TABLE OF CONTENTS

EXECUTIVE SUMMARY.....	1
PURPOSE AND SCOPE.....	1
THE 2026 EDITION	1
ACKNOWLEDGEMENTS	3
A YEAR IN REVIEW	21
<i>Progress</i>	21
<i>Backsliding</i>	26
<i>Pushing Forward</i>	27
<i>Key Developments 2025</i>	31
<i>2026 Recommendations</i>	32
THE GLOBAL AI POLICY LANDSCAPE	33
COUNCIL OF EUROPE.....	33
<i>European Court of Human Rights</i>	35
EUROPEAN UNION	35
<i>European Commission</i>	36
<i>European Parliament</i>	36
<i>Two Councils</i>	37
<i>Court of Justice of the European Union</i>	38
<i>European Data Protection Board</i>	39
<i>European Data Protection Supervisor</i>	40
G7.....	41
<i>G7 Privacy Roundtable</i>	43
G20	44
GLOBAL PRIVACY ASSEMBLY	45
OECD.....	46
<i>Global Partnership on AI</i>	47
<i>OECD AI Policy Observatory</i>	47
<i>Collaboration with United Nations</i>	48
UNITED NATIONS.....	48
<i>UNESCO</i>	49
<i>UN High Commissioner for Human Rights</i>	52
<i>UN Special Rapporteur</i>	53
<i>UN and Lethal Autonomous Weapons</i>	53
THE VATICAN	57
TECHNICAL SOCIETIES.....	59
LEGAL SOCIETIES	61
CIVIL SOCIETY	61
<i>Global Efforts</i>	62
<i>Africa</i>	62

<i>Americas</i>	63
<i>Asia</i>	64
<i>Europe</i>	65
COUNTRY REPORTS	67
ARGENTINA	67
<i>National AI Strategy</i>	67
<i>Local Strategies</i>	68
<i>Public Participation</i>	69
<i>Data Protection</i>	70
<i>Algorithmic Transparency</i>	73
<i>Data Scraping</i>	75
<i>Use of AI in Public Administration</i>	75
<i>Facial Recognition</i>	76
<i>Environmental Impact of AI</i>	78
<i>Lethal Autonomous Weapons</i>	79
<i>AI Literacy</i>	80
<i>Human Rights</i>	81
<i>OECD / G20 AI Principles</i>	81
<i>Council of Europe AI Treaty</i>	82
<i>UNESCO Recommendation on AI Ethics</i>	82
<i>Evaluation</i>	83
AUSTRALIA	85
<i>National AI Strategy</i>	85
<i>International Cooperation on Safe and Responsible AI</i>	89
<i>Public Participation</i>	90
<i>Data Protection</i>	91
<i>Algorithmic Transparency</i>	94
<i>Data Scraping</i>	96
<i>Use of AI in Public Administration</i>	98
<i>Use of AI in Education</i>	102
<i>Use of AI in the Military</i>	103
<i>Environmental Impacts of AI</i>	103
<i>Lethal Autonomous Weapons</i>	105
<i>AI Literacy</i>	107
<i>Human Rights</i>	108
<i>OECD / G20 AI Principles</i>	109
<i>Council of Europe AI Treaty</i>	110
<i>UNESCO Recommendation on AI Ethics</i>	111
<i>Evaluation</i>	111
AUSTRIA	113
<i>National AI Strategy</i>	113
<i>EU Digital Services Act</i>	115
<i>EU AI Act</i>	115
<i>Public Participation</i>	116
<i>Data Protection</i>	116
<i>Algorithmic Transparency</i>	118

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

<i>Facial Recognition</i>	119
<i>Automated Tax Fraud Detection</i>	120
<i>User Tracking and Website Analytics</i>	121
<i>Environmental Impact of AI</i>	122
<i>Lethal Autonomous Weapons</i>	123
<i>AI Literacy</i>	124
<i>Human Rights</i>	125
<i>OECD AI Principles</i>	125

EXECUTIVE SUMMARY

Purpose and Scope

The Center for AI and Digital Policy (CAIDP) ***Artificial Intelligence and Democratic Values Index*** (CAIDP Index) is the first global survey to assess progress toward trustworthy AI based on detailed narrative reports, combined with a methodology that produces ratings and rankings for national AI policies and practices.

The **CAIDP Index** has these objectives: (1) to document AI policies and practices, based on publicly available sources, (2) to establish a methodology for the evaluation of AI policies and practices, based on global norms, (3) to provide a basis for comparative evaluation, (4) to provide the basis for future evaluations, and (5) to ultimately encourage all countries to make real the promise of AI that is trustworthy, human-centric, and provides broad social benefit to all.

Artificial Intelligence and Democratic Values focuses on human rights, rule of law, and democratic governance metrics. Endorsement and implementation of the OECD/G20 AI Principles and the UNESCO Recommendation on the Ethics of Artificial Intelligence are among the primary metrics. Opportunities for the public to participate in the formation of national AI policy, adoption of the right to algorithmic transparency, and creation of independent agencies to address AI challenges are also among the metrics. Patents, publications, investment, and employment impacts are important metrics for the AI economy, but they are not considered here.

The **CAIDP Index** is published annually and will evolve as country practices change and new issues emerge.

The 2026 Edition

The 2026 edition of the report updates and expands the previous reports. To reflect some of the key discussions and developments in the AI policy landscape, our efforts to enhance usability, and our expansion as an organization, we have also made the following changes for ***CAIDP Index 2026***.

- We updated the metric concerning the UNESCO Recommendation on the Ethics of AI. Recognition for full implementation (Y) of the Recommendation requires completion of the Readiness Assessment Methodology (RAM) and additional steps.
- We added 10 new country reports to the Index, bringing our total to 90 countries. The new countries for the 2026 edition are: Benin, Ecuador, Greece, Jordan, Mozambique, Namibia, Oman, Romania, Slovakia, and Tanzania.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

- We introduced a section on AI Literacy to weigh policies promoting education and capacity-building for students, workers, and civil servants. We focus on programs designed to prepare citizens to live and participate in a world shaped by AI.
- The scores for country reports previously published were reviewed and revised based on developments during the past year concerning AI policies and practices.
- The number of researchers participating in the project has grown significantly. More than 500 CAIDP Research Group members representing more than 90 countries contributed updates from 2025. This brings our total contributors above 2000 researchers representing 130 countries.

The CAIDP AI and Democratic Values report is a trusted global reference.

– *Council of Europe Secretary General Alain Berset (2026)*

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

For anyone who wants to engage AI governance seriously, as a researcher, practitioner, educator, or advocate, the CAIDP Index is as close to an essential resource as this field has produced.

– *Carolina Rossini, University of Massachusetts, Amherst (2026)*

The Index offers a valuable resource for policymakers, researchers, and civil society working to ensure that artificial intelligence is developed and deployed in ways that are trustworthy, human-centric, and beneficial to society.

– *David Roldán Martínez, International WoMenX in Business for Ethical AI (2026)*

The CAIDP Index and the work of the CAIDP in general demonstrate the value of civil society engagement as a factor in policy, in this case as an essential evidence-based contribution to the regulation and governance of AI.

– *Hannes Werthner, Digital Humanism (2026)*

The Index is essential for informing anyone curious about the key trends on how nations are responsibly adopting AI.

– *Michael Zimba, Malawi University of Science and Technology (2026)*

The wealth of information in the CAIDP Index is unparalleled and the rigor is uncanny. What an excellent tool for researchers and policy makers!

– *Niovi Vavoula, Université du Luxembourg (2026)*

The CAIDP Artificial Intelligence and Democratic Values Index is a critical resource for practitioners and technology adoption leaders

– *Pablo Molina, Drexel University (2026)*

[CAIDP's study is] a significant milestone that opens the door for us to consider the long-term material impacts of technology, ensuring that our pursuit of innovation consistently protects the intellectual and spiritual well-being of all societies.

– *Syed Ishtiaque Ahmed, University of Toronto (2026)*

As the development and use of AI continues to increase exponentially, governments and civil society have struggled to keep pace. [...] This report is essential reading for anyone looking to grasp the key trends that link how nation states are responding to the rise of AI, and for anyone looking to understand the key developments in specific states. It is both thoroughly researched and the product of deep and broad expertise.

– *Edward Santow, Human Technology Institute, UTS (2025)*

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The AIDV Index is an incredibly impressive and valuable compendium. The country reports themselves offer an extremely valuable collection of case studies.

– *Justin Longo, University of Regina (2025)*

The AI and Democratic Values 2024 report is a well-developed and highly technical work that provides essential insights into the intersection of artificial intelligence and democratic governance. This report serves as a crucial tool for understanding how nations can effectively promote and safeguard democratic values in the age of AI. It is an invaluable resource for countries seeking to strengthen democratic principles while leveraging AI responsibly.

– *Armando Guio Español, Berkman Klein Center (2025)*

It is always encouraging to see the progress in AIDV and its contribution to the formation of AI policies around the world.

– *Wonki Min, KAIST (2025)*

The report seeks to shed light on the broad landscape of AI regulation and governance. Accordingly, it seeks to explicate both the challenges and opportunities surrounding the adoption of AI systems, making the AIDV a useful reference document that points towards more inclusive digital futures.

– *Bulelani Jili, Harvard University (2025)*

I endorse this report for its clear and diverse inclusion of countries in both the Global North and the Global South. The report gives an important insight into AI-related activities globally. This is important because AI does not operate in a vacuum, nor does it operate in silos: its impact is intertwined across the globe.

– *Kutoma Wakunuma, De Montfort University (2025)*

The CAIDP 2024 Report continues its tradition of excellence in providing essential insights into the global relationship among democratic values, ethics and the accelerated pace of AI innovation and development. It is an essential tool to understand the nature of AI and its relationship to the public good. At UNESCO, with our global standard on the ethics of AI, we are proud to partner with CAIDP to achieve a technological transition that is fair and sustainable.

– *Former UNESCO Assistant Director-General for Social and Human Sciences at Gabriela Ramos (2024)*

CAIDP's report sheds light on the current landscape of international regulations, national laws and policies emerging from the fascinating and complex field of AI. The report emphasizes the imperative to protect fundamental rights and uphold the rule of law and will serve as a useful roadmap for shaping AI

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

governance and to foster and advance a crucial dialogue among diverse stakeholders in the international arena.”

– *Cristos Velasco, DHBW Cooperative State University (2024)*

CAIDP’s flagship report provides insightful information how the AI principles are translated into practice across 75 countries.

– *Wonki Min, SUNY Korea (2023)*

It is a great exercise of comparative digital law in action, providing a comprehensive perspective on the evolution of AI policy also contributing to underline the constitutional relationship between AI & democracy. Digital Democracy and rule of law in the digital context will be the real challenges for the next decade.

– *Oreste Pollicino, Bocconi University (2023)*

A very worthwhile analysis.

– *Stuart Russell, University of Berkeley, California (2022)*

An impressive body of work.

– *Alessandro Acquisti, Carnegie Mellon University (2022)*

An excellent report, a very useful tool for the community and a reference to see nexus between AI and Democratic Values.

– *Leyla Keser, Istanbul Bilgi University (2022)*

A very insightful report on AI laws and policies that addresses significant international developments and provides a terrific comparison of AI laws and policies across 50 countries.

– *Lee J. Tiedrich, Duke University (2022)*

This report is unique in that it compares AI policies and practices around the world and should inspire progress toward trustworthy and human-centric AI. The report also documents the important role of digital rights and consumer groups in this endeavor.

– *Ursula Pachl, European Consumer Association (BEUC) (2022)*

It's rare to read a document that has the potential to influence national policies on artificial intelligence around the world. The country descriptions and evaluations are thoughtfully organized, well-written, and carefully documented. The country rankings enable readers to have a broad understanding of who the leaders are and why, while pointing out what still needs to be done. The AI and Democratic

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Values index gives me hope that AI policy efforts can improve human rights, social justice, and dignity.

– Ben Shneiderman, author, *Human-Centric AI* (Oxford 2022)

In this historical moment of global interest negotiation and competition on AI we are in right now, we urgently need a shared narrative serving the human interest and democracy. With its comprehensive overview of key global and local power actors and initiatives The Artificial Intelligence and Democratic Values Index is an essential instrument for the facilitation of this shared global dialogue on AI now and in many years to come.

– Gry Hasselbalch, *DataEthics.eu*, *InTouchAI.eu* (2022)

This is a very ambitious and important exercise. The outcome is impressive—detailed and rigorous.

– Valsamis Mitsilegas, *Queen Mary University of London* (2022)

This comparative study sheds critical light on the adoption of Artificial Intelligence in democratic societies. AI and Democratic Values is an indispensable reference source for regulators, reporters, academics, and practitioners

– Dr. Pablo G. Molina, *Georgetown University* and founder, *International Applied Ethics and Technology Association* (iaeta.org) (2022)

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

A Year in Review

2025: Progress, Backsliding, and Pushing Forward

The *AI and Democratic Values Index (CAIDP Index)*, published annually by the Center for AI and Digital Policy provides a comprehensive review of AI policies and practices worldwide. In this sixth edition, we highlight increased support for the international AI treaty and progress in various countries toward comprehensive AI legislation and the creation of supervisory authorities. We also noted backsliding, particularly with attempts by the US federal government to interfere with state legislation on AI and influence the implementation of the EU AI Act. Despite these setbacks, AI governance continues to move forward, led by international organizations including the United Nations and UNESCO and, increasingly, middle powers, including countries from the Global South.

Progress

In the roughly 20 AI Intelligence and Human Rights, Democracy, and the Rule of Law opened for signature, 45 countries have endorsed this first international treaty on AI. Bosnia and Herzegovina, Canada, Japan, Liechtenstein, Switzerland, Ukraine, and Uruguay signed in 2025, and Armenia signed in early 2026.¹ The mandate of the Committee on Artificial Intelligence (CAI), which drafted the Convention, concluded in 2025.² The Treaty extends to South America, North America, Europe, and East Asia. The final meeting reflected the global commitment to the treaty's principles and expanded global outreach. Ecuador joined the meeting as a CAI observer for the first time and committee members engaged in a Thematic Hearing on "Connecting Asia, the Global South, and Europe on Responsible AI in the Public Sector."³ The Declaration on AI and Global Governance⁴ at the conclusion of the Lisbon Forum organized with the GPAI Expert Community⁵ reflected efforts to connect Europe, Africa, the Middle East, Latin America, and Asia in discussions

Center for AI and Digital Policy

on AI governance challenges. A proposed Steering Committee on New and Emerging Technologies (CDNET) to complete work on implementation tools for the Framework Convention and to offer advice to the Committee of Ministers on AI governance could further increase the treaty's global support.⁶

Several countries formalized legal frameworks to guide the development, deployment, and use of artificial intelligence and to answer questions about liability for harms. China's revised cybersecurity law⁷ defines liability and specifies penalties for individuals and for network operators responsible for "serious" failures such as data breaches or infrastructure failure. Individuals and operators can also be liable for disseminating or failing to stop the spread of prohibited information. In the European Union, Italy charged forward, delivering the first national framework implementing the EU AI Act.⁸ Slovenia⁹ and Hungary, too,¹⁰ passed national acts to create a more robust framework for enforcing the regional act. Even as the European Commission's Digital Omnibus loosens requirements in the name of simplification,¹¹ national governments are developing regulations to provide clarity for companies and protections for their citizens.

Vietnam¹² and Peru¹³ both passed comprehensive, risk-based AI legislation near the end of 2025. Like the EU AI Act, the Vietnamese and Peruvian legal

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

frameworks require safeguards for high-risk systems and prohibit certain AI applications such as social scoring in the Vietnamese case¹⁴ and mass surveillance and biometric identification (with exceptions) in the Peruvian case.¹⁵ These prohibitions offer a step toward realizing the Global Call for AI Red Lines launched during the UN General Assembly and supported by over 90 organizations, including CAIDP, and AI and governance experts.¹⁶ Most of the provisions of the Peruvian law entered into force at the end of 2025 while Vietnamese law entered into force in March 2026, months after the Korean AI Basic Law promulgated in January 2025.¹⁷ Like the EU law, the Peruvian law has rolling deadlines, including progressive steps over three years toward full implementation of the article on Algorithmic Transparency. Taiwan's AI Basic Act enacted in January 2026 defines principles and a risk-based framework for future legislation.¹⁸

Implementation of global frameworks and governance mechanisms progressed in 2025, too. UNESCO has supported more than 40 countries through the report stage of Readiness Assessment Methodology (RAM).¹⁹ Countries from the Global South and global majority continue to lead in the completing the RAM. Asia saw the greatest number of completions since the launch of the 2025 Index, with 10 countries—Bangladesh, Cambodia, India, Laos, Malaysia, Maldives, Philippines, Thailand, Timor-Leste, and Vietnam—joining Indonesia. Botswana, Chad, Mauritius, Namibia, São Tomé and Príncipe, Tanzania, and Zimbabwe joined African countries identified last year, with Rwanda nearing completion. Egypt, listed under

¹⁹ UNESCO Global AI Ethics and Governance Observatory, *Global Hub* (Oct. 2025), <https://www.unesco.org/ethics-ai/en/global-hub>; as of 3/31/26, 43 RAM reports are accessible in the Digital Library, though not all of those countries are listed on the Hub as completed. Colombia, Democratic Republic of Congo, and Paraguay have published reports but have no profile. Rwanda has a profile, but the report is not available.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Arab States and Africa, and Oman joined Morocco and Saudi Arabia in the Middle East. Eight countries from Latin America and the Caribbean also published reports since April 2025, including Peru, Paraguay,²⁰ Jamaica, Ecuador, Curaçao, Cuba, Colombia, Antigua and Barbuda. The Netherlands became the first European country to complete the process in 2025, with Moldova following in early 2026. Countries have also participated in programs to equip civil servants with basic knowledge about the uses and risks of AI technologies through UNESCO initiative such as the Supervising AI by Competent Authorities program²¹ and the AI Literacy Program for Civil Servants.²²

Beyond the RAM, many countries have taken action to implement the UNESCO Recommendation²³ and OECD AI Principles²⁴ through policies to integrate AI literacy and digital skills into national education programs and support for community-based initiatives. Namibia's national digital strategy emphasizes integrating digital literacy into the national education curriculum, training teachers, and developing community-based digital literacy and AI training programs to empower citizens to know when and how to use AI systems effectively.²⁵ Argentina's Secretariat of Education and Ministry of Human Capital launched a beta version of a program (PAIDEIA) to prepare students in primary and secondary education to "understand and actively participate in a world increasingly mediated by technology."²⁶ The program applies cognitive and durable skills to coding and computer science as well using and developing AI systems. Finland's Ministry of

Center for AI and Digital Policy

Education and Culture’s Recommendation on AI also centers AI literacy with attention to legal and ethical issues.²⁷ Finland’s Recommendation identifies competencies students can develop through AI literacy education and the safe use of AI tools in learning. These programs also build citizens’ capacity to engage in AI policymaking.

Japan continues to model action-oriented governance globally, particularly through the country’s leadership engaging with the G7 Hiroshima AI Process (HAIP). The OECD and G7 released the HAIP Reporting Framework in early 2025, and 9 of the 25 companies who have submitted reports as of January 2026, are Japanese.²⁸ Japan explicitly drew on the HAIP to formulate the national AI Act, which is intended to “improve the quality of life of the Japanese people and boost the development of the national economy by promoting AI research, development, and utilization.”²⁹ Japan’s integration of the HAIP in the national AI Act exemplifies how countries can integrate international frameworks and mechanisms into national legislation to ensure citizens’ safety and to build trust.

The AI Action Summit in early 2025 marked a clear shift in the global AI policy agenda from a narrow focus on catastrophic risk at the 2023 Bletchley Safety Summit to a broader emphasis on deployment, economic opportunity, and global governance. The conference also featured many new participants from the Global South. More than 60 countries and major international organizations endorsed a political declaration emphasizing that AI should be “open, inclusive, transparent, ethical, safe, secure and trustworthy” and aligned with human rights and sustainability goals.³⁰ Surprisingly, the United States and the United Kingdom chose not to endorse the conference declaration.

The Vatican has also been prominent in discussions on AI governance. Pope Francis’s message to the AI Action Summit stressed the power of the heart over algorithms and reiterated that “the voices of all stakeholders should be taken into account, including the poor, the powerless and others who often go unheard in global

decision-making processes”³¹ in discussions on AI governance. The Vatican endorsed the Statement on Inclusive and Sustainable AI.³² Pope Leo emphasized human dignity, too, telling AI governance leaders “Acknowledging and respecting what is uniquely characteristic of the human person is essential to the discussion of any adequate ethical framework for the governance of AI.”³³ This effort, requires “widespread participation that gives everyone the opportunity to be heard with respect, even the most humble”³⁴ to restore “confidence in the human ability to guide the development of these technologies [...] a confidence that today is increasingly eroded by the paralyzing idea that [AI] development follows an inevitable path.” Actors from politics, business, communities, and religious and other institutions must place this joint responsibility, Pope Leo argued, “before any partisan interest or profit, which is increasingly concentrated in the hands of a few.”

Backsliding

The US federal administration’s swift revocation of the 2024 Executive Order on Safe, Secure, and Trustworthy AI³⁵ marked the beginning of a steady decline in the country’s leadership in trustworthy artificial intelligence and global governance. Administration leaders invoked a race with China and security threats from unnamed adversaries to rationalize an innovation-at-all costs narrative that opposed well-established values for AI governance, including fairness, transparency and

accountability, and reliability.³⁶ This narrative has material effects. With the withdrawal from UNESCO³⁷ and opposition to the AI Scientific Panel and the Paris Declaration, the United States has increasingly acted on the world stage as an adversary to the AI governance principles it helped establish.

The United States has threatened progress in the European Union, too. The proposed AI Digital Omnibus would grant companies easier access to data for training models³⁸ without the AI Act protections designed to build trust.

Pushing Forward

Resistance to the Trump Administration has united actors in the United States and globally. California,³⁹ New York,⁴⁰ and Texas,⁴¹ for example, moved forward with new AI safeguards. The US Senate defeated a proposed moratorium on state laws, 99–1.⁴² G20 leaders moved forward with their summit in November despite a US boycott over claims South Africa—which was shunned in international organizations in the 1960s–early 1990s over its apartheid regime—was persecuting

the white minority.⁴³ The G20 Declaration highlighted a broader range of global voices in the discussions on AI, data governance, and innovation for sustainable development.⁴⁴ By contrast, the US State Department media note announcing assumption of the 2026 G20 presidency promises to “return the G20 to focusing on its core mission of driving economic growth and prosperity to produce results.”⁴⁵

Many national governments moved to combat deepfakes and AI-generated nonconsensual sexual material,⁴⁶ especially involving children. Italy’s national AI law criminalizes harmful uses of artificial intelligence, including deepfakes,⁴⁷ making users generating and sharing undressed or otherwise harmful content without consent liable to criminal charges. Italy’s data protection office (*Garante*) also warned companies that own products used to create these images, including Grok and ChatGPT, of their obligation “to design, develop, and make available applications and platforms [...] to ensure that users can use them in compliance with privacy regulations.”⁴⁸ Brazil’s government gave xAI, the company that owns Grok, 30 days to prevent sexualized deepfakes, while Indonesia and Malaysia imposed at least temporary bans on Grok.⁴⁹ China’s Cyberspace Administration published an instrument to standardize the labeling of AI-generated content,⁵⁰ a move that complements earlier restrictions. While Grok and xAI have been named most prominently because of the “spicy” mode on the image generation tool, the United Kingdom’s Department for Science, Innovation and Technology (DSIT) Secretary of

Center for AI and Digital Policy

State emphasized the broader problem: “The platforms that host such material must be held accountable—including X.” These actions reflect progress in defining liability for users and for providers.

Lost funding has not deterred the United Nations from fulfilling its role as a site for international dialogue and norm-making for AI governance. The 2025 General Assembly formally established the International Scientific Panel on AI, with members selected through early 2026.⁵¹ The first Global Dialogue on AI Governance also took place,⁵² though informally, offering what BRICS leaders called “an inclusive platform within the United Nations for states and stakeholders to discuss the critical issues concerning AI facing humanity today.”⁵³

The Global Dialogue and International Scientific Panel demonstrate the centrality of the United Nations in furthering global AI governance. The AI Red Lines movement also gathered attention at the General Assembly. The next UN Secretary-General will have to navigate an expanded, urgent role amid opposition from a former partner. AI governance will certainly remain a crucial topic in the interactive dialogues with candidates for Secretary-General in 2026.⁵⁴

The UN Secretary-General report on lethal autonomous weapons systems (LAWS) demonstrated wide consensus that weapons systems with no human control challenge international humanitarian law.⁵⁵ Discussions in the UN General Assembly in 2025 pushed the idea of a treaty forward with only 5 countries opposing and 5 abstaining on a resolution to hold informal discussions on emerging normative proposals around LAWS.⁵⁶ Countries demonstrated similar support to continue the dialogue on artificial intelligence in the military domain more broadly. 118

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

delegations also supported⁵⁷ a draft resolution demanding human control and oversight over command, control, and communications systems of nuclear weapons.⁵⁸ These resolutions encourage the Convention on Certain Conventional Weapons (CCW) Group of Governmental Experts (GGE) on LAWS to continue toward an international instrument by the end of 2026. The global movement for AI red lines and UN efforts converge here, against allowing machines to decide and act to end a human life.

The BRICS Leaders' Statement on the Global Governance of Artificial Intelligence reflects the Global South's leadership in the push to implement AI governance based on shared values and national sovereignty.⁵⁹ At the Global AI for Africa Summit, leaders backed the African Union AI Continental Strategy with plans to bolster data and technological sovereignty and the establishment of the Africa AI Council.⁶⁰ The ASEAN provided concrete guidelines and action steps "to create the ideal conditions for responsible AI to flourish in the region" with the Responsible AI Roadmap⁶¹ and the expansion of the Guide on AI Governance and Ethics to address Generative AI.⁶² Progress in the G20 on data governance, non-discrimination in AI, and innovation for sustainable development owes much to the three consecutive years of leadership by countries in the Global South.⁶³

The G7 continues to offer tools for AI developers and deployers to align their practices with AI principles as part of the commitment to "drive innovation and adoption of secure, responsible, and trustworthy AI that benefits people, mitigates negative externalities, and promotes our national security."⁶⁴ Beyond the Hiroshima Process reporting, the G7 this year moved forward with an AI Adoption Roadmap outlining "the G7's shared vision and practical steps to help our small and medium-

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

sized enterprises (SMEs) access, understand and adopt AI in ways that drive value and productivity.”⁶⁵ Canada’s G7 Presidency achieved the key outcome of developing the SME AI Adoption Blueprint.⁶⁶

This year has demonstrated again the value of international institutions and multilateralism to move closer to a “world where technology promotes broad social inclusion based on fundamental rights, democratic institutions, and the rule of law,”⁶⁷ even as authoritarianism threatens. International institutions and individual countries have pushed implementation of AI principles forward while demonstrating the benefits of global cooperation. The stakes are too high to upset a growing global consensus for AI governance.

Key Developments 2025

- 45 countries support the Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law
- Japan and China pass comprehensive AI legislation; Peru and Vietnam enact laws defining red lines against AI applications that undermine human rights and democratic values; South Korea’s 2025 law comes into effect
- US states adopt innovative AI safeguards while the executive branch withdraws from leadership in AI governance
- EU countries, including Italy, Slovenia, and Hungary, move forward the AI Act, and appoint oversight authorities
- UN establishes the Global Dialogue on AI Governance and an Independent International Scientific Panel on AI
- Countries at AI Action Summit in Paris endorse declaration on “inclusive and sustainable AI” as inequality and sustainability emerge as key governance themes
- UNESCO promotes AI readiness, focusing on the Global South and reaching Europe with the Netherlands and Moldova
- UNESCO begins training of AI Supervisory Authorities
- The South Africa G20 presidency moves forward on inclusive AI governance to protect against discrimination and establishes an institute to assist with AI governance
- ASEAN publishes the ASEAN Responsible AI Roadmap (2025–2030) and the Expanded ASEAN Guide on AI Governance and Ethics, strengthening alignment with foundational AI governance frameworks

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

- African nations support data and technological sovereignty and establish AI Council

2026 Recommendations

- Global support for the International AI Treaty
- Prohibitions on AI systems that undermine human rights and democratic values
- Human oversight of AI systems across the lifecycle
- Bridge the AI safety and fairness agendas
- Implementation and enforcement of AI governance frameworks, such as the EU AI Act and the Hiroshima AI Process
- Algorithmic transparency, including the accountability to contest adverse outcomes
- Liability rules for developers, deployers, and users of AI systems

THE GLOBAL AI POLICY LANDSCAPE⁶⁸

As a field of research, AI policy is rapidly maturing. In the last several years, national governments and international organizations have adopted policy frameworks that explicitly regulate “Artificial Intelligence.”⁶⁹ This has occurred at a rapid pace. While government funding for work on Artificial Intelligence goes back to the mid-1950s, it was many years before governments examined the consequences of this research. That gap is now closing. Governments around the world confront important decisions about AI priorities, AI ambitions, and AI risks. Much of this report concerns the current policies and practices of national governments.

In addition to national governments, many intergovernmental organizations are pursuing AI policies and initiatives. This section provides an overview of these organizations, listed in a simple A to Z. We also note the important work of technical associations and civil society organizations. This section briefly summarizes these activities, as of early 2026.

Council of Europe

The Council of Europe (COE) is the continent’s leading human rights organization.⁷⁰ The COE comprises 47 member states, 27 of which are members of the European Union. All COE member states have endorsed the European Convention of Human Rights, a treaty designed to protect human rights, democracy, and the rule of law. Article 8 of the Convention concerning the right to privacy has influenced the development of privacy law around the world.

The COE Convention 108 (1981) was the first binding international instrument protecting the individual against abuses that may accompany the collection and processing of personal data and regulating the transborder flow of personal data.⁷¹ In 2018, the Council of Europe amended Convention 108 and opened

⁶⁸ [Editorial note: For the 2025 edition of the *AI and Democratic Values Index*, we removed much of the background text that was typically included in the Global Policy Landscape section and focused on recent developments. These materials are still available in the 2024 edition of AIDV, which is available online at <https://www.caidp.org/reports/aidv-2023/>

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

for signature and ratification the COE Modernized Convention 108+. ⁷² Article 9(1)(c) specifically addresses AI decision-making. As the COE explains, the “modernised Convention extends the catalogue of information to be transmitted to data subjects when they exercise their right of access. Furthermore, data subjects are entitled to obtain knowledge of the reasoning underlying the data processing, the results of which are applied to her/him. This new right is particularly important in terms of profiling of individuals.” ⁷³ Forty-six states have signed the protocol amending the Privacy Convention and 33 have ratified. ⁷⁴

The development of the Framework Convention on AI emerged in response to growing concerns over the artificial intelligence. The Council of Europe initiated discussions on AI governance in 2019, leading to the drafting of a binding legal framework. In 2024, the Council of Europe adopted the Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law. The AI Treaty aims to ensure that the development and use of AI technologies align with fundamental human rights, democratic values, and the rule of law, addressing risks such as misinformation, algorithmic discrimination, and threats to public institution.

At the time of publication, over 40 countries, counting the individual member states of the European Union, had endorsed the treaty, including Canada, Japan, United States, Ukraine, and Uruguay. ⁷⁵ Leading experts in international law and AI have also endorsed the AI Treaty. ⁷⁶

The Committee on AI (CAI), which drafted the Treaty, completed the mandate in 2025, though a new body with an advisory role is now established. ⁷⁷ The Steering Committee for New and Emerging Digital Technologies (CDNET) will coordinate the work of the Council of Europe in the field of new and emerging technologies, ensuring that this work supports innovation, and give its legal and policy expertise. ⁷⁸ CDNET also serves as custodian of the Framework Convention

until the Conference of the Parties is established. The HUDERIA methodology,⁷⁹ a tool for actors in the public and private sectors to assess the risk and impact assessment of AI systems with an eye to human rights, democracy, and the rule of law, also facilitates implementation of the Treaty and its principles.

European Court of Human Rights

The European Court of Human Rights has generated an abundance of case law interpreting Article 8 of the European Convention on Human Rights on the right to private and family life. This case law will establish governance norms for AI systems. The opinions of the Court on privacy and data protection are widely regarded by other courts. The Court has addressed privacy challenges in relation to telephone conversations, computers, mass surveillance, bulk interceptions of telecommunications and the internet.⁸⁰ The Court have deemed these aspects of personal data protection of fundamental importance to a person's enjoyment of their right to respect for private and family life.

In early 2025, the European Court of Human Rights sponsored a judicial seminar on Protecting Human Rights in a World of Artificial Intelligence, Algorithms and Big Data.⁸¹ A background paper prepared for the session outlined relevant European Court of Human Rights caselaw in three categories: Freedom of expression, right to a fair trial, and prohibition on discrimination.⁸² The paper further detailed specific areas of intersection between the case law of the Court of Human Rights and AI systems, such as facial recognition, the right to be forgotten, bias in the system, reasoned decision-making, and gender-based cyber violence.

European Union

The European Union (EU) was established by the Treaty of Masstricht in 1993. The European Union is a supranational political and economic union of 27 member states. Many institutions in the European Union now play a significant role in the development of AI policies and practices.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The EU AI Act, a comprehensive regulation for the governance of AI, was formally adopted in March 2024 by the European Parliament, with a large majority of 523-46 votes in favor of the legislation. The risk-based framework notably includes a category of prohibited AI systems, such as subliminal manipulation, social scoring, scraping of facial images for facial recognition, biometric categorization, and real-time biometric identification. At the time of publication, nearly 200 national supervisory authorities have been selected to ensure the enforcement and implementation of the AI Act, with data protection agencies given a prominent role.

European Commission

The European Commission plays an active role in developing the EU's overall strategy and in designing and implementing EU policies. The Commission is the initiator of EU legislation. AI was identified as a priority when the new Commission, under the Presidency of Ursula von der Leyen, was established in late 2019.⁸³ At that time, von der Leyen recommended new rules on Artificial Intelligence that respect human safety and rights.⁸⁴ Von der Leyen's proposal followed remarks at the G20 summit in 2019 by Chancellor Angela Merkel, who called on the European Commission to propose comprehensive regulation for artificial intelligence: "It will be the job of the next Commission to deliver something so that we have regulation similar to the General Data Protection Regulation that makes it clear that artificial intelligence serves humanity."

European Parliament

The European Parliament is co-legislator, together with the Council of the European Union. The Parliament has convened hearings and adopted resolutions to outline the elements of EU legislation.⁸⁵ One resolution urged the Commission to establish legal obligations for artificial intelligence and robotics, including software, algorithms, and data. A second would make those operating high-risk AI systems strictly liable for any resulting damage. A third resolution on intellectual property rights makes clear that AI should not have legal personality: only people may claim IP rights.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Two committees in the European Parliament have taken the reins for the EU AI Act. The Committee on the Internal Market and Consumer Protection (IMCO Committee) is responsible for the legislative oversight and scrutiny of EU rules on the single market, including the digital single market, customs, and consumer protection.⁸⁶ The Committee on Civil Liberties, Justice, and Home Affairs (LIBE Committee) “is responsible for the majority of legislation and democratic oversight of policies that enable the European Union to offer its citizens an area of freedom, security and justice (Article 3 TEU). While doing so, we ensure, throughout the EU, the full respect of and compliance with the EU Charter of Fundamental Rights, in conjunction with the European Convention on Human Rights.”⁸⁷

The influential LIBE Committee has also highlighted concerns about AI and fundamental rights and AI in criminal justice.⁸⁸ In February 2020, the Committee held a hearing on Artificial Intelligence and Criminal Law and examined the benefits, risks, and ethical and rights implications of AI, predictive policing, and facial recognition. LIBE worked in association with the United Nations Interregional Crime and Justice Research Institute (UNICRI), the European Union Agency for Fundamental Rights (FRA), and the Council of Europe (COE). In November 2020, LIBE issued an opinion concerning AI and the application of international law.⁸⁹

Two Councils

The European Council defines the EU's overall political direction and priorities.⁹⁰ Its members are the heads of state or government of the 27 EU member states, the European Council President, and the President of the European Commission. The European Council is not one of the EU's legislating institutions, so does not negotiate or adopt EU laws. This is the prerogative of the Council of the European Union (Council), composed of representatives of member states' ministers.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Court of Justice of the European Union

Although the Court of Justice has yet to rule directly on the EU AI Act, the Court will play a significant role as AI policies evolve and AI law is adopted.⁹¹ The Court issued several judgements that implicate AI systems. In its *Ligue des Droits Humains* Judgment of June 2022, concerning the Passenger Name Records Directive, the Court of Justice reaffirmed the primacy of a human-centered approach to AI. The Court of Justice ruled that machine learning techniques may be incompatible with the protection of fundamental rights.⁹² The Court observed that the opacity of artificial intelligence might make it impossible to understand the reason why a given program arrived at a positive match.⁹³ As the Advocate General had earlier observed, algorithms “must function transparently and that the result of their application must be traceable.”⁹⁴ The Court added in *Ligue des droits humains* that the use of pre-determined criteria also precludes the use of systems that modify “the assessment criteria on which the result of the application of that process is based as well as the weighting of those criteria.”⁹⁵ These holdings could have far-reaching significance for the use of AI techniques by law enforcement agencies and the future interpretation of the EU AI Act.⁹⁶

The Court has also addressed the transparency of automated processing. In the SCHUFA case, the Court of Justice held that the generation of credit scores by credit reference agencies are within the scope of the prohibition on automated decision-making in Article 22(1) of the GDPR.⁹⁷ The practical consequence is that automated decision-making enabled by AI systems will be subject to the GDPR. In another case, the Court found that individuals subject to adverse decisions are

entitled to receive meaningful information about the basis of the decision.⁹⁸ In the Court’s words: “The explanation provided must enable the data subject to understand and challenge the automated decision.”

Judgments of the Court concerning data transfers will also impact the development of AI systems. In the 2020 *Schrems II* judgment, the Court struck down the Privacy Shield framework that permitted the transfer of personal data from the European Union to the United States.⁹⁹ The *Schrems II* judgment will likely limit the collection and use of personal data for AI systems.

European Data Protection Board

The European Data Protection Board (EDPB) is an independent European body that contributes to the consistent application of data protection rules throughout the European Union and promotes cooperation among the EU’s data protection authorities (DPAs).¹⁰⁰

The EDPB issued several reports in 2024 concerning Artificial Intelligence. A ChatGPT Taskforce expressed preliminary views on lawfulness, fairness, transparency, data accuracy, and the rights of data subjects.¹⁰¹ A July 2024 statement from the EDPB addressed the role of DPAs in the AI Act framework.¹⁰² The Statement described the relationship between the AI Act and the GDPR as “complementary and mutually reinforcing instruments” and recommended a “prominent role” for DPAs due to their experience and expertise in developing guidelines and carrying out enforcement actions on AI-related issues with respect to the processing of personal data. For these reasons and others, the EDPB recommended that DPAs be designated as Market Surveillance Authorities (MSA) under the EU AI Act.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In December 2024, the EDPB issued an opinion on AI Models.¹⁰³ The report addressed four questions raised by the Irish DPA: (1) when and how an AI model can be considered anonymous; (2) how controllers can demonstrate the appropriateness of legitimate interest as a legal basis in the development and (3) deployment phases; and (4) what are the consequences of the unlawful processing of personal data in the development phase of an AI model on the subsequent processing or operation of the AI model. Among the key findings: “the determination of whether an AI model is anonymous should be assessed, based on specific criteria, on a case-by-case basis”¹⁰⁴; AI models are very likely to require such a thorough evaluation of the risks of Identification”¹⁰⁵; “When there is the finding of an infringement, SAs may impose corrective measures, such as ordering controllers, taking into account the circumstances of each case, to take actions in order to remediate the unlawfulness of the initial processing”;¹⁰⁶ and the lawfulness of the processing should be assessed case-by-case.¹⁰⁷

In 2025, the European Data Protection Board (EDPB) played a central role in clarifying the application of EU data protection law to artificial intelligence, with a particular focus on generative AI and cross-border enforcement. The EDPB advanced coordinated enforcement through the establishment and ongoing work of a task force on generative AI, aimed at ensuring consistent supervisory responses among national data protection authorities.¹⁰⁸ In parallel, the EDPB continued to issue guidance and binding decisions under the GDPR’s consistency mechanism, reinforcing a harmonized, rights-based approach to AI governance across the European Union.¹⁰⁹

European Data Protection Supervisor

The European Data Protection Supervisor is the European Union’s independent data protection authority.¹¹⁰ The EDPS responsibilities include the mission to “monitor and ensure the protection of personal data and privacy when EU institutions and bodies process the personal information of individuals.” This AI

Center for AI and Digital Policy

work of the EDPS builds on earlier initiatives, including Recommendations on the AI Act (2023) and the EDPS-EDPB Joint Opinion on the AI Act (2021).¹¹¹

The European Data Protection Supervisor undertook many projects related to AI in 2024. In June, the EDPS published Orientations on “generative Artificial Intelligence and personal data protection” to provide EU institutions, bodies, offices and agencies with practical advice and instructions on the processing of personal data when using generative AI systems, to facilitate their compliance with the requirements of the data protection legal framework.¹¹² The Guidelines emphasize the general principles of data protection that should help EU institutions comply with the data protection requirements. The European Data Protection Supervisor also supported the work of the Global Privacy Assembly and the G7 DPA Privacy Roundtable, discussed above.

In 2025, the European Data Protection Supervisor (EDPS) advanced work on artificial intelligence through a series of detailed supervisory guidelines and policy initiatives aimed at safeguarding fundamental rights. Most notably, the EDPS issued revised guidance on generative AI, providing practical instructions for EU institutions on lawful data processing, transparency, and risk mitigation, including heightened scrutiny of web scraping and training data practices.¹¹³ The EDPS also released comprehensive guidance on AI risk management, offering lifecycle-based frameworks to identify and mitigate risks to personal data and fundamental rights, with particular attention to fairness, accuracy, data minimization, and security.¹¹⁴

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

States. The members represent the wealthiest liberal democracies. The group is officially organized around shared values of pluralism and representative government. The G7 is also the incubator for significant work on AI policy.

In 2024, Artificial Intelligence was a prominent feature in the G7 Leaders' Communique. G7 leaders said they would “pursue an inclusive, human-centered, digital transformation that underpins economic growth and sustainable development, maximizes benefits, and manages risks, in line with our shared democratic values and respect for human rights.”¹¹⁵ The G7 leaders expressed support for the Hiroshima AI process and the development of a reporting framework for monitoring the International Code of Conduct for Organizations Developing Advanced AI Systems.

G7 leaders called attention to labor issues and said they would launch an action plan on the use of AI in the world of work. “We ask our Labor Ministers to develop the action plan, envisaging concrete actions to fully leverage the potential of AI to enable decent work and workers' rights and full access to adequate reskilling and upskilling, while addressing potential challenges and risks to our labor markets.” The G7 leaders endorsed the UN General Assembly Resolution on Seizing the Opportunities of Safe, Secure and Trustworthy AI Systems for Sustainable Development and said they would work “towards closing digital divides, including the gender digital divide, and achieving digital inclusion.”¹¹⁶

The G7 leaders also recognized the impact of AI on the military domain and the need for a framework for responsible development and use. They stated, “We welcome those who have endorsed the Political Declaration on Responsible Military Use of AI and Autonomy (REAIM) and the REAIM Call to Action, and we encourage more States to do so to ensure that military use of AI is responsible, complies with applicable international law, particularly international humanitarian law, and enhances international security.”¹¹⁷

Under Canada's G7 Presidency in 2025, G7 leaders again focused on artificial intelligence, dedicating a statement to AI for Prosperity.¹¹⁸ The leaders committed to collaboration on integrating AI into the public sector to enhance services “while respecting human rights and privacy, as well as promoting transparency, fairness, and accountability.”¹¹⁹ They also laid out action steps to support SMEs to adopt AI,

manage the energy challenges posed by AI, and partner with emerging markets and developing countries to increase access to AI.¹²⁰

France assumed the G7 presidency for 2026.

G7 Privacy Roundtable

In recent years, privacy officials from G7 nations have gathered to host seminars and issue statements in conjunction with the Leaders' Summit. The G7 Privacy officials issued several statements related to AI at the 4th G7 Data Protection and Privacy Authorities Roundtable in Rome, Italy. First, the 2024 Communique emphasized “the challenges that artificial intelligence (AI) poses to privacy, data protection, and other fundamental rights and freedoms.”¹²¹ In a second statement on AI and Children, the G7 Privacy officials warned about “potential violations of privacy and data protection linked to the use of AI systems which could have serious implications for children and young people.”¹²² The privacy officials identified several threats, including AI-based decision-making, manipulation and deception, and the use of children's data for training AI models. The officials recommended greater emphasis on privacy by design, privacy impact assessments, transparency, and digital literacy.

A third statement explored the role of Data Protection Agencies in fostering trustworthy AI.¹²³ The G7 Privacy officials welcomed the recognition of DPAs in many of the international instruments for AI, including the OECD AI Principles (2019) and the UNESCO Recommendation on AI Ethics (2021), as well as the Bletchley Declaration (2023) and the Seoul Declaration (2024). The privacy officials explained, “many AI technologies, including generative AI, are based on the processing of personal data, which can subject natural persons to unfair stereotyping, bias and discrimination even when not directly processing their respective personal data.” The G7 privacy officials emphasized, “Current privacy and data protection laws apply to the development and use of generative AI products, even as different jurisdictions continue to develop AI-specific laws and policies.” The statement concluded, “Many data protection overarching principles can be transposed into

broader AI governance frameworks”; “DPAs supervise a core component of AI”; “DPAs can help address problems at their source”; and “DPAs have experience.”

The 2025 Privacy Roundtable Statement stressed data protection and privacy as necessary conditions for innovation, arguing “When individuals have confidence that their data is protected and used lawfully and responsibly, trust exists; where trust exists, innovation is embraced.”¹²⁴ The data protection and privacy reiterated how organizations can prioritize privacy to support market confidence and individuals’ trust and to protect children while offering specific actions for prioritizing privacy.

G20

The G20 is an international forum made up of 19 countries, the African Union, and the European Union, representing the world’s major developed and emerging economies.¹²⁵ Together, the G20 members represent 85% of global GDP, 75% of international trade, and two-thirds of the world’s population. According to the OECD, because of its size and strategic importance, the G20 has a crucial role in setting the path for the future of global economic growth.

The 2025 Leaders’ Declaration highlighted advances by the Indian and Brazilian presidencies in facilitating a broader range of global voices in the discussions on AI, data governance, and innovation for sustainable development as exemplified by the Solidarity, Equality, and Sustainability theme promoted by the South African G20 presidency.¹²⁶ The G20 also progressed on ensuring more equitable access to AI development and participatory governance through organizations such as the Technology Policy Assistance Facility established with UNESCO to support countries in developing AI policies based on research and best practices. The United States did not attend the meetings in South Africa, alleging the country was violating the rights of white Afrikaners and acting aggressively toward the United States and allies.¹²⁷

The United States assumed the G20 presidency in December 2025, promising “the best is yet to come” at the 2026 summit in Miami.¹²⁸ The United States has not invited South Africa to the meeting, citing “politics of grievance” from South Africa

and the country’s “radical agendas that have nothing to do with economic growth”—namely discussions on climate change, diversity and inclusion, and aid dependency.¹²⁹

Global Privacy Assembly

The Global Privacy Assembly is the global network of privacy officials and experts. The Global Privacy Assembly meets annually to discuss emerging privacy issues and to adopt resolutions. In recent years, the focus of the GPA has moved toward AI.¹³⁰

In October 2023, the Assembly adopted a resolution on Generative AI Systems. The signatories stressed that they were particularly “concerned by the release—often with insufficient pre-deployment assessment—of generative AI systems to the wider public, which may present risks and potential harms to data protection, privacy and other fundamental human rights if not properly developed and regulated.”¹³¹

The GPA Working Group on Ethics and Data Protection in Artificial Intelligence presented a report at the October 2024 meeting in Jersey.¹³² The Working Group set out a 2024–2025 workplan to (1) establish a clear definition of what constitutes a meaningful human review of automated decisions, (2) report on Generative AI-related work, (3) assess AI auditing capabilities, and (4) examine discrimination in insurance pricing and decisions. In 2025, the GPA adopted a resolution proposed by the Working Group that includes steps organizations can take to ensure meaningful human oversight while acknowledging that “in some circumstances meaningful human oversight may not be possible”¹³³ such as when the scale and timeframe of automated decisions make oversight of individual decisions impractical. The Working Group announced plans to develop a checklist

for organizations formulating internal policies on the use of generative AI and compiling DPA's issued AI-related guidelines.¹³⁴

OECD

The OECD is an international organization that “works to build better policies for better lives.”¹³⁵ The goal of the OECD is to “shape policies that foster prosperity, equality, opportunity and well-being for all.” The OECD has led the global effort to develop and establish the first government-endorsed framework for AI policy. This was a result of a concerted effort by the OECD and member states to develop a coordinated international strategy. The OECD AI Principles also build on earlier OECD initiatives such as the OECD Privacy Guidelines, a widely recognized framework for transborder data flows and the first global framework for data protection.¹³⁶ OECD policy frameworks are not treaties, do not have legal force, and are not directly applicable to OECD member states. However, there are many instances of countries adopting national laws based on OECD policies and a clear convergence of legal norms, particularly in the field of data protection.

OECD publishes regular reports and research aligned with implementation of the AI Principles. A report on AI in government published in 2025 “aims to provide governments with the necessary elements for effective AI use and to identify areas where AI is having an impact and where gaps remain. Future efforts will build on the growing evidence base of policies and use cases, seeking to further assist governments putting in place the enablers, guardrails and engagement mechanisms needed for a strategic and trustworthy approach to AI.”¹³⁷ The organization also partnered with the European Commission to develop a draft framework to guide leaders and policymakers in creating AI Literacy materials and standards toward competence that “empowers learners to understand AI and make decisions about its use in meaningful and ethical ways.”¹³⁸

Global Partnership on AI

The Global Partnership on Artificial Intelligence (GPAI) emerged from the OECD Recommendation on Artificial Intelligence.¹³⁹ GPAI activities are intended to foster the responsible development of AI grounded in “human rights, inclusion, diversity, innovation, and economic growth.”¹⁴⁰ The GPAI aims to “bridge the gap between theory and practice on AI by supporting cutting-edge research and applied activities on AI-related priorities.” GPAI formalized an integration partnership with OECD “for harnessing the potential of AI for Good and for All”¹⁴¹ in 2024. According to a press statement, “The OECD and the Global Partnership on Artificial Intelligence (GPAI) are joining forces to advance an ambitious agenda for implementing human-centric, safe, secure and trustworthy Artificial Intelligence (AI) embodied in the principles of the OECD Recommendation on AI.”¹⁴² The OECD further said, “The existing GPAI Expert Support Centres—in Paris, France, Montreal, Canada, and Tokyo, Japan—will continue to take an active role in shaping and advancing the new partnership’s work.”¹⁴³

As of January 2026, GPAI’s members include Argentina, Australia, Belgium, Brazil, Canada, Chile, Colombia, Costa Rica, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, India, Ireland, Israel, Italy, Japan, Korea, Latvia, Lithuania, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, Senegal, Serbia, Singapore, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye, the United Kingdom, and the United States.¹⁴⁴

OECD AI Policy Observatory

The OECD AI Policy Observatory launched in February 2020 provides extensive data and multi-disciplinary analysis on artificial intelligence across a wide range of policy areas.¹⁴⁵ According to the OECD, the AI Policy Observatory is based on multidisciplinary, evidence-based analysis and Global multi-stakeholder partnerships.

Collaboration with United Nations

In September 2024, the OECD and the United Nations announced a collaborative effort to strengthen global AI governance. This partnership focuses on conducting regular, science-based assessments of AI risks and opportunities.¹⁴⁶ The collaboration seeks combines the OECD’s technical expertise with the UN’s global reach to inform policy decisions and promote responsible AI development worldwide. OECD Deputy Secretary General Knudsen said, “The speed of AI technology development and the breadth of its impact requires diverse policy ecosystems to work more cohesively. And in real time. I am delighted that the OECD and the UN will link their efforts to help governments improve the quality and timeliness of their policy response to AI’s opportunities and its risks.” UN Under-Secretary General Gill said, “We will work with all stakeholders, including leading scientists and academic centres from around the globe, to realise this goal.”

United Nations

The Secretary-General of the United Nations has led a global campaign for AI governance over many years. Speaking in February 2025 at the AI Action Summit in Paris, Secretary-General António Guterres said, “We must all work together so that artificial intelligence can bridge the gap between developed and developing countries—not widen it. It must accelerate sustainable development—not entrench inequalities.”¹⁴⁷ Guterres emphasized the need to ensure technology serves humanity, not the other way around. “The creation of an Independent International Scientific Panel on AI will be central to translating this vision into reality,” said the Secretary-General. He also called attention to the growing impact of AI on the climate and sustainability. He concluded, “It is in all our interests for Governments and technology leaders to commit to global guardrails, share best practices and shape fair policy and business models.”

The UN accomplished several milestones toward this goal in 2024. The Pact for the Future, adopted by World Leaders at the Summit for the Future in September 2024, outlined several goals for AI aligned with the Sustainable Development Goals, including enhancing international governance of AI for the benefit of humanity.¹⁴⁸

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Pact also warned of the “risks of existing and potential risks associated with the military applications of artificial intelligence.”¹⁴⁹ The Global Digital Compact, also adopted at the Summit for the Future, established the first universal agreement on the governance of AI. The Compact reiterated calls for building AI capacity in developing nations.

The UN implemented these initiatives in 2025 with the establishment of International Scientific Panel on AI¹⁵⁰ and the first informal Global Dialogue on AI at the 80th General Assembly.¹⁵¹ The panel and dialogue reflect the UN’s centrality in furthering global AI governance, a role validated by the BRICS Leaders’ recognition of the Global Dialogue as “an inclusive platform within the United Nations for states and stakeholders to discuss the critical issues concerning AI facing humanity today.”¹⁵²

UNESCO

In 2020, UNESCO embarked on a project to develop a global standard for Artificial Intelligence. UNESCO Director General Audrey Azoulay stated, “Artificial intelligence can be a great opportunity to accelerate the achievement of sustainable development goals. But any technological revolution leads to new imbalances that we must anticipate.”¹⁵³

The UNESCO Recommendation sets out about a dozen principles, five Action Goals, and eleven Policy Actions. Notable among the recommendations is the emphasis on Human Dignity, Inclusion, and Diversity. UNESCO also expresses support for Human Oversight, Privacy, Fairness, Transparency and Explainability, and Safety and Security, among other goals. Understandably, UNESCO is interested in the scientific, educational, and cultural dimensions of AI, the agency’s program focus.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The UNESCO Recommendation was adopted in 2021. This is the first global agreement on the Ethics of Artificial Intelligence.¹⁵⁴ UNESCO Director General Audrey Azoulay stated, “The world needs rules for artificial intelligence to benefit humanity. The recommendation on the ethics of AI is a major answer. It sets the first global normative framework while giving member states the responsibility to apply it at their level. UNESCO will support its 193 member states in its implementation and ask them to report regularly on their progress and practices.”

UNESCO explained, “The Recommendation aims to realize the advantages AI brings to society and reduce the risks it entails. It ensures that digital transformations promote human rights and contribute to the achievement of the Sustainable Development Goals, addressing issues around transparency, accountability and privacy, with action-oriented policy chapters on data governance, education, culture, labour, healthcare and the economy.” The key achievements of the UNESCO AI Recommendation include:

1. Protecting data. The UNESCO Recommendation calls for action beyond what tech firms and governments are doing to guarantee individuals more protection by ensuring transparency, agency and control over their personal data.
2. Banning social scoring and mass surveillance. The UNESCO Recommendation explicitly bans these uses of AI systems.
3. Monitoring and Evaluation. The UNESCO Recommendation establishes new tools that will assist in implementation, including Ethical Impact Assessments and a Readiness Assessment Methodology (RAM).
4. Protecting the environment. The UNESCO Recommendation emphasizes that AI actors should favor data-, energy-, and resource-efficient AI methods to help ensure that AI becomes a more prominent tool in the fight against climate change and on tackling environmental issues.

The Recommendation aims to provide a basis to make AI systems work for the good of humanity, individuals, societies, and the environment and ecosystems, and to prevent harm. It also aims at stimulating the peaceful use of AI systems. The Recommendation provides a universal framework of values and principles of the ethics of AI. It sets out four values: respect, protection, and promotion of human rights and fundamental freedoms and human dignity; environment and ecosystem flourishing; ensuring diversity and inclusiveness; living in peaceful, just, and interconnected societies.

Further, the Recommendation outlines 10 principles—proportionality and do no harm, safety and security, fairness and non-discrimination, sustainability, right to privacy and data protection, human oversight and determination, transparency and explainability, responsibility and accountability, awareness and literacy—backed by

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

more concrete policy actions on how they can be achieved. The Recommendation also introduces red lines to unacceptable AI practices. For example, it states that “AI systems should not be used for social scoring or mass surveillance purposes.”

The Recommendation focuses not only on values and principles but also on their practical realization via concrete eleven policy actions. UNESCO encourages Member States to introduce frameworks for ethical impact assessments, oversight mechanisms, etc. Member States should ensure that harms caused through AI systems are investigated and redressed by enacting strong enforcement mechanisms and remedial actions to make certain that human rights, fundamental freedoms, and the rule of law are respected.

UNESCO developed the Readiness Assessment Methodology (RAM) to assist Member States in implementing the Recommendation.¹⁵⁵ As of early 2026, UNESCO has supported more than 40 countries in assessing their readiness for AI integration along 5 dimensions: legal, social/cultural, scientific/educational, economic, and technical and infrastructural. Country profiles on UNESCO’s Global Hub¹⁵⁶ include key insights and recommendations from the reports, revealing key action steps and common challenges as well as useful approaches to governing AI aligned to the Recommendation.

UNESCO’s Supervising AI by Competent Authorities¹⁵⁷ project, with the assistance of the Center for AI and Digital Policy, provided hands-on training to “equip national authorities with the tools, knowledge, and peer support needed to supervise AI systems effectively.” In 2025, the program delivered sessions to more than 700 civil servants across 12 EU Member States. The program also produced an AI Supervision Toolkit.¹⁵⁸ CAIDP also assisted UNESCO on the AI Literacy Program for Civil Servants,¹⁵⁹ as part of the AI Ethics Experts without Borders (AIEB) network. The program aims to advance national implementation of the UNESCO Recommendation by preparing government official and public services

with the “knowledge, tools, and competencies that can help guide AI adoption in ways that uphold human rights, democracy, and the rule of law.” The European Commission Directorate-General for International Partnerships (DG INTPA) and the Patrick J. McGovern Foundation also support the project.

UN High Commissioner for Human Rights

In the Roadmap for Digital Cooperation, the UN Secretary-General stated, “To address the challenges and opportunities of protecting and advancing human rights, human dignity and human agency in a digitally interdependent age, the Office of the United Nations High Commissioner for Human Rights will develop system-wide guidance on human rights due diligence and impact assessments in the use of new technologies, including through engagement with civil society, external experts and those most vulnerable and affected.”¹⁶⁰

In September 2021, the UN High Commissioner for Human Rights Michelle Bachelet called for a moratorium on the sale and use of AI that pose a serious risk to human rights until adequate safeguards are put in place.¹⁶¹ She also called for a ban on AI applications that do not comply with international human rights law. “Artificial intelligence can be a force for good, helping societies overcome some of the great challenges of our times. But AI technologies can have negative, even catastrophic, effects if they are used without sufficient regard to how they affect people’s human rights,” Bachelet said.

The High Commissioner’s statement accompanied the release of a new report on The Right to Privacy in the Digital Age. The UN Report details how AI systems rely on large datasets, with information about individuals collected, shared, merged, and analyzed in multiple and often opaque ways. The UN Report finds that data used to guide AI systems can be faulty, discriminatory, out of date, or irrelevant. Long-term storage of data also poses risks, as data could in the future be exploited in as yet unknown ways.¹⁶²

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

UN Special Rapporteur

An extensive 2018 report by a UN Special Rapporteur explored the implications of artificial intelligence technologies for human rights in the information environment, focusing in particular on rights to freedom of opinion and expression, privacy, and non-discrimination.¹⁶³ The Report of the Special Rapporteur on the Promotion and Protection of the Right to Freedom of Opinion and Expression defines key terms “essential to a human rights discussion about artificial intelligence”; identifies the human rights legal framework relevant to artificial intelligence; and presents preliminary guidelines to ensure that human rights are considered as AI systems evolve. The report emphasizes free expression concerns and notes several frameworks, including the International Covenant on Civil and Political Rights and the UN Guiding Principles on Business and Human Rights.

Among the Recommendations, the Special Rapporteur proposed “Companies should make all artificial intelligence code fully auditable and should pursue innovative means for enabling external and independent auditing of artificial intelligence systems, separately from regulatory requirements. The results of artificial intelligence audits should themselves be made public.” The report emphasizes the need for transparency in the administration of public services. “When an artificial intelligence application is being used by a public sector agency, refusal on the part of the vendor to be transparent about the operation of the system would be incompatible with the public body’s own accountability obligations,” the report advises.

An article published in 2024 by the CAIDP founder urged the creation of a Special Rapporteur for AI and Human Rights.¹⁶⁴ Rotenberg wrote, “to effectively navigate the intricate landscape of AI and human rights, there is a pressing need for the creation of a UN Special Rapporteur on AI and Human Rights. This role would not only complement existing efforts but also provide the agility, authority, and competence required to address emerging challenges and safeguard human rights in the digital age.”

