration status.⁸⁰¹² Concerns have arisen, sometimes “leaving foreign nationals and refugees without any way to prove their immigration status.”⁸⁰¹³ In one case, an e-Visa applicant’s details were merged with another person. Her advisor wrote “This is a major GDPR breach. The third

party has access to all our client’s personal information including her passport details, telephone number and email address.” The House of Lords Secondary Legislation Scrutiny Committee expressed concerns related to the operational risks connected to greater reliance on technological solutions, especially for vulnerable persons: “We welcome the steps the Government has taken to support vulnerable users. The House may wish to enquire how the Home Office will monitor the adequacy of these once the system is in wider use.”⁸⁰¹⁴

Environmental Impact of AI

While the UK's national AI strategy and regulatory framework focus heavily on innovation, governance, and ethics, significant concerns about the environmental impact of AI emerged in 2025. Members of the Government Digital Sustainability Alliance (GDSA) highlighted a new report detailing the substantial water consumption required by AI systems and data centres. The GDSA authors called for mitigation measures, including locating data centres away from water-stressed areas and mandating biodiversity impact assessments before development.⁸⁰¹⁵ No policies yet address this issue.

Lethal Autonomous Weapons

The UK's Ministry of Defense issued the following statement in the Defense AI Strategy in 2022: “The UK does not rule out incorporating AI within weapon systems. In practice, however, some concepts and capabilities may prove impossible to deliver in a safe and responsible manner—and we are very clear that there must be context-appropriate human involvement in weapons which identify, select and attack targets. This could mean some form of real-time human supervision, or control exercised through the setting of a system’s operational parameters. We believe that AI can substantially augment the performance of our people and significantly enhance our capabilities. However, given concerns about the ethics and risks of delegating certain decisions to AI, it is also important to state that we do not believe that ‘more autonomous’ necessarily means ‘more capable.’ We believe that Human-Machine Teaming delivers the best outcomes, in terms of overall effectiveness, optimal use of resources, the practicalities of integration and the ease with which we can address issues arising; it is therefore our default approach to AI adoption. The

appropriate degree of system ‘autonomy’ and type of ‘human control’ need to be considered carefully on a case-by-case basis.”⁸⁰¹⁶

In February 2023, the UK participated in the first global Summit on Responsible Artificial Intelligence in the Military Domain (REAIM 2023). Together with other government representatives, the United Kingdom agreed a joint call to action on the responsible development, deployment and use of artificial intelligence in the military domain,⁸⁰¹⁷ stressing the importance that AI in the military domain be “employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” The UK endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁸⁰¹⁸ The UK also participated in the second REAIM summit in 2024, hosted by South Korea.⁸⁰¹⁹

The UK has reaffirmed its commitment to international discussions on lethal autonomous weapon systems (LAWS). In response to a parliamentary question, the UK government confirmed its ongoing participation in United Nations discussions on LAWS through the Convention on Certain Conventional Weapons (CCW).⁸⁰²⁰

In response to a House of Lords Artificial Intelligence in Weapons System Committee Report, the government committed to ensuring meaningful human control and accountability throughout the lifecycle of AI-enabled military systems. However, the government fell short on the recommendation to adopt a specific operational definition for autonomous weapons systems.⁸⁰²¹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI Literacy

The AI Opportunities Action Plan includes a goal to “ensure its lifelong skills programme is ready for AI” as one of 50 goals but offers few details.⁸⁰²² The government has plans to train all civil servants⁸⁰²³ in the use of AI through the One Big Thing Project, an annual Civil Service initiative promoting large-scale upskilling and cultural change around a shared learning priority. The 2025 theme is “AI for All,” aiming to equip every civil servant with the knowledge and tools to use artificial intelligence effectively in public service.⁸⁰²⁴ The UK government also offers an AI skills tools package available to everyone.⁸⁰²⁵

Human Rights

According to Freedom House, the UK is “Free” with a score of 92/100 for political rights and civil liberties in 2025.⁸⁰²⁶ The country “is a stable democracy that regularly holds free elections and hosts a vibrant media sector.” However, the report also notes that: “While the government generally enforces robust protections for political rights and civil liberties, recent years have featured new restrictions on the right to protest as well as rising Islamophobia, antisemitism, and anti-immigrant sentiment.”

All UK AI initiatives must comply with the UK Human Rights Act of 1998. Post-Brexit, the UK remains a part of the European Convention on Human Rights and is subject to the jurisdiction of the European Court of Human Rights in Strasbourg.

As a member of the council of Europe, the UK abides by the 2020 Recommendation that states “must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or

[minimizing] possible adverse effects.”⁸⁰²⁷ The Alan Turing Institute also issued guidelines on AI and non-discrimination/human rights.⁸⁰²⁸ Britain’s Equality and Human Rights Commission (EHRC) identified the human rights risks posed by digital technologies and artificial intelligence as a top regulatory priority in the Strategic Plan 2025–2028.⁸⁰²⁹ The EHRC committed to assessing risks of discrimination and influencing policy to prevent digital exclusion in public services.

AI Safety Summit

The UK is engaged internationally in the development of AI governance in line with the values of fairness, freedom and democracy. This engagement includes working with partners to shape AI governance under development including the EU AI Act and the Council of Europe legal framework.⁸⁰³⁰

In November 2023, the UK convened the first AI Safety Summit and endorsed the Bletchley Declaration.⁸⁰³¹ The UK thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully [realize] their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

The UK government co-hosted the AI Seoul Summit, building on the legacy of the first AI Safety Summit hosted by the UK at Bletchley Park.⁸⁰³² The AI Seoul Summit’s objective was for key global leaders to converge on three critical priorities on AI: safety, innovation and inclusivity.⁸⁰³³ The UK released on commissioned an

independent scientific report and offered operational support during the Seoul Summit,⁸⁰³⁴ and released the final report ahead of the Paris AI Action Summit in 2025.⁸⁰³⁵ However, the UK government refused to sign the Paris AI Action Summit leaders' declaration committing to inclusive and sustainable deployment of AI.⁸⁰³⁶

The UK established the AI Safety Institute (AISI) in late 2023. The AISI focuses on assessing the safety of advanced AI systems, aligning its evaluations with ethical standards such as those outlined by UNESCO.⁸⁰³⁷ UK Technology Secretary Peter Kyle announced renaming of the AI Safety Institute as the AI Security Institute and collaboration with the Ministry of Defense's Defense Science and Technology laboratory to assess the dual-use scientific capabilities of frontier AI.⁸⁰³⁸ On announcing the renaming, the secretary stated, "They are scientists—scientists who are squarely focused on rigorous research into the most serious emerging risks. They are researching AI's potential to assist with the development of chemical and biological weapons."

The launch of an AI assurance platform designed to help businesses identify and mitigate AI-related risks furthered interest in AI safety. This initiative aims to build greater trust in AI technology and drive demand for the UK's AI assurance sector.⁸⁰³⁹

OECD / G20 AI Principles

The UK is a member of the OECD and the G20 and has endorsed the OECD AI Principles.⁸⁰⁴⁰ The OECD/G20 AI Principles are not referred to in the National AI Strategy. However, the UK is actively involved in the OECD's AI Governance

Working Party. In this role, the UK promotes the practical application of trustworthy AI guidelines globally by contributing case studies on its AI Assurance Techniques to the OECD's Catalogue of Tools and Metrics.⁸⁰⁴¹

The UK is a founding member of the Global Partnership on AI (GPAI)⁸⁰⁴² and invested in GPAI's data trust research.⁸⁰⁴³ Additionally, UK defense has a strong record of collaborating with international partners and allies, including engagement with NATO supporting the AI Partnership for Defense. On the bilateral front, in September 2020 the UK and the U.S. signed to establish dialogue on their shared vision for driving technological breakthroughs in AI and to explore an AI R&D ecosystem that “promotes the mutual wellbeing, prosperity, and security of present and future generations.” The Declaration mentions, as one objective, to protect “against efforts to adopt and apply these technologies in the service of authoritarianism and repression.”⁸⁰⁴⁴

Council of Europe AI Treaty

The UK contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law. During a conference of Council of Europe Ministers of Justice in Vilnius, Lithuania, the UK, along with other nations, signed the Framework Convention on Artificial Intelligence. This treaty represents the first legally binding international agreement on AI, providing a comprehensive legal framework covering

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

the entire lifecycle of AI systems.⁸⁰⁴⁵ The UK has not yet ratified the international AI treaty.⁸⁰⁴⁶

UNESCO Recommendation on AI Ethics

The UK endorsed the 2021 UNESCO Recommendation on the Ethics of AI.⁸⁰⁴⁷ The UK has integrated UNESCO's ethical guidelines into its national AI policies. During a 2023 parliamentary debate, the government reaffirmed its commitment to the UNESCO framework, emphasizing its role in shaping the UK's approach to AI governance.⁸⁰⁴⁸

The UK has been a proactive participant in UNESCO's efforts to promote ethical AI. The UK contributed to the Global Forum on the Ethics of Artificial Intelligence held in Kranj, Slovenia.⁸⁰⁴⁹ This forum brought together international experts and policymakers to discuss the implementation of UNESCO's Recommendation on the Ethics of AI, focusing on ethical governance and responsible AI development.

The UK has not initiated the UNESCO Readiness Assessment Methodology (RAM), a process designed to facilitate country's implementation of the UNESCO recommendation.⁸⁰⁵⁰

Evaluation

The UK continues to act as a global leader in AI, highlighted by a flourishing policy and legal framework, proactive government initiatives, growing economic investment, and international cooperation. The UK continues to establish robust regulatory frameworks to ensure AI's safe and trustworthy development, driven by the consultation on the white paper detailing the Department for Science, Innovation,

on the approach to AI regulation.”⁸⁰⁵¹ The UK is further advancing regulatory frameworks “to influence on future AI’s values, safety and governance”⁸⁰⁵² as demonstrated by the AI Opportunities Action Plan⁸⁰⁵³ and legislation including the Artificial Intelligence (Regulation) Bill,⁸⁰⁵⁴ Data (Use and Access) Act,⁸⁰⁵⁵ and the Crime and Policing Bill.⁸⁰⁵⁶

The UK is also committed to international collaboration. Prime examples are the Memorandum of Cooperation signed with Singapore⁸⁰⁵⁷ and the US⁸⁰⁵⁸ as well as the endorsement of the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁸⁰⁵⁹

Following Brexit, the UK shifted from a legislative approach based on rights and obligations, such as that applied in the data protection field, to a regulatory approach to AI based on ethical standards and cross-ministerial coordination. From this perspective, the UK’s development of a strong algorithmic transparency framework appears to be a corrective tool but not a safeguard against AI-based harm. The widespread use of live facial recognition across multiple UK law enforcement agencies in contradiction with the ICO’s own guidance raises questions about the merits of a purely regulatory approach. In these circumstances, the resilience of the UK AI policy framework will be only as good as the virtues and merits of its oversight mechanisms.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

United States

In 2025, the United States previous AI orders and guidance and began implementing an AI Action Plan that emphasizes deregulation, AI adoption, and private investment, largely through executive orders. The White House opposed state efforts to pass AI laws while many states continued to enact new legislation to promote transparency, fairness, and accountability for AI systems. The United States also announced plans to leave UNESCO and largely withdrew from AI governance.

National AI Strategy

The national vision and high-level strategy for AI governance and development in the United States has tended to come from Executive Orders issued by the president. Since the inauguration of the second Donald Trump administration in 2025, the U.S. AI strategy has focused on establishing America's global dominance in AI development. This approach represents a shift from the Biden Administration's approach to promoting safe, secure, and trustworthy AI development.⁸⁰⁶⁰ In pursuit of global dominance, the administration has removed existing regulations perceived as obstacles to AI development, such as with the Removing Barriers to American Leadership in Artificial Intelligence order signed soon after the inauguration.⁸⁰⁶¹

The second Trump Administration's AI Action Plan⁸⁰⁶² reflects the current national AI strategy. The Plan identifies over 90 Federal policy actions across three pillars: Accelerating Innovation, Building American AI Infrastructure, and Leading in International Diplomacy and Security. Globally agreed-on principles such as transparency, human-centeredness, sustainability, fundamental rights, and rule of law underly some of the policy actions but are not explicit. Policy actions range across deregulation, speeding up AI adoption in private industry and government operations, expanding AI literacy, fast tracking data centers and semiconductor permits, and developing the workforce to build out AI infrastructure. The 3 Executive Orders accompanying the AI Action Plan—Preventing Woke AI in the Federal

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Government, Accelerating Federal Permitting of Data Center Infrastructure,⁸⁰⁶³ Promoting the Export of the American AI Technology Stack⁸⁰⁶⁴—reflect the Plan’s narrow focus: “It is a national security imperative for the United States to achieve and maintain unquestioned and unchallenged global technological dominance.”⁸⁰⁶⁵ America’s AI Action Plan does not define or reference governance principles.

The Executive Order on Ensuring a National Policy Framework for Artificial Intelligence⁸⁰⁶⁶ attempts to spread the administration’s deregulation agenda to state laws by directing federal agencies to “check the most onerous and excessive laws emerging from the States that threaten to stymie innovation.” The EO tasks the Department of Justice to set up an AI Litigation Taskforce to challenge state AI laws and instructions other agencies with actions that would undermine federal funding to the states. The directions in the order implement the AI Action Plan stance that “the Federal government should not allow AI-related Federal funding to be directed toward states with burdensome AI regulations.”⁸⁰⁶⁷ Federal preemption proposals on state AI laws remains a critical policy discussion throughout the year with significant support from the AI industry.⁸⁰⁶⁸

The AI Risk Management Framework issued by the National Institute of Standards and Technology (NIST)⁸⁰⁶⁹ and follow-up voluntary standards remain influential in guiding private sector practices. The Biden White House National Security Memorandum (NSM) on AI, which provided comprehensive guidance for governing AI use in national security systems, including defense and intelligence

agencies,⁸⁰⁷⁰ has not been expressly revoked or altered by the second Trump Administration.

Executive Orders related to AI from the first Trump Administration have not been explicitly rescinded. A 2019 Executive Order emphasized the need to maintain U.S. leadership in Artificial Intelligence and set out a range of policies and practices, including funding, research, training, and collaboration.⁸⁰⁷¹ The EO also described the need to protect “civil liberties, privacy, and American values.”⁸⁰⁷² Executive Order 13960 on Promoting the Use of Trustworthy Artificial Intelligence in the Federal Government issued in 2020 reflects the goals set in the 2019 Executive Order and established common guidance to encourage federal agencies to use AI consistent with nine principles.⁸⁰⁷³ Reasoning that “The ongoing adoption and acceptance of AI will depend significantly on public trust,”⁸⁰⁷⁴ the EO emphasized the need to ensure that “the use of AI remains consistent with all applicable laws, including those related to privacy, civil rights, and civil liberties.”⁸⁰⁷⁵ The EO characterized Trustworthy AI as being lawful, respectful of our civil rights, accurate, reliable, safe, understandable, responsible, transparent, accountable and regularly monitored.⁸⁰⁷⁶

Previous Administrations’ Executive Orders

The second Trump administration’s AI agenda is a sharp departure from the first Trump administration, which led efforts to establish an international governance framework for AI. The current White House Science Advisor Michael Kratsios said in 2019 “for the first time in history, America and likeminded democracies of the world will commit to common AI principles reflecting our shared values and priorities. These principles send a strong message—that the OECD countries stand

together in unleashing AI innovation, understanding that it is an essential tool to drive economic growth, empower workers, and lift up quality of life for all.”⁸⁰⁷⁷ A 2020 Executive Order from President Trump, echoed the OECD AI Principles in emphasizing “legal compliance, performance justification, technical reliability, safety and security, transparency, and accountability.”⁸⁰⁷⁸

The Biden Administration’s 2023 Executive Order 14110 was rescinded in the first wave of executive orders from the Trump White House. EO 14110 aimed to harness AI for good and realize its myriad benefits by mitigate its substantial risks.⁸⁰⁷⁹ EO 14110 built on prior work to support the development of responsible AI technologies and policies, including the Office of Science and Technology Policy’s (OSTP) Blueprint for an AI Bill of Rights⁸⁰⁸⁰ and the National Institute of Standards and Technology’s (NIST) AI Risk Management Framework (AI RMF).⁸⁰⁸¹

Federal AI Legislation

Federal laws have been passed in Congress either as standalone legislation or as AI-focused provisions in broader acts. The Congressional Research Service reported that hundreds of bills relating to artificial intelligence had been introduced since the 115th Congress, but fewer than 30 had been enacted as of May 2025.⁸⁰⁸² Nearly half of those enacted consisted of AI-focused provisions either in appropriations or national defense authorization legislation.

The TAKE IT DOWN Act, which criminalizes the nonconsensual publication of intimate images, including “digital forgeries” (i.e., deepfakes), in certain circumstances, passed in 2025. The law requires certain websites and online or mobile applications, identified as “covered platforms,” to implement a “notice-and-removal” process to remove intimate images at the depicted individual’s request. President signed the bill into law on May 19, 2025. The bill's criminal prohibition takes effect immediately, while covered platforms have one year to establish the required notice-and-removal process.⁸⁰⁸³

The Senate rejected⁸⁰⁸⁴ a 10-year prohibition on state AI regulation proposed as part of the 2025 budget reconciliation known as the One Big Beautiful Bill Act.⁸⁰⁸⁵ The measures passed the House of Representatives and were amended in the Senate to apply to AI systems or automated decision-making “entered into interstate or commerce” and ultimately tied Broadband Equity Access and Deployment Program (BEAD) funds to the prohibition.⁸⁰⁸⁶

The House Bipartisan House Task Force on Artificial Intelligence issued its report providing 66 key findings 85 recommendations in December 2024.⁸⁰⁸⁷ The Task Force held multiple hearings and numerous roundtables and engaged with over one hundred experts, including business leaders, government officials, technical experts, academics, legal scholars, and other domain specialists in preparation of the report. The report framed the analysis and recommendations on principles including protecting against AI harms and risks, taking an incremental approach, and keeping the humans designing, using, and subject to AI systems at the center of policymaking.