UN and Lethal Autonomous Weapons

In 2024, the UN Secretary-General urged the Security Council to act decisively to establish international guardrails for artificial intelligence, warning that

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

delays could heighten risks to global peace and security.¹⁶⁵ “Every moment of delay in establishing international guardrails increases the risk for us all,” Mr. Guterres said. “No country should design, develop, deploy or use military applications of AI in armed conflict that violate international humanitarian and human rights laws.” “Recent conflicts have become testing grounds for AI military applications,” he said, citing AI use in autonomous surveillance, predictive policing, and even reported life-and-death decisions.

Particularly alarming, he underscored, is the potential integration of AI with nuclear weapons and the advent of quantum-AI systems that could destabilize global security. “The fate of humanity must never be left to the ‘black box’ of an algorithm,” he stated, stressing the importance of human control over decisions involving the use of force.

The Secretary-General’s remarks follow a long history of efforts to establish rules to limit the use of AI systems in warfare. In fact, one of the first AI applications to focus the attention of global policymakers was the use of AI for warfare.¹⁶⁶ In 2016, the United Nations established the Group of Governmental Experts (GGE) on Lethal Autonomous Weapons Systems (LAWS) following a review of the High Contracting Parties to the Convention on Certain Conventional Weapons (CCW).¹⁶⁷ In November 2019,¹⁶⁸ the CCW High Contracting Parties endorsed 11 Guiding Principles for LAWS.¹⁶⁹ But concerns about the future of regulation of lethal autonomous weapons remain. At present, some countries believe that current

international law “mostly suffices” while others believe new laws are needed.¹⁷⁰ Human Rights Watch provided an important overview of country positions on the future of banning fully autonomous weapons in August 2020.¹⁷¹ Concerns over killer reports also arose at the 75th UN Assembly in October 2020. Pope Francis warned that lethal autonomous weapons systems would “irreversibly alter the nature of warfare, detaching it further from human agency.” He called on states to “break with the present climate of distrust” that is leading to “an erosion of multilateralism, which is all the more serious in light of the development of new forms of military technology.”¹⁷² The Permanent Representative of the Holy See to the UN called for a ban on autonomous weapons in 2014.¹⁷³

At the 2022 UN General Assembly, 70 countries endorsed a joint statement on autonomous weapons systems. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”¹⁷⁴

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

At the 78th UN General Assembly First Committee in 2023, 164 states voted in favor¹⁷⁵ of resolution L.56¹⁷⁶ on autonomous weapons systems. The Resolution emphasizes the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report presented in July 2024 summarized views from more than 40 Member and Observer States and 28 civil society organizations.¹⁷⁷ The statements reflect a breadth of perspectives and concerns over defining LAWS and whether international law is sufficient for governing these weapons or a new instrument should be developed. Questions about the best approach remain but the Secretary-General noted the urgency “to take preventative action on this issue” and reiterated his call for “the conclusion by 2026, of a legally binding instrument to prohibit lethal autonomous weapons that function without human control or oversight and that cannot be used in compliance with international humanitarian law.”¹⁷⁸ He concluded, “The autonomous targeting of humans by machines is a moral line that must not be crossed.”

The 80th UN General Assembly furthered support for an international instrument to ensure the development and use of lethal autonomous weapons (LAWS) align with international humanitarian law. Negotiations for a treaty pushed forward with only 5 countries opposing and 5 abstaining on a resolution to extend conversations on beyond the GGE to informal discussions on emerging normative proposals at the General Assembly.¹⁷⁹ Countries also overwhelmingly supported ongoing dialogue on artificial intelligence in the military domain more broadly. 118 delegations supported¹⁸⁰ a draft resolution demanding human control and oversight over the command, control, and communications systems of nuclear weapons.¹⁸¹ These resolutions encourage the Convention on Certain Conventional Weapons

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

(CCW) Group of Governmental Experts (GGE) on LAWS to continue toward an international instrument by the end of 2026.

The Vatican

Pope Francis served as a leading figure in AI policy. In addition to his statements on autonomous weapons, in November 2020 the Pope warned that AI could exacerbate economic inequalities around the world if a common good is not pursued. “Artificial intelligence is at the heart of the epochal change we are experiencing. Robotics can make a better world possible if it is joined to the common good. Indeed, if technological progress increases inequalities, it is not true progress. Future advances should be oriented towards respecting the dignity of the person and of Creation.”¹⁸²

Earlier in 2020, the Pope endorsed the Rome Call for AI Ethics.¹⁸³ The goal of the Rome Call is to “support an ethical approach to Artificial Intelligence and promote a sense of responsibility among organizations, governments and institutions.” The Pope said, “The Call’s intention is to create a movement that will widen and involve other players: public institutions, NGOs, industries and groups to set a course for developing and using technologies derived from AI.” The Pope also said that the Rome Call for Ethics is the “first attempt to formulate a set of ethical criteria with common reference points and values, offering a contribution to the development of a common language to interpret what is human.”¹⁸⁴

The key principles of the Rome Call are 1) Transparency: AI systems must be explainable; 2) Inclusion: the needs of all human beings must be taken into consideration so that everyone can benefit and all individuals can be offered the best possible conditions to express themselves and develop; 3) Responsibility: those who design and deploy the use of AI must proceed with responsibility and transparency; 4) Impartiality: do not create or act according to bias, thus safeguarding fairness and human dignity; 5) Reliability: AI systems must be able to work reliably; 6) Security and privacy: AI systems must work securely and respect the privacy of users. These principles are described as “fundamental elements of good innovation.”

The Pope delivered several speeches on Artificial Intelligence in 2024. Speaking to the G7 leaders in June, the Pope described AI as an “exciting and fearsome” tool, “that can autonomously adapt to the task assigned to it and, if designed this way, can make choices independent of the person in order to achieve

the intended goal.”¹⁸⁵ The Pope called attention to inherent bias in AI systems, particularly those that may be deployed for judicial decision-making, and explained that algorithms are neither objective nor neutral. The Pope also urged world leaders to reconsider the development and use of lethal autonomous weapons and ultimately ban their use. He said, “No machine should ever choose to take the life of a human being.”

Speaking to the World Forum in Davos in 2025, the Pope said that AI must promote and never violate human dignity.¹⁸⁶ The Pope said, AI raises “fundamental questions about ethical responsibility, human safety, and the broader implications of these developments for society.” He warned against the risk that AI will be used to advance the “technocratic paradigm,” which subordinates human dignity and fraternity to “the pursuit of efficiency, as though reality, goodness, and truth inherently emanate from technological and economic power.”

Pope Leo XIV stressed to participants at the Second Annual Rome Conference on Artificial Intelligence “the need to weigh the ramifications of AI in light of the ‘integral development of the human person and society’ (Note *Antigua et Nova*, 6). This entails taking into account the well-being of the human person not only materially, but also intellectually and spiritually [...] Ultimately, the benefits or risks of AI must be evaluated precisely according to this superior ethical criterion.”¹⁸⁷ In a later speech, he called for widespread participation and unity “before any partisan interest or profit, which is increasingly concentrated in the hands of a few”¹⁸⁸ in a joint responsibility to protect this essential humanity against “the paralyzing idea that [AI] development follows an inevitable path.” Pope Leo also challenged leaders to act against the perceived inevitability of an AI-enabled arms race.¹⁸⁹ He noted that

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

artificial intelligence in weapons and other applications “is a tool that requires appropriate and ethical management, together with regulatory frameworks focused on the protection of freedom and human responsibility.”

Technical Societies

Technical societies have also played a leading role in the articulation of AI principles. The IEEE led several initiatives, often in cooperation with government policymakers, to develop and promote Ethically Aligned Design (EAD).¹⁹⁰ The initial report, *A Vision for Prioritizing Human Well-being with Autonomous and Intelligent Systems*, was published in 2015. The IEEE published the second edition in 2017.¹⁹¹ In 2019 the IEEE issued a Positions Statement on Artificial Intelligence, concluding that “AI systems hold great promise to benefit society, but also present serious social, legal and ethical challenges, with corresponding new requirements to address issues of systemic risk, diminishing trust, privacy challenges and issues of data transparency, ownership and agency.”¹⁹²

In November 2022, the IEEE Board approved the IEEE Standard for Operator Interfaces of Artificial Intelligence. The standard defines a set of operator interfaces frequently used in AI applications and highlights various types of operators, such as those related to basic mathematics, neural networks, and machine learning.¹⁹³ As of 2025,¹⁹⁴ the IEEE Standards Association includes the 7000 standards series to address transparency, privacy, algorithmic bias, and accountability in AI and other autonomous systems and a personal credentialing and product certification program to be compatible with the EU AI Act. The South African Chair’s Summary following the World Summit on the Information Society (WSIS) High-Level Event 2025, co-sponsored by International Telecommunications Union (ITU), UNESCO, and several other UN entities, called on countries to empower digital and education ministers through political support and funding to carry out the “skills development,

Center for AI and Digital Policy

infrastructure investment, and knowledge sharing” needed to “ensure that all countries can benefit equitably.”¹⁹⁵

ACM, an international society of computer scientists and professionals, has also contributed to the global AI policy landscape.¹⁹⁶ In 2017 ACM released a Statement on Algorithmic Transparency and Accountability, identifying key principles to minimize bias and risks in algorithmic decision-making systems, including transparency, accountability, explainability, auditability, and validation.¹⁹⁷ In 2020, in response to growing concerns about the use of facial recognition technologies in public spaces, ACM released another statement addressing the unique issues of biometric data systems and the potential bias and inaccuracies that have significant consequences for violation of human rights.¹⁹⁸ A 2023 Statement addressed emerging challenges of generative AI and proposed several new principles, including Limits and guidance on Deployment and Use, Ownership, Personal Data Control, and Correctability.¹⁹⁹

ACM supported efforts in the United States and Europe to ensure AI use aligned with the organization’s code of Ethics and Professional Conduct. In a statement on the inappropriate use of AI Chatbots,²⁰⁰ the organization expressed deep concerns about chatbots and similar tools that “engage in interactions of a sensual, sexual, or suggestive nature with minors” and urged “investigation and oversight of any such design or deployment.” An ACM brief called on policymakers and legislators to draft laws against technology-facilitated domestic violence, human

trafficking, and child exploitation.²⁰¹ The ACM U.S. Technology Policy Committee’s recommendations to include AI education and workforce training were included in the AI Action Plan.²⁰² The Europe Technology Policy Committee submitted a policy brief to EU AI Act policymakers with recommendations to “enable true environmental accountability in the EU AI Act.”²⁰³

Legal Societies

Legal societies are also playing a more prominent role in the AI policy landscape. The European Law Institute has published several reports and recommendations on AI law and policy.²⁰⁴ In 2024, the International Bar Association endorsed the Council of Europe Framework Convention on Artificial Intelligence, Human Rights, Democracy and the Rule of Law.²⁰⁵

Civil Society

Civil society organizations engage in AI policymaking through a variety of means. Whether researching AI-related justice issues like facial recognition in public spaces, submitting comments, or sitting in the rooms where policymakers make decisions on legislation, civil society organizations hold government leaders accountable for rights-violating AI uses and help develop more just policies. This section highlights some recent engagement by civil society organizations.

Center for AI and Digital Policy

Global Efforts

International organizations such as the G20 provide channels for representatives from civil society. In 2024, for example, Brazil launched the G20 Social to “increase the participation of non-governmental actors in G20 activities and decision-making processes.”²⁰⁶ The São Luís Declaration, a joint statement on inclusive AI by the civil, labor, think-tank, and women engagement groups, emerged from meetings leading up to the Social Summit held in connection with the Leaders’ Summit.²⁰⁷

Other global meetings and venues such as the AI Safety Summit also include civil society organizations. The Sixth Athens Roundtable on AI and the Rule of Law in December 2024 brought together over 130 leading AI decision-makers in person and more than 800 participants online. The event emphasized the urgency of establishing robust, globally coordinated accountability mechanisms to safeguard the rule of law, democratic values, and global well-being. Key discussions centered on enforcing global standards for AI risk management, building an interoperable ecosystem for AI evaluations, and ensuring transparency and accessible information flows.

Africa

In Africa, civil society organizations have actively engaged with continental initiatives surrounding AI governance, exemplified by an open letter published in July 2024 addressing the African Union (AU).²⁰⁸ The letter was coordinated by Pollicy and the Media Institute of Southern Africa (MISA) and supported by a coalition comprising various organizations including Mozilla, Paradigm Initiative, African Internet Rights Alliance, and the Women of Uganda Network. The letter was issued in response to the endorsement of the Continental AI Strategy and the African Digital Compact by African ICT and Communications Ministers, applauding the AU for its visionary leadership and collective effort.

Signatories expressed significant concerns regarding the effectiveness of implementation at the national level, emphasizing that the transformative potential of these continental frameworks depends heavily on their translation into binding domestic policies. The coalition highlighted the importance of protecting African

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

societies from potential negative impacts of AI, such as misinformation and AI-enabled propaganda, stressing the critical necessity of robust policies addressing data governance and fundamental rights. Recommendations included calling upon African Heads of State to actively participate in discussions during the AU Assembly, urging AU Chairperson Moussa Faki Mahamat to underscore the importance of the AU Data Policy Framework, and advocating for strengthened partnerships between civil society, communities, and AU bodies like AUDA-NEPAD. The letter strongly emphasized collaborative governance as essential, underlining civil society's willingness to partner with political leaders to ensure AI development truly benefits all Africans, reflecting a collective vision toward digital transformation rooted firmly in human rights and ethical standards.

Americas

Civil society organizations continue to advocate for individual rights in their struggle against facial recognition in public spaces. In Argentina, the Civil Rights Association (*Asociación por los Derechos Civiles*, ADC) organized against facial recognition in 2020–2023.²⁰⁹ A judge ruled the system implemented in Buenos Aires unconstitutional in 2022.²¹⁰ The Coalition Rights on the Net (*Coalizão Direitos na Rede*) in cited several examples of arrests after mistaken identity in a 2024 open letter advocating for the Brazilian AI regulation to ban facial recognition technologies.²¹¹ This action continues research informing the public on facial recognition in public spaces by Brazilian think tank Instituto Igarapé²¹² and a 2018 class action by the Brazilian Institute for Consumer Protection before the São Paulo Court of Justice in 2018.²¹³

In Mexico, the multi-stakeholder National Alliance on Artificial Intelligence (ANIA, *Alianza Nacional de Inteligencia Artificial*) revitalized the charge for a national AI strategy with the Proposal for a National AI Strategy for Mexico, 2024–

Center for AI and Digital Policy

2030.²¹⁴ ANIA brings together experts from academia, private enterprise, government, and NGOs to conduct roundtables, offer public webinars and workshops, research AI use cases, and collaborate with other regional leaders.

In the United States, a variety of civil society organizations, including the Center for AI and Digital Policy, engage in policymaking and public advocacy. The Algorithmic Justice League, led by Dr. Joy Buolamwini,²¹⁵ unites these areas with testimony to Congress and statements to legislators, organizing and capacity-building through public campaigns, and media such the documentary *Coded Bias*.²¹⁶ Buolamwini's study, *Gender Shades*, co-authored with former Google AI Ethics co-lead Timnit Gebru,²¹⁷ prompted her advocacy and activism. Gebru's organization, Distributed AI Research Institute, centers research that aims to "mitigate/disrupt/eliminate/slow down harms caused by AI technology, and cultivate spaces to accelerate imagination and creation of new technologies and tools to build a better future."²¹⁸ DAIR centers research on the real, present harms of AI technologies in society.

Asia

AI Safety Asia (AISA), co-founded in 2024 by Lyantoniette Chua, Senior Policy Advisor and Fellow at the Center for AI and Digital Policy is a global non-profit organization dedicated to the international governance of safe AI, beginning with initiatives in Southeast Asia. By promoting safe and governed AI in Asia, AISA aims to mitigate catastrophic risks, reduce adverse societal impacts, and unlock equitable socioeconomic development for 60% of the global population. Through programs such as the AISA Governance Academy and the Southeast Asia Policy Observatory, AISA seeks to enhance AI safety governance, upskill civil servants, incubate junior researchers, and foster cross-disciplinary collaboration. AISA has conducted AI Safety Roundtables in Manila, Jakarta, Singapore, Kuala Lumpur, and Bangkok, convening stakeholders to discuss regional opportunities, challenges, and strategies for AI safety governance.

AISA joined with Asia Society France at the AI Action Summit in Paris, France, in February 2025, to convene a high-level dialogue in Paris on the sidelines

Europe

Civil society organizations across Europe have issued an urgent collective response to the third draft of the EU Code of Practice for General Purpose AI (GPAI) models, warning that crucial protections for fundamental rights and child safety have been significantly weakened. The joint letter,²¹⁹ endorsed by influential groups including the Ada Lovelace Institute, ARTICLE 19, 5Rights Foundation, and The Future Society, criticized the relegation of fundamental rights concerns such as child sexual abuse material (CSAM) and non-consensual intimate image abuse (NCII) to voluntary measures listed in an appendix, rather than central obligations. According to these groups, this approach drastically shifts responsibility for assessing risks from GPAI model providers to downstream system developers, undermining the accountability envisioned by the EU AI Act. Furthermore, the coalition asserts that by reducing fundamental rights issues to mere "potential considerations," the code becomes incompatible with established international frameworks, such as the International Scientific Report on the Safety of Advanced AI, which explicitly acknowledges these harms. They also highlighted inadequacies in current industry safety frameworks cited by the drafters, pointing out that prominent frameworks from companies including Meta and Google notably fail to address critical risks related to human rights, discrimination, and child safety.

Civil society organizations urged EU policymakers to ensure the code aligns firmly with the original intent of the AI Act, maintaining mandatory protections rather than permitting companies to selectively recognize or ignore systemic risks. The signatories concluded that without these revisions, the code risks normalizing a regulatory landscape in which safeguarding fundamental rights and protecting vulnerable groups become discretionary rather than obligatory moral imperatives.

COUNTRY REPORTS

Argentina

In 2025, Argentina's data protection agency released guidelines on transparency in artificial intelligence while the Secretariat of Education's AI literacy program, PAIDEIA, launched in the beta stage.

National AI Strategy

The former Ministry of Science, Technology and Productive Innovation (MINCYT) published the National Strategy for Artificial Intelligence in 2019.²²⁰ The plan includes two priority initiatives: Digital Agenda Argentina 2030²²¹ and the National Strategy for Science, Technology, and Innovation, Argentina Innovates 2030.²²²

With the goal of positioning Argentina as a regional leader on AI, the ten-year strategy seeks to transform the country through AI, leveraging the technology in pursuit of developmental objectives built on the UN's sustainable Development Goals (SDGs). The Strategy aims to minimize the potential risks of AI development and implementation for Argentinean society by protecting personal data and individual privacy through guidelines for the design of AI systems consistent with ethical and legal principles. The strategy also proposes to analyze the impact in the production scheme, to measure effects on labor force, and to prevent automate systems from reproducing or reinforcing discriminatory or exclusionary stereotypes. The cross-cutting themes in the Strategy are Ethics and regulation, Communication and awareness building, and International co-operation.

As the wide range of topics indicates, the Strategy requires a whole-of-government effort that brings together different government ministries under the leadership of the Digital Agenda Executive Roundtable (*Mesa Ejecutiva Agenda Digital*), which ended in 2019. This effort is supported by twenty different government agencies, as well as a Multi-sectoral Committee of Artificial Intelligence and a Scientific Committee of experts.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The 2019 National AI Strategy for Argentina set out ambitious goals that built on other national strategies developed under the former President Mauricio Marci, just before President Alberto Fernandez was elected in December 2019. The Executive Branch under the Fernandez administration published the Productive Development Plan Argentina 4.0 in April 2021.²²³ An initiative of the now-dissolved National Ministry of Productive Development, aims to promote the incorporation of technologies 4.0—including AI—in the national production chain. The Argentina 4.0 Plan does not refer to the National AI Strategy. In November 2021, the Secretariat for Strategic Affairs also adopted the Artificial Intelligence Program.²²⁴ The aim is to foster the responsible use of technology, such as artificial intelligence, “that contribute to consolidating Argentine technological sovereignty in the 4.0 revolution.”²²⁵

Local Strategies

The Autonomous City of Buenos Aires launched Future City: AI Strategy in August 2021.²²⁶ The Plan outlines three objectives:

- Use AI for the city’s development
- Use AI for the benefit of the citizens
- Use cross-cutting tools to ensure the city’s sustainability

Under this strategy, the Buenos Aires government has established Buenos Aires AI Lab (*BA Laboratorio IA*), which provides opportunities for training and professional development to youth and serves as a hub for facilitating R&D and application of AI. As with the National Plan, one of the key aspects of the Buenos Aires strategy is that it aims to foster mechanisms and tools for the development and use of AI technology that respects fundamental values and human rights.²²⁷

The Ministry of Government of the Province of Buenos Aires (*Gobierno de la Provincia de Buenos Aires*) released guidelines for using generative AI in the

²²³ Ministry of Productive Development, *Productive Development Plan: Argentina 4.0* (Apr. 2021), https://www.argentina.gob.ar/sites/default/files/plan_de_desarrollo_productivo_argentina_4.0.vf_2.pdf

²²⁴ Secretary for Strategic Affairs, *Resolution 90/2021* (Nov. 26, 2021), <https://www.argentina.gob.ar/normativa/nacional/resoluci%C3%B3n-90-2021-357421>

²²⁷ *Ibid*

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

public administration.²²⁸ The guidelines outline eight key principles to ensure the safe and appropriate use of AI in public administration, including 1) Authorization for Use; 2) Ethical Behavior; 3) Transparency of the tools; 4) Confidentiality and Data Protection; 5) Information Security in not entering sensitive information in AI systems; 6) Evaluation of AI Outputs to ensure human oversight for accuracy, relevance, data sensitivity, bias, and legal compliance; 7) Prohibited Uses to mandate human intervention in decision-making, especially in matters affecting rights, accreditation, verifications, civil applications, or legal investigations; and 8) Training and Continuous Learning for public officials. The Undersecretariat of Digital Government is responsible for overseeing this initiative to protect human rights, foster responsible innovation, and ensure human oversight in AI applications across Buenos Aires' public sector.

Public Participation

Since the development of Argentina's national AI strategy, the government has taken further steps to increase public participation in AI-related initiatives. The Agency for Access to Public Information (*Agencia de Acceso a la Información Pública*, AAIP) launched a program in 2023²²⁹ focused on AI transparency and the protection of personal data. To further support these efforts, the AAIP published the Guide to Transparency and the Protection of Personal Data in Responsible AI,²³⁰ outlining AI's potential risks and challenges and offering guidance on implementing responsible AI principles throughout the AI lifecycle. These efforts reflect Argentina's aim to ensure AI development aligns with societal values and effectively addresses public concerns.

The AAIP oversaw a public consultation on a proposed update of the Personal Data Protection Law (*Ley 25.326*) in 2022.²³¹ A webpage on the project reported

²²⁸ Gobierno de la Provincia de Buenos Aires, *Resolution 4/2025 that Approves the “Guidelines for the Use of Generative Artificial Intelligence in Public Administration of the Province of Buenos Aires [Resolución 4/2025 de la Subsecretaría de Gobierno Digital del Ministerio de Gobierno que Aprueba las “Dícticos de uso de Inteligencia Artificial Generativa en la Administración Pública de la Provincia de Buenos Aires”]*, Boletín 29939 (Feb. 14, 2025), <https://normas.gba.gob.ar/ar-b/resolucion/2025/4/493209>

more than 123 participants from civil society, organizations, universities, and public and private institutions submitted opinions and documents and includes summaries of roundtables to inform the bill submitted in 2023.²³² The site references informational documents, including the UNESCO Recommendation on the Ethics of AI.

Argentina's Library of Congress (*Biblioteca del Congreso de la Nación*) dedicated an edition of the Legislative Dossier to artificial intelligence.²³³ The Dossier includes bills, international frameworks such as the OECD AI Principles, and judicial decisions related to AI. The issue provides basic information such as the definition of artificial intelligence and impacts as well as relevant legislation.

Data Protection

Article 43 of Argentina's Constitution guarantees an individual's access to personal data in private and public registries, and exercise agency over how that data is used. Argentina's Personal Data Protection Law (PDPL) follows international standards regarding basic personal data rules and had even been deemed adequate by the European Commission.²³⁴ A new proposal put forward by the former administration to reform the PDPL and related legislation has been stalled in the National Congress. The purpose of this reform is not only for the country to keep its international status as a jurisdiction that provides an adequate level of protection, particularly after the passing of the European General Data Protection Regulation, but also to keep its data protection regime up to date with the technological and legal developments that have taken place in recent years. Two new bills to modernize the PDPL, one in the Chamber of Deputies (*Cámara de Diputados*),²³⁵ and one in the

Center for AI and Digital Policy

Senate (*Senado*)²³⁶ may succeed in modernizing the law though they remain under committee consideration with no plenary vote recorded in either chamber.

The Agency for Access to Public Information (*Agencia de Acceso a la Información Pública*, AAIP) is Argentina's data protection authority. Although the AAIP enjoys functional autonomy by law, the agency remains under the National Executive Branch from a structural perspective; an aspect that, with the absence of proper mechanisms, has led civil society groups to question the impartiality and independence of the appointment process of its Executive Director.²³⁷

Following an extended public consultation, the AAPI took up 80 for the revised Personal Data Protection Law articles in the final proposal and modified 43 based on public comments. The reform package was presented to Argentina's government for review before introduction to the National Congress of Argentina in June 2023.²³⁸

AAIP issued a resolution that established the Transparency and Protection of Data Program on the use of AI.²³⁹ This program has the objective of enhancing regulatory frameworks and strengthening state powers necessary for the development and use of AI, based on the assumption that the state is responsible for guaranteeing the effective exercise of citizens' rights regarding transparency and the protection of personal data. The Resolution included the formation of the Observatory on AI, an initiative to foster governance and community engagement. A week after this Resolution was created, Argentina's President Chief of Staff issued Administrative Decision No. 750/2023, which created an Inter-Ministerial roundtable on AI.²⁴⁰

As a member of the Ibero-American Network for the Protection of Personal Data (*Red Iberoamericana de Protección de Datos*, RIPD), which comprises 16 data protection authorities of 12 countries, the AAPI endorsed the General

Recommendations for the Processing of Personal Data in Artificial Intelligence²⁴¹ and the accompanying Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects.²⁴²

In May 2023, the RIPD data protection authorities initiated a coordinated action regarding ChatGPT, developed by OpenAI, on the basis that it may entail risks for the rights and freedoms of users in relation to the processing of their personal data. Concerns regarding the risk of misinformation. “ChatGPT does not have knowledge and/or experience in a specific domain, so the precision and depth of the response may vary in each case, and/or generate responses with cultural, racial or gender biases, as well as false ones.”²⁴³

Argentina’s AAIP has been a member of the Global Privacy Assembly (GPA) since 2018.²⁴⁴ AAIP co-sponsored the 2018 GPA Resolution on AI and Ethics,²⁴⁵ 2020 Resolution on AI and Accountability,²⁴⁶ 2022 Resolution on Facial Recognition Technology,²⁴⁷ and the 2023 Resolution on Generative AI.²⁴⁸

Center for AI and Digital Policy

Argentina is also party to Council of Europe Convention 108 since June 2019. Argentina became the 23rd state to ratify 108+ on data protection in 2023.²⁴⁹

Building on these initiatives, in July 2024 the Argentine Congress proposed the establishment of a Federal Observatory on AI²⁵⁰ to guide ethical AI policy, enhance transparency, and ensure that AI systems respect constitutional rights. The Center for AI and Digital Policy (CAIDP)²⁵¹ praised Argentina's efforts, particularly the AAIP guidelines' focus on transparency and data protection, which is aligned with global standards such as the OECD AI Principles and UNESCO Recommendation on AI Ethics.

Algorithmic Transparency

Argentina ratified the Council of Europe Convention 108+, granting Argentines the right to information on algorithmic logic as well as access to correction.²⁵² The AAIP²⁵³ published a preliminary draft of the Guide on Transparency and Personal Data Protection for Responsible AI,²⁵⁴ which outlines challenges and risks associated with AI while providing recommendations for implementing these principles throughout the AI lifecycle, in 2024. The guide promotes algorithmic transparency in the AI lifecycle and ensures data subjects are

provided with relevant information regarding the AI system. Public consultation on this guide was opened after its publication.²⁵⁵

The AAPI provided interpretation guidelines of the Personal Data Protection Act²⁵⁶ through Resolution No. 4/2019²⁵⁷ in which it recognizes that, under the right of access enshrined in the current data protection law, data subjects have the right to request from data controllers an explanation about the logic used by any system that reaches decisions solely based on automated processing of data and which can affect citizens or have pernicious legal effects on them.²⁵⁸

The AAPI's proposed reform Act includes the right of citizens to get information about "the existence of automated decision systems, including those that create digital profiles," as well as "meaningful information" about the logic applied by those systems.²⁵⁹ A formal right to object to a decision based solely on automatic processing methods is also included in the proposal.²⁶⁰

The RED Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects also provide guidance on algorithmic transparency such that "The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language, it will not be necessary to provide a complete explanation of the algorithms used or even to include them. The above always looking not to affect the user experience."²⁶¹

Data Scraping

The AAIP and 16 of its international counterparts released a follow-up joint statement laying out expectations for industry related to data scraping and privacy in 2024.²⁶² The initial statement in August 2023 established that “[social media companies] and other websites are responsible for protecting personal information from unlawful scraping.”²⁶³ The follow-up, which incorporates feedback from engagement with companies such as Alphabet (YouTube), X Corp (formerly Twitter), and Meta Platforms (Facebook, Instagram, WhatsApp), adds that organizations must “comply with privacy and data protection laws when using personal information, including from their own platforms, to develop AI large language models”; must regularly review and update privacy protection measures to keep pace with technological advances; and ensure that permissible data scraping, such as that for research, “is done lawfully and following strict contractual terms.”²⁶⁴

Data scraping generally involves the automated extraction of data from the web. The statements responded to increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

Use of AI in Public Administration

Argentina is among the Latin American and the Caribbean countries that have been utilizing AI in the public sector. Some of the implementations include Prometea,²⁶⁵ developed in 2017, which is a virtual assistant that anticipates case solutions (based on previous cases and solutions) and helps assemble judicial case files. Laura, an application developed by the Ministry of Finance of the Province of

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Cordoba, automates tasks in bureaucratic procedures.²⁶⁶ One of the most controversial uses was the use of AI by the Government of the Province of Salta, which implemented a system to predict teenage pregnancy and school dropout using machine learning algorithms trained on personal, environmental, and health data collected in low-income districts of Salta City in 2016 and 2017.²⁶⁷ The program came to an end following the 2019 national and state elections when the new administration terminated several programs, including the use of algorithms to predict pregnancy.²⁶⁸

The Undersecretariat of Information Technologies enacted a resolution delineating a comprehensive framework of ethical principles and recommendations for the design, development, implementation, and use of AI projects in the public service.²⁶⁹ The Ministry of Justice launched the National Comprehensive Program of Artificial Intelligence in Justice.²⁷⁰ The National Program aims to apply AI in strategic areas that directly impact the lives of citizens, especially in justice and public administration, health, and education and training.²⁷¹ The Ministry of Security furthered the use of AI systems in the justice system with the creation of the Artificial Intelligence Unit Applied to Security (UIAAS)²⁷² to enhance crime prevention and investigation using AI tools like social media monitoring, facial recognition, and predictive algorithms.

Facial Recognition

Several documented cases of facial recognition technology use have been reported in various cities and localities as well as at the provincial level in the country. Facial recognition systems being deployed include: for the identification and capture

awareness about the dangers facial recognition technologies pose to citizens, particularly when their data is included within opaque and unaccountable systems.²⁸¹ A trial judge declared the implementation of the Fugitive Facial Recognition System (SRFP, for its name in Spanish) by the Government of the City of Buenos Aires unconstitutional.²⁸²

The Court of Appeals of the City of Buenos Aires confirmed the unconstitutionality of the use of the Fugitive Facial Recognition System implemented by the Buenos Aires City Government in 2023.²⁸³ The use of SRFP is currently suspended. Meanwhile on the national level, the Artificial Intelligence Applied to Security Unit (UIAAS) plans to use facial recognition to predict future crimes.²⁸⁴ AI may be used to cross-reference databases related to the commission of crimes (such as records of convictions, arrests, etc.) with others related to criminals and other persons of interest to generate predictions. UIAAS also expects to deploy facial recognition software to identify “wanted persons,” patrol social media, and analyze real-time security camera footage to detect suspicious activities.

Environmental Impact of AI

In Argentina, the role of AI in environmental management is becoming increasingly important as it has the potential to address critical challenges such as climate change, pollution, and biodiversity loss. AI is already being used in initiatives such as the United Nations Environment Programme's (UNEP)²⁸⁵ World Environment Situation Room (WESR),²⁸⁶ which uses AI for real-time analysis of environmental data. This includes monitoring CO2 levels, sea level rise and other key indicators to inform policy decisions and improve environmental sustainability.

Center for AI and Digital Policy

AI also plays an important role in monitoring emissions, optimizing the use of renewable energy and supporting smarter environmental policies. However, there is growing concern about the environmental costs of AI, particularly in terms of data processing and e-waste. Argentina's growing focus on AI for sustainability must balance the technology's environmental impact with its benefits.

Lethal Autonomous Weapons

Argentina has been very critical about the development and use of lethal autonomous weapons systems, particularly those without significant human involvement. Argentina has set out a strong position in public statements as well as within international organizations, including during meetings regarding the Convention on Conventional Weapons. Within the framework of those meetings, Argentina stressed the need “to preserve meaningful human control at all phases of the development and use” of weapons systems.²⁸⁷ On behalf of the Group of Latin American and Caribbean Countries, Argentina raised several concerns over fully autonomous weapons, including the risks of reprisal, retaliation, and terrorism.²⁸⁸ And Argentina has called for a “preemptive prohibition of the development of lethal autonomous systems.”²⁸⁹

At the 78th UN General Assembly First Committee in 2023, Argentina voted in favor of the resolution on autonomous weapons systems, along with 163 other states. The resolution stressed the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems and ways to address the related challenges and concerns they raise from humanitarian, legal, security, technological and ethical perspectives and on the role of humans in the use of force.

Argentina was one of the 70 countries that endorsed a 2022 joint statement on autonomous weapons systems at the UN General Assembly meeting. In this joint statement, States urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures,

such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (IHL), including through maintaining human responsibility and accountability in the use of force.”²⁹⁰

Argentina endorsed, along with more than 30 other Latin American and Caribbean states, the Belén Communiqué,²⁹¹ which calls for “urgent negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force. Argentina voted in favor of UN General Assembly Resolution 78/241²⁹² on lethal autonomous weapons systems, which takes up several of the points expressed in Resolution L.56. Most recently, the country also supported a draft resolution that calls for open informal consultations that shall be open to the full participation of all member states and observer states, international and regional organizations, the International Committee of the Red Cross, and civil society, including the scientific community and industry.²⁹³

AI Literacy

Argentina’s Secretariat of Education (*Secretaría de Educación*), under the Ministry of Human Capital (*Ministerio de Capital Humano*), oversees the Argentine Program of Education Innovation with Artificial Intelligence (PAIDEIA) to “develop key skills in students from primary to secondary education, preparing them to understand and actively participate in a world increasingly mediated by technology.”²⁹⁴ PAIDEIA emphasizes human cognition skills across three objectives including computational thinking, application of AI, and development of AI.²⁹⁵ The program aligns with a humanist vision of AI as a tool for human development,

“derived from the ancient Greek *paideia* meaning education, formation, or growth.”²⁹⁶ The program has launched in a beta phase with plans for gradual national implementation.²⁹⁷ The Secretariat of Education released a guide for AI in education as part of the PAIDEIA program.²⁹⁸

Human Rights

According to the Freedom House 2024 report, Argentina is “Free,” receiving overall a score of 85/100.²⁹⁹ The Freedom House country report highlights concerns regarding democratic backsliding. Citizens continue to use social media to mobilize protests on political and social issues although new president Javier Milei has implemented restrictions on protests. The President has also dismantled several ministries, reducing their number from 20 to 8. Some controversial reforms have also been engaged regarding women, gender, and Indigenous affairs, raising concerns regarding the protection of vulnerable groups. On the other hand, in June 2024 the Argentine Chamber of Deputies proposed a bill to create an AI regulatory framework with INTI oversight, penalties for non-compliance, and an advisory board for ethical and human rights impact assessment.³⁰⁰

In the international arena, Argentina has shown a strong commitment to the protection of human rights, including international and regional initiatives that pertain to AI.

OECD / G20 AI Principles

As part of the G20 and as a prospective member to the OECD, Argentina has endorsed the OECD/G20 AI Principles.³⁰¹ According to an OECD report, several

policies of Argentina's national AI strategy align with the G20 AI principles. These include the comprehensive, human-centered and human rights-focus nature, which aligns with the Principles for Responsible Stewardship of Trustworthy AI (Section 1). Argentina's investment initiatives, the focus on conditions for AI development, educational plans and international engagements implement Section 2 of the G20 AI Principles (National Policies and International Co-operation for Trustworthy AI).³⁰²

In October 2023, the OECD's *The State of the Implementation of the OECD AI Principles Four Years On* noted that Argentina's Ethics Principles for the Development of AI reflect the five value-based OECD AI Principles and the five recommendations to national governments.³⁰³

Council of Europe AI Treaty

Argentina contributed as an Observer State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law.³⁰⁴ However, Argentina has signed this first legally binding treaty on AI and human rights.³⁰⁵

UNESCO Recommendation on AI Ethics

Argentina is a UNESCO member and adopted the UNESCO Recommendation on the Ethics of AI during the 41st General Conference in November 2021.

Argentina is part of the Regional Council comprising national and local governments from Latin America and the Caribbean, established through collaboration between UNESCO and the Latin American Development Bank (CAF) in support of ethical AI.³⁰⁶ Argentina signed the Santiago Declaration to Promote

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Ethical Artificial Intelligence that resulted from the first council meeting.³⁰⁷ The declaration establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy, and data protection. Argentina also signed the Declaration of Cartagena de Indias,³⁰⁸ which establishes the commitment to promote governance frameworks and AI ecosystems for a safe, inclusive, ethical and responsible development of AI within the Latin American region.

Despite a record of international collaboration, Argentina refused to sign the UN Pact for the Future, which included the Global Digital Compact, a comprehensive framework for global governance of digital technology and artificial intelligence in 2024.³⁰⁹

Argentina has taken a clear step to implement the UNESCO Recommendation on the Ethics of Artificial Intelligence by beginning the Readiness Assessment Methodology (RAM).³¹⁰

Evaluation

Argentina's comprehensive, ambitious, and human-centered national strategy reflects the country's interest in matching socioeconomic development with strong human rights commitments in the design and development of AI. Despite the initial enthusiasm that surrounded the launching of the Plan, the new government seems to have abandoned this path. It remains to be seen how the Productive Development Plan Argentina 4.0 will be operationalized in practice. Despite significant progress in modernizing data protection law and bringing it up to international standards, the deployment of facial recognition systems has raised widespread concern that AI could be used for purposes that violate individual rights. This threat is especially

concerning given recent reports of democratic backsliding. The non-signing of the Pact for the Future or the adoption of the Council of Europe's AI Treaty could represent a significant change of foreign policy to the detriment of human rights safeguards.

Argentina has the resources and the infrastructure to pursue regional leadership. Argentina has signed the UNESCO Recommendation on AI Ethics and, with the collaboration of the CAF, is on its path to its implementation. Argentina has also been calling for a prohibition and regulation of autonomous weapons.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Australia

In 2025, Australia updated the National AI Policy along with the related impact assessment and procurement tools. The country also furthered implementation of the Guidelines for the responsible use of AI in the public service.

National AI Strategy

The Australian government published a Roadmap for AI in 2019 to “help develop a national AI capability to boost the productivity of Australian industry, create jobs and economic growth, and improve the quality of life for current and future generations.”³¹¹ Australia’s AI Technology Roadmap is intended to help guide future investment in AI and provide a pathway to ensure Australia captures the full potential of AI.³¹² The Roadmap identifies three domains of AI development and application where AI could transform Australian industry based on existing strengths and comparative advantages, opportunities to solve Australian problems, and opportunities to export solutions to the rest of the world. These domains are Health, Aging, and Disability; Cities, Towns, and Infrastructure (including connected and automated vehicle technology); and National Resources and Environment (building on strengths related to mining and agriculture). The Roadmap also elaborates necessary foundations for realizing these goals in terms of data governance, ethics, trust research, skills, and infrastructure, while underscoring its complementarity with the OECD AI Principles.

Australia also published an AI Ethics Framework in 2019 to “help guide businesses and governments looking to design, develop, and implement AI in Australia.”³¹³ Key goals are to achieve better outcomes, reduce the risk of negative impact, and practice the highest standards of ethical business and good governance. The eight AI Ethics Principles are Human, social, and environmental wellbeing;

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Human-centered values; Fairness; Privacy protection and security; Reliability and safety; Transparency and explainability; Contestability and Accountability.³¹⁴

In 2020, the Australian Department of Industry, Science and Resources (DISR) launched a public consultation to inform the AI Action Plan,³¹⁵ which was published in 2021 as part of the Digital Economy Strategy.³¹⁶ This plan aims to position Australia as a leader in developing and adopting “trusted, secure, and responsible AI,” enhancing business productivity, building a skilled workforce, and addressing national challenges.”³¹⁷ The Plan created the National AI Centre (NAIC) and four Capability Centres to support SMEs and promote ethical AI.³¹⁸ DISR subsequently took over administration of the NAIC to strengthen government-industry engagement on AI.³¹⁹

Australia's AI Strategy includes coordinated initiatives for responsible AI development and adoption. After a public consultation launched in 2023 on safe and responsible AI in Australia, including the need to regulate AI,³²⁰ the government's interim response in January 2024 concluded that the current regulatory framework likely did not sufficiently address known risks presented by AI systems.³²¹

Following the AI Strategy and interim public consultation response, DISR established a temporary AI Expert Group to advise on measures for testing, transparency, and accountability in high-risk AI contexts and ensure system safety.³²²

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Comprising 12 industry, academic, and legal experts, the group operated through September 2024, with plans for a permanent group expected.³²³

DISR launched the Voluntary AI Safety Standard in September 2024³²⁴ to establish consistent practices and help organizations manage AI risks, aligning with the broader objectives of the AI Action Plan. The standard provides guidance on the safe and responsible use of AI through ten voluntary guidelines emphasizing testing, transparency, and accountability. The AI Impact Navigator, a tool launched by the NAIC in October 2024, will assist users in implementing the Voluntary AI Safety Standard and in evaluating the impact of their AI systems.³²⁵

DISR also laid a path toward regulating the use of AI in high-risk settings with the release of a proposal paper outlining definitions, principles, and mandatory guardrails, including for the use of general-purpose AI systems.³²⁶ These guardrails reference international AI regulations and include five of the most agreed-upon goals in the AI policy realm: fairness, accountability, transparency, rule of law, and fundamental rights. In the public consultation of the proposed guardrails, the Australian Human Rights Commission highlighted that ‘the proposed guardrails do not specify the need for high-risk AI to comply with human rights obligations’ and recommended it to explicitly include human rights considerations.³²⁷ Public consultation has since closed but how and if DISR implements feedback remains to be seen.³²⁸

The government has also acted to strengthen existing laws in areas that will help to address known harms with AI. This includes the implementation of privacy law reforms, including an in-principle agreement to require non-government entities

to conduct a privacy impact assessment to identify and manage, minimize or eliminate risks, which is already a requirement for government entities and an amendment to the Online Safety Act 2021.³²⁹ A proposed amendment to existing communications legislation targeted misinformation and disinformation³³⁰ but was withdrawn in committee over censorship concerns.³³¹

Australia launched the National AI Plan in December 2025 to deliver three goals (1) capture the opportunity by building smart infrastructure, backing domestic AI capability, and attracting global investment (2) spread the benefits through widespread AI adoption, supporting and training Australian workers, and improved public services (3) keep Australians safe with legislative and regulatory frameworks that mitigate AI harms, while promoting widespread responsible practices and international engagement that upholds Australia's values.³³² The Plan signals the government's confidence that existing legal frameworks "can apply to AI and other emerging technologies" to mitigate AI harms, while committing to continue assessing adequacy.³³³ The confidence in existing frameworks suggests a preference for regulatory flexibility over the adoption of a comprehensive AI-specific framework.

While the AI Strategy and bodies like the Australian Human Rights Commission recognize the need for regulation, Australia lacks a specific federal framework for AI. The Senate formed the Select Committee on Adopting Artificial Intelligence to explore potential opportunities and challenges.³³⁴ Based on these findings, the Committee recommends that the Australian Government implement comprehensive AI legislation to regulate high-risk uses, support sovereign AI

development, address workplace risks, ensure fair compensation for creatives, and prioritize transparency, privacy, and sustainable infrastructure growth.³³⁵

Bringing greater transparency to AI adoption in the country, the National AI Centre launched the Responsible AI Index 2025 to benchmark organizational governance maturity across fairness, safety, and transparency metrics.³³⁶ The Index assessed 500 Australian organizations and provided a public dashboard for tracking national progress on responsible AI adoption, with 12 percent of organizations classified as “leading” and 17 percent in the “emerging” category.

International Cooperation on Safe and Responsible AI

Australia and Singapore signed an updated Memorandum of Understanding (MOU) in 2024. The MOU renews a shared commitment to “further cooperate and leverage on Australia and Singapore’s comparative strengths to ensure the participants can realize the benefits of AI and minimise any risks, and also shape the development of international AI-related frameworks, policies and standards” from a 2020 MOU.³³⁷

Australia participated in the first AI Safety Summit and endorsed the Bletchley Declaration in November 2023.³³⁸ Australia thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that “for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

At the subsequent AI Safety Summit—which was renamed the AI Action Summit—Australia joined 90+ countries in endorsing the Statement on Inclusive and Sustainable AI Statement and co-led the AI safety, trust, and governance initiatives.³³⁹

Public Participation

The Australian government has responded to recommendations and feedback from the public in national efforts on AI and digital policy, including the AI Ethics Framework and Supporting Responsible AI discussion paper.³⁴⁰ The Australian Government opened a public consultation³⁴¹ as part of a review of the Online Safety Act 2021.³⁴²

The Australian government published an interim response to the Safe and Responsible AI in Australia discussion paper in early 2024.³⁴³ The government committed to developing a regulatory environment that builds community trust and promotes AI adoption. Subsequently, DISR issued a formal request for comment on Mandatory Guardrails for AI in High-risk Settings.³⁴⁴ The views were asked on the proposed guardrails, high-risk AI definition, and regulatory options for mandating the guardrails.

Center for AI and Digital Policy

The Therapeutic Goods Administration of the Department of Health and Aged Care³⁴⁵ and Department itself issued separate calls for public consultation in September 2024 as they reviewed their legislative frameworks to “clarify and strengthen legislation and regulation for AI in Australia’s health care settings.”³⁴⁶ In particular, they sought feedback on stakeholders, what about AI to regulate, and how to prevent AI harms and enable the benefits. The Joint Committee of Public Accounts and Audit adopted an inquiry into the use and governance of artificial intelligence systems by public sector entities in September 2024.³⁴⁷

The Australian Treasury opened a formal request for comment for a Review of AI and the Australian Consumer Law (ACL).³⁴⁸ The review will examine the ACL’s fitness to address consumer harms and support responsible use of AI. Inputs are sought to determine if provisions on product safety, prohibitions on businesses for deceptive conduct and unfair contract terms, prohibitions on false representations, etc., sufficiently safeguard and provide remedies against consumer harm. The review also seeks input on whether there are ambiguities around ACL’s application to AI and how it can be addressed.

Data Protection

In February 2023, the Australian Attorney-General's Department released its review of the Privacy Act 1988,³⁴⁹ a significant step initiated in 2020.³⁵⁰ The review was initiated after the Australian Competition and Consumer Commission (ACCC) recommended reforms to “ensure consumers are adequately informed, empowered

Center for AI and Digital Policy

and protected, as to how their data is being used and collected.”³⁵¹ The Privacy Act Review Report³⁵² includes 116 recommendations based on 30 “key themes and proposals” from stakeholders. “The proposed reforms are aimed at strengthening the protection of personal information and the control individuals have over their information. Stronger privacy protections would support digital innovation and enhance Australia’s reputation as a trusted trading partner,” according to the Attorney-General’s Department.

The Office of the Australian Information Commissioner welcomed the release of the report. “This is an important milestone as we move towards further reform of Australia’s privacy framework,” said Angelene Falk, the Australian Information Commissioner and Privacy Commissioner at the time of the report’s release. “As the privacy regulator we see the proposal to introduce a positive obligation that personal information handling is fair and reasonable, as a new keystone of the Australian privacy framework. This shifts the burden from individuals, who are currently required to safeguard their privacy by navigating complex privacy policies and consent requirements, and places more responsibility on the organisations who collect and use personal information to ensure that their practices are fair and reasonable in the first place.”

The Government released its Response to the Privacy Act 1988 Review, noting 10 proposals, agreeing in-principle to 68, and fully agreeing to 38 proposals, including that “further consideration should be given to enhanced risk assessment requirements in the context of facial recognition technology and other uses of biometric information and that this work should be coordinated with the Government’s ongoing work on Digital ID and the National Strategy for Identity Resilience.”³⁵³

These reforms build on Australia’s efforts to enact regulation for accountability and data protection. The Privacy APP Code 2017 requires agencies subject to the Privacy Act (Australian Government Agencies—Governance) to conduct privacy impact assessments for all “high privacy risk projects.”³⁵⁴ Furthermore, section 33D of the Privacy Act grants the Commissioner authority to

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

require an agency to provide impact assessments whenever an activity or function may have a “significant impact on the privacy of individuals.”³⁵⁵

The Privacy Act also builds on efforts to address privacy concerns raised by facial recognition and other biometric technology. The Federal Attorney-General referred positively to the 2022 Human Technology Institute (HIT) report outlining a Facial Recognition Model Law to address “threats to Australians’ privacy and other human rights” using a risk-based approach.³⁵⁶ The Federal Attorney-General noted that the Model Law is “a way of striking the right balance, endorsing, in principle, a risk assessment approach to regulating facial recognition and other biometric technologies.”³⁵⁷

The Parliament approved a bill to amend the Privacy Act 1988 to implement reforms that include “creating a statutory tort for serious invasions of privacy” and amending the Criminal Code Act 1995 to introduce two offenses for doxxing.³⁵⁸ The Privacy and Other Legislation Amendment Bill 2024 received Royal Assent in December 2024, with most provisions commencing immediately.³⁵⁹ Further obligations such as automated decision-making transparency will be phased in through December 2026.³⁶⁰

The Office of the Australian Information Commissioner is a member of the Global Privacy Assembly (GPA).³⁶¹ Australia supported the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology³⁶² but did not support the 2018 Declaration on Ethics

and Data Protection in Artificial Intelligence,³⁶³ 2020 Resolution on Accountability in the Development and Use of Artificial Intelligence,³⁶⁴ or 2023 Resolution on Generative Artificial Intelligence Systems.³⁶⁵

Algorithmic Transparency

Australian law does not explicitly protect a right to algorithmic transparency. However, the transparency and explainability, contestability, and accountability principles in the AI Ethics Framework provide guidance for organizations³⁶⁶ and the 2024–2025 National Action Plan³⁶⁷ charges the Attorney-General’s Department and DISR to “create transparency in the use of automated decision making and artificial intelligence.” The Australian Government released the Transparency of Automated Decision Making (AU0024) to address public concerns about the transparency and integrity of government decisions made using automated systems and AI.³⁶⁸

These actions follow reports and advice from various agencies to establish algorithmic transparency as a right. In early 2019, the Australian Human Rights Commission called for an AI Policy Council to guide companies and regulators regarding artificial intelligence technology. “When companies use AI decision-making systems, they must build them in a way that allows a person to understand the basis of decisions that affect them. This is fundamental to ensuring accountability and will be really important for all companies that use AI,” Human Rights

Commissioner Ed Santow said.³⁶⁹ The Australian Human Rights Commission published the Human Rights and Technology report recommending the government to legislate a right to contest automated decisions and introduce a requirement for transparency in AI systems used for significant decisions.³⁷⁰

The Office of the Australian Information Commissioner (OAIC) emphasized the need for greater transparency in its 2023 response to the Safe and Responsible AI in Australia discussion paper.³⁷¹ The OAIC highlighted that “most Australians view transparency about the use of AI and the right to request information on how AI decisions are made as essential preconditions for its responsible deployment in decision-making.”

The Senate Economics References Committee's Interim Report on international digital platforms in 2023 included a chapter on algorithmic transparency.³⁷² Chapter 6 outlines risks such as misinformation, echo chambers, and biases in automated decision-making, stressing the need for algorithm disclosure, especially in content curation and targeted ads. The report called for regulation to ensure algorithms promote fairness, accuracy, privacy, and user safety.³⁷³ An interim report released by the Senate Select Committee on Adopting Artificial Intelligence in October 2024³⁷⁴ recommended that mandatory transparency and disclosure requirements for AI-generated content should be developed before the 49th Parliament election.³⁷⁵

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In its formal response to the Select Committee's report, issued in August 2025, the Australian government accepted in principle the recommendation for mandatory transparency requirements. The Minister for Communications announced that the government would direct the Australian Communications and Media Authority (ACMA) to develop a mandatory code of practice for digital platforms under the Online Safety Act. This code will require designated platforms to provide clear, plain-language explanations of how their recommender systems and content moderation algorithms work, and to produce annual transparency reports on their operation and impact. A draft of the code is expected to be released for public consultation in early 2026.³⁷⁶

The OAIC released a report and recommendations on Automated decision-making and public reporting under the Freedom of Information Act, assessing “how transparent Australian Government agencies are about their use [Automated Decision Making] ADM in decision making process.”³⁷⁷ The report assesses how agencies authorized to use ADM disclose their use of ADM as required under the Freedom of Information Act 1982 (FOI Act). The report found that 17 percent of agencies reviewed disclosed the use of ADM, while 2 percent were identified as “likely using ADM” but did not disclose this publicly. As a result, the report recommended agencies to disclose their status regardless of whether they’re actually using ADM, and expanded on the information that should be published if ADM is used.

Data Scraping

The Office of the Australian Information Commissioner (OAIC) and 16 of its international data protection and privacy counterparts released a follow-up joint statement laying out expectations for industry related to data scraping and privacy.³⁷⁸ The initial statement in August 2023 established that “[social media companies] and other websites are responsible for protecting personal information from unlawful

scraping.”³⁷⁹ The follow-up, which incorporates feedback from engagement with companies such as Alphabet (YouTube), X Corp (formerly Twitter), and Meta Platforms (Facebook, Instagram, WhatsApp), adds that organizations must “comply with privacy and data protection laws when using personal information, including from their own platforms, to develop AI large language models”; must regularly review and update privacy protection measures to keep pace with technological advances; and ensure that permissible data scraping, such as that for research, “is done lawfully and following strict contractual terms.”³⁸⁰

The OAIC’s press release places the joint initiative in the context of national efforts to hold industry accountable to privacy laws, noting “The joint initiative, with its focus on the implications of AI large language models, coincides with the OAIC recently publishing detailed guidance on privacy and developing and training generative AI models.”³⁸¹ These guidelines establish that the collection and use of publicly available data for AI training must meet a “fair and reasonable” standard, defining specific criteria for lawful data collection practices. The OAIC identified six factors to consider when determining whether web scraping is fair, including the sensitivity of information, intended purpose, risk of harm to individuals, and whether individuals intentionally made the information public. The guidelines provide practical guidance for organizations developing AI systems with scraped data and represent a concrete implementation step for Australia’s commitment to ethical AI development while ensuring consistent privacy protections across technologies and data sources.

Privacy Commissioner Carly Kind’s statement in August 2024 on the OAIC decision against investigating Clearview AI cited the initial joint statement on data scraping to reiterate companies’ obligations to protect personal information.³⁸² In 2021, the Australian Information Commissioner declared that Clearview AI must “cease collecting images from individuals in Australia” and delete images it previously collected because the company had violated the Privacy Act and several

Australian Privacy Principles in its use of facial recognition technology to collect images and biometric templates from people in Australia. Kind reiterated that “the determination against Clearview AI still stands” and promised guidance for companies seeking to develop and train AI models.

Use of AI in Public Administration

After a scandal involving an automated system issuing unlawful and inaccurate debt notices, the Australian government has worked to establish principles and procedures for the responsible use of AI systems in public administration. These efforts culminated in the Policy for the Responsible Use of AI in Government, which took effect on September 1, 2024.³⁸³

From 2016 through 2019, the Australian government agency Services Australia used an automated debt recovery system known as Robodebt to calculate overpayments and issue debt notices to welfare recipients. Robodebt was an automated data matching system that compared the records of Services Australia payment compliance program with averaged income data from the Australian Taxation Office. Robodebt was suspended in 2019 following investigations by the Commonwealth Ombudsman,³⁸⁴ two Senate Committees,³⁸⁵ and several legal challenges,³⁸⁶ including class-action lawsuits against the government. In one such suit, Federal Court Justice Bernard Murphy condemned the Government in his ruling and approved a \$1.8 billion settlement, including repayments of debts paid, wiping of outstanding debts, and legal costs.³⁸⁷ In October 2022, the newly elected

government effectively forgave the debts of 197,000 people that were still under review.³⁸⁸

A Royal Commission into the Robodebt scheme issued a report³⁸⁹ detailing the human impact of system and its errors, including false or incorrectly calculated debt notices; negative consequences on the physical and mental health of debt notice recipients, often among the most vulnerable; and the lawfulness of the scheme.

In August 2023, the House of Representatives passed a formal motion apologizing for the scheme on behalf of the Parliament. In November 2023, the Australian government formally accepted or accepted in principle all 56 recommendations in the Royal Commission report.³⁹⁰ In the Government Response, the Prime Minister and Cabinet promised increased funding to implement the recommendations aligned to reforms aimed at “building trust in government, investing in a capable public sector, delivering strong institutions[,] and ensuring humans are put back at the centre of human services and service delivery.”

In September 2023, the Digital Transformation Agency (DTA) and the Department of Industry, Science and Resources (DISR) established the Artificial Intelligence in Government Taskforce.³⁹¹ The Chief Executive Officer for the DTA cited the government’s role in setting an example for the safe and ethical use of AI technologies, adding “We don’t want to be left behind but we do want to protect government systems and ensure we’re ultimately benefiting the wider Australian community.” The Taskforce comprising representatives from multiple Australian Public Service (APS) agencies identified four key principles for implementing AI safely and responsibly in the public sector: “1) AI should be deployed responsibly in low-risk situations, 2) Transparency and explainability: tell when AI is used and why its use was warranted, 3) Privacy protection and security: use only public information, and 4) Accountability and human centred decision-making: final word should be with a human.”³⁹²

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The AI Taskforce released initial interim guidance on government use of publicly available generative artificial intelligence (AI) platforms.³⁹³ According to the Guidance, one of the golden rules that Australian Public Service staff should consider for the responsible use of generative AI tools is: “you should be able to explain, justify and take ownership of your advice and decisions.” In addition, the Interim Guidance encouraged all APS staff to “read and understand Australia’s AI Ethics Principles,” and outlined steps to adhere to the Principles.³⁹⁴

The Australian government issued the Data and Digital Government Strategy: The data and vision for a world-class APS to 2030.³⁹⁵ The Data and Digital Government Strategy is accompanied by an Implementation Plan and a Roadmap timeline. With the Strategy, the government commits to “improving and maintaining trust in its use of data and digital technology through adopting a whole-of-government Data Ethics Framework [...] and adopting AI technologies in safe, ethical and responsible ways.”³⁹⁶

Building on the Strategy, the Data and Digital Ministers Meeting released a National Framework for using AI in government.³⁹⁷ This framework establishes a consistent and holistic approach to AI assurance across all aspects of government.³⁹⁸ Shortly after release of the national framework, the Digital Transformation Agency’s Policy for the responsible use of AI in government took effect.³⁹⁹ The policy outlines an adaptive whole-of-government framework that attempts to unite uses of AI in Public Administration and strengthen public trust in the Government’s use of AI.⁴⁰⁰ Adherence is mandatory for non-corporate Commonwealth entities, excepting national defense matters and members of the national intelligence community, who

are encouraged to adopt elements of the policy that do not compromise national security.⁴⁰¹ Government agencies are also required to designate accountable official(s) to assume responsibility for their respective agency's implementation of the Policy.⁴⁰² These officials are tasked with ensuring AI tools align with the core principles outlined in the National Framework for the Assurance of AI in Government, including human oversight and privacy protection. Additionally, Section 5.2 of the policy requires agencies to publish public transparency statements detailing AI use cases, risk mitigation strategies, and human oversight mechanisms. The Senate Select Committee on Adopting AI emphasized in its October 2024 interim report that such disclosures are critical to rebuilding public trust after systemic failures such as the Robodebt scandal.⁴⁰³

Australia's AI Plan for the Australian Public Service 2025 outlines the government's approach to leveraging AI to enhance public service delivery, framed around the goal of delivering "better services faster."⁴⁰⁴ The plan provides a platform for fostering AI literacy and capacity-building among public servants, supported by designated Chief AI Officers tasked with driving AI adoption across agencies. To support the AI Plan for the Australian Public Service 2025, the Digital Transformation Agency (DTA) published three initiatives. First, the update to the Policy for the Responsible Use of AI in Government addresses the evolving capabilities of AI, strengthens accountability requirements, and mandates impact assessments for specified use cases.⁴⁰⁵ Second, the AI Impact Assessment Tool introduces a standardized tool for managing impacts and risks against Australia's AI Ethics Principles.⁴⁰⁶ Third, the Guidance on AI Procurement in Government comes with a checklist and detailed guidance expanding on each stage of the procurement process, highlighting AI-specific risks and considerations.⁴⁰⁷

Use of AI in Education

In May 2022, in a global investigative report on the education technology (EdTech) endorsed by for children’s education during the pandemic, Human Rights Watch analyzed the technical and policy features of Minecraft: Education Edition used in Australia. Human Rights Watch found that the endorsements of this online learning platform put at risk or directly violated children’s rights due their tracking abilities for advertising purposes.

Following the report, education ministers agreed to develop an evidence-based, best practice framework to guide schools in harnessing AI tools to support teaching and learning, and to establish a Taskforce to develop the framework. The Taskforce issued the Australian Framework for Generative AI in Schools in November 2023.⁴⁰⁸ The framework relies on key principles such as Human and Social Wellbeing, including the use of AI tools “in ways that respect and worker rights, including individual autonomy and dignity”; Transparency, including explainability: “vendors ensure that end users broadly understand the methods used by generative AI tools and their potential biases”; Fairness; Accountability; Privacy, Security and Safety: safe and ethical use of generative AI tools; best practice implementation of generative AI tools in the classroom to lift student outcomes; reducing workload burden and administration using generative AI tools; and establishing education-specific standards and governance to meet the needs of Australian schools.

The House of Representatives Standing Committee on Employment, Education, and Training tabled its report, *Study Buddy or Influencer*,⁴⁰⁹ following its Inquiry into the Use of Generative Artificial Intelligence in the Australian Education System.⁴¹⁰ The Committee’s 25 recommendations explore how Australian schools can maximize the opportunities presented by generative artificial intelligence (GenAI) while successfully mitigating the risks of using the emerging technology

and ensuring adequate safeguards and guardrails are in place to prevent misuse. The recommendations focus on integrating GenAI into Australia's national curriculum as a study buddy for all students.

Use of AI in the Military

Although Australia participates in forums on AI use in the military, the Defence Digital Strategy and Roadmap 2024 did not explicitly include a plan for integrating AI systems.⁴¹¹ The roadmap outlines a vision for a “secure, integrated, and scalable digital environment to compete and succeed in the digital age,” but only briefly mentions the use of modern technologies such as AI and business process mining to inform and enhance defense operations.

Australia is also collaborating with international allies to develop advanced AI capabilities in defense. Under the AUKUS security pact,⁴¹² Australia is working alongside the United States and the United Kingdom on next-generation military technologies, including AI, quantum computing, and autonomous systems. Early AUKUS initiatives have explored AI-enabled battlefield decision-making and autonomous vehicle deployment. However, these developments necessitate strong ethical and legal oversight.

Moreover, Australian universities are collaborating with industry and government to train students in applied AI and other emerging technologies as part of Australia's Next Generation Graduates Program. The program seeks to create a skilled workforce that will enhance Australia's defense and aerospace sectors while leveraging engagement with Australia's First Nations peoples.⁴¹³

Environmental Impacts of AI

Although AI technology is seen as a possible solution to clean energy and sustainability, Australia's national science agency, the Commonwealth Science and Industrial Research Organization (CSIRO),⁴¹⁴ has shifted focus to the potential

⁴¹¹ Australian Government, Defence, *Defence Digital Strategy and Roadmap 2024* (Aug. 27, 2024), <https://www.defence.gov.au/about/strategic-planning/defence-digital-strategy-roadmap-2024>

environmental impacts of AI technology. This focus is expected to progress considering Australia's aim to "become a host for AI data [centers] in the Asia-Pacific region."⁴¹⁵ Australia's DISR commissioned a 2021 report to review the energy efficiency of data centers. The report found that "[g]rowth in edge computing (the use of data centres close to the point of use), which is required to support applications such as 5G, Artificial Intelligence and Virtual Reality, is likely to increase energy demand."⁴¹⁶ Beyond data center energy impacts, the DISR proposal for mandatory guardrails included environmental impacts among those organizations should consider in assessing whether the use of an AI system is "high-risk."⁴¹⁷

Australia was one of 19 signatories to the Net Zero Government Initiative at the United Nations Framework Convention on Climate Change Conference of Parties (COP27).⁴¹⁸ The Net Zero in Government Operations Strategy, which outlines the Australian government's approach to achieve net zero government operations by 2030, set energy efficiency and environmental standards for new data centers.⁴¹⁹ As part of these efforts, the Digital Transformation Agency established a new Data Centre Panel to "help promote sustainable practices across the data centre market [...] to reach net zero."⁴²⁰

Lethal Autonomous Weapons

At the 78th UN General Assembly First Committee in 2023, Australia voted in favor⁴²¹ of resolution L.56⁴²² on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems” from humanitarian, legal, security, technological, and ethical perspectives and reflect on the role of humans in the use of force. The Resolution mandated the UN Secretary-General prepare a report reflecting the views of member and observer states on autonomous weapons systems.

In addition, Australia is a high contracting party to the convention on Certain Conventional Weapons (CCW).⁴²³ Australia has also endorsed the United Nations General Assembly Resolution 78/241 on lethal autonomous weapons systems (LAWS).⁴²⁴ Australia made a submission to the Secretary-General’s Report on Lethal Autonomous Weapons Systems in May 2024,⁴²⁵ indicating that the government “considers that the CCW is the most appropriate framework for multilateral discussions on LAWS” and reinforced its compromises to IHL and ethical standards. The submission also called attention to a joint proposal Australia co-sponsored to the Group of Governmental Experts on Emerging Technologies in the Area of Lethal Autonomous Weapons Systems (GGE).⁴²⁶ The Proposal introduces a two-tier approach that involves total bans on specific LAWS (e.g., those designed to target civilians or civilian objects) and the imposition of restrictions on other systems to ensure adherence to IHL.⁴²⁷

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In October 2022, Australia was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.⁴²⁸ In this joint statement, States declared that they “are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (IHL), including through maintaining human responsibility and accountability in the use of force.”⁴²⁹

Australia participated in the Responsible Artificial Intelligence in the Military Domain (REAIM) international summit, co-hosted by the Netherlands and the Republic of Korea.⁴³⁰ Government representatives, including Australia, agreed on a joint call for action on the responsible development, deployment, and use of artificial intelligence in the military domain, stressing that AI in the military domain should be “employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”⁴³¹ Australia has also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁴³² Australian commissioners and experts joined the Global Commission on Responsible AI in the Military Domain in the Hague.⁴³³

Center for AI and Digital Policy

The second edition of the REAIM was held in Seoul, South Korea, on September 9–10, 2024.⁴³⁴ The Summit led to the adoption of the Blueprint for Action on the responsible use of AI in the military domain, endorsed by Australia.⁴³⁵ This commitment builds on the groundwork from the 2023 summit in The Hague, proposing broader guidance for the ethical and responsible application of AI in military contexts, emphasizing compliance with international law, human accountability, reliability, human involvement, and data governance.

AI Literacy

Australia’s updated National AI Plan⁴³⁶ includes supporting and training workers as Action 5 under the goal to spread the benefits of AI.⁴³⁷ The Government supports lifelong learning in the plan and detailed under the Jobs and Skills Australia 2025 Generative AI report.⁴³⁸ Industry partners including Microsoft are assisting the expansion of AI Literacy Hubs across the country for all citizens to promote “inclusive AI upskilling across Australia.” However, the plan does not define AI literacy.

The National AI Plan adds AI to the digital literacy competency already embedded in the education system.⁴³⁹ The curriculum will build on the 2023 Framework for Generative Artificial Intelligence in Schools,⁴⁴⁰ which “seeks to guide the responsible and ethical use of generative AI tools in ways that benefits students, schools and society.” The Framework defines guidelines around key principles, including Transparency, which specifies that “School communities understand how generative AI tools work, how they can be used, and when and how these tools are impacting them,” requiring vendors to ensure users “broadly

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

understand” how the tools work and their biases.⁴⁴¹ The Framework also includes principles on Fairness and Accountability, as well as Privacy and Data Rights. However, the Framework does not specify how to use AI in those ways or specify vendors. The report on the Framework following the annual review in 2024 “found that the Framework not only correctly identified and made provision for existing challenges but also effectively predicted emerging and current risks, such as the increased use of AI deep fakes.” The review noted updates to the national curriculum (Version 9.0)⁴⁴² to support teacher and school training on AI, elaborate on AI content, and identify potential research into AI’s impact on learning outcomes.

Human Rights

Human rights are respected and protected through various laws in Australia at the federal, state and territory levels, through the Australian Constitution, and the common law.⁴⁴³ Australia has formally agreed to be bound as a party to seven core international human rights treaties,⁴⁴⁴ including as an original signatory to the Universal Declaration of Human Rights.⁴⁴⁵ Under the Human Rights (Parliamentary Scrutiny) Act 2011, all bills and legislations are scrutinized against these covenants and conventions for compatibility with human rights and freedoms.⁴⁴⁶

Freedom House ranked Australia very highly (95/100) in 2025 and reported that, “Australia has a strong record of advancing and protecting political rights and civil liberties. Challenges to these freedoms include the threat of foreign political influence, harsh policies toward asylum seekers, discrimination against LGBT+ people, legal constraints on the press, and ongoing difficulties ensuring the equal rights of First Nations Australians.”⁴⁴⁷ Although Australia has maintained its “free” ranking, the score declined from 97 in 2021.⁴⁴⁸

Center for AI and Digital Policy

Australia also ranks highly in the Freedom House Freedom on the Net report, scoring 76/100 in 2024. Although Australia ranks highly in access to information, the report warns of proposed legislation that “sought to increase online surveillance and limit the security of encrypted communications.”⁴⁴⁹

Human rights and Artificial Intelligence came together in the Australian Human Rights Commission 2023 report to DISR on Safe and Responsible AI. The report outlined human rights risks of AI, called for government action to “ensure human rights-centred design in the deployment of new and emerging technologies (including AI),” and supported human rights impact assessments to increase public trust.⁴⁵⁰ The Commission reiterated the need to center human rights in the development and deployment of AI systems in a 2024 report the Senate Select Committee on Adopting Artificial Intelligence.⁴⁵¹ The report provided 6 recommendations to the Select Committee to “address risks that are not currently within the scope of the existing regulatory framework.”

OECD / G20 AI Principles

Australia has endorsed the OECD and the G20 AI Principles. Australia has been actively aligning its policies with the OECD AI Principles, including through the AI Ethics Principles, the creation of NAIC, and the Voluntary AI Safety Standard. The OECD notes the Australia Roadmap for AI, the AI Ethics Framework, and the Australia’s AI Standards Roadmap, “intended to identify priority areas for AI standards development and a pathway for Australian leadership on international standardization activities for AI.”⁴⁵² The OECD also notes the work of Australia on trustworthy AI for health.

Australia joined the Global Partnership on AI as a founding member in June 2020.⁴⁵³ Minister Andrews stated, “Australia is committed to responsible and ethical

use of AI. Membership of the GPAI will allow Australia to showcase our key achievements in AI and provide international partnership opportunities which will enhance our domestic capability.” Andrews further stated, “Membership of the GPAI will build on the work the Government started at last year’s National AI Summit, which brought together 100 AI experts to discuss the challenges and opportunities which AI will present for the Australian economy.”

Australia actively participated in the G20 meetings held in Brazil in 2024 and it also endorsed the Maceio Ministerial Declaration of the Digital Economy Working Group (DEWG).⁴⁵⁴ The declaration calls for international cooperation to establish transparent and reliable AI guidelines to ensure equitable global benefits, human rights, and ethical standards. The declaration also highlights AI’s potential in addressing challenges like climate change and health crises, urging investments in digital infrastructure and skills to maximize its positive impact.

Council of Europe AI Treaty

Australia participated in the negotiation and drafting process for the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy and the Rule of Law.⁴⁵⁵ The first-of-its-kind global framework, the treaty aims to ensure “respect of human rights, the rule of law and democratic legal standards in the use of artificial intelligence (AI) systems.”⁴⁵⁶ Australia has not yet signed the treaty.⁴⁵⁷

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

UNESCO Recommendation on AI Ethics

Australia endorsed the UNESCO Recommendation on the Ethics of AI in 2021.⁴⁵⁸ The Australian AI Action Plan contains no explicit reference to the Recommendation because the Plan was published before.⁴⁵⁹ However, the recent responsible use of AI in government policy⁴⁶⁰ and the national data sharing framework signal progress.⁴⁶¹ A comprehensive assessment, such as the UNESCO Readiness Assessment Methodology (RAM) could help Australia evaluate the effectiveness of policy and further implement the UNESCO Recommendation. However, Australia has not initiated the RAM.⁴⁶²

Evaluation

Australia has set out an AI Roadmap and an AI Ethics Framework, in addition to endorsing the OECD/G20 AI Principles. The Government is implementing these values-based principles through practical initiatives such as the National Artificial Intelligence Center (NAIC) based on the country's AI Ethical Principles. The AI Ethical Principles are built upon OECD values.⁴⁶³ Australia has encouraged public participation in the development of AI policy, joined the Global Partnership on AI, and has a strong record on human rights. Australia has independent agencies, including a national regulator for privacy and freedom of information⁴⁶⁴ and a human rights commission that is engaged in AI oversight. Australia was also a cosponsor of the GPA resolution on Accountability in the development and use of AI.

Although Australia has endorsed the UNESCO Recommendations on the Ethics of AI, the Government has not conducted a comprehensive assessment to evaluate their effectiveness and further implement the UNESCO Recommendation.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The modernization of Australia’s data protection law to better protect human rights continues to progress, most recently with the amendments to the Privacy Act passing through Parliament. In addition, Australia’s national AI strategy continues to develop, including the release of the Voluntary AI Safety Standard, which aims to “ensure that the development and deployment of AI systems in Australia in legitimate but high-risk settings is safe and can be relied on, while ensuring the use of AI in low-risk settings can continue to flourish largely unimpeded.”⁴⁶⁵ Concerns exist regarding facial recognition.

⁴⁶⁵ National Artificial Intelligence Centre, *Voluntary AI Safety Standard* (Aug. 2024), <https://www.industry.gov.au/sites/default/files/2024-09/voluntary-ai-safety-standard.pdf>

Austria

In 2025, Austria progressed on implementing the EU AI Act by operationalizing advisory and supervisory bodies. The AI Advisory Board and AI Stakeholder Forum will contribute to the newly established AI Monitor. Austria signed the Statement on Inclusive and Sustainable AI at the AI Action Summit.

National AI Strategy

The Austrian Government presented the national AI strategy, Artificial Intelligence Mission Austria 2030 (AIM AT 2030), in August 2021.⁴⁶⁶ The objectives are: Using AI for the common good; Positioning Austria as an international hub of AI research and innovation; Boosting Austria's economy through strategic AI use.

AIM AT 2030 is guided by the two cornerstones of the European AI strategy: an ecosystem for trust and an ecosystem for excellence. Austria not only supports increased cooperation at the European level, as proposed in the European Commission's White Paper on AI⁴⁶⁷ and the EU AI Act,⁴⁶⁸ but also intends to shape national AI ecosystems in line with the European AI strategy.⁴⁶⁹

The Austrian strategy is based on a human-centered approach to AI to ensure that resources are used to support fundamental European values and respect and guarantee fundamental rights such as privacy and the principle of equality. Citizens' involvement is also identified as key.⁴⁷⁰ Regarding ethical principles, the strategy refers to the European High-Level Expert Group on AI's Ethics guidelines for

⁴⁷⁰ *Ibid*, p. 17

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

trustworthy AI.⁴⁷¹ Accordingly, AI systems must fulfill three basic principles to be considered trustworthy. They must:

- “be lawful by respecting all existing laws and regulations;
- respect ethical principles and values such as equality and fairness; and
- be robust, both in a technical sense and from a societal perspective.”⁴⁷²

AIM AT 2030 also mentions the need to establish a clear legal framework that releases innovation in science and economy, reduces uncertainties and at the same time guarantees legal certainty. The Austrian Federal Government supported the creation of a Europe-wide legal framework for AI applications to avoid isolated national solutions, a project realized with the EU AI Act.

The AI Implementation Plan introduced in 2024 is an interim report that serves as a significant addition and clarification to the AIM AT 30 and aligns “with fundamental European values and the European legal framework.”⁴⁷³

The Federal Ministry Republic of Austria Climate Action, Environment, Energy, Mobility, Innovation and Technology oversees AI policy under the broad category of “Innovation.” The Ministry also engages with research, policy, governance, industrial competitiveness, sustainability, and international cooperation.⁴⁷⁴

Austria’s 11-member AI Advisory Board established in early 2024 includes experts from academia, law, and ethics. This board advises the federal government on AI regulatory measures and ethical concerns and assists in incorporating EU AI Act guidelines into national policy frameworks.⁴⁷⁵

Austria is proactively planning for emerging and future AI-related technologies. The Federal Ministry of Innovation, Mobility and Infrastructure (BMIMI), established a national roadmap, Virtual Worlds and Immersive Technologies 2035, detailing recommendations for action with the goal for Austria to effectively develop in extended reality (XR).⁴⁷⁶ The roadmap highlights the need

Public Participation

Experts and other stakeholders were involved in the development of the national AI strategy through the AI Stakeholder Forum,⁴⁸³ and through the consultation among government entities.⁴⁸⁴ The strategy also provides for broad participation of civil society organizations, intermediaries, and citizens in the implementation of the measures. The Austrian Regulatory Authority for Broadcasting and Telecommunications (RTR) created an AI Service Desk to serve as a “point of contact and information hub for the general public” on AI. The service desk also supports implementation of the EU AI Act.⁴⁸⁵ The AI Stakeholders Forum also promotes exchange between the Federal Government and the country’s diverse stakeholders in the field of artificial intelligence. As of December 2024, the Forum consisted of 29 different associations and interest groups. The central task of the Forum is to connect participating organizations, disseminate information and news on AI, and promote synergies.⁴⁸⁶

The Federal Government endeavors to formulate its target provisions in close coordination and comprehensive agreement with the fundamental values and objectives of the European Union. Austria is thus also contributing to the promotion of Europe's industrial and technical performance regarding AI.

Data Protection

Austria is an EU Member State, so the General Data Protection Regulation (GDPR)⁴⁸⁷ applies. The Austrian Data Protection Act (DSG) supplements the GDPR.⁴⁸⁸

Following the EU AI Act’s policy framework on AI systems, Austria has strengthened its data privacy measures. New policies require detailed impact

assessments for systems handling sensitive data or biometric recognition. These updates further Austria's commitment to protecting data privacy and human rights.⁴⁸⁹

According to Article 35(4) GDPR, national supervisory authorities shall compose and publish the list of processing operations that requires performing a data protection impact assessment. According to the list established by the Austrian Data Protection Authority (*Datenschutz behörde*, DPB), a data protection impact assessment is necessary in cases involving AI, including:

- assessment or classification related to a person's work, economic situation, health, preferences and interests, reliability or behavior, location or movements and that is based solely on automated processing and may have negative legal, physical, or financial consequences
- evaluating the behavior and other personal aspects in cases that may be used by third parties to make automated decisions that have legal effects on the persons evaluated or similarly significantly affect them
- using or applying new or novel technologies or organizational solutions in processing data that make it difficult to assess the impact on data subjects and the social consequences, in particular through the use of artificial intelligence and the processing of biometric data beyond the real-time reproduction of facial images
- where the use of algorithms makes it possible to take decisions that significantly affect the data subject by going beyond the processing operations normally expected of a data subject⁴⁹⁰

Austria also transposed the EU Data Protection Law Enforcement Directive (LED)⁴⁹¹ with the DSG.⁴⁹² The Austrian National Council approved the Austrian

an AMS algorithm designed to support AMS staff in their daily advising to job seekers in 2020, the Austrian Federal Administrative Court (BVwG) overruled the initial ruling on appeal in 2025.⁵⁰¹ The appeal successfully demonstrated the lack of reliance on automatic decisions, making the ruling that the AMS did not have a suitable legal basis for automated decision-making under Article 22 GDPR moot.⁵⁰² According to the BVwG, “Investigations demonstrated that advisors had a substantive role in the decision-making process, rather than a merely formal one. Furthermore, [...] the controller implemented clear internal guidelines and measures to comply with them. Therefore, the Court concluded that there was no automated decision-making.”⁵⁰³ Still, the CEO of the AMS says that the tool will not be revived as too much time has passed and the tool is likely outdated.”

The Austrian Government launched the AI Monitor, a dashboard that provides information about Austria’s usage and the opportunities, and challenges associated with AI. Publicly available at digitalaustria.gv.at, the AI Monitor allows citizens greater AI oversight. The Monitor will be updated annually and include a “broad range of quantitative data, alongside short introductions to lighthouse projects and initiatives within the Austrian AI ecosystem and contributions by the Austrian AI Advisory Board and the AI Stakeholder Forum.”⁵⁰⁴

Facial Recognition

Since December 2017, 25 E-Gates, where border controls are supported by facial recognition, have been installed at the Vienna International Airport in Austria. Manual border controls have also remained in place.⁵⁰⁵

After a one-year test phase, facial recognition for law enforcement has been in regular operation in Austria since August 2020. The police can use digital image

comparison only if they suspect the commission of an intentional judicially punishable act in the case of unknown perpetrators. The Ministry of the Interior published information about the use of the software after parliamentary inquiries.⁵⁰⁶ Accordingly, the Federal Criminal Police Office may use the system to investigate intentional acts authorized by the judiciary regardless of the level of punishment for an offense.⁵⁰⁷

The Austrian supervisory authority (*Datenschutzbehörde, DSB*) issued a decision in 2023 against the facial recognition company Clearview AI, which maintains a database of over 30 billion facial images collected globally. The DSB found Clearview AI to have violated several GDPR provisions, citing a lack of lawfulness, fairness, and transparency in processing the complainant's personal data, and of illegally scanning and extracting uniquely identifying facial features of the complainant. Clearview AI was ordered to delete the complainant's personal data and designate a representative within the European Union⁵⁰⁸ but not required to pay a fine.⁵⁰⁹ Austrian privacy group noby filed a criminal complaint in Austria in 2025, accusing Clearview of illegally collecting photos to build its facial recognition database violating GDPR provisions.⁵¹⁰

The ID Austria mobile app (previously Digitales Amt) was officially launched in 2025. The app aims to improve services for digital ID, electronic signatures, and qualified signatures. The login process has also been updated to allow users to log in using fingerprint, facial recognition, or their device password/PIN.⁵¹¹

Automated Tax Fraud Detection

risk management structure with increased efficiency in auditing, fraud prevention, and tax collection.⁵¹²

PACC reviewed approximately 6 million income tax disclosures and 1.4 million applications for COVID-19 assistance payments using machine learning to derive potential fraud scenarios from a variety of historical data sources. The reviews facilitate the selection of tax audits, plausibility checks of tax returns, and the evaluation of start-ups and applications of all kinds. The Ministry of Finance claims that this will make it easier to detect tax evasion, including customs fraud.⁵¹³

According to a Ministry of Finance's press release on the 2023 annual balance sheet, PACC's analysis identified 375,000 cases out of 34 million as potentially implausible, targeting them for further investigation into tax evasion and fraud.⁵¹⁴ For the 2024 cycle, PACC's automated reviewed analyzed 6.6 million tax cases and reviewed 23.4 million compliance cases, helping to detect false declarations, fraud attempts, and fake companies.⁵¹⁵ This work generated about €354 million in extra tax revenue. In one example, a farm failed to report vehicle sales and was required to pay over €300,000 in back taxes. The Ministry said that PACC plans to expand the use of AI and generative models to make Austria's financial administration even more effective.

User Tracking and Website Analytics

Many websites use tracking technologies to track users and show them personalized advertisement. The Austrian Data Protection Authority (DSB), after declaring the use of Google Analytics illegal,⁵¹⁶ held a similar decision on the Facebook Login and Meta Pixel tools provided by Meta.⁵¹⁷ If these tools are used,

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

data is inevitably transferred to the United States, where the data is at risk of intelligence surveillance. Such transfer would contravene the Court of Justice of the European Union's (CJEU) 2020 *Schrems II* decision as the transferred data would not grant a level of protection equivalent to that guaranteed by the General Data Protection Regulation (GDPR).⁵¹⁸ According to the European Center for Digital Rights (noyb), "there is no information if a penalty was issued or if the DSB is planning to also issue a penalty. The GDPR foresees penalties of up to €20 million or 4% of the global turnover in such cases, but data protection authorities seem unwilling to issue fines, despite controllers ignoring two CJEU rulings for more than two years."⁵¹⁹

Environmental Impact of AI

Austria's 2024 AI Implementation Plan identifies Climate Neutrality and Sustainability as a Key Area from and through AI.⁵²⁰ The Environmental Impact Assessment Directive requires environmental impact assessments for 89 types of projects, including industrial plants, expected to have "substantial adverse impact on the environment." However, the directive contains threshold values and criteria that could allow some AI systems or data centers to avoid assessment.⁵²¹

Austria joined over 100 countries to discuss the link between AI and energy at the AI Action Summit in Paris. The discussions aimed to share knowledge, support investments in sustainable AI systems, promote global dialogue on AI and the environment, and welcome the creation of an observatory on AI's energy impact with the International Energy Agency. Austria signed the Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet, along with 62 other countries.⁵²²

Lethal Autonomous Weapons

Austria supports developing a legally binding instrument that would ban autonomous weapons and systems that are not meaningfully controlled by humans.⁵²³ At the virtual conference, Safeguarding Human Control over Autonomous Weapon Systems in 2021, the Austrian Federal Minister for European and International Affairs of Austria situated the country as the vanguard of many disarmaments, non-proliferation, and arms control issues.⁵²⁴ They also talked about the challenges of AI and questioned algorithms that make death or life decisions based on ethics, morality, and law and called for a legal norm in the form of a treaty to ensure human control.⁵²⁵

Austria has continued this stance through efforts at the UN and REAIM conferences.⁵²⁶ The country emphasized the need for a legally binding instrument to regulate autonomous weapons and highlighted both humanitarian, environmental and security-risks in remarks during the informal consultations on lethal autonomous weapons systems (LAWS) at the UN General Assembly.⁵²⁷ Austria's submission to the Secretary-General Report in response to Resolution 79/239 emphasized the interface of AI and autonomous weapons and the need to link military-AI governance with international humanitarian law.⁵²⁸ Prior to submitting the report, Austria hosted the first Vienna Conference on Autonomous Weapons Systems Humanity at the

Crossroads: Autonomous Weapons Systems and the Challenge of Regulation,⁵²⁹ where more than 1000 participants from 140 countries discussed international regulation of autonomous weapons and the challenges of a legally binding document.

AI Literacy

Austria's Artificial Intelligence Strategy, AIM at 2030, recognizes that AI will fundamentally change teaching and learning processes. As a result, the Federal Government aims to establish Digital Basic Education as a compulsory subject for children and adolescents. Federal Ministry for Climate Action, Environment, Energy, Mobility, Innovation and Technology (BMK) posits this education will be essential for successful digital transformation, AI topics and related ethical questions can be addressed as pedagogical concepts.⁵³⁰ The BMK AI Implementation Plan 2024 aims to ensure 80 percent of the population develops digital skills by 2030, an increase from the 63 percent assessed to possess them in 2023.⁵³¹ The Implementation Plan identifies increasing AI skills among teachers, students, and researchers as essential to minimize potential risks associated with AI use.⁵³² The Digital Skills Initiative (DKO) established in 2022 offered a strategy for realizing this goal and asserting Austria's leadership in digital competency with particular attention to the "training of educators, leveraging and supporting best practices, showcasing the public sector as a role model, addressing the IT skills shortage, offerings in the field of AI literacy."⁵³³

Center for AI and Digital Policy

Human Rights

The 2025 Freedom House report scores Austria highly for political rights and civil liberties with (93/100) and designates the country as “Free.”⁵³⁴ Austria was the 70th country to join the United Nations and is party to the most important international legal instruments for the protection and defense of human rights.⁵³⁵

With regards to AI policy, as part of the objectives contained in its AI Strategy, Austria states that it will deploy AI responsibly targeting the common good relying on fundamental human rights,⁵³⁶ aligned with the Council of Europe 2020 Recommendation to member states and the international treaty.⁵³⁷ Austria reiterated the need that “All uses of AI must remain firmly anchored in international humanitarian and human rights law. [...] AI technology should [...] be aimed at promoting human rights” at the UN Security Council open debate on AI and international peace and security.⁵³⁸

OECD AI Principles

Austria has endorsed the OECD and G20 AI Principles.⁵³⁹ Regarding implementation, the OECD notes that Austria is actively involved in relevant international organizations, the EU, and other processes and its AI strategy specifically addresses “human-centered values and fairness, robustness, security and safety, inclusive growth, sustainable development and well-being, investing in AI R&D and providing an enabling policy environment for AI.”⁵⁴⁰

Council of Europe AI Treaty

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Democracy and the Rule of Law. Austria endorsed the international treaty as part of the European Union.⁵⁴¹

UNESCO Recommendation on AI Ethics

Austria endorsed the UNESCO Recommendation on AI, the first ever global agreement on the ethics of AI.⁵⁴² The Austrian Commission for UNESCO created an Advisory Board on the Ethics of Artificial Intelligence to implement the UNESCO Recommendation on the Ethics of Artificial Intelligence. The Advisory Board aims to exchange information on developments related to AI and the UNESCO Recommendation, advise the National Contact Point at the Austrian Commission for UNESCO, and support measures to raise awareness and initiate a dialogue in society on the ethical implications of AI.⁵⁴³

Austria's TU Wien Informatics program became the first to hold a UNESCO Chair on Digital Humanism in 2023. The UNESCO Chair was part of a collaboration among the Federal Ministry of Education, Science and Research; Federal Ministry of Climate Action, Environment, Energy, Mobility, Innovation and Technology; Federal Ministry of European and International Affairs; and the City of Vienna. Following UNESCO's AI ethics recommendations, the Chair seeks to lay scientific groundwork for meaningful regulations and foster an interdisciplinary approach to educating future IT professionals.

Austria has taken steps to implement the UNESCO Recommendation on the Ethics of Artificial Intelligence through initiatives tied to the 2021 national AI strategy and digital decade. The country's programs for digital skills development, environmental protection, and creation of an AI oversight body demonstrate this progress. Austria has not initiated the UNESCO Readiness Assessment Methodology (RAM).⁵⁴⁴

Evaluation

The Austrian AI strategy released in late 2021 follows the larger goals of the EU strategy, emphasizing both excellence and the protection of fundamental rights.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Austria has emphasized public participation in the development of the national AI strategy and receives expert advice from the Austrian Council on Robotics and Artificial Intelligence, which has stressed the importance of human-centric AI.

Austria ranks highly for traditional human rights protection and is active at the OECD, although it is not a member of the Global Partnership on AI. Austria ratified the Modernized Convention 108 of the Council of Europe, which includes an important provision on algorithmic transparency. This should avoid any doubts in the future regarding the scope of application of the right to algorithmic transparency. With the adoption of the EU AI Act, Austria shall establish a national supervisory mechanism which, it is to be hoped, will be an independent and will take the protection of human rights seriously. Concerns persist regarding the use of AI techniques for facial surveillance and predictive policing.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Azerbaijan

In 2025, Azerbaijan approved the Artificial Intelligence Strategy 2025–2028 and developed technical standards related to AI risk assessments and model training.

National AI Strategy

In recent years, Azerbaijan has taken an active interest in Artificial Intelligence and new technologies to reform the country's economy and extend internal security and policing.⁵⁴⁵ The Ministry of Economy of the Republic of Azerbaijan announced in February 2022 that the country would establish an AI Strategy.⁵⁴⁶ In March 2024, Acting Chairperson of the Innovation and Digital Development Agency of the Ministry of Digital Development and Transport Inara Valiyeva declared that a roadmap for the national AI strategy “is now at the approval stage.”⁵⁴⁷ The Minister of Digital Development and Transport announced the draft Artificial Intelligence Strategy 2025–2028 for the development of artificial intelligence in October 2024.⁵⁴⁸ The minister's announcement focused on investment for startups and research to “establish a platform for the exchange of ideas and experience among all participants in the innovation ecosystem.” The minister emphasized the plan to integrate sustainable development principles in the agenda but did not mention ethical or human rights principles such as transparency or fairness.

The Artificial Intelligence Strategy 2025–2028 was approved by Presidential Decree in March 2025.⁵⁴⁹ The Strategy outlines a national roadmap for AI development, focusing on innovation, public services, and capacity building. The AI strategy includes key objectives on developing a skilled workforce; establishing data governance systems to facilitate AI development while enhancing data quality; and

ensuring transparency, mitigating bias, and enhancing cybersecurity through regulatory frameworks.

As part of the implementation of the Action Plan for the Artificial Intelligence Strategy of the Republic of Azerbaijan for 2025–2028,⁵⁵⁰ the Azerbaijan Standardization Institute adopted several national AI standards in 2025 to establish common rules for the functioning of AI systems across various platforms and industries and to ensure interoperability. The standards address risk management, using machine learning, assessing the robustness of neural networks, and managing systems more broadly.

The Fourth Industrial Revolution Analysis and Coordination Centre (4SIM), in collaboration with the World Economic Forum Artificial Intelligence and Machine Learning Platform, played a key role in preparing the roadmap for shaping Azerbaijan's National Strategy on Artificial Intelligence.⁵⁵¹ In parallel, the Azerbaijan is also preparing a digital development strategy,⁵⁵² including a data management strategy,⁵⁵³ with the support of the World Bank.

In 2016, Azerbaijan approved the Strategic Roadmap for Development of Telecommunications and Information Technologies in the Azerbaijan Republic (Roadmap).⁵⁵⁴ The Roadmap focuses on Information Communication Technology (ICT) sector and sets three main strategic targets: 1) Improve governance structures

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

and strengthen ICT; 2) Increase productivity and operational efficiency of the business environment; 3) Digitize government and social environment.⁵⁵⁵

In February 2021, Azerbaijan adopted its 2030 Vision: National Priorities on Socio-Economic Development,⁵⁵⁶ which highlighted the importance of technological transformation.

Both the Ministry of Economy and the Ministry of Digital Development and Transport have been active in areas related to AI adoption. The Ministry of Economy manages the Center for Analysis and Coordination of the Fourth Industrial Revolution established by Presidential Decree of January 6, 2021. The mandate of the center is to respond to global challenges and trends including artificial intelligence.⁵⁵⁷ In October 2021, another Presidential Decree established the Innovation and Digital Development Agency under the Ministry of Digital Development and Transport. This decision aimed to “improve governance in the field of digitalization, innovation, high technologies and communications in the Republic of Azerbaijan.”⁵⁵⁸

Public Participation

Azerbaijan has a law that promotes public participation in the formulation and implementation of government policies.⁵⁵⁹ Membership of the public council is open to everyone and elections are held to elect members of the public council.⁵⁶⁰ As a member of the Council of Europe (CoE), the country is committed to implement the Council of Europe (CoE) National Action Plan for the Promotion of Open Government 2020–2022, through the adoption and implementation of an expanded

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

CoE Action Plan for Azerbaijan 2022–2025, which among several goals, is intended to enhance digitalization, improve civilian oversight, expand public participation, and prevent corruption.⁵⁶¹

Azerbaijan is part of the Enlarged Partial Agreement of the North-South Centre of the Council of Europe (NSC) to encourage a bottom-up dialogue between civil society and other democratic governance actors around four goals: global development education, youth co-operation, women’s empowerment, and migration.

Nevertheless, no record of public consultations in connection with developing AI initiatives, including the AI Strategy, which outlines broad stakeholder engagement, has been found.

Data Protection

Data Protection is enshrined in the Constitution of the Republic of Azerbaijan. Article 32, paragraph VIII establishes the right to inviolability of private life, and states that the “scope of the personal information, as well as the conditions of their processing, collection, passing, use and protection is prescribed by law.”⁵⁶²

The country’s data protection laws currently encompass three bodies of legislation:⁵⁶³ 1) the Law on State Secrets,⁵⁶⁴ 2) the 1998 Law on Data, Data Processing and Data Protection, and 3) the 2010 Law on Personal Data.⁵⁶⁵

The Personal Data Law provides for data subjects’ right to be informed, right to access, right to rectification, right to erasure, right to object opt-out, and right not to be subject to automated decision-making (unless this is required by law). The Law regulates the collection, processing and protection of personal data, in the public and private sectors. The Law also covers cross-border transfer of personal data and the rights and obligations of public bodies and local authorities, individuals, and legal entities operating in this field.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Ministry of Digital Development and Transport is the authority tasked with the implementation of this Law.⁵⁶⁶ A 2018 Decree of the President of the Republic of Azerbaijan authorized the ministry, formerly known as the Ministry of Transport, Communications, and High Technologies,⁵⁶⁷ to exercise the authority to avoid infringements of the provision of the law, ensure information security, verify compliance in collection, processing and protection of personal data, and keep registry on information resources related to personal data. The State Security Service, Ministry of Internal Affairs, Ministry of Justice, and Special State Protection Service are also involved in the implementation of the data protection legal regime.⁵⁶⁸

Azerbaijan is party to Convention 108 or Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data.⁵⁶⁹ Convention 108 reaffirms the fundamental values of respect for privacy. Article 5 defines the need for personal data to be “obtained and processed fairly and lawfully.” Convention 108 requires Azerbaijan to establish an independent data protection authority.

The Council of Europe (CoE) Action Plan for Azerbaijan 2022–2025 has a specific chapter on data protection and artificial intelligence. Azerbaijan is committed to:

- Move closer to signing and ratifying the Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data (Convention 108+)
- Adopt legislation compliant with the Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data (ETS No. 108)
- Establish a dedicated independent authority for personal data protection
- Disseminate and implement Council of Europe guidelines on the use of artificial intelligence
- Conduct an awareness-raising campaign on the importance of data protection for the benefit of the local population

The Chief of Special Communication and Information Security State Service of Azerbaijan, Tural Mammadov, said during the Cyber-Secure Economy: Reforms, Innovative Approaches and Solutions event in 2022 that a draft law on ensuring

personal data protection has been prepared in Azerbaijan based on European standards, the GDPR in particular.⁵⁷⁰

The Electronic Security Service under Azerbaijan's Ministry of Digital Development and Transport has drafted a new version of the law on the Protection of Personal Data. Reportedly, the amendments seek to “balance security and [...] ensure the reliable protection of citizens’ rights.”⁵⁷¹

Azerbaijan is not an accredited member of the Global Privacy Assembly and has not sponsored the 2018 GPA Resolution on AI and Ethics,⁵⁷² the 2020 Resolution on AI and Accountability,⁵⁷³ the 2022 Resolution on Facial Recognition Technology, or the 2023 GPA Resolution on Generative AI Systems.⁵⁷⁴

Algorithmic Transparency

Azerbaijan has neither signed nor ratified the protocol modernizing Convention 108, which provides for algorithmic transparency.⁵⁷⁵ National legislation does not provide for algorithmic transparency.

AI Readiness and Digitization

The Azerbaijan government has taken concrete steps to promote technology innovation. In June 2019, Presidential Decree 718 created a Centralized Government Cloud⁵⁷⁶ for the effective organization of the formation, storage, maintenance and integration of state information systems and reserves. The Decree also supports innovative solutions based on Artificial Intelligence and robotics and committed

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Azerbaijan to use “machine learning” (M2M), “artificial intelligence” (EU), “big data,” and “internet of things” (IoT) as bases for providing public services in the country.

The e-Gov Development Center of the State Agency for Public Service and Social Innovations organized the International Conference on Artificial Intelligence in Digital Governance. The first panel discussions were dedicated to the transformation of healthcare with AI, the second panel focused on AI and society, and the last session addressed the future of artificial intelligence and how it will change human life.⁵⁷⁷

The Center for Analysis and Coordination of the Fourth Industrial Revolution (C4IR) held several events dedicated to AI and machine learning. The events focused on exchanging views and experience on the development of AI and machine learning with the involvement of government agencies, private companies, scientific and educational institutions, and civil society.⁵⁷⁸

In October 2022, a mission of the Center for Analysis and Coordinator of the Fourth Industrial Revolution (C4IR) participated in a “Global Dialogue: The role of artificial intelligence in the new global development—innovation and inclusiveness,” presenting the measures taken by the government on the digital economy in the country.⁵⁷⁹

AI and the Judiciary

The Head of the Innovation and Digital Development Agency of Azerbaijan, Inara Valiyeva, announced the introduction of the Unified Court System based on AI for 2023. The Unified Court System is currently operating in test mode in coordination with the Supreme Court with about 50,000 documents used in the

creation of the system.⁵⁸⁰ Azerbaijan plans to focus on improving the quality of decision-making and management by using Big Data and AI technologies.⁵⁸¹ The project, conducted with the cooperation of the Council of Europe for the Efficiency of Justice (CEPEJ) and the World Bank, includes an automated random allocation of cases based on criteria regarding subject matter, weight of the case, and the court's or judge's caseload; a "fast-track procedure for uncontested small claims; an "e-Order" automated system"; and a unified judicial portal.⁵⁸²

The Ministry of Digital Development and Transport and the Ministry of Justice jointly launched the E-qanun.ai, an AI-driven search platform for Azerbaijan's legal documents and legislative database.⁵⁸³ The platform was developed as part of the implementation of the national AI Strategy to support natural language processing priorities outlined in subsection 8.2.2 of the Strategy.

Biometrics

The Law on Biometric Data adopted in 2008 determines the formation and requirements for biometric information resources, the organization and purpose of the biometric identification system, and the application of biometric technologies. The law also regulates the relations arising in this area. Azerbaijan began issuing biometric-based electronic identity cards in September 2018. The cards contain information on place of residence and marital status as well as photos and fingerprints if the citizen is over age 15.⁵⁸⁴

AI Surveillance

Center for AI and Digital Policy

remains unclear.”⁵⁸⁵ Usage of surveillance tools by the Azerbaijani Government was also reported by Amnesty International.⁵⁸⁶ The OCCRP (Organized Crime and Corruption Reporting Project) named Azerbaijan’s surveillance a Digital Autocracy.⁵⁸⁷ A report by Open Tech found that Azerbaijan is one of several countries where censorship, facial recognition, and access to encrypted communication have been prevalent as forms of information control.⁵⁸⁸

The Law on Operative-Search Activity authorizes agencies to conduct surveillance without a court order in cases where it is regarded as necessary to prevent serious crimes against individuals or especially dangerous crimes against the state. The vaguely written provision leaves the law open to abuse. It has long been believed that the State Security Service and the Ministry of Internal Affairs monitor the communications of individuals, especially foreigners, prominent political activists, and business figures.⁵⁸⁹

In 2015, leaked documents showed that the Azerbaijani government was a client of the Italian surveillance company Hacking Team.⁵⁹⁰ In the previous year, Citizen Lab reported that the government was using RCS (Remote Control System) spyware sold by Hacking Team. The RCS endpoint was active in Azerbaijan between June and November 2013. Azerbaijan hit international headlines in 2013 when the results of the October presidential elections were accidentally released before voting began.⁵⁹¹ RCS allows anyone with access to activate a targeted device’s camera and microphone and to steal videos, photos, documents, contact lists, and emails.⁵⁹²

In 2017, Amnesty International reported that Azerbaijani human rights activists, journalists, and political dissidents have been the targets of a sustained spear phishing campaign using emails and Facebook chat, apparently aimed at gaining access to their personal information and private communications.⁵⁹³ In the same year, malware targeted Azerbaijani dissidents.⁵⁹⁴

An April 2018 report by Qurium revealed that Azerbaijan had purchased specialized security equipment, in particular Deep Packet Inspection (DPI) technology, from the Israeli company Allot Communications for some \$3 million.⁵⁹⁵

In October 2018, Israeli newspaper Haaretz reported that Israel's Verint Systems had sold surveillance equipment and software to the Azerbaijani government. Local police later used the equipment to identify the sexual orientation of users on Facebook.⁵⁹⁶ Haaretz reported that a few years after Verint's systems began being used Azerbaijani police arrested and tortured 45 gay men and transgender women.⁵⁹⁷

In July 2021, an investigative initiative led by Forbidden Stories concluded that the Pegasus software produced by the Israeli cybersurveillance company NSO Group was used in Azerbaijan to target more than 40 Azerbaijani journalists.⁵⁹⁸ Reporters with the Organized Crime and Corruption Reporting Project (OCCRP), which was among the groups working on the project, found some 250 potential targets in Azerbaijan, the majority of whom were "dissidents, activists, journalists, and opposition politicians." The report added that "journalists came under particular pressure, with dozens of prominent names, including OCCRP's Khadija Ismayilova, appearing on the list."⁵⁹⁹

The day full-scale war erupted between Azerbaijani and Armenian forces in Nagorno-Karabakh, the Ministry of Transport, Communications and High

Technologies throttled mobile and fixed-line broadband internet across Azerbaijan and blocked a number of social media platforms and websites, including Facebook, WhatsApp, and Skype. The action lasted 46 days, Azerbaijan's longest internet disruption to date.⁶⁰⁰

Facial Recognition

A 2019 report by Qurium indicated that Azerbaijan's government may be using facial-recognition technology. Qurium identified an AzerTelecom server running the software.⁶⁰¹

The Ministry of Transport, Communications and High Technologies (now Ministry of Digital Development and Transport) developed a Public-Private Partnership with SVORT and Sinam to establish AzInTelecom LLC. AzInTelecom is developing a new generation cloud digital signature called SIMA.⁶⁰² SIMA's initial purpose is to facilitate access to e-government services but will expand to the use of services through banks, mobile operators, internet providers, and household appliance stores. SIMA combines face recognition, public key, and cloud technologies and is based on biometric authentication.

Based on SIMA signatures, the Information Computing Centre is developing a payment system with face recognition technology.⁶⁰³ Users scan their identity card and verify their identity via face recognition through the front camera of the mobile devices.⁶⁰⁴ E-signatures are regulated by the Law of Azerbaijan on Electronic Signature and Electronic Document of March 9, 2004.⁶⁰⁵ No amendments were introduced concerning SIMA, biometric authentication, or facial recognition.

Smart Cities

As part of its plan to repopulate the Karabakh area following the war with Armenia, Azerbaijan plans to build Smart Cities/Villages in Zangilan. After the first

pilot project of the Aghali village, three additional smart villages were planned for 2023.⁶⁰⁶

The President of Azerbaijan, Ilham Aliyev, announced in January 2021 that “settlements recently liberated from Armenian occupation will be re-established based on the concept of smart city/village.”⁶⁰⁷ The Concept of Smart Cities and Smart Villages was later approved by presidential order.⁶⁰⁸ The Smart City/Village concept is to be implemented through working groups representing various ministries.⁶⁰⁹ A publication of the Baku Research Institute provides insights about the Smart Cities concept as a means to promote sustainable development of territories and attract population back.⁶¹⁰ The World Bank published a framework and Smart Villages Readiness Index for Azerbaijan to support the country in ensuring that economic opportunities, access of service, and governance are applied in the process.⁶¹¹

Environmental Impact of AI

The Minister of Digital Development and Transport emphasized the country’s attention the principles of sustainable development in its technology and innovation agenda in his announcement of the national strategy for AI development.⁶¹² However, no available policies demonstrate how officials plan to implement the principles.

Lethal Autonomous Weapons

During his swearing-in ceremony in February 2024, Azerbaijan's President, Ilham Aliyev stated, "Today, in the field of industrial development, in military industrial complex and, in general, in the military field, technological development and superiority are of great importance. Everyone saw this during the Second Karabakh War and the anti-terrorist operation. [...] Technological development, digitization, cybersecurity, application of artificial intelligence—all these should become part of our daily life. Government agencies, the private sector, and all other segments of society must be ready for this. [...] I do not see any dangers or threats to Azerbaijan but I know why—because they know that our response will be merciless, it will be crushing, and it will be given regardless of anything. Therefore, if we do not achieve technological development, if there are just a few thousand not tens of thousands of Azerbaijanis in this business, we may be overtaken. Therefore, I think that all institutions and, at the same time, society should know and see this as a duty."⁶¹³

Azerbaijan is not a party to the Convention on Conventional Weapons (CCW),⁶¹⁴ although the country participated as an observer on CCW meetings on killer robots in November 2019.⁶¹⁵ Azerbaijan is not among the countries that support a ban on lethal autonomous weapons.⁶¹⁶ At the Plenary meeting on December 22, 2023, Azerbaijan abstained from voting on General Assembly Resolution 78/241, which asks UN Secretary-General António Guterres to seek the views of countries and other stakeholders on addressing the challenges of autonomous weapons systems from various perspectives and report back in the second half of 2024.⁶¹⁷

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Over the last decade, Azerbaijan has steadily built up its armed forces and purchased weapons from Russia, Israel, and Türkiye.⁶¹⁸ Azerbaijan also developed drone arsenal composed of Turkish and Israeli UAVs.⁶¹⁹

In 2016, during the Four-Day War, also known as the Nagorno-Karabakh conflict in which the Azerbaijani Armed Forces faced the Armenian-backed Artsakh Defense Army, Azerbaijan used the Harop UAV to hit many targets, including artillery, air defense systems, and a busload of Armenian troops.⁶²⁰ As Forbes reported,⁶²¹ the Harops were supplied by Israel. In 2017 a team from Aeronautics was in Azerbaijan to finalize a contract for Orbiter 1K kamikaze drones and were asked to attack enemy positions. Apparently when the Israeli drone operators refused, “senior representatives of the company took control and operated the craft themselves, ultimately missing their targets.” Israeli authorities imposed a two-year ban on Aeronautics for this stunt. But when the ban expired in 2019, the company promptly announced a \$13m deal to sell drones to Azerbaijan. In the longer term, Azerbaijan plans to produce a licensed copy of the Orbiter known as Zarba themselves.

An Azerbaijani company announced in 2018 that it was working on three different sizes of kamikaze drones,⁶²² including one with an 11-pound warhead able to cruise for three hours looking for targets, while another company announced manufacturing kamikaze-drone called Bat.⁶²³

Algorithm Watch reported that Azerbaijani forces used at least three different models of drones capable of identifying and destroying a target automatically⁶²⁴ and

several autonomous weapons in the Second Nagorno-Karabakh conflict, known as the 2020 War.⁶²⁵

The 2020 War raised serious questions concerning the legality of UAVs and autonomous weapons. Ulrike Franke, autonomous weapons expert from the European Council on Foreign Relations, saw a watershed in warfare and commented: “The really important aspect of the conflict in Nagorno-Karabakh, in my view, was the use of these loitering munitions, so-called “kamikaze drones”—these pretty autonomous systems.”⁶²⁶ Human Rights Watch, in a statement to support the International Committee of the Red Cross initiative to ban Killer Robots, indicated: “the increased use of weapons systems with autonomy in today’s armed conflicts underscores the importance of creating a new international legal standard now, before it is too late.”⁶²⁷

The Republic of Nagorno-Karabakh was dissolved in 2024.⁶²⁸ In 2023, with Russia distracted and bogged down by its war in Ukraine, Azerbaijan launched a blockade of Nagorno Karabakh, eventually seizing the region and causing the majority of its Armenian population to flee.⁶²⁹

In the preliminary report on the draft of the UNESCO Recommendation on the Ethics of AI, Azerbaijan was referenced as a case of the use of AI technologies in armed conflicts. The report concluded that: “from the point of view of international humanitarian law, it is highly recommended to have certain regulations concerning the use of AI in military technology, so-called lethal autonomous weapons.”⁶³⁰

Center for AI and Digital Policy

AI Literacy

There is growing emphasis on digital skills and AI readiness in Azerbaijan's AI strategy and educational policy. UNESCO reported that Azerbaijan's education authorities define digital literacy as a basic competency for all learners and data classes will be integrated throughout the educational path.⁶³¹ However, there is no documented national program for the public or for civil servants nor a publicly available AI or digital literacy curriculum or standards.

Human Rights

Azerbaijan is a Member State of the United Nations and of the Council of Europe. Azerbaijan endorsed the UN Universal Declaration of Human Rights⁶³² and ratified the European Convention on Human Rights. Azerbaijan also has human rights obligations at the regional⁶³³ and universal levels.

The 2025 Freedom House report on Azerbaijan ranks the country as “Not Free” with a score of 7 out of 100.⁶³⁴ Among key aspects, the report cited the concentration of power in the authoritarian regime headed by President Ilham Aliyev since 2003 and his family. According to Freedom House, “Corruption is rampant, and the formal political opposition has been weakened by years of persecution. The authorities have carried out an extensive crackdown on civil liberties in recent years, leaving little room for independent expression or activism.” The fleeing of nearly all ethnic Armenians from the Nagorno-Karabakh region following Azerbaijani control in 2023 also contributed to the country's “not free” status.

Azerbaijan scores 34/100 on internet freedom.⁶³⁵ Internet freedom continues to be restricted with blocked access to several social media sites and self-censorship through a media registry. “The government also launched a media registry, required by the new media law adopted in 2022, and rejected the applications of several independent news outlets to join the registry. Prosecution of activists for their online

criticism of the government continued during the coverage period. Additionally, activists faced online harassment, doxing, and blackmail.”⁶³⁶

The Council of Europe (CoE) Action Plan for Azerbaijan 2022–2025 includes strategic programming to align legislation, institutions, and practices further with CoE standards in human rights, the rule of law, and democracy.⁶³⁷ Among the objectives of the Action Plan are: the implementation of the UN 2030 Agenda for Sustainable Development,⁶³⁸ and the identification of areas for cooperation in artificial intelligence.

Azerbaijan is also part of Partnership for Good Governance, through which the European Union and the Council of Europe cooperate to strengthen governance in the Eastern Partnership region⁶³⁹ and advance localized efforts to improve “stability, prosperity, and resilience.”⁶⁴⁰

OECD / G20 AI Principles

Azerbaijan is a member of neither the OECD nor the Global Partnership on Artificial Intelligence (GPAI)⁶⁴¹ and has not endorsed the OECD AI Principles.⁶⁴² The OECD Development Centre has been supporting Azerbaijan in the promotion of enterprise digitalization. A 2022 study highlighted the significance of digitalization to allow Small Medium Enterprises access to strategic resources and integration into global markets.⁶⁴³

Council of Europe AI Treaty

Rights, Democracy, and the Rule of Law.⁶⁴⁴ However, Azerbaijan has not signed the treaty.⁶⁴⁵

UNESCO Recommendation on AI Ethics

Azerbaijan is a UNESCO member since 1992 and is one of the 193 countries that endorsed the UNESCO Recommendation on the Ethics of AI.⁶⁴⁶ Azerbaijan has not initiated the Readiness Assessment Methodology (RAM),⁶⁴⁷ a foundational tool for countries to implement the UNESCO Recommendation.

Evaluation

Azerbaijan has set an ambitious goal of embracing new technologies to propel the economic growth of the country. The digitalization process in Azerbaijan has been accelerating and has stimulated several initiatives, including the release of a National AI Strategy and AI standards supporting its implementation. The country has not yet signed the protocol modernizing Convention 108 nor created an independent agency or mechanism for data (and AI) oversight to modernize its data protection law regime. Concerns exist that, with the use of AI, Azerbaijan is turning into a “digital autocracy.” The country has not endorsed any declaration against the use of LAWS and has been a laboratory for their use.

Bahrain

In 2025, Bahrain launched a National AI Policy to guide the use of AI in the public sector. The country also published an AI readiness assessment report built on the UNESCO RAM.

National AI Strategy

The Bahraini government and legislature have initiated and operationalized a multi-layered framework including a national policy, a regionally aligned ethical manual to ensure cultural and legal interoperability, and a binding standalone law to regulate high-risk applications and establish legal certainty. The Kingdom of Bahrain envisions AI development and application as an opportunity to establish the country's leadership in digital transformation and a tool to improve services to citizens and streamline government processes more broadly.⁶⁴⁸ Fundamental principles for the National AI Policy⁶⁴⁹ (iGA National Policy) include human decision-making and control; safety and prevention of harm; fairness, equity, and non-discrimination; transparency and explainability; responsibility, accountability, and awareness; integrity and non-fabrication; privacy and data protection; reliability and safety; investment; promotion innovation; and protection of intellectual property rights. The Information and eGovernment Authority (iGA) structured the National AI Policy structured around four key pillars: Policies and Legislation, AI Use and Adoption, Awareness and Education, and Enhancing Local and International Cooperation.

Bahrain adopted the Gulf Cooperation Council (GCC) Guiding Manual on the Ethics of Artificial Intelligence to promote the AI use consistent with human values, local laws, and the UNESCO Recommendation on the Ethics of AI.⁶⁵⁰ The guide focuses on four main values: promoting human dignity and autonomy; respecting Islamic Sharia, the Constitution, and cooperation among GCC countries; protecting the environment and promoting sustainability; and achieving human well-being. The principles center on four areas: human autonomy and decision-making;

system safety and harm prevention; justice, fairness, and non-discrimination; and privacy and data protection.

A 2023 Telecommunications Plan⁶⁵¹ and iGA National Policy are part of government plans to transition Bahrain to a knowledge-based economy that keeps pace with the global trends in science and technology.⁶⁵² In the opening of the 5th legislative cycle of 2019, for example, H.M. King Hamada bin Isa Al Khalifa directed the government to undertake a national plan to increase the readiness for the digital economy “by adopting and employing artificial intelligence technology in the production and service sectors, through the establishment of the necessary systems and technical frameworks, as well as through encouraging quality investments, in order to guarantee the maximum benefit to our national economy.”⁶⁵³

The broader strategic digital and economic initiatives include the Kingdom’s Economic Vision 2030,⁶⁵⁴ which addresses AI policy and development in the country.⁶⁵⁵ The Digital Transformation Journey of the Kingdom focuses on fostering an innovation ecosystem for the use of emerging technologies for the benefit of the Bahraini society. The Kingdom “encourages those involved in designing, developing, and deploying new technologies to ensure that they are consistent with the Kingdom’s values and adhere to international norms and standards.”⁶⁵⁶

AI Legislation

Bahrain’s Shura Council unanimously approved a new standalone law to regulate AI in April 2024.⁶⁵⁷ The law identifies offenses for manipulating content

without consent, punishable by fines and imprisonment.⁶⁵⁸ The AI Regulation Law also requires ministers to establish sector-specific regulations.⁶⁵⁹ The Council of Representatives is reviewing the law.

Public Participation

Since 2016, Bahrain has been very active in promoting and developing public participation in relation to its digital services and technology. This has consistently involved a theme of strong encouragement of citizens and users to engage with the government via primarily digital means and social media. Bahrain's eGov Strategy 2016 included a digitized National Suggestions and Complaints System, an open data platform, and continued encouragement of uptake of eGovernment services. In 2018, the strategy directly prioritized objectives including "Nurturing active participation and engagement with constituents."⁶⁶⁰

The iGA National Policy specifies where updates will be posted and provides an email address connected to an invitation that "All comments and suggestions related to the General Policy for the Use of Artificial Intelligence in the Kingdom of Bahrain are welcomed and appreciated."⁶⁶¹ The invitation notes that feedback will help improve the document and ensure it is comprehensive and aligned with the user's needs.

The Public consultation on the implementation of at least six draft regulations to complement the Personal Data Protection Law (PDPL)⁶⁶² resulted in the

enactment of ten ministerial resolutions in March 2022 to align the PDPL more closely to international standards and the GDPR.⁶⁶³

In the Digital Government Strategy 2022, the government developed the “Leave No One Behind” digital policy to focus on citizen needs, underpinned by the Digital First principle.⁶⁶⁴ This principle prioritizes the design of public services digitally first to encourage citizens voicing their concerns and opinions via portals such as Tawasul. The design should require citizens and corporations to supply data only once to a government entity and the pooling of government data for greater public accessibility and civic engagement, which supports Bahrain’s Digital Identities initiative.

Bahrain has established a system to receive public feedback on how to run services more efficiently and effectively. However, outcomes and findings from participatory action are not always publicly available.

Data Protection

Bahrain has led the region in the enactment of legislation aligned to the highest global standards. The Kingdom was the second state in the Gulf Region, following Qatar, to address personal data protection as a right, with the enactment of Law No. (30) of 2018 with Respect to Personal Data Protection Law (PDPL).⁶⁶⁵ The Royal Decree No (78) of 2019 established the Personal Data Protection Authority (PDPA),⁶⁶⁶ and granted the Minister of Justice, Islamic Affairs and Waqf the chair of the Board of Directors of the PDPA.⁶⁶⁷ The PDPA has the responsibility to enforce the law and investigate potential violations.

The PDPL, inspired by the EU GDPR, entered into effect in August 2019. The Law protects the rights of individuals regarding the collection, processing, and

storage of their personal data (whether by automatic or manual means), and establishes obligations to data controllers or data processors in their relationship with data owners or subjects.⁶⁶⁸

The PDPL shares similarities with the GDPR⁶⁶⁹ in the rights to notification of data collection and processing, right to erasure, and right of rectification, but differs in some specifics related to the right to be informed (Article 18) and the right to object to processing of personal data (Articles 19, 20, and 21). Exceptions to the right not to be subject to decision-making based on solely automated means (Article 22), the absence of the right to data portability, and the shorter period of response to data subjects' requests (15 days vs one month in the GDPR) are important differences.

Unlike the GDPR, the PDPL mandates data managers to recognize the right of Bahraini data owners to object to personal data that causes harm or distress to the data owner or any persons. Prior written approval from the Personal Data Protection Authority is mandatory before processing certain personal data. Article 58 defines criminal and civil penalties for violations including prison, in specified cases, in contrast with GDPR where only monetary penalties are defined.

Following public consultations, the Minister of Justice issued ten decisions to guide implementation of the PDPL. These decisions specified technical requirements to protect personal data, rules and procedures for processing, the transfer of data outside of Bahrain, conditions for creating publicly accessible personal data records, and administrative fees and policies.⁶⁷⁰ Terms and language such as transparency and accountability are mentioned briefly, as well as human rights and freedoms.