These efforts followed the Bipartisan Senate AI Working Group convened by Senator Chuck Schumer (D-NY) along with Senators Mike Rounds (R-SD), Todd Young (R-Ind.), and Martin Heinrich (D-NM) in 2023.⁸⁰⁸⁸ The working group convened a series of “Insight Forums” to complement the traditional approach of committee hearings.⁸⁰⁸⁹ There were nine forums in the series with representation from tech companies, AI experts, civil society, think tanks, research, and academia. In his opening statement Sen. Schumer announced that the insight forums would

build “a foundation for bipartisan AI policy that Congress can pass.”⁸⁰⁹⁰ “More than 300 AI-related proposed bills were introduced in the 118th congressional session [beginning in January 2023]. They range all over the place, from controlling misinformation to how we can stimulate AI innovation and research.”⁸⁰⁹¹ However, no AI legislation was passed in the 118th Congress.

OMB Guidance on AI

The Office of Management and Budget issued Memorandum M-25-21,⁸⁰⁹² Accelerating Federal Use of AI through Innovation, Governance, and Public Trust, and Memorandum M-25-22,⁸⁰⁹³ Driving Efficient Acquisition of Artificial Intelligence in Government, in April 2025. The memoranda rescinded and replaced the memoranda M-24-10⁸⁰⁹⁴ and M-24-18.⁸⁰⁹⁵ The revised memoranda adopt a forward-leaning, pro-innovation approach while maintaining safeguards for civil rights, civil liberties, and privacy.

OMB Memo M-25-21 carries forward the key guidance in the 2020 Executive Order 13960 issued under the first Trump administration. The memo states “agencies are directed to provide improved services to the public, while maintaining strong safeguards for civil rights, civil liberties, and privacy.”⁸⁰⁹⁶ The Memo directs that “Agencies must ensure their AI use is trustworthy, secure, and accountable, in

accordance with Executive Order 13960.”⁸⁰⁹⁷ OMB Memo M-25-21 “redefines AI governance as an enabler of effective and safe innovation”⁸⁰⁹⁸ and sets deadlines for agencies to establish policies around acceptable use, risk management, and oversight. The memo also directs agencies to “implement minimum risk management practices for AI that could have significant impacts when deployed (‘high-impact AI’).”⁸⁰⁹⁹ Risk management practices include pre-deployment testing, impact assessments, ongoing monitoring, human training and assessments, human oversight and accountability, appeals/remedy process, public feedback and consultation processes and plans for actions. The Appendix of Memo M-25-21 itemizes applications that would be within scope of high-impact AI.⁸¹⁰⁰

OMB Memo M-25-22 sets out three core principles for the procurement and acquisition of AI in government:⁸¹⁰¹

- Ensuring the government and the public benefit from a competitive American AI marketplace
- Safeguarding Taxpayer Dollars by Tracking AI Performance and Managing Risk
- Promoting Effective AI Acquisition with Cross-Functional Engagement

To implement these core principles the OMB requires agencies to maximize the use of American-made AI, protect privacy, protect IP rights and use of government data, and contribute to a shared repository of best practices.⁸¹⁰²

Joint Statement of Enforcement Agencies

Leaders from four agencies issued a Joint Statement on Enforcement Efforts Against Discrimination and Bias in Automated Systems.⁸¹⁰³ The statement does not create any new rights or liabilities but restates Agencies’ existing enforcement authorities and their application to automated systems that contribute to unlawful discrimination and otherwise violate federal law. The statement uses the term “automated systems” broadly to mean software and algorithmic processes, including AI, that are used to automate workflows and help people complete tasks or make

decisions.⁸¹⁰⁴ The statement identifies three sources of discrimination in automated systems: Data and Datasets, Modal Opacity and Access, and Design and Use.⁸¹⁰⁵

The Department of Education, Department of Health and Human Services, Department of Homeland Security, Department of Housing, and Urban Development and Department of Labor later joined in the statement.⁸¹⁰⁶

In July 2024, the FTC issued 6(b) orders to eight companies that were offering “surveillance pricing products and services that incorporate data about consumers’ characteristics and behavior.”⁸¹⁰⁷ Through the orders, the FTC sought to better understand how “surveillance pricing is affecting consumers, especially when the pricing is based on surveillance of an individual’s personal characteristics and behavior.” In January 2025, the FTC staff published the 6(b) Study.⁸¹⁰⁸

The FTC changed the enforcement posture on AI in 2025 by setting aside the consent order in Rytr, LLC in relation to company’s AI-based review generation service.⁸¹⁰⁹ In setting the consent order aside, the FTC expressly acted pursuant to the AI Action Plan, which directed the FTC to “review all FTC final orders, consent decrees, and injunctions, and, where appropriate, seek to modify or set-aside any that unduly burden AI innovation.”

The DoJ also reversed prior regulations in 2025, including the “disparate-impact liability” for enforcing Title VI of the Civil Rights of 1964 and anti-

discrimination law.⁸¹¹⁰ The DoJ carried out enforcement against theft and espionage of U.S. AI technology by Chinese nationals⁸¹¹¹ and trafficking in advanced GPUs.⁸¹¹²

NIST Risk Management Framework

NIST released Version One of the Artificial Intelligence Risk Management Framework (AI RMF) in 2023.⁸¹¹³ The AI RMF followed an initial mandate⁸¹¹⁴ by Congress in 2020 for NIST to lead the charge, which subsequently led to a “consensus-driven, open, transparent, and collaborative process that included a Request for Information, several draft versions for public comments, multiple workshops, and other opportunities to provide input.”⁸¹¹⁵ “The Framework is intended to be voluntary, rights-preserving, non-sector-specific, and use-case agnostic, providing flexibility to organizations of all sizes and in all sectors and throughout society to implement the approaches in the Framework.”⁸¹¹⁶ NIST highlights core functions such as governance, risk assessments and management, and documentation ranging from organizational roles and responsibilities to the knowledge limit of the AI system.⁸¹¹⁷

The RMF describes four specific functions—GOVERN, MAP, MEASURE, and MANAGE—broken down further into categories and subcategories to help organizations manage risks arising from AI development and use. The GOVERN function applies to all stages of the AI risk management processes and procedures while “the MAP, MEASURE, and MANAGE functions can be applied in AI system-specific contexts and at specific stages of the AI lifecycle.”⁸¹¹⁸ NIST launched the

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Trustworthy and Responsible AI Resource Center to facilitate implementation of and international alignment with the AI RMF in early 2023.

NIST has also responded to the rise of generative AI by publishing the Artificial Intelligence Risk Management Framework: Generative Artificial Intelligence Profile (GenAI Profile)⁸¹¹⁹ as a companion resource to the AI RMF. Additionally, NIST published A Plan for Global Engagement on AI Standards, designed to drive the worldwide development and implementation of AI-related consensus standards, cooperation and coordination, and information sharing.⁸¹²⁰ Specifically, the publication calls for “context-sensitive, performance-based, human-centered, and responsive to societal considerations.”⁸¹²¹ Despite the significance of the organization’s role in AI research and development, there are reports of NIST facing resource constraints due to budget cuts. Some in the AI community worry that underfunding NIST makes it vulnerable to industry influence.⁸¹²²

NIST continues to play a key role in implementing the actions under the 2025 AI Action Plan,⁸¹²³ which reinforces the importance of pre-deployment evaluation of AI models and the role of NIST, CAISI, and other agencies in establishing AI measurement science, assessing foreign-built frontier AI models, and ensuring the interpretability, transparency, and security of AI systems.

AI Safety Institute

Coinciding with the AI Safety Summit and the Bletchley Park Declaration, the Biden-Harris Administration announced the establishment of the U.S. Artificial Intelligence Safety Institute (USAISI) to lead the U.S. government’s efforts on AI safety and trust, particularly for evaluating the most advanced AI models.⁸¹²⁴ The announcement states that “USAISI will facilitate the development of standards for

safety, security, and testing of AI models, develop standards for authenticating AI-generated content, and provide testing environments for researchers to evaluate emerging AI risks and address known impacts.”⁸¹²⁵ The USAISI is housed within NIST and focuses on the priorities assigned to the institution under Executive Order 14110.⁸¹²⁶

The Biden-Harris administration also announced the establishment of the AI Safety Consortium including 200 AI stakeholders to support the work of USAISI. The announcement stated that the consortium will “unite AI creators and users, academics, government and industry researchers, and civil society organizations in support of the development and deployment of safe and trustworthy artificial intelligence (AI).”⁸¹²⁷ The U.S. Secretary of Commerce later announced collaboration with a network of AI Safety Institutes.⁸¹²⁸ This network serves strengthen and expand on USAISI's previously announced collaborations with the AI Safety Institutes of the UK, Japan, Canada, and Singapore, as well as the European AI Office and its scientific components and affiliates, and will catalyze a new phase of international coordination on AI safety science and governance.

Pursuant to EO 14179, the Secretary of Commerce recast CAISI as the Center for AI Standards and Innovation.⁸¹²⁹ The AI Action plan requires “secure-by-design” for AI systems in safety-critical and the national security context.⁸¹³⁰ The Plan takes a whole of government approach to AI safety and security and envisions deep coordination between the federal government, private sector, and researchers. It directs investment in AI testbeds for evaluations in secure, real-world settings and encourages the involvement of the research community and multi-stakeholder teams to build an AI evaluations ecosystem.⁸¹³¹

EU-U.S. Trade and Technology Council (TTC)

In June 2021, the U.S. and the European Union established the EU-U.S. Trade and Technology Council (TTC) to “strengthen global cooperation on technology, digital issues, and supply chains” and “with the aim of promoting a democratic model of digital governance.”⁸¹³² The TTC outlined areas of U.S.-EU cooperation, including “responsible stewardship of trustworthy AI.” Since 2021, the U.S. has made progress in support of the TTC’s goals at the policy and agency level,⁸¹³³ announced a joint roadmap on “evaluation and measurement tools for trustworthy Artificial Intelligence.”⁸¹³⁴ The TTC continually recommitted to addressing the harms of AI implementation, including on the workforce,⁸¹³⁵ and expanding transatlantic cooperation on artificial intelligence to promote “interoperability in emerging approaches to AI governance.”⁸¹³⁶

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The AI Action Plan⁸¹³⁷ and the National Security Strategy⁸¹³⁸ in 2025 revised the U.S. approach to transatlantic relationships. On international diplomacy and security, the AI Action Plan aims to “support likeminded nations working together to encourage the development of AI in line with our shared values” with the goal of countering Chinese influence. The National Security Strategy which views European policies and regulations as a retreat from shared values with America and prioritizes opposing “elite-driven, anti-democratic restrictions on core liberties in Europe, the Anglosphere, and the rest of the democratic world,” especially among U.S. allies. Vice President J.D. Vance at the Munich Security Conference⁸¹³⁹ remarked that “excessive regulation of the AI sector could kill a transformative industry just as it's taking off, and we'll make every effort to encourage pro-growth AI policies. And I'd like to see that deregulatory flavor making its way into a lot of the conversations in this conference.”

Public Participation

The United States has a consistent and long-standing approach to receiving public comment through the Federal Register, including for AI Policy. First, the AI Safety Institute (AISI) released for public comment new technical guidelines to help AI developers manage the evaluation of misuse of dual-use foundation models.”⁸¹⁴⁰ The AISI sought insights from the public on current and future practices and methodologies for the responsible development and use of chemical and biological (chem-bio) AI models.⁸¹⁴¹ The Office of Critical and Emerging Technologies also sought public comment to provide a national AI capability for the Department of Energy (DOE).⁸¹⁴²

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Finally, the OMB requested public input on issues related to Federal agency collection, processing, maintenance, use, sharing, dissemination, and disposition of commercially available information (CAI) containing personally identifiable information (PII).⁸¹⁴³ OMB also incorporated public comment to inform future action on federal procurement of AI to ensure that federal contracts align with OMB's AI guidance and address such issues as the protection of privacy, civil rights, and civil liberties.⁸¹⁴⁴

The 2024 opportunities followed a surge in request for public comments on AI related issues and rulemaking from 2022 onwards.⁸¹⁴⁵ Civil society organizations in the United States actively participate in discussions and advocacy related to artificial intelligence (AI). The involvement of these organizations is important for promoting transparency, accountability, and ethical considerations in the development and deployment of AI technologies. Some of these organizations focus on specific aspects of AI, such as privacy, bias, accountability, and the impact of AI on various social issues. Examples of civil society organizations involved in AI-related discussions in the United States include the Center for AI and Digital Policy, the Center for Humane Technology, the AI Now Institute, Algorithmic Justice League, Public Citizen, Public Knowledge, the Allen Institute for AI, Data & Society, the Electronic Privacy Information Center, Leadership Conference on Civil Rights, Brennan Center for Justice, the Partnership on AI, Encode Justice, and Fidutam.

The United States has considered public comments in the development of AI Policy, strategies, priorities, research and innovation. The National Artificial Intelligence Research Resource Task Force launched in 2021 to “develop a roadmap to democratize access to research tools that will promote AI innovation and fuel economic prosperity”⁸¹⁴⁶ is one example, along with the White House Office of Science and Technology Policy (OSTP) and the National Science Foundation (NSF)

Center for AI and Digital Policy

implementation plan for a National Artificial Intelligence Research Resource (NAIRR).⁸¹⁴⁷

Comments submitted in response to a White House request for input on U.S. national priorities and future actions on AI informed the development of the AI Executive Order and other executive actions.⁸¹⁴⁸

Requests for comments have continued in the second Trump Administration's reorientation of AI governance, too. The White House Office of Science and Technology Policy (OSTP) released more than 10,000 public comments gathered in response to a Request for Information (RFI) regarding the development of the AI Action Plan.⁸¹⁴⁹ After, the OSTP sought public comment on the development of a National AI R&D Strategic Plan.⁸¹⁵⁰ Pursuant to the deregulatory policy set out in the executive orders of the second Trump Administration, the OSTP also sought public comment about "existing Federal statutes, regulations, agency rules, guidance, forms, and administrative processes that unnecessarily hinder the development, deployment, and adoption of artificial intelligence ('AI') technologies within the United States."⁸¹⁵¹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Other federal agencies including the Consumer Financial Protection Bureau sought public comment on AI-driven identity theft and coerced debt.⁸¹⁵² NIST sought public comment on draft standards relating to dataset documentation and TEVV.⁸¹⁵³

Despite opportunities for comment, however, continued deregulation efforts and challenges to agency independence raises doubts the administration meaningfully considers comments in the formulation of policies or approaches to AI governance. For example, Pew Research Center reported in 2025 that most Americans surveyed were more concerned than excited about AI in their daily lives.⁸¹⁵⁴ Fewer than half on average trusted the US government to regulate AI, though the survey did not question whether respondents wanted regulation. A report in early 2026 found that Americans want more control over how they use or are expected to use AI.⁸¹⁵⁵

When the OSTP sought public comment on developing the AI Action Plan, CAIDP organized several roundtable discussions to gather civil society organizations, provide input, and build shared capacity to participate in the policy process.⁸¹⁵⁶ During 2025, there were several coalition actions in response to public comment proceedings⁸¹⁵⁷ and the administration's actions to procure and deploy

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

unsafe AI models in the federal government.⁸¹⁵⁸ There was a big tent of Civil society organizations united in opposition to the proposed moratorium on state AI laws.⁸¹⁵⁹

Civil society has also participated in the development of and advocacy for state legislation. California Senate Bill 1047, the “Safe and Secure Innovation for Frontier AI models Act,” provoked a heated debate over the future of AI regulation in the state, with both opposition and support from various stakeholders. Several civil society organizations such as Encode Justice⁸¹⁶⁰ and CAIDP⁸¹⁶¹ voiced support for the bill. Although the bill initially passed Assembly, the Governor vetoed it. SB 53 enacted in 2025 updated SB 1047.

The United States government provides access to all final policy proposals concerning AI. Federal agencies have undertaken public rulemaking and requested public comment. However, the National Security Commission NSCAI initially attempted to keep deliberations secret. A federal court later determined that the AI Commission had violated U.S. open government laws and was required to make both records and meetings open to the public.⁸¹⁶² Oddly, the AI Commission initially made agency documents available on a proprietary platform rather than an agency website.⁸¹⁶³

Data Protection

The United States does not have an overarching privacy law, such as the GDPR, nor is there a privacy agency. Congressional efforts to establish a privacy protection law have failed to progress.⁸¹⁶⁴ However, the United States has two

members in the Global Privacy Assembly (GPA), the FTC (since 2010) and the California Privacy Protection Agency (CPPA) (since 2022).⁸¹⁶⁵ Neither voting U.S. member has endorsed the GPA's key resolutions: the Declaration on Ethics and Data Protection in Artificial Intelligence,⁸¹⁶⁶ the Resolution on Accountability in the Development and Use of Artificial Intelligence,⁸¹⁶⁷ and the Resolution and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology,⁸¹⁶⁸ or the 2023 Resolution on Generative Artificial Intelligence Systems.⁸¹⁶⁹

Both the FTC and the CPPA have taken several steps to address data protection, along with action from other agencies. For example, the National Science Foundation (NSF) and DOE established a research network⁸¹⁷⁰ dedicated to advancing the development, deployment, and scaling of privacy-enhancing technologies (PETs). Two OMB Requests for Information (RFIs) in 2024 also addressed privacy concerns. The first focused on federal agencies' handling of personally identifiable information (PII) contained within commercially available data. The second aimed to enhance the effectiveness of privacy impact assessments conducted by federal agencies, particularly considering emerging technologies like AI.