Other laws that provide general rights to privacy, including digital privacy,⁶⁷¹ are: Article 26 of the Kingdom's constitution, which safeguards confidentiality of

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Algorithmic Transparency

Bahrain has not enacted specific algorithmic transparency legislation. However, the Information & eGovernment Authority (iGA) General Policy for the Use of Artificial Intelligence⁶⁸¹ establishes a binding framework for government agency practices. The iGA National Policy codifies transparency and explainability; fairness, equity, and non-discrimination, and privacy and data protection. The PDPL in Article 15, requires permission from the Authority before the automated processing of personal data of sensitive nature, biometric data, genetic data, linking data to two or more data controllers for different purposes. Article 22 includes the right to object to decisions based solely on automated processing for purposes of assessing performance at work, financial standing, credit scoring, reliability or conduct. Yet the PDPL does not include provisions to ensure transparency in the methods of processing.

According to Bahrain's National Digital Portal, the country introduced legal frameworks to protect individual privacy and reduce algorithmic biases in 2024. Bahrain has enacted a new AI regulatory framework which consists of 38 articles, imposing fines of up to BD1,000 for using AI in decision-making without human oversight. More severe penalties, including fines up to BD2,000, apply to AI misuse that infringes privacy, promotes discrimination, or deviates from intended purposes.⁶⁸²

Previously, Bahrain joined other member states of the Digital Cooperation Organization (DCO) to adopt the Riyadh AI Call for Action Declaration (RAICA) during the Global AI Summit of 2022.⁶⁸³ The Declaration marks a commitment to develop AI technology that benefits people, communities, and nations. Item 4 of the Call for Action addresses safeguards to prevent unfairness of algorithms against individuals due to their orientation, culture, gender, or race.

Mass Surveillance

Amnesty International reported about an ongoing investigation on the use of Pegasus Spyware to infect the devices of three political activists in Bahrain in

2021.⁶⁸⁴ The misuse of the spyware provided by Israeli NSO Group to trace mobile phones targeted at least 50,000 devices of journalists and human rights activists. According to Citizen Lab, Bahraini authorities used cyber surveillance since 2013, including phone forensics technology sold by Israeli company Cellebrite to extract private data from the devices of arrested activists.⁶⁸⁵

The Carnegie Endowment for Peace report on AI surveillance, found that Bahrain is using facial recognition for smart policing, mainly from Chinese technology providers such as Dahua.⁶⁸⁶ Reports of use of surveillance cameras in public spaces also surfaced.

The OHCHR reiterated concerns about surveillance of individuals and groups cooperating with the United Nations.⁶⁸⁷ The Ministry of Interior has issued statements warning about legal procedures against activists and their followers who participate in cybercrime on social media.⁶⁸⁸

The Cybercrimes Directorate and the Cyber Safety Directorate monitor social media and websites to identify and prevent crimes, including forbidden speech, false news, and threats to national security. “Department officials receive training to identify “permitted speech and forbidden speech,” whether it is text, video, or audio.⁶⁸⁹

Bahrain’s eGovernment authority released the “BeAwareBahrain” app to “ensure the safety of all its citizens and residents.”⁶⁹⁰ The app alerted individuals in case of close contact with a confirmed case of COVID-19 and was able to confirm the location of people who had moved more than 15 meters from their phone. A 2020 report by Amnesty International on 11 countries using data tracking apps for COVID-19 concluded that the BeAwareBahrain app was among “the most alarming tools [...] carrying out live or near-live tracking of users’ locations by frequently uploading

GPS coordinates to a central server.”⁶⁹¹ The surveillance activities included the real-time broadcast of users’ locations to a government database, the publication of online sensitive information linked to their national ID, and the enforced use of a Bluetooth bracelet during quarantine.

Biometric Identification

Bahrain has integrated biometrics and digital IDs as part of the Digital First Policy. The use of a nationwide digital identity scheme to include Sijilat (the Commercial Registration Portal), the National Taxation System, and Sehati (the National Social Health Insurance Program), aims to facilitate users access to government services through one-time input into the system.⁶⁹² Users can visit a Government Service Center if they lack internet access. The iGA provided the ID card & Birth Certificate eServices through the unified MyGov app in 2025.⁶⁹³ In an interview, the iGA Chief Executive stated that the new card functions as an ICAO-compliant digital travel document.⁶⁹⁴ The card also uses advanced fingerprint matching technology to securely verify the holder's identity.

Bahrain introduced biometric identification for automated border control in Bahrain International Airport (BIA) in 2019, as part of the Airport Modernization Programme (AMP).⁶⁹⁵ In July 2022, Bahrain joined the Global Entry Partnership, the U.S. Customs and Border Protection (CBP) program for expedited entry into the U.S. for pre-approved, low-risk travelers. The program makes use of facial recognition and travelers can make use of biometric kiosks at airports to process them.⁶⁹⁶

Tamkeen (Labour Fund), Bahrain’s government agency promoting private-sector business and individual development, launched digital onboarding using biometric identification to register customers. Tamkeen uses B2B payment integrated

with BENEFIT Pay.⁶⁹⁷ BenefitPay is a financial network established in 1997 under license of the Central Bank of Bahrain.⁶⁹⁸ Benefit uses facial recognition for validation and authentication of users, recognizing all GCC IDs and passports of all nationalities. The service is available for FinTech, insurance, and investment companies to curtail cybercrime.⁶⁹⁹

With the growing trend towards digitization, only around 5% of transactions require physical contact, mainly for issues related to issuing residence permits and biometric updates. New initiatives include a national birth system, digital archiving of records, and a Central Population Registration System.⁷⁰⁰

Environmental Impact of AI

Bahrain revised its strategy roadmap in the wake of the COVID-19 pandemic to reprioritize digital projects and ensure alignment with the UN Sustainable Development Goals.⁷⁰¹ The government continues to drive its National Digital Economy Strategy (NDES) for 2022–2026⁷⁰² to build a strong and sustainable digital economy. This effort is aligned with the Kingdom of Bahrain Economic Vision 2030,

which seeks to ensure “a safe, secure, sustainable and attractive environment and world class infrastructure.”⁷⁰³

Bahrain has developed ethics to guide the responsible development and adoption of AI in the country, including a principle that “AI systems should be developed and used in a way that is sustainable and minimizes their environmental impact.”⁷⁰⁴

AI is also a driver of sustainable development in Bahrain. The University of Bahrain and the Benefit Company signed a Memorandum of Understanding to use AI and advanced computing for research and innovation into sustainable energy, climate change, and sea-level prediction.

Lethal Autonomous Weapons

Bahrain is a High Contracting party to the Convention on Certain Conventional Weapons’ (CCW)⁷⁰⁵ and a member of Non-Aligned Movement (NAM).⁷⁰⁶ In a statement presented during the Group of Governmental Experts on Emerging Technologies (GGW) on LAWS Meeting in Geneva in 2022, the NAM called for the negotiation of a “legally binding international instrument stipulating prohibitions and regulations on lethal autonomous weapons systems.”⁷⁰⁷

Bahrain voted for the UN General Assembly Resolution 78/241⁷⁰⁸ on lethal autonomous weapons systems, which directed the UN Secretary-General to prepare

a report reflecting the views of member and observer states. Bahrain also supported the more recent UN General Assembly Resolution L.77. The resolution raised concerns about the impact of autonomous weapons on global security and regional and international stability and provides for open consultations to consider the Secretary-General's report.

Bahrain also endorsed the Political Declaration resulting from the Responsible AI in the Military Domain Summit (REAIM 2023) co-hosted by the Netherlands and the Republic of Korea in November 2023.⁷⁰⁹ The Declaration followed a joint call to action on the responsible development, deployment, and use of AI in the military domain issued during the summit.⁷¹⁰

AI Literacy

The Third Pillar of the iGA National AI Policy is dedicated to Awareness and Education.⁷¹¹ Objectives center on raising awareness among government employees “about the latest AI technologies and how to benefit from them in service development” and ensuring they have the technical capabilities use the technology safely and effectively. Rules and requirements instruct government entities to provide training programs but no specific initiatives are proposed.

The National Digital Economy Strategy 2022–2026⁷¹² envisions a future-ready workforce where graduates “are equipped with advanced digital skills and are prepared for future job markets.” Strategic initiatives include incorporating ICT curriculum in primary and secondary education as well as empowering the Skills Bahrain program and incentivizing other upskilling and reskilling programs.⁷¹³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Human Rights

Bahrain supports the Universal Declaration of Human Rights.⁷¹⁴ The Prime Minister has expressed the importance of the UDHR in public statements.⁷¹⁵ The country has completed four cycles of Universal Periodic Reviews, the most recent in November 2022.⁷¹⁶ The UPR of Bahrain noted the recommendations of various states for Bahrain to ratify international human rights covenants. The country made a voluntary pledge and commitment to implement projects of the national human rights plan (102 projects), for 2022–2026 and to submit voluntary reports every two years on the ongoing efforts to enhance the country’s human right system.⁷¹⁷

Bahrain is one of the 16 State Parties to the Arab Charter on Human Rights and has ratified the International Covenant on Civil and Political Rights (ICCPR), the International Covenant on Economic, Social, and Cultural Rights (ICESCR), and the Convention on the Rights of the Child (CRC).⁷¹⁸

Freedom House rated Bahrain as “Not Free” (12/100) in 2025.⁷¹⁹ Restrictions to freedom of expression and beliefs and the use of spyware and surveillance technology to target activists and dissidents are areas of concern. Internet freedom in Bahrain remained restricted in 2024 with content critical of the government blocked and removed. Freedom House notes that despite the continued use of social media for activism, self-censorship prevailed due to fear of state surveillance.⁷²⁰

Center for AI and Digital Policy

Transparency International's 2023 Corruption Perception Index ranks Bahrain 76th of 180 countries with a score of 42/100.⁷²¹ Bahrain showed significant progress in 2024 with a move up eleven places to 53.⁷²²

Although Bahrain granted amnesty to over 2,500 prisoners in 2024,⁷²³ Human Rights Watch reported on the ongoing imprisonment of human rights defenders, some for more than a decade, and pro-democracy activists and abysmal conditions and denial of adequate healthcare in prisons. Limits on freedom of expression and the return of the death penalty, especially given unfair trials, remain concerns.⁷²⁴

OECD / G20 AI Principles

Bahrain is not a member of the OECD and has not endorsed the OECD AI Principles.⁷²⁵ Bahrain has not submitted reports to the OECD AI Policy Observatory in relation to ongoing policies, strategies, or activities associated with AI.⁷²⁶ Bahrain has launched initiatives such introducing AI and cybersecurity into education that align with the OECD AI principles. Bahrain is a member of the MENA-OECD Initiative on Governance and Competitiveness created in 2021 to implement reforms to improve governance structures and cooperation.⁷²⁷

Council of Europe AI Treaty

Bahrain has not endorsed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law, the first legally binding international AI treaty.⁷²⁸

UNESCO Recommendation on AI Ethics

Bahrain is a UNESCO member since 1972⁷²⁹ and is one of the member States which endorsed the Recommendation on the Ethics of AI.⁷³⁰ Bahrain has published a readiness assessment report⁷³¹ based on the UNESCO Readiness Assessment Methodology (RAM). However, UNESCO does not yet feature Bahrain with a country profile.⁷³² Key recommendations in the report include developing data infrastructure; inclusive STEM education focusing on women, youth, and people with disabilities; national campaigns and outreach to promote AI literacy and public trust; and research focused on the social, economic, and environmental impacts of AI as well as system development.⁷³³

Evaluation

Bahrain's National AI Policy incorporated principles from the GCC AI Ethics Guide and UNESCO Recommendation to drive AI development aligned to ethical and human-centered principles. Combined with the Economic Vision 2030, Digital Government Strategy 2022, and Digital Economy Strategy 2022–2026, the Kingdom of Bahrain has provided a roadmap and KPIs for the governance of AI. The participation of multiple governmental agencies advancing the digitalization and AI plans is a strength in the pathway to governing AI.

In terms of data protection and independent oversight, the alignment of the Bahrain's Personal Data Protection Law (PDPL) to GDPR, and the draft regulations for Data Protection Impact Assessments (DPIA) are positive steps, which can be enhanced by the adoption of legislation to enforce algorithmic transparency and the creation of an independent data and AI supervisory authority.

Although Bahrain has signed the Universal Declaration of Human Rights and the Arab Charter on Human Rights, the country stands as “not free” in relation to human rights protection. Concerns exist regarding the use of AI for mass surveillance purposes.

Center for AI and Digital Policy

Bangladesh

In 2025, Bangladesh submitted a draft National AI Policy for public consultation. The country also completed the UNESCO RAM process and published the report.

National AI Strategy

Bangladesh published its National Strategy on Artificial Intelligence in March 2020.⁷³⁴ The goal is to make Bangladesh a “technologically advanced nation by the next decade.” The National AI Strategy is driven by the slogan “AI for Innovative Bangladesh.” To create a “sustainable AI Ecosystem,” the report proposes six strategic pillars:

- research and development
- skilling and reskilling of AI workforce
- data and digital infrastructure
- ethics, data privacy, security & regulations
- funding and accelerating AI startups
- industrialization for AI technologies

Each pillar consists of a strategic brief, a roadmap, action plan, related stakeholders and lead ministries. Finally, a summary roadmap in the report includes steps for the development of AI over the next five years. Under the Ethics, Data Privacy, Security & Regulations pillar, the Bangladeshi government aims to create a new set of AI ethics guidelines to address issues such as fairness, safety, cybersecurity, and transparency. The ICT Division and Ministry of Law, Justice and Parliamentary Affairs intended to formulate Right to Explanation (RTE) Guideline for AI Algorithm.⁷³⁵

The national Parliament passed the Agency to Innovate (a2i) Bill 2023, creating the a2i as Bangladesh’s national innovation agency, a statutory body. The a2i is a flagship program of the 2019 Smart Bangladesh’s Vision 2041 and its 20-year

Perspective Plan,⁷³⁶ which aim to utilize technology for societal advancement by 2041. The Vision and Perspective Plan focus on four institutional pillars: governance, democratization, decentralization, and capacity building. As part of the three-prong strategy for Bangladesh's Innovation Economy, the Plan aims to leverage the fourth industrial revolution, including AI and smart machines, for competitiveness and a low-carbon economy. To this end, Bangladesh aims to develop a robust legal framework and governance structure for e-government.⁷³⁷

Minister of Law, Justice, and Parliamentary Affairs Mr. Anisul Huq announced the government's initiative to draft a law on AI in February 2024. The Minister emphasized plans to consult with international stakeholders before finalizing the act.⁷³⁸ Minister Huq led a discussion with the Ministry of Posts on the draft framework for the AI law, stressing the importance of addressing critical aspects related to human welfare and the ethical use of AI. He highlighted the commencement of discussions on AI's legal framework, with a focus on safeguarding human rights and promoting the beneficial application of AI across various sectors.⁷³⁹ A draft policy⁷⁴⁰ was released in 2024 but is no longer available on the Ministry website.

A formal AI policy initiative under a Steering Committee in July 2025.⁷⁴¹ The initiative contributes to a vision to develop a “responsible, inclusive, and innovation-driven national framework for artificial intelligence that empowers every citizen and industry.” The committee held three meetings in 2025 and released a draft AI policy for public consultation in early 2026. Bangladesh released a revised National AI policy in February 2026.⁷⁴² The draft policy charges the Ministry of Law, Justice, and Parliamentary Affairs with drafting “comprehensive AI liability legislation” by 2028.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Public Participation

The National AI Strategy of Bangladesh identified engagement with media and civil societies for creating a “robust ethics, data privacy, security and regulations guideline” for emerging technologies.⁷⁴³ As part of its National Internet of Things (IoT) Strategy, the Bangladesh government proposed to establish “an Advisory Committee including representatives from Government, industry, academia, and community” to provide ongoing guidance in the emerging areas of IoT.⁷⁴⁴

The Bangladeshi government sought civil society input on the draft of the Cyber Security Act in 2023, receiving around 900 recommendations in the two weeks of the comment period.⁷⁴⁵ Bangladesh's first National AI-driven design competition, National AI Art-A-Thon, organized by the United Nations Development Programme (UNDP) Bangladesh and the Bangladesh Computer Council (BCC) under the Bangladesh's Information and Communication Technology (ICT) Ministerial Division, brought together a diverse group of people —professional and student artists, creators, architects, designers, content makers, and technologists—for a creative challenge that used artificial intelligence to reinterpret and showcase Bangladesh's rich cultural heritage.⁷⁴⁶

The Steering Committee overseeing the AI Policy national initiative held a public consultation on the first draft of the National AI policy during 2 weeks in early 2026.⁷⁴⁷ The website for the national initiative includes all meeting notes and recordings for the Steering Committee; however, the comments received from the consultation are not available

Data Protection

Although the Constitution of Bangladesh does not explicitly grant the fundamental right to privacy, Article 43 of the Constitution recognizes this right

under certain restrictions and states that, “every citizen shall have the right, subject to any reasonable restrictions imposed by law in the interests of the security of the State, public order, public morality or public health – (a) to be secured in his home against entry, search and seizure; and b) to the privacy of his correspondence and other means of communication.”⁷⁴⁸

Bangladesh proposed a draft Data Protection Act in 2022.⁷⁴⁹ One critic noted that “The proposed Data Protection Act 2022 and the Bangladesh Telecommunication Regulatory Commission Regulation for Digital, social media and OTT Platforms, 2021 attempt to protect citizen information against American tech companies, but both draft regulations grant Bangladesh authorities powers to control everything on the Bangladeshi internet.”⁷⁵⁰ The purpose of this law is to provide security for personal data. The law does not provide a definition of personal data.⁷⁵¹ The proposed data protection law mandates storage of citizen data within Bangladesh. “The localization of the data within Bangladesh gives authorities broad powers to access people’s personal data without judicial oversight and accountability for any violation of people’s right to privacy,”⁷⁵² wrote Amnesty International in feedback to the proposed bill.

In November 2023, the Cabinet of Bangladesh gave its approval in principle to the Draft Data Protection Act 2023. The Act shall now be enacted by the Parliament.⁷⁵³ The revised Act addressed stakeholders’ feedback on the transition period and data localization requirements. However, the definition of personal data

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

was not addressed.⁷⁵⁴ The Act provides for the establishment of a Board in charge of overseeing data protection in the country. The Board shall be constituted by the Government and consisting of a chairman and four members.

The Telecommunications Act (2000) is a law “for the purpose of development and efficient regulation of telecommunication systems and telecommunication services in Bangladesh.”⁷⁵⁵ Under Section 67 (b) of the Act no person can “intercept any radio communication or telecommunication nor shall [utilize] or divulge the intercepted communication, unless the originator of the communication or the person to whom the originator intends to send it has consented to or approved the interception or divulgence.” Under Section 97 of the Act, the government may ask the telecommunication operator to maintain records relating to the communications of a specific user under the broad definition of National Security and Public Interest.

The Information Communication Technology Act (2006) imposes responsibility on any individual or body corporate handling personal or sensitive data and requires them to maintain and implement reasonable security practices.⁷⁵⁶ Section 46 of the Information Communication Technology Act states that the state can intercept, monitor, or decrypt data in the interest of:

- state sovereignty, integrity, or security
- relations with foreign states
- public order
- preventing the commission of or incitement to commit any offense relating to the above
- investigation of any offense

The Digital Security Act came into force in October 2018 and pertained to “offences committed through digital devices.”⁷⁵⁷ Section 26 of the Act provides for “punishment for unauthorized collection, use etc. of identity information.” The Digital Security Act 2018 repealed 5 provisions of the Information Communication

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Technology Act 2006 including section 57, which was deemed to be in violation of rights protected under the Bangladesh Constitution.⁷⁵⁸

Bangladesh's parliament passed the Cyber Security Act (CSA), replacing the Digital Security Act of 2018, to combat cybercrime and disinformation. The CSA outlines measures for detecting, preventing, and prosecuting crimes committed through digital or electronic means. Additionally, Section 5 of the Act establishes a National Cyber Security Agency, which will operate under the ICT Division to fulfill the Act's objectives, including supervising and coordinating with the National Computer Emergency Response Team, Computer Emergency Teams, or the Computer Incident Response Team.

The Cyber Security Act has largely been critiqued as a replication of the DSA. As Amnesty International reported, “The only changes the CSA makes are related to sentencing, which can be summarized as follows: lowering the maximum applicable prison sentence for eight [offenses], removing a sentence of imprisonment for two [offenses], increasing the maximum applicable fine for three [offenses] and removing the higher applicable penalty for all repeat [offenses].”⁷⁵⁹

Bangladesh's interim government enacted the Cyber Security Ordinance 2025,⁷⁶⁰ replacing the CSA. The new ordinance introduces provisions criminalizing the unlawful use of artificial intelligence (AI)—such as unauthorized access using AI tools, identity theft, and improper use of personal data—making the ordinance the country's first binding legal measures to directly address AI risks.⁷⁶¹ The ordinance represents a strong step towards enforceable law that recognizes AI could accelerate cybersecurity threats. Additionally, the ordinance signals Bangladesh's government concerns about AI threats (e.g., deepfakes, impersonation, and automated attacks). Still, the Cyber Security Ordinance faces international criticism for the lack of oversight structures, algorithmic accountability frameworks, or safeguards for civil liberties. The Cyber Security Ordinance's ambiguous terms could pose serious risk of government overreach and violation of human rights.

Center for AI and Digital Policy

Algorithmic Transparency

While there is no explicit right to algorithmic transparency in Bangladeshi law, the government acknowledged the lack of transparency of machine learning. The national AI strategy identified a Right to Explanation Guideline for AI Algorithms as one of the outcomes and noted GDPR as a potential model for integrating this right into the national legal framework.⁷⁶²

Under the principle of oversight and accountability, the second draft of the National AI Policy 2026–2030 stresses an individual’s right to “clear accessible explanation of outcomes, contestability, and human review”⁷⁶³ when affected by high-impact decisions.

Biometric Identification

Since 2008, the Election Commission of Bangladesh has issued a National Identity Card (NID) which is compulsory for every Bangladeshi citizen over the age of 18 for voting and for availing 22 types of services, including banking, taxpayer identity number (TIN), driving license, and passport. In 2016, the government started issuing a machine readable “smart NID card” with a chip that can store encrypted data such as biometric and identification data for enhancing security and reducing forgery.⁷⁶⁴ In June 2023, authority for issuing NID cards was transferred from the Election Commission to the Bangladesh Home Ministry.⁷⁶⁵ This change, part of the National Identity Registration Act, aims to streamline citizen identification processes.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Environmental Impact of AI

The draft National AI Policy 2024 emphasizes Sustainability as a Key Principle, aiming to develop AI technologies that minimize their carbon footprint and promote environmentally friendly practices.⁷⁶⁶

Lethal Autonomous Weapons

Bangladesh is a High Contracting Party to the Convention on Certain Conventional Weapons (CCW).⁷⁶⁷ Bangladesh engages actively in discussions surrounding lethal autonomous weapons systems (LAWS). At a 2016 UN General Assembly, Bangladesh's representative noted Bangladesh is “of the view that further attention of the international community is required in this area so that consensus can be reached in near future so that use of such weapons can be regulated by international laws and regulations.”⁷⁶⁸ In October 2023, at the 78th UN General Assembly, Bangladesh voted in favor of resolution L.56, emphasizing the international community's need to address concerns regarding autonomous weapons.⁷⁶⁹ Bangladesh advocates for a comprehensive assessment of these systems' compliance with international law, including humanitarian and human rights laws. Bangladesh is part of the Non-Aligned Movement (NAM) in the CCW,⁷⁷⁰ which supports negotiating a legally binding instrument on autonomous weapons. The NAM emphasizes the urgency of regulating emerging technologies related to autonomous weapons systems through a legally binding instrument under the Convention.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI Literacy

The Bangladesh United Nations Development Programme recognized the importance of equipping young professionals, one-third of Bangladesh’s population, with AI Literacy skills to thrive in a technology-driven world. Bangladesh’s UNDP made a commitment to empower youth providing AI skills to strengthen the national innovation and entrepreneurship ecosystem. Bangladesh’s UNDP commitment to empower youth with AI skills alongside public and private sector partnerships resulted in programs to support youth-led start-ups, to expand access to software programming certifications and to connect youth with job opportunities.⁷⁷¹

The draft National AI Policy frames public awareness campaigns as foundational to and charges the government with creating education programs to build public trust, digital literacy, and acceptance of AI systems.⁷⁷² More specific skills-based and digital literacy initiatives emphasize objectives to build an AI-ready workforce and AI use and development. For example, the policy proposes introducing AI and computational thinking education beginning in grades 8 or 9 to build foundational skills in math, programming, and machine learning.⁷⁷³ The goal is to “cultivate a generation capable of innovating, not just consuming, within the global AI ecosystem.” Under Education, Research, and Development, the National AI Policy acknowledges AI ethics and over-reliance on AI under the Risk Management and Accountability Measures.⁷⁷⁴

Human Rights

Freedom House ranked Bangladesh as “Partly Free” with a score of 44/100 for political and civil rights in the 2026 Freedom in the World Report.⁷⁷⁵ The report highlights reforms to pen political and civic space since the ruling Awami League (AL) was overthrown in 2024 after 15 years in power. Extralegal violence and political persecution remain problems, however. The country’s first general election

in more than a decade were “conducted in a free, fair and peaceful manner in line with international standards.”⁷⁷⁶

The UN Office of the High Commissioner for Human Rights (OHCHR) noted concerns over excessive use of force by security forces against protesters in n August 2024 before the AL was overthrown. The OHCHR received multiple reports of extrajudicial killings, arbitrary arrests, and suppression of political dissent. The report called for independent investigations into these incidents to ensure accountability.⁷⁷⁷

OECD / G20 AI Principles

Bangladesh is not a member of the OECD or the G20 and has not endorsed AI principles.⁷⁷⁸ Bangladesh does not participate in the Global Partnership on AI.⁷⁷⁹ The draft National AI Policy⁷⁸⁰ commits to endorsing the principles as a non-member state under the International Alignment and Cooperation foundation. The country is still early in the process of implementing policies to ensure the human-centered development of trustworthy AI.

Council of Europe AI Treaty

Bangladesh has not endorsed the Council of Europe Framework Convention on AI and Human Rights, Democratic Values, and Rule of Law.⁷⁸¹

UNESCO Recommendation on AI Ethics

Bangladesh officially endorsed the UNESCO Recommendation on the Ethics of Artificial Intelligence in 2021 and has since taken steps to integrate principles

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

including transparency, fairness, and human-centered AI development into national frameworks.⁷⁸²

UNESCO collaborated with Bangladesh's ICT Ministry and Aspire to Innovate (a2i) to conduct the Readiness Assessment Methodology (RAM) released in April 2025. UNESCO highlights the country's advances in AI research, AI startups, the training of models on Bengali, and the draft National AI Strategy as positive directions for AI development.⁷⁸³ Recommendations center on ensuring the AI strategy and policy are inclusive and rights-protecting, strengthening the data protection and cybersecurity regimes, and developing a more structured AI and digital literacy curriculum.

Evaluation

Bangladesh set out a national strategy for AI that recognizes the importance of AI ethics and endorsed the UNESCO Recommendation on the Ethics of AI. The data protection ordinance in 2025 marked an improvement and there is support in the national AI strategy for a GDPR-style law and for an explicit right of algorithmic transparency in the draft National AI Policy 2024. Bangladesh's extensive biometric identification program through the national ID system remains concerning, especially with ongoing violence even after the change in government in late 2024.

⁷⁸³ UNESCO Global AI Ethics and Governance Observatory, *Bangladesh* (2026), <https://www.unesco.org/ethics-ai/en/bangladesh>

Belgium

In 2025, Belgium released a Charter for the Responsible Use of AI in Public Services and designated authorities for the protection of fundamental rights in line with Article 77 of the EU AI Act.

National AI Strategy

In October 2022, the Council of Ministers of the Belgian Federal Government approved a National Convergence Plan for the Development of Artificial Intelligence, reducing the fragmentation of regional AI strategies to “exploit the opportunities offered by AI to the full” in a Smart AI Nation.⁷⁸⁴ The Plan centers on nine objectives: “(1) Promoting trustworthy AI; (2) Guaranteeing cybersecurity; (3) Strengthening Belgium’s competitiveness and attractiveness through AI; (4) Developing a data-driven economy and a high-performance infrastructure; (5) AI at the heart of healthcare; (6) Driving more sustainable mobility; (7) Protecting the environment; (8) Better lifelong training; (9) Providing citizens with better services and protection.” A steering committee created by FPS Policy and Support (BOSA) and the FPS Economy executes and coordinates the Convergence Plan.

The Convergence Plan envisions a “Smart AI Nation in which truly every citizen shares in the benefits AI provides.”⁷⁸⁵ To achieve a Smart AI Nation “we must take particular care to protect fundamental rights such as privacy and non-discrimination, and ensure that new technologies are developed within an appropriate ethical and legal framework.” Under the first objective, the Convergence Plan references steps toward an EU AI Act and acknowledges “new rights and obligations may be needed to ensure that the framework for AI innovation provides the necessary protection [...] and that it is accessible and transparent to all users of AI services.” Dialogue with citizens, raising awareness about AI uses and harms, and studying impacts on individuals and societies are other action items.⁷⁸⁶

At the beginning of 2024, Belgium launched a call for candidates to set up a Data and AI Ethics Advisory Committee for the federal administration. Its members

were officially appointed by ministerial decree on May 8, 2024.⁷⁸⁷ The creation of this Committee has several objectives, including raising awareness among civil servants in relation to the use of data and AI and its ethical considerations; preserving human oversight; and respect for values such as human rights, democracy and the rule of law.

In 2019, the Information Report on the necessary cooperation between the Federal State and the federated entities regarding the impact, opportunities, possibilities and risks of the digital “smart society” was released by a working group created by the Belgian Senate that has been meeting since 2018.⁷⁸⁸ Their findings and recommendations are grouped in six chapters: governance, ethics and human rights, and legislation; economy, labor market and taxation; education and training; attention economy: impact on people; privacy and cybersecurity; research and development. The report states that “The development and use of artificial intelligence shall be based on the following guiding principles: prudence, vigilance, loyalty, reliability, justification and transparency, accountability, limited autonomy, humanity, human integrity, and balancing of individual and collective interests.” “Fundamental rights, in particular human dignity and freedom, and privacy, must be the basis and starting point for all actions and legislation in the field of artificial intelligence.”⁷⁸⁹

AI Regulations in the Federated States

The national Convergence Plan centers on working “in synergy with the federated states that have been pursuing a very dynamic policy for the introduction of AI for several years.”⁷⁹⁰ Belgium is a federal state with three regions as well as three communities, all of which have their own government, and many of which have also developed strategies and initiatives on digitalization or AI. “The Flemish Community, the French Community and the German-speaking Community are

divided according to language and culture. They are responsible for language, culture, education, audiovisual media, and individual assistance such as specific parts of health policy and social welfare. The regions (the Flemish Region, the Brussels Capital Region and the Walloon Region) are divided based on territory.”⁷⁹¹ They are responsible for the economy, employment, housing, public works, energy transportation, environmental and spatial planning and have some things to say concerning international affairs. The Federal Government is responsible for foreign affairs, defense, justice, finance, social security, healthcare and internal affairs.

The Flemish Region (*Vlaanderen*) released the Flanders Radically Digital program in 2019, which was renewed as Flanders Radically Digital II (VRD2) in 2021. This regional digital strategy aims to foster digital public services, data processing, and automation in the public sector.⁷⁹² The strategy focuses specifically on algorithmic transparency, privacy, explainability, and human-centered, safe, sustainable, and trustworthy AI.⁷⁹³ The plan includes the allocation of 5 million euros to initiatives related to AI ethics and education.⁷⁹⁴ Another AI Action plan,⁷⁹⁵ covering 2024–2028, continued these efforts following a positive external evaluation of progress.

In 2022, the Flemish government adopted a new strategy for data governance, which also comprises initiatives for ethical data use, privacy, transparency, and AI analytics for the public sector.⁷⁹⁶ In September 2024, in continuation of the Flemish Government’s commitment to AI, a project to make Flemish Public Administration AI-ready was launched.⁷⁹⁷

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Walloon government published the Digital Wallonia 2019–2024 strategy “based on values including a cross-disciplinary approach, transparency, coherence, openness and flexibility.”⁷⁹⁸ In 2019, the Walloon government also launched the regional strategy DigitalWallonia4.ai. The strategy aims to accelerate the development of the Walloon AI ecosystem and “sustainably include Wallonia in national and European AI initiatives in order to build a foundation of trust around transparent, ethical and responsible AI.”⁷⁹⁹

In 2022, the Brussels Capital Region started a pilot project with the FARI Institute, a non-profit initiative led by Vrije Universiteit Brussel and Université Libre de Bruxelles, to develop an AI strategy for the region.⁸⁰⁰ In January 2023, FARI published outcomes from the 2022 Conference on AI, Data and Robotics in Cities, including recommendations from the Observer Committee for the Brussels Capital Region. The recommendations included raising AI awareness and literacy; governing with various stakeholders, including citizens; determining AI-related responsibilities; collaborating on multi- and interdisciplinary levels; (responsibly) enabling data flows; reusing and readapting the existing AI guidelines, principles, and regulations.⁸⁰¹ The adoption of the 2022 Convergence Plan was also preceded by several initiatives at national and European level.

EU Digital Services Act

The EU Digital Services Act (DSA) applies in Belgium.⁸⁰² The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

As required by DSA, Belgium designated competent authorities to implement provisions of the DSA. As numerous competences are involved in the

implementation of the DSA, at federal and community level, four competent authorities have been designated in Belgium.⁸⁰³

A Bill to implement the DSA was introduced to the Belgian Chamber of Representatives on January 31, 2024. The Bill aims to harmonize Belgian legislation with the new requirements for digital services under the DSA. Key provisions include the designation of the Belgian Institute for Postal Services and Telecommunications (BIPT) as the competent authority to supervise the provisions of the DSA at the federal level, the issuance of decrees designating the competent authorities for federated entities, and the establishment of a cooperation agreement between the federal state and the communities. The Bill introduces additional obligations for providers of very large online platforms and search engines. These obligations include the management, assessment, and limitation of systemic risks and the implementation of crisis response mechanisms. They apply to platforms and search engines with an average monthly number of users in the EU of 45 million or more. The Bill also proposes changes to other aspects of Belgian law to align with the DSA and introduces sanctions for non-compliance with orders issued by the competent authorities.⁸⁰⁴

EU AI Act

As an EU member State, Belgium is bound by the EU AI Act.⁸⁰⁵ Belgium's FSA Policy and Support (BOSA) identifies the EU AI Act as an important aid in implementing the National Convergence Plan. A Royal Decree established the

Center for AI and Digital Policy

Steering Committee as the primary federal contact on matters related to AI policy, alongside the Federal Government Data Ethics and AI Advisory Committee established in 2023.⁸⁰⁶

Belgium has not designated an official single point of contact for the EU AI Act but has identified a number of authorities to protect fundamental rights in line with Article 77.⁸⁰⁷ Belgium has designated 18 authorities at the federal level as well as authorities for each of the regions. Some of these authorities, such as Unia, an institute for equality, overlap. The data protection authority is also listed, along with bodies dedicated to cybersecurity, policing, and migration.

Belgium voted against EU AI Code of Conduct, or the General-Purpose AI Code of Practice, over copyright issues. Commenting on the vote, the federal minister for Digitalisation, Vanessa Matz, told the press, “Belgium and other European countries have emphasised that this is not the end of the process. The Commission has acknowledged that the code may need to be evaluated and amended sooner than legally required. I will continue to work with the relevant services to ensure that AI models take the interests of journalists, publishers, producers and creators into account.”⁸⁰⁸ The General-Purpose AI Code of Practice is a voluntary tool to help industry comply with the AI Act’s obligations for providers of general-purpose AI models.⁸⁰⁹

Public Opinion

A 2019 opinion survey by AI4Belgium, a committee under the FSA BOSA, examined the public perception of AI, its perceived impact, and the role the government should play in AI implementation.⁸¹⁰ According to the survey, 76% of the respondents hold a positive attitude towards technological developments, while only 6% hold a negative attitude. Most respondents were worried about the loss of

privacy, security and integrity of their personal information (85%), less use of human common sense (85%), less human interaction (83%) and the loss of trust and control over robots and artificial intelligence (77%).

When asked which activity to prioritize, the highest priority concerned “the management of ethical risks around AI. For example, discrimination, privacy, etc.” (74%). This was followed by “supporting employees and employers in the transition to AI in the workplace” (65%); “improving public service through AI” (58%); “supporting research and development (R&D) and innovation in the field of AI” (52%); “facilitating and supporting enterprise access to AI technologies” (48%); and “supporting start-ups engaged in AI” (45%). The majority of citizens suspect that AI will increase inequality between highly educated and low- or unskilled people (66%) and between persons with a privileged background and persons without one (60%).

Public Participation

As part of its Presidency of the Council of the European Union in the first half of 2024, Belgium launched a pioneering democratic initiative: a citizens’ panel on artificial intelligence (AI).⁸¹¹ This initiative underlines the country's commitment to an inclusive and participatory approach towards the formulation of European policies in the field. The citizens' panel, which is made up of 60 people selected at random from over 16,000 invitations sent out across Belgium, brought together all strata of the population in terms of age, gender, levels of education, and other demographic criteria. This diversity ensured that the discussions and recommendations reflect a wide range of perspectives and experiences rooted in people's lived experiences.⁸¹²

Belgian Minister of Foreign and European Affairs described the initiative as their determination “to put the Belgian people at the heart of the decision-making process.”⁸¹³ Civil society must be heard on issues as important as artificial intelligence and contribute towards ambitious policies that meet their expectations.” The panel’s conclusions were compiled into a report, which featured 9 key messages aimed at contributing to Belgian and EU policy on AI. These messages reflected citizens’ aspirations for a responsible, ambitious, and beneficial approach to AI to ensure that

AI serves the interests of all and leaves no one behind.⁸¹⁴ On May 25, 2024, the report was presented and debated in Brussels, in the presence of Belgian and European politicians, representatives of civil society and tech companies.⁸¹⁵

Data Protection

Since Belgium is an EU Member State, the General Data Protection Regulation (GDPR) is directly applicable in Belgium. Taking stock of the GDPR, the Belgium Privacy Commission was reformed in 2018. It is now called the Belgian Data Protection Authority (DPA) and aims to ensure compliance with the GDPR.⁸¹⁶ The DPA has direct sanctioning powers as well as extended enforcement capabilities. The Belgian DPA published guidance on the interplay between the GDPR and the AI Act on September 19, 2024.⁸¹⁷

In March 2022, the DPA expressed concern over the Belgian draft legislation on amending the Act of December 3, 2017, establishing the Data Protection Authority. In particular, the DPA mentioned that the draft law jeopardizes its efficiency and independence.⁸¹⁸ The draft legislation introduces parliamentary interference regarding the DPA internal organization and setting its priorities. The European Data Protection Board expressed similar concerns in its letter of April 2022 in support of the Belgian DPA.⁸¹⁹ The reform proposal of the DPA Act amending the law of December 3, 2017, was approved and entered into force on June 1, 2024.⁸²⁰

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Belgium also established a Federal Data and AI Ethics Advisory Committee to promote ethical AI use in public administration, with objectives that include raising awareness among civil servants on data and AI ethics.⁸²¹

Regarding the activities of law enforcement authorities, Belgium transposed⁸²² the EU Data Protection Law Enforcement Directive (LED).⁸²³ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination,⁸²⁴ and “will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”⁸²⁵

Following the transposition of the EU Law Enforcement Directive in Belgian law, the Supervisory Body for Police Information, “the oversight body which looks at how the police use information (COC) was reformed to function as an independent data protection body.”⁸²⁶ It is intended to oversee how the police use data.⁸²⁷

Both the DPA and the COC are members of the Global Privacy Assembly (GPA). The DPA co-sponsored the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence⁸²⁸ but did not endorse the 2020 Resolution on Accountability in the Development and Use of Artificial Intelligence,⁸²⁹ 2022 GPA

Belgium is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.⁸³²

In 2019, a national human rights institution, the Federal Institute for the Protection and Promotion of Human Rights, was established. Its main goal is to facilitate cooperation between the existing human rights oversight mechanisms and fill the gaps in the existing landscape.⁸³³ More specifically, it “ensures that the use of new technologies and the digitalisation of society contribute to strengthening our rights rather than limiting them.”⁸³⁴

Algorithmic Transparency

Belgium is subject to the GDPR and Convention 108+. Belgians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.⁸³⁵ They also have the right to meaningful

contestation.⁸³⁶ Belgium has signed but not yet ratified Convention 108+.⁸³⁷ Belgium's ratification is required for the Convention to enter into force.

In 2019, the Federal Institute for the Protection and Promotion of Human Rights issued its first opinion on the use of algorithms and artificial intelligence by the administration and argued in favor of more transparency from public authorities.⁸³⁸

Algorithm Registers

Brussels, in collaboration with eight other cities across Europe and with the help of Eurocities' Digital Forum, adopted an algorithm register, the Algorithmic Transparency Standard. The data officer for the Brussels Capital region will oversee the register, which allows residents to access information about the use of algorithms by municipalities and their impact. The register includes information such as the type and purpose of an algorithm, the department using the algorithm, the geographical area and domain it relates to, and a risk category. The register also references the data source and training data, any bias and mitigation, and human oversight. This initiative builds on similar algorithm registers launched in Amsterdam and Helsinki.

According to André Sobczak, Secretary General, Eurocities, "The efforts undertaken by these cities aim to set a standard for the transparent and ethical use of algorithms while their use is still in its relative infancy across city administrations in Europe. In this way, they seek to offer both a safeguard for people whose data may be used by algorithms, and have created a validated model that other cities can use straight away."⁸³⁹

AI in Public Administration

administration⁸⁴⁰ to a) empower civil servants in the use of data and AI, b) raise awareness among civil servants about the ethical aspects of data use, and c) show citizens that the Federal Administration is setting an example and dealing with digital technology in an ethical and innovative way. The committee was established in 2024.⁸⁴¹

In January 2024, Wallonia announced its aim to integrate AI into the public service sector.⁸⁴² To this end, Wallonia launched a public call for the development of a Proof of Concept (PoC) with public entities.⁸⁴³ The Flemish region also initiated a project in 2024 to ensure the Flemish Public Administration AI-ready.⁸⁴⁴ This project is funded by the European Commission's Directorate-General for Structural Reform Support. UNESCO's Ethics of AI Unit, Social and Human Sciences Sector, is tasked with implementing the project, which will leverage UNESCO's Readiness Assessment Methodology (RAM).

The Council of Europe Technical Support Project launched an initiative to strengthen the administrative capacity of equality bodies in Belgium (as well as Finland and Portugal) over 2024–2026, increasing the Belgian Interfederal Center for Equal Opportunities (Unia) readiness to uncover discrimination in AI deployment in public administration and support those facing discrimination by AI, in line with Council of Europe standards.⁸⁴⁵

As part of Objective 9 of the National AI Convergence Plan to “provide citizens with better services and better protection,”⁸⁴⁶ the AI4Belgium Ethics and

Law Committee developed the Charter for the Responsible Use of Artificial Intelligence in Public Services⁸⁴⁷ in collaboration with experts and government agencies.⁸⁴⁸ Fundamental principles and commitments underlying the charter include: the option to choose Human interaction over AI, Transparency about when AI is used, Human control or supervision for high-risk AI systems, the right to challenge an AI-supported decision, Data quality and governance requirements, Risk assessment and mitigation before deployment, Sustainability and environmental-impact-aware applications, and Continuing education about AI for public officials. Forty public service entities across the Federal Public Services and Programming, Public Interest Organizations, and Public Social Security Institutes have agreed to adhere to the Charter.

Facial Recognition

According to AlgorithmWatch, facial recognition has been used at the Brussels Airport, football matches, for school registration and for healthcare. A “smart” video surveillance system is also in use to locate criminals, solve theft cases and collect statistical information.⁸⁴⁹ AlgorithmWatch stressed that there is no legal framework governing this activity by the police.

Additionally, Belgium’s involvement in the Prüm Convention facilitates the sharing of biometric data, including facial recognition images, across European borders. In March 2024, Belgium signed the Prüm II expansion, which includes provisions for cross-border facial recognition technology. This expansion underscores the need for Belgium to implement robust data protection measures and clear guidelines to ensure that cross-border use of Facial Recognition Technology (FRT) aligns with privacy standards.⁸⁵⁰

The COC has criticized the use of facial recognition at the Brussels airport, stating that there is “too little information about the implementation and risks of the technology as there was no clear policy or data protection impact assessment

conducted to come to a conclusion or offer advice.” In a 2022 report, the COC reiterated “the lack of legal basis for the use of facial recognition technology by the Brussels airport police” and noted that it took “corrective action” in order to halt the pilot project.⁸⁵¹ The COC also reported that Belgian police had used the controversial facial recognition system Clearview AI without a legal basis and advised Belgian police to cease this activity.”⁸⁵²

Belgium’s 2025–2029 federal coalition agreement commits to deploying AI tools in law enforcement, including facial recognition “for the detection of convicts and suspects.”⁸⁵³ The coalition agreement text says that the government will work on “a concrete policy” regarding the use of these technologies “within a strict and precisely defined legal framework.” The text also mentions an expansion of the camera legislation to allow broader (smart) surveillance.

Regulatory Sandboxes

In Belgium, the Flemish and Walloon regions have both developed regulatory sandboxes aimed at creating self-contained, low-regulation environments where software developers can experiment with innovative solutions without taking on significant risks. In Flanders, the Sandbox Flanders project is coordinated through the Flemish government agency for digitalization, Digital Flanders. Sandbox Flanders is designed to develop innovative solutions for the public sector by “matching” start-ups with government agencies and departments. The project also aims to be a “permanent marketplace” for ideas without a profit motive.⁸⁵⁴ Many of the projects in question use AI systems to solve practical issues in particular “challenges,” such as predicting exam enrollments and automated policy impact

assessments.⁸⁵⁵ In the Walloon case, a private entity (LUDEBO) coordinates the sandbox ecosystem together with Digital Wallonia and the blockchain startup-collective Walchain, but the goal of this regulatory sandbox is only to foster blockchain technology development.⁸⁵⁶

Starting in July 2023, regional authorities commenced sectorial AI testing under the Digital Europe Program.⁸⁵⁷ The Testing and Experimentation Facilities (TEFs) are poised to aid in the implementation of the EU AI Act, particularly by supporting regulatory sandboxes in collaboration with national authorities. This initiative encompasses a facility spearheaded by Digitaal Vlaanderen, focused on smart cities and communities, with the objective of ensuring AI technologies align with European values prior to market introduction. The Flemish Government published a reflection paper outlining models and implementation pathways for an AI regulatory sandbox targeting SMEs and high-risk AI systems within Belgium's governance structure.⁸⁵⁸ The paper provides a foundational framework and practical options for an AI regulatory sandbox within Belgium, including support for SMEs and high-risk AI innovators, alignment with the strategic objectives set out by the EU AI Act, and specific operational structures and legal considerations for implementation.

In 2024, the Brussels-Capital Region launched a mobility data and AI regulatory sandbox as part of the European AI Testing and Experimentation Facility for Smart and Sustainable Cities and Communities. Coordinated by Digitaal Vlaanderen, this initiative supports Belgian startups in developing AI solutions by providing access to real data and controlled testing environments. The sandbox specifically focuses on AI applications in the mobility sector, offering a structured environment for experimentation that ensures compliance with European standards. This project underscores Belgium's commitment to fostering AI innovation while aligning with EU regulatory standards for safe and ethical AI development.⁸⁵⁹

AI in Healthcare

The use of AI in healthcare is one of the cornerstones of Belgium's AI strategy. An entire chapter of its national convergence plan is devoted to "AI at the heart of healthcare"⁸⁶⁰ and the plan states that "the creation of a healthcare data agency reflects the importance and the necessity of facilitating the re-use of healthcare for research and innovation." The national strategy also emphasizes the "perspective of the user" in that it aims to stimulate human-centric use of AI in healthcare, while acknowledging the necessity of clear accountability rules, attention to data bias and privacy, and giving patients agency over their own data.⁸⁶¹

In 2024, the Belgian EBCP (Evidence-Based Care Policies) mirror group released a policy brief focused on enhancing AI applications in healthcare, particularly in cancer care. The brief identifies critical areas for improvement, including data access, IT infrastructure, and legal and ethical frameworks, while emphasizing the importance of building public trust in AI applications. The brief also highlights Belgium's active role in EU initiatives, such as the European Health Data Space (EHDS) and the EU Cancer Imaging Infrastructure (EUCAIM), advocating for continued investments to align with European data-sharing and healthcare innovation standards.

Belgium's Health Data Agency funds projects "to facilitate the development and management of data in the healthcare sector, improving the quality, affordability, prevention and targeting of healthcare for every citizen and every patient."⁸⁶² Three of the four projects approved for the first round of funding center on AI in the healthcare space. They include a project using LLMs to convert unstructured medical text, like notes, into more structured data and medical letters in Dutch to make the data more useful for analysis, another applying generative AI to match children to clinical trials, and develop an AI tool to determine whether patient data can be truly anonymized for export.

Environmental Impact of AI

Belgium's Convergence Plan for developing AI includes protecting the environment among the main objectives.⁸⁶³ However, there are no specific action steps to ensure that AI development is sustainable. The EU AI Act, for example, has been criticized for emphasizing AI *for* sustainability over AI that *is* sustainable.⁸⁶⁴

Lethal Autonomous Weapons

In 2018, the Belgian Parliament passed a Resolution to prohibit use, by the Belgian Defense, of killer robots and armed drones.⁸⁶⁵ In this resolution, the Parliament states that Belgium should:

- Participate in international working groups within the framework of the United Nations and the Convention on Certain Conventional Weapons (CCW) in particular to work towards an internationally recognized definition of killer robots and to determine which types of weapons will fall into this category in the future
- Advocate in international fora, together with like-minded countries, for a global ban on the use of killer robots and fully automated armed drones
- Ensure that the Belgian Defense never deploys killer robots in military operations
- Support the development and use of robotic technology for civilian purposes.

The culmination of Belgium's efforts, which began in 2018 to ban lethal autonomous weapons, was marked by the Belgian Defense Committee's approval of a bill to this effect.⁸⁶⁶ Consequently, in January 2023, Belgium became one of the first countries in the world to implement an outright ban on lethal autonomous weapons.

Belgium has taken a central role in putting Lethal Autonomous Weapons Systems (LAWS) on the international agenda. During its chairmanship of the Group of Governmental Experts (GGE) on Lethal Autonomous Weapons Systems, Belgium aimed to “find consensus in relation to the clarification, consideration, and

development of aspects of the normative and operational framework on emerging technologies in the area of LAWS.”⁸⁶⁷

Belgium was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”⁸⁶⁸

At the 78th UN General Assembly First Committee in 2023, Belgium voted in favor⁸⁶⁹ of resolution L.56⁸⁷⁰ on autonomous weapons systems, emphasizing the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems.” Belgium co-sponsored and supported Draft Resolution L.77 in 2024.⁸⁷¹ Belgium stated, “scientific development is outpacing regulations in the field of autonomous weapon systems. Innovative systems and artificial intelligence are being introduced on the battlefield. Now is the time for a normative framework, if we wish to regulate the development and use of these systems before being confronted with a fait accompli.”⁸⁷²

Belgium was also part of a cohort of 42 states that delivered a vital joint statement in the 2025 GGE asserting that the rolling text, which serves as a starting point for the rules of a treaty, “is a sufficient basis to fulfil the mandate of this GGE in

Center for AI and Digital Policy

its current form” and a “sufficient basis for negotiations on an instrument on lethal autonomous weapons systems.”⁸⁷³

Belgium has also engaged in international discussions on LAWS outside the UN, including the REAIM Summits. Belgium endorsed the joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain during the 2023 REAIM Summit in the Netherlands.⁸⁷⁴ Belgium also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.⁸⁷⁵ At the second REAIM summit, hosted by the Republic of Korea in 2024,⁸⁷⁶ Belgium endorsed the outcome document, Blueprint for Action, which translated the principles agreed upon at REAIM 2023 into action steps⁸⁷⁷.

Belgium endorsed the Chair’s Summary of the Vienna conference Humanity at the Crossroads: Autonomous Weapons Systems and the Challenge of Regulation, in April 2024, affirming its commitment to work urgently towards an international legal instrument to regulate autonomous weapons systems.⁸⁷⁸

AI Literacy

Belgium expanded national policy actions for AI literacy in line with the EU AI Act, focusing on both public engagement with digital policymaking and capacity building for AI oversight entities. Through initiatives like the Action plan DigiJump

and the Flemish AI Academy, the government invested in curriculum reform, teacher training, and digital skills programs to empower citizens and ensure that oversight professionals receive specialized training for regulatory compliance and responsible AI adoption, and workers to meet AI and STEM workforce demands, with new programs tailored for compliance with the EU AI Act and greater adoption across public and industrial sectors.⁸⁷⁹

Human Rights

Belgium is a signatory to many international human rights treaties and conventions. In 2025, Belgium received a rating of “Free” with a score of 96/100 in the Freedom House Freedom in the World report. Freedom House reported that “Belgium is a stable electoral democracy with a long record of peaceful transfers of power. Political rights and civil liberties are legally guaranteed and largely respected. Major concerns in recent years have included the threat of terrorism, corruption scandals, and rising xenophobia.”⁸⁸⁰

Per the country chapter in the European Commission’s 2025 Rule of Law report,⁸⁸¹ the Belgian government strengthened legal protections for journalists by decriminalizing defamation and introducing tougher penalties for crimes against them, acknowledging their public interest role. Belgium is also advancing the transposition of the EU anti-SLAPP Directive with a draft law offering broad protections and developed in consultation with journalist associations. However, journalist groups report rising legal intimidation, political interference, and harassment, especially online and during protests.

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers clarified that Member States’ commitment to “ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction” required them to “ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”⁸⁸²

OECD / G20 AI Principles

Belgium has endorsed the OECD/G20 AI Principles. In its 2021 survey, the OECD noted several examples of implementation of the AI Principles by Belgium, including the establishment of an AI Observatory, providing financial and non-financial support to retrain and attract top AI talent, development of an AI self-assessment tool, and the resolution to prohibit the use of lethal autonomous weapons by local armed forces.⁸⁸³

Belgium is a member of the Global Partnership for AI, a multi-stakeholder initiative that aims to foster international cooperation on AI research and applied activities and is “built around a shared commitment to the OECD Recommendation on Artificial Intelligence.”⁸⁸⁴

Belgium’s 2022 national AI strategy covers all the OECD AI principles: inclusive growth, sustainable development and well-being; human-centered values and fairness, transparency and explainability; robustness, security and safety; and accountability.⁸⁸⁵ However, the strategy does not explicitly mention the OECD as the basis for its common objectives.⁸⁸⁶

Council of Europe AI Treaty

Belgium contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law.⁸⁸⁷ Belgium is party to the Convention through the

Center for AI and Digital Policy

European Commission signature on September 5, 2024. However, Belgium has not taken individual action to endorse or ratify the treaty.⁸⁸⁸

UNESCO Recommendation on AI Ethics

Belgium is a signatory to the UNESCO Recommendation on the Ethics of Artificial Intelligence. The 2022 National Convergence Plan does not explicitly refer to the UNESCO Recommendation.⁸⁸⁹ Still, actions by the AI4Belgium Ethics and Law Committee reflect alignment with UNESCO Policy Recommendations. However, the Flemish region is collaborating with UNESCO on project to ready the public administration for AI systems.⁸⁹⁰ UNESCO's Ethics of AI Unit, Social and Human Sciences Sector, will leverage the Readiness Assessment Methodology (RAM) underway in Flanders as part of the implementation.

Evaluation

Belgium has a national AI strategy with a strong focus on AI ethics that should ensure coherence among the regional AI strategies and align toward common objectives. Regional AI policy innovation has been strengthened to align with the UNESCO Recommendation on AI Ethics. Belgium also established a Federal Data and AI Ethics Advisory Committee within the Federal Public Service (FPS) to enhance AI oversight and educate civil servants on data ethics, human oversight, and fundamental rights.

However, some crucial points are still awaiting action, such as national action on the Council of Europe treaty and the establishment of an independent national supervisory agency under the EU AI Act.

Benin

In 2025, Benin hosted the Regional Summit on Digital Transformation in Western and Central Africa, where states affirmed a commitment to creating governance structures to foster ethical AI development. The country progressed on implementing the National AI Strategy by partnering with UNESCO to develop national AI competency frameworks for teachers and students.

National AI Strategy

The Ministerial Council of Benin approved and adopted the National Artificial Intelligence and Big Data Strategy (*Stratégie Nationale d'Intelligence Artificielle et des Mégadonnées*, SNIAM 2023–2027)⁸⁹¹ on January 18, 2023. The SNIAM 2023–2027 is deeply rooted in the National Development Plan (PND) 2018–2025⁸⁹² and the Government Action Program (PAG),⁸⁹³ positioning digital technology as a lever for accelerating structural economic transformation.

The SNIAM 2023–2027 identifies six major problems addressed through 4 Strategic Programs “that can be rolled out in three phases spread over five years, with a portfolio containing one hundred and twenty-three (123) actions impacting both the public and the private sectors.”⁸⁹⁴ Program 1 focuses on AI development and use in high priority sectors (agriculture, health, education, and living environment). Programs 2 and 3 aim to strengthen human capacity and skills for working in AI professions and provide support for training, research, and innovation in the private sector while fostering cooperation. Program 4 implements institutional and governance frameworks to regulate the ethical and liability issues related to AI and big data.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

A robust legal framework, specifically the Digital Code⁸⁹⁵ and data protection law,⁸⁹⁶ provides a basis for Program 4. Although the SNIAM 2023–2027 does not explicitly align with international governance frameworks, it functionally aligns with the core principles of global standards such as the OECD AI Principles, Universal Guidelines for Artificial Intelligence,⁸⁹⁷ UNESCO Recommendation on the Ethics of AI, Council of Europe AI Treaty, or African Union Continental AI Strategy. Key areas of alignment include Accountability as guiding principle: “all stakeholders will need to be involved in the design, implementation, and ongoing monitoring and evaluation of the strategy.”⁸⁹⁸ The SNIAM Program 4 on the implementation of a governance framework for AI outlines specific actions to establish monitoring as liability mechanism to ensure that “AI systems are designed with respect for people, the planet, prosperity, peace, transparency, justice and fairness, accountability, non-maleficence, privacy, benevolence, freedom and autonomy, sustainability, dignity, and solidarity.”⁸⁹⁹

Additionally, under Action 3.3: Bolstering institutional cooperation and collaboration, the strategy mandates the strengthening of “win-win” international and regional cooperation to support the national AI ecosystem. The SNIAM explicitly identifies UNESCO and the African Union (AU)—operating through bodies such as Smart Africa and ECOWAS (Economic Community of West African States)—as key institutional partners.⁹⁰⁰

⁹⁰⁰ *Ibid*, p. 33

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Regional and AU Collaboration

Benin's SNIAM 2023–2027⁹⁰¹ functionally aligns with the five core focus areas in the African Union Digital Transformation Strategy,⁹⁰² effectively serving as a national-level implementation of the continental vision.

The Cotonou Declaration serves as the explicit bridge, where Benin and regional peers formally committed “to building, by 2030, a Single African Digital Market based on connectivity, trust, innovation, sustainability, and ethical AI, so that no country and no citizen is left behind in the digital economy.”⁹⁰³ To this end, the Cotonou Declaration reiterates commitments to “Ethical artificial intelligence and inclusive innovation” by embedding “transparency, fairness and inclusivity into artificial intelligence governance to ensure that technology benefits all communities while mitigating risks such as bias, misuse and disinformation.”⁹⁰⁴

Benin's SNIAM 2023–2027 aligns with the African Union Continental Artificial Intelligence Strategy⁹⁰⁵ on five priority key areas, particularly ensuring ethical and secure AI that minimizes risks, protects data privacy, and implements ethical, human-centric AI aligning with AU principles.

Public Participation

According to the official SNIAM 2023–2027, “The process of developing Benin's National Artificial Intelligence and Big Data Strategy (SNIAM) was headed up by the Ministry of Digital Affairs and Digitalization, in an approach involving all the stakeholders.”⁹⁰⁶

SNIAM established Accountability as one of the key principles driving the implementation of the strategy. Accountability, that goes “hand in hand with the principle of the effective participation of the various stakeholders (government, private sector, and the end users) in the design, development, implementation, and

ongoing monitoring and evaluation of the strategy.”⁹⁰⁷ Although the SNIAM 2023–2027 described an approach intended to involve all stakeholders, no open public participation mechanisms were found to have been established during the development phase.

Data Protection

The Digital Code,⁹⁰⁸ as amended by law no. 2020-35 of 06 January 2021,⁹⁰⁹ and the Law dealing with the Protection of Personally Identifiable Information.⁹¹⁰ The Digital Code deals with the collection, treatment, transmission, storage, and use of personal data by a person, the state, local authorities, and legal persons, as well as automated processing and non-automated processing of personal data contained in files, or any processing of data for public security, defense, research, prosecution of criminal offenses, or the security and essential interests of the state.⁹¹¹ The 2020 amendments have been criticized as overly broad, leaving journalists and activists vulnerable to accusations of libel and disinformation.⁹¹²

The Personal Data Protection Authority (*Autorité de Protection des Données à caractère Personnel*, APDP) serves as the independent regulatory body established to ensure protection of personal data and privacy and enforcement of the Digital Code.⁹¹³ The personal data protection law originally named the National Commission of Information (Freedom) and Privacy (*Commission Nationale de*

Center for AI and Digital Policy

l'Informatique et des Libertés) but the body transformed in 2018 under the Digital Code.

The APDP serves a critical function as the government moves to implement the data-intensive initiatives outlined in the SNIAM 2023–2027.⁹¹⁴ The APDP is an active member of the Network of African Data Protection Authorities (RAPDP/NADPA) and the Francophone Association of Personal Data Protection Authorities (AFAPDP).

Benin's approach to data privacy is not isolated; it is deeply entrenched in broader regional goals, established in the African Union's Digital Transformation Strategy for Africa (2020-2030)—along with the recent commitments acquired in the Cotonou 2025 Declaration.⁹¹⁵ Benin also aligns with the African Union (AU) Continental Artificial Intelligence (AI) Strategy, which prioritizes creating national and regional data pools, facilitating cross-border data flows, and implementing robust data protection regulations based on the Malabo Convention.⁹¹⁶

To fortify its national data governance, Benin is developing a specific National Data Strategy⁹¹⁷ that explicitly operationalizes the African Union's Continental Data Policy Framework⁹¹⁸ and the binding principles of the Malabo Convention on Cybersecurity and Personal Data Protection. Backed by the technical and financial support of the Smart Africa Alliance and German Cooperation (GIZ) under the AU-EU Data Governance in Africa project, this initiative prioritizes the creation of a regulated, secure, and rights-based digital environment.

The Global Privacy Assembly (GPA) lists the National Commission for Information (Freedom) and Liberties as an accredited member since 2015 and does not list the APDP. Benin's data protection authority did not endorse the 2018 Declaration on Ethics and Data Protection in Artificial Intelligence,⁹¹⁹ 2020

Algorithmic Transparency

Benin's Digital Code provides basic provisions related to algorithmic transparency within Book V on Data Protection.⁹²³ The Code prohibits automated decisions and profiling in judicial cases and requires notice of automated processing as well as access to the logic of decisions. The Code does not mention redress or the right to contest a decision. This Code is enforced by the Personal Data Protection Authority (APDP).

Article 401 prohibits court decisions and decisions producing legal effects that may significantly affect an individual based solely on automated processing of personal data, including profiling intended to evaluate aspects of personality, though exceptions apply when such decisions occur within a contractual framework or legal provision that includes appropriate safeguards, including the data subject's right to express their point of view.⁹²⁴ Article 405 of the Code specifies that "automated or non-automated data processing operations carried out by public or private organizations and involving personal data must, prior to their implementation, be subject to a prior declaration to the Authority or be registered in a register maintained by the person designated for this purpose by the data controller."⁹²⁵

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Under Articles 415 and 416, data controllers are obliged to inform subjects of the data about “the existence of automated decision-making, including profiling, as referred to in Article 401 and, at least in such cases, meaningful information about the logic involved, as well as the significance and the envisaged consequences of such processing for the data subject.”⁹²⁶ However, the Code does not define what constitutes “meaningful information about the logic, nor does it establish specific standards for algorithmic explainability, technical documentation requirements, or the level of detail required when explaining automated systems. The Code lacks provisions for algorithmic impact assessments, mandatory auditing of automated decision-making systems, or specific oversight mechanisms beyond general data protection compliance.

Benin has a national Open Data Portal designed, developed, and deployed to increase transparency in government operations.

Environmental Impact of AI

Benin currently does not have national laws or policies that explicitly address the environmental impact of artificial intelligence.

Lethal Autonomous Weapons

Benin is a High Contracting Party to the Convention on Certain Conventional Weapons (CCW)⁹²⁷ and has supported a ban on lethal autonomous weapons systems (LAWS) since at least 2018 as a member of the African Group⁹²⁸ and Non-Aligned Movement (NAM) in the CCW.⁹²⁹ The NAM advocated for the CCW Group of Governmental Experts (GGE) on LAWS to implement a treaty.⁹³⁰ The African Group reiterated support for a legally binding instrument within the CCW in 2023,⁹³¹ with

the view that “the world no longer needs more weapons, particularly those with unpredictable functionality, which operate on data and algorithm biases that could self-learn and take away meaningful human control to potentially cause unnecessary human suffering and damage to property.” A 2018 African Group statement to the GGE on LAWS rationalized the need for human control: “The African Group finds it inhumane, abhorrent, repugnant, and against public conscience for humans to give up control to machines, allowing machines to decide who lives or dies, how many lives and whose life is acceptable as collateral damage when force is used.”⁹³²

AI Literacy

The National Artificial Intelligence and Big Data Strategy (SNIAM 2023–2027) highlights capacity building and stakeholder sensitization as core objectives. The SNAIAM proposes programs to strengthen human capital, deliver training, and raise awareness among public-sector actors and beneficiaries.⁹³³

Benin is partnering with UNESCO and the KIX Africa 21 Hub to develop national AI competency frameworks for teachers and students.⁹³⁴ This collaboration aims to integrate AI and digital skills into education systems, strengthen foundational literacy through local languages, and ensure that AI supports inclusive, equitable learning aligned with national strategies like Benin’s AI and Big Data Strategy.

Human Rights

Benin’s Constitution, ratified in 1991, establishes commitments to the rule of law, fundamental rights, and human dignity. Benin is also a signatory to key international human rights instruments.⁹³⁵ Once considered a stable democracy in Sub-Saharan Africa, Benin has seen deterioration in the protection of human rights

since 2016. In the 2025 Freedom House Freedom in the World Report, Benin scores 60/100 and ranks as “Partly Free” for political rights and civil liberties.⁹³⁶

Attacks on independent media outlets and arbitrary arrests of dissidents have led to a shrinkage of civic space. Specifically, the criminalization of “publication of false information” and “electronic harassment” in the Digital Code has led to suspensions of media and self-censorship amongst journalists.⁹³⁷

Benin’s revised Code of Ethics⁹³⁸ in the media sector aims to address digital & AI challenges in journalism and other media. The Code intends to safeguard professional integrity and ethical standards with a strong emphasis on preventing disinformation.

OECD / G20 AI Principles

Benin is not a member of the OECD and has not officially endorsed the OECD AI principles.⁹³⁹ The National Development Plan 2018–2025 base for the AI strategy aims for “strong, inclusive and sustainable economic growth within the framework of more effective national and local governance, achievable by focusing on the development of human capital and infrastructure.”⁹⁴⁰ These align with the OECD Principles. Benin is not a member of the Global Partnership on Artificial Intelligence (GPAI).⁹⁴¹

Council of Europe AI Treaty

Benin has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.⁹⁴²

UNESCO Recommendation on AI Ethics

Benin adopted the UNESCO Recommendation on the Ethics of Artificial Intelligence together with 192 other countries.⁹⁴³ Benin's partnership with UNESCO to develop national AI literacy competency frameworks for teachers and students aligns with the recommendation on Literacy and Awareness and inclusive AI development.⁹⁴⁴

Benin has not initiated the UNESCO Readiness Assessment Methodology (RAM),⁹⁴⁵ a tool to facilitate implementation of the UNESCO Recommendation.

Evaluation

Benin set out a national strategy for AI that recognizes digital technology as a lever for accelerating structural economic transformation. The country protects personal data and the right to privacy through a comprehensive legal framework. However, it does not explicitly protect a right to algorithmic transparency by law.

Benin's domestic activities and ethical guidelines are functionally aligned with global standards. Significantly, the country aligns with regional initiatives, anchoring its digital agenda in the Digital Transformation Strategy for Africa (2020–2030)⁹⁴⁶ and the Cotonou 2025 Declaration to foster a sovereign and interconnected African digital market. Benin is also a signatory to key international human rights instruments; however, the criminalization of “publication of false information” and “electronic harassment” in the Digital Code⁹⁴⁷ has led to suspensions of media and self-censorship among journalists, raising concerns over freedom of expression and the press.

Brazil

In 2025, Brazil finalized an updated national AI plan (PBIA) while legislators continued work on a legal framework for AI. The country also saw publication of the UNESCO RAM report.

National AI Strategy

Then-President Jair Bolsonaro declared before the United Nations General Assembly in September 2020 that Brazil is “open for the development of state-of-the-art technology and innovation efforts, such as 4.0 Industry, artificial intelligence, nanotechnology, and 5G technology, with all partners who respect our sovereignty and cherish freedom and data protection.”⁹⁴⁸

The Brazilian government adopted a national AI strategy, *Estratégia Brasileira de Inteligência Artificial* (EBIA) in 2021,⁹⁴⁹ following on the Digital Transformation Strategy (E-Digital) released in 2018.⁹⁵⁰ Release of the EBIA followed restructuring of the Ministry of Science, Technology, Information, and Communications, which was divided into the Ministry of Science, Technology, and Information (*Ministério da Ciência, Tecnologia e Inovação*, MCTI) and the Ministry of Communication (MCom). A broad Directorate on Science and Digital Innovation under the Secretary of Entrepreneurship and Innovation of MCTI oversees AI policy.⁹⁵¹

The EBIA included developing ethical principles to guide responsible use of AI, removing barriers to innovation, and improving collaboration between government, the private sector, and researchers among the key objectives. A governance committee composed of representatives from the public sector, companies, civil society, and academia identified specific actions to reinforce these

objectives in a 2022 Working Plan.⁹⁵² Updates to the EBIA website in 2026 emphasized the basis of the EBIA's objective in the OECD AI Principles.⁹⁵³

The federal government finalized the Brazilian Artificial Intelligence Plan 2024–2028 (*Plano Brasileiro de Inteligência Artificial*, PBIA) 2025–2028.⁹⁵⁴ The new plan, developed through 2024–2025, reassesses objectives and actions in the country's AI strategy and seeks to better align them with national interests and priorities.⁹⁵⁵ The plan outlines Brazil's vision for a human-centered AI, promoting national autonomy, international cooperation, and alignment with the Sustainable Development Goals (SDGs). The PBIA emphasizes ethical standards, bias prevention, data sovereignty, and inclusivity in AI applications, aiming to position Brazil as a pioneer in socially responsible AI development. The PBIA includes foundational projects meant to develop the knowledge base and regulatory environment needed for sustainable and trustworthy AI. Pillars include Training and Workforce Development, Improvement of Public Services, and Support for AI Regulation and Governance.

Under the guidance of the earlier PBIA, the country launched the Brazilian AI Observatory (OBIA) in 2024⁹⁵⁶ to monitor AI implementation nationwide and promote transparency and fairness in key sectors like healthcare. The initiative complements Senate guidance on ethical AI policies.

AI Legislation

Both of Brazil's congressional bodies, the Federal Senate and house of representatives (*Câmara dos Deputados*) have approved versions of bills to establish a legal framework for AI in Brazil and to provide ethical frameworks and guidelines

for the development and use of AI in the country.⁹⁵⁷ After academics and NGOs warned that a draft bill (21/2020) “may help perpetuate recent cases of algorithmic discrimination through provisions that hinder accountability for AI-induced errors and restrict the scope of the rights established in the LGPD and in the Brazilian Constitution,”⁹⁵⁸ the Federal Senate appointed a temporary Commission of Jurists (*Comissão de Juristas*, “CJSUBIA”) to analyze the three draft AI bills and consolidate them into a proposal for a new Brazilian AI Act. The process included public consultations and international seminars.⁹⁵⁹

The Commission of Jurists submitted a draft legal framework to the Federal Senate in 2022.⁹⁶⁰ The explanatory statement of the report stresses “Therefore, this substitute bill is based on the premise that there is no trade-off—a mutually exclusive choice—between protection of fundamental rights and freedoms, appreciation of work and dignity of the human person in the face of the economic order and the creation of new value chains. [...] Its normative objective is to conciliate an approach based on risks with a regulatory model based on rights [...] weight of regulation is dynamically calibrated according to the potential risks of the technology application context.”

The proposed framework is a risk-based approach, imposing different obligations depending on the level of risk of the AI system, while recognizing for all individuals affected by AI systems, regardless of the system risk levels. The rights for all affected individuals include right to prior information before interacting with AI systems, right to explanation, right to challenge decisions or predictions made by AI, right to human participation in decisions in AI systems, right to non-discrimination, and right to privacy and protection of personal data. The draft bill addresses liability, defining that in the case of high risk or excessive risk of the AI systems, the supplier or operator is objectively liable for the damage caused. Otherwise, the liability will be presumed and there will be a reversal of the burden

Center for AI and Digital Policy

of proof in favor of the victim. A competent authority to enforce the legislation would be a body or entity of the Federal Government, still to be defined.

After amendments and a supplemental vote document⁹⁶¹ to update a June 2024 report that recommended the approval of Bill 2338/2023,⁹⁶² the Senate approved Bill 2338 in December 2024.⁹⁶³ The bill advanced to the Chamber of Deputies for additional voting.⁹⁶⁴

The State of Ceará adopted a law in 2021 establishing obligations and guidelines for the implementation and use of AI systems within the state.⁹⁶⁵ This law requires AI systems to be designed in a safe way, based on ethics and in accordance with this law and Brazilian laws more generally. The law defines an AI system as computer science technologies that enable computers to interact with humans, through technological mechanisms that enable the simulation of human reasoning. The law also states that companies headquartered in the State of Ceará, or that have their artificial intelligence systems in use and operation in the State of Ceará, must be responsible for how their systems operate, being liable for any damages in accordance with the law.

Public Participation

The (then) Ministry of Science, Technology, Innovations, and Communications (MCTIC) organized an online public consultation between December 2019 and February 2020 to gather inputs for “a National Artificial Intelligence Strategy that allows to enhance the benefits of AI for the country, mitigating any negative impacts.”⁹⁶⁶ According to the terms of the public consultation, “the objective of the strategy is to solve concrete problems in the country, identifying priority areas in the development and use of AI-related

Center for AI and Digital Policy

technologies in which there is greater potential for obtaining benefits. It is envisaged that AI can bring gains in promoting competitiveness and increasing Brazilian productivity, in providing public services, in improving people's quality of life and in reducing social inequalities, among others.”⁹⁶⁷

The consultation addressed thematic areas related to AI and focused on the government's role regarding the impact of AI technologies on society. Relevant documents to artificial intelligence were made available on the consultation website. The consultation collected about 1,000 contributions in total, which were considered for the development of the strategy proposal.⁹⁶⁸

On the other hand, Academics and NGOs have stated that the debate on Bill No. 21/2020 lacked public participation. According to José Renato Laranjeira de Pereira and Thiago Guimarães Moraes, “The debate on the bill ignored the claims of experts and civil society organisations to address the high risks of the technology regarding fundamental rights. In contrast, Members of Congress delivered favorable speeches on the positive impacts of AI in society, especially as a tool for efficiency and innovation.”⁹⁶⁹

As indicated above, the Federal Senate responded to these criticisms by establishing a Commission of Jurists to prepare a new consolidated proposal for a Brazilian AI Act, the preparation of which involved the establishment of public participation mechanisms. The Commission of Jurists initiated the organization of meetings, seminars, and public hearings divided into thematic axes, with the participation of experts and national and international representatives. 12 thematic panels were created and the Commission of Jurists received 102 statements from civil society entities, consolidated in the report submitted to the Federal Senate.⁹⁷⁰

Between May and September 2025, the Chamber of Deputies' Special Commission on AI held twelve public hearings on the legal framework for Artificial Intelligence bill, inviting academia, civil society, and industry. Separately, the ANPD conducted a nationwide consultation (*Tomada de Subsídios*) on AI and automated decisions. The ANPD published results of the nationwide inquiry in May 2025.⁹⁷¹

Data Protection

Brazil's President signed the data protection law, *Lei Geral de Proteção de Dados Pessoais* (LGPD), in September 2020.⁹⁷² The LGPD is the first comprehensive data protection law in Brazil and mirrors the European Union's GDPR.⁹⁷³ The LGPD is relevant to the processing of personal data in relation to AI applications.⁹⁷⁴

The LGPD established the National Data Protection Authority (*Autoridade Nacional de Proteção de Dados*, ANPD) to oversee data protection and privacy in the country. A new law in 2022 modified the LGPD to transform the ANPD into an independent agency, separate from the executive with its own budget.⁹⁷⁵ The ANPD is guaranteed technical and decision-making autonomy⁹⁷⁶ and is given important attributions related to the interpretation, application and enforcement of the LGPD.⁹⁷⁷ Following public consultation on automatic decisions, the ANPD added the issue to the 2025–2026 agenda.⁹⁷⁸

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Brazilian Congress enacted Constitutional Amendment (EC) 115, which establishes personal data protection as a fundamental right in February 2022.⁹⁷⁹ EC 115 also gives the Federal Government exclusive jurisdiction to legislate on personal data protection and processing. The amendment establishes the competence of the highest court within Brazil's judiciary, the Federal Supreme Court (*Supremo Tribunal Federal*, STF), to adjudicate legal issues involving personal data. Previously, the STF had examined related cases based on other constitutional guarantees, such as the inviolability of intimacy and individuals' private life.

The ANPD approved regulation on international data transfers and the content of standard contractual clauses in August 2024.⁹⁸⁰ The regulation implements the international data transfer framework under the LGPD.⁹⁸¹ Publication of the regulation came amid discussions of creating a "sovereign cloud" to ensure government data is stored within national borders as part of Brazil's Artificial Intelligence Plan.⁹⁸²

The National Council for the Rights of Children and Adolescents (CONANDA) developed a resolution to protect children and adolescents' rights in virtual environments. The resolution establishes specific data protection requirements such as the prohibition of processing minors' personal data for commercial purposes including targeted advertisement and profiling in connection with consumption, behavior, and market segmentation.⁹⁸³

The ANPD became a member of the Global Privacy Assembly (GPA) in 2023.⁹⁸⁴ The ANPD has not endorsed the 2018 GPA Declaration on Ethics and Data

AI Oversight

The ANPD adopted a 2023 resolution emphasizing the need to strengthen data protection and oversight concerning AI applications.⁹⁸⁹

As a member of the Ibero-American Network for the Protection of Personal Data (*Red Ibero-Americano de Protección de Datos*, RIPD), the ANPD endorsed the General Recommendations for the Processing of Personal Data in Artificial Intelligence⁹⁹⁰ and the accompanying Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects.⁹⁹¹ The RIPD data protection authorities initiated a coordinated action on ChatGPT, investigating risks for the rights and freedoms of users in relation to the processing of their personal data. Concerns centered on the risk of misinformation: “ChatGPT does not have knowledge and/or experience in a specific

domain, so the precision and depth of the response may vary in each case, and/or generate responses with cultural, racial or gender biases, as well as false ones.”⁹⁹²

Algorithmic Transparency

Article 20 of the LGPD establishes the right of any individual “to request the review of decisions taken solely on the basis of automated processing of personal data that affect his interests, including decisions designed to define his personal, professional, consumer and credit profile or aspects of his personality.”⁹⁹³

As a result, “the controller shall provide, whenever requested, clear and adequate information regarding the criteria and procedures used for the automated decision, observing the commercial and industrial secrets.”⁹⁹⁴ Where the information is not provided due to the observance of commercial and industrial secrecy, the national data protection authority “may perform audits to verify discriminatory aspects in automated processing of personal data.”⁹⁹⁵

Some Brazilian researchers and judicial advocates, including Prof. Renato Leite Monteiro and entities such as the Brazilian Institute of Consumer Protection (IDEC), assert that a comprehensive interpretation of the LGPD, in conjunction with the Constitution, consumer law, and other legal provisions, guarantees the existence of a right to explanation in Brazil. However, this position demands greater judicial consolidation.⁹⁹⁶

The ANPD public consultation on automated decisions and artificial intelligence and related report offer steps toward providing this consolidation.⁹⁹⁷ The

Center for AI and Digital Policy

AI Regulatory Sandbox initiative can provide further clarity with tests of algorithmic transparency and data protection mechanisms in a controlled environment.⁹⁹⁸

The national AI strategy outlined transparency as a critical element of AI governance both regarding explainability of decisions taken by autonomous systems and the transparency of methodologies used in the development of AI systems, including data sources and project procedures.⁹⁹⁹

With regard to the transparency principle, the RIPD Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects provide, “The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language, it will not be necessary to provide a complete explanation of the algorithms used or even to include them. The above always looking not to affect the user experience.”¹⁰⁰⁰

The Brazilian Artificial Intelligence Plan 2024–2028 established and funded the National Center for Algorithmic Transparency and Trustworthy AI, a national center to develop research and studies on AI risks, security, transparency, and reliability.¹⁰⁰¹

Use of AI in Public Administration

As a member of the Latin American Centre for Development Administration (CLAD), Brazil approved the Ibero American Charter on Artificial Intelligence in Civil Service.¹⁰⁰² The Charter aims to provide a roadmap and common framework for CLAD member states to learn about the challenges and opportunities involved in the implementation of AI in public administration and adapt their AI policy strategies

and laws accordingly. The guiding principles are human autonomy; transparency, traceability and explainability; accountability, liability and auditability; security and technical robustness; reliability, accuracy, and reproducibility; confidence, proportionality, and prevention of damage; privacy and protection of personal data; data quality and safety; fairness, inclusiveness, and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection.

The third axis of the proposal for the Brazilian Artificial Intelligence Plan 2024–2028 focuses on the use of AI to improve public services. The plan includes 19 suggested actions to foster the use of AI in the public sector to improve the delivery of public services and enhance impact on development and social inclusion. Some of the areas targeted for proposed AI solutions to improve public services include procurement, management of human resources, management of educational resources, cybersecurity, management of assets, and prevention of extreme climate events.¹⁰⁰³ The updated PBI 2024–2028 introduces “AI for Public Power” actions to deploy AI in health, agriculture, and social protection. Thirty-one Immediate Actions prioritize public sector digitalization and risk assessment frameworks.¹⁰⁰⁴

Algorithm-Based Advertising

The Brazilian Advertising Self-Regulation Council (CONAR), a nongovernmental organization that acts as a tribunal in the advertising industry to ensure advertising practices are lawful and ethical,¹⁰⁰⁵ warned advertisers to be cautious when using algorithm-based advertising after deciding a case involving algorithm-based advertising in December 2021.¹⁰⁰⁶ The ruling responded to a consumer complaint against a streaming platform, alleging that an ad did not reflect the actual content of the platform. Although CONAR found the streaming platform had committed no irregularities, the council cautioned advertisers that algorithmic-based ads designed to increase engagement rather than inform may hinder consumers’ ability to find solutions they seek.

A Brazilian court fined Meta Platforms up to \$3.62 million after finding the company had accepted paid advertisements that fraudulently used a retailer’s name

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

to mislead consumers. Ads revealed that artificial intelligence had been used to mimic a businessman's voice.¹⁰⁰⁷

The Brazilian government sanctioned the Digital Statute for Children and Adolescents in 2025.¹⁰⁰⁸ This law creates a significant new restriction on algorithm-based advertising by explicitly prohibiting profiling to direct commercial advertising to children and adolescents. The law defines profiling in Article 2 (Section V).

EdTech

The EdTech apps Descomplica and Stoodi used in Sao Paulo were part of a 2022 global study conducted by Human Rights Watch on education technology endorsed by 49 governments, including Brazil, during the pandemic.¹⁰⁰⁹ Based on technical and policy analysis of these EdTech products, Human Rights Watch found that Brazil's endorsement of these online learning platforms put at risk or directly violated children's rights. Both Descomplica and Stoodi have "the ability to collect their users' advertising IDs. This allowed these apps to tag children and identify their devices for the sole purpose of advertising to them," in violation of child data protection principles as well as corporations' human rights responsibilities outlined in the United Nations Guiding Principles on Business and Human Rights.

In March 2024, Human Rights Watch submitted recommendations to the UN Committee on the Rights of the Child urging the ANPD to seek actionable steps against the EdTech companies to protect children and adolescents' data privacy. Human Rights Watch also recommended that ANPD build on the current "case law and Supreme court rulings protecting children's right in educational settings" when addressing online education.¹⁰¹⁰ Brazil's legislature took direct action to address these concerns. The government sanctioned Digital Statute for Children and

Adolescents in 2025,¹⁰¹¹ establishing new binding rules for all platforms accessed by minors.

A federal law introduced in February 2025 would also limit smartphone use in public and private elementary and high schools across Brazil.¹⁰¹²

Use of AI in Courts

With a current backlog of 78 million lawsuits, the Brazilian judicial system operates with substantial challenges in case flow management. The lack of resources to meet this demand¹⁰¹³ has led to numerous initiatives involving Artificial Intelligence.

In this context, the President of the National Council of Justice (*Conselho Nacional de Justiça*, CNJ), a judicial agency responsible for the administrative and financial control of the judiciary and the supervision of judges,¹⁰¹⁴ published in August 2020 a Resolution on ethics, transparency and governance in the production and use of artificial Intelligence in the Judiciary.¹⁰¹⁵ The NCJ Resolution addresses AI-related requirements such as respect for human rights; preservation of equality, non-discrimination, plurality, and solidarity; transparency (from disclosure to explainability); data security; user control; and accountability.

The NCJ passed a new resolution updating the previous guidelines to create a new norm around AI in the judiciary with guidelines, requirements, and a governance structure for the development, use, and auditability of artificial intelligence tools.¹⁰¹⁶ Another Resolution established guidelines for generative AI in Brazilian courts, mandating human oversight, risk management plans, and auditable records.¹⁰¹⁷

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Attorney General of the Union (AGU) began using artificial intelligence tools in the production of legal documents in 2024. Federal lawyers and prosecutors may use generative AI tools through the institutional document management system known as Super Sapiens to make summaries of extensive texts, classify and sort documents, extract data from a process, or obtain suggestions for petition models.¹⁰¹⁸

The Public Prosecutor's Office of the State of Rio de Janeiro reportedly invested in data science and AI to expedite investigations and prevent crimes.¹⁰¹⁹ The system has allowed information from different sources and bodies to be collected as well as real-time data to be collected from suspected criminals. Likewise, Brazil's federal and state police are using AI applications such as military drones¹⁰²⁰ and crime prediction software.¹⁰²¹

Computational Propaganda

According to Freedom House's Freedom on the Net report, Brazil is only "partly free" because of the prevalence of manipulated content online and the "notable proliferation of disinformation during the 2018 and 2022 election campaigns."¹⁰²² Several studies¹⁰²³ have pointed out the use of bots on online

gatekeepers in the electoral context. Misinformation campaigns in Brazil have consisted in “pro-government and pro-party propaganda”; “attacking the opposition or mounting smear campaigns”; “suppressing participation through trolling and harassment”; and social media campaigns that “drive division and polarize citizens.”¹⁰²⁴ Brazil’s Supreme Court opened a probe into so-called “digital militias” in 2021 and received a report from the Federal Police detailing their structure for coordinating attacks against rival politicians and democratic institutions and the dissemination of “false news.”¹⁰²⁵

The Brazilian Judiciary responded to these challenges—primarily through the Superior Electoral Court and the Federal Supreme Court—by implementing innovative measures to mitigate the harmful effects of disinformation and ensure the integrity of the electoral process.¹⁰²⁶ In February 2024, the Superior Electoral Court approved a resolution¹⁰²⁷ that addressed several threats related to artificial intelligence. The resolution included prohibition of deep fakes; obligation to warning about the use of AI in electoral propaganda; restriction of the use of “robots” to mediate contact with the voter (the campaign cannot simulate dialogue with a candidate or anyone else); and accountability of “big techs” that do not immediately remove content that violates these guidelines from their platforms. The violation of this norm carries strict punishment for candidates. Article 9c highlights that a candidate can have their registration or mandate canceled for infringing on the norm and Article 9-E establishes the joint and severe liability of the providers, in a civil and administrative way, if they do not immediately remove certain content and/or accounts that violate these guidelines during the electoral period.

Facial Recognition

Facial recognition is implemented in both the public and private sectors in Brazil. According to Instituto Igarapé, a Brazilian think tank, there were at least 48 facial recognition applications throughout 16 Federal States between 2011 to 2019.¹⁰²⁸ The main use sectors are public security, border control, transportation, and education.¹⁰²⁹

In August 2018, the Brazilian Institute for Consumer Protection (IDEC) brought a civil public class action¹⁰³⁰ before the Court of Justice of Sao Paulo for breach of privacy and consumer legislation against the São Paulo Metro operator, regarding an AI crowd analytics system that claimed to predict the emotion, age, and gender of metro passengers without processing personal data.¹⁰³¹ In May 2021, the São Paulo 37th Civil Court ordered the company to pay compensation for passengers' data collection without their consent and prohibited the company from continuing the implementation and use of cameras that recognized human presence or identified emotion, gender, and age groups.¹⁰³²

Another monitoring system with built-in facial recognition installed in the São Paulo subway network was challenged in Court. In early 2020, the operating company was requested to provide clarification on the risks and impact assessment expected from the implementation of the new technology, on how personal data will be processed, on technical databases and security systems issues, and on actions to mitigate the potential risk of a data breach.¹⁰³³ In March 2022, the 6th Public Treasury Court of São Paulo delivered a preliminary injunction ordering the operating company to suspend the deployment and use of the facial recognition system in the

São Paulo metro stations.¹⁰³⁴ In April 2022, the preliminary injunction was confirmed in appeal by the São Paulo 5th Public Law Chamber.¹⁰³⁵ However, in October 2022, the same Chamber ruled that the operating company was entitled to deploy and use facial recognition technology on the grounds that the LGPD allows such use for public security purposes. Governor Rodrigo Garcia officially inaugurated the facial recognition system the following month. The aim is for 5,000 biometric cameras to be deployed in transit stations over the next 30 months.¹⁰³⁶

In July 2023, the government of São Paulo introduced the Muralha Paulista system, a security network that interconnects cameras and radars in different cities to the Metropolitan Region of São José do Rio Preto.¹⁰³⁷ The Muralha Paulista system has since been used by football clubs to identify perpetrators of violence or harassment at large sporting events, specifically to flag people with open warrants or judicial restrictions.¹⁰³⁸

In November 2023, Brazil's ANDP issued a technical note that sheds light on the legality of facial recognition technology in sports stadiums. Amid controversies about striking a balance between enhancing public safety and safeguarding individual privacy, the note lays down concrete suggestions to ensure compliance with the General Data Protection Law. Key among these suggestions is the call for comprehensive Data Protection Impact Assessments that specifically address the processing of biometric data. The note outlines critical guidelines for avoiding legal pitfalls and details the consequences of failing to adhere to these standards, marking

a step forward in the ongoing discussions around ethical deployment of AI technologies in public spaces.¹⁰³⁹

The ANPD announced its investigation into irregularities in the use of facial recognition systems for the sale of tickets and entry to stadiums by 23 football clubs. The irregularities pertain to the compliance with transparency requirements and the handling of data concerning children and adolescents under the data protection law. The inspector issued a preventive measure requiring football clubs to publish information on the registration and biometric identification procedures for fans on ticket selling platforms within 20 business days as the agency investigates.¹⁰⁴⁰

The Brazilian police have also been using live facial recognition for Carnival and has plans to use the technology in events involving crowds to find wanted criminals. In 2020, police forces rolled out facial recognition in six capitals across the country. When announcing the use of live facial recognition, the São Paulo police said they would create a “situation room,” where they would monitor the images from the cameras, which would then be compared with a database managed by a biometrics lab. According to the police, the aim is to reduce the likelihood of mistakes, such as wrongful arrests.¹⁰⁴¹

In 2021, Brazil rolled out end-to-end biometric identification technologies by IDEMIA, a technology solution provider, for use in passenger identification at several airports, including domestic airports in São Paulo and Rio de Janeiro.¹⁰⁴² Many have voiced concern at the government’s embrace of facial recognition technology, especially surrounding issues of racial bias, given that the LGPD does not address these technologies.¹⁰⁴³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In the first quarter of 2022, several campaigns started in Brazil opposing the widespread use of facial recognition technologies in public spaces.

One of them is called *Sai da minha cara* (Get off my face) and is led by civil society organizations, including the IDEC.¹⁰⁴⁴ A localized campaign with several states and cities, *Sai da minha cara* advocates for laws to ban facial recognition. Including bills to restrict the use of facial recognition by public authorities before the State Legislative Assembly of São Paulo¹⁰⁴⁵ and before the City Council in Porto Alegre, the capital of the state of Rio Grande do Sul.¹⁰⁴⁶ A bill before the City Council in Curitiba, capital city of the state of Paraná, would restrict the use of facial recognition for mass surveillance by public authorities.¹⁰⁴⁷

Another campaign started in May 2022 under the name “Tire o Meu Rosto da Sua Mira” (Get My Face Out of Your Sight).¹⁰⁴⁸ Civil society organizations demand a total ban on the use of facial recognition technologies for public security purposes in Brazil. According to the campaign’s open letter, in Brazil, a country with the third largest incarcerated population in the world, the use of facial recognition technologies for public security purposes would lead to the worsening of racist practices.

A Federal Law proposal seeking to regulate the use of facial recognition technologies in Brazil both for the private and public sectors was submitted to the Brazilian House of Representatives in August 2022.¹⁰⁴⁹ The legislative process began that October and the proposed legislation was forwarded to the responsible commissions.

A new study published by the Center for Security and Citizenship Studies (CESeC) in March 2024 showed that 67.4 million Brazilians, close to a third of the population, are potentially under surveillance by facial recognition cameras. In

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

updates in January 2025, the CESeC cited 337 facial recognition projects in the country and more than 81 million people surveilled.¹⁰⁵⁰

The banning of the use of facial recognition systems for public security purposes was one of the key points that emerged during the public hearings promoted by the Commission of Jurists that elaborated the proposal for the regulation of artificial intelligence in Brazil.¹⁰⁵¹ Several Brazilian rights organizations called for a ban on facial recognition by law enforcement during discussions around the proposed AI regulation bill.¹⁰⁵² For example, the Coalition Rights on the Net (*Coalizão Direitos na Rede*) cited several examples of arrests after mistaken identity in their open letter advocating for the Brazilian AI regulation to ban facial recognition technologies.¹⁰⁵³

On November 10th, 2025, Resolution No. 17 was published by Brazil's National Human Rights Council. It establishes guidelines for the use of facial recognition technologies in public spaces.¹⁰⁵⁴

Environmental Impact of AI

Brazil's AI Plan (PBIA) recognized the environmental implications of AI technologies, focusing on integrating sustainability within AI development. The strategy includes the monitoring of AI's carbon footprint, advocating for energy-efficient AI systems, and promoting best practices to reduce environmental damage. The policy also encourages the creation of regulatory sandboxes for AI, which allow for controlled testing of AI technologies with an emphasis on minimizing their environmental impact, particularly in terms of energy consumption and e-waste. Brazil is also aligning its AI policies with global climate goals, supporting AI's potential to address challenges related to climate change and sustainable

development.¹⁰⁵⁵ In addition, the Brazilian government announced a “new global initiative focused on information integrity, with particular attention to climate change.” This is in line with the G20 and the 30th UN Framework Convention on Climate Change (COP 30).¹⁰⁵⁶

Lethal Autonomous Weapons

Brazil has consistently called for the negotiation of a legally binding instrument to ensure meaningful human control over critical functions in lethal autonomous weapons systems (LAWS). Brazil issued a joint statement with Austria and Chile at a 2018 meeting of the Convention on Certain Conventional Weapons (CCW) Group of Government Experts (GGE) on LAWS that proposed to establish an open-ended GGE to negotiate a legally binding instrument to ensure meaningful human control over critical functions in LAWS.¹⁰⁵⁷ Brazil’s representative at the 77th meeting of the UN General Assembly First Committee reiterated the need for a regulation that recognizes the centrality of human control in the development and use of autonomous systems, in line with international humanitarian law;¹⁰⁵⁸ however, Brazil was not among the 70 countries that endorsed a joint statement on autonomous weapons systems at the meeting.¹⁰⁵⁹ Brazil voted in favor of the adoption of the 2024 UN General Assembly Resolution on lethal autonomous weapons.¹⁰⁶⁰ Brazil delivered a statement on behalf of 39 High Contracting Parties to the CCW at the

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

2025 GGE meeting¹⁰⁶¹ stressing the “need for urgent action” on negotiating a legal instrument in line with the GGE mandate.

Brazil joined more than 30 other Latin American and Caribbean states to endorse the Belén Communiqué in 2023.¹⁰⁶² The Communiqué calls for “urgent negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

AI Literacy

The PBI 2025–2028 lists Dissemination, Training, and Capacity-Building as a strategic axis, promoting digital skills training and AI literacy for citizens and civil servants.¹⁰⁶³ The axis aims to reach 30% of the adult population with the national awareness campaign within 3 years. Within 5 years, the plan intends for 85% of adults “have a basic understanding of AI, its benefits and risks.”¹⁰⁶⁴ The Plan proposes a program for AI learning, including about the impacts of AI targeting students and teachers in basic education, though details are few. Implementation is shared by MCTI and the Ministry of Education.

Human Rights

Brazil is a signatory to the Universal Declaration of Human Rights and other international human rights treaties and conventions.¹⁰⁶⁵ Freedom House rated Brazil as “Free” in the 2025 Freedom in the World Report with a score of 72/100 for political rights and civil liberties. According to Freedom House, Brazil is “a democracy that holds competitive elections. Its political arena, though polarized, is characterized by vibrant public debate. However, independent journalists and civil society activists risk harassment and violent attack and political violence is high. Minority groups suffer from crime, disproportionate violence, and economic

exclusion, issues the government struggles to address. Corruption is endemic at top levels, contributing to widespread disillusionment among the public. Societal discrimination and violence against LGBT+ people remain serious problems.”

Freedom House rated Brazil as “Partly Free” with a score of 65/100 in the Freedom on the Net report.¹⁰⁶⁶ The report cited obstacles to internet access, limits on digital content, and violation of user rights as concerns.

AI Safety Summit

Brazil participated in the first AI Safety Summit in 2023 and endorsed the Bletchley Declaration.¹⁰⁶⁷ Brazil thus committed to participate in international cooperation on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Brazilian representatives did not attend the 2024 Summit in Seoul, in part because of the country’s schedule conflict with a G20 event hosted at the same time.¹⁰⁶⁸

At the AI Action Summit in Paris, Brazil signed the Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet, affirming priorities that include AI access, sustainability, safety, and transparency.¹⁰⁶⁹

OECD / G20 AI Principles

Brazil has endorsed the OECD AI Principles and the G20 AI Guidelines.¹⁰⁷⁰ Brazil’s most recent AI strategy explicitly integrates the OECD AI Principles as the its base.¹⁰⁷¹ Brazil is also a member of the Global Partnership on AI, a multi-stakeholder initiative that aims to foster international cooperation on AI research and

applied activities.¹⁰⁷² The GPAI is “built around a shared commitment to the OECD Recommendation on Artificial Intelligence.”¹⁰⁷³

With the G20 Presidency in 2024, Brazil led progress on the realization of the G20 AI Guidelines. The G20 Digital Economy ministers, led by Brazil, endorsed principles for digital inclusion and AI for inclusive sustainable development, inequality reduction, and combating disinformation.¹⁰⁷⁴

Brazil and the European Union convened for the 13th Edition of the bilateral Digital Dialogue¹⁰⁷⁵ in Brussels in 2025 and published a Joint Communiqué on their commitment to digital development and global technology governance. Both parties evaluated their advancements in key areas of cooperation from the 2024 Dialogue,¹⁰⁷⁶ including AI regulation, and reaffirmed their commitment to foster digital development, facilitate digital innovation and inclusion, and preserve democratic principles. Importantly, while approving a joint work plan to guide the collaboration over the next two years, the parties agreed to continue cooperating in multilateral fora as decided in the G20 Maceió Ministerial Declaration on Digital Inclusion.

Council of Europe AI Treaty

Brazil did not participate in the negotiations for the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law and has not signed the treaty.¹⁰⁷⁷

UNESCO Recommendation on AI Ethics

Brazil has endorsed the UNESCO Recommendation on the Ethics of AI and recognizes the obligation to implement the framework. UNESCO partnered with the Regional Centre for Information Society Development Studies (CETIC.br) to host a launch event for the Portuguese version of the UNESCO AI Recommendation, which aimed to “discuss and promote this subject in Brazilian society.”¹⁰⁷⁸ At the launch, Director and UNESCO representative in Brazil Marlova Noleto reiterated Brazil’s active engagement in preparing the document and the country’s preemptive alignment with the recommendations. Brazilian Ambassador to UNESCO and president of UNESCO’s 41st General Conference, Santiago Mourão, emphasized that the Recommendations fully align with the Brazilian government’s guidelines and actions on AI themes.¹⁰⁷⁹

CAF, the development bank of Latin America, and UNESCO signed a letter of intent to collaborate on the implementation of the Recommendation on AI Ethics in Latin America and the Caribbean.¹⁰⁸⁰ They established a Regional Council comprising national and local governments from Latin America and the Caribbean, including Brazil, and convened for the inaugural meeting in October 2023.¹⁰⁸¹

Brazil also signed the resulting 2023 Santiago Declaration to Promote Ethical Artificial Intelligence.¹⁰⁸² The Santiago Declaration reflects UNESCO’s Recommendation on the Ethics of AI and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.

Brazil was one of the first countries to complete the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of

Center for AI and Digital Policy

the Recommendation.¹⁰⁸³ The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.¹⁰⁸⁴ The process of implementing the RAM “highlighted progress, but also that significant challenges still need to be addressed.”¹⁰⁸⁵ Issues such as the significant inclusion of marginalized groups and transparency in the processes of development and use of artificial intelligence (AI) demand constant attention and improvement. On the other hand, important advances were noted, demonstrating a maturation in the country’s regulatory, policy and infrastructure approaches. UNESCO published the Brazil RAM Report in 2025.¹⁰⁸⁶

In 2024, initiatives in Brazil sought to highlight how marginalized groups such as the indigenous community are excluded from AI debates under UNESCO’s Recommendation on the Ethics of AI.¹⁰⁸⁷

Evaluation

Brazil has developed a robust national strategy for AI and has established a comprehensive law for data protection that includes algorithmic transparency. The federal government’s Brazilian Artificial Intelligence Plan 2024–2028 (PBIA), now updated for 2025 to better align objectives with national interests and priorities, marks significant progress. ANPD has also progressed on data protection in the context of the proposed AI plan. While AI legislation is still under review, the introduction of a new bill in the Chamber of Deputies, while the Senate bill is under committee review, demonstrates a commitment to establishing principles, guidelines and standards for the development, implementation and responsible use of AI systems in Brazil.¹⁰⁸⁸ Initiatives to tackle disinformation and abuses from facial recognition have been inadequately addressed, however, leaving human rights groups continuing to call for bans.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Brazil has emerged as an international leader in championing inclusive and more ethical AI. Brazil led on implementation of the UNESCO Recommendation through completion of the RAM and participation in regional discussions of best practices. Brazil's leadership in furthering digital inclusion in AI and beyond in the G20 is also noteworthy. Addressing national concerns in areas such as facial recognition could make Brazil a model for implementing international frameworks.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Canada

In 2025, Canada launched the AI Strategy for the Federal Service and continued to work on responsible AI in government. The country also endorsed the Council of Europe AI Treaty.

National AI Strategy

Canada's national AI Strategy has focused on the use of AI in government and public services. The Canadian government stated "Artificial intelligence (AI) technologies offer promise for improving how the Government of Canada serves Canadians. As we explore the use of AI in government programs and services, we are ensuring it is governed by clear values, ethics, and laws."¹⁰⁸⁹ Canada has set out Guiding Principles¹⁰⁹⁰ to ensure the "effective and ethical use of AI" in government. The government has committed to "understand and measure" impacts, be transparent about use, "provide meaningful explanations" for AI decision-making, "be as open as we can be," and provide sufficient training."

The AI Strategy for Federal Public Service 2025–2027 prioritizes responsible use of AI, expertise, security, and public trust by providing training and talent development, and building public trust through transparency.¹⁰⁹¹ The strategy aims to accelerate responsible AI adoption throughout the federal public service, leveraging AI within the Government of Canada to enhance productivity, enhance capacity in science and research, and deliver improved digital services. The Advisory Council on Artificial Intelligence¹⁰⁹² formed in 2019 and expanded in 2025 advises the Government on opportunities for AI applications to ensure economic growth benefits all Canadians and reflections national values. The expansion of the mandate in 2025 includes advice on budget initiatives and the development of the Safe and Secure Artificial Intelligence Advisory Group to guide the government on emerging

risks from AI systems across the economy. An AI Strategy Taskforce¹⁰⁹³ charged with providing recommendations for a new national AI Strategy also falls under the Advisory Council.

The federal strategy builds on collaborations with provinces, such as the collaboration with the government of Quebec to establish the Centre of Expertise in Montréal for the Advancement of Artificial Intelligence (CEIMIA).¹⁰⁹⁴ The CEIMIA, formerly known as ICEMAI, continues to facilitate international collaboration on responsible AI as an International Centre of Expertise under the Global Partnership on Artificial Intelligence (GPAI). As a meeting place for academia, civil society, and government, CEIMIA “enables Quebec to highlight the important role of its AI ecosystem, specifically in the area of responsible development of AI, and to take its place internationally as an essential partner and subject-matter expert.”

Directive on Automated Decision-Making

The Government of Canada’s Treasury Board Secretariat (TBS) established a Directive on Automated Decision-Making to ensure that administrative decisions are “compatible with core principles of administrative law such as transparency, accountability, legality, and procedural fairness.”¹⁰⁹⁵ Canada has developed a questionnaire for an Algorithmic Impact Assessment to “assess and mitigate the risks associated with deploying an automated decision system” and to comply with the Directive.¹⁰⁹⁶ The Directive took effect on April 1, 2019, with compliance required by no later than April 1, 2020. The Directive is reviewed and updated every two years with feedback from the public. Existing systems have one year to comply with updated requirements.

The TBS issued the Guide on the Scope of the Directive on Automated Decision-Making in 2024 to clarify the conditions for exception and applicability of the Directive.¹⁰⁹⁷ The guide itemized five key elements for applicability: used by a

department; developed after April 1, 2020; used in an administrative decision-making process; replaces or assists judgment; and used in a production environment. The Guide recommends compliance with the Directive in National Security Systems (NSSs) while nothing that NSSs are out of scope.

In a parallel effort to support the Directive, the TBS worked with Public Services and Procurement Canada (PSPC) to establish a pre-qualified AI Vendor procurement program to streamline the procurement of AI solutions and services in the government.¹⁰⁹⁸ This new public AI procurement program was used to help government departments and agencies build awareness of the solutions offered by AI. It also provided small and medium AI companies with an opportunity to provide their services to the government. The Government of Canada posted a tender for companies to qualify for the AI source list in October 2024. The procurement aims to “establish a pre-qualified list of suppliers [...] who meet all the mandatory criteria to provide Canada with responsible and effective AI services, solutions and products.”¹⁰⁹⁹

Digital Charter Implementation Act

Bill C-27, the Digital Charter Implementation Act (DCIA), represented Canada’s first comprehensive AI legislation, introduced in June 2022.¹¹⁰⁰ The Bill, which comprised three separate pieces of legislation: the Consumer Privacy Protection Act (CPPA), Personal Information and Data Protection Tribunal Act (PIDPTA), and the Artificial Intelligence and Data Act (AIDA),¹¹⁰¹ faced public criticism because of what was perceived as insufficient protections and inadequate public consultation. Amendments incorporating some of the public feedback in November 2023 failed to earn public trust in AIDA as an effective, adaptable regulatory framework for AI. Civil society organizations¹¹⁰² called for the withdrawal of AIDA, noting “consultation with Indigenous rights-holders, civil society, the private sector, and other stakeholders that should have taken place prior to AIDA’s introduction” before reintroducing it in revised form.

Center for AI and Digital Policy

AIDA expired in a parliamentary committee, leaving the future of AI legislation in Canada uncertain.¹¹⁰³ The Digital Charter Implementation Act also expired in Committee.¹¹⁰⁴ The government has since initiated renewed public consultations to inform future legislation on AI regulation and data governance.

Public Participation

In 2019, Canada established an Advisory Council on Artificial Intelligence to “inform the long-term vision for Canada on AI both domestically and internationally.”¹¹⁰⁵ Composed of researchers, academics, and business leaders, the Council advises the Government of Canada on how to build on Canada’s AI strengths to support entrepreneurship, drive economic growth and job creation and build public trust in AI. The Council created two working groups to date, one on Commercialization and another one on Public Awareness. Public awareness is a key area for the Council that emphasized that policy design, including sectoral priorities, require the trust and support of the public to succeed.¹¹⁰⁶

Canada’s AI Advisory Council created its public engagement and consultation processes using both consultation and deliberation. The national survey elicited an array of citizens’ input on AI use in different sectors. Online workshops aimed to find ways to address ethical concerns raised by citizens via the survey. Among the goals of the deliberative process is to shape a new set of guidelines and recommendations for the development of AI.¹¹⁰⁷

The government of Canada published a public consultation in 2023 to gather insights on the negotiations on the Council of Europe Convention on AI, Human Rights, Democracy and the Rule of Law. Officially, the role of Canada in the negotiations is to help shape “the treaty to reflect Canadian values and interests,

while promoting Canadian objectives on AI in the context of potential risks to human rights, democracy and the rule of law.”¹¹⁰⁸

The Minister of Innovation, Science and Industry launched a public consultation to help inform the design and implementation of a new AI Compute Access Fund and a Canadian AI Sovereign Compute Strategy proposed in Budget 2024. The consultation was aimed at researchers, innovators, civil societies, Indigenous groups, and businesses through various means including online.¹¹⁰⁹

The Government of Canada established an AI Strategy Task Force and launched a public consultation to gather stakeholder input on the next national AI strategy and AI computing infrastructure.¹¹¹⁰ This engagement targeted researchers, civil society groups, industry representatives, and Indigenous communities, marking a renewed federal effort to ensure meaningful participation in shaping Canada’s future AI policy.¹¹¹¹

Data Protection

The Office of the Privacy Commissioner (OPC) of Canada provides advice and information for individuals about protecting personal information.¹¹¹² The agency also enforces two federal privacy laws that set out the rules for how federal government institutions and certain businesses must handle personal information. The Privacy Act regulates the collection and use of personal data by the federal

government.¹¹¹³ The Personal Information Protection and Electronic Documents Act (PIPEDA) applies to personal data collected by private companies.¹¹¹⁴

First in November 2020, and then in November 2022, after an extensive period of consultation, the Privacy Commissioner issued proposals on regulating artificial intelligence.¹¹¹⁵ The recommendations “aim to allow for responsible AI innovation and socially beneficial uses while protecting human rights.” The Commissioner recommended amending PIPEDA to:

- allow personal information to be used for new purposes towards responsible AI innovation and for societal benefits
- authorize these uses within a rights-based framework that would entrench privacy as a human right and a necessary element for the exercise of other fundamental rights
- create a right to meaningful explanation for automated decisions and a right to contest those decisions to ensure they are made fairly and accurately
- strengthen accountability by requiring a demonstration of privacy compliance upon request by the regulator
- empower the OPC to issue binding orders and proportional financial penalties to incentivize compliance with the law
- require organizations to design AI systems from their conception in a way that protects privacy and human rights.

The Commissioner also highlighted a public consultation initiated by the OPC that received 86 comments from industry, academia, civil society, and the legal community, among others. Those inputs were incorporated in a separate report, which informs the recommendations for law reform.¹¹¹⁶

Federal, provincial and territorial privacy commissioners published the principles for responsible, trustworthy and privacy-protective generative AI technologies in December 2023. The objective is to help organizations that are

Center for AI and Digital Policy

developing, providing or using generative AI to be compliant with fundamental rights and privacy legislation.¹¹¹⁷

The Office of the Privacy Commissioner of Canada published the Strategic Plan considering its role in the development of AI in Canada. The OPC considered governing and developing AI among its three priorities for 2024–2027. The plan outlines how the OPC will maximize its impact in fully and effectively promoting and protecting the fundamental right to privacy, addressing and advocating for privacy in this time of technological change, and championing children’s privacy rights.¹¹¹⁸

The Privacy Commissioner of Canada is an accredited member of the Global Privacy Assembly (GPA) since 2002.¹¹¹⁹ The Privacy Commissioner has endorsed the 2018 GPA Resolution on AI and Ethics,¹¹²⁰ the 2020 GPA Resolution on Facial Recognition,¹¹²¹ the 2022 GPA Resolution on AI and Accountability,¹¹²² and the 2023 GPA Resolution on Generative AI Systems.¹¹²³

Center for AI and Digital Policy

Algorithmic Transparency

The PIPEDA includes strong rights for individual access concerning automated decisions.¹¹²⁴ The PIPEDA Reform Report for AI builds on public consultations and proposes to “Provide individuals with a right to explanation and increased transparency when they interact with, or are subject to, automated processing.”¹¹²⁵ The Cofone Report on the reform also explains that “the right to explanation is connected to the principles of privacy, accountability, fairness, non-discrimination, safety, security, and transparency. The effort to guarantee these rights supports the need for a right to explanation.” The amended Directive on Automated Decision-Making strengthens transparency, accountability, and testing/monitoring, with updates reflected in the Algorithmic Impact Assessment tool.¹¹²⁶

In the last Open Algorithms Network meeting that was co-chaired by the Government of Canada, with participation from the Governments of Estonia, Norway, the United Kingdom, and Scotland as well as civil society respondents, the participants started considering issues of “equality, bias, and discrimination in their algorithmic commitments in Open Government Partnership (OGP) action plans and across government AI strategies.”¹¹²⁷ “Many of these commitments are grounded in the idea that opening data and design of algorithms is an avenue to reduce bias and discrimination, and that the process of collecting data or design is as important as the outcome.”¹¹²⁸ Algorithmic transparency¹¹²⁹ is an emerging commitment¹¹³⁰ area for OGP.

Canada’s Federal AI Registry is a public database documenting all AI systems used by government agencies. The Registry includes information about systems’ purpose, data sources, performance metrics, and human oversight mechanisms. This registry fulfills commitments made in Canada’s 2024–2026 Open Government

Partnership National Action Plan and establishes new standards for public sector algorithmic transparency.¹¹³¹

Data Scraping

The Office of the Privacy Commissioner alongside the data protection authorities of 16 countries issued a statement in October 2024 calling for more protection of fundamental rights in mass data scraping and for AI model training.¹¹³² The 2024 statement followed up on a joint statement issued in August 2023, based on engagement with social media companies (SMCs) and other industry stakeholders. The statement provided additional guidance, emphasizing that contractual terms cannot render scraping lawful, and that SMCs and other organizations must ensure there is a legal basis, maintain transparency, and obtain consent when required by law. The statement also encouraged stakeholders to leverage AI to protect personal data from unlawful scraping.¹¹³³

Canada's Privacy Commissioner opened an investigation into social media platform X to ensure compliance for AI data use in accordance with the PIPEDA.¹¹³⁴ The investigation will focus on the platform's compliance with federal privacy law with respect to data scraping of Canadians' personal information to train artificial intelligence models.

Facial Recognition

Canada continues to ensure that facial recognition technologies do not threaten the rights of its citizens. Canada took decisive action against Clearview AI in 2021, after discovering the organization had scraped billions of images of people from across the Internet, in clear violation of Canadians' privacy rights.¹¹³⁵ The Supreme Court of British Columbia upheld a ban on Clearview AI's collection of

biometric data without consent in 2025.¹¹³⁶ The court dismissed a Clearview petition to overturn an order prohibiting the company from offering its facial recognition services using images and biometric facial arrays collected from individuals in British Columbia.

Following the Clearview action, the privacy commissioners of Canada, Ontario, and Québec issued a joint statement recommending the creation of a legal regulatory framework for the use of facial recognition technology by police. The recommendation identifies four requirements:¹¹³⁷

- Clear and explicit definitions for the appropriate and prohibited use of facial recognition technologies by law enforcement. This should include ‘no-go’ zones and the prohibition of mass surveillance.
- Restricting the use of such technologies based on strict necessity and proportionality,
- The use of strong independent oversight that are based on proactive engagement including program pre-authorization and advanced notice before initiating initiatives based on facial recognition technology
- Privacy rights protection that limits the risk to individuals including limitations on the duration of information retention and measures to ensure that data is accurate.

The Canada Border Services Agency (CBSA) secured Treasury Board approval for the Traveler Modernization initiative,¹¹³⁸ which includes integrating facial recognition verification into the Advance Declaration system. The project emphasizes privacy, transparency, accessibility, and human oversight, and is being co-developed with Transport Canada and Immigration, Refugees and Citizenship Canada.

AI in Defense and Nuclear Policies

The Canadian Department of National Defence (DND) and Canadian Armed Forces (CAF) released their first-ever Artificial Intelligence Strategy in March 2024. The strategy focuses on five key areas: 1) Identifying and fielding capabilities

required the institutions; 2) Creating a culture supportive of AI innovation; 3) Establishing principles, processes and practices to ensure that the use of AI is ethical, legal, inclusive, safe and trusted; 4) Managing talent and training to meet workforce needs; 5) Deepening strategic partnerships internally and externally with allies, industries and academia. The strategy “commits the Defence Team to becoming AI enabled by 2030.”¹¹³⁹

The Canadian Nuclear Safety Commission joined the United Kingdom’s Office for Nuclear Regulation and the United States Nuclear Regulatory Commission to establish high-level principles for the safe and effective integration of AI technologies in nuclear operations. The group jointly published the Trilateral Principles Paper on the Deployment of Artificial Intelligence in Nuclear Activities on September 5, 2024.¹¹⁴⁰ Developed through a collaborative trilateral relationship formed in 2022, the paper addresses critical aspects such as safety and security engineering, human and organizational factors, AI system architecture, lifecycle management, and the documentation of safety measures. Highlighting the importance of data quality, the paper emphasizes that the performance of AI systems hinges on the quality of the data they process. The paper also identifies security challenges unique to AI, noting their potentially greater significance compared to conventional software issues. By providing this framework, the paper seeks to advance the responsible and secure use of AI within regulated nuclear activities.

Lethal Autonomous Weapons

Canadian academics urged Prime Minister Justin Trudeau to oppose Autonomous Weapon Systems in 2017 as part of the #BanKillerAI campaign.¹¹⁴¹ Trudeau included “Advance international efforts to ban the development and use of fully autonomous weapons systems,” in the mandate he charged to Foreign Affairs Minister François Philippe Champagne in December 2019.¹¹⁴² However, this mandate has not been fulfilled. Canada CCW members delivered a 2022 proposal on Principles and Good Practices on Emerging Technologies in the Area of Lethal

Autonomous Weapons Systems.¹¹⁴³ At the 78th UN General Assembly First Committee in 2023, Canada voted in favor¹¹⁴⁴ of resolution L56¹¹⁴⁵ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. In the report to the UN Secretary-General,¹¹⁴⁶ Canada advocated for a ban on LAWS that cannot be used in compliance with IHL, requirements that LAWS maintain “appropriate levels of human involvement,” updating national policies to ensure technologies are used in compliance with international law, and open exchanges of information about emerging technologies.

Canada agreed to the joint call to action on the responsible development, deployment, and use of artificial intelligence (AI) in the military domain as part of the REAIM Summit in 2023 in the Netherlands.¹¹⁴⁷ Canada also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.¹¹⁴⁸ The second REAIM summit was held in South Korea. At the summit, 61 countries, including Canada,¹¹⁴⁹ signed a Blueprint for Action for

the ethical and human-centric use of AI in the military.¹¹⁵⁰ The blueprint identifies the standards for AI in the military domain including the principles and framework for future governance, compliance with international law, holding humans responsible, ensuring reliability and trustworthiness of AI, maintaining an appropriate human involvement and improving the ability to explain AI.

EdTech

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including Canada, for children’s education during the pandemic. One of the case studies concerned “CBC Kids,” offered by the Canadian Broadcasting Corporation and recommended by Canada’s Quebec Education Ministry for pre-primary and primary school-aged children’s learning. Based on technical and policy analysis of this EdTech product, Human Rights Watch found that the endorsement of this online learning platforms put at risk or directly violated children’s rights, due to its tracking and profiling practices for advertising purposes. The report called on governments to develop, refine, and enforce modern child data protection laws and standards and ensure that children who want to learn are not compelled to give up their other rights to do so.¹¹⁵¹

The Canadian Teachers Federation released a policy brief in September 2024, calling for urgent action to regulate the use of AI in Canadian K–12 public education.¹¹⁵² The Teachers’ Federation requested that the Federal Government and the Council of Ministers of Education, Canada (CMEC) develop and implement policies that safeguard the rights of educators and students as AI systems proliferate in public education across the country.

AI Literacy

A recent global study by KPMG and the University of Melbourne reported that “Canada ranks among the least AI literate nations globally, holding the fourth-

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

lowest position in AI training and literacy in a ranking of 47 countries.”¹¹⁵³ The Canadian Government has acknowledged the importance of a well-trained workforce to ensure AI is adopted responsibly. The government made “talent and training” a priority area in the 2025–2027 AI Strategy for the Federal Public Service.¹¹⁵⁴ Key actions in the strategy include developing a training plan, benchmarking talent needs, and developing a talent plan.