The Federal Trade Commission has been issuing business guidance since 2021 to put companies on notice about unlawful data and algorithmic practices.⁸¹⁷¹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In February 2023, following the widespread public awareness of GPT-4, the FTC warned, “false or unsubstantiated claims about [an AI] product’s efficacy are our bread and butter [...] You don’t need a machine to predict what the FTC might do when those claims are unsupported.” In the May 2023 business guidance on consumer trust and generative AI tools, the FTC states that, “Design or use of a product can also violate the FTC Act if it is unfair.”⁸¹⁷² The FTC has also issued business guidance that would guide the downstream uses and integrations of LLM products.⁸¹⁷³

Apart from business guidance, since 2019, the FTC has proposed five disgorgement orders including against Cambridge Analytica and Amazon.⁸¹⁷⁴ In the 2023 Privacy and Security Report to Congress, the FTC stated: “The Commission has been leading efforts to ensure that AI and similar technologies are not deployed in harmful ways. In addition to obtaining orders against Rite Aid, Ring, and Amazon to ensure that companies are disincentivized from using data that was wrongfully collected or trained to develop AI, we have initiated a market study of social media and video streaming platforms on the use of AI, announced a public contest to develop new approaches to protect consumers from AI-enabled voice cloning harms, proposed rules to crack down on AI-fueled impersonator and fake review fraud, and issued numerous business guidance alerts.”⁸¹⁷⁵

Regarding risks related to deepfakes scams, the FTC issued a Trade Regulation Rule on Impersonation of Government and Businesses⁸¹⁷⁶ and also proposed to extend protections against AI impersonation scams and deepfakes in 2024.⁸¹⁷⁷ In 2024, the FTC launched *Operation AI Comply* to an enforcement sweep

against businesses that use AI tools to trick, mislead, or defraud people.⁸¹⁷⁸ The FTC continued to carry out enforcement actions against deceptive business practices of AI companies in 2025, offering consumer facing services including claims about efficacy of AI content detection, AI lawyer claims, and AI powered security screening systems.⁸¹⁷⁹ In 2025, the FTC also issued the final rule on COPPA,⁸¹⁸⁰ strengthening protections like inclusion of biometric identifiers within the scope of personal information, enhanced measures for services directed to children, and collection and processing of children's data.

State-Level Data Protection

At the state level, the California Consumer Privacy Rights Act (CPRA) updated the state's privacy law (the CCPA), created a privacy protection agency (the CPPA), and established a right to limit algorithmic profiling.⁸¹⁸¹ The CPRA strengthens accountability measures by requiring companies to conduct privacy risk assessments and cybersecurity audits, and regularly submit them to regulators. In addition, it supplements the individual rights in the CCPA with new notification requirements, clarifies that individuals have the right to opt out of both the 'sale' and 'sharing' of personal information, and adds protections for a new category of 'sensitive data.'"⁸¹⁸² California's Opt Me Out Act⁸¹⁸³ enacted in 2025 made California the first state in the nation to require browsers to offer users a simple, built-in way to tell websites not to sell or share their personal information. When the law takes effect in January 2027, Californians will see new privacy options in web browsers.⁸¹⁸⁴

Virginia and Colorado followed the CPRA in 2021, by passing the Virginia Consumer Data Protection Act (VCDPA) and Colorado Privacy Act (CPA), respectively. The Virginia law took effect on January 1, 2023, and the Colorado law took effect on July 1, 2023. Utah also passed the Utah Consumer Privacy Act (UCPA), which closely follows the Virginia law, and took effect on December 31, 2023. The two states also advanced amendments and regulatory initiatives to strengthen protection for minors in 2025. Virginia expanded child-data protections under VCDPA.⁸¹⁸⁵ In Colorado, amendments to the CPA strengthened protections for minors' online data by requiring controllers to implement age-appropriate privacy safeguards, obtain verifiable parental consent for certain data processing activities, and limit the use of personal data for targeted advertising and profiling of minors.⁸¹⁸⁶

Connecticut became the 5th U.S. State to enact comprehensive data privacy legislation with the Connecticut Data Privacy Act (CTDPA), which took effect on July 1, 2023. These state laws give consumers more control over their personal information by providing them with certain rights and mandating that businesses be transparent about privacy practices. However, there are notable differences in applicability, consumer rights, and enforcement with other state acts. The Connecticut Attorney General's 2025 report⁸¹⁸⁷ on compliance with the CTDPA highlighted an increased focus on universal opt-out mechanisms, children's data, and profiling practices. The report also recommended aspects of the CTDPA for the state legislature to strengthen or clarify.

Algorithmic Transparency

No federal laws in the United States guarantee a right to algorithmic transparency, though both the FTC and the CPPA have taken several steps to address algorithmic transparency. Guidance and actions from federal agencies such as OMB and FTC provide a measure of transparency and accountability and some access to contest decisions.

Federal and state legislatures previously introduced bills to provide algorithmic transparency and protect against harms from automated decision-making. In 2025, California legislation on Automated Decision Tools, for example,⁸¹⁸⁸ proposed privacy impact assessments to address algorithmic

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

discrimination in the context of consequential decisions.⁸¹⁸⁹ Likewise, the U.S. Congress first proposed the Algorithmic Accountability Act to conduct impact assessments to mitigate the harmful effects of automated decisions. A renewed version, the Algorithmic Accountability Act (H.R. 5511),⁸¹⁹⁰ introduced in 2025 expands this framework by directing the FTC to establish rules for risk and transparency assessments covering both automated decision systems and augmented critical decision processes. However, the acts did not pass.

More targeted state and local legislation has been more successful. For example, Illinois's Artificial Intelligence Video Interview Act requires that employers disclose whenever they use AI to analyze applicant-submitted interview videos.⁸¹⁹¹ The act also requires employers who rely solely on AI analysis of video interviews to make employment decisions to report demographic data annually to a state agency, and for the state agency to report whether the data discloses a racial bias from the use of AI. New York City's Local Law 144 requires bias audits on any automated employment decision tools and notice on the use of such tools to employees and job seekers.⁸¹⁹²

New York's Algorithmic Pricing Disclosure Act⁸¹⁹³ requires businesses to clearly disclose to consumers when prices are set by algorithms using personal data.

State-Level AI Legislation

The National Conference of State Legislatures summarized the state of play on AI legislation in 2025: "In the 2025 legislative session, all 50 states, Puerto Rico, the Virgin Islands, and Washington, D.C., have introduced legislation on this topic this year. Thirty-eight states adopted or enacted around 100 measures this year."⁸¹⁹⁴ 55 AI-related bills were introduced during 2025 session in California alone. Governor Newsom signed 13 of those AI bills into law, covering safety &

Center for AI and Digital Policy

transparency obligations of AI companies, child safety measures, privacy & data rights, consumer protection, and infrastructure development.⁸¹⁹⁵ Among those laws, SB 53, the Transparency in Frontier Artificial Intelligence Act (TFAIA),⁸¹⁹⁶ is the first comprehensive state law in the United States to establish guardrails for frontier models, the most advanced AI systems.⁸¹⁹⁷ The law establishes four key mechanisms: mandatory safety disclosures by frontier AI developers, whistleblower protections, incident reporting requirements for safety-related events, and public infrastructure to foster AI research and innovation.

Utah became the first state to enact AI-specific consumer protection legislation⁸¹⁹⁸ with the Artificial Intelligence Policy Act. The act establishes liability for AI use that violates consumer protection laws if not properly disclosed. Amendments enacted in 2025 modify the disclosure requirements of the original act. For example, they narrow the scope of required disclosures to “high-risk” generative AI interactions and extend the law’s sunset date.⁸¹⁹⁹

Texas passed the Texas Responsible Artificial Intelligence Governance Act (TRAIGA)⁸²⁰⁰ to protect public safety, individual rights, and privacy while encouraging the safe advancement of AI technology in Texas. The Act sets out consumer protections and enforcement mechanisms, a regulatory sandbox program for testing innovative AI systems, and the creation of the Artificial Intelligence Council to support innovation and oversee compliance.

Other examples from state legislatures⁸²⁰¹ include a law in Arkansas clarifying ownership of AI-generated content; Montana’s “Right to Compute” law, which sets requirements for critical infrastructure controlled by an AI system, such as instructing the deployer to develop a risk management policy that considers guidance from a list of specified standards, such as the NIST AI RMF. Montana’s

law also specifies that the government cannot take actions that restrict the ability to privately own or make use of computational resources for lawful purposes, unless deemed necessary to fulfill a compelling government interest.

New Jersey adopted a resolution urging generative AI companies to make voluntary commitments regarding employee whistleblower protections.⁸²⁰² New York enacted a new law that requires state agencies to publish detailed information about their automated decision-making tools on their public websites through an inventory created and maintained by the Office of Information Technology. The new law also amends the civil service law to strengthen worker protections, such as requiring when an AI system is used by the state government that it cannot affect the existing rights of employees pursuant to an existing collective bargaining agreement and requiring that an AI system does not result in displacement or loss of a position. A new law in North Dakota prohibits individuals from using an AI-powered robot to stalk or harass other individuals, expanding current harassment and stalking laws, while an Oregon law specifies that a non-human entity including an agent powered by AI cannot use specific licensed and certified medical professionals' titles, such as a registered nurse and certified medication aide.

CAIDP Complaint and FTC Investigation into OpenAI

In March 2023, CAIDP filed a detailed Complaint with the Federal Trade Commission against OpenAI.⁸²⁰³ CAIDP explained that OpenAI released a product GPT-4 for the consumer market that is biased, deceptive, and a risk to privacy and public safety. The CAIDP Complaint quoted extensively from the GPT-4 Technical Report, highlighted that the outputs of ChatGPT cannot be proven or replicated, and no independent assessment was undertaken prior to deployment.⁸²⁰⁴ CAIDP's complaint was grounded on violations of Section 5 of the FTC Act, FTC's numerous Guidance for AI Products, and Rules for Governance of AI. CAIDP asked the Commission to begin an investigation of OpenAI and to prevent the release of further models until necessary guardrails are established.

In a supplement to the original complaint, CAIDP accused OpenAI of "unfair and deceptive practices." CAIDP outlined the numerous investigations from consumer agencies around the world since the original CAIDP complaint and sheds light on newly surfaced issues not fully captured in the initial complaint.⁸²⁰⁵

Both the *New York Times* and the *Wall Street Journal* reported in 2023 that the FTC had launched the investigation sought by CAIDP.⁸²⁰⁶ Subsequently, CAIDP filed a second supplement that urged the FTC to move forward the investigation and issue an order to establish safeguards and guardrails for ChatGPT.⁸²⁰⁷ However, no order has yet been issued by the FTC in this investigation.

Subsequently, the FTC issued a staff report on AI partnerships and investments between the largest cloud service providers and two of the most prominent generative AI developers: Anthropic PBC and OpenAI.⁸²⁰⁸ The FTC subsequently opened an investigation into OpenAI and launched a broader inquiry into consumer-facing AI chatbots (including OpenAI among other companies). A new FTC inquiry into AI chatbots acting as companions launched in September 2025 includes OpenAI among the targeted companies.⁸²⁰⁹

Facial Recognition

There is growing opposition to the deployment of facial recognition technology in the United States. Still, as the National Academies of Sciences, Engineering, and Medicine report “With few exceptions, the U.S. does not currently have authoritative guidance, regulations, or laws to adequately address issues related to facial recognition technology use.”⁸²¹⁰

The Facial Recognition Act of 2023⁸²¹¹ introduced during the 118th Congress proposed limitations on the use of biometric surveillance systems including facial

Assembly introduced legislation that would limit law enforcement use of facial recognition technology.⁸²¹⁹ The bill was introduced in passed by both chambers in April 2024. Among other provisions it would require the Governor's Office of Crime Prevention and Policy, on or before October 1 each year, to report to the General Assembly information reported by law enforcement agencies using facial recognition technology.

After multiple lawsuits alleging that Facebook had violated state and federal privacy laws as well as repeated recommendations to the FTC that the company's business practices, including the collection and use of facial images, violated a 2011 settlement with the Commission, Facebook announced it would shut down its facial recognition system and delete the face scans of more than one billion users it had gathered.⁸²²⁰ In February 2022, and after months of criticism by advocacy groups, the Internal Revenue Service announced that it would halt its program with identity verification company ID.me to use facial recognition technology to verify taxpayers' identities.⁸²²¹

The Federal Trade Commission (FTC) issued a press release, "FTC Recommends Best Practices for Companies That Use Facial Recognition Technologies," promoting consumer protection innovation and best practices guidance to companies developing and deploying facial recognition technologies.⁸²²² The statement included the release of a staff report, "Facing Facts: Best Practices for Common Uses of Facial Recognition Technologies," a product of the Commission's December 8, 2011, workshop, "Face Facts: A Forum on Facial Recognition Technology" and the Commission's March 2012 report, "Protecting Consumer Privacy in an Era of Rapid Change."⁸²²³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In May 2023, the FTC issued its Policy Statement on Biometric Information and Section 5 of the Federal Trade Commission Act.⁸²²⁴ In its policy statement, the FTC noted “facial recognition technology, may perform differently across different demographic groups in ways that facilitate or produce discriminatory outcomes.”⁸²²⁵ The FTC’s Biometric Policy Statement serves as “warning that the increasing use of consumers’ biometric information and related technologies, including those powered by machine learning, raises significant consumer privacy and data security concerns and the potential for bias and discrimination.”⁸²²⁶

The FTC filed a lawsuit in 2023 against Rite Aid for using “facial recognition technology in its stores without taking reasonable steps to address the risks that its use would likely harm consumers due to false-positive match alerts, especially women consumers and consumers of color.”⁸²²⁷ The FTC filed its proposed stipulations and order in March 2024, requiring “Rite Aid to discontinue using any such technology if it cannot control potential risks to consumers.”⁸²²⁸

In September 2023, the Government Accountability Office (GAO) reported that “Seven law enforcement agencies in the Departments of Homeland Security (DHS) and Justice (DOJ) reported using facial recognition services provided by commercial and nonprofit entities. GAO made ten recommendations to DHS and DOJ relating to safeguards for civil rights, training, and privacy related to their use of facial recognition technology to support criminal investigations.”⁸²²⁹

The 2024 report of the National Academies highlights that “FRTs are highly personal, uniquely powerful, and potentially extremely intrusive. Opting out of showing one’s face is not a realistic option in most circumstances”⁸²³⁰ This report

has revived congressional action to regulate facial recognition technology.⁸²³¹ However, the Facial Recognition Act of 2025⁸²³² introduced in the House of Representatives to regulate law enforcement use did not progress out of committee.

In response to the federal government's increasing use of facial recognition technology (FRT), the United States Commission on Civil Rights (USCCR) examined the Department of Justice (DOJ), Department of Homeland Security (DHS), and the Department of Housing and Urban Development (HUD)'s use of facial recognition technology and produced the 2024 Statutory Enforcement Report titled on the civil rights implications of facial recognition technology.⁸²³³ The report provides recommendations to federal agencies on AI uses, concerns, and best practices. The Department of Homeland Security announced a final rule to collect biometric data at ports of entry and exit in 2025.⁸²³⁴

In 2025, Clearview AI reached a settlement in multi-district biometric privacy litigation in Illinois.⁸²³⁵ In the settlement, rather than establish a settlement fund, consumers will potentially hold a 23% stake in the startup company—a novel solution in the context of BIPA.⁸²³⁶

Environmental Impact of AI

The U.S. Global Change Research Program has released the Fifth National Climate Assessment, outlining the country's dire climate status. The report discusses climate justice and emphasizes the critical need to proactively mitigate the environmental harms associated with rapid technological shifts.⁸²³⁷ However, U.S. efforts on environmental issues related to AI tend to focus on the AI's alleged potential to support the growth of America's clean energy economy, as a report in

2024.⁸²³⁸ The DOE launched the Frontiers in AI for Science, Security, and Technology (FASST) initiative⁸²³⁹ to harness AI for scientific discovery, national security, and energy and electric grid resilience.⁸²⁴⁰ The Senate moved on legislation to regulate the environmental impact of AI systems with the Artificial Intelligence Environmental Impacts Act in 2024,⁸²⁴¹ but the bill did not progress in the last congressional session and no new mandates have arisen.

Instead, the White House took several AI policy actions under the AI Action Plan to ease environmental regulations in support of American AI dominance, such as Executive Order 14318 to ease federal permitting of data centres.⁸²⁴² The AI Action Plan directs federal agencies to make public lands available for data centre construction. The administration also directed the Secretary of the Interior, Secretary of Commerce, and the Secretary of Energy to “identify regions where coal-powered infrastructure is available and suitable for supporting AI data centres; assess the market, legal, and technological potential for expanding coal-based infrastructure to power data centres to meet the electricity needs of AI and high-performance computing operations.”⁸²⁴³

Lethal Autonomous Weapons

The United States is a High Contracting Party to the Convention on Certain Conventional Weapons (CCW)⁸²⁴⁴ but maintains reservations about legally binding

international bans, preferring the development of best practices and risk mitigation strategies for LAWS in cooperation with allies.