Human Rights

Canada consistently ranks “Free” and among the top ten nations in the world for the protection of human rights and transparency on the Freedom House Freedom in the World Report. Canada’s score dropped one point to 97 in 2025.¹¹⁵⁵ Freedom House reported that, “Canada has a strong history of respect for political rights and civil liberties, though in recent years citizens have been concerned about laws related to the administration of elections, government transparency, the treatment of inmates in prisons, and restrictions on public sector employees wearing religious symbols. While members of minority groups, including Black and Indigenous Canadians, still face discrimination and economic, social, and political challenges, the federal government has acknowledged these problems and made some moves to address them.”¹¹⁵⁶

The Law Commission of Ontario and Ontario Human Rights Commission, representing Canada’s most populous province, jointly created an AI impact assessment tool in November 2024 to provide organizations a method to assess AI systems for compliance with human rights obligations.¹¹⁵⁷ The human rights AI impact assessment (HRIA) assists developers and administrators of AI systems to identify, assess, minimize, or avoid discrimination and uphold human rights obligations throughout the lifecycle of an AI system by providing guidelines for when and how to conduct impact assessments. The HRIA is intended to: “Strengthen knowledge and understanding of human rights impacts; Provide practical guidance on specific human rights impacts, particularly in relation to non-discrimination and

equality of treatment; and Identify practical mitigation strategies and remedies to address bias and discrimination from AI systems.”¹¹⁵⁸

The Office of the Information and Privacy Commissioner of Alberta issued Comments Regarding Responsible AI Governance in Alberta, calling for provincial legislation to prohibit or restrict high-risk AI uses, such as training on sensitive data, and to embed human oversight, transparency, and fairness into AI decision-making.¹¹⁵⁹ The report reflects emergent sub-national policy leadership on human rights-based AI governance in Canada, particularly focused on privacy, accountability, and proportionality in automated decision systems.

AI Safety Summit

Canada participated in the first AI Safety Summit and endorsed the Bletchley Declaration in 2023.¹¹⁶⁰ Canada thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

The formation of the International Network of AI Safety Institutes was announced at the AI Seoul Summit in May 2024. As a founding member of the Network, Canada will seek to actively coordinate efforts with international partners and collaborate on joint projects, including the development of guidance on AI safety.¹¹⁶¹ Canada launched the Canadian AI Safety Institute (CAISI) in November 2024. CAISI “is part of the Government of Canada’s plan to support the safe and responsible development and deployment of artificial intelligence (AI). CAISI aims

“to advance the science of AI safety, in collaboration with international partners, in order to ensure that governments are well-positioned to understand and act on the risks of advanced AI systems. These include risks posed by synthetic content, including impersonation and fraud, as well as risks posed by the development or deployment of systems that may be dangerous or hinder human oversight.”¹¹⁶²

Canada participated in the 2025 AI Action Summit in Paris. The country signed the Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet.¹¹⁶³

OECD / G20 AI Principles

Canada endorsed the OECD and the G20 AI Principles, including the principles updated in May 2024.¹¹⁶⁴

In 2020, Canada and France, and a dozen other countries announced the Global Partnership on Artificial Intelligence (GPAI) to “support the responsible and human-centric development and use of AI in a manner consistent with human rights, fundamental freedoms, and our shared democratic values.”¹¹⁶⁵

Canada and the European Union announced in 2020 that they were collaborating to leverage AI to help the international community respond to COVID-19. The initiative included the GPAI’s group on AI and Pandemic Response and the annual EU-Canada Digital Dialogue.¹¹⁶⁶

The Safe and Secure AI Advisory Group initiated in 2025 incorporates the OECD AI Principles in the national strategy to promote AI while respecting human rights and democratic values.¹¹⁶⁷

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Canada committed to a joint research partnership with the UK to “support pioneering work to keep advanced systems safe by maintaining transparency, predictability and responsiveness to human oversight” in line with OECD goals of accountability and explainability.¹¹⁶⁸

Council of Europe AI Treaty

Canada contributed as an Observer State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy, and the Rule of Law. The Committee of Ministers adopted the Framework during the 2024 ministerial meeting¹¹⁶⁹ and it opened for signature in September 2024. Canada signed this first international AI Treaty on February 11, 2025.¹¹⁷⁰

UNESCO Recommendation on AI Ethics

Canada is a signatory of the UNESCO Recommendation on the Ethics of Artificial Intelligence.¹¹⁷¹ Canada’s principles for AI, directive on automated decision-making, and support of Impact Assessment tools reflect a commitment to the Recommendations in public deployment while guidelines for public procurement offer a means to extend those guidelines to the private sector.¹¹⁷² Canada’s National AI Strategy for the Federal Public Service 2025–2027 based on international best practices represents further alignment with UNESCO ethical guidelines.¹¹⁷³ Canada has not initiated the UNESCO Readiness Assessment Methodology (RAM), a tool to help countries ensure alignment with the Recommendation.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Evaluation

Canada is among the leaders in creating policies and guidelines for AI. In addition to endorsing the OECD/G20 AI Principles and establishing the GPAI with France, Canada has taken steps to establish model practices for the use of AI across government agencies. Canada has a solid record on human rights and is now working to update national privacy law to address the challenges of AI. The failure of the Digital Charter Implementation Act including the AIDA and data protection updates raises the possibility that Canada will remain without a comprehensive AI policy. However, the government is applying the lesson about the importance of public consultation in the formation of the next round of policies.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Chile

In 2025, Chile published the official update of the National AI Policy. The Ministerial Advisory Council offered recommendations to implement the new data protection law, which enters into force in December 2026.

National AI Strategy

Chile's Ministry of Science, Technology, Knowledge, and Innovation (*Ministerio de Ciencia, Tecnología, Conocimiento e Innovación*, MinCiencia) approved an updated National AI Policy focused on ethical considerations, responsible development, and the potential of AI to drive social and economic progress.¹¹⁷⁴ The report followed Chile's milestone as the first country globally to apply and complete UNESCO's AI Readiness Assessment Methodology (RAM) and robust public consultations.¹¹⁷⁵ The updated policy builds on the initial National AI Policy published in October 2021¹¹⁷⁶ and aims to bring the Governance and Ethics axis in alignment with recent governance developments rather than formulating a new policy.¹¹⁷⁷ The 3 policy axes on "enabling factors," "development and adoption," and "governance and ethics" address a broad range of AI-related issues from developing AI-ready talent at the school level to promoting investment in AI R&D, and adopting international standards for regulations. Strengthening international cooperation in the AI domain is a key focus.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The AI Action Plan¹¹⁷⁸ complementing the original AI policy¹¹⁷⁹ sets out 177 actions, aiming to complete 100 by the end of 2026. Priority tasks are in education, product development, talent management, and other areas. The AI Action Plan also deals with accountability and establishes timelines for priority tasks implementation.

The main AI Policy objective for Chile is “to place the country at the forefront of AI research, development, and innovation, with an ecosystem that creates new capacities in various sectors.”¹¹⁸⁰ Such an ecosystem should be designed according to transversal concepts of opportunity and responsibility, contribute to sustainable development, and improve the quality of life.¹¹⁸¹

After discussing a draft Bill modeled on EU AI Act in 2023,¹¹⁸² the Chilean Parliament officially introduced a bill to promote the ethical development of AI, safeguard fundamental rights, and ensure consumer protection in the Chamber of Deputies (*Cámara de Diputadas y Diputados*).¹¹⁸³ The Chamber of Deputies approved the draft Bill in 2025 and sent the bill back to the Commission on Future, Science, Technology Knowledge and Innovation for detailed amendments and revision. The draft Bill was sent to the Senate in October 2025, beginning the second constitutional stage.¹¹⁸⁴

Public Participation

MinCiencia opened a public consultation on the National Artificial Intelligence Policy 2024 in January,¹¹⁸⁵ which remained accessible for three months. The consultation seeks to gather citizen feedback on proposed revisions to the 2021 National Artificial Intelligence Policy with a focus on ensuring ethical AI usage in the public sector and fostering international collaboration, particularly within Latin America. This consultation formed part of the ongoing update of the Ethics and Governance axis of the policy.

The drafting of the initial National AI Policy was marked by an effort to ensure wide and inclusive participation across the industry, academia, civil society and the public at large. The core team was composed of 12 experts in the field.¹¹⁸⁶ Virtual and in-person AI seminars, discussion groups and workshops were held across the country, including the regions, where inputs for the AI Policy were collected.¹¹⁸⁷ After the first draft of the AI Policy was produced, a citizens' consultation was held to collect their views. More than 9,000 people participated in the process.¹¹⁸⁸ Civil society expressed criticism regarding the lack of transparency regarding the output of regional and online workshops and difficulties accessing meeting minutes.¹¹⁸⁹ The inclusivity of the process was also called into question as only 21% of respondents to the second stage consultation were female and a consultation questionnaire was available only in Spanish.¹¹⁹⁰

The updated policies were also informed by a series of roundtables. A report published by the Library of the National Congress on one such roundtable on Public Policies on Artificial Intelligence in 2023 noted that the discussions allowed “the exchange of information and opinions from [participants] with diverse professional

experiences and areas of focus” to inform the design of public policies in the country.¹¹⁹¹

Chile’s Digital Government requested public consultation on the 2030 Digital Government Strategy. This strategy outlines objectives for Chile to be above the OECD average in the Digital Transformation of the State and strengthen public trust.¹¹⁹² The strategy will evaluate emerging technologies such as AI and apply regulations within the public sector. A commission in charge of recommending how to implement the new data protection law also collected public comments over more than 1 month ahead of their final report in 2025.¹¹⁹³

Data Protection

Article 19 of Chile's Constitution of 1980 protects the right to private life.¹¹⁹⁴ In 2018, the constitutional guarantee was extended to explicitly protect personal data.¹¹⁹⁵ The Law on Protection of Private Life (LPPL) of 1999 regulates the processing of personal data in public and private databases.¹¹⁹⁶ A new Personal Data Protection and Processing Law¹¹⁹⁷ replacing and modernizing the LPPL will enter into force in December 2026. The new law establishes the Personal Data Protection Agency (*Agencia de Protección de Datos Personales*) as an autonomous public-rights corporation to “ensure the effective protection of the rights that guarantee the

private life of individuals and their personal data.”¹¹⁹⁸ The Agency will be technical and decentralized. The Agency will oversee impact assessments and determine requirements (art. 15) in addition to overseeing compliance with the law. In contrast to the Transparency Council (*Consejo para la Transparencia*) and consumer protection agency SERNAC (*Servicio Nacional del Consumidor*), which monitor data protection under the LPPL,¹¹⁹⁹ the Agency will have the authority to sanction those who violate the law.¹²⁰⁰

The processing of personal data in the financial and healthcare sectors is regulated by relevant sectoral laws.¹²⁰¹ Legal actions regarding the violations of the constitutionally protected right to personal data can be brought before courts by the Transparency Council or SERNAC.¹²⁰² A Ministerial Advisory Committee¹²⁰³ tasked with advising the Executive on the regulatory and administrative measures necessary for implementing the new data protection framework urged the government to establish and fund the new Agency as soon as possible.¹²⁰⁴

Chile’s Transparency Council endorsed the Ibero-American Data Protection Network (*Red Iberoamericano de Protección de Datos*, RIPD) standards and guidelines and committed to integrated the principles of legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality in national policies.¹²⁰⁵ The 16 data protection authorities representing 12 countries initiated a coordinated action on ChatGPT, developed by OpenAI, in May 2023 on the basis that ChatGPT may entail risks for the rights and

freedoms of users in the processing of their personal data because of the potential for “responses with cultural, racial or gender biases, as well as false ones.”¹²⁰⁶

The Transparency Council has been a member of the Global Privacy Assembly (GPA) since 2019.¹²⁰⁷ The Transparency Council has not endorsed any AI-related GPA Resolutions¹²⁰⁸ or the related ICDPPC Declaration on Ethics and Data Protection in Artificial Intelligence (2018).¹²⁰⁹

Algorithmic Transparency

Article 8 of the new data protection law that enters into force in December 2026 introduces a “right to object and not be subject to decisions based on the automated processing of their personal data, including profiling, which produces legal effects concerning them or significantly affects them” unless the decision is necessary for the conclusion or execution of a contract, based on data subject’s consent, or provided for by law.¹²¹⁰ In all decisions made based on automated processing, the data controller must take necessary measures to ensure the rights and freedoms of data subjects, including their right to information and transparency, to obtain explanation and human intervention, to express their point of view, and to request a review of the decision.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The new law aligns with the RIPD Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects, endorsed by the Transparency Council. The guidelines specify that “The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language, it will not be necessary to provide a complete explanation of the algorithms used or even to include them. The above always looking not to affect the user experience.”¹²¹¹

In October 2022, the Transparency Council initiated efforts to draft a General Instruction on Algorithmic Transparency.¹²¹² The analysis of algorithmic transparency in the public sector carried out by the public innovation lab GobLab UAI and the Transparency Council shows that although information about processing activities and algorithmic logic is sometimes available, it is frequently fragmented and dispersed across different sources.¹²¹³ The researchers pointed to the considerable effort required to collect, systematize and present the information in a manner understandable to the recipient.¹²¹⁴

The survey of 74 companies selling IoT devices carried out by SERNAC in February 2022 showed a widespread lack of knowledge regarding the use of AI and algorithmic technologies within the private sector. Many companies were not aware if manufacturers had employed such technologies in the products they were selling or distributing.¹²¹⁵ This is aggravated by the lack of understanding about what data categories are collected by the IoT devices and the absence of privacy policies explaining processing to the consumers.

Use of AI in Public Administration

Chile’s government published a circular entitled Guidelines for the use of AI tools in the public sector in December 2023. The circular addresses key themes such as human-centric AI, transparency and explainability, privacy, and data use. The

guidelines came into effect on January 1, 2024, and the circular was distributed to all public services.¹²¹⁶ The Guide to Ethical Formulation of Data Science Projects, a collaboration between the Digital government Secretariat and UAI and BID Lab,¹²¹⁷ provides guidance to the public sector on ethical and legal risks associated with projects using personal data. The nation's public procurement body ChileCompra collaborated on recommendations for ethical and responsible data management as part of GobLab's Ethical Algorithms Project.¹²¹⁸ This guide incorporated requirements related to transparency, privacy, non-discrimination, and explainability and helped Chile become amongst the first Latin American countries to establish data ethics requirements for AI procurement systems.

As a member of the Latin American Centre for Development Administration (CLAD), Chile approved the principles in the Ibero American Charter on Artificial Intelligence in Civil Service in late 2023.¹²¹⁹ The guiding principles include: human autonomy; transparency, traceability and explainability; accountability, liability and auditability; security and technical robustness; reliability, accuracy, and reproducibility; confidence, proportionality, and prevention of damage; privacy and protection of personal data; data quality and safety; fairness, inclusiveness, and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection. The Charter also proposes prohibited uses, including facial recognition systems; systems aimed at behavior and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly); and social ranking systems based on certain personality traits, individual behaviors, socio-demographic features or economic status.¹²²⁰

Chile's AI Bill introduced in May 2024 aligns with the Charter's principles and outlines a comprehensive risk classification system for AI applications in public

Center for AI and Digital Policy

administration.¹²²¹ This system mandates public agencies to conduct thorough assessments of the potential risks associated with the AI technologies they develop or procure.

The country introduced a public registry for AI systems,¹²²² including high-risk AI applications, and implemented a mandatory algorithmic audit process.¹²²³ These updates are enforced by the newly created Data and AI Center,¹²²⁴ which will oversee the implementation and accountability of AI systems in public administration. These institutions implement specific provisions in the updated National AI Policy to mitigate algorithmic biases, with an emphasis on eliminating discrimination based on gender, ethnicity, and socio-economic status in public sector applications.¹²²⁵ The policy also includes requirements for continuous auditing of AI models to ensure transparency and the avoidance of “black box” effects.

Facial Recognition

In 2019, a group of 28 civil society organizations and nearly 70 experts issued a public statement rejecting President Piñera's Mobile Surveillance System deployed the same year.¹²²⁶ The system was created under Chile's Safe Street (*Calle Segura*) plan and used drones equipped with high-definition cameras and facial recognition technology to monitor public areas to fight crime and improve coordination of

security agencies. Despite the criticism, the surveillance system, which started with a fleet of 8 drones, was expanded and new public procurements were ongoing.¹²²⁷ Regulation DAN-151 issued by the General Directorate of Civil Aeronautics (DGAC) in 2024 defined appropriate conditions for drone use with an explicit reference to the requirement of respect to people's rights to privacy and intimacy in the operation of drones.¹²²⁸

A number of cases recorded in Chile demonstrated errors, false positives, and a general lack of effectiveness in publicly funded and invasive facial recognition systems. The facial recognition system deployed in one of Santiago's shopping malls and used to cross-reference images with the Investigative Police database of wanted suspects, for example, was reported to result in a 90% rate of false positives.¹²²⁹ The Transparency Council criticized the system for being disproportionate and intrusive from a privacy perspective.¹²³⁰

Inadequate results and widespread errors were also reported when using IDEMIA's real-time image analysis and facial recognition software in the municipality of Las Condes¹²³¹ and the facial recognition system implemented by the Civil Registry.¹²³² Likewise, a Ministry of Transport pilot payment system on buses in Santiago that used facial recognition attracted considerable controversy due to concerns over data use, rights to privacy, and surveillance.¹²³³

The data protection law due to come into force in December 2026 includes provisions strengthening the protection of biometric data, including facial

recognition data, which is explicitly classified as sensitive personal data, and therefore subject to stricter safeguards and legal protection.¹²³⁴ The processing of such data requires the data subject's explicit consent, unless a specified exception applies (such as public health, legal obligations, or judicial purposes).¹²³⁵ Article 16(3) requires the data controller to provide the data subject with clear and comprehensive information regarding the purpose of the processing, legal basis, recipients of the data, retention period, and rights available to the data subject prior to processing.¹²³⁶

EdTech

As part of a global investigative report on the education technology (EdTech) endorsed by 49 governments, including Chile, during the pandemic, Human Rights Watch found that Aprendo in Linea in Chile put at risk or directly violated children's rights. The EdTech product sent children's data to AdTech companies.¹²³⁷

Key stakeholders, including policymakers, international organizations, private sector representatives, and academia, participated in discussions on the skills needed to meet the challenges and opportunities presented by artificial intelligence in education at a roundtable on Education and Skills in the Age of Artificial Intelligence hosted by the UNESCO Regional Office in Santiago in October 2023.¹²³⁸ Stakeholders highlighted the need for continuous training for teachers and school leaders regarding the ethical use of AI technologies. The discussion also emphasized the collaborative roles of various sectors in adapting education to current technological advancements. Valtencir Mendes, Head of Education at UNESCO Santiago, concluded by stressing the need to protect students' rights while adapting the educational system to technological advancements.

Chile was among the 16 countries from Latin America and the Caribbean that committed to the promotion of ethical AI education as part of their endorsement of

the Cartagena de Indias Declaration in August 2024.¹²³⁹ The declaration stresses the need for collaboration to foster ethical and inclusive AI development and commits the countries to enhancing digital education and sharing best practices while ensuring AI governance frameworks uphold human rights and promote innovation.

The Chilean Ministry of Education, in collaboration with UNESCO's Regional Office in Santiago, presented the first version of the National Plan for the Digital Transformation of Education in 2025.¹²⁴⁰ This strategic framework serves as a roadmap for the integrated and sustainable adoption of digital technologies across all levels of the Chilean education system, grounded in a participatory, ethically driven approach.

AI and Neurotechnology

Chile became the first country in the world to provide constitutional protection for neuro-rights in 2021. Neuro-rights are recognized as a subset of human rights aimed at balancing the potentially adverse effects of neurotechnology.¹²⁴¹ Article 19 of the Chilean Constitution was amended by introducing the provision that "Scientific and technological development will be at the service of people and will be carried out with respect for life and physical and psychological integrity. The law will regulate the requirements, conditions and restrictions for its use on people, especially safeguarding brain activity, as well as the information derived from it."¹²⁴² This guarantee is especially relevant in light of advances in the area of neuroscience and AI, such as brain-computer interfaces.¹²⁴³

Center for AI and Digital Policy

Chile introduced a bill on the protection of neuro-rights and mental integrity and the development of research and neurotechnologies in October 2020.¹²⁴⁴ The bill, which was in the second constitutional procedure of the legislative process in 2024,¹²⁴⁵ aims to regulate neurotechnologies while preserving rights and data regarding brain activity and mental integrity.

Environmental Impact of AI

Chile's National AI Policy states that it will establish incentives for developers and deployers of AI systems to focus on energy efficiency and develop guidelines for environmentally responsible use in the public and private sectors.¹²⁴⁶ The updated policy emphasizes sustainable use and development of AI systems for social and environmental wellbeing as part of the human-centric principle and under the sustainable development principle.¹²⁴⁷ The Policy stresses Chile's renewable energy resources and legal norms around environmental impact assessments.¹²⁴⁸ Chile's endorsement of the Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet at the AI Action Summit reaffirms this commitment to developing energy-efficient, environmentally responsible, and socially inclusive AI ecosystems.¹²⁴⁹

Lethal Autonomous Weapons

Chile has consistently advocated for an international treaty regulating and prohibiting the use of lethally autonomous weapons systems (LAWS) in the United Nations, Group of Governmental Experts on LAWS, and other international

meetings. In 2018, Chile proposed along with Austria and Brazil an open-ended GGE to negotiate a legally binding instrument to ensure meaningful human control over critical functions in LAWS.¹²⁵⁰ In 2020, Chile also joined eight other CCW parties and reiterated the call for the development of a “normative and operational framework” for ensuring human control of LAWS.¹²⁵¹

Chile was one of 70 states that endorsed a joint statement on autonomous weapons systems in October 2022 calling for recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.¹²⁵² At the 78th UN General Assembly First Committee in 2023, Chile voted in favor¹²⁵³ of resolution L.56¹²⁵⁴ on autonomous weapons systems, along with 163 other states, which mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. Chile reaffirmed its support for a legally binding international treaty prohibiting fully autonomous lethal weapons in 2025.¹²⁵⁵ In a joint statement, the Chilean delegation highlighted the need for meaningful human control over critical functions and reiterated a commitment to international humanitarian law and accountability in the use of AI in warfare.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Chile endorsed the Belén Communiqué in February 2023,¹²⁵⁶ which calls for “urgent negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

Chile also participated in the international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands in February 2023. At the end of the REAIM 2023, Chile, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.¹²⁵⁷

AI Literacy

Chile’s Digital Citizenship (*Ciudadanía Digital*) initiative launched in 2022 fosters AI and Digital Literacy in support of democracy and human rights.¹²⁵⁸ The initiative supports the “development of fundamental knowledge, skills, and attitudes to allow people to exercise their digital rights and strengthen democratic society through the safe, responsible, participatory, creative, critical, and reflective use of digital technology, understanding the influence of these technologies in their personal and public lives at local and global levels.” Critical and Reflective Digital Literacy is the first of four dimensions of Digital Citizenship, along with Digital Care and Responsibility centering ethical use of technology, Participation in Digital Citizenship promoting caring for democracy through the use of digital technology, and Digital Creativity and Innovation. The Ministry of Education’s Plan for Digital Citizenship and Literacy 2025–2026 incorporates AI content as part of the aim to “Raise awareness in the population of the challenges, opportunities, and risks of acting in digital environments so we can protect democracy and strengthen community life.”¹²⁵⁹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Human Rights

Chile ranked as “Free” with a score of 95/100 in the Freedom in the World report,¹²⁶⁰ with 38/40 for political rights and 57/60 for civil liberties in 2025.

The government of Chile has continued to demonstrate progress on improving the protection of human rights related to AI by updating the Ethics and Governance axis of the 2021 version of its National AI Policy¹²⁶¹ in line with input from various stakeholder groups gathered during a 2-month public consultation period.¹²⁶² The new AI bill¹²⁶³ aimed at regulating AI development in a way that safeguards and promotes democratic principles, the rule of law, and citizens’ fundamental human rights will also ensure the ethical and responsible implementation of AI. At the Third World Summit of Committees of the Future in Santiago, organized by the Chilean Senate with the Inter-Parliamentary Union (IPU),¹²⁶⁴ parliamentary delegations from 17 countries produced an Outcome Document emphasizing that emerging technologies, including AI, must be governed in accordance with human rights, democracy, and the rule of law.¹²⁶⁵

Despite Chile's ratification of several human rights instruments,¹²⁶⁶ some lingering issues remain regarding human rights protection. Chile still has problems with incarceration conditions in detention facilities and cases of torture and brutality

by law enforcement.¹²⁶⁷ There are also reported cases of arbitrary or unlawful murders, as well as issues with the protection of the rights of women, indigenous populations, LGBTQI+, migrants, and refugees.¹²⁶⁸ In October 2020, following a series of protests and clashes with law enforcement authorities, more than 70% of citizens voted in favor of forming a constituent assembly to rewrite the constitution, which has remained unchanged since the dictatorship that officially ended in 1990.

AI Safety Summit

Chile participated in the first AI Safety Summit and endorsed the Bletchley Declaration in November 2023.¹²⁶⁹ Chile thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

Chile did not participate in the AI Seoul Summit in May 2024.¹²⁷⁰

Chile participated in the AI Action Summit 2025 in Paris and signed the Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet.¹²⁷¹ Through this commitment, Chile pledged to promote transparent, ethical, and sustainable AI aligned with public-interest values and global democratic norms. At the Summit, Chile and Inria France jointly launched the Franco-Chilean Binational Center on AI, a strategic 2025–2026 initiative focused on AI safety evaluation, trustworthy generative AI, energy-efficient computing, open-source AI

Center for AI and Digital Policy

tools, and talent development.¹²⁷² This Center strengthens Chile's institutional capacity for safe AI research and reinforces alignment with the OECD and UNESCO frameworks.

OECD / G20 AI Principles

As an OECD member, Chile endorsed the OECD AI Principles.¹²⁷³ Chile's AI-related documents, including in its National AI Policy,¹²⁷⁴ directly reference the OECD Principles. The May 2024 update to the National AI Policy strongly emphasizes responsible AI development, ethical AI deployment, and the importance of international collaboration on AI governance.

The OECD has noted Chile's AI policy efforts across various dimensions,¹²⁷⁵ including its promotion of societal dialogues on AI, its creation of partnerships with the private sector for human capacity development, its willingness for international cooperation on AI governance.

Chile's AI policy vision also echoes several OECD principles, including the transparency and explainability, human-centered AI, and building human capacity for AI.¹²⁷⁶ The Chilean Transparency Council's recommendations on algorithmic transparency¹²⁷⁷ published in August 2024 align with OECD guidelines to promote accountability and the ethical use of algorithms in public services by introducing guidelines for proactive transparency, effective monitoring, and use of clear language

in the delivery of information about automated and semi-automated decision-making systems. MinCiencia's AI system public registry implements these principles.¹²⁷⁸

Council of Europe AI Treaty

Chile has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law, the first legally binding international AI treaty.¹²⁷⁹

UNESCO Recommendation on AI Ethics

Chile is a UNESCO member and adopted the UNESCO Recommendation on the Ethics of AI in November 2021.¹²⁸⁰

Chile's Ministry of Science, in partnership with UNESCO and CAF,¹²⁸¹ the Latin American development bank, convened the first Regional Forum on AI Ethics in November 2023. The aim of the event was to shape a collective strategy among Latin American and Caribbean (LAC) countries aligned with the UNESCO Recommendation. Chile signed the resulting Santiago Declaration to Promote Ethical Artificial Intelligence.¹²⁸² The Declaration establishes fundamental principles that should guide public policy on AI, including proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection. The Declaration also constitutes a milestone toward establishing a Regional Council on AI for the LAC region. Chile will preside over the working group created to this end.¹²⁸³

Center for AI and Digital Policy

Chile among the first countries to complete the UNESCO Readiness Assessment Methodology (RAM),¹²⁸⁴ a tool to support the effective implementation of the Recommendation. The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.¹²⁸⁵ Chile implemented the RAM with the launch of an updated National AI Policy and action plan in May 2024.¹²⁸⁶ Chile also proposed a new bill aimed at regulating the ethical and responsible development of AI based on the recommendations from the RAM.¹²⁸⁷ Chile has also updated the privacy law, as recommended on the RAM report.

Evaluation

Chile has made considerable progress toward developing legislative and policy frameworks in data protection and AI and aligning them with international standards, including the UNESCO Recommendation on the Ethics of AI and OECD AI Principles. Chile's efforts refining its National AI Policy in accordance with international AI governance standards and best practices reflects the country's recognition of the need for global cooperation to govern AI for the benefit of humanity. Joining the Cuncil of Europe AI group as an observer and endorsing the AI treaty would further demonstrate Chile's commitment to international cooperation.

Updates to the data protection law establish a regulatory oversight agency with adequate enforcement powers and create enforceable standards in algorithmic transparency.¹²⁸⁸ The AI Bill under deliberation addresses the issue of regulatory oversight and includes provisions for the establishment of a National Commission on Artificial Intelligence,¹²⁸⁹ which will enforce and monitor compliance with the

China

In 2025, China progressed on national AI governance by releasing guidance and standards on data and the AI industry and amendments to strengthen AI ethics in the Cybersecurity Law. China also launched a Global AI Governance Action Plan aligned with the UN Global Digital Compact.

National AI Strategy

Since 2013, the Chinese government has published several national-level policies, guidelines, and action plans, which reflect the intention to develop, deploy, and integrate AI in various sectors. In 2015, Prime Minister Li Keqiang launched the “Made in China” (MIC 2025) initiative aimed at turning the country into a production hub for high-tech products within the next few decades.¹²⁹¹ In the same year, the State Council released guidelines on China’s Internet + Action Plan.¹²⁹² The Action Plan sought to integrate the internet into all elements of the economy and society. The document emphasized the importance of cultivating emerging AI industries and investing in research and development.

The Central Committee of the Communist Party of China’s 13th 5-year plan is another notable example. The document mentioned AI as one of six critical areas for developing the country’s emerging industries and as an essential factor in stimulating economic growth.¹²⁹³ The Robot Industry Development Plan¹²⁹⁴ and Artificial Intelligence Innovation Action Plan for Higher Education Institutions¹²⁹⁵ illustrate detailed action plans and guidelines concerning specific sectors.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Most notable of all is the New Generation Artificial Intelligence Development Plan (AIDP)—an ambitious strategy to make China the world leader in AI by 2030 and the most transparent and influential indication of China's AI strategy's driving forces. China's State Council issued the AIDP in 2017. According to the Plan, AI should be used in a broad range of sectors, including defense and social welfare. The AIDP also indicates the need to develop standards and ethical norms for the use of AI. The actual innovation and transformation are expected to be driven by the private sector and local governments. The Chinese government has handpicked three major tech giants to focus on developing specific sectors of AI: Baidu, Alibaba, and Tencent.¹²⁹⁶ These companies receive preferential contract bidding, more convenient access to finance, and sometimes market share protection.

Following the AIDP, the Ministry of Science and Technology published the New Generation Artificial Intelligence Development Code of Ethics (Code of Ethics).¹²⁹⁷ The New Generation AI Governance Professional Committee, consisting of experts from academics and the industry,¹²⁹⁸ created the Code of Ethics and is responsible for its implementation. The Code of Ethics aims to “thoroughly implement the AIDP, refine the principles of AIDP, enhance society's awareness and behavioural consciousness of AI ethics, actively guide responsible AI research, development, and application activities, as well as promote the healthy development of AI.” The Code of Ethics highlights six fundamental ethical requirements: (1) “improving human well-being”; (2) “promoting fairness and justice”; (3) “protecting privacy and security”; (4) “ensuring controllability, and trustworthiness”; (5) “strengthening responsibility”; and (6) “improving ethical literacy,” taking issues like privacy, biases, discrimination, and fairness into consideration.¹²⁹⁹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Regarding local governments, there is a system of incentives for fulfilling national government policy aims. For this reason, local governments often become a testing ground for the central government's policies. Chinese cities and provinces, as well as regional administrations, compete for new AI incentives. Large metropolises, such as Tianjin and Shanghai, have already launched multi-billion-dollar AI city Venture Capital funds and converted entire districts and islands for new AI companies. Shenzhen and Shanghai have taken the lead to create policies and standards for the Artificial Intelligence industry in China at the provincial level. The Regulations on the Promotion of Artificial Intelligence Industry in Shenzhen from 2022,¹³⁰⁰ marked the birth of the country's first regulation on the AI industry. Shanghai, in the meantime, published Regulations of Shanghai on Promoting the Development of Artificial Intelligence Industry, coming into effect on October 1, 2022.¹³⁰¹ The two Regulations aim to promote the innovation and development of the AI industry in their provinces for the benefit of citizens, society, and the economy. Both Regulations establish mechanisms and Committees of AI Ethics to develop AI ethics policy and standards as well as provide guidance on AI ethics.

The establishment of the New Generation AI Governance Professional Committee at the national level and Committees of AI Ethics at the provincial level embodies the creation of a monitoring regime for the guidance and supervision of AI and AI ethics. The impact of the oversight of AI in policy implementation processes as well as the level of independence of these mechanisms remains unclear.

Cybersecurity Law

China's Cybersecurity Law of 2017 has broad provisions to "ensure cybersecurity; safeguard cyberspace sovereignty and national security, and social and public interests; protect the lawful rights and interests of citizens, legal persons, and other organizations; and promote the healthy development of informatization of the

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

economy and society.” The law applies to those constructing, operating, maintaining, and using networks on the mainland and aims to support research and development in artificial intelligence without sacrificing security.¹³⁰²

Revisions in 2025 aim to strengthen the regulatory regime, including risk monitoring, assessment, and safety oversight as well as improving AI ethics rules.¹³⁰³ The amendments define liability and specify penalties for individuals as well network operators responsible for “serious” failures such as data breaches or infrastructure failure. Individuals and operators responsible for disseminating or failing to stop the spread of prohibited information can also be found liable and face penalties, including fines.

National AI Standards

China’s Cyberspace Administration in partnership with several other technology-focused government offices, including the National Development & Reform Commission and the National Standardization Administration, released official guidelines for a National Comprehensive Standardization System for the AI industry in 2024.¹³⁰⁴ Primary standards cover security and governance as well as concerns related to products, services, industrialization, and technical matters. None of the Standards are substantive, providing a roadmap more than a strict framework.

The National Development and Reform Commission issued guidelines for a National Data Standards System in 2024 to activate data’s potential, an adjacent but important area for AI strategy. These guidelines build on the National Artificial Intelligence Industry Comprehensive Standardization System and target areas such as Data aggregation technical standards and 5G data transmission network standards.¹³⁰⁵ The Artificial Intelligence Standardization Technical Committee

Center for AI and Digital Policy

established under the Ministry of Industry and Information Technology (MIIT) in December 2024 furthers China’s strategy to strengthen regulatory oversight as a means to support industrial growth and global AI norms and standards.¹³⁰⁶

The National Cybersecurity Standardization Technical Committee 260 (TC260) adopted the AI Safety Governance Framework, a voluntary AI risk management framework that “outlines control measures to address different types of AI safety risks through technological and managerial strategies.” The document stresses that “comprehensive AI safety and security risk governance mechanisms and regulations” should “engage multi-stakeholder participation, including technology R&D institutions, service providers, users, government authorities, industry associations, and social organizations.”¹³⁰⁷

Management of Algorithmic Recommendations

China has started to adopt a comprehensive set of regulations on AI. The Provisions on the Management of Algorithmic Recommendations in Internet Information Services came into force in March 2022.¹³⁰⁸ The Provisions apply to any entity that uses algorithm recommendation technologies to provide Internet information services within Mainland China. The Provisions require companies to register algorithms to an online database to the extent that the algorithm has public opinion properties or social mobilization capabilities. Companies shall also complete an algorithm security self-assessment report. Users shall have the right to opt out of recommendation algorithms. The use of recommendation algorithms for illegal or harmful purposes is prohibited.

Deep Synthesis Regulations

In January 2023, the Cyberspace Administration of China (CAC) introduced regulations prohibiting the production of deepfakes without user consent and requires specific identification that the content had been generated using AI. The regulations were formulated to “carry forward the core Socialist value vision, to safeguard

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

national security and the societal public interest.”¹³⁰⁹ Any content that was created using an AI system must be clearly labeled with a watermark, i.e., text or image visually superimposed on the video indicating that the content had been edited. Deep synthesis services cannot use the technology to disseminate fake news. Content that goes against existing laws is prohibited, as is content that endangers national security and interests, damages the national image or disrupts the economy.

The Cyberspace Administration of China published Measures for the Identification of Synthetic Content Generated by AI in March 2025.¹³¹⁰ The instrument aims to standardize the labeling of AI-generated content by internet information service providers with requirements for production, display, and distribution. Service providers must embed explicit labels in files containing AI-generated content and include implicit labels with production details as per regulatory standards. If services include downloading, reproducing, or exporting generated synthetic content, service providers “shall ensure that the files contain explicit labels that satisfy these requirements.” Additionally, service providers are required to inform users of labeling specifications in service agreements.

Generative AI Measures

The Provisional Administrative Measures of Generative Artificial Intelligence Services (Generative AI Measures) were published by the Cyberspace Administration of China (CAC), together with six other authorities, in July 2023 and took effect that August. The Generative AI Measures apply to “the use of generative AI technology to provide services for generating text, pictures, sounds, videos and other content within the territory of China.” The Measures will apply to domestic companies and to overseas generative AI service providers offering AI services in China to the public.¹³¹¹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI Ethics

The AIDP outlines China's desire to become a world leader in defining ethical norms and standards for AI.¹³¹² Government bodies and private companies have attempted to define ethical standards. For example, China's Artificial Intelligence Industry Alliance (AIIA) released a draft joint pledge on self-discipline in the AI industry emphasizing AI ethics, safety, standardization, and international engagement.¹³¹³

The National New Generation Artificial Intelligence Governance Expert Committee established by China's Ministry of Science and Technology prepared the Governance Principles for Developing Responsible Artificial Intelligence in 2019.¹³¹⁴ The document outlines eight principles for the governance of AI: harmony and friendliness; fairness and justice; inclusivity and sharing; respect for human rights and privacy; security; shared responsibility; open collaboration; and agility to deal with new and emerging risks. The document emphasizes that AI development should begin by enhancing the common well-being of humanity.

Another important document is a white paper on AI standards¹³¹⁵ released in 2018 by the Standardization Administration of the People's Republic of China, the national-level body responsible for developing technical standards. Three key principles for setting the ethical requirements of AI technologies are (1) the ultimate goal of AI is to benefit human welfare; (2) transparency and the need to establish accountability as a requirement for both the development and the deployment of AI systems and solutions; (3) protection of intellectual property.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In April 2022, China published “Opinions on Strengthening the Management of Science and Technology Ethics,”¹³¹⁶ which is the first national policy on tech ethics. The document proposes five principles to supervise and review technology ethics and calls for the establishment of the China Science and Technology Ethics Society and ethical supervision in AI research.

China issued the Global AI Governance Action Plan in 2025, calling on all parties to take concrete and effective actions in advancing global AI development and governance based on the objectives and principles of promoting AI for good and in service of humanity, respecting national sovereignty, aligning with development goals, ensuring safety and controllability, upholding fairness and inclusiveness, and fostering open cooperation. The plan contains 13 points, including: Creating a diverse, open, and innovative ecosystem; Addressing energy and environmental issues; Advancing the governance of AI safety; and Jointly implementing the Global Digital Compact, taking the United Nations as the main channel.¹³¹⁷

Public Participation

The National People's Congress of China operates a permanent online public-comment system through which it regularly publishes draft laws and regulations for feedback.¹³¹⁸

Between 2021 and 2025, several AI-related public consultations were conducted by China's main regulatory authorities. These include the CAC's draft Regulations on the Management of Internet Information Service Algorithm Recommendations,¹³¹⁹ the draft Regulations on the Management of Deep Synthesis of Internet Information Services,¹³²⁰ and the draft Measures for the Management of

Generative AI Services.¹³²¹ In addition, the Ministry of Industry and Information Technology (MIIT) sought comments on the draft Guidelines for the Construction of a Comprehensive AI Industry Standard System.¹³²² Most recently, the MIIT consulted the public on the draft Measures for the Management of Artificial Intelligence Science & Technology Ethics Services (Trial).¹³²³

Scholarly research and findings from international organizations suggest that while China provides structured avenues for public input, these mechanisms function more as formal consultations than as effective tools for meaningful participation in national AI governance.¹³²⁴

At the 2022 World Artificial Intelligence Conference, the Shanghai Artificial Intelligence Laboratory Governance Research Center, Tsinghua University, and Fudan University jointly launched an open platform for artificial intelligence ethics: OpenEGLab.¹³²⁵ There are five major sections in the platform including rule sets,

governance maps, risk displays, evaluation frameworks, and industry solutions. The rule set is dedicated to building a global governance knowledge base. Currently, about 1,500 marked rule documents have been included, including ethical principles, policy strategies, laws, regulations, and standards.

Data Protection

In recent years, China has introduced major data protection laws, including the Personal Information Protection Law (PIPL) (effective from November 1, 2021) and the Data Security Law (DSL) (effective from September 1, 2021), together with a series of implementation regulations and administrative rules. The Cyberspace Administration of China (CAC) enforces data protection on a national level, though the CAC shares this responsibility with various local-level offices and the public security authority. China is not a member of the Global Privacy Assembly (GPA).¹³²⁶

The PIPL¹³²⁷ establishes a new comprehensive regulatory framework for personal information protection in China, requiring consent as the principal basis for data collection and handling, introducing provisions with extraterritorial effect, restricting cross border data transfers, and imposing significant revenue-based fines for non-compliant conduct. The law seeks to regulate how private companies collect and use personal rather than granting data subjects control over their data or providing redress mechanisms than data protection laws such as the EU GDPR.¹³²⁸ For example, the PIPL, allows the collection of unlimited amounts of personal data, including images, so long as it is done “for the purpose of safeguarding public security.”¹³²⁹ That is to say, the law does not limit the government’s ability to collect or store biometric data obtained through facial recognition.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The PIPL does not assign responsibilities to government entities that collect personal data or guidance for who will be held responsible for data leaks. This becomes increasingly important with the rise of recent incidents of government leaks of the personal information of its citizens.¹³³⁰ Nevertheless, as the big data industry has been rapidly growing in China, the law provides more protection to users against unwanted data collection by private companies.

In March 2023, China's Ministry of Science and Technology established the National Data Administration (NDA). The NDA will be "responsible for the coordination and advancement of building the data factor system; for overall planning of the integrated sharing and development and use of data resources; for overall planning and advancement of Digital China, digital economy; and digital society plans and construction."¹³³¹ The new regulator will have responsibilities that were previously performed by the Cyberspace Administration of China and by the National Development and Reform Commission.¹³³²

The National Development and Reform Commission (NDRC) and National Data Bureau launched a high-quality data set initiative in 2025 aimed at supporting the AI+ action plan. This initiative focuses on curating structured data to enhance AI applications across public administration, finance, healthcare, and industrial automation. China seeks to establish greater reliability in AI-driven decision-making while reinforcing data sovereignty policies by providing AI models government-approved, high-integrity data for training.¹³³³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Algorithmic Transparency

Article 4 of the Interim Measures for Generative Artificial Intelligence Services refers to “effective measures to increase transparency in generative AI services and to increase the accuracy and reliability of generated content” based on the service type. The National Information Security Standardization Technical Committee (T260) then released the Basic Requirements for Security of Generative Artificial Intelligence Service¹³³⁴ with specific requirements for providing users with information about the service and its functioning. Enforcement of those requirements is currently rolled out as an AI-content oversight campaign by Cyberspace Administration of China (CAC).¹³³⁵ The Ministry of Industry and Information Technology’s target is that at least 60% of these prospective standards will be implemented in “general key technologies and application development projects,” with over 1,000 Chinese companies championing early adoption.¹³³⁶

Complementing these AI-content oversight efforts, the CAC announced new measures under the Clean Internet Platforms: Governance of Typical Algorithm Issues campaign in May 2025. The measures respond to public concerns over algorithm-driven content risks such as information cocoons and polarization by enhancing transparency and accountability in algorithmic recommendation systems across major platforms such as Douyin, Xiaohongshu, Weibo, Kuaishou, and WeChat Video Channel.¹³³⁷

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Provisions on the Management of Algorithmic Recommendations in Internet Information Services¹³³⁸ highlight the principles of “openness” and “transparency” while establishing legal liabilities for violations of these principles. Article 4 Chapter I emphasizes that “the provision of algorithm recommendation services shall comply with laws and regulations, respect social morality and ethics, abide by business ethics and professional ethics, and follow the principles of fairness, openness and transparency, scientific reasonableness, and good faith.” Companies shall be transparent regarding how their recommendation algorithms are trained and deployed, including which datasets the algorithm is trained on. Article 12 states, “Algorithmic recommendation service providers are encouraged to [...] optimize the transparency and understandability of search, ranking, selection, push notification, display, and other such norms, to avoid creating harmful influence on users, and prevent or reduce controversies or disputes.” Chapter V establishes clear legal liability for non-compliance to and violation of the Provisions, including “the suspension of information updates and a fine of between 10,000 and 10,000 RMB, administration punishments or sanctions such as ordering the closure of websites, revoking relevant business permits, or revoking business licenses.”

Article 24 Chapter II, Section 1 of the PIPL requires information processors using personal information in automatic decision-making to ensure “the transparency of decision-making and the fairness and justice of the results” and “shall not impose unreasonable differential treatment on individuals in terms of transaction price and other transaction conditions.” Article 24 also requires alternatives to algorithmic business marketing and information push be provided or “a convenient way for individuals to reject.” The article provides individuals adversely affected with the right an explanation and “to reject the decision made by the personal information processor only through automatic decision-making,”¹³³⁹

Social Governance

Social governance is another area in which AI is promoted as a strategic opportunity for China. The Chinese authorities focus on AI as a way of overcoming social problems and improving the welfare of citizens,¹³⁴⁰ specifically on healthcare

Center for AI and Digital Policy

reform,¹³⁴¹ environmental protection¹³⁴², the administration of justice,¹³⁴³ and the implementation of the Social Credit System or Social Score.¹³⁴⁴ Another concrete example of how China is using AI in social governance can be seen in the sphere of internal security and policing.

China has been at the forefront of the development of smart cities equipped with digital infrastructure cloud computing and computer vision. The National Development and Reform Commission (NDRC), together with the National Data Administration (NDA) and other ministries, issued guidance to deepen smart city development and outlining China's plans to accelerate the integration of AI, big data, and cloud computing into urban governance and public services, with the goal of building livable, resilient, and efficiently managed smart cities nationwide by 2027.¹³⁴⁵ While the government emphasizes the convenience of smart cities, they also raise privacy and human rights concerns given their potential use for surveillance.¹³⁴⁶

Facial Recognition

As early as the 2008 Beijing Olympics, China began to deploy new technologies for mass surveillance.¹³⁴⁷ China put in place more than two million

CCTV cameras in Shenzhen, making it the most-watched city in the world.¹³⁴⁸ In recent years, the techniques for mass surveillance have expanded rapidly, most notably in Shenzhen, also to oversee the Muslim minority group the Uyghurs, and in Hong Kong. Modern systems for mass surveillance rely on AI techniques for such activities as facial recognition, communications analysis, and location tracking. As one industry publication has reported, “In the world of surveillance, no country invests more in its AI-fueled startups and growth-stage businesses than China. And no technology epitomizes this investment more than facial recognition—a technology that courts more controversy than almost any other.”¹³⁴⁹ Forbes continues, “But a thriving domestic tech base has done nothing to quell the concerns of citizens. China is held up as a Big Brother example of what should be avoided by campaigners in the West, but that doesn't help people living in China.”

However, the Supreme People's Court adopted and released provisions on civil cases relating to the use of facial recognition technology, which came into effect on August 1, 2021.¹³⁵⁰ The Provisions aim to “hear civil cases relating to the use of facial recognition technology in processing personal information, protect the lawful rights and interests of litigants, and promote the healthy development of the digital economy,” in accordance with related laws and codes.

In particular, the Supreme People's Court highlights that the Provisions apply to civil cases arising from violations of the provisions of laws, administrative regulations, or the agreement of both parties to process facial information, which refers to biometrics information or facial information generated through facial recognition technologies.¹³⁵¹ In this regard, the Provisions establish civil liabilities for the infringement of the rights and interests of natural persons in the process of biometrics data and information in the application of facial recognition technologies, which was republished and redistributed by local People's Courts.¹³⁵² Before the

enforcement of the Provisions regulating facial recognition technology, the China Academy for Information and Communications Technology (CAICT), a national think tank administrated by the Ministry of Industry and Information Technology, initiated the Trustworthy Facial Recognition Protection Plan in response to issues including “privacy leakage, technology abuse, biases and discrimination” in the development and application of facial recognition technologies while encouraging self-discipline of the industry.¹³⁵³

There are many reports on China’s use of facial recognition technology against ethnic minorities.¹³⁵⁴ The discriminatory ways in which state organs, companies, and academics have researched, developed, and implemented facial recognition in China would seem not to comply with the OECD AI Principles or the Governance Principles for the New Generation Artificial Intelligence. The deployment of facial recognition has also provoked opposition within China.¹³⁵⁵ This gap between stated ethical principles and on-the-ground applications of AI demonstrates the weakness of unenforceable ethics statements.¹³⁵⁶

In September 2019, China’s information-technology ministry announced that telecom carriers must scan the face of anyone applying for mobile and internet service.¹³⁵⁷ There are over 850 million mobile Internet users in China. Meanwhile, the Hong Kong government invoked emergency powers in October 2019 to ban demonstrators from wearing face masks.¹³⁵⁸

Protests in Hong Kong over the use of facial surveillance are widespread. Umbrellas once used to deflect pepper spray, are now deployed to shield protester activities from the digital eyes of cameras.¹³⁵⁹ It is notable that the battle over the use

of facial surveillance in Hong Kong began with widespread public protests about a national security law that extended police authority over the semi-autonomous region.¹³⁶⁰ According to the AP, “Young Hong Kong residents protesting a proposed extradition law that would allow suspects to be sent to China for the trial are seeking to safeguard their identities from potential retaliation by authorities employing mass data collection and sophisticated facial recognition technology.”¹³⁶¹

China is also exporting the model of mass surveillance by facial recognition to other parts of the world. A detailed report, published in *The Atlantic* in September 2020, stated that “Xi Jinping is using artificial intelligence to enhance his government’s totalitarian control—and he’s exporting this technology to regimes around the globe.”¹³⁶² According to *The Atlantic*, “Xi’s pronouncements on AI have a sinister edge. Artificial intelligence has applications in nearly every human domain, from the instant translation of spoken language to early viral outbreak detection. But Xi also wants to use AI’s awesome analytical powers to push China to the cutting edge of surveillance. He wants to build an all-seeing digital system of social control, patrolled by precog algorithms that identify potential dissenters in real-time.”

In September 2020, the United States State Department issued voluntary guidelines for American companies “to prevent their products or services [...] from being misused by government end-users to commit human rights abuses.”¹³⁶³ The report came amid growing concern that China is rapidly exporting its own surveillance capabilities to authoritarian regimes around the world, as part of its Belt and Road Initiative (BRI).¹³⁶⁴ But the Washington Post highlighted the ongoing role of US-made technology in the sweeping surveillance of China, and notably the

Uighur Muslim minority.¹³⁶⁵ The Washington Post explained that “the aim is to monitor cars, phones, and faces—putting together patterns of behavior for ‘predictive policing’ that justifies snatching people off the street for imprisonment or so-called reeducation. This complex opened four years ago, and it operates on the power of chips manufactured by U.S. supercomputer companies Intel and Nvidia.” The Post editorial followed a New York Times investigation which found extensive involvement by U.S. firms in the Chinese surveillance industry.¹³⁶⁶

Facial recognition technology will also be pushed forward with the development of humanoid robots to be deployed across all sectors of social life by 2025.¹³⁶⁷ The draft Shenzhen Accelerates High-level Application Action Plan for Promoting the High-quality Development of Artificial Intelligence (2023–2024) released in May 2023 mentions the deployment of “general-purpose embodied intelligent robots” and “large-scale application of humanoid robots”.¹³⁶⁸

The Cyberspace Administration of China and Ministry of Public Security finalized regulations to standardize facial recognition usage and bolster personal data protection in March 2025. The regulations stipulate that the deployment of facial recognition must be lawful and not compromise national security, public welfare, or individual rights. Users must establish the necessity of the technology's use, advocate for minimal intrusion on personal rights, and mandate strict protection of collected data. Prior to collecting facial data, individuals must be clearly informed about the data collector's identity, the purpose of collection, processing methods, and data retention period. The regulations prohibit organizations and individuals from using misleading or coercive tactics to verify identities and from installing facial recognition equipment in private spaces such as hotel rooms, bathrooms, changing

rooms, and restrooms. Additionally, they call for measures like data encryption, security auditing, access control, and intrusion detection to protect collected facial recognition information.¹³⁶⁹

AI and Public Health

In China, the ultimate ambition of AI is to liberate data for public health purposes. The AIDP outlines the ambition to use AI to “strengthen epidemic intelligence monitoring, prevention and control,” and to “achieve breakthroughs in big data analysis, Internet of Things, and other key technologies” for the purpose of strengthening intelligent health management.¹³⁷⁰ The State Council’s 2016 official notice on the development and use of big data in the healthcare sector also explicitly states that health and medical big data sets are a national resource and that their development should be seen as a national priority to improve the nation’s health.¹³⁷¹ However, there is a rising concern that relaxed privacy rules and the transfer of personal data between government bodies will promote the collection and aggregation of health data without the need for individual consent.¹³⁷²

Beijing Municipal Health Commission strictly prohibited the use of AI for automatically generating medical prescriptions and regulated various online healthcare activities with the draft set of 41 rules, with the goal that AI “shall not replace the doctors to provide diagnosis and treatment services.”¹³⁷³

Use of AI in COVID-19 Response

In June 2020, the State Council released a White Paper, entitled “Fighting COVID-19: China in Action,” which provides that China has “fully utilized” artificial intelligence to not only research, analyze, and forecast COVID-19 trends and developments, but also to track infected persons, identify risk groups, and facilitate the resumption of normal business operations.”¹³⁷⁴ During the pandemic, China has used AI for surveillance of infected individuals and medical imaging. China also sought to reduce human interaction by using computers and robots for various purposes and has proven to be very effective in reducing exposure, providing necessary services such as assistance for healthcare professionals, improving efficiency in hospitals, and precautionary measures for returning to normal business operations.¹³⁷⁵

Environmental Impact of AI

Policy initiatives in 2025 began to implement standards established in 2024 to steer industrial development toward more sustainable practices.¹³⁷⁶ The National Development and Reform Commission (NDRC), along with the Ministry of Industry and Information Technology (MIIT) 2024 Action Plan aims to reduce the average power usage effectiveness (PUE) of data centers to below 1.5 by 2025. The plan also seeks to increase the utilization rate of renewable energy in data centers by 10 percent annually.¹³⁷⁷ These measures include enhanced fiscal support for green technologies, streamlined foreign investment in strategic sectors, and a focus on digital transformation—all aimed at boosting energy efficiency and accelerating the transition to renewable energy sources in industries such as high-end manufacturing and data centers.¹³⁷⁸

Center for AI and Digital Policy

At the municipal level, the city of Shenzhen, known as the ‘Chinese Silicon Valley’ for its vibrant technology ecosystem, has implemented regulations to promote the development of green AI data centers. The city's government is tasked with improving the evaluation system for AI data centers and setting higher energy efficiency standards to build environmentally friendly facilities that support AI development.¹³⁷⁹

The Ministry of Foreign Affairs 2024 Shanghai Declaration on Global AI Governance affirmed China’s commitment to protecting the health of the environment while pursuing its National AI Strategy.¹³⁸⁰

Lethal Autonomous Weapons

China has pursued AI development in the military since 2017 while calling on countries to “exercise restraint”¹³⁸¹ in developing AI weapons to ensure they comply with international humanitarian law. The AIDP states that “the development of AI [is] a major strategy to enhance national competitiveness and protect national security” and that China will “promote all kinds of AI technology to become quickly embedded in the field of national defense innovation.”¹³⁸² Military and defense leaders echoed these sentiments that AI in the military was inevitable both on the battlefield and in decision-making,¹³⁸³ and their commitment to ensuring China’s military leads these innovations.¹³⁸⁴ These sentiments are shared by academics from

Center for AI and Digital Policy

the People's Liberation Army (PLA) who believe that AI will be used to predict battlefield situations and outpace human decision-making.¹³⁸⁵

In 2018, China's Ministry of National Defense established two major research organizations focused on AI and unmanned systems: the Unmanned Systems Research Center (USRC) and the Artificial Intelligence Research Center (AIRC).¹³⁸⁶ According to some experts, China is pursuing the most aggressive strategy for developing AI for military uses among the major military powers.¹³⁸⁷

In the official position on Lethal Autonomous Weapons, China maintains that both the common security and the dignity of mankind should be safeguarded through an international treaty. China's contribution to the UN Secretary General report on LAWS continued this emphasis and called for "an agreed understanding on key elements and technical characteristics" of LAWS to "formulate targeted measures and negotiate a legally binding international instrument" while avoiding "blanket bans or restrictions" that could "undermine States' legitimate defence capabilities" and "their right to the peaceful use of these technologies."¹³⁸⁸

China recently stressed that the CCW is the best place for these discussions.¹³⁸⁹ China has consistently supported agree-upon definitions as the basis for an international treaty and the need to avoid an AI arms race in discussions at the UN,¹³⁹⁰ GGE on LAWS,¹³⁹¹ and Convention on Certain Conventional Weapons

(CCW). China’s position that international negotiations for a treaty related to LAWS should happen in the CCW may account for the country’s abstention from the widely accepted Resolution on Lethal Autonomous Weapons (L.56) at the 78th UN General Assembly.¹³⁹²

China attended the first summit on Responsible AI in the Military Domain—REAIM 2023 hosted by the Netherlands. The summit provided a platform for all stakeholders (governments, industry, civil society, academia, and think tanks) to forge a common understanding of the opportunities, dilemmas, and vulnerabilities associated with military AI.¹³⁹³ China is one of the 57 endorsing countries that underlined the need to put the responsible use of AI higher on the political agenda and to further promote initiatives that make a contribution to this respect. However, China did not endorse the “Blueprint for AI Action” to govern responsible use of artificial intelligence in the military that was supported by 61 countries.¹³⁹⁴

AI Literacy

The Beijing Municipal Education Commission announced in March 2025 that AI education will become mandatory across all levels of compulsory schooling, from elementary to high school, beginning Fall 2025. Schools will offer at least 8 hours of AI curriculum per year, with methods adapted for the grade level. Courses may be integrated with others subjects or stand alone. The plan responds to the rapid expansion of the AI industry in China and is an effort “to nurture future-oriented and innovative talent.”¹³⁹⁵

Human Rights

China has endorsed the Universal Declaration of Human Rights. As a party to the UDHR, China shall recognize “the inherent dignity” of all human beings and secure their fundamental rights to privacy. Privacy rights are guaranteed to Chinese

citizens under the Constitution. However, Article 40 of the constitution justifies the invasion of privacy “to meet the needs of State security.” Furthermore, the provisions of the Constitution are not directly enforceable since there is neither a constitutional court nor any possibility to assert constitutional rights.¹³⁹⁶ Relatedly, problematic exemptions for the collection and use of data, when it is related to security, health, or the flexibly interpretable “significant public interests”¹³⁹⁷ contribute to weak data protection in China.

Freedom House classifies China as Not Free with a total score of 9/100¹³⁹⁸ and a negative score of -2/40 for political rights. Freedom House Report cites increasing repression as the ruling Chinese Communist Party (CCP) tightens control over all aspects of life and governance, including the state bureaucracy, the media, online speech, religious practice, universities, businesses, and civil society associations. Human Rights Watch concurs with the assessment of government repression, citing mass detentions in Xinjiang, suppression of civil society, and the continued dismantling of freedoms in Hong Kong under the 2020 national security legislation.¹³⁹⁹ According to Decoding China, while the United Nations defines human rights as universal and intrinsic to all human beings, China argues that “sovereignty and non-interference trump the notion of universal human rights” and maintains rights are internal affairs rather than a matter of international oversight.¹⁴⁰⁰

Global AI Governance

In October of 2023, China suggested the establishment of a Global AI Governance Initiative.¹⁴⁰¹ In its announcement, the Ministry of Foreign Affairs called on countries to strengthen cooperation on the governance of AI. After stressing the “unpredictable risks and complicated challenges” posed by AI, the Ministry highlighted the need to “uphold a people-centered approach in developing AI,” to “respect other countries’ national sovereignty and strictly abide by their laws when providing them with AI products and services.” The Ministry stated, “We oppose

using AI technologies for the purposes of manipulating public opinion, spreading disinformation, intervening in other countries' internal affairs, social systems and social order, as well as jeopardizing the sovereignty of other states.” The Ministry indirectly called out US restrictions regarding export controls on AI chips and chipmaking tools, stating: “We oppose drawing ideological lines or forming exclusive groups to obstruct other countries from developing AI. We also oppose creating barriers and disrupting the global AI supply chain through technological monopolies and unilateral coercive measures. [...] We should increase the representation and voice of developing countries in global AI governance, and ensure equal rights, equal opportunities, and equal rules for all countries in AI development and governance.”¹⁴⁰²

China hosted the World Artificial Intelligence Conference and High-Level Meetings on Global AI Governance in July 2025, where it released the Global AI Governance Action Plan (2025).¹⁴⁰³ The plan calls for global cooperation to ensure AI's “safety, reliability, controllability, and fairness,” while aligning with the UN Pact for the Future and the Global Digital Compact. The plan advances 13 priority actions, including promoting sustainable AI, improving risk assessment and safety governance, strengthening technical standards, empowering the Global South through capacity building, and developing an inclusive multi-stakeholder governance model.

AI Safety Summit

In November 2023, China participated in the first AI Safety Summit and endorsed the Bletchley Declaration.¹⁴⁰⁴ Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

At the 2025 AI Safety Summit, rebranded as the AI Action Summit, President Xi Jinping's special representative, Vice Premier Zhang Guoqing, stated that China is prepared to work with other nations to promote AI development, safeguard

security, and share technological achievements.¹⁴⁰⁵ He noted that AI is driving a new technological revolution and referenced the Global Initiative for AI Governance introduced in October 2023. Zhang called for international collaboration to develop AI for good, enhance innovation, and improve global governance. China was among the China was among the approximately 60 countries and international organizations to sign the outcome document, Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet.¹⁴⁰⁶

OECD / G20 AI Principles

As a member of the G20, China is bound by the G20 AI Guidelines, which were drawn from the OECD Principles.¹⁴⁰⁷ China also adopted the G20 Ministerial Declaration in September 2024, reaffirming its commitment to ethical AI for inclusive sustainable development, aiming to drive growth, reduce inequality, and mitigate risks.¹⁴⁰⁸ China's Global Artificial Intelligence Governance Initiative¹⁴⁰⁹ and the Global AI Governance Action Plan¹⁴¹⁰ share several core themes with the OECD AI Principles, including safety, fairness, inclusiveness, and international cooperation.

Council of Europe AI Treaty

China neither signed the Council of Europe AI Treaty nor participated in its elaboration.¹⁴¹¹ China will be eligible to accede to the Framework Convention on

Artificial Intelligence and Human Rights, Democracy, and the Rule of Law only after this first international treaty enters into force.¹⁴¹²

UNESCO Recommendation on AI Ethics

As Member of the UNESCO Ad Hoc Expert Group on AI Ethics, Zeng Yi, Director of the Sino-British Research Centre for AI Ethics and Governance, Institute of Automation, at the Chinese Academy of Sciences as well as Member of the National New Generation AI Governance Professional Committee, actively participated in the drafting and formulation of the UNESCO Recommendation on the Ethics of AI.¹⁴¹³ According to Zeng Yi, “the Recommendation is the most widely reached consensus worldwide at the governmental level, which will become a benchmark for reference to the development of AI ethics related international standards and international law.”

The value of “harmonious coexistence,” as Zeng Yi pointed out in the formulation of the Recommendation, contributes to the harmonious development of human society coexisting with AI technologies as well as the empowerment of human development, society, and ecology by AI.¹⁴¹⁴ “Harmonious coexistence” is reflected in China’s New Generation Artificial Intelligence Governance Principles¹⁴¹⁵ (Governance Principles) and New Generation Artificial Intelligence Code of Ethics¹⁴¹⁶ (Code of Ethics) formulated by the National New Generation AI Governance Professional Committee, which shows similar visions with the Recommendation.

Another shared vision concerns sustainable development. Zhang Yi’s proposal for the sustainable development of AI was accepted by the Recommendation in the policy section, which provided suggestions for achieving sustainability through deploying AI in the field of environment. At the national level,

both the Governance Principles and the Code of Ethics issued by China consider sustainable development as the overall vision and objective for the New Generation Artificial Intelligence.¹⁴¹⁷

Since the publication of the UNESCO Recommendation on AI Ethics, Chinese mainstream news media, think tanks, research institutions, and organizations actively interpreted, reposted, and communicated the Recommendation to the wider public in China. China has not implemented nor is in the process of implementing the UNESCO's Readiness Assessment Methodology (RAM).¹⁴¹⁸

Evaluation

China is one of the first AI superpowers implementing the ambitious plan of leading the world in AI by 2030. The country has endorsed principles on AI ethics, enforced a new law on data protection, and adopted a comprehensive set of regulations on AI. However, concerns exist that the main objective of China's legislative frenzy is not to protect human rights but to make sure that the government controls and monitors the digital world as much as it does the physical world. The validation of the use of facial recognition for public security purposes in the data protection law and the enforcement mechanisms and sanction regimes to regulate AI are some cases in point. The use of AI technology and facial recognition against minorities and dissidents is also of concern.

China has participated in international efforts to create an ethical AI framework, including representatives contributing to the UNESCO Recommendation on the Ethics of AI and forming the Global AI Governance Initiative. These efforts suggest a willingness to establish some common understandings in international AI governance or, absent meaningful action to implement international frameworks, signal China's international status as an AI superpower.

Colombia

In 2025, Colombia approved the National AI Policy to foster ethical and sustainable use and development of AI. The country also became the first country to formally adopt the UNESCO Guidelines for the Use of AI in the Judicial System.

National AI Strategy

“In an increasingly digital world, artificial intelligence is presented as a fundamental tool that can positively shape the future of our nation. However, we recognize that this power must be guided by solid ethical principles and a strategic vision that guarantees the well-being of all Colombians” said the Minister of Science, Technology, and Innovation Yesenia Olaya, during the launch of the AI Roadmap to ensure the ethical and sustainable adoption of AI in Colombia in February 2024.¹⁴¹⁹

The Roadmap centers ethical and sustainable adoption and identifies challenges to that objective. Ethics and Governance, including a dedicated section on algorithmic transparency, is one of five key themes.¹⁴²⁰ The goal is to establish and strengthen the legal and regulatory AI framework to tackle ethical challenges posed by AI. The other strategic centers are Education, research, and innovation; Data and Organizations; Innovative and emerging industries; Privacy, cybersecurity, and defense. The AI Roadmap not only promotes scientific integrity in the development of technological solutions but also seeks to establish effective governance structures that ensure its ethical application of artificial intelligence in solving social, economic, and environmental challenges at the national level.

The Roadmap serves as the basis for the National AI Policy by the National Council of Economic and Social Policy (*Consejo Nacional de Política Económica y Social, CONPES*) approved in 2025.¹⁴²¹ The National AI Policy aims to “foster capacity in research, development, adoption, and the ethical and sustainable use of

AI systems to promote social and economic transformation in Colombia.”¹⁴²² The strategy outlines 106 actionable measures across six specific objectives: 1) Strengthen governance and application of ethical principles; 2) Strengthen ethics and governance, data infrastructure, research and innovation, talent development, risk mitigation, and sectoral AI adoption. The policy proposes regulatory sandboxes and ethical frameworks to safely test AI technologies in real-world contexts and identifies work in progress under the executive branch to develop a legal framework for governing AI.¹⁴²³ Training and mentorship programs aimed at increasing women’s participation in AI policymaking are intended to alleviate the gender gap in technology.

The national policy builds on earlier actions and policies across sectors and strategic work areas to create the conditions to support ethical and sustainable AI.¹⁴²⁴ These initiatives began with the National Policy for Digital Transformation and AI¹⁴²⁵ in 2019, led by the National Planning Department (*Departamento Nacional de Planeación*, DNP), the Ministry of Information and Communications Technologies (*Ministerio de Tecnologías de la Información y las Comunicaciones*, MinTIC), and the Office of the President. The Strategy introduced social and economic conditions that facilitate the development of AI by creating a flexible framework of principles and guidelines rather than a rule-based structure. These consultations helped define goals of the National Development Plan 2022–2026 “Colombia World Power of Life,” adopted in May 2023¹⁴²⁶ and the National Digital Strategy 2023–2026, issued in February 2024.¹⁴²⁷

Colombia’s Ethical Framework for AI,¹⁴²⁸ according to President Iván Duque, provides “tools that strengthen the principle of democracy, free competition

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Framework for AI was developed around ethical principles that can serve as a criterion for evaluating the different uses and challenges that arise in this respect. The Ethical Framework for AI was developed as a tool that can be applied to different sectors taking into consideration the diversity of interests and opinions around the use of AI. The ten principles provided by the framework to guide the design, development, implementation and evaluation of AI systems include transparency, explainability, privacy, human oversight over AI decisions, security, responsibility, non-discrimination, inclusion, prevalence of the rights of children and adolescents, and social benefit.¹⁴³⁵

The framework also proposes an ethical algorithm register in which entities periodically report what their AI project is about, how they are implementing the AI ethics principles, and the ethical risks to the use of AI in their project. The register allows for the monitoring of progress in the implementation of AI principles and reinforces citizen participation by inviting their comments or questions on policies, good practices and projects related to AI.¹⁴³⁶ The DAPRE and the Superintendency of Industry and Commerce (*Superintendencia de Industria y Comercio*, SIC) are responsible for monitoring AI projects. The Superintendency of Industry and Commerce monitors AI projects by carrying out the Data privacy regulatory Sandbox.¹⁴³⁷ The ethical algorithm register of Colombia is based on the models of Amsterdam and Helsinki.¹⁴³⁸

Regulatory Sandboxes and Beaches

Colombia has adopted a smart regulation approach to AI through regulatory sandboxes and beaches. This controlled environment was set up to experiment and test AI systems in the local context, to identify technical and governance flaws while promoting innovation.¹⁴³⁹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

At first, a Draft Model Concept for the Design of Regulatory Sandboxes and Beaches in AI was published in August 2020 with public comments received from various stakeholders.¹⁴⁴⁰ The purpose of this policy was to understand technology before trying to regulate it, by balancing precaution with experimentation and learning. The document suggests a process of implementation that includes (1) defining a policy leadership to implement public policy; (2) defining emerging technologies and preliminary problems to be addressed; (3) completing a regulatory mapping of the impacted sector; (4) selecting a public entity to perform inspection and surveillance functions; (5) capacity building and training; (6) creating working groups; (7) designing a risk model and defining possible risks; (8) setting out a selection criteria for the risks; (9) designing the sandbox; (10) sharing the project for comment; (11) publishing and implementing; and (12) reporting on the findings and evidence.¹⁴⁴¹

A policy proposing a regulatory sandbox for Privacy and AI was open for public comments by the DAPRE and the Superintendency of Industry and Commerce until November 30 2021 Superintendency. The regulatory sandbox here is meant to be preventive, so AI systems related to e-commerce, advertising and marketing protect personal data from the stage of design to execution, using tools like privacy impact assessments and privacy by design. It proposes (1) criteria to ensure compliance with regulation on data processing in AI; (2) proper processing of personal data in all stages of an AI project; (3) creation of AI products that respects individual rights to personal data; (4) advice to companies on the protection of personal data in AI systems; (5) adoption of a preventive approach to protect human rights in AI projects; (6) suggestion of amendments or modifications to Colombian regulations on technological advances.¹⁴⁴²

The Superintendency of Industry and Commerce released a final document governing privacy by design and by default in AI projects in April 2021 and the government approved the first proposals under the sandbox program in August 2021.¹⁴⁴³ The Superintendency of Industry and Commerce's sandbox for Privacy and AI started operating during 2021, and on January 2022, selected a first project.¹⁴⁴⁴

Center for AI and Digital Policy

Public Participation

The Development Bank of Latin America (CAF) with the authorship of international expert, Armando Guío Español, has developed AI policy and implementation documents, including the ethical framework for AI, a model concept for the design of regulatory sandboxes and beaches in AI, a data governance model, a task force on the development and implementation of AI, and the outline of an international council for the implementation of AI policy.¹⁴⁴⁵

Draft AI policies and legislations of Colombia have been opened for public comment from academia, national, regional and international civil society actors, intergovernmental organizations and the private sector. These consultations have taken on various forms.¹⁴⁴⁶ Previously, the Ministry of Science, Technology and Innovation (MinCiencias) conducted a public consultation on the Roadmap to ensure the ethical and sustainable adoption of AI in Colombia¹⁴⁴⁷ and plans on organizing subsequent consultations to flesh it out further.¹⁴⁴⁸

The MinCiencias expanded the participatory framework through the initiative Artificial Intelligence, Education and Social Sciences: A Strategic Dialogue in CLACSO.¹⁴⁴⁹ The initiative aims to foster Colombia's commitment to inclusive AI governance by integrating social-science perspectives into public policy design and ensuring that marginalized voices are represented in AI-related consultations. The program also encourages collaboration between research institutions and public authorities to enhance digital literacy and critical understanding of algorithmic decision-making. This program brought together representatives from academia,

policymakers, and civil society to examine the ethical, social, and cultural implications of AI adoption in Latin America.

Data Protection

Data Protection in Colombia is governed by Article 15 of the Constitution.¹⁴⁵⁰ Colombia also regulates financial credit, commercial and services information,¹⁴⁵¹ and personal data processing and databases.¹⁴⁵²

For the implementation and monitoring of regulations regarding privacy, the Personal Data Authority (DPA) was established under the Division of Data Protection of the Superintendency of Industry and Commerce (SIC), according to Article 19 of Law 1581 of 2012.¹⁴⁵³ This authority functions as an oversight body, providing instructions and setting mandates, along with receiving complaints on the handling of data. The National Government introduced a bill in late 2025 to modernize Colombia's data protection framework.¹⁴⁵⁴ The proposal updates Law 1581 of 2012 to address data governance in artificial intelligence, algorithmic profiling, and cross-border data transfers. The bill expands the powers of the Superintendency of Industry and Commerce to supervise automated decision-making systems and introduces mandatory AI Data Impact Assessments. Law 1581 aligns national law with international standards such as the OECD principles and UNESCO recommendation.

On automated decision-making, Law 1581 establishes that personal data processing must be for a legitimate purpose under the Constitution and other laws, it must be notified to the subject, and the purpose must be specific. As a result, if automated decision-making is the purpose of processing data, then it must be (1)

¹⁴⁵⁴ Ministerio de Ciencia, Tecnología e Innovación (MinCiencias), *National Government Submitted a Bill to Update the Current Regulations on Personal Data Protection in Colombia [Gobierno Nacional radica proyecto de ley para la protección de datos personales en Colombia]* (Aug. 27, 2025), <https://inteligenciaartificial.minciencias.gov.co/gobierno-nacional-radico-proyecto-de-ley-para-actualizar-la-normatividad-vigente-en-la-proteccion-de-datos-personales-en-colombia/>

legitimate as per the Constitution and other laws of Colombia, (2) specific in purpose, and (3) data subject should be informed of it.¹⁴⁵⁵

Secondary decrees, decisions, and regulations provide a better understanding of data protection, particularly regarding the application of automated mechanisms to databases. Databases have been defined under Article 3 of Law 1581 as an organized set of personal data which is treated in the same as personal data. Decree 886 that regulates Article 25 of Law 1581 explains this further by stating that, when automation is applied to databases containing personal data, it should be registered in the public directory of databases called the National Register of Databases.¹⁴⁵⁶ Drawing from the necessity to register information from databases and the protection of the right to habeas data,¹⁴⁵⁷ the Constitutional Court concluded that the administrator of a database has specific obligations regarding the quality of data being transmitted and allows data subjects to authorize how their information in an automated system is handled.¹⁴⁵⁸ Additionally, Article 26 of Decree 1377 establishes the principle of proven liability, according to which those responsible for handling personal data have an obligation to prove that they have taken sufficient and effective measures to abide by regulations, even when the data is processed by an automated method.¹⁴⁵⁹

In July 2020, through Resolution 38281, the Superintendency of Industry and Commerce concluded that Law 1581 is thematically and technologically neutral.¹⁴⁶⁰ Thus, the provisions of Law 1581 apply to the processing of any data regardless of techniques or technologies used. The protection of personal data extends to all techniques and tools, including AI in its use for predictive dialing, robocalls and nuisance calls. Nelson Remolina, the Superintendent for the Protection of Personal

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Data, elaborated on this by stating that, while Colombian law allows for the creation, design, and use of technological innovations to process data, it must be done in a way that respects the legal system by complying with all the rules pertaining to the processing of personal data.¹⁴⁶¹

Colombian data protection law differs in scope from the GDPR, since it only applies to data processing carried out by data processors and data controllers within the country or to those who have a legal obligation under international law and treaties. Unlike the GDPR, the Colombian privacy law does not set out conditions under which data profiling is allowed. However, Colombian privacy law protects individual privacy through habeas data rights, guaranteed by Article 15 of the Colombian Constitution. Article 15 is intended to protect an individual's right to know, update, and rectify information gathered about them in online files or databases.¹⁴⁶²

In January 2022, President Duque issued Decree 092, modifying the structure of the Superintendency of Industry and Commerce. The modifications include the creation of the Habeas Data Department, under the Deputy Superintendency for Personal Data Protection. The Decree tasks the Habeas Data Department with ensuring that all entities covered by the data protection regime comply with data protection law. The Habeas Data Department may also resolve any complaint or claim submitted by data subjects seeking to enforce their data rights. The Department may issue orders to enforce its statutory mandates.¹⁴⁶³

The Superintendency of Industry and Commerce, as a member of the Ibero-American Network for the Protection of Personal Data (*Red Iberoamericano de Protección de Datos*, RIPD), which comprises 16 data protection authorities from 12 countries, also endorsed the General Recommendations for the Processing of Personal Data in Artificial Intelligence¹⁴⁶⁴ and the accompanying Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence Projects.¹⁴⁶⁵ Both have been framed in accordance with

¹⁴⁶¹ Ibero-American Data Protection Network (RIPD), *Colombian Data Protection Authority Concluded that Predictive Dialing, Robocalls and Artificial Intelligence Must Comply with Regulation Regarding the Processing of Personal Data* (Jul. 20, 2020), <https://www.redipd.org/en/news/colombian-data-protection-authority-concluded-predictive-dialing-robocalls-and-artificial>

¹⁴⁶⁵ Red Iberoamericana de Protección de Datos (RIPD), *Specific Guidelines for Compliance with the Principles and Rights that Govern the Protection of Personal Data in Artificial Intelligence*

the RIPD Standards for Personal Data Protection for Ibero-American States.¹⁴⁶⁶ The adoption of the Standards signals Colombia's recognition of guiding principles and rights for the protection of personal data that RIPD members can adopt and develop in their national legislation to guarantee a proper treatment of personal data facilitate homogeneous rules in the region. The guiding principles of personal data protection are: legitimation, lawfulness, loyalty, transparency, purpose, proportionality, quality, responsibility, safety and confidentiality. Controllers must also guarantee the exercise of the following rights by data subjects: right of access, right to correction, right to cancellation, right to opposition, right not to be subject to automated individual decisions, right to portability of personal data and right to the limitation of treatment of personal data.

The RIPD data protection authorities initiated a coordinated action regarding ChatGPT, developed by OpenAI, in May 2023 over concerns regarding the risk of misinformation and harmful biases in responses.¹⁴⁶⁷ Colombia's Superintendency of Industry and Commerce also launched an independent investigation in May 2023 to assess whether the application ChatGPT complies with Colombian data protection law.¹⁴⁶⁸

The Superintendency of Industry and Commerce sponsored the 2020 GPA Resolution on Accountability in the Development and Use of Artificial Intelligence¹⁴⁶⁹ and co-sponsored the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology.¹⁴⁷⁰ However, the organization did not co-sponsor the 2020 GPA

Declaration on Ethics and Data Protection in AI¹⁴⁷¹ or the 2023 GPA Resolution on Generative AI.¹⁴⁷²

Algorithmic Transparency

Colombian data protection law for partial algorithmic transparency with the requirement that the data subjects know when their data is processed automatically. The right to habeas data requires the administrator of a database to ensure the quality of data being transmitted and allows data subjects to authorize how their information in an automated system is handled.¹⁴⁷³ The 2022 Ethical Framework for AI¹⁴⁷⁴ provides for both transparency and explainability. The 2024 AI Roadmap also refers to algorithmic transparency.¹⁴⁷⁵

The RIPD Specific Guidelines offers some clarity on the expectations for explainability as related to the transparency principle: “The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language, it will not be necessary to provide a complete explanation of the algorithms used or even to include them. The above always looking not to affect the user experience.”¹⁴⁷⁶

The Colombian Constitutional Court made a landmark ruling emphasizing the need for human oversight in AI use within the judiciary. The ruling cited

UNESCO's AI tools and guidelines, highlighting the importance of transparency, privacy, and human judgment in judicial processes.¹⁴⁷⁷ The court directed Colombia's Consejo de la Judicatura to develop comprehensive guidelines on AI use, aligning with best practices to ensure ethical application that respects human rights.

Data Infrastructure

Colombia facilitates data access for those designing and developing AI systems, achieved by removing unnecessary and unjustified barriers to access information. To facilitate such data access and to generate social and economic well-being, the Colombian government has developed data infrastructure policies with a shared dynamic and standardized resources across different actors. Thus, data infrastructure is used to strengthen institutional capacity to provide better quality services to citizens, to include citizens and the private sector in data governance, to drive innovation in governance, and to guide decision-making.

The first policy document on data infrastructure is the National Policy on Data Exploitation (CONPES 3920), developed by the National Council on Economic and Social Policy, the National Planning Department, and the Office of the President.¹⁴⁷⁸ This policy uses data within a legal, ethical, and institutional framework to generate social and economic value; to increase the availability and interoperability of government data; to promote data culture in public entities, academia and the private sector; to promote data ethics and AI; and to provide test environments through data sandboxes, sandboxes on privacy and AI, and conceptual models for regulatory sandboxes and beaches in AI. To achieve this target, CONPES 3920 sets out 45 action steps with indicators, responsible parties, budgets and a timeline.

The second policy document is the National Data Infrastructure Plan (PNID) developed by MinTIC, the National Planning Department, and the Office of the President, with the support of the World Economic Centre for the Fourth Industrial Revolution.¹⁴⁷⁹ The draft of the PNID was shared for public comment until 17 September 2021. The PNID presents an approach to data as infrastructure, defines

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

the components of data infrastructure, and provides a roadmap with concrete actions to implement data infrastructure in the country. This roadmap identifies 6 elements including governance, data, data leveraging, infrastructure interoperability, data security and privacy, as well as technical and technological input for data management.

For the successful integration of the PNID into the data regulation ecosystem, the government intends to create between 2022 and 2025 PNID guidelines. The aim is to identify priority data and create guidelines to ensure data quality; to develop a data infrastructure governance model; to identify indicators for monitoring; and to draw up a collaborative participation strategy for different actors in the data ecosystem.

CONPES 3920 and the PNID both emphasized the need to develop an institutional framework to accompany the development of data infrastructure. The governance model responds to this need. The governance model outlines five objectives to guide its design: institutional coordination, private sector participation, confidence building, technical modelling, and international impact. Under each of these objectives, responsible parties or entities and specific tasks have been provided.

The Ministry of Information and Communications Technologies introduced a bill aimed at developing a data infrastructure to enhance data availability, usage, and exchange, improve decision-making, and foster a data-driven culture.¹⁴⁸⁰ The bill applies to public administration entities and individuals performing public functions, including the legislative, judicial, and control bodies. Key provisions include obligating public entities to implement recommendations from the National Data Committee, ensuring compliance with the Digital Government Policy for those using emerging technologies like AI, and guaranteeing interoperability among data infrastructure across public entities.

Data Scraping

Colombia's Superintendency of Industry and Commerce and international data protection and privacy counterparts released a follow-up joint statement laying

¹⁴⁸⁰ El Congreso De Colombia, *Bill through which Dispositions for the Provision, Exchange, and Use of Data Infrastructure in the State of Colombia (IDEC) and the Interoperability of Information Systems for Public Entities, and Others, are Declared [Proyecto Ley por medio de la cual se dictan disposiciones para el suministro, intercambio y aprovechamiento de la infraestructura de datos del Estado colombiano (IDEC) y la interoperabilidad de los sistemas de información de las entidades públicas y se dictan otras disposiciones]* (Oct. 2025), https://www.camara.gov.co/wp-content/uploads/2025/10/proyectos-ley/documentos/proyecto-33228/pl_447_2024c_infraestructura_de_datos_del_estado_colombiano_0-14f1fca8.pdf

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

out expectations for industry related to data scraping and privacy.¹⁴⁸¹ The initial statement in August 2023 established that “[social media companies] and other websites are responsible for protecting personal information from unlawful scraping.”¹⁴⁸² The follow-up, which incorporates feedback from engagement with companies such as Alphabet (YouTube), X Corp (formerly Twitter), and Meta Platforms (Facebook, Instagram, WhatsApp), adds that organizations must “comply with privacy and data protection laws when using personal information, including from their own platforms, to develop AI large language models”; must regularly review and update privacy protection measures to keep pace with technological advances; and ensure that permissible data scraping, such as that for research, “is done lawfully and following strict contractual terms.”¹⁴⁸³

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

Use of AI in Public Administration

As a member of the Latin American Centre for Development Administration (CLAD),¹⁴⁸⁴ Colombia approved the Ibero American Charter on Artificial Intelligence in Civil Service. The Charter aims to provide a roadmap and common framework for CLAD member states to adapt their AI policy strategies and laws for the challenges and opportunities involved in the implementation of AI in public administration. The guiding principles are human autonomy; transparency, traceability and explainability; accountability, liability and auditability; security and technical robustness; reliability, accuracy, and reproducibility; confidence,

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

proportionality, and prevention of damage; privacy and protection of personal data; data quality and safety; fairness, inclusiveness, and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection.

In addition to common principles, the Charter recommends specific tools for monitoring AI impact as well as a risk classification mechanism that guardrails for high-risk use cases and prohibitions against uses that violate human rights. Prohibited uses include facial recognition systems; systems aimed at behavior and cognitive manipulation of specific individuals or vulnerable groups (children or the elderly); and social ranking systems based on certain personality traits, individual behaviors, socio-demographic features, or economic status.¹⁴⁸⁵

Use of AI in Courts

The Colombian government introduced the use of technology in the administration of justice through Article 95 of Law 270 in 1996, while mandating protection of confidentiality, privacy, and security of personal data.¹⁴⁸⁶ As a result, several government entities use AI in judicial aspects of their work. This includes the Constitutional Court (*Corte Constitucional*), the Office of the Attorney General, and the Superintendency of Companies.

Concerning the Constitutional Court of Colombia, where thousands of case documents are received daily, their processing has been expedited using an AI system called Prometea. Applying machine learning abilities, this system investigates, analyses, identifies and suggests priority cases on health-related aspects within a few minutes.¹⁴⁸⁷ Additionally, it produces statistical reports, automates documentation, systematizes and synthesizes case law across the country, and improves security by integrating blockchain technology. This system that includes human oversight, improved the efficiency of case processing by 937%.¹⁴⁸⁸

The Office of the Attorney General makes use of an AI system called Fiscal Watson, which consolidates criminal cases across different databases and regional

¹⁴⁸⁵ Ibid, p. 21

¹⁴⁸⁸ Juan Corvalan, *Prometea: Artificial Intelligence to Transform Justice and Public Organizations* (Apr. 13, 2020), <https://ojs.imodev.org/?journal=RIDDN&page=article&op=view&path%5B%5D=342&path%5B%5D=523>

offices to analyze similar evidentiary elements such as *modus operandi*, physical attributes, types of weapon and other aspects.¹⁴⁸⁹ By accelerating the processing of case information, Fiscal Watson has helped connect and solve similar cases across the country. The Attorney General has also suggested that Fiscal Watson can be used to identify irregularities in government contracts made during the COVID-19 pandemic, since all data and documentation is available online.¹⁴⁹⁰

The Superintendency of Companies, an administrative body, employs a robot assistant called Siarelis (System based on AI for the Resolution of Company Litigation) to exercise its discretionary judicial powers in corporate cases related for example to the piercing of the corporate veil or insolvency.¹⁴⁹¹ Using Case Based Reasoning (CBR), Siarelis helps officials identify relevant case law for a specific case and also provides users with possible decisions that could be reached in their case. The outcome reached by the system is decided based on the judicial history and precedent relevant to a specific case.

Law 2213 of 2022¹⁴⁹² and the General Procedure Code¹⁴⁹³ allow the use of different technologies in the different stages of Civil, Labor, Family, Administrative, Constitutional, Disciplinary and Criminal procedures in Colombia. The Law specifies that such technologies should only be used when they are suitable for the task. In this regard, Professor Gutierrez noted, “If ChatGPT and other LLMs currently available are evidently unreliable, since their outputs tend to include incorrect and false information, then judges would require significant time to check the validity of the AI-generated content, thereby undoing any significant “time

Center for AI and Digital Policy

savings”. As it happens with AI in other areas, under the narrative of supposed “efficiencies,” fundamental rights can be put at risk.”¹⁴⁹⁴

In 2023, ChatGPT was used in Colombian Courts in two different cases. The answers provided by ChatGPT were determinant in both cases. In the first case, the judge asked questions with regard to key legal issues, specific to the Colombian legal system. In the second case, the questions touched upon issues of access to justice and due process pertaining to carrying out a hearing in the metaverse. There was no evidence that the answers received by ChatGPT were corroborated by other sources. Professor Florez also raised the risk of over-reliance on “the outputs of automated systems.”¹⁴⁹⁵

These cases led the Constitutional Court of Colombia to issue a “landmark”¹⁴⁹⁶ ruling indicating that AI tools like ChatGPT may be used to assist with judicial tasks but cannot replace human judgment in legal decisions.¹⁴⁹⁷ The Court emphasized that while AI can help manage workload and draft documents, excessive reliance on these systems could threaten due process and judicial independence. The ruling established key principles including transparency, privacy protection, and the requirement for human oversight.

In addition, the Court required the issue of guidelines for the use of AI in courts within four months after the ruling. To this end, the Superior Council of the Judiciary (*Consejo Superior de la Judicatura*) established a partnership with UNESCO to tackle four areas: development of judicial AI guidelines, capacity building, algorithmic impact assessment, and transfer of knowledge.¹⁴⁹⁸ The Superior Council adopted the Guidelines for the Responsible Use of Artificial Intelligence in the Colombian Judiciary in 2024.¹⁴⁹⁹ Colombia is the first country to adopt these

Guidelines, developed with UNESCO.¹⁵⁰⁰ The Guidelines introduce a risk-based classification system for AI tools, requires mandatory human supervision, and sets out obligations of transparency, explainability, and data protection. The Guidelines explicitly state that AI systems may support administrative and analytical tasks but cannot replace human reasoning or decision-making in judicial proceedings. The guidelines also establish procedures for algorithmic audits, staff training, and ethical review before deployment.

Facial Recognition

In Colombia, facial recognition technology is used extensively by the State. The Ministry of Transport is integrating a network of cameras with facial recognition technology throughout Bogota. The system, which is meant to prevent and reduce road accidents, has become operational in December 2021 and provides the location of cameras out of transparency.¹⁵⁰¹ A facial recognition system to improve surveillance was also introduced by local authorities in September 2021 at a stadium in Barranquilla. This system combines cameras with access to unlimited databases to record and track individuals.¹⁵⁰² The system will be used to identify and detain anyone with cases pending before the judicial system or any other relevant authority. The Atanasio Girardot stadium in Medellín also has 170 smart cameras installed for surveillance, since 2016.¹⁵⁰³ Expanding the reach of surveillance in the city, Medellín introduced 40 security robots with facial recognition capability and an integrated AI security system to patrol the city.¹⁵⁰⁴ The Border Control Agency located at El Dorado International Airport in Bogota uses the Iris recognition system, with the system expected to reach other airports in the country within the next few years.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Fundación Karisma, a civil society organization dedicated to supporting the responsible use of tech, highlights the pitfalls of these systems. In a report titled “Discreet Cameras,” Fundación Karisma points out that surveillance technology and biometric identification systems in Colombia only take into consideration technical and impact considerations while assessing systems. There is no analysis using necessity, proportionality or the possible effect of the technology on human rights.¹⁵⁰⁵ However, Colombia’s co-sponsorship of the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology indicates a move towards official recognition of the importance of parameters such as reasonableness, necessity, proportionality, and the effect of the technology on human rights.¹⁵⁰⁶ Although the government tries to ensure transparency by sharing the location of video surveillance systems that use facial recognition technology, the right to privacy and other fundamental rights of individuals are still ignored.¹⁵⁰⁷

Use of AI during COVID-19 Pandemic

Despite this situation during the emergency of the COVID-19 the government released a mobile app named CoronApp.¹⁵⁰⁸ At first, CoronApp’s main objective was to allow people to stay updated on the progression of the pandemic in Colombia. In the days that followed, however, the narrative around the app changed. Its purpose became more ambitious. It soon became a digital tool to keep the population informed and “save as many lives as possible.”

Concerns were raised about the app's data privacy implications, as it collected personal information such as location data and potentially exposes users to security risks. The Colombian government stated that the app is voluntary, and that users' data will be kept confidential, but it is important for individuals to carefully review the app's privacy policy and consider the potential risks before downloading and using it. In response to these concerns, the Colombian human rights organization Dejusticia called for greater transparency and accountability in the use of personal data

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

collected through this app and another implemented in the future.¹⁵⁰⁹ Dejusticia had also called for the government to implement strict measures to protect the privacy of individuals and ensure that their data is only used for the purposes that the app was created.

Dejusticia has also urged the government to establish clear guidelines for the collection, use, and storage of personal data, and to provide users with the ability to opt out of the app(s) at any time. Additionally, they have called for the government to establish a system of oversight and accountability to ensure that data collected through the app(s) is not misused or mishandled.

CoronApp had the potential to be a useful tool in guaranteeing the health of the population, but it is important that the government takes steps to ensure that the personal data of users is protected and used responsibly. In April 2022, the Constitutional Court reviewed and determined that the plaintiffs' rights to privacy should be respected, even during a national state of emergency. Furthermore, the Court declared that authorities had a duty to "avoid the abusive and arbitrary use of personal data" and the National Data Authority was ordered to erase the plaintiffs' data.¹⁵¹⁰

Environmental Impact of AI

The growing adoption of AI technologies in Colombia has prompted concerns about their environmental impact, leading to the inclusion of sustainability considerations in recent AI policy proposals. Colombia's particular vulnerability to climate phenomena, coupled with its 70% dependence on hydroelectric power, makes environmental sustainability a critical aspect of AI governance.¹⁵¹¹

The national AI policy roadmap centers the ethical and sustainable use of AI and aims to develop AI in support of the UN Sustainable Development Goals. However, the specific recommendations related to environmental impact center on using AI tools to monitor water resource usage and quality and air quality and to

assist with sustainable urban planning.¹⁵¹² The National AI Policy (CONPES 4144) notes that Colombia lacks a way to measure the environmental impact of AI systems.¹⁵¹³ The document charges the MinCiencias with creating hyperscale data centers capable of supporting AI development “fed with renewable energy sources and technologies that optimize water use, minimizing the environmental impact, thereby guaranteeing the competitiveness and sustainability of the country.”¹⁵¹⁴

Lethal Autonomous Weapons

During the 2015 meeting of the Group of Governmental Experts (GGE) on lethal autonomous weapons (LAWS), Colombia issued a statement calling for multilateral regulation to ensure human control over autonomous weapons at all times, so that no machine makes an autonomous decision.¹⁵¹⁵ Colombia has called for a pre-emptive ban on all LAWS¹⁵¹⁶ and for an international treaty that will ensure meaningful human control over any use of force.¹⁵¹⁷

Colombia was among the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 UN General Assembly meeting. In this joint statement, States urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in

particular International Humanitarian Law (“IHL”), including through maintaining human responsibility and accountability in the use of force.”¹⁵¹⁸

At the 78th UN General Assembly First Committee in 2023, Colombia voted in favor¹⁵¹⁹ of resolution L.56¹⁵²⁰ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. The report should analyze ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.

The Secretary-General issued the report in the 79th UN General Assembly and analyzed ways to address the challenges and concerns autonomous weapon systems raise from humanitarian, legal, security, technological and ethical perspectives and reflect on the role of humans in the use of force.¹⁵²¹ Colombia contributed to statements from the Ibero-American states¹⁵²² and as part of a group High Contracting Parties to the CCW. Both reports reiterated support for a legally binding instrument to prohibit the use of autonomous weapons outside human control and restrict other uses. The latter statement also proposed a draft protocol VI originally submitted to the GGE in July 2022 as a starting point for a legally binding instrument.¹⁵²³

Colombia also endorsed, along with more than 30 other Latin American and Caribbean states, the Belén Communiqué of 2023,¹⁵²⁴ which calls for “urgent

negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

AI Literacy

The National AI Policy¹⁵²⁵ includes an axis (5.3.4) dedicated to Capacity Development and Digital Talent with action items to develop the capabilities and digital talent necessary for the design, use and adoption of AI, in addition to promoting the social appropriation of knowledge of this technology.¹⁵²⁶ The policy charges the Ministry of National Education (*Ministerio de Educación Nacional*) to add a section on AI to the Safe Use of Information Technology guide through 2026 and, over five years, to implement strategies in the curriculum to strengthen students’ digital competencies, including with AI. The policy also charges the Ministry of Education, with the help of the institute for education evaluation, to recommend a way to evaluate digital competencies through the national standardize tests by the end of 2026. More generally, the MinCiencias, MinTIC, and National Planning Department will increase general levels of social understanding of AI.

Human Rights

Colombia is a signatory to many international human rights treaties and conventions. Colombia has ranked as “free” in the Freedom in the World Report since 2023,¹⁵²⁷ with a score in 2025 of 70/100.¹⁵²⁸ Colombia ranks as “partly free” on Internet Freedom with a score of 64/100, in part because of violence against digital journalists and cyberattacks on media and government entities.¹⁵²⁹

According to Article 93 of Colombia’s Constitution, rights and duties in the national system are interpreted according to international treaties and conventions

¹⁵²⁵ Consejo Nacional de Política Económica y Social (CONPES), *Document 4144: National Artificial Intelligence Policy [Documento 4144: Política Nacional de Inteligencia Artificial]*, approved version, pp. 93–96 (Feb. 14, 2025), <https://colaboracion.dnp.gov.co/CDT/Conpes/Economicos/4144.pdf>

that have been ratified by its Congress.¹⁵³⁰ Thus, Colombia has made powerful commitments backed by strong action that encourages legal certainty, with an entire implementation, regulatory and monitoring ecosystem for AI. This is strengthened by expert contributions and public participation at the national, regional and international level.

OECD / G20 AI Principles

Colombia has endorsed the OECD AI Principles¹⁵³¹ and is part of the Global Partnership on Artificial Intelligence (GPAI).¹⁵³² Colombia's Ethical Framework for AI introduced as a guideline for trustworthy AI, provides standards for the ethical use and governance of AI and is aligned with the OECD AI principles.¹⁵³³ Additionally, Colombia has developed policy intelligence tools and a follow up plan to monitor the implementation of the OECD AI Principles, while identifying good practices to determine if OECD's recommendations to Colombia have been implemented.

Council of Europe AI Treaty

Colombia is not a member of the Council of Europe and has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.¹⁵³⁴

UNESCO Recommendations on AI Ethics

Colombia endorsed the UNESCO Recommendation on the Ethics of AI in November 2021. Even before the UNESCO recommendation was completed, the Presidency cited the example of OECD and UNESCO principles to acknowledge "the importance of ethical considerations for the design, development, and implementation of artificial intelligence in Colombia and more precisely the need to

adopt an Ethical Framework as a non-binding guide for the implementation of artificial intelligence in the country.”¹⁵³⁵

Colombia is part of the Latin America and Caribbean Regional Council of national and local governments established by CAF, the development bank of Latin America, and UNESCO to implement the UNESCO Recommendation in Latin America and the Caribbean.¹⁵³⁶ At the inaugural meeting in 2023, the Council focused on the collaborative exchange and formulation of proposals, encompassing both political and technical perspectives, aimed at guiding the ethical development of Artificial Intelligence in the region.¹⁵³⁷ Colombia signed the resulting 2023 Santiago Declaration to Promote Ethical Artificial Intelligence.¹⁵³⁸ The Santiago Declaration reflects UNESCO’s Recommendation on the Ethics of AI and establishes fundamental principles that should guide public policy on AI. These include proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.

UNESCO published the report on Colombia’s Readiness Assessment Methodology (RAM) exercise in 2025.¹⁵³⁹ The country does not yet have a profile on the UNESCO Global Hub, however.¹⁵⁴⁰

Evaluation

Colombia has anchored the National AI Policy in the Ethical Framework for Artificial Intelligence and international frameworks and other national models.

¹⁵³⁵ Gobierno de Colombia, *Ethical Framework for Artificial Intelligence in Colombia [Marco ético para la inteligencia artificial en Colombia]*, version 1, p. 9 [Spanish version] (May 2021), <https://minciencias.gov.co/sites/default/files/marco-etico-ia-colombia-2021.pdf>

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Colombia is part of the Regional Council for the implementation of the UNESCO Recommendation on AI Ethics and has endorsed the Ibero-American Charter on AI in Civil Service. Colombia also adopted the UNESCO Guidelines on use of AI in courts, the first country to do so. The Constitution of Colombia established a right to data protection, and the country has a comprehensive data protection law and an active data protection agency. Draft bills for ethical and sustainable development and application of AI are being discussed in Congress. The Colombian data protection authority is the first in the region to have opened an investigation on OpenAI ChatGPT. However, Colombia's laws have not yet codified the right to algorithmic transparency in law. There are also growing concerns regarding the use of facial recognition systems.

Costa Rica

In 2025, Costa Rica released the Action Plan for the National AI Strategy centered on ethical, safe, and responsible AI. The Legislative Assembly furthered discussions on three bills covering responsible AI use, development, and implementation.

National AI Strategy

Costa Rica adopted its National Artificial Intelligence Strategy (*Estrategia Nacional de Inteligencia Artificial*, ENIA) developed by the Ministry of Science, Innovation, Technology, and Telecommunications (*Ministerio de Ciencia, Innovación, Tecnología y Telecomunicaciones*, MICITT) in October 2024.¹⁵⁴¹ This initiative, drafted with UNESCO's support,¹⁵⁴² aims to align national efforts toward a long-term vision for AI. ENIA's primary goals include fostering the ethical, safe, and responsible use, adoption, and development of AI technologies to maximize benefits for citizens while minimizing potential harm. The strategy outlines specific action areas to harness AI's advantages and to address associated ethical, social, and technical risks and challenges.¹⁵⁴³

The MICITT later adopted an Action Plan to implement ENIA, introducing AI ethical and legal frameworks, guidance on technical norms and good practice on data protection.¹⁵⁴⁴ The Action Plan focuses on seven strategic axes of the ENIA 2024–2027 to ensure the comprehensive development of AI in Costa Rica, including Ethical, Safe, and Responsible AI; Widespread, Responsible Use for Economic Development; Promotion of R&D; Smart Government; Talent Training and

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Capacity-Building; Digital Infrastructure for Public Services; and International Leadership.

The country has also developed a general human-centered science, technology and innovation plan and a specific digital strategy to address issues related to AI technology. The National Plan on Science, Technology and Innovation 2022–2027 (provides a general overview of the country’s goals regarding the use of information and communication technologies for a sustainable, equitable and creative future. Regarding AI, the plan focuses on pursuing developing technical capabilities and competencies across STEM/STEAM curricula in schools and technical colleges, technical certification in AI, the development of understandable and accessible AI systems for all, and ensuring ethical and responsible AI adoption through the support of the fAIr Latin America and Caribbean (LAC) initiative designed by the Inter-American Development Bank (IDB).¹⁵⁴⁵

Adoption of the AI Strategy in 2024 marked progress on a key action item from the Digital Transformation Strategy 2023–2027.¹⁵⁴⁶ The Digital Transformation Strategy frames AI use as a way to drive the country’s economic competitiveness and productivity through innovation and value creation through digital citizenship and good governance.

AI Legislation

Costa Rica’s legislature is currently working on at least four bills related to artificial intelligence.¹⁵⁴⁷ The Draft Bill for the Responsible Promotion of Artificial Intelligence proposed in September 2023¹⁵⁴⁸ is the furthest along. The National Assembly’s Human Rights Commission approved the bill in early 2025 and sent to

plenary. Deputies proposed alternative text for consideration in October 2025.¹⁵⁴⁹ The Bill on Artificial Intelligence Regulation seeks to regulate the development, implementation, and use of AI in Costa Rica.¹⁵⁵⁰ The Technology and Education Committee approved the bill in October 2024 but it has not been considered in the plenary. The subcommittee issued a report¹⁵⁵¹ on and approved a Law for the Implementation of AI Systems, aimed at integrating AI in the public sector with attention to capacity-building. A law to regulate the use of AI in the electoral process has been studied by a special committee on the electoral process and is awaiting hearing in the plenary session.¹⁵⁵²

Public Participation

Citizen participation in Costa Rica has a vast and rich history that has given rise to a significant number of democratic innovations. The Constituent Assembly of 1949 was reintroduced into the constitutional text with instruments for citizen participation. With later reforms to the Constitution in 2002 and 2003, public participation was enhanced through the inclusion of the Referendum and the Popular Initiative. In 2003, Article 9 of the Constitution of Costa Rica was further amended, supplementing the various instruments of citizen participation that had already been incorporated into the Constitution. Costa Rica's democratic institutions provide a robust legal framework to support public participation.

The National Commission for Open Government is using its online platform to enable public consultations on relevant national policies. The MICITT publishes all its public consultation opportunities on its website¹⁵⁵³ as well as on social media

through its Facebook page.¹⁵⁵⁴ However, the MICITT does not include comments from the consultation on the site and the current site lists consultations back to only 2022.¹⁵⁵⁵

Costa Rica has made important progress in aligning its regulations and practices regarding public participation with OECD standards.¹⁵⁵⁶ Costa Rica also takes part in the CoST initiative to implement the Infrastructure Transparency Index (ITI) for improving transparency and accountability across public infrastructures. These commitments consolidate the transformation of Costa Rica towards an open government.¹⁵⁵⁷

The Ministry of Science, Innovation, Technology and Telecommunications publishes consultation opportunities on a dedicated website.¹⁵⁵⁸ However, consultations held before 2022 are no longer available. The ministry held consultations on the national Cybersecurity Strategy in 2022.¹⁵⁵⁹

Costa Rica launched a public national consultation on the National Artificial Intelligence Strategy, inviting citizens to participate in shaping the country's approach to artificial intelligence.¹⁵⁶⁰ The consultation, which was open March to April 11, 2024, sought input to promote the ethical, safe, and responsible adoption and development of AI in the nation. Participants were encouraged to review the National Artificial Intelligence Strategy document and submit feedback using a public consultation form via email.

The Legislative Assembly's Science and Technology Committee and the Chamber of Information and Communication Technologies (CAMTIC) held a

Center for AI and Digital Policy

working group on three bills related to AI regulation.¹⁵⁶¹ The session was limited to experts. The Minister of Science and Technology expressed fears that any attempts to regulate artificial intelligence would become obsolete even before publication. A technology attorney called requirements in the laws for prior authorization and registries “an outdated form of regulation” and noted that even the EU AI Act, “which is the most advanced in the world in AI, does not have these controls.”

Data Protection

Costa Rica has two comprehensive laws that protect personal data. Law No. 8968 protects the personal data handling of individuals. Law No. 7975, the Undisclosed Information Law, specifies that the unauthorized disclosure of confidential and/or personal information is a crime.¹⁵⁶² These laws, together with their by-laws, were enacted to regulate activities of companies that administer databases containing personal information.¹⁵⁶³ The laws require data subjects’ consent before the processing or use of their data. Consent must cover in particular the purpose for data collection and how the data will be processed. The identity of all recipients and parties with access to personal data must be disclosed. Transfer of personal data to third countries is also conditional upon data subjects’ consent.

The Agency for the Protection of Inhabitants’ Data (*Agencia de Protección de Datos de los Habitantes*, Prodhav) is a fully independent body¹⁵⁶⁴ to “guarantee to any person, regardless of their nationality, residence, or home, the respect of their right to control information about their private life or activity and other rights of their personhood like the defense of their freedom and equality with respect to automated or manual treatment of the data related to their person or property.”

Additional laws include Costa Rica’s Executive Decree No. 37554-JP for data breach and the General Telecommunications Law No. 8642 (Article 42) that protects the privacy of communications and personal information. The General Telecommunications Law is supplemented by administrative regulation N° 35205-

MINAET that guarantees the secrecy of communications, the right to privacy, and the protection of personal data of subscribers and users.¹⁵⁶⁵

After proposed amendments to align the data protection law with the GDPR stalled,¹⁵⁶⁶ the legislative assembly is discussing a new proposed law that would repeal Law 8968 and replace it.¹⁵⁶⁷ The proposed new legislation would establish a set of principles and rights for personal data protection to ensure proper handling of residents' personal data and enhance the level of protection for individuals regarding data processing. These revisions would align Costa Rica with international standards on data privacy in a society increasingly shaped by information and communication technologies. The proposed law also aims to promote the development of mechanisms for international cooperation among control authorities in Ibero-American states, non-regional control authorities, and international entities specializing in data protection. The first reading of the law was approved and a letter from the Costa Rica Institute of Technology in June 2025 indicated the law was still under consideration.¹⁵⁶⁸

The Ministry of Science, Innovation, Technology, and Communications included data protection as a main objective under the Ethical, Safe, and Responsible AI and Smart Government axes under the AI Action Plan.¹⁵⁶⁹

As a member of the Ibero-American Network for the Protection of Personal Data (RIPD) which comprises 16 data protection authorities from 12 countries, the Prodhab endorsed the General Recommendations for the Processing of Personal Data in Artificial Intelligence¹⁵⁷⁰ and the accompanying Specific Guidelines for

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

under consideration by the Legislative Assembly (*Asamblea Legislativa*) does not refer to algorithms or AI but contains a general transparency principle, a right to data access, and the right to not be object to automated decisions with significant impact or without human intervention.¹⁵⁷⁹ Costa Rica's AI strategy emphasizes transparency in AI systems as necessary for building trust. The Strategy would require developers to ensure that AI processes are understandable and that automated decisions are explainable, especially in sensitive sectors like public administration.¹⁵⁸⁰ Regular audits and clear information on how AI algorithms work are recommended to avoid biases and maintain accountability, particularly for AI models impacting the public. Transparency is also one of the key principles of the 2022 National Code of Digital Technologies.¹⁵⁸¹

The RIPD Specific Guidelines provide clarity on the definition and requirements of “transparency,” noting: “The information provided regarding the logic of the AI model must include at least basic aspects of its operation, as well as the weighting and correlation of the data, written in a clear, simple and easily understood language, it will not be necessary to provide a complete explanation of the algorithms used or even to include them. The above always looking not to affect the user experience.”¹⁵⁸²

Use of AI in Public Administration

The ENIA highlights AI's potential to streamline public administration by automating tasks, improving public service delivery, and enhancing decision-making efficiency.¹⁵⁸³ For instance, AI is used to manage health services, such as the EDUS platform by Costa Rica's Social Security Fund, which leverages AI for chronic

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

disease management and prevention. The document underlines the need for ethical standards and effective human oversight in these applications to align with national values and ensure responsible deployment. The Smart Government axis (Axis 4) of the Action Plan for the ENIA¹⁵⁸⁴ establishes specific actions to promote the use of AI in the public sector. Milestones include publishing a digital catalog of AI projects in the public sector, developing the capacity and skills of public officials in the use and management of AI, and implementing systems that utilize AI to enhance the quality of public services and decision-making.

As a member of the Latin American Centre for Development Administration (CLAD), Costa Rica approved the Ibero American Charter on Artificial Intelligence in Civil Service in November 2023.¹⁵⁸⁵ The Charter aims to provide a roadmap and common framework for CLAD member states to learn about the challenges and opportunities involved in the implementation of AI and adapt their AI policy strategies and laws accordingly. The guiding principles are human autonomy; transparency, traceability and explainability; accountability, liability and auditability; security and technical robustness; reliability, accuracy, and reproducibility; confidence, proportionality, and prevention of damage; privacy and protection of personal data; data quality and safety; fairness, inclusiveness, and non-discrimination; human-centering, public value, and social responsibility; and sustainability and environmental protection. In addition to common principles, the Charter recommends specific tools for monitoring AI impact as well as a risk classification mechanism that guardrails for high-risk use cases and prohibitions against uses that violate human rights.¹⁵⁸⁶

Use of AI in Courts

While Costa Rica's judiciary has not yet fully integrated AI, the ENIA envisions a future where AI could assist with case management, evidence analysis, and even support decision-making. The strategy stresses that any use of AI in the legal system must be transparent, accountable, and subject to human oversight to uphold justice and prevent discrimination or errors in judgment.¹⁵⁸⁷

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

A new AI system called Prometea developed by the Innovation and AI Laboratory of the School of Law of the University of Buenos Aires and the Public Prosecutor's Office of the Autonomous City of Buenos Aires, has been implemented in the judicial system of the Inter-American Court of Human Rights in Costa Rica.¹⁵⁸⁸ Regardless of whether judicial cases are simple (e.g. minor infractions, traffic accidents, and taxi license disputes) or complex (e.g. murder trials), controversy lies in the inevitable biases of the AI-enabled system and the lack of algorithmic transparency behind the decision-making process. Transparency of the AI system's algorithm, therefore, must be assured to protect due process and the rule of law.

AI and Hiring

The use of data analytics and AI techniques for hiring, firing, and promoting employees in Costa Rica has also been very controversial due to AI systems' bias and lack of transparency. Companies recruiting in Costa Rica must adapt their recruiting processes to accommodate Costa Rican law, especially with regard to discrimination. However, controversy persists because Costa Rican law does not directly regulate the impact or effects of AI on recruitment.¹⁵⁸⁹

Costa Rica has piloted a skills and training platform that uses AI to "provide skill development suggestions to participants, based on their abilities, interests and experiences."¹⁵⁹⁰

The ENIA addresses the role of AI in the hiring process, acknowledging its potential to make recruitment more efficient and objective.¹⁵⁹¹ However, it also highlights the importance of preventing algorithmic biases that could affect vulnerable groups. Costa Rica's AI strategy encourages transparency in AI-driven hiring tools so applicants understand how decisions are made. The ENIA also supports providing opt-out capability to ensure ethical AI practices in employment.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

According to a September 2024 ManpowerGroup survey, Costa Rica ranks among the top countries with strong hiring intentions, with 36% of employers planning to increase their workforce. This positive outlook is partly driven by advancements in technology and the integration of AI in various sectors.¹⁵⁹²

Environmental Impact of AI

Costa Rica's ENIA centers sustainability and well-being as guiding principles,¹⁵⁹³ stipulating that AI systems must continuously evaluate the impacts of these technologies on society, animal life, and the environment. Given the environmental impact of AI represents one of the key risks associated with AI in Costa Rica, the country highlights the urgency of developing AI sustainably, prioritizing energy efficiency, and adopting renewable energy sources. Axis 1 of the AI Strategy Action Plan calls for technical recommendations to incorporate sustainability and energy efficiency criteria into AI development.¹⁵⁹⁴ Axis 4, Smart Government, calls for training, awareness, and resource exchange to promote the “use, development, and sustainable management of AI.”¹⁵⁹⁵

Lethal Autonomous Weapons

Costa Rica is one of the 126 member states signatory to the Convention on Certain Conventional Weapons (CCW) and participated in CCW meetings. During the UN General Assembly in October 2013, Costa Rica proposed that critical functions of weapons systems be subject to meaningful human control highlighting the risks and harms identified with the use of armed drones and robotic weapons. In 2016 Costa Rica called for a preemptive ban on lethal autonomous weapons systems.¹⁵⁹⁶

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Costa Rica has continued to advocate for the ban on lethal autonomous weapons. In 2020 the Ministry of Foreign Affairs, together with the Foundation for Peace and Democracy (FUNPADEM), called for the prohibition of the use of Lethal Autonomous Weapons (LAWS).¹⁵⁹⁷ Still in 2020, Costa Rica advocated for the development of international legally binding agreements providing for prohibitions and regulations on autonomous weapons systems at the Group of Governmental Experts (GGE) on emerging technologies in the area of LAWS.¹⁵⁹⁸

Costa Rica was among the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 UN General Assembly meeting. In this joint statement, States urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law (IHL), including through maintaining human responsibility and accountability in the use of force.”¹⁵⁹⁹

In February 2023, the Costa Rican Ministry of Foreign Relations, together with the Foundation for Peace and Democracy, organized the Latin American and Caribbean Conference on the social and humanitarian impact of autonomous weapons. The Conference resulted in the endorsement by Costa Rica and more than 30 other Latin American and Caribbean states, of the Belén Communiqué.¹⁶⁰⁰ The Belén Communiqué calls for “urgent negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

At the 78th UN General Assembly First Committee in 2023, Costa Rica co-authored draft resolution L.56¹⁶⁰¹ on autonomous weapons systems. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. Costa Rica’s submission to the report reiterated its support for a legally binding instrument.¹⁶⁰²

Costa Rica voted in favor of Draft Resolution L.77 on lethal autonomous weapons systems at the 79th UN General Assembly First Committee in October 2024. The draft drew attention to the “negative consequences and impact of autonomous weapon systems on global security and regional and international stability” and marked the urgent necessity of human interventions to ensure accountability, responsibility, and compliance toward international law. L.77 also noted the Secretary-General’s proposal on enforcing legally binding prohibitions and regulations for autonomous weapons systems.¹⁶⁰³ Speaking at the assembly, Costa Rica reiterated the potential harms caused by lethal autonomous weapons and called for legally binding instruments to prevent the deployment of such weapons.¹⁶⁰⁴

AI Literacy

The ENIA¹⁶⁰⁵ identifies AI literacy and training as essential to ensure that all members of society can fully benefit from the technology, and tasks the Ministry of Science, Innovation, Technology, and Telecommunications with coordinating public AI literacy efforts and training for public officials. The ENIA identifies improvements to communications infrastructure and adaptation of training to local

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

and regional languages and dialects as core dependencies of implementing AI training nationwide.

The AI Strategy Action Plan incorporates objectives for training and talent development into Axis 5,¹⁶⁰⁶ with the expected result of formulating and executing an AI literacy strategy through Intelligent Community Centers (*Centro Comunitario Inteligentes, CECI*). This strategy includes awareness campaigns, accessible educational resources, and training activities for the community. This axis also targets the implementation of workforce reskilling and upskilling programs, directed to engineers and personnel from various areas who can benefit from AI technologies in their roles. Other efforts are directed to end-users, through guidance from trained personnel on the application of AI technologies to improve their tasks.

Human Rights

Freedom House ranked Costa Rica “Free” with an overall score of 91/100 in the 2026 Freedom in the World report.¹⁶⁰⁷ Costa Rica also ranked as “Free” with a score of 86/100 for freedom on the internet.¹⁶⁰⁸ However, the report cited “worsening online intimidation,” especially against journalists critical of the president. “Politicalization in the allocation of state advertising” to media outlets also threatens Costa Ricans’ online freedom. Human rights in Costa Rica predominantly stem from the UDHR, the country’s Constitution, and the Inter-American Human Rights System.

OECD / G20 AI Principles

Costa Rica endorsed the OECD AI Principles for designing safe, fair, trustworthy and robust AI systems¹⁶⁰⁹ before becoming a member of OECD on May 25, 2021.¹⁶¹⁰

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Several policies proposed in Costa Rica's national digital transformation strategy, in which AI is included, align with the OECD AI principles. These include a focus on inclusive growth; human-centered values and fairness; transparency; robustness, security, and safety; and accountability.¹⁶¹¹ The National AI Strategy¹⁶¹² and related Action Plan¹⁶¹³ further these principles and Costa Rica's commitment to ethical, reliable human-centered AI for sustainable development.

Council of Europe AI Treaty

Costa Rica contributed as a non-member¹⁶¹⁴ to the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law. Despite this participation, Costa Rica has not signed this first legally binding international AI treaty.¹⁶¹⁵

UNESCO Recommendation on AI Ethics

Costa Rica is one of the 193 countries that adopted the UNESCO Recommendation on the Ethics of AI during the 41st General Conference in November 2021. The instrument is the first of its kind that considers ethics as a basis for normative evaluation and guidance of AI technologies with reference to human dignity and wellbeing, and the prevention of harm.¹⁶¹⁶

CAF, the development bank of Latin America, and UNESCO pledged to create a Regional Council composed of national and local governments in the region to support implementation of the UNESCO Recommendation. Costa Rica is a

member of the Regional Council,¹⁶¹⁷ which held the inaugural meeting in October 2023 in Santiago de Chile.¹⁶¹⁸ Costa Rica signed the resulting Santiago Declaration to Promote Ethical Artificial Intelligence.¹⁶¹⁹ The Declaration aligns with the UNESCO Recommendation and establishes fundamental principles that should guide public policy on AI: proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.¹⁶²⁰

Costa Rica also participated in the Second Ministerial and High Authorities Summit on the Ethics of Artificial Intelligence in Latin America and the Caribbean held in Montevideo, Uruguay in 2024.¹⁶²¹ The summit consolidated the work proposed in the Ministerial Summit in Santiago, seeking to advance collaborative and sustainable AI-regulations efforts for Latin America and the Caribbean in the Montevideo Declaration.¹⁶²²

The Ministry of Science, Innovation, Technology and Telecommunications in Costa Rica developed the National AI Strategy released in 2024 through collaboration with UNESCO to align the strategy with the UNESCO Recommendation.¹⁶²³

Costa Rica is currently in process of completing the UNESCO Readiness Assessment Methodology (RAM),¹⁶²⁴ a tool to support the effective implementation of the Recommendation. The RAM helps countries and UNESCO identify and address any institutional and regulatory gaps.¹⁶²⁵

Evaluation

Costa Rica adopted a national AI strategy aligned with the UNESCO Recommendation through collaboration with UNESCO and then created an Action Plan for implementation. Costa Rica has specifically endorsed worldwide initiatives focused on the ethical and responsible use of AI, including the OECD AI principles and the UNESCO Recommendation on the Ethics of AI, and has also participated in regional efforts to implement the frameworks. Costa Rica has an independent data protection agency charged with enforcing the comprehensive data protection law regime. The extensive use of AI both in public and private sectors calls, however, for protection of the right to algorithmic transparency.

Czechia

In 2025, Czechia approved a roadmap for the AI Strategy and submitted legislation to implement the EU AI Act. Czechia also launched a national AI skills initiative to build basic AI knowledge and skills in the public administration and across society.