The United States was among the 161 countries that approved a draft resolution on lethal autonomous weapons systems (LAWS) at the 79th UN General Assembly.⁸²⁴⁵ The resolution expressed concern over LAWS exacerbating existing conflicts and humanitarian crises and approved including discussions of LAWS in the next session.⁸²⁴⁶ 70 countries that endorsed a joint statement on autonomous weapons systems at the UN General Assembly meeting. In this joint statement, States urge “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (IHL), including through maintaining human responsibility and accountability in the use of force.”⁸²⁴⁷ The United States also supported a later UN General Assembly Resolution on lethal autonomous weapons systems.⁸²⁴⁸

The United States participated in the first global Summit on Responsible Artificial Intelligence in the Military Domain (REAIM 2023) hosted by the government of The Netherlands. Government representatives, including the United States, have agreed a joint call to action on the responsible development, deployment and use of artificial intelligence (AI) in the military domain.⁸²⁴⁹ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” States also “stress the importance of a holistic, inclusive and comprehensive approach in addressing the possible impacts, opportunities and challenges of the use

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

of AI in the military domain and the need for all stakeholders, including states, private sector, civil society and academia, to collaborate and exchange information on responsible AI in the military domain.”⁸²⁵⁰

At REAIM, the United States issued the Political Declaration on Responsible Military Use of Artificial Intelligence and Autonomy.⁸²⁵¹ The declaration sets out 10 guiding principles in the development, deployment, or use of military AI capabilities, including those enabling autonomous functions and systems.⁸²⁵² The declaration seeks to provide a normative framework addressing the use of these capabilities in the military domain.⁸²⁵³ The Department of State, in collaboration with the Department of Defense (DoD), convened the inaugural plenary meeting of States endorsing the Political Declaration to operationalize and implement this initiative in March 2024.⁸²⁵⁴ 49 states have endorsed the political declaration led by the United States.⁸²⁵⁵

The DoD’s update to a 2023 policy directive on Autonomy in Weapons Systems remains in place.⁸²⁵⁶ The Directive is valid for 10 years and supports existing documents such as the DoD AI Ethical Principles, which were instituted in 2020,⁸²⁵⁷ the DoD Responsible AI Strategy and Implementation Pathway,⁸²⁵⁸ and the DoD 2023 Data, Analytics, and Artificial Intelligence Adoption Strategy.⁸²⁵⁹ The directive also supported the DoD Responsible AI Toolkit,⁸²⁶⁰ which is publicly

available to demonstrate this commitment and to encourage transparency internationally.

In 2025, the Congress passed measures relating to the responsible development and use of lethal autonomous weapons systems (LAWS) as part of broader national security modernization under the National Defense Authorization Act FY25.⁸²⁶¹ The Act mandates pilot programs and feasibility studies for AI-enabled weapon systems and requires strategic reviews of AI's integration into DoD operations. The DoD is now taking a commercial-first approach to accelerating adoption of AI.⁸²⁶²

AI Literacy

In 2025, President Trump issued an Executive Order to promote AI literacy and proficiency in American youth.⁸²⁶³ The EO established an AI education taskforce and the Presidential AI challenge. The EO directed multiple federal agencies to collaborate with the private sector and educational institutions to provide K–12 AI education, enhance AI training, and develop registered apprenticeship programs. The EO directs the Secretary of Labor, in collaboration with the Director of NSF, to work with State and local workforce organizations and training providers to identify and promote high-quality AI-skills coursework and certifications across the country.⁸²⁶⁴ 60 organizations also signed onto the White House pledge to invest in AI education to help make AI education accessible to K–12 students across the country, spark curiosity in the technology, and prepare the next-generation for an AI-enabled economy.⁸²⁶⁵ Major organizations and technology leaders committed resources

toward integrating AI education into K–12 curricula, supporting teacher training, and expanding public access to trustworthy AI information.⁸²⁶⁶

Human Rights

The United States endorsed the Universal Declaration for Human Rights, published a detailed annual report on human rights, and has historically ranked high for the protection of human rights. However, the U.S. withdrew from the UN Human Rights Council in 2025.⁸²⁶⁷ Freedom House suggested a number of factors behind this withdrawal from support for international rights bodies as the 2026 report noted a shift: “In recent years, a number of factors—including political polarization, the growing role of money in politics, and discrimination, among others—have contributed to new infringements on fundamental rights and significantly hampered the ability of federal institutions to fulfill their core responsibilities with respect to budgeting, oversight, and governance.”⁸²⁶⁸ Freedom House scored the United States “Free” with a score of 81/100 in 2026, down 3 from the 2025 report.⁸²⁶⁹

The decline in the Freedom House ranking reflects the change in course related to AI policies and protections as well as the centralization of power under the Executive.⁸²⁷⁰ Executive orders and actions under earlier administrations, were rescinded or abandoned.⁸²⁷¹ The 2025 AI Action Plan sets out individual liberties and civil rights policy actions only in the context of “creation of the world’s largest and highest quality AI-ready scientific datasets.”⁸²⁷² In issuing EO 14179, the second Trump Administration aimed to “revoke existing AI policies and directives that act

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

as barriers to American AI innovation, clearing a path for the United States to act decisively to retain global leadership in artificial intelligence.⁸²⁷³

The Executive Order on Preventing Woke AI in Federal Government⁸²⁷⁴ exemplifies the erosion of rights and civil liberties by framing the “incorporation of concepts like critical race theory, transgenderism, unconscious bias, intersectionality, and systemic racism” in AI as “an existential threat to reliable AI.” The EO requires all AI procured by the federal government to conform to the principles of “truth-seeking” and “ideological neutrality.” OMB Memorandum M-25-21⁸²⁷⁵ directs federal agencies to accelerate the responsible use of AI while maintaining safeguards for civil rights, civil liberties, and privacy. However, the other executive actions leave open the question of which, and whose, rights and liberties are to be protected.

OECD / G20 AI Principles

The United States fully supported the OECD AI policy process, endorsed the OECD AI Principles, and is a founding member of the Global Partnership on AI.⁸²⁷⁶ The OECD notes that the United States has taken several steps to implement the AI Principles. The United States continued its commitment to the OECD AI Principles with endorsement of the updated Principles in May 2024.⁸²⁷⁷

Representatives of the Department of Commerce have stated that the Blueprint for an AI Bill of Rights was largely inspired by the OECD AI Principles.⁸²⁷⁸ Three agencies within the Department of Commerce—the National Institute of Standards and Technology (NIST), the National Telecommunications and Information Administration (NTIA), and the International Trade Administration

(ITA)—participate in the OECD Working Party on AI Governance.⁸²⁷⁹ The U.S. continues its representation on the OECD Council.⁸²⁸⁰ and there have been no changes to the endorsements to OECD’s AI Principles.⁸²⁸¹

The U.S. has consistently supported the G7 processes on artificial intelligence. It joined the leaders’ statement on the Hiroshima AI Process which committed to “foster an open and enabling environment where safe, secure, and trustworthy AI systems are designed, developed, deployed, and used to maximize the benefits of the technology while mitigating its risks, for the common good worldwide, including in developing and emerging economies with a view to closing digital divides and achieving digital inclusion.”⁸²⁸² Subsequently the U.S.-Japan consultative committee issued a joint statement which states: “We welcome progress under the Hiroshima AI Process, particularly the Hiroshima Process International Guiding Principles for Organizations Developing Advanced AI Systems and the Hiroshima Process International Code of Conduct for Organizations Developing Advanced AI Systems and affirm our determination to further advance the Hiroshima AI Process together with other G7 members.”⁸²⁸³

The United States joined other G7 nations in emphasizing the importance of a human-centric approach to artificial intelligence (AI) to foster prosperity and address global challenges and committing to enhance innovation and adoption of secure, trustworthy AI while promoting national security in the 2025 Leaders’ Statement.⁸²⁸⁴ The G7 leaders aim to support small and medium-sized enterprises (SMEs) in adopting AI technologies to drive economic growth and improve public services, alongside launching initiatives like the G7 GovAI Grand Challenge to overcome barriers in public sector AI adoption. Additionally, the leaders recognize the need to address energy challenges posed by AI, cooperate with developing

Center for AI and Digital Policy

countries to bridge digital divides, and promote inclusive STEM education to ensure a diverse AI workforce.

The 2025 AI Action Plan expressed support for “like-minded nations [and international organizations such as OECD] working together to encourage the development of AI in line with our shared values” but also argued that “too many of these efforts have advocated for burdensome regulations, vague ‘codes of conduct’ that promote cultural agendas that do not align with American values or have been influenced by Chinese companies attempting to shape standards for facial recognition and surveillance.”⁸²⁸⁵

Council of Europe AI Treaty

The U.S. is not a member of the Council of Europe but signed and ratified the COE Convention on Cybercrime,⁸²⁸⁶ as COE conventions are open for ratification by non-members states.

The U.S. was one of the non-member states of the COE intergovernmental drafting body on the Framework Convention on AI.⁸²⁸⁷ During the diplomatic negotiations in Strasbourg to finalize the text of the Convention, there was considerable concern about the U.S. role in watering down the treaty.⁸²⁸⁸ The Center for AI and Digital Policy led a coalition of civil society organizations and AI experts urging negotiators not to “Abdicate Our Rights.”⁸²⁸⁹

The U.S. signed⁸²⁹⁰ the Council of Europe’s Framework Convention on AI and Human Rights, Democracy, and the Rule of Law. Signing signals positive prospects for the United States as the country could become a ratifying party to the first multilateral treaty focused on artificial intelligence. The second Trump Administration has taken no action on the treaty.

Center for AI and Digital Policy

UNESCO Recommendation on AI Ethics

The United States rejoined UNESCO as a full member in 2023,⁸²⁹¹ after the UNESCO Recommendation on the Ethics of AI were adopted. The Recommendation is applicable to all 194 member states of UNESCO.

While several countries are implementing the Readiness Assessment Methodology (RAM) to determine whether they are prepared to implement the Recommendation, the U.S. has not completed the RAM.⁸²⁹²

The Department of State⁸²⁹³ and UNESCO⁸²⁹⁴ confirmed that the United States formally notified its intention to withdraw from UNESCO, effective December 2026. This decision introduces uncertainty about future U.S. participation in the implementation and reporting of the AI Ethics Recommendation.

Evaluation

U.S. AI policy has undergone a profound transformation, pivoting from a risk-management and rights-protection framework to one centered on deregulation, economic competitiveness, and national security. While innovation and infrastructure investments have accelerated, the rollback of safeguards for civil rights, algorithmic accountability, environmental protection, and international engagement raises significant concerns. Legislation such as the TAKE IT DOWN Act and the acceleration of state-level activity has countered some of the second Trump Administration's backsliding on democratic AI governance to instead center industry interests in AI policy.⁸²⁹⁵ However, shifts in enforcement as federal agencies carry out White House directives and the ongoing, ill-conceived attempts at federal

Center for AI and Digital Policy

preemption of state laws⁸²⁹⁶ make the need for AI regulations more pressing. Attempts at federal preemption over state AI laws could remain a challenge.

The United States continues to endorse the OECD/G20 AI Principles and participated in the G7 Leaders' Statement on AI for Prosperity in June 2025. However, the Administration has signaled skepticism toward multilateral AI governance frameworks, characterizing some international efforts as promoting “burdensome regulations” and “cultural agendas” that do not align with American values. The U.S. withdrawal from UNESCO, the UN Human Rights Council, and other international organizations, particularly when combined with characterizations of concepts like inclusion as an “existential threat to AI,” raises questions about the country’s commitment—or outright hostility—to multilateral engagement on AI ethics and human rights.

⁸²⁹⁶ Marc Rotenberg, Merve Hickok, Christabel Randolph, *Proposed Moratorium on US State AI Laws is Short-Sighted and Ill-Conceived*, Tech Policy Press (May 21, 2025), <https://www.techpolicy.press/proposed-moratorium-on-us-state-ai-laws-is-shortsighted-and-illconceived/>

Uruguay

In 2025, Uruguay passed a law with measures such as algorithmic transparency, equality, and nondiscrimination to protect workers on digital tasking platforms and, after Senate concerns, withdrew a project using facial recognition to track high-school attendance. Uruguay became the first Latin American country to sign the Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.

National AI Strategy

Uruguay's revised AI Strategy, 2024–2030, aims to “promote the ethical, responsible, safe, critical, creative, and innovative development and use of artificial intelligence for the benefit of people and all sectors of society.”⁸²⁹⁷ The strategy was built on ten core principles: 1) AI for the good of people and sustainable development; 2) Strengthening democracy; 3) Respect for dignity and human rights; 4) Equity and non-discrimination; 5) Protection and privacy of personal data; 6) Transparency and explainability; 7) Responsibility and accountability; 8) Trustworthiness and security; 9) Responsible and safe innovation; and 10) Multiple stakeholders.

The 2024–2030 AI Strategy also identifies various considerations across Governance, AI Capacity, and Sustainable Development.⁸²⁹⁸ Regulatory frameworks and international articulation under the Governance pillar and AI and society and Impacts of AI on employment under Sustainable Development relate most closely to human rights and democratic values. The Strategy explicitly aligns with the UNESCO Recommendation on the Ethics of Artificial Intelligence, OECD AI Principles, and the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law, as well as national frameworks and plans, such as those for digital citizenship.⁸²⁹⁹

The updated strategy extends the application of earlier strategies, which focused on AI in the public sector, to include the private sector. The new strategy also

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

represents the first comprehensive AI strategy. The previous version, called the Artificial Intelligence Strategy for Digital Government (AISDG) 2020,⁸³⁰⁰ focused on AI development for the digital government. The Agency for Electronic Government and Information and Knowledge Society (*Agencia de Gobierno Electrónico y Sociedad de la Información y del Conocimiento*, AGESIC) led the preparation of the AISDG and the revised AI strategy. A budget and funding law⁸³⁰¹ formally assigned AGESIC with designing and developing an updated data and AI strategy covering the private as well as public sector and based on international standards after an OECD analysis found the strategy overly focused on the public sector and lacking measurable outcomes.⁸³⁰² The law, which includes provisions for controlled AI testing environments (sandboxes) to promote innovation, followed collaboration with UNESCO and the Development Bank of Latin America and the Caribbean (CAF) to review the AI strategy and create a data strategy.⁸³⁰³

Uruguay's AI strategies are part of the country's broader Digital Agendas. Uruguay has published five digital government agendas (in 2008, 2010, 2015, 2020, and 2021). Issues associated with AI were considered in the 2020 Digital Government Plan,⁸³⁰⁴ Digital Agenda 2020,⁸³⁰⁵ and Digital Agenda 2021–2025.⁸³⁰⁶

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Uruguay established the Observatory of Artificial Intelligence in the State in 2024,⁸³⁰⁷ realizing plans to promote transparency around the AI Strategy and to enhance trust and mitigate risks around the use of AI technologies.⁸³⁰⁸ The Observatory allows citizens to monitor and follow-up on action plans for the new AI and Data Strategies.⁸³⁰⁹ As part of this effort, the AGESIC joined with the Personal Data Regulatory and Control Unit (URCDP) to publish Recommendations on Algorithmic Transparency.⁸³¹⁰

Public Participation

Uruguay created both the Draft Data Strategy 2024–2030 and current Artificial intelligence Strategy through a participatory process and public consultations.⁸³¹¹

The Artificial Intelligence Strategy for Digital Government (AISDG) also resulted from a public consultation on a draft prepared by AGESIC.⁸³¹² The revised AI Strategy, Uruguay Artificial Intelligence Strategy 2024–2030, was created after an extensive participatory process that gathered input from more than 300 individuals from various disciplines and fields and representing many organizations, including over 40 government institutions, 11 civil society organizations, 45 private sector organizations, academia, and other interest groups. CAF and UNESCO supported the consultation process.⁸³¹³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

As AGESIC explained when it announced the public consultation, “This new National Strategy is the cornerstone for the deployment of a national AI policy that involves the public sector, the private sector and all stakeholders, and that enhances the sustainable development of Uruguay in all its dimensions, contributing to economic growth, social inclusion, environmental sustainability of the country and the strengthening of its sovereignty.”⁸³¹⁴ The 29 proposals AGESIC received during the consultation,⁸³¹⁵ including CAIDP’s comments,⁸³¹⁶ are available on the public consultation site, along with a report on the consultation. Of CAIDP’s recommendations, Uruguay adopted a strong human rights-based approach, improved the monitoring and review frameworks, and expanded access for multi-stakeholder participation.⁸³¹⁷

Data Protection

The National Data Strategy 2030 is the cornerstone for national data policy across the private and public sectors.⁸³¹⁸ International commitments such as the Universal Declaration of Human Rights, American Convention on Human Rights or Pact of San José de Costa Rica, and Council of Europe Convention 108+ for the protection of individuals with regards to the Processing of Personal Data inform the legal framework for data protection in Uruguay. Article 72 of the Constitution and a law on Personal Data Protection and Habeas Data Action (LPDP)⁸³¹⁹ provide legal protections.

Uruguay’s data-protection system follows EU data-protection rules and has regulations that adapt to the General Data Protection Regulation (GDPR). The

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

European Commission formally approved Uruguay's status as a country providing "adequate protection" for personal data within the meaning of the European Data Protection Directive.⁸³²⁰

Continuing with the process of full GDPR adaptation, Uruguay passed provisions relating to data protection that address, among others, the proactive responsibility principle (which supposes the implementation of appropriate technical and organizational measures such as privacy by design and privacy by default); the obligation to designate a data-protection officer, and data-breach notification rules. A follow-up decree⁸³²¹ regulates the implementation and enforcement of the provisions.

The Personal Data Protection and Habeas Data law established the Personal Data Regulatory and Control Unit (*Unidad Reguladora y de Control de Datos Personales*, URCDP)⁸³²² as the country's supervisory data-protection authority. The URCDP is an autonomous entity of the AGESIC.

As a member of the Ibero-American Network for the Protection of Personal Data (RIPD), which comprises 16 data protection authorities of 12 countries, the URCDP endorsed the General Recommendations for the Processing of Personal Data in Artificial Intelligence⁸³²³ and the accompanying Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects.⁸³²⁴

The RIPD data protection authorities initiated a coordinated action regarding ChatGPT in May 2023 on the basis that the service may entail risks for the rights and freedoms of users in relation to the risk for misinformation. The action stated: "ChatGPT does not have knowledge and/or experience in a specific domain, so the

Uruguay's ratification of Council of Europe Convention 108+ also provides for algorithmic transparency.⁸³³²

AGESIC's Recommendations on Algorithmic Transparency,⁸³³³ published with the Unit of Access to Public Information (*Unidad de Acceso a la Información Pública*, UAPI) as part of the State Observatory on AI, instruct public bodies to proactively disclose rules for algorithms, publish information about AI systems, and handle algorithm-focused information requests. The Recommendations adapt the UNESCO Recommendations and OECD AI Principles to Uruguay and apply the Law on the Right to Access Public Information⁸³³⁴ to the use of algorithms by public entities. The Recommendations, combined with ratification of Convention 108+, progress toward providing Uruguayans the right to know when algorithms are used, the logic and/or factors underlying decisions, and a meaningful opportunity to contest automated decisions.

AGESIC published guidance for the preparation of Algorithmic Impact Assessment (*Estudio de Impacto Algorítmico*, EIA) as part of an earlier AI Strategy on Digital Government.⁸³³⁵

Uruguay's president signed a law proposed by the Ministry of Labor and Social Security (*Ministerio de Trabajo y Seguridad Social*) to establish minimum levels of protection for workers who perform tasks through digital platforms, specifically around transparency of algorithms and automated decision-making systems that make or support decisions affecting working conditions.⁸³³⁶

Observatory of AI in the State

The Observatory of Artificial Intelligence in the State⁸³³⁷ was established in 2024 to promote transparency around the AI Strategy and to enhance trust and mitigate risks around the use of AI technologies.⁸³³⁸ The Observatory lists key information about models used in the public sector, allowing citizens to monitor and follow-up on action plans for the new AI and Data Strategies.

The Uruguayan government currently has projects for AI solutions in sectors including public education and public health in different stages of testing and implementation.⁸³³⁹ These models include a predictive model to detect disengagement among high-school students, prepared jointly with the Public Education National Administration (ANEP).⁸³⁴⁰ The model for educational purposes was initially tested on a small scale to identify possible errors, and the teachers will be taught how to interpret the underlying information.⁸³⁴¹ The Observatory also provides accountability and oversight: ANEP withdrew a related facial recognition pilot to track high school attendance after a senator and members of an education union expressed concerns about possible privacy rights violations.⁸³⁴² Similarly, an AGESIC official has acknowledged that a predictive model for cardiovascular disease, which is currently undergoing tests, involves the use of sensitive personal data and raises ethical challenges.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Use of AI in Public Administration

Uruguay has acted on its objective to “promote and support the ethical, responsible, safe, and trustworthy use” of artificial intelligence technology through various national and international frameworks, institutions, and tools. Uruguay’s first AI Strategy (2020) focused on the use of AI in public administration. This strategy for digital government emerged from a two-decade-long tradition of digital government agendas (referred to as Digital Uruguay). Uruguay has published five digital government agendas with periodic revisions and subject to public consultations. The latest revision of the current digital government agenda was (Digital Agenda 2025).⁸³⁴³

AGESIC also created the Public Sector Strategic Committee for Artificial Intelligence and Data⁸³⁴⁴ to collaborate in the process of creating and implementing the corresponding strategies. The Committee is chaired by AGESIC and composed of representatives from different Ministries. The Strategic Committee initiated efforts toward a roadmap for the AI and Data strategies, bringing together eleven public sector bodies. The event showed coordination led by AGESIC, with the involvement of personal data oversight, economic and labor areas, official statistics, and education/innovation.⁸³⁴⁵ The Committee also published the Sixth National Action Plan for Open Government 2025–2029, which encompasses 41 commitments from 24 public institutions and civil society.⁸³⁴⁶

Finally, as a member of the Latin American Centre for Development Administration (CLAD),⁸³⁴⁷ Uruguay approved the Ibero American Charter on Artificial Intelligence in Civil Service. The Charter aims to provide a roadmap and common framework for CLAD member states to adapt their AI policy strategies and laws for the challenges and opportunities involved in the implementation of AI in

⁸³⁴⁷ CLAD, *Ibero American Charter on Artificial Intelligence in Civil Service* (2024), <https://web-api-backend.clad.org/uploads/cia-en-03-2024.pdf>

public administration. In addition to common principles, the Charter recommends specific tools for monitoring AI impact as well as a risk classification mechanism that outlines prohibited AI uses as well as guidelines for the guardrails in high-risk uses.

Facial Recognition

Uruguay's Data Protection Authority was among the co-sponsors of the 2022 GPA Resolution on Facial Recognition Technology, which set forth "principles and expectations for the appropriate use of personal information in facial recognition technology," including the need for lawful basis; reasonableness, necessity, and proportionality; protection of human rights; transparency; and accountability.⁸³⁴⁸

Uruguay's Ministry of the Interior announced in 2024⁸³⁴⁹ that it will apply an AI-based analytical system to video surveillance camera networks.⁸³⁵⁰ The initiative consists of two thousand new cameras with software based on algorithms developed to recognize specific images and movements. By these means, the behavior and movements of people will be studied with the aim to detect and anticipate criminal patterns.

Even if the systems recently acquired by the Ministry of the Interior for surveillance purposes reportedly allow for a rapid response to criminal acts and even prevent them, there is no available information or assessment on Uruguay has no regulation related to the police use of AI.

Uruguay began developing a facial-identification database for public-safety purposes under the Ministry of the Interior in 2020.⁸³⁵¹ The system was approved as an "omnibus law" through the National Budget Act, meaning tight deadlines

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

prevented proper discussion.⁸³⁵² The Ministry of the Interior is responsible for developing the database based on the database for issuing identification cards currently under the control of the National Directorate of Civil Identification. The database will include facial images of adults, first and last names, sex, date of birth, nationality, and identification card number, as well as issue and expiration dates. The Ministry of the Interior has already purchased automated facial recognition software and currently has a system of 8,433 cameras distributed in the country in the 19 departments, in addition to private surveillance systems. The national government has admitted that the intended use of this facial-identification database is automated surveillance using facial-recognition algorithms.⁸³⁵³

Environmental Impact of AI

Uruguay is a recognized regional leader in renewable energy usage. The International Energy Agency found that 91.1% of the country's electricity in 2022 came from renewable sources.⁸³⁵⁴ According to the Ministry of Industry, Energy, and Mining (*Ministerio de Industria, Energía y Minería*, MIEM) Uruguay has the largest share of electricity generated from biomass in the world and generated 99% of its electricity from renewable sources in 2024.⁸³⁵⁵

Although Uruguay has no specific policy to address the environmental impact of AI, the General Environmental Protection Law includes environmental impact assessments among the tools for protecting the environment.⁸³⁵⁶ These have been applied to AI-related projects. For example, after an environmental impact assessment on a Google data center project in Canelones representing more than \$850 million in investment,⁸³⁵⁷ the Ministry of Environment required provisions to

reduce water usage and integrate renewable energy. Implementation measures now include transitioning to air-based cooling systems to minimize water consumption, committing to 100% renewable energy supply through UTE contracts (Uruguay's state-owned electric utility company), and capping annual energy use at 560 GWh.⁸³⁵⁸ The National AI Strategy mentions environmental protection related to regulatory frameworks and public administration,⁸³⁵⁹ suggesting this approach of aligning infrastructure with existing sustainability laws will persist, even in the absence of AI-specific regulations.

Lethal Autonomous Weapons

Uruguay co-authored several documents submitted during the 7th Meeting of Governmental Experts (GGE) on Lethal Autonomous Weapons Systems (LAWS) in 2022. These included a Working Paper on emerging technologies in the area of lethal autonomous weapons systems,⁸³⁶⁰ setting considerations for the future work of the GGE, including the acknowledgment of the “centrality of the human element in the use of force” and the “urgent need for adequate rules and limits on the development, deployment, and use of autonomous weapon systems to ensure sufficient human involvement and oversight.”

Uruguay contributed to a joint commentary to the UN calling for a legally binding instrument on autonomous weapon systems⁸³⁶¹ and a proposal for a roadmap towards new protocol on autonomous weapons systems.⁸³⁶² The group submitted a revised draft version of a protocol VI to the Convention on Certain Convention

Weapons containing updates and revisions based on ongoing discussions and proposals.⁸³⁶³ A proposed ban includes autonomous weapon systems that violate international humanitarian law. The treaty would require countries to regulate other autonomous weapon systems to ensure “meaningful human control is retained” throughout their entire life cycle. Uruguay reiterated the need to require human control in any instrument on LAWS during the country’s statement during the first session of the group of the 2025 GGE.⁸³⁶⁴ Uruguay was listed among the 39 High Contracting Parties supporting the September 2025 joint statement reaffirming the principle of ‘meaningful human control’ and calling for further progress before the 2026 CCW Review Conference.⁸³⁶⁵

AI Literacy

Uruguay has taken concrete steps to strengthen AI literacy and build public capacity for digital governance. The National Artificial Intelligence Strategy includes a focus on “Citizens and AI,” highlighting the importance of public understanding, ethical awareness, and workforce preparedness.⁸³⁶⁶ The government, through the Agency for Electronic Government and Information Society (AGESIC), has advanced training and awareness programs for public officials, emphasizing responsible and transparent AI use. Plan Ceibal, Uruguay’s long-standing digital inclusion initiative, continues to integrate computational thinking and emerging technology content into education, positioning the country to expand AI education within its broader digital skills framework.⁸³⁶⁷ The National Digital Citizenship

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Strategy 2024–2030⁸³⁶⁸ includes “Development of skills to analyze algorithms, understand AI and other emerging technologies, and recognize the power dynamics and interests online” as one of 3 fundamental dimensions.

Human Rights

Freedom House ranked Uruguay as “Free” with a score of 96/100 points in the 2025 Freedom in the World report.⁸³⁶⁹ Freedom House acknowledges that Uruguay has “a historically strong democratic governance structure and a record of upholding political rights and civil liberties. There are some persistent issues with pressure on journalists, delays in the court system, conditions in the country’s prisons, and political representation of marginalized groups” such as women, transgender people, Uruguayans of African descent, and the Indigenous population.

Uruguay is among the countries with a very high level of formal adherence to the international human rights protection system, as it has ratified practically all existing international instruments. However, according to some reports, Uruguay has serious shortcomings when it comes to effective compliance with such standards.⁸³⁷⁰ Likewise, a 2013 report by the Office of the United Nations High Commissioner for Human Rights mentions the debts that the country maintains related to certain human-rights categories contained in the treaties ratified by Uruguay.⁸³⁷¹

Impunity for crimes against humanity committed during the military dictatorship (1973-1985) persists and is still an open issue. Uruguayan NGO Peace and Justice Service (SERPAJ) reported in 2023 that,⁸³⁷² nearly four decades after the democratic transition, the country continues to face persistent challenges in ensuring truth, justice, and reparations for victims of dictatorship-era human rights violations. The report highlights the lack of progress in judicial investigations, ongoing impunity, and insufficient state commitment to memory and reparation policies.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

OECD's 2022 report assessing the use of AI in the public sector across Latin America and the Caribbean notes that at the end of 2013 the Uruguayan government acquired Predpol, an "AI-enabled policing software to predict the potential for crimes in different areas of the country."⁸³⁷³ While the system "offered predictions based on data collected by the Ministry of the Interior," concerns remain over the possibility that historical biases in the criminal justice system could lead to decisions that disproportionately harm people from marginalized groups. Knowledge about the model design was not made public, undermining efforts to explain its decisions, although, according to public information, the machine learning algorithm relied on four variables: type of crime, location, date and time."⁸³⁷⁴

Uruguay's deployment of Predpol raised human rights concerns. A study on the deployment of algorithms and AI solutions in Latin America, including Predpol, suggested that "these models generate a feedback loop: a greater police presence in a given area makes it more likely for crime to be detected. The more crimes recorded in an area, the more likely that police forces will be deployed. According to HRDAG, this means officers will be repeatedly sent to the same areas of the city, usually those where minorities are concentrated, regardless of the true crime rate in that area."⁸³⁷⁵

The study reported that Human Rights organization SERPAJ expressed similar concerns about PredPol in 2017, warning of a vicious cycle, "Basically legitimizing arbitrary police behavior, which translates into police abuse, and is often the product of racism or classism."⁸³⁷⁶ The project was discontinued after an evaluation by the Uruguayan Ministry of Interior concluded it did not perform better than "a more traditional annual retrospective reporting system based on statistical tools created by the Police's Tactical Information Directorate."⁸³⁷⁷ As of 2025, Uruguay reports that the PredPol license has not been renewed and the Ministry of the Interior is reviewing governance frameworks for the algorithmic use of public-

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

safety technologies, including facial-recognition systems under regulatory consideration.⁸³⁷⁸

An AI-enabled facial recognition surveillance system proposed by the Ministry of Interior raises similar human rights concerns.⁸³⁷⁹

OECD / G20 AI Principles

Uruguay is a non-member adherent to the OECD AI Principles.⁸³⁸⁰

OECD's 2022 report assessing the AI use in the public sector across Latin America and the Caribbean analyzed the consistency of the Uruguayan AI strategy for the public sector (AISDG) with the OECD AI principles. OECD found that "Uruguay's 'General Interest' principle aligns with OECD principles 1 and 2. The first part of the principle sets a social goal, namely, protecting the general interest, and guaranteeing inclusion and equity. The second part states that 'work must be carried out specifically to reduce the possibility of unwanted biases in the data and models used that may negatively impact people or favor discriminatory practices.'"⁸³⁸¹ OECD also noted that the Algorithmic Impact Study (EIA) and other tools allow for interpretations that provide for transparency and explainability and the fact that "Uruguay's AI principles include a requirement that technological solutions based on AI must have a clearly identifiable person responsible for the actions derived from the solutions."

Uruguay is not a member of the Global Partnership on AI. However, it is a member of Digital Nations,⁸³⁸² the Open Government Partnership,⁸³⁸³ and the Electronic Government Network of Latin America and the Caribbean.⁸³⁸⁴ Uruguay

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Uruguay signed the Santiago Declaration to Promote Ethical Artificial Intelligence as part of a Regional Council in Latin America and Caribbean focused on ethical AI implementation.⁸³⁹³ The Santiago Declaration aligns with the UNESCO Recommendation and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.⁸³⁹⁴ The High Authorities from Latin America and the Caribbean who established the Santiago Declaration committed to collaborating with CAF and UNESCO to implement the Recommendations for AI Ethics across the region as part of a regional council.⁸³⁹⁵

Uruguay presented the RAM report at the Second Ministerial Summit on the Ethics of Artificial Intelligence, the realization of the regional council.⁸³⁹⁶ The RAM report found that Uruguay has a solid enabling regulatory framework that establishes the bases for the development of AI in the country. In addition, the RAM identified an integrated vision of AI and data, which facilitates a more cohesive implementation of strategies in this area. The connectivity and coverage indicators are very good, highlighting 100% coverage in educational institutions, which is a key factor for the deployment and development of the Ceibal Plan, a Uruguayan initiative to provide each child with a laptop.⁸³⁹⁷ In terms of areas to be improved, the RAM report points to the lack of indicators and impact measurement tools, which makes it difficult to effectively evaluate the initiatives implemented.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Leaders at the Ministerial Summit also agreed to the Montevideo Declaration⁸³⁹⁸ and approved a Roadmap for Ethical Artificial Intelligence for Latin America and the Caribbean 2024–2025.⁸³⁹⁹ The Roadmap defines five lines of action: Governance and Regulation, Skills and the future of work, Protection of vulnerable groups, Environment, Sustainability and Climate Change, and Infrastructure.

Evaluation

Uruguay initially focused policies on digital government, and the country has done well extending this focus to artificial intelligence. The OECD also acknowledged the soundness of Uruguay's AI strategy for the public sector.

Uruguay's data protection legal regime is largely aligned with the GDPR, as confirmed by the European Commission's adequacy decisions.⁸⁴⁰⁰ Data protection presents a promising view for the future for the country's AI regulation. Uruguay also has mechanisms in place to promote algorithmic transparency, especially in the public sector. Uruguay has moved from its initial approach on AI in the public sector to a more comprehensive one. Uruguay revised the AI strategy and elaborated on the data strategy with support by UNESCO and the CAF. Both strategies were created through an open, participatory process. The AI Strategy has been approved and published.

As stated in the RAM report, "Uruguay is committed to the implementation of the UNESCO Recommendation on the Ethics of AI [...] and aims to align the country with international ethical principles, a human rights framework, technical standards, and technological developments, as well as address its growing challenges and opportunities." As part of the alignment with international standards, Uruguay committed to the OECD Recommendations in July 2024 and the international treaty on AI and Human Rights in 2025.⁸⁴⁰¹

Venezuela

In 2025, Venezuela developed the Code of Ethics for the Responsible Development and Application of Artificial Intelligence. Human rights abuses and repression of freedom expression online continued, with AI-enabled tools facilitating surveillance of dissenters.

National AI Strategy

The Venezuelan presidency announced implementation of an AI Plan in early 2025⁸⁴⁰² and the Ministry of Popular Power for Science and Technology (*Ministerio del Poder Popular para Ciencia y Tecnología*, Mincyt) met with leaders from the National Autonomous Telephone Company (CANTV) and Movilnet to discuss a roadmap to advance the AI Plan in early February 2026.⁸⁴⁰³ According to the Mincyt, the Plan envisions AI as a strategic tool for the “human and productive development of the nation” and stresses that this technology “must be aligned with the principles of human development.”⁸⁴⁰⁴ The minister stressed that governing and regulating AI requires innovative approaches, including “ethical, global, and national principles and specific sectorial landings.” The Mincyt has focused on developing an AI ecosystem by building physical, legal, and educational infrastructure with ethics and morals at the center.⁸⁴⁰⁵

Aligned with this vision, the Directorate of Artificial Intelligence Development and Application (*Dirección General de Desarrollo y Aplicación de Inteligencia Artificial*, DGDAIA) under the Mincyt developed the Code of Ethics for the Responsible Development and Application of Artificial Intelligence.⁸⁴⁰⁶ The

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Code's explicitly adapts the OECD and UNESCO AI principles and national frameworks⁸⁴⁰⁷ in developing 9 principles for trustworthy AI: 1) Humanist AI; 2) Equity, Equality, and Non-Discrimination; 3) Environmental Responsibility; 4) Security of data and the model; 5) Privacy; 6) Transparency; 7) Accountability (*Rendición de cuentas*) of humans; 8) Open Science; and 9) Human Excellence in intellect, science, and technology. The Code of Ethics aims to “promote artificial intelligence that is humanist, that serves the common good, and that contributes to the construction of a more just and sustainable future.”⁸⁴⁰⁸ On releasing the document the Mincyt reiterated that “it is of vital importance that the advance of technology is always subordinated to life, respecting deeply our human rights and caring for nature.”⁸⁴⁰⁹

Venezuela's National Assembly (*Asemblea Nacional*) approved an AI bill on the first reading in late 2024.⁸⁴¹⁰ The bill aims to “regulate, promote, evaluate, and push the development, use, and application of artificial intelligence.”⁸⁴¹¹ As part of the framework for AI oversight, the bill would establish a National AI Agency as a regulatory body in a risk-based approach with 4 categories of risk: unacceptable (with exceptions for national security), high, medium, and low. The bill includes measures for “fostering education” of the technology to ensure Venezuelans develop and use AI according to ethical principles.⁸⁴¹²

Public Participation

Venezuela has experienced continued and wide-ranging restrictions to civic and democratic spaces, hindering public participation. The Office of the High Commissioner for Human Rights (OHCHR) observed cases of stigmatization,

Center for AI and Digital Policy

criminalization, and threats against dissenting voices, civil society, media, and trade unionists that affect their capacity to effectively carry out their legitimate duties.⁸⁴¹³ While the report by the United Nations High Commissioner for Human Rights observed some willingness by the government to open dialogue with civil society organizations following two high level meetings between the government and Foro Civico (a group of civil society organizations) in April 2022, the above challenges persist.

The National Assembly announced plans for a public consultation on the Artificial Intelligence Law in May 2025.⁸⁴¹⁴ However, the National Assembly website provides no information about the outcome of the consultation. The AI Law is not accessible online, at least from outside the country.

Data Protection

Venezuela has no specific regulation regarding data privacy. However, Article 28 of the Constitution defines the Habeas Data as a ground for individual complaints before the Constitutional Court: “Anyone has the right of access to the information and data concerning him or her or his or her goods which are contained in official or private records, with such exceptions as may be established by law, as well as what use is being made of the same and the purpose thereof, and to petition the relevant court for the updating, correction or destruction of any records that are erroneous or unlawfully affect the petitioner's right. He or she may, as well, access documents of any nature containing information of interest to communities or groups of persons.”⁸⁴¹⁵ Article 60 establishes a right to the “protection of their honor, private life, intimacy, own image (*propia imagen*), confidentiality, and reputation” and extends legal protections to electronic information.⁸⁴¹⁶

⁸⁴¹⁶ *Ibid*, p. 181–182

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The e-Government law (*ley de Infogobierno*) also provides in Article 75 for the right to information about automated data collection.⁸⁴¹⁷ Also of relevance are the 1991 Law on the Protection of the Privacy of Communications,⁸⁴¹⁸ the 2001 Special Law Against Computer Related Crimes,⁸⁴¹⁹ and the 2018 Regulation for the Protection of the Rights of Users in the Provision of Telecommunications Services.⁸⁴²⁰

Supreme Court decisions establish arguments for data principles such as informed consent, legal collection, data quality, use limitation, security, and confidentiality.⁸⁴²¹

Despite the fact that these laws exist, there are reports of challenges in implementation due to the lack of an independent data protection oversight authority.⁸⁴²² Further, there are concerns of government surveillance and counterintelligence activities through the introduction of public digital ID programs such as Carnet de la Patria as well as the mobile app VeQR-Somos that requires vast amounts of personal data that can be used to track both personal data and location.⁸⁴²³

Use of AI in Public Administration

As a member of the Latin American Centre for Development Administration (CLAD), Venezuela approved the principles in the Ibero American Charter on Artificial Intelligence in Civil Service in late 2023.⁸⁴²⁴ The guiding principles include: human autonomy; transparency, traceability and explainability; accountability, liability and auditability; security and technical robustness; reliability, accuracy, and reproducibility; confidence, proportionality, and prevention of

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

damage; privacy and protection of personal data; data quality and safety; fairness, inclusiveness, and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection. The Charter recommends that member states require assessment of the impact of AI systems on human rights and freedoms and registration algorithms to “anticipate risks, prevent undesirable effects and ensure its proper implementation”⁸⁴²⁵ and proposes a risk classification mechanism that would require guardrails for middle-risk uses and prohibitions against high-risk applications.

On beginning a new term in 2025, President Nicolás Maduro announced the activation of a Popular Self-Government Chamber powered by new AI technologies called the 1x10 of Good Government System to ensure timely and effective public service.⁸⁴²⁶ Government agencies had 90 days to implement the system, which include physical technology to be installed in Communal Circuits, part of system for popular government,⁸⁴²⁷ across the country. While framed as a tool for efficiency, concerns exist about its potential misuse for computational propaganda and information control.

Deepfakes and Computational Propaganda

According to experts, deepfakes are the latest tool used in disinformation campaigns promoting Venezuela. In 2023, short YouTube videos circulated with fake hosts of a seemingly Western news broadcast to spread propaganda. The purported journalists on screen are artificial intelligence avatars created by a company called Synthesia that for just \$30 a month will say whatever the buyer wants.⁸⁴²⁸ President Maduro disregarded criticism of the AI-generated propaganda, calling it “popular intelligence” and “revolutionary intelligence.”⁸⁴²⁹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

According to the 2023 Freedom on the Net Report, “progovernment propaganda generated by AI was viewed widely on social networks.”⁸⁴³⁰ Journalists in Venezuela also started employing AI as a tool for circumventing government repression and censorship in 2024.⁸⁴³¹ This effort, named Operación Retuit, has been used anonymously by Venezuelan journalists to spread content that the AI generated journalistic personas refer to as “real, verified, high-quality and created by journalists.”⁸⁴³² According to the Latin American Journalistic Review (LJR), “Operación Retuit is [verified] information from independent media, except we have to use avatars to protect the identity and integrity of journalists/activists.”⁸⁴³³

Environmental Impact of AI

Venezuela’s Code of Ethics for the Responsible Development and Application of Artificial Intelligence includes Environmental Responsibility as a key principle.⁸⁴³⁴ The Code hails the potential to apply AI to help preserve resources while recognizing the demand water and energy resources. The Code of Ethics asserts that “all actors within the lifecycle of AI systems should contribute to a development that meets current needs without compromising the capacity of future generations.” However, specific laws to hold developers and user accountable for this principle are not available.

Lethal Autonomous Weapons

Venezuela is a High Contracting Party to the Convention on Certain Conventional Weapons (CCW) and a member of the Non-Aligned Movement (NAM).⁸⁴³⁵ Venezuela’s contributions to the CCW and UN, through the Non-Aligned

Movement, and other groups consistently support the negotiation of a legally binding treaty to regulate and prohibit lethal autonomous weapons systems (LAWS).

In the UN General Assembly, Venezuela endorsed a joint statement urging “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”⁸⁴³⁶ Venezuela joined the Ibero-American Summit of Heads of State and Government contribution to the Secretary-General report on LAWS in 2024, reinforcing the call for treaty “containing prohibitions and regulations on autonomy in weapons systems, in order to ensure compliance with international law, including international humanitarian law and international human rights law, and ethical perspectives, as well as the prevention of the social and humanitarian impact that autonomy in weapons systems entails.”⁸⁴³⁷

Venezuela endorsed, along with more than 30 other Latin American and Caribbean states, the Belén Communiqué,⁸⁴³⁸ which calls for “urgent negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

AI Literacy

Venezuela does not yet have a comprehensive AI literacy strategy or policy though the Ministry of Science and Technology (Mincyt) has emphasized human development as a component of the AI Plan. For example, Mincyt noted eight technological nodes established at the national level, spaces that function as development pilots in sovereign and secure software with a clear orientation toward AI.⁸⁴³⁹ At a visit to a school marking the start of the 2025–2026 year, President

Nicolás Maduro mentioned AI would be taught in schools starting in 2025 so students could learn what AI is and how it should be used responsibly. Nonetheless, no timelines or details of these two projects were provided.⁸⁴⁴⁰

Human Rights

Freedom House rated Venezuela as “Not Free” with a score of 13/100 in the 2025 Freedom in the World Report.⁸⁴⁴¹ The report cites increasing government repression and flawed elections for the decrease by 2 points in the score since 2024. The 2025 Freedom on the Net Report also noted a significant decline in internet freedom, rating Venezuela as “Not Free” and decreasing the score from 30 in 2024 to 26.⁸⁴⁴² Repression of human rights and internet freedom declined following the 2024 election in which Nicolás Maduro “claimed victory despite credible evidence” that the opposition candidate won. To repress opposition, the government blocked news sites; detained leaders and protesters, including for online actions; implemented influence campaigns to influence online discussion; and created a digital complaint mechanism for informers to report others’ dissent.

Venezuela continued to face severe international scrutiny for restrictions on digital and civil rights, as well as intensifying digital authoritarian practices. The UN Human Rights Council’s Fact-Finding Mission (FFM) confirmed in September 2025⁸⁴⁴³ that Venezuela’s policy of repression, including arbitrary detention, digital surveillance, and closure of civic space, remained systematic and constitutes ongoing crimes against humanity. Human Rights Watch likewise documented continued internet censorship, expanded AI-assisted monitoring, and severe restrictions on NGOs. Independent investigations describe the use of state-controlled biometric IDs, AI-powered surveillance, and throttling of connectivity to preempt dissent. Venezuela’s Carnet de la Patria now merges social-subsidy management with

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

predictive analytics and digital tracking.⁸⁴⁴⁴ Amnesty International also reports on the government use of repression and intimidation to silence dissenters, including using the judicial system to criminalize human-rights defenders.⁸⁴⁴⁵

Strategic Association with China

Venezuela established a Strategic Association with China in 2023. As part of the partnership, which “projects Venezuela as a vanguard in technological development, with its own capacities oriented toward the well-being of the population” a delegation from the Mincyt visited China in 2025 for a workshop on AI capacity-building.⁸⁴⁴⁶ The visit aligned with Venezuela’s efforts to “strengthen cooperation with strategic allies like the People’s Republic of China, for the construction of an independent, scientific, and sovereign Nation (*Patria*).”

OECD / G20 AI Principles

Venezuela is not a member of the OECD⁸⁴⁴⁷ or the Global Partnership on Artificial Intelligence (GPAI)⁸⁴⁴⁸ and has not endorsed the OECD AI principles.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

UNESCO Recommendation on AI Ethics

Venezuela is a member state of UNESCO having joined on September 25, 1946.⁸⁴⁵⁰ Venezuela endorsed the UNESCO Recommendation on the Ethics of AI in November 2021.⁸⁴⁵¹

Venezuela has participated in regional initiatives to implement the UNESCO Recommendation, including as part of the Regional Council established by the UNESCO partnership with CAF, the Latin American development bank.⁸⁴⁵² Venezuela signed the 2023 Santiago Declaration to Promote Ethical Artificial Intelligence, which emerged from the first Regional Forum on AI Ethics.⁸⁴⁵³ The Declaration aligns with the UNESCO Recommendation and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.⁸⁴⁵⁴

Venezuela's AI Code of Ethics aligns with international examples, including the UNESCO recommendation on AI Ethics.⁸⁴⁵⁵ Venezuela is not among the countries that have implemented or are in the process of implementing the Readiness Assessment Methodology (RAM).⁸⁴⁵⁶

Evaluation

Venezuela has an AI strategy and Code of Ethics for the Responsible Development and Application of Artificial Intelligence, demonstrating efforts to seize opportunities brought by AI while mitigating risks. While the AI Law calls for an oversight body, such a body has not yet been established. Given the current government structure and efforts to repress dissent, doubts remain that such a body would be independent. Venezuela's endorsement of the UNESCO Recommendation on the Ethics of AI, the Ibero-American Charter on AI in the Civil Service,⁸⁴⁵⁷ and the Santiago Declaration to Promote Ethical AI,⁸⁴⁵⁸ along with efforts and promises by the Ministry of Science and Technology, suggest a commitment to international alignment. However, the use of AI to maintain the power in place and reinforce authoritarian practices is a major concern.

Center for AI and Digital Policy

Vietnam

In 2025, Vietnam built a governance structure for AI and Digital Policy by passing the Law on Artificial Intelligence, Law on Digital Technology Industry, and Personal Data Protection Law. The country also completed the UNESCO Readiness Assessment Methodology (RAM), launching the report with the Vietnam International Digital Week.

National AI Strategy

The Prime Minister's Office for the Socialist Republic of Vietnam published the government's National Strategy on R&D and Application of Artificial Intelligence in 2021. The Strategy outlines Vietnam's AI ambitions projected through 2030, with specific, measurable, and incremental targets by 2025 and 2030.⁸⁴⁵⁹ The bulk of the Strategy focuses on planned investments in education, innovation, and infrastructure, aimed at helping Vietnam become a leading hub for AI technologies within the Association of Southeast Asian Nations (ASEAN). The Strategy proclaims AI as "the background technology for the Fourth Industrial Revolution," pledging to align the nation's AI development and applications with socio-economic development and to "strengthen national defense and security, develop science and technology; unlock the potential of the entrepreneurs, effectively mobilize all resources; gradually receive, master and then upgrade technology transfer."⁸⁴⁶⁰

Vietnam's AI strategy outlines the government's commitment to creating a legal framework and policies for AI aimed at "developing and applying AI with people and entrepreneurs at the center, avoiding technology abuse and infringement upon legitimate rights and interests of organizations and individuals."⁸⁴⁶¹ The strategy does not mention creating AI aligned with the principles of fairness and accountability. However, the Strategy commits to applying AI toward elevating public services, pledging to "improve the operational efficiency of the public administrative management system in social resources allocation and mobilization, social management and urban planning, especially in big cities such as Hanoi and Ho Chi Minh City and Da Nang."⁸⁴⁶²

⁸⁴⁵⁹ Prime Minister, *National Strategy on R&D and Application of Artificial Intelligence* (Mar. 17, 2021), https://wp.oecd.ai/app/uploads/2021/12/Vietnam_National_Strategy_on_RD_and_Application_of_AI_2021-2030.pdf

AI Legislation

Vietnam legalized the National AI Strategy with a draft law in October 2025,⁸⁴⁶³ which passed the National Assembly in December 2025.⁸⁴⁶⁴ The Law on Artificial Intelligence implements a risk-based approach that includes tiers for prohibited AI uses as part of the aim to “ensure a balance between risk control and the promotion of innovation, in line with international practices and support.” The law requires human oversight over AI decisions and notes “AI must serve humans not replace them” to foster AI aligned with national values and ethical standards. Article 4 defines fairness, transparency, non-bias, and accountability as foundational principles and prioritizes safeguards for fundamental rights and privacy.⁸⁴⁶⁵ Observers call the foundational principles and risk-based approach a “clear manifestation of the Brussels effect” while pointing out differences in implementation, such as Vietnam’s focus on harmful practices rather than detailing categories for prohibition.

Providers self-classify risk levels and notify the Ministry of Science and Technology when medium- and high-risk systems are released.⁸⁴⁶⁶ Providers and deployers must submit reports and sample audits and, for high-risk systems, demonstrate human oversight, risk assessments, and registration. A draft document for implementing the AI law included a list of high-risk AI systems during public consultation.⁸⁴⁶⁷

The Law on Artificial Intelligence builds on and supersedes the risk-based framework in the Law on Digital Technology Industry passed in June 2025,⁸⁴⁶⁸ which

applied to artificial intelligence as a digital technology product.⁸⁴⁶⁹ The digital technology industry law grounds Vietnam's development of digital products in principles of transparency, safety, and non-discrimination and mandates that all AI systems remain under human oversight.⁸⁴⁷⁰

Public Participation

Vietnam's AI strategy does not mention any structured process for public participation in the development of AI policy. AI policies and updates are accessible to the public on the Ministry of Science and Technology's Legal Documents (*Văn bản QPPL*) page, including a section on draft legal documents open for consultation.⁸⁴⁷¹ Drafts of a Circular Guiding the National Artificial Intelligence Ethics Framework⁸⁴⁷² and a draft detailing the implementation of the Law on Artificial Intelligence⁸⁴⁷³ were open for consultation in the first week of February 2026. However, the consultation period lasted 5–7 days, in contrast to other documents with one-month periods.

The Ministry of Science and Technology published the Draft Law on Digital Technology Industry⁸⁴⁷⁴ and the Draft Law on Artificial Intelligence⁸⁴⁷⁵ for consultations of two months and three weeks (respectively). The listings invite stakeholders to submit feedback on the draft legal text and associated implementation rules through the portal. The page includes summaries of some of the opinions and comments received in consultations, though a summary does not appear for the Law on Artificial Intelligence.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Public consultation opportunities have been more visible in data protection laws. A draft Personal Data Protection Bill was issued for public consultation on February 9, 2021.⁸⁴⁷⁶ The ratified data protection law, Decree No. 53, which aimed to boost cybersecurity in Vietnam, went into effect on October 1, 2022; yet no evidence was available regarding whether or how public participation meaningfully contributed to the recent data privacy legislation.⁸⁴⁷⁷ The first draft of a new Law on Personal Data Protection and was open for public consultation for nearly three months in 2024.⁸⁴⁷⁸

Data Protection

While Vietnam has not yet enacted a comprehensive data protection law, the country's constitution includes provisions identifying rights pertaining to personal data. As per article 21 of the Constitution of Vietnam, "everyone is entitled to the inviolability of personal privacy, personal secrecy, and familial secrecy and has the right to protect his or her honor and prestige."⁸⁴⁷⁹ Several related laws and regulations also exist.

The Vietnamese government ratified a Law on Cybersecurity, Decree No. 53 in August 2022, which became fully effective in October 2022.⁸⁴⁸⁰ In keeping with OECD Principle 1.4 on "robustness, security, and safety," the law prescribes measures aimed at shoring up data security and restricting illegal activities, in part via a "data localization" requirement mandating that foreign entities store certain categories of data pertaining to users in Vietnam within the country's borders. However, there is insufficient infrastructure to prevent cybersecurity and digital

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

rights violations of Vietnamese citizens.⁸⁴⁸¹ Also, as indicated in this report, there is State-sponsored espionage and surveillance that infiltrates the digital real estate of Vietnamese citizens.⁸⁴⁸² Citizens of Vietnam remain both a source and victim of cyberattacks. In 2019, Kaspersky, a leading cybersecurity firm declared Vietnam the “second most cyber-attacked country in the world.”⁸⁴⁸³ In 2018, over 992,952 cyberattacks originated in Vietnam.⁸⁴⁸⁴

Data protection norms have additionally been developed through other laws, notably the 2016 Law on Network Information Security (LNIS).⁸⁴⁸⁵ This law assigns organizations the responsibility of protecting the personal data to which they are given access and identifies legal consequences for individuals and organizations that violate these provisions. Section 2 of the law stipulates a requirement of consent from individuals when organizations collect personal information (Article 17) and explicitly requires the deletion of personal data upon accomplishment of the purpose (Article 18). Sanctions punishing violations of personal data use can also be found in other regulations. For example, Vietnam’s 2020 Decree No.15/2020/ND-CP assigns fines for infringements of personal information and privacy including email, postal and telephonic spam.⁸⁴⁸⁶

None of these data protection rules apply to the state itself. While the new law requiring data localization may indeed strengthen cybersecurity, it also provides the Vietnamese government with additional authoritarian leverage, cementing restrictions on residents’ access to international media, social media, and other applications.⁸⁴⁸⁷

Vietnam’s first comprehensive Personal Data Protection Law (PDPL) took effect Jan 1, 2026,⁸⁴⁸⁸ integrating a data governance regime that was a collage of

legal instruments reflected in the country's constitution, criminal code, civil code, and a raft of sectoral and procedural regulations under a single framework. The new law establishes strict mechanisms for data subject rights, defines penalties for violations, and unifies regulations for cross-border data transfer. Notably, to reduce the compliance burden, SMEs and startups are exempt from certain impact assessment requirements for the first five years. The law specifies provisions for the treatment of data in artificial intelligence and machine learning as well as areas such as healthcare, employment, and for children or people with limited cognitive capacity.⁸⁴⁸⁹ as well as specifications for treating children's data. The PDPL aligns with many GDPR principles, including Lawfulness, Purpose limitation, Accuracy and storage limitation, Security, Violation prevention and management, and Harmony between national interests and individual rights.⁸⁴⁹⁰

Vietnam does not have a dedicated data protection agency, though the PDPL places some responsibility for oversight and reporting on the Ministry of Public Security as well as local committees. Although the law is in effect, a guiding decree and sanction decree to empower local regulators to handle noncompliance are pending.⁸⁴⁹¹ The first of these decrees was issued in December 2025.⁸⁴⁹²

Vietnam is not a member of the Global Privacy Assembly (GPA)⁸⁴⁹³ and endorsed no GPA resolutions.

Algorithmic Transparency

Vietnam's AI law requires human oversight in AI decisions and requires AI systems be developed and operated in a safe, reliable, secure, and impartial manner,

without discrimination.⁸⁴⁹⁴ Providers and deployers must be accountable and must clearly define legal responsibility for damages caused. The law requires providers and deployers to ensure those interacting with AI systems know they are interacting with machines and requires machine-readable labeling of AI-generated content.⁸⁴⁹⁵

Based on the Freedom House Country Report on Vietnam,⁸⁴⁹⁶ the government uses a variety of legislative machinery to acquire citizens' personal data and engineer sophisticated forms of mass surveillance. These include the Cybersecurity Law 2019, the Publishing Law, the Penal Code, the Law on Protection of State Secrets 2018, the Law on Information Security 2016, and a number of decrees. One notable example is Bluezone, a tracking application ostensibly introduced to control COVID-19. Freedom House reports that the application "shared user data with the government without disclosing that fact to users. The source code was not made available for external auditing. In late May 2021, the Ministry of Health issued an instruction to local governments that recommended sanctioning people who did not install Bluezone and other COVID apps before entering certain public places and facilities; local authorities were tasked with determining the specific sanction. As of May 2021, Bluezone had reached 31.88 million downloads." The report also cites examples of State-supported phishing attacks to acquire the personal data of citizens, especially dissidents and activists. No right to algorithmic transparency exists to allow citizens to obtain judicial redress, should it be a possibility.

Rice ATMs

In the early months of the COVID-19 lockdown in 2020, a business leader in Vietnam partnered with community organizations to deploy "rice ATMs" (automatic rice-dispensing machines) enabled with AI-facial recognition technology to ration food to people in need.⁸⁴⁹⁷ This program was widely publicized internationally, credited as an instance of applying advanced technology towards resolving basic

human needs during this public health crisis.⁸⁴⁹⁸ This popular program reportedly helped cement a benign view of AI and facial recognition technology within the country's population.⁸⁴⁹⁹

Smart City Initiatives

Vietnam's "smart city" initiative began as a directive from the prime minister in 2018 to promote sustainable cities.⁸⁵⁰⁰ The country's 2021 national AI strategy elaborated on this plan, promising substantial AI investments to upgrade and target resources in the country's most populous cities—namely Hanoi, Ho Chi Minh, Da Nang, and Can Tho—to benefit the quality of life and improve services ranging from energy distribution to traffic control to water supply to education. Vietnam's Ministry of Information and Communication released codified principles regarding the smart cities project, committing to "a people-centered approach [to] encourage the neutrality of technology [to] pilot new services with improvements based on the experience of users; [to] use open standards or open sources."⁸⁵⁰¹ The OECD AI Policy Observatory has identified the smart cities initiative as addressing its core principle 2.2, "Fostering a digital ecosystem for AI." Vietnam's smart city policies additionally echo OECD's core principle 1.1 pertaining to "inclusive growth, sustainable development, and wellbeing." Alongside these potentially vast benefits, however, there are credible reasons for concern that the smart cities project will include surveillance technologies that will further the government's capacity for authoritarian control.⁸⁵⁰²

Aus4Innovation: Innovation Policy Exchange with Australia

In 2017, Australia and Vietnam announced an “innovation partnership” named “Aus4Innovation”, aimed at building prosperity within Vietnam and furthering a strategic and economic partnership between the two countries. Currently overseen by CSIRO, the Australian Government agency responsible for scientific research, Aus4Innovation includes a notable “policy exchange”, aimed at helping Vietnam “bring up the living standards of all of [its] citizens over the coming decades”, while setting the stage for Australia to be a source of policy influence in establishing “an international best practice review based on expert input from Australia.”⁸⁵⁰³ The OECD AI Policy Observatory has identified Aus4Innovation as representing an instance of its core principle 2.5, “International cooperation for trustworthy AI.”⁸⁵⁰⁴ The Aus4Innovation Program also supported 2022 Vietnam Artificial Intelligence Day, (AIV4N), a conference that brings together government representatives, policymakers, and practitioners to discuss the latest development in Vietnam’s AI landscape.⁸⁵⁰⁵

The Australian Government’s Aus4Innovation program was reported to have awarded A\$1.45 million to strengthen Vietnam’s agriculture sector through advanced technologies in August 2024. Managed by CSIRO, the initiative funds three projects focusing on sustainable farming and climate resilience. The projects integrate artificial intelligence, geospatial tools, and digital traceability systems to boost agricultural productivity and market development. For example, the Griffith University and Hanoi University of Science & Technology are creating an AI-driven platform for carbon farming. Additionally, AI-powered certification systems by Griffith University and Vietnam’s Commission of Standards aim to enhance sustainability and product traceability.⁸⁵⁰⁶

Public Security and Identity Verification

Since April 2021, the Inspection Commissions of Party organizations at all levels in the People’s Public Security Forces have been required to build action plans to realize the Party resolutions regarding digital technology, artificial intelligence,

Center for AI and Digital Policy

and the 4th Industrial Revolution, contributing to building elite and modern public security forces by 2030.⁸⁵⁰⁷

In December 2022, Deputy Minister Luong Tam Quang asked the Immigration Department to deploy 37 level-4 public services related to entry and exit, perfect the issuance of electronic passports, and promote research and application of science and technology, artificial intelligence, and biometric identification to the management of entry and exit.⁸⁵⁰⁸

Vietnam's Ministry of Public Security expanded biometric data collection for the national ID system, including iris scans, voice samples, and DNA, under the Amended Law on Citizen Identification (2023) to enhance national security.⁸⁵⁰⁹ Vietnam has also trialed facial recognition for immigration, aiming to streamline identity verification for travelers, mandated by a 2024 directive on tourism and immigration. Additionally, facial recognition is used for digital payment verification as part of Vietnam's digital transformation efforts. However, limited privacy protections raise concerns about potential misuse or overreach in state surveillance.⁸⁵¹⁰

Predictive Policing

In its July 2022 report on inclusive development and artificial intelligence in Southeast Asia, the Asia Society Policy Institute notes, if AI adoption is “nascent” in Vietnam, “the topic of ethics in relation to AI has barely begun to percolate in the country.”⁸⁵¹¹ The institute highlights with particular concern Vietnam's stated plans to use AI applications in policing and immigration, “to proactively prevent crimes,” with the implication that Vietnam intends to apply surveillance technologies in developing predictive policing. The Asia Society Policy Institute report summarizes, “While there is some degree of recognition in Vietnam of the importance of AI ethics, their formulation and application remain underexplored.”

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Environmental Impact of AI

Vietnam's AI law considers energy efficiency and environmental protection as part of green, inclusive, and sustainable AI development.⁸⁵¹² The National AI Strategy includes the management of environmental and natural resources among potential applications for AI systems but does not acknowledge the environmental impact of developing and deploying such systems.⁸⁵¹³

Lethal Autonomous Weapons

Vietnam is not a High-Contracting Party to the Convention on Certain Conventional Weapons (CCW) but is a State Signatory.⁸⁵¹⁴ Vietnam has not officially announced a clear and independent national policy on Lethal Autonomous Weapon Systems (LAWS). However, the country is participating in the international discussions, such as by supporting UN General Assembly Resolution 78/241.⁸⁵¹⁵ This resolution highlights the urgent need to address the humanitarian, legal, security, technological, and ethical challenges posed by LAWS.

AI Literacy

Vietnam's AI law frames human resources and “disseminating AI knowledge through society” as “crucial factors, enabling Vietnam not only to utilize the technology but also to master, innovate, and develop it in its own unique direction.”⁸⁵¹⁶ UNESCO highlighted Vietnam's progress addressing AI literacy and the challenges of AI in education through the AI in Education Strategy, National Digital Competency Framework for Learners, and AI competency frameworks for

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

teachers and education managers.⁸⁵¹⁷ The RAM report recommends “continued efforts to strengthen teachers’ capacity in AI skills, digital pedagogy, and AI ethics, coupled with improved infrastructure and access to high quality digital learning resources” to “ensure equitable benefits from digital transformation.”

Human Rights

Vietnam has been designated as “Not Free” by Freedom House, scoring 20/100 Freedom in the World metrics, with particularly low marks (4/40) for political rights, and a low score (16/60) for metrics pertaining to “civil liberties.”⁸⁵¹⁸ The report elaborates, “freedom of expression, religious freedom, and civil society activism are tightly restricted” in Vietnam, and “particularly in 2024, the authorities have engaged in one of the widest-ranging crackdowns on dissent in decades,” including on citizens’ use of social media and the internet to voice dissent and share uncensored information. Vietnam’s data protection laws, requiring “data localization” within the country’s borders for a range of applications, additionally restricts residents’ ability to access information and media from abroad. These State restrictions over content access and its escalation of digital surveillance and harassment of digital activists correlate to the “Not Free” ranking in the Freedom on the Net report.⁸⁵¹⁹

OECD / G20 AI Principles

Vietnam is not a member of the OECD, G20, or Global Partnership on Artificial Intelligence (GPAI)⁸⁵²⁰ and has endorsed the OECD AI Principles.⁸⁵²¹ Still, However, as a member of ASEAN, Vietnam indirectly aligns with these standards. For example, ASEAN’s Guide on AI Governance and Ethics adapts global best practices, including the OECD AI Principles, for the Southeast Asia region.⁸⁵²²

Several elements of Vietnam’s national strategy echo some of the OECD AI principles. For example, the Vietnam AI Strategy and AI Law center humans in

developing and deploying AI, avoiding technology abuse, and are early steps in developing a legal framework to uphold these principles, aligning with OECD principles to design systems “in a way that respects the rule of law, human rights, democratic values, and diversity and should include appropriate safeguards to ensure a fair and just society.”⁸⁵²³

Additionally, the OECD AI Policy Observatory has identified Vietnam’s partnership with Australia, which includes a significant policy exchange component, as an instance of its core principle 2.5 pertaining to “international cooperation for trustworthy AI.”⁸⁵²⁴

Council of Europe AI Treaty

Vietnam did not participate in negotiations for the Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law in the Council of Europe.⁸⁵²⁵ Vietnam has not endorsed this first legally binding AI Treaty.⁸⁵²⁶

UNESCO Recommendation on AI Ethics

Vietnam endorsed the UNESCO Recommendation on the Ethics of AI, together with other UNESCO member states.⁸⁵²⁷ UNESCO launched Vietnam’s Readiness Assessment Methodology (RAM) report⁸⁵²⁸ as part of the country’s International Digital Week in 2025.⁸⁵²⁹ Vietnam’s legislative efforts in passing the Personal Data Protection Law, AI Law, and Digital Industry Law in the last quarter

of 2025 reflect a commitment to building a legal framework to make principles binding rather than advisory.⁸⁵³⁰

Evaluation

In the 2021 National AI Strategy, the government of Vietnam pledged that the nation would become an innovation leader in AI technology within the ASEAN nations, promising to apply AI towards the betterment of its citizens and to devise a system of laws and regulations that would prevent “abuse and infringement upon legitimate rights and interests of organizations and individuals,” as well as pledging to develop “legal documents on privacy protection, human rights [...] for AI-related activities.”⁸⁵³¹ Since then, Vietnam has continued to invest in programs within the country, including international partnerships aimed at improving its technological leadership and promoting the industry both domestically and abroad. In 2025, the country turned attention to building a robust legal framework to direct these investments to truly benefit humans, passing a personal data protection law, AI law, and digital technology industry law as well as the initial decrees necessary to implement them. Completion of the UNESCO Readiness Assessment Methodology reflects this commitment and provides clear recommendations to align the country’s AI and data governance with international ethical standards.

Perhaps the most salient risk is that AI may be used to further authoritarian rule. As Freedom House reported recently in the designation of Vietnam as “Not Free,” “authorities have increasingly cracked down on citizens’ use of social media and the internet to voice dissent and share uncensored information.”⁸⁵³² The Asia Society Policy Institute notes, Vietnam’s commitment to applying AI to “proactively prevent crimes” begs further discussion about the implications of surveillance technologies, algorithmic processes, and quality of datasets for predictive policing purposes.”⁸⁵³³

Artificial Intelligence and Democratic Values 2026
Center for AI and Digital Policy

Map of Tiers
CAIDP Index, 2026

METHODOLOGY

Scope

We began our assessment by examining the AI policies and practices of the top 40 countries by GDP. We next looked at 40 additional countries we considered “high-impact” to make the Index representative of both the diversity and commonalities among countries worldwide in AI policies, issues encountered, and best practices. Our aim is to examine those countries likely to have the greatest policy impact in the AI field. We also considered influential intergovernmental organizations such as the European Union, Council of Europe, OECD, UNESCO, and G20. However, we did not attempt to evaluate these institutional AI policies.

We expanded to 90 countries for the 2026 Index. We considered factors such as GDP, participation in AI policymaking in international organizations, and domestic AI policies as well as others to ensure broad regional and experiential representation.

Time Period

The research for the 2020 edition of the report was undertaken in late 2020 for publication in mid-December 2020. As the report has expanded, we have pushed publication later into year of release. For the 2021 edition of the report, published in mid-February 2022, we continued to gather information throughout 2021 and into early 2022. For the 2023 edition, information was gathered throughout 2022 and into early 2023. For the 2025 Index, we shifted the naming convention to reflect the year of publication. To the 2023 edition, we added information through 2023 and 2024, and activities in early 2025 that relate directly to metrics, such as endorsement of the Council of Europe AI Treaty. For the 2026 edition, we followed a similar process, including updates through 2025 and the most relevant for early 2026.

Factors

We identified 12 factors to assess national AI policies and practices. The factors reflect well-known frameworks for AI policy (the OECD/G20 AI Principles, UNESCO Recommendation on the Ethics of AI, Council of Europe Framework Convention on AI), human rights (the Universal Declaration for Human Rights), and democratic decision-making (transparency, public participation, and access to policy documents). We also highlighted key themes for AI policy, including algorithmic transparency and accountability.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

On certain factors, we deferred to well-established legal frameworks and well-known international organizations. For example, countries within the European Union are subject to the General Data Protection Regulation and the Data Protection Law Enforcement Directive, which provide certain rights to those who are subject to automated decision-making, including access to the underlying logic of an algorithm. The Council of Europe Modernized Convention 108 (Convention 108+) provides similar legal rights regarding AI. On general human rights assessments, we deferred to the reports of Freedom House, Human Rights Watch, and Amnesty International. We also recognized those countries that endorsed the resolution on AI and Ethics, the resolution on AI and Accountability, the resolution on facial recognition, and resolution on Generative AI adopted by the Global Privacy Assembly, the global association of leading privacy experts and officials.

On the issue of implementation, we recognize that it is difficult to assess progress toward AI policy goals empirically, particularly when the underlying objective is not measured in quantitative terms, as would be the case for research investment, papers published, or patents obtained. Nonetheless, we believe this must be a key component of the evaluation. Reports from the OECD and UNESCO tracking implementation of their respective principles and frameworks provide one source for assessment. The OECD published substantial reports on the state of implement of the OECD AI Principles in 2020, 2021,⁸⁵³⁴ and 2023.⁸⁵³⁵ The OECD has also encouraged member states to provide overviews on national AI strategies to the OECD AI Group of Experts, many of which are accessible on the OECD AI Policy Observatory. UNESCO created the Readiness Assessment Methodology (RAM) and Ethical Impact Assessment process as tools for implementation of the Recommendation on AI Ethics. We consider countries' engagement with these tools as well national policy action in assessing implementation.

We looked next at national developments, both favorable and controversial, concerning the implementation of AI policy. We consulted official sources but also reviewed independent sources such as news sources, agencies, and think tanks not directly aligned with national governments for these assessments.

Finally, because AI policy is in the early days, there is far more information about what governments intend to do than what they have done. We encourage governments to establish independent agencies with annual public reporting requirements to provide information about progress toward national goals and

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

compliances with international policy frameworks. Such reports could provide the basis for future comparative evaluations.

The Metrics

Q1. Has the country endorsed the OECD/G20 AI Principles?

The OECD/G20 AI Principles are the first global framework for AI policy. Endorsement of these principles provides a baseline to determine a country's compliance with international AI policy norms. Countries that have endorsed the OECD/G20 AI Principles fall into four categories: 1) OECD Member Countries, 2) Non-member OECD Countries that endorsed the OECD AI Principles, 3) G20 Member countries that subsequently endorsed the G20 AI Principles, which follow closely the original OECD AI Principles,⁸⁵³⁶ and 4) Members of the Global Partnership on Artificial Intelligence (GPAI),⁸⁵³⁷ which requires a commitment to the OECD AI Principles.⁸⁵³⁸

Determinations in this category are essentially binary: a country has either endorsed the OECD/G20 AI Principles or not.

Q2. Is the country implementing the OECD AI Principles?

Endorsement alone of the AI Principles is not sufficient to determine a country's AI practices. The OECD itself has begun a process to track implementation of the AI Principles, but the reporting to date is mostly anecdotal and inconclusive. We begin our analysis of implementation with the OECD reporting and then look to other sources, including government documents, news articles, and NGO reports to assess implementation.

Determinations in this category are more nuanced: some countries have called attention to their efforts to implement the OECD/G20 AI principles. Others have done so in practice without explicit references to the AI Principles. We have made reasonable efforts to identify national projects that implement the OECD/G20 AI Principles, based on reporting from the OECD, but information is often difficult to find. In some instances, we were able to acknowledge partial implementation (P). In 2020, we concluded that no country has fully implemented the OECD/G20 AI Principles and therefore no country received a Y determination.

⁸⁵³⁶ The G20 AI Principles directly restate the value-based principles in Part I of the OECD AI Principles

⁸⁵³⁷ GPAI, *Community* (2024), <https://gpai.ai/community/>

Artificial Intelligence and Democratic Values 2026
Center for AI and Digital Policy

Q3. Has the country endorsed the Universal Declaration of Human Rights?

In the human rights field, the Universal Declaration of Human Rights is the most well-known and widely adopted legal framework for the protection of fundamental rights. Although the UDHR preceded the rise of Artificial Intelligence, we anticipated that many of the significant policy debates ahead will be grounded in principles set out in the Universal Declaration. For this reason, we propose endorsement of the UDHR as a second baseline to assess country AI policies and practices.

Determinations in this category are essentially binary: a country has either endorsed the UDHR or it has not. The one notable exception is Saudi Arabia, which did not endorse the UDHR but is a member of the United Nations and has recognized, according to human rights organizations, certain human rights obligations.

Q4. Is the country implementing the Universal Declaration for Human Rights?

Like the question regarding implementation of the OECD AI Principles, measuring implementation of the UDHR is not a simple task. Several well-established international organizations, such as Freedom House and Human Rights Watch, have developed formal metrics to evaluate compliance with human rights norms. We defer to these organizations for the evaluation of general human rights practices, while also noting that several of these factors may be useful in future evaluation of AI practices.

Determinations in this category typically fell into two categories: Y, a country widely recognized for its defense of human rights as generally understood by reference to the UDHR, and P, a country in partial compliance with human rights obligations. In 2021, we made this determination more precise. Countries that Freedom House designated as “Free” received Y. A country designated “Partly Free” was received P and countries designated “Not Free” were designated N.

We continue to defer to the Freedom House ratings while noting concerns with their methodology. For example, Freedom House evaluates human rights conditions in Israel separately from those in the Gaza Strip and West Bank.

Q5. Has the country established a process for meaningful public participation in the development of a national AI Policy?

Almost every country in our report has set out a national AI strategy or action plan. We have attempted to fairly summarize and present these initiatives. But we are also interested in the development of these policies. Was there an opportunity for public participation? Was there a formal consultation process? Do the national AI policies reflect the views of those who may be impacted by the deployment of AI

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

techniques? And is there an ongoing mechanism for public participation as national AI policies evolve?

Determinations in this category were based on our ability to identify opportunities for meaningful public participation. The distinction between a Y and P in this category reflected the quality of the opportunity for public participation and evidence that governments engaged that participation meaningfully.

Q6. Are materials about the country's AI policies and practices readily available to the public?

Effective public participation requires public access to relevant documents. Has the national government taken steps to ensure that documents concerning AI policy are readily available, complete, and accurate? Are the materials available on the website of a public agency or are they maintained by a private company? Are there opportunities for future comment?

The determinations in this category often aligned with the determinations about public participation. We respect the practice of countries to publish reports and to seek public reports in the national language. We note, however, that the absence of an English translation may make independent evaluation of a country's AI policies and practices more difficult. We discuss the issue of Language in more detail below.

Q7. Does the country have an independent (agency/mechanism) for AI oversight?

All governments understandably seek to advance national AI priorities. And most governments have directed a science or industry ministry to lead national efforts. But the deployment of AI techniques also raises concerns about accountability, privacy and data protection, fairness, transparency, and equity. For these reasons, we look to determine whether countries have independent agencies, such as a data protection agency, a human rights commission, or an AI ethics commission, to protect fundamental rights.

Determinations in this category were based on the actual establishment of mechanisms to oversee or guide AI practices. Again, the difference between a Y and a P determination reflected the quality and breadth of the oversight mechanisms.

Q8. Do the following goals appear in the national AI policy: "Fairness," "Accountability," "Transparency," "Rule of Law," "Fundamental Rights"?

There are many themes in the AI policy realm. We identified these five goals as the most significant. They appear frequently in AI policy frameworks, and they are grounded in law. We recognize that countries that have endorsed the OECD/G20 AI Principles have, by implication, endorsed these goals. But this question asks whether countries have explicitly identified these goals in their national AI strategies.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Determinations in this category attempt to evaluate the extent to which a country has prioritized these AI policy goals. Full endorsement of all goals received a Y, partial endorsement a P.

Q9. Has the country by law established a right to Algorithmic Transparency?

One of the most significant AI policy issues today is Algorithmic Transparency. We take the position that individuals should have the right to access the logic, factors, and data that contributed to a decision concerning them and the ability to meaningfully contest adverse decisions. This right is currently established in two legal frameworks: The General Data Protection Regulation (GDPR) of the European Union (Article 22) and the Council of Europe Convention 108+, the modernized Privacy Convention (Article 9). Countries that are within the EU and/or signatories to COE 108+ have therefore established this right. We have also considered whether countries, by national law, have established the right to algorithmic transparency.

For determinations in this category, we assigned a Y to those countries that are subject to the GDPR and/or the Council of Europe Convention or national legislation that explicitly grants these rights. In a subsequent review, we will investigate whether countries have *implemented* a right to algorithmic transparency. This will provide a more detailed assessment of this key metric.

Q10. Has the country endorsed the Council of Europe AI Treaty?

The Council of Europe Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law is the first legally binding international treaty on AI. We consider the AI Treaty, open for signature by all CoE member and non-member states a watershed moment in the development of AI policies. We substituted the CoE Treaty for the UNESCO Recommendation because 1) almost all countries have now endorsed the UNESCO Recommendation and 2) support for the AI Treaty will demonstrate a commitment to human rights, democracy, and the rule of law. For AIDV 2025, we wanted to highlight countries that made this commitment. We designated countries that signed as Y⁸⁵³⁹ and EU member states that are party to the Convention through EU signature with P.⁸⁵⁴⁰ In future editions, we may designate countries that have ratified the AI Treaty as Y and those that have signed as P.

⁸⁵³⁹ Council of Europe Treaty Office, *Chart of Signatures and Ratifications of Treaty 225* (Mar. 26, 2026), <https://www.coe.int/en/web/conventions/full-list?module=signatures-by-treaty&treatyenum=225>

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

[Note on Methodology: in AIDV 2020, we asked in Q11 whether countries supported the Social Contract for AI and in AIDV 2021, we asked in Q10 whether countries had endorsed the Universal Guidelines on AI. We described both as “aspirational goals for the Age of AI that go beyond the OECD/G20 AI Principles.” In AIDV 2022 and AIDV 2023, our assessment asked whether countries supported the UNESCO Recommendation on AI Ethics. We recognize this change disrupts our year-over-year comparisons but reflects our efforts to adapt to the rapid evolution of AI policy.]

Q11: Is the country implementing the UNESCO Recommendation on the Ethics of AI?

Endorsement alone of the UNESCO Recommendation is not sufficient to determine a country’s AI practices. UNESCO itself has begun a process to track implementation of the Recommendation, but the reporting to date is limited to a few countries. We begin our analysis of implementation with UNESCO documents pertaining to planned partnerships and the 2022 UNESCO AI Needs Assessment Survey in Africa.⁸⁵⁴¹ However, we deepened the analysis by searching for statements made by countries pledging their commitment to implement the UNESCO Recommendation. We tracked preliminary announcements and monitoring mechanisms to be put into place. We then looked to other sources, including regional organizations’ documents, news articles, and NGO reports, to assess implementation.

Determinations in this category show that some countries have called attention to their efforts to implement the UNESCO Recommendation and help other countries to implement it. We also started to identify other countries that have done so in practice without explicit references to the Recommendation. We will proceed in the future with identifying national projects that implement the UNESCO Recommendation.

Completion of the UNESCO Readiness Assessment Methodology (RAM) is one such project. The report produced through the RAM provides a source for assessing countries’ capacity for implementing the UNESCO Recommendation and represents an important action toward implementation.⁸⁵⁴² Given the critical mass of countries that have completed the RAM as of 2025, we consider RAM completion a

⁸⁵⁴¹ UNESCO, *UNESCO Launches the Findings of the Artificial Intelligence Needs Assessment Survey in Africa* (Sept. 28, 2022), https://www.unesco.org/en/articles/unesco-launches-findings-artificial-intelligence-needs-assessment-survey-africa?TSPD_101_R0=080713870fab2000b997f8502bad446dd247c280241aa27fd7822794303d84c6660f286b5a18426908ddf3745b1430007a6bae5f69251a9f6e076c992f212add23ade97d15b9e6e1e4b6982ed494862afe0aec119ec0669b25f164dab4a02b42

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

necessary action for implementation of the UNESCO Recommendation in the ***CAIDP Index 2026***. Countries recognized with Y have completed the RAM and taken significant additional policy actions to implement the UNESCO Recommendation. We acknowledge partial implementation (P) for countries that have completed the RAM or taken policy actions aligned with implementation.

Q12: Has the country's Data Protection Agency endorsed the 2018 GPA Resolution on AI and Ethics, the 2020 GPA Resolution on AI and Accountability, the 2022 GPA Resolution on AI and Facial Recognition, and the 2023 GPA Resolution on Generative Artificial Intelligence Systems?

In the fall of 2018, the Global Privacy Assembly (then known as the International Conference of Data Protection and Privacy Commissioners), adopted a foundational Declaration on Ethics and Data Protection in Artificial Intelligence.⁸⁵⁴³ The 2018 Declaration emphasized fairness, vigilance, transparency and intelligibility, and measures to reduce unlawful bias and discrimination. In 2020, the GPA adopted a resolution on AI and Accountability.⁸⁵⁴⁴ That resolution sets out a dozen steps for AI accountability, including the preparation of human rights impact assessments. This Declaration was followed by three other key AI-related resolutions: the 2020 resolution on AI and Accountability, the 2022 resolution on AI and Facial Recognition, and the 2023 resolution on Generative Artificial Intelligence Systems.

We believe that support for these resolutions is an important indicator of a country's commitment to AI and data protection and effective implementation of AI policy goals. We checked to see which countries explicitly sponsored the resolutions. We will also consider other notable initiatives in future global surveys of AI policies and practices.

For determinations in this category, we assigned a Y to countries that sponsored the four resolutions, an N to countries that sponsored none of them (or are not represented at the GPA), and P to the countries that sponsored one, two, or three of the resolutions.

As an aside to the Global Privacy Assembly, we would recommend new mechanisms that would allow members to endorse resolutions concerning AI in subsequent years. We will update country ratings accordingly.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Hong Kong

Hong Kong constitutes a special case in our review of national AI policies and practices. Although Hong Kong, an Administrative Region of the People's Republic of China (HKSAR) is not a country, it ranks number 37 in the world for GDP, placing it within the top 40 countries we reviewed for the 2021 index. Hong Kong also has an active data protection agency that has contributed to the formulation of the AI policies endorsed by the Global Privacy Assembly. As Hong Kong is not a country it could not enter into international agreements, such as the OECD AI Principles. So, we treated commitments made by China to these policies as if they were made by Hong Kong. At the same time, we recognized variances in AI practices in the Region as well as the different ratings for compliance with the human rights norms, as determined by Freedom House.

Exemplars

In developing the methodology, we also created a list of exemplar countries for several metrics. For example, on Question 5, concerning meaningful public participation, we were struck by the high level of public engagement in Switzerland. On Question 6, concerning the availability of a countries AI policies and practices, Germany's *Plattform Lernende Systeme* offers a map that shows, by region, AI developments across the country. And the multiple agencies in France, the CNIL and the Defender of Rights, provide a very good example of independent oversight for AI, highlighted by Question 7.

Scoring

We assigned a numeric value of 1.0 to each Y answer, 0.5 to each P answer, and 0.0 to each N answer. We then tallied the numbers, weighing each metric equally, and produced a total score. A top score would be 12, a bottom score is 0. We grouped countries by color gradation and then into tiers based on total scores.

Search Strategy

To locate relevant policy materials, we conducted extensive online searches. Key search terms, often used in combination with AI or Artificial Intelligence, included: Accountability, Algorithmic Transparency, Data Protection, Digital, Ethical, Ethics, Fairness, Governance, Law, Legislation, Policy, Privacy, Regulation, Strategy, and Technology.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Descriptive Summary

Each country report includes a descriptive summary labelled “Evaluation.” The evaluation does not precisely track the metrics. It is intended to highlight the key findings in the country report and provide a general overview for the reader. For AIDV 2025, we included a brief introduction to highlight the most important developments in the country in 2024.

Language

Our research team has rapidly expanded and diversified, with language expertise in various languages such as English, French, German, Italian, Japanese, Korean, Mandarin, Russian, Spanish, Turkish, Uyghur, or Vietnamese. We rely on this language diversity in conducting our analysis of sources in the original language. However, we prefer to use official English translations when they are available because of our international audience and research group. In instances where a country designated an official English translation or original English-language source, we cited the title in English only. When an official translation was not available and the research team translated or relied on machine translators, we refer to the document by the translated English title in the text. In the footnote, we aim to use the title in the English translation, followed by the original language in square brackets.

Citation Format

We have continued the simplified citation format adopted for the ***CAIDP Index 2022*** in subsequent editions. Each citation includes the author and title of the publication. Where there are multiple authors, we provided the name of the institution if available. We include also a date where there was a final publication date. By way of contrast, some citations to websites do not include dates. We included transparent, detailed URLs so the reader can quickly assess the source. In a paragraph where there may be multiple references to the same source, we cited to the source in the first instance, but not in subsequent instances unless there was an intervening reference to a different source.

Gender Balance and Diversity

In the development of the ***CAIDP Index***, the selection of team members and reviewers, we strived to maintain gender balance. We have also tried to promote diversity and regional representation.

Bias

We did not explicitly examine the issue of bias in AI, although this is a widely discussed topic and the focus of extensive research, including bias in datasets. Our view is that the most effective policy response to the problem of bias is the *explicit recognition of Fairness, Accuracy, and Transparency* in AI policy and the implementation of these principles in AI practices. Several questions in the **CAIDP Index** (Q1, Q2, Q7, Q9, Q10, Q11, Q12) make these factors key metrics for the evaluation of a nation's AI policies.

We also recognize the inherent bias in the construction of all surveys, including in the survey focus, framing of questions, and research methodology.⁸⁵⁴⁵

Private Sector Practices

We did not attempt to review or evaluate the practices of private firms or organizations. The **CAIDP Index** attempts only to evaluate the policies and practices of national governments. We do believe that private firms must act in compliance with law and through democratic institutions, and that the evaluation of government policies must ultimately be the measure of private sector practices.⁸⁵⁴⁶

⁸⁵⁴⁵ Max Weber, *Objectivity of Social Science and Science Policy* (1904)

⁸⁵⁴⁶ Further discussion of the methodology underlying the *AI Index* is presented in Marc Rotenberg, *Time to Assess National AI Policies*, Blog@CACM (Nov. 24, 2020), <https://cacm.acm.org/blogs/blog-cacm/248921-time-to-assess-national-ai-policies/fulltext>