National AI Strategy

The Czech Ministry of Industry and Trade (MIT) announced¹⁶²⁶ the approval of an updated National AI Strategy of the Czech Republic 2030¹⁶²⁷ (NAIS 2030) by government resolution on July 24, 2024. This updated strategy represents a fundamental shift from Czechia's original 2019 National Artificial Intelligence Strategy's general aspirational guidelines approach to a more structured and accountable framework. The updated NAIS moves from voluntary guidelines to specific requirements with designated oversight and enforcement mechanisms, reflecting Czechia's commitment to following through on EU regulatory standards and to ensuring the cohesive implementation of AI ethics and funding mechanisms for AI in the country. This includes a mandatory implementation framework with regular reporting requirements, specific timelines for implementation, clear accountability measures, and concrete funding commitments.¹⁶²⁸

The NAIS 2030 specifically refers, multiple times, across multiple contexts, to: 1) Fairness (*spravedlnost*); 2) Accountability (*odpovědnost*); 3) Transparency (*transparentnost*); 4) Rule of Law (*právní stát*); 5) Legal Force (*právní síla*); and 6) Enforcement (*vymáhání*).¹⁶²⁹ The 2019 NAIS established a standard of “maintaining a high level of protection of fundamental and other rights, in line with the European approach of human-centric AI.”¹⁶³⁰

¹⁶²⁶ Ministry of Industry and Trade, *Czechia as a Technological Leader: Government Approved the National Strategy for Artificial Intelligence of the Czech Republic 2030* (Jul. 24, 2024), <https://mpo.gov.cz/en/guidepost/for-the-media/press-releases/czechia-as-a-technological-leader--government-approved-the-national-strategy-for-artificial-intelligence-of-the-czech-republic-2030--282278>

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The updated NAIS 2030 includes a restructuring around seven key areas: 1) AI in Research, Development and Innovation, 2) Education and Expertise in AI, 3) AI Skills and Labor Market Impacts; 4) Ethical and Legal Aspects of AI, 5) Security Aspects of AI, 6) AI in Industry and Business, and 7) AI in Public Administration and Public Services.¹⁶³¹ International Cooperation is integrated across all areas, and Ethics and Legal Aspects of AI is now a standalone area of focus, after previously being combined as two among five topics in the 2019 NAIS.¹⁶³²

The Deputy Prime Minister and Minister of Industry and Trade are directly responsible for the NAIS implementation, coordinating through the newly established AI Committee. The AI committee is a subcommittee of the Digital Czech Republic Steering Committee. The Committee primarily includes responsible ministries who are competent to coordinate each specific key area of the Strategy and will be in charge of the NAIS operational management. Working groups are affected to each of the NAIS seven key objectives. Once a year, the Steering Committee and the Czech Government will receive a progress report on the NAIS implementation. The 2025 Action Plan attached to NAIS 2030 earmarks significant public funding to priority projects across R&D, skills, public administration use, and SME adoption, strengthening the credibility of delivery commitments.¹⁶³³

The 2019 NAIS provided context for the updated version.¹⁶³⁴ The NAIS follows up on the commitment the Czech Republic undertook by signing, together with other EU Member States the 2018 EU Declaration of Cooperation on Artificial Intelligence.¹⁶³⁵ The NAIS is part of the Innovation Strategy of the Czech Republic 2019–2030¹⁶³⁶ and the Digital Czech Republic strategy.¹⁶³⁷ The 2019 NAIS referenced work by the UN, OECD, and Council of Europe as guides for addressing the legal, societal, and ethical aspects of AI. Introducing the 2019 NAIS, the prime

minister stated, “We are going to focus on protecting every person and consumer, their rights and privacy, especially the weakest ones. We are going to prevent discrimination, manipulation and misuse of AI, we are going to set the rules for decision-making of algorithms about people in everyday life.”¹⁶³⁸

The National AI Strategy of the Czech Republic 2030 continues the path first established with the 2019 NAIS to embody, and now put into more specific action, the Government's "commitment to becoming one of Europe's innovative leaders and a country of the technological future within twelve years.”¹⁶³⁹ This translates into a position cautioning the EU against overregulation in view of the adoption of an EU AI Act, following the release of the European Commission’s White Paper on AI.¹⁶⁴⁰ In November 2019, the Czech Republic prepared a position non-paper for the EU on the “Regulatory Framework for AI in the EU.”¹⁶⁴¹ In the non-paper, the Czech Republic recommended to refrain from initial overregulation of AI, to promote self-regulation and soft-law based on best practices, and to define horizontal red lines as a means of ensuring the protection of fundamental rights as well as legal certainty. The Czech Republic also emphasized that “securing the safety of citizens is the very precondition for the true implementation of fundamental human rights and freedoms.”

The Czech Republic is also one of 14 EU Member States that urged the Commission in October 2020 to push for as little regulation as possible in the AI field to find a balance between setting up rules and ensuring fast AI development. In their non-paper, Czechia and other EU Member States set out two visions for the EU’s development of AI: (1) promoting innovation, while managing risks through a clear framework and (2) establishing trustworthy AI as a competitive advantage.¹⁶⁴²

EU Digital Services Act

As an EU member state, Czechia shall apply the EU Digital Services Act (DSA).¹⁶⁴³ The DSA regulates online intermediaries and platforms to prevent illegal and harmful activities online and the spread of disinformation.

Czechia designated the Czech Telecommunication Office (ČTÚ) as the Digital Services Coordinator (DSC)¹⁶⁴⁴ charged with monitoring platform compliance, transparency, and online content governance. Although trusted-flagger systems and penalty mechanisms are still being finalized, the coordination framework is fully functional and demonstrates growing regulatory maturity. However, in 2025 the European Commission referred Czechia to the Court of Justice of the EU for not equipping the DSC with all required enforcement powers and penalties, indicating institutional capacity gaps to be addressed.¹⁶⁴⁵

EU AI Act

As an EU member State, Czechia is bound by the EU AI Act.¹⁶⁴⁶ The EU AI Act is a risk-based market regulation that aims to promote a human-centric approach to AI and make the EU a global leader in the development of secure, trustworthy, and ethical AI.

Czechia designated the Personal Data Protection Office (*Úřad pro ochranu osobních údajů*) and Public Defender of Rights (*Veřejný ochránce práv*) as national competent authorities to ensure the protection of fundamental rights.¹⁶⁴⁷ The AI Committee under the Ministry of Industry and Trade, responsible for implementing

the NAIS,¹⁶⁴⁸ is also planning implementation of the AI Act.¹⁶⁴⁹ The Ministry of Industry and Trade submitted a bill to Parliament¹⁶⁵⁰ in September 2025 that designates the Telecommunications Office (ČTÚ) as the single point of contact.¹⁶⁵¹ The National Bank and Office for Personal Data Protection also have oversight duties while the Office for Technical Standardization will be the notifying authority and oversee conformity assessments.

Public Participation

Public participation to formulate the 2024 National AI Strategy was formalized and inclusive. The public participation phase for preparing the update took place from June 28–August 20, 2023, and included 517 respondents from the general public, public administration representatives, private sector stakeholders, academic institutions, research organizations, and non-profit organizations.¹⁶⁵² “To ensure broad-based support and relevance, the MPO consulted with public and private representatives. [...] We were inspired by the approaches of countries like Canada, the USA, the United Kingdom, and the Netherlands. We organized an online roundtable where experts from these countries presented their approaches to AI. The roundtable served as a platform for exchanging information and best practices,” said Petr Očko, Chief Director for Digitalization and Innovation at the MPO.¹⁶⁵³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

This approach demonstrates more active commitment to public participation, including the use of Expert Working Groups, organized by the Aspen Institute in cooperation with prg.ai, under the auspices of the Ministry of Industry and Trade. However, it is unclear exactly how the public was involved in the consultation, which appears to possibly have focused mostly on experts, industry, and academics with some inclusion of NGOs and social partners. Despite the lack of clear insights into this process, it is notable that there appears to be a dedicated effort by key Czech AI leaders to embrace the need for, and execution of, robust public participation, perhaps in response to the lack of civil-society engagement, such as by human rights organizations, in the 2019 strategy.¹⁶⁵⁴

In February 2020, Czechia launched the AI Observatory and Forum, an expert platform on legal aspects of AI to create a favorable social and legal environment for research, development and use of responsible AI.¹⁶⁵⁵ The platform is tasked with identifying legislative obstacles for research, development and use of AI and offering recommendations on their removal, developing legal and ethical recommendations for practice, providing space for public debate and engaging Czechia in international discussions on AI regulation and data economy. Audits in the public and private sector will also detect the existence of legal barriers. The core of the expert platform and forum consists of a team of independent experts that continuously monitors trends in research and development of AI, its social impact, the development of legal and ethical rules in Czechia, in other countries and at international level. The platform cooperates closely with the AI Committee in charge of coordinating the implementation of the NAIS.

Despite functioning for several years, however, the forum has not published reports of findings in the public domain.¹⁶⁵⁶ The latest news uploaded to the platform website are from 2020. Given the inactivity of the AI Observatory and Forum since 2020, the standing mechanism for sustained public co-governance remains limited; while the 2023 consultation engaged experts and stakeholders, broader citizen participation could be strengthened in the next update cycle.¹⁶⁵⁷

Center for AI and Digital Policy

Data Protection

Since the Czech Republic is an EU Member State, the General Data Protection Regulation (GDPR)¹⁶⁵⁸ is directly applicable in Czechia and to Czechs. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens.”¹⁶⁵⁹ The GDPR has been applicable since May 25, 2018. The EU Data Protection Law Enforcement Directive (LED)¹⁶⁶⁰ protects citizens’ fundamental right to data protection in handling by criminal law enforcement authorities.¹⁶⁶¹ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.¹⁶⁶²

The 2019 Personal Data Processing Act (ZZOÚ) supplements the GDPR and implements the LED in Czech law.¹⁶⁶³ The Office of Personal Data Protection (*Úřad pro ochranu osobních údajů*) serves as the Czech Data Protection Authority under the ZZOÚ.¹⁶⁶⁴

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Czech Republic is also a member of the Council of Europe and has signed but has not yet ratified¹⁶⁶⁵ the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.¹⁶⁶⁶

Czechia's Office of Personal Data Protection joined the Global Privacy Assembly (GPA) as an accredited member in 2002.¹⁶⁶⁷ The Czech DPA did not endorse or co-sponsor the 2018 Declaration on Ethics and Data Protection in Artificial Intelligence,¹⁶⁶⁸ 2020 Resolution on Accountability in the Development and Use of Artificial Intelligence,¹⁶⁶⁹ 2022 Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology,¹⁶⁷⁰ or 2023 Resolution on Generative Artificial Intelligence Systems.¹⁶⁷¹

Algorithmic Transparency

The Czech Republic has ratified Convention 108, which includes provisions for algorithmic transparency, but has not yet ratified the Protocol that amends it (Convention 108+) and expands algorithmic transparency requirements.¹⁶⁷² However, the Czech Republic is subject to the GDPR as an EU member state. Czechs have a general right to obtain access to information about automated decision-

making and to the factors and logic of an algorithm.¹⁶⁷³ The EU AI Act, effective from August 2, 2024,¹⁶⁷⁴ also introduces transparency obligations for AI systems in the Czech Republic. The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems¹⁶⁷⁵ specifically emphasizes requirements on transparency, accountability and effective remedies.

AI Oversight

The Czech DPA has been proactive in the deployment of GDPR protections, having fined companies for data leaks and conducted bilateral meetings with the Austrian oversight body¹⁶⁷⁶ on the risks of AI in social media.¹⁶⁷⁷ Until the oversight authorities for the EU AI Act are designated by law, the DPA remains the primary oversight body for algorithmic-processing.

Environmental Impact of AI

The Czech Republic NAIS does not specifically address policies aimed at mitigating the environmental impact of AI technologies.¹⁶⁷⁸ Still, the Czech Republic complies the EU Net Zero policies and the European Green Deal and has obligations under the ESG “Do no harm” principle, which prescribes an overall careful approach to the environment before the deployment of new technologies. The Digital Czech Republic¹⁶⁷⁹ strategy highlights the importance of a public and political debate to

find new and innovative ways of adapting to the emerging climate change through digital and AI-enhanced technologies and tools.

Lethal Autonomous Weapons

According to the Czech Republic, “it is indispensable for the CCW High Contracting Parties to have sufficient guidance on how to ensure that any new weapon, means or methods of warfare are in compliance with the International Humanitarian Law, which is our main objective” and “welcome[s] the work on Lethal Autonomous Weapons Systems.”¹⁶⁸⁰

The Czech Republic is one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”¹⁶⁸¹ Czechia voted in favor¹⁶⁸² of resolution L.56¹⁶⁸³ on autonomous weapons systems, emphasizing the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems.” The Czech Republic continued this support for discussions on LAWS in the UN General Assembly with the goal of an international agreement with support for Resolution 79/62¹⁶⁸⁴ on lethal autonomous weapons systems in the 2024 UN General Assembly.

Czechia participated in the REAIM 2023 international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Czechia endorsed a joint call for action

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

stressing “the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.”¹⁶⁸⁵

AI Literacy

AI literacy is embedded in NAIS 2030 under Education and Expertise in AI and AI Skills and Labour Market Impacts.¹⁶⁸⁶ The AI National Skilling Plan¹⁶⁸⁷ launched in June 2025 with Microsoft aims to train more than 350,000 people in basic AI skills over the next year. Target groups include public administration, teachers, students, women, job-seekers, and non-profit organizations. Charles University is a partner in the program and participated in an AI Skills for Public Administration. The AI for Kids program is training teachers to support students’ literacy on what AI is, how to use it “meaningfully and sensibly,” and to understand the impact of AI on individuals and society. A brochure on tips for using AI in education and beyond was one of the first program outputs. The initiative explicitly aligns to commitments in the NAIS 2030.

Human Rights

Czechia adopted the United Nations Declaration on Human Rights. As a member of the European Union and of the Council of Europe, Czechia is committed to upholding the EU Charter of Fundamental Rights and the European Convention on Human Rights. Freedom House ranks the Czech Republic “Free” with a score of 95/100, recognizing the country’s positive standing on political and civil rights.¹⁶⁸⁸

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers recalled that their commitment to the Convention for the Protection of Human Rights and Fundamental Freedoms required member state to “ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-

dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”¹⁶⁸⁹

OECD / G20 AI Principles

The Czech Republic has been a member of OECD since 1995 and has endorsed the OECD AI Principles.¹⁶⁹⁰ The original NAIS emphasizes the importance of cooperation with the OECD for the implementation of the Strategy measures. Exchange of information in expert groups on AI at the OECD and coordination of preparations for negotiations within the OECD are amongst those measures.¹⁶⁹¹ The OECD AI Policy Observatory acknowledges that the NAIS addresses “inclusive growth, sustainable development and well-being; robustness, security and safety; accountability; fostering a digital ecosystem for AI; providing an enabling policy environment for AI; building human capacity and preparing for labour market transition, international co-operation for trustworthy AI.”¹⁶⁹²

The Czech Republic joined the Global Partnership on AI, a multi-stakeholder initiative which aims to foster international cooperation on AI research and applied activities, in 2022.¹⁶⁹³ The GPAI is “built around a shared commitment to the OECD Recommendation on Artificial Intelligence.”

Council of Europe AI Treaty

The Czech Republic contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI,

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Human Rights, Democracy and the Rule of Law.¹⁶⁹⁴ The Czech Republic is party to the Convention as an EU member state but has not signed independently.¹⁶⁹⁵

UNESCO Recommendation on AI Ethics

A UNESCO member state since 1993,¹⁶⁹⁶ Czechia is among the 193 countries that endorsed the UNESCO Recommendation on AI, the first ever global agreement on the ethics of AI.¹⁶⁹⁷ The Czech Republic supported the implementation of the UNESCO Recommendation by hosting the first ever Global Forum on the Ethics of AI under the Czech Presidency of the Council of the European Union and under the patronage of UNESCO in December 2022. The forum placed a spotlight on “ensuring inclusion in the AI world,” and took stock of the implementation of the recommendation.¹⁶⁹⁸

Czechia has not initiated the Readiness Assessment Methodology (RAM),¹⁶⁹⁹ a tool developed by UNESCO to assist in the implementation of the Recommendation.

Evaluation

The Czech Republic’s ambition to become a European leader in the digital field by 2030¹⁷⁰⁰ has shaped its position on AI policy. The release in 2024 of an updated National Artificial Intelligence Strategy 2030 builds on that ambition by shifting to a focus on implementation.¹⁷⁰¹ The updated National AI Strategy of the

Center for AI and Digital Policy

Czech Republic 2030, effective as of July 2024, shifted transitioned from the broad aspirational approach in the 2019 NAIS to a structured, more enforceable framework.

Although the country adheres to a human centric approach to AI through its commitment to implementing the OECD AI Principles and the UNESCO Recommendation on the Ethics of AI, Czechia has consistently stood against perceived overregulation, notably through the EU AI Act, and strives with its national AI strategy to remove what it considers as legal impediments to AI development. The Czech Republic has not yet ratified the modernized Convention 108+ for the protection of individuals with regard to the processing of personal data. Czechia has legislation pending to establish a national supervisory mechanism for AI aligned with the AI Act.

Denmark

In 2025, Denmark passed legislation to implement the EU AI Act by designating national supervisory authorities. The Ministry of Culture proposed the Copyright Act as a means to combat Deepfakes and proposed measures to tighten control over training AI systems on copyrighted material.

National AI Strategy

The Danish government unveiled the national AI strategy in March 2019.¹⁷⁰² The Danish strategy on AI development outlines the issues that must be tackled and defines specific policy efforts and key initiatives. The national AI strategy intends to establish Denmark as a leader in responsible AI development. There are four objectives to accomplish this goal 1) Establish a consistent ethical and human-centered foundation for artificial intelligence; 2) Prioritize and promote research in artificial intelligence; 3) Encourage the growth of Danish firms through the development and use of artificial intelligence; and 4) Ascertain that the public sector utilizes AI to provide world-class services to citizens and society.

The strategy covers both the public and the private sector and aims to create a framework to improve the level of trust in AI. Six principles for AI guide this objective: self-determination, human dignity equality and justice, and addresses also responsibility and explainability.¹⁷⁰³ The national strategy establishes healthcare, energy and utilities, agriculture, and transport as priority areas to lift the work of AI within Denmark.

The Agency for Digital Government (*Digitaliserings-styrelsen*) published three AI Guides in 2024 directed to companies, citizens, and authorities testing and working with Generative AI.¹⁷⁰⁴ The Agency also launched an AI Sandbox in cooperation with the Data Protection Agency to facilitate compliance with GDPR and, over time the EU AI Act.

The 2024 Strategic Approach to Artificial Intelligence¹⁷⁰⁵ by the Ministry of Digital Affairs (*Regeringen*) aims to provide a “more robust framework for the

¹⁷⁰⁵ Ministry of Digital Affairs, *Strategic Approach to Artificial Intelligence: A More Robust Foundation for the Responsible Development and Use of AI in Denmark* (Dec. 2024), <https://www.english.digmin.dk/Media/638719220318136690/Stategic%20Approach%20to%20Artificial%20Intelligence.pdf>

responsible development and use of AI in Denmark.” The new strategy document clarifies the Danish vision for AI, centered on three guiding principles, the first of which is “Developing and using AI must be centred on citizens’ fundamental rights and in accordance with Danish values.” The other principles center on supporting businesses “to develop, apply and sell solutions and business models based on the responsible use of AI” and leading the world in using AI in the public sector to benefit citizens.¹⁷⁰⁶

Led by the Ministry of Culture (*Kulturminister*),¹⁷⁰⁷ political representatives are also working to protect citizens’ rights to their images and bodies with an agreement to create legislation that will make it illegal to share digital imitations of personal characteristics such as deepfakes.¹⁷⁰⁸ The bill will also make it illegal to share imitations of performances, providing protection for performing artists, while leaving room for parodies and satire.

Nordic-Baltic and Nordic Cooperation on AI

As for the regional landscape, the Danish Minister for digitalization signed the declaration on “AI in the Nordic-Baltic region” establishing a collaborative framework on “developing ethical and transparent guidelines, standards, principles and values to guide when and how AI applications should be used” and “on the objective that infrastructure, hardware, software and data, all of which are central to the use of AI, are based on standards, enabling interoperability, privacy, security, trust, good usability, and portability.”¹⁷⁰⁹

The ministerial declaration Digital North 2.0¹⁷¹⁰ builds on the common priorities of the Nordic-Baltic countries, and follows the previous ministerial declaration, Digital North 2017-2020. “In order to promote work with digitalisation, co-ordinate efforts, and follow up on the goals of the declaration, a council of ministers for digitalisation (MR-DIGITAL) was established in 2017. The aim is to promote development in three areas: (1) Increase mobility and integration in the Nordic and Baltic region by building a common area for cross-border digital services;

(2) Promote green economic growth and development in the Nordic-Baltic region through data-driven innovation and a fair data economy for efficient sharing and re-use of data; and (3) Promote Nordic-Baltic leadership in the EU/EEA and globally in a sustainable and inclusive digital transformation of our societies.”¹⁷¹¹

The Nordic and Baltic ministers for digitalization released another joint statement in November 2021, announcing a focus on digital inclusion, striving to implement measures to make digital services more accessible to all Danish inhabitants and ensuring that those who do not possess the necessary level of skills get the opportunity to acquire them.¹⁷¹²

In September 2022, the Nordic and Baltic ministers for digitalization issued a common statement on the importance of cooperation on digital security in the Nordic-Baltic region following the COVID-19 pandemic and the war in Ukraine. The ministers stressed that this “rapid transformation has challenged everyone to adapt to new, digital ways of doing business, learning and accessing public authorities.” The ministers declared that they “have committed to ensuring that our region maintains its position as a leader in digitalisation, and that everyone in the region benefit from digitalisation regardless of age, wealth, education or level of digital skills. [...] Robust and secure digital services, safeguarding users' privacy and ensuring that personal data are stored and processed in a trustworthy way, are crucial to the citizens' sustained trust in digital services.”¹⁷¹³

As part of its action plan for Vision 2030 (2021–2024), the Nordic Council of Ministers identified innovation, digital integration, the safe use of artificial intelligence, data development and open data, education and digitalization as key objectives.¹⁷¹⁴ The Nordic Council of Ministers also emphasizes the involvement of

civil society in efforts relating to our vision for 2030 thanks to “a Nordic civil society network and public consultations.”¹⁷¹⁵

Nordic Project 2024 will continue toward this vision to support collaboration among Nordic and Baltic countries in developing and using AI in a responsible way. The project aims to support Nordic businesses’ development and application of responsible and ethical AI to achieve critical mass by pooling and coordinating resources through a collaboration platform, center, or hub.¹⁷¹⁶ The Nordic-Baltic Co-operation Programme for Digitalisation 2025 to 2030 builds on this initiative with a subgoal (3.3) dedicated to “trustworthy, secure, responsible, and sustainable use of technology, including Artificial Intelligence.”¹⁷¹⁷

EU Digital Services Act

As an EU member state, Denmark applies the EU Digital Services Act (DSA)¹⁷¹⁸ regulating online intermediaries and platforms. The main objective is to prevent illegal and harmful activities online and the spread of disinformation by requiring online intermediaries and platforms to implement ways to prevent and remove posts containing illegal goods, services, or content while giving users the means to report or flag this type of content.

The Agency for Digital Governance (*Digitaliserings-styrelsen*) serves as Denmark’s Digital Services Coordinator.¹⁷¹⁹

EU AI Act

As an EU member State, Denmark is bound by the EU AI Act.¹⁷²⁰ The EU AI Act is a risk-based market regulation which supports the objective of promoting a

human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

Denmark designated the Agency for Digital Government the national competent authority charged with coordinating with supervisory authorities and the European AI Office.¹⁷²¹ The Agency is part of the Ministry of Digital Affairs and implements digital and AI policies in the public sector for citizens and businesses. For example, the agency implemented the regulatory sandboxes and created AI guides for citizens, businesses, and authorities.¹⁷²²

The Act on Supplementary Provisions to the AI Regulation implements the EU AI Act in Denmark.¹⁷²³ The Act designates the Agency for Digital Government as the central contact point and supervisory authority for most prohibited practices and the Danish Data Protection Agency and the Danish Court Administration as competent authorities for specific areas. In line with this role,¹⁷²⁴ the Agency for Digital Government published a six-part guidance package on prohibited AI uses.¹⁷²⁵

Public Participation

Denmark provides programs that enable non-governmental actors (e.g., the academic community, business, civil society, and regional and local governments) to express their perspectives or provide expert advice that informs policy-making processes. These policy initiatives enable stakeholders or experts to engage in public discussions to share information and foster collaboration. Public awareness campaigns and civic engagement activities include informing and consulting with members of the public. The government also has a consultation portal (*Høring*

Portalen) for receiving comments, as in the 2025 consultation on amendments to the copyright law.¹⁷²⁶

The Ministry of Foreign Affairs Tech for Democracy Initiative launched in 2021 brought together government members, organizations, industries and civil society to ensure that technology works for humans and not the other way round.¹⁷²⁷ At the launch event, the Copenhagen Pledge on Tech for Democracy was signed by over 200 stakeholders.¹⁷²⁸ Throughout the ensuing Year of Action, ten Action Coalitions convened to deliberate on issues such as transparency, content moderation, and online harassment.¹⁷²⁹ In March 2023, Denmark, alongside Norway, supported the EC in launching the Digital Democracy Initiative (DDI) as a Team Europe Initiative, with an implementation period that stretches to 2026.¹⁷³⁰

The Danish AI strategy for its part is based on proposals from a Digital Growth Panel¹⁷³¹ and the Danish Government's Disruption Committee.¹⁷³²

Data Protection

Denmark, like other European countries, has enacted laws to supplement the EU General Data Protection Regulation (GDPR).¹⁷³³ In Denmark, the GDPR and its

Danish supplementary act, the Data Protection Act (DPA)¹⁷³⁴ are the primary regulations governing the processing of personal data. The DPA provides for certain exceptions to the GDPR, most notably regarding the processing of personal data in the employment sector and the processing of national registration numbers. The independent Danish Data Protection Agency, the Datatilsynet, enforces data protection in Denmark.

In 2002, the Danish Act on Personal Data Processing came into force, implementing Directive 95/46 EC. However, despite the fact that the Danish data protection regulation is more than two decades old, until the GDPR was implemented in 2016, little attention was paid to data protection in Denmark.

The Danish and other European supervisory authorities have released several recommendations and decisions interpreting the GDPR and relevant national legislation, allowing Danish businesses to conduct significantly more targeted and resource-efficient compliance operations. Denmark has lagged behind the majority of other EU Member States when it comes to data protection knowledge and compliance. The levels of fines (100.000 DKK and 50.000 DKK) were very low compared to fines in other countries (with fines up to millions). A case in August 2024 marked a shift.¹⁷³⁵ The Danish Data Protection Authority imposed a DKK 200,000 (\$29,560) fine on a local authority for insufficient security measures. Furthermore, on February 13, 2025, the European Court of Justice ruled that fines for GDPR violations should be calculated based on the worldwide turnover of the entire corporate group, not just the violating entity.¹⁷³⁶ This decision, stemming from a case involving Danish company ILVA, could lead to significantly higher fines in Denmark and across the EU. According to some privacy law professionals, there is a significant risk for Denmark to be considered a “safe haven” in relation to fines, which could cause companies that do not want to comply with the GDPR to locate in Denmark.¹⁷³⁷

Regarding the activities of law enforcement authorities, Denmark transposed the EU Data Protection Law Enforcement Directive (LED)¹⁷³⁸ through the Danish Law Enforcement Act.¹⁷³⁹ The EDPB has produced guidelines on the use of facial recognition technologies in the area of law enforcement, stressing that law enforcement must “satisfy the requirements of necessity and proportionality.”¹⁷⁴⁰ One of the first publicly known applications of facial recognition technology in Denmark under the framework of the LED and national data protection rules was approved in January 2025. The Danish Data Protection Agency authorized the use of automated facial recognition by Football Club Copenhagen to enhance public safety and prevent entry by banned individuals.¹⁷⁴¹ The system may be deployed at Parken Stadium and during away games at other venues. While the LED sets strict compliance requirements for all uses of facial recognition, this decision is an early example of a high-risk, security-driven deployment deemed to meet the thresholds of necessity and proportionality. It may serve as a precedent for similar applications in other public spaces.

The European Data Protection Board (EDPB) launched a Coordinated Enforcement Framework action focusing on the right to erasure under the GDPR in March 2025. The Danish Data Protection Agency is participating in this initiative to evaluate how data controllers manage and respond to erasure requests, ensuring compliance with GDPR standards.¹⁷⁴²

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him

¹⁷³⁸ *Directive (EU) 2016/680 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data by competent authorities for the purposes of the prevention, investigation, detection or prosecution of criminal offences or the execution of criminal penalties, and on the free movement of such data, and repealing Council Framework Decision 2008/977/JHA*, <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A02016L0680-20160504>

or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

Despite being a member of the Global Privacy Assembly (GPA) since 2002, the Datatilsynet has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,¹⁷⁴³ the 2020 GPA Resolution on AI Accountability,¹⁷⁴⁴ the 2022 GPA Resolution on Facial Recognition Technology,¹⁷⁴⁵ or the 2023 GPA Resolution on Generative AI.¹⁷⁴⁶

Algorithmic Transparency

Denmark is party to the Council of Europe Convention 108 on automatic processing information, but has not signed the updated Convention 108+, which explicitly provides for algorithmic transparency.¹⁷⁴⁷ Convention 108+ treaty will enter into force after Denmark and all other parties to the original convention ratify. Denmark is subject to the GDPR, which provides a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.¹⁷⁴⁸

Data Ethics Council

The Danish government established the Data Ethics Council to “support the development in an ethically sound manner that takes into account citizens’ fundamental rights, legal certainty or fundamental societal values.”¹⁷⁴⁹ The Council

advises the public and private sectors on data-related ethical issues and provide a venue for debate and public awareness. The Council publishes responses to consultations on various data-related issues, such as the Copyright Act,¹⁷⁵⁰ which protects against digitally generated production imitations, and applications of AI such as in health. The Council also issued recommendations on ensuring the responsible use of generative AI in the public sector in 2025.¹⁷⁵¹

Danish Labeling Program for Digital Accountability

Another key initiative is the “D-seal.” The Danish government established an independent labelling scheme in collaboration with a consortium of the Confederation of Danish Industry, the Danish Chamber of Commerce, SME Denmark, and the Danish Consumer Council. It is supported by the Danish Business Authority and financed by the Danish Industry Foundation. “All companies, regardless of their size, must meet the D-seal’s data ethics requirements if they develop software and if they use or develop algorithms and AI.”¹⁷⁵² “The purpose of the D-seal is to promote data security, data protection and data ethics at Danish companies, so that customers and consumers can feel safe when using the companies’ products and services.”¹⁷⁵³ The idea is for the seal to create a market incentive for actors to be more data ethical. The D-seal was launched in September 2021.

The D-seal is based on 8 criteria: A management system for data accountability; Awareness and safe behavior; Technical IT security; Requirements for suppliers’ IT security and digital accountability; Transparency and control of data; Privacy & security by design & default; Reliable algorithms & AI; Data ethics.¹⁷⁵⁴

In 2020, ahead of the negotiations regarding the draft EU AI Act, Denmark, together with 13 other EU Member States, issued a non-paper responding to the European Commission’s White Paper on AI.¹⁷⁵⁵ Through this non paper, Denmark

called for a “flexible” framework with voluntary self-labelling schemes. Denmark argued for a risk-based approach towards AI, highlighting that trustworthy and human-centric AI goes hand in hand with innovation, economic growth and competitiveness. The non-paper concludes with a call to the EU for a voluntary European labelling scheme that would make it visible for potential users, for example, citizens, businesses as well as public administrations, which applications are based on secure, responsible and ethical AI and data.¹⁷⁵⁶

AI in Public Administration

In October 2023, the Danish Data Protection Authority (*Datatilsynet*) published guidance on the development and use of AI by public authorities.¹⁷⁵⁷ The report contained the results of the mapping of the use of AI across the public sector longer term. The Danish Data Protection Authority stated that it will look at more guidance on how organizations can handle the risks that may be associated with the use of AI, such as bias and lack of transparency.

Denmark introduced an AI compliance framework on the use of AI Assistants in the private and public sectors in 2024.¹⁷⁵⁸ A consortium that included Netcompany, the Agency for Digital Governance, Danish Business Authority and other entities published the whitepaper with the framework, with support from major financial entities and Microsoft. The framework provides structured methodologies for risk and bias management, secure data handling, and staff training. The guidance is designed to help organizations align with the EU AI Act and GDPR, ensuring transparency and efficiency in AI adoption across sectors.”

Amnesty International’s Algorithmic Accountability Lab (AAL) released an investigative report on Denmark’s welfare agency (*Udbetaling Danmark*, UDK) scrutinizing the use of algorithmic decision-making in welfare distribution.¹⁷⁵⁹ The

Center for AI and Digital Policy

report highlights concerns over potential discriminatory practices, where automated systems disproportionately target individuals seeking benefits. These findings align with broader European concerns regarding the risks of algorithmic bias in public sector decision-making.

Autonomous Vehicles

Amendments to Denmark's Road Traffic Act in 2017 imposed restrictions on the testing of self-driving motor vehicles.¹⁷⁶⁰ Effective 1 July 2025, Denmark's Executive Order on Trials and Testing of Self-Driving Units issued by the Denmark Road Authority eases many of those restrictions.¹⁷⁶¹ The Order allows municipalities to establish designated test zones, where trials may proceed with a permit from the Danish Road Traffic Authority. The order introduces updated technical requirements, clearer sanction rules, and more flexible conditions for approving tests, addressing earlier concerns that regulations were overly restrictive.

Mass Surveillance

The Danish Data Ethics Council raised concerns regarding the Danish Parliament's draft law on the Danish Security and Intelligence Service (PET),¹⁷⁶² which was introduced without a data ethics impact assessment. The Council deems the impact assessment essential for legislation involving such extensive intrusions into citizens' privacy. The proposed law seeks to expand PET's surveillance powers by allowing large-scale, automated analyses of all Danish citizens' digital communications and online activity, ostensibly to strengthen national security and counter-terrorism capabilities in response to Denmark's elevated threat level. The Council's assessment uncovered serious concerns. The Council cautioned that the draft law grants PET sweeping access to citizens' digital footprints without sufficient evidence of the measure's effectiveness or adequate safeguards to protect individual rights and freedoms.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Environmental Impact of AI

The Danish National Strategy for Artificial Intelligence emphasizes responsible and ethical AI use across sectors, including the green transition. This strategy is a part of Denmark's broader commitment to sustainability. It includes measures such as promoting the use of renewable energy in AI-related infrastructures and supporting the development of efficient data processing methods to reduce carbon footprints.¹⁷⁶³

This commitment gained urgency as projections indicated that data centers, critical infrastructure for AI development, could account for one-fifth of the total Danish energy budget by 2030. To mitigate this impact and enhance sustainability, the government announced an agreement in 2025 to remove the existing pricing cap on excess heat generated by businesses.¹⁷⁶⁴ Removing the price cap, which requires a legislative amendment, provides an incentive for businesses, particularly data centers, to invest in heat recovery projects that would promote market-driven utilization and integration of waste heat into existing district heating systems.

Lethal Autonomous Weapons

At a 2015 informal meeting of the Convention on Certain Convention Weapons (CCW) Group of Global Experts (GGE) on Lethal Autonomous Weapons Systems, Denmark affirmed that weapons must remain under “meaningful human control.”¹⁷⁶⁵ In 2020, during the General Debate of the First Committee of the 75th UN General Assembly, the Permanent Representative of Denmark declared, “Denmark supports the work of the GGE on Lethal Autonomous Weapons Systems (LAWS), in particular the 11 guiding principles. In our work on these principles we should in particular aim to develop an understanding of the type and degree of human machine interaction.”¹⁷⁶⁶

Artificial Intelligence and Democratic Values 2026
Center for AI and Digital Policy

Denmark has consistently supported measures to discuss the implications of LAWS in the UN General Assembly,¹⁷⁶⁷ and to collaborate on a framework to protect against a loss of control.¹⁷⁶⁸ Denmark supports a two-tier approach whereby applications of LAWS that cannot comply with international law or international humanitarian law (IHL) would be explicitly prohibited and other uses would be regulated to ensure compliance. The country laid out this position in a working paper submitted with Bulgaria, France, Germany, Italy, Luxembourg, and Norway to the GGE on LAWS in 2024.¹⁷⁶⁹ UN Secretary-General cited the working paper multiple times in the Report on LAWS prepared under direction from the General Assembly resolution L.56.¹⁷⁷⁰ During the GGE session in August 2024, the Danish delegation emphasized the importance of adhering to the principles of distinction and proportionality under International Humanitarian Law (IHL), reinforcing the need for meaningful human control over autonomous military technologies.¹⁷⁷¹ Denmark was one of 39 High Contracting Parties that supported a joint statement declaring that the GGE's rolling text was a sufficient basis for launching negotiations on a legally binding instrument on lethal autonomous weapons systems.¹⁷⁷²

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In February 2023, Denmark participated in the REAIM international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Denmark endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.¹⁷⁷³ Denmark also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.¹⁷⁷⁴

AI Literacy

Denmark employs a comprehensive, human centered approach to AI literacy, viewing it as crucial for public trust and effective governance. This effort is primarily driven by the AI Competence Pact (*AI Kompetence Pagten*), a major public-private partnership established to upskill one million people in AI to future-proof the public sector workforce.¹⁷⁷⁵ The focus is on providing foundational awareness for citizens and building functional competence within institutions. The Agency for Digital Governance's specialized AI Guides inform citizens on the responsible use of generative AI,¹⁷⁷⁶ marking further progress in this regard. The National Agency for Education and Quality has also published recommendations on the use of generative AI in upper secondary education "to support a practice where generative AI is used in a balanced way to support learning, and where pupils are taught to critically reflect on their use of the technology."¹⁷⁷⁷ These guidelines mirror those published in 2024 for upper secondary education.¹⁷⁷⁸

Human Rights

Denmark receives high scores for Political Rights and Civil Liberties in the Freedom House Freedom in the World 2025 Report, earning a score of 97/100 to rate

¹⁷⁷³ Responsible AI in the Military domain Summit, *REAIM Call to Action* (Feb. 16, 2023), <https://www.government.nl/documents/publications/2023/02/16/ream-2023-call-to-action>

Center for AI and Digital Policy

as “Free.” The report highlights the Danish government’s protections of free expression and association and the judiciary’s independence but notes a lack of full rights and protections for immigrants and other newcomers. The Danish Parliament established the Danish Centre for Human Rights in 1987, which was renamed the Danish Institute for Human Rights in 2002.¹⁷⁷⁹ Denmark is a signatory to major human rights treaties, including the Universal Declaration of Human Rights which has also ratified several European human rights instruments, including the European Convention on Human Rights (ECHR).¹⁷⁸⁰

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers reminded member states that their commitment “to ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction” requires them to “ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, interdependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”¹⁷⁸¹

OECD / G20 AI Principles

Denmark is a member of the OECD and has endorsed the OECD AI Principles.¹⁷⁸² A 2021 report on the state of implementation of the OECD AI Principles noted Denmark’s progress toward implementation of the OECD AI principles.¹⁷⁸³ The 2024 Strategic Approach to Artificial Intelligence reinforces Denmark’s commitment to the OECD AI Principles¹⁷⁸⁴ with the guiding principles centered on developing AI to aligned with citizens’ fundamental rights and Danish values, supporting Danish companies to be competitive through responsible AI innovation, and modeling responsible public-sector use of AI.

Center for AI and Digital Policy

Denmark is also a member of the Global Partnership on AI, a multi-stakeholder initiative that aims to foster international cooperation on AI research and applied activities and is “built around a shared commitment to the OECD Recommendation on Artificial Intelligence.”¹⁷⁸⁵

Council of Europe AI Treaty

Denmark participated in negotiations for the Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law as a Council of Europe member. Denmark became party to this first legally binding international AI treaty with the European Commission signature in September 2024 but has not acted independently on the treaty.¹⁷⁸⁶

UNESCO Recommendation on AI Ethics

Denmark has endorsed the UNESCO Recommendations on AI, the first ever global agreement on the ethics of AI.¹⁷⁸⁷ Denmark’s AI Competence Pact¹⁷⁸⁸ aligns with the Recommendation’s policy action on Education and Research while the Data Ethics Council¹⁷⁸⁹ provides advice and reviews to encourage ethical use of data and the products resulting from this use, as exemplified by the Council’s review of the Danish Parliament’s draft law on the Danish Security and Intelligence Service (PET).¹⁷⁹⁰ Denmark has not initiated the UNESCO Readiness Assessment Methodology (RAM),¹⁷⁹¹ a tool for implementing the Recommendation.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Evaluation

Denmark's National AI strategy, released in 2019, sets out an ambitious agenda emphasizing responsible AI development. Denmark has acted on this agenda, establishing an independent Data Ethics Council, endorsing the OECD AI Principles, and promoting opportunities for public participation in the development of AI policy. Denmark has also introduced certification seals to promote trustworthy AI. Denmark has established an independent national competent authority in accordance with the EU AI Act and even offered guides on safe and responsible use of generative AI for citizens, companies, and authorities.

As Denmark has endorsed the UNESCO Recommendation on the Ethics of AI and the country's action on the EU AI Act, Council of Europe AI Treaty, and Nordic-Baltic collaboration is a step toward implementation. Ratifying the Convention 108+ would be a strong signal that Denmark prioritizes the fundamental rights of its citizens.

Dominican Republic

In 2025, Dominican legislators introduced the first AI-related bills to Congress. National agencies also progressed on implementing the 2024 Open Government Action Plan to promote public participation in policymaking.

National AI Strategy

The president of the Dominican Republic introduced the National AI Strategy¹⁷⁹² with these words in October 2023: “We find ourselves at a transformative moment for the future of our nation. AI stands as the emblematic technology of our century, with an impact that will resonate in all facets of our society. A vast territory of new opportunities is opening before us, a horizon of transformation which calls us to immediate action.”

The Smart Government Program targeting proactive and ethical digital transformation in public administration is one of three key initiatives in the Strategy.¹⁷⁹³ The other pillars are creating a hub to promote human talent and innovation and building infrastructure to make the Dominican Republic a regional hub for the storage and processing of data. The Strategy takes a regional perspective for all three initiatives, promoting regional collaboration on AI to make the country a catalyst in a regional AI ecosystem. These initiatives align with the Strategy’s objectives to insert the country in the Fourth Industrial Revolution, strengthen technological autonomy, and lead the region in AI. “Guaranteeing that the adoption of artificial intelligence in our land is aligned with fundamental ethical principles and reinforces the protection of human rights”¹⁷⁹⁴ is part of the vision underlying the Strategy.

The National AI Strategy aligns with the Digital Agenda 2030¹⁷⁹⁵ developed by the Digital Transformation Cabinet (*Gabinete de Transformación Digital de la República Dominicana*), which sits under the executive.¹⁷⁹⁶ The Digital Agenda 2030 is divided into five main axes: 1) governance and regulatory framework; 2)

¹⁷⁹² Gobierno de la República Dominicana, *National Artificial Intelligence Strategy of the Dominican Republic* [Estrategia Nacional de Inteligencia Artificial de la República Dominicana], p. 6 (Oct. 2023), https://agendadigital.gob.do/wp-content/uploads/2023/10/Final_ENIA-Estrategia-Nacional-de-Inteligencia-Artificial-de-la-Republica-Dominicana-.pdf

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

connectivity and access 3) education and digital skills; 4) digital government; and 5) digital economy. Each of these axes responds to specific objectives through performance measurement indicators. “By 2030, the Dominican Republic expects to have reduced the digital divide and ensured access to, and use of, digital technologies in a secure and sustainable environment.”¹⁷⁹⁷ The Digital Agenda has been developed in line with the broader development strategy, more particularly with regard to addressing the digital divide through education.

The Dominican Republic has also been part of the Caribbean Artificial Intelligence Initiative led by the UNESCO Cluster Office for the Caribbean and the Broadcasting Commission of Jamaica (BCJ). The Initiative “aims to develop a sub-regional strategy on the ethical, inclusive and humane use of AI in the Caribbean Small Island Developing States.”¹⁷⁹⁸ The Caribbean AI Policy Roadmap was released in June 2021 and updated in 2024.¹⁷⁹⁹

AI Legislation

The Dominican Republic has not yet passed AI-specific legislation, though a number of bills were presented in 2025. One bill to regulate AI systems and applications includes a proposal to establish the National Council for Artificial Intelligence (CONIA) with AI oversight responsibility over the entire AI life cycle.¹⁸⁰⁰ The bill, which was presented in the Chamber of Deputies (*Cámara de Diputados*), prohibits the use of AI systems for military, defense, or national security purposes.¹⁸⁰¹ Other bills propose guidelines for public policies on the development, use, regulation, and implementation of AI in the country¹⁸⁰² and address the use of

AI-generated content to commit fraud.¹⁸⁰³ The oversight bill ended the 2025 session in committee and was resubmitted at the start of the 2026 session.¹⁸⁰⁴

Public Participation

To engage with stakeholders in development of digital service and policy design, the Dominican Republic used focus groups, public consultations and social media.¹⁸⁰⁵ The Dominican Republic deepened and systematized the commitment to participatory governance in digital and AI-related policymaking through the Open Government Plan of Action, 2024–2028,¹⁸⁰⁶ and the National Strategy for Civic Space.¹⁸⁰⁷

The Open Government Partnership (OGP) supported the initiatives, which were led by the General Directorate of Ethics and Government Integrity (*Dirección General de Ética e Integridad Gubernamental*, DIGEIG). The Action Plan provides actions steps to be implemented across the government to improve transparency and citizens participation in holding offices accountable.¹⁸⁰⁸ Participants in creating the plan reported “adequate outreach” and feedback on how suggestions were incorporated, or why they were not.¹⁸⁰⁹ The DIGEIG also developed the National

Strategy for Civic Space through a cocreation process.¹⁸¹⁰ The Strategy provides 21 reforms intended to “expand the channels of dialog between the State and citizens, protect the rights of expression, association, and participation; and foster sustainable conditions for social collaboration in public governance.”¹⁸¹¹

These initiatives respond to the Agenda Digital 2030 emphasis on public participation as a cross-cutting policy while noting the dearth of digital participation initiatives as an area for improvement.¹⁸¹² More recently, the Government Office of Technology, Information and Communication, built a site on Notion to support public consultations on the AI strategy.¹⁸¹³ The Senate has also hosted meeting with affected private sector representatives.¹⁸¹⁴

The judiciary invited civil society and stakeholders to provide input on how the judicial branch will manage, publish and safeguard data through consultation¹⁸¹⁵ on the draft Open Data Policy of the Judiciary.¹⁸¹⁶

Data Protection

The Dominican Constitution enshrines the right to the protection of personal data in public and private records under Section 44(2) and provides that data controllers and processors are to comply with data security, professional secrecy, data quality and data loyalty.¹⁸¹⁷

¹⁸¹⁷ Constitute, *Dominican Republic's Constitution of 2015* (Apr. 27, 2022), https://www.constituteproject.org/constitution/Dominican_Republic_2015.pdf

Law No 172-13 on the Comprehensive Protection of Personal Data of consumers or users¹⁸¹⁸ provides the right to access and right to rectification of personal data.¹⁸¹⁹ Various decisions have upheld these rights in digital formats and with automatic processing.¹⁸²⁰ Still, no institution has official oversight to guarantee these protections for citizens' rights, leaving, in the words of one attorney, "the constitutional recognition solid on paper but weak in practice." The General Directorate of Ethics and Government Integrity is an observer in the Ibero-American Network for Data Protection (*Red Iberoamericana de Protección de Datos*, RIPD).¹⁸²¹

The General Law for the Protection of Consumer or User Rights No. 358-05 declared that the National Institute for the Protection of Consumer Rights, "Pro Consumidor," monitors data protection compliance in relation to consumers. Pro Consumidor does not have enforcement powers. Instead, the institution relies on mediation and conciliation competences.¹⁸²²

The Dominican Republic started to draft a data protection law in line with international standards such as the Council of Europe's Convention 108+ in 2019 and received support from the Council of Europe to this end.¹⁸²³ However, no such law yet exists.

The 2023 AI Strategy sets revision of Law No 172-13 to include safeguards for the protection of personal data and human rights in the implementation of AI

Center for AI and Digital Policy

system by 2025.¹⁸²⁴ However, an amended law has not passed the congress. The country developed a Digital Government guide that includes a provision on the documentation and explainability of digital government initiatives, software, and services.¹⁸²⁵

Algorithmic Transparency

The Dominican Republic's data protection regime indirectly addresses automated processing and the right to correct data may provide some protection in the case of automatic decisions. The National AI Strategy includes transparency in the use of AI as one of the guarantees to be established by a proposed code of ethics.¹⁸²⁶ Both the strategy and Digital Government guide propose requirements for government transparency around data use. However, specific guidelines for algorithmic transparency and explainability are not provided.¹⁸²⁷

Facial Recognition

The Dominican General Director of Immigration, Enrique García, reported in 2021 that facial recognition technology will be used to enforce security in airports and border entry to combat drug trafficking and international crime.¹⁸²⁸ The Dominican Airport Association explained in September 2022 that there are intelligent security cameras in Dominican airports.¹⁸²⁹

Center for AI and Digital Policy

The Director of the General Directorate of Passports (DGP) said in March 2022 that the country will transition from using mechanical passports to electronic passports. The electronic passport would integrate a chip containing all the carrier information and designed to facilitate facial recognition.¹⁸³⁰ The passport agency issued a tender for a passport containing a chip that carries biometric data, such as fingerprints and facial recognition, in May 2024.¹⁸³¹

The Director of Migration reported the launch of a pilot plan for biometric facial recognition at formal [land] border crossings in August 2025.¹⁸³² The director is coordinating the installation of technology with the Presidency to test the project ahead of the entry into force of a “resolution that will establish the deadline for mandatory biometric facial recognition registration for foreigners participating in binational markets.”

Beyond migration, the police launched an “automated facial recognition system” in the Scientific Policy area in 2023.¹⁸³³ The system allows users to find matches in a “database of millions of images collected from various social networks and websites” from a photo or video of “unknown people.”

Environmental Impact of AI

The Dominican Republic’s Digital Economy Agenda includes an objective to use technology to promote “economic and social well-being as a way to promote sustainable development.”¹⁸³⁴ The country has also committed to using mitigating the environmental impact of AI by endorsing the Montevideo Declaration, a regional

Center for AI and Digital Policy

document centered on implementing the UNESCO Recommendation, that includes Environment and Sustainability as areas of focus for 2024–2025.¹⁸³⁵

Lethal Autonomous Weapons

The National AI Strategy makes clear that the goal of the Dominican Republic is to pursue the prohibition of the use of AI as a weapon of war.¹⁸³⁶

The Dominican Republic endorsed 2019 Declaration on Lethal Autonomous Weapons¹⁸³⁷ prepared by France and Germany and opened for endorsement during the Alliance for Multilateralism event in 2019. The 11 principles in the declaration respond to challenges cited by the UN Convention on Certain Conventional Weapons (CCW) relating to the development of LAWS. The principles affirm that “international humanitarian law applies to these systems; a human must always be responsible for the decision to use these systems; [and] States must examine the legality of these new weapons that they are developing or requiring at the design stage.”

The Dominican Republic is one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly urging “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”¹⁸³⁸ The country reiterated this stance with support by co-sponsoring resolution L.56 on autonomous weapons

systems¹⁸³⁹ in the First Committee in 2023 and voting in favor of the UN General Assembly Draft Resolution on Lethal Autonomous Weapons Systems in 2024.¹⁸⁴⁰ In 2025, Dominican Vice Minister Armando Manzueta warned of AI-related threats to peace and security. He cited lethal autonomous weapons without human oversight, disinformation, and technological asymmetry while reaffirming the call for banning autonomous weapons.¹⁸⁴¹

The Dominican Republic endorsed the Belén Communiqué,¹⁸⁴² which calls for “urgent negotiation” of a binding international treaty to regulate and prohibit the use of autonomous weapons to address the grave concerns raised by removing human control from the use of force in February 2023.

At the Responsible AI in the Military Domain Summit (REAIM 2023) in the Netherlands, the Dominican Republic joined nearly sixty states in calling for action on the responsible development, deployment and use of AI in the military domain.¹⁸⁴³ The Dominican Republic also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.¹⁸⁴⁴

AI Literacy

Education and human talent as core components of both the National AI Strategy¹⁸⁴⁵ and Agenda Digital 2030.¹⁸⁴⁶ Both documents define objectives to build this talent through pre-university education modules and teacher training and development as well as programs directed to labor-force upskilling and training programs. The AI Strategy proposes collaboration among education and tech experts, parents, and teachers in a proposed HUB of human talent and innovation, #YoSoyFuturoRD. The Agenda Digital 2030 aims to ensure access to technological resources. The objective centers on “Developing the necessary competencies in the Dominican population, ensuring an inclusive focus that will permit the efficient use and adoption of digital technologies and forming the human talent required for sustainable economic and social development.”¹⁸⁴⁷ The Minister of Education proposed digital competencies to be included in the 2026–2027 school year but no details have been provided.¹⁸⁴⁸ Other government agencies have implemented programs for digital literacy on an ad hoc basis.¹⁸⁴⁹

Human Rights

In 2025, Freedom House ranked the Dominican Republic as “Partly Free,” with a score of 68/100 for political rights and civil liberties.¹⁸⁵⁰ According to the Freedom House 2024 report, “The Dominican Republic holds regular elections that are relatively free, though recent years have been characterized by controversies around implementing a new electoral framework.” “Pervasive corruption undermines state institutions and the use of excessive force by police is a problem.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Discrimination against Dominicans of Haitian descent and Haitian migrants, as well as against LGBT+ people, remain serious problems.”

Despite these issues, the Human Rights Council Working Group Universal Periodic Review in June 2024 highlighted the country’s progress in human rights, noting legislative advances in areas such as gender equality, child protection, and anti-discrimination measures. Key achievements include prohibiting child marriage, expanding educational access, and enhancing social protections for vulnerable groups. The report also discusses ongoing reforms to improve public security, reduce poverty, and protect marginalized communities, particularly through addressing the rights of women, children, and the LGBTQ+ community. Recommendations emphasize the need for further action on issues like statelessness, migration, and gender-based violence, urging the Dominican Republic to continue aligning its policies with international human rights standards.¹⁸⁵¹

OECD / G20 AI Principles

The Dominican Republic has not endorsed the OECD AI principles¹⁸⁵² and is not a member of the Global Partnership on Artificial Intelligence,¹⁸⁵³ which requires a commitment to the OECD AI Principles. The Dominican Republic’s participation in international AI governance discussions, especially with peers in Latin America and the Caribbean through institutions such as the Inter-American Development Bank and the fAIr LAC initiative, aligns with OECD AI Principles around international collaboration and sustainable, human-centered AI.¹⁸⁵⁴ The country’s National AI Strategy and Agenda Digital 2030 also implement recommended policy actions including education and workforce training.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Council of Europe AI Treaty

The Dominican Republic has not signed the first legally binding global treaty on AI, the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.¹⁸⁵⁵

UNESCO Recommendation on AI Ethics

The Dominican Republic is a member state of UNESCO¹⁸⁵⁶ and endorsed the UNESCO Recommendation on AI Ethics.¹⁸⁵⁷

The Dominican Republic participates in the Regional Council incorporating all governments of the region¹⁸⁵⁸ to implement the UNESCO Recommendation. Following the first summit centered on AI ethics, the Dominican Republic signed the 2023 Santiago Declaration to Promote Ethical Artificial Intelligence.¹⁸⁵⁹ The Declaration establishes fundamental principles to guide public policy on AI, including proportionality, security, fairness, non-discrimination, gender equality, accessibility, sustainability, privacy and data protection.¹⁸⁶⁰ The National AI Strategy commits the country to drafting a code of AI ethics in line with the UNESCO Recommendation.¹⁸⁶¹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Following the second meeting of the Regional Council in 2024, the Dominican Republic signed the Montevideo Declaration,¹⁸⁶² which emphasizes a commitment to human rights, freedoms, and democracy and outlines five key priorities for countries to pursue in the coming year: Governance and Regulation, Talent and Future Work, Protection of Vulnerable Groups, Environment, and Sustainability. Regional governments and the AI Working Group, with support from UNESCO and CAF, will lead the implementation, with semi-annual reviews to ensure transparency and stakeholder engagement.

The Dominican Republic completed the UNESCO Readiness Assessment Methodology (RAM), a tool to support the effective implementation of the Recommendation in 2024.¹⁸⁶³ Key recommendations focus on advancing the National Artificial Intelligence Strategy (ENIA) with strong institutional and public support. Priorities include updating regulatory frameworks for data protection, cybersecurity, and potential AI-specific regulations, along with strengthening public sector capacities, promoting diversity in AI, and reducing urban-rural technology access disparities.¹⁸⁶⁴

Evaluation

The Dominican Republic's endorsement of the UNESCO Recommendation on the Ethics of AI and related regional frameworks such as the Santiago and Montevideo Declarations reflect the country's commitment to ethical AI. The adoption of the National AI Strategy and completion of the RAM provide a strong foundation for ethical governance. Success will depend on effective implementation, particularly in ensuring algorithmic transparency and revising data protection laws to provide a strong legal framework to protect citizens' rights.

The country's stance on banning autonomous weapons is commendable though concerns about AI surveillance persist, especially for those whose lack of formal documents threatens their legal status. The introduction of TAINA and other programs designed to modernize public services is promising as are the plans and

Center for AI and Digital Policy

strategies for improving public participation in policymaking and fostering Civic Spaces.

Ecuador

Ecuador progressed on a national strategy to promote the responsible and ethical development and use of AI in Ecuador aligned to the 2025–2030 public policy for digital transformation. The country also deepened international collaboration by joining the Council of Europe Committee on AI (CAI) and gained recognition from UNESCO for being the first in the region to integrate an AI code of ethics in the public sector after the Superintendency of Economic Competition introduced the code and Guide for AI Use.

National AI Strategy

Ecuador’s government institutions and digital innovation agencies initiated AI governance efforts in 2021 with an assessment of the AI landscape.¹⁸⁶⁵ The Digital Transformation Agenda for Ecuador 2022–2025 followed and defined the responsible use of emerging technologies such as AI among national priorities.¹⁸⁶⁶ The Agenda created the Artificial Intelligence Committee to coordinate, promote, and evaluate strategies for the development and ethical adoption of AI in Ecuador.¹⁸⁶⁷ The Committee supports the implementation of the UNESCO Recommendation on the Ethics of Artificial Intelligence and advises on AI initiatives.¹⁸⁶⁸ These efforts culminated in the Public Policy for the Digital Transformation of Ecuador 2025–2030 to strengthen AI strategy development and ethical oversight.¹⁸⁶⁹

these efforts in August 2025 with the launch of the Proposed Strategy for the Promotion of the Development and Ethical and Responsible Use of Artificial Intelligence in Ecuador.¹⁸⁷⁰ The Proposed Strategy seeks to “promote the development, adoption, and ethical and responsible use of artificial intelligence” that “guarantees the transparent, equitable, and human-centric implementation” through “the strengthening of human and technological capacities; the promotion of research, development, and innovation.” This proposed strategy responds to recommendations in the Artificial Intelligence Landscape Assessment in Ecuador conducted by the MINTEL and the UN Development Programme (UNDP)¹⁸⁷¹ that the country develop a national AI strategy; strengthen digital infrastructure, data governance, and talent; promote public–private collaboration; and establish ethical, transparent, and inclusive oversight mechanisms.¹⁸⁷² The Strategy has not yet been implemented.

Building on these efforts, the Superintendence of Economic Competition of Ecuador (*Superintendencia de Competencia Económica*, SCE) introduced the Code of Ethics for the Use of Artificial Intelligence¹⁸⁷³ and the Guide for the Use of AI Tools in 2025.¹⁸⁷⁴ The Code and the Guide establish a set of core principles fully aligned with the UNESCO Recommendation on the Ethics of Artificial Intelligence. This initiative marked a significant milestone in the region, as UNESCO commended Ecuador’s government as the first public institution to implement an ethical AI framework.¹⁸⁷⁵

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI Policies

Lawmakers introduced the Organic Law for the Regulation and Promotion of Artificial Intelligence in the National Assembly (*Asamblea Nacional*) in June 2024.¹⁸⁷⁶ The proposed law is the country's first comprehensive framework for AI regulation that aims to uphold fundamental rights alongside responsible innovation. The draft bill adopts a risk-based approach, including explicit prohibitions on AI systems that violate human dignity, fundamental rights, the rule of law, and democratic values.¹⁸⁷⁷ The draft bill proposes creating a National AI Regulatory Authority to enforce its provisions and oversee a National Registry of High-Risk AI Systems.¹⁸⁷⁸ Sixteen guiding principles, including human-centric design, privacy protection, transparency and explainability, and environmental sustainability, shape the bill's overarching policies.

A separate Bill for the Promotion and Development of Artificial Intelligence introduced in July 2024 shared many of the same objectives while placing greater emphasis on AI education, digital literacy in schools, and incentives for AI research and investment.¹⁸⁷⁹ The Legislative Administration Council authorized the Standing Specialized Committee on Education, Culture, Science, Technology, Innovation, and Ancestral Knowledge to merge them into a single Organic Bill on Artificial Intelligence.¹⁸⁸⁰

Additionally, the Organic Bill on Digital Utilization and Artificial Intelligence for Children and Adolescents introduced in September 2024 seeks to

safeguard children and adolescents in their interaction with AI.¹⁸⁸¹ Beyond regulating the use of AI by and for minors, the bill aims to protect minors in their use of the internet, social media, and digital platforms. Mirroring the earlier proposals, the draft bill recommends establishing a National Authority for the Supervision of Artificial Intelligence (*Autoridad Nacional de Supervisión de Inteligencia Artificial*), creating a registry of high-risk AI systems, and banning AI systems that manipulate users, process sensitive data, infer emotions without justification, or perform real-time facial recognition outside of public safety necessity.

Public Participation

Ecuador has facilitated several opportunities for public participation with various stakeholders in the development of its AI governance initiatives.

The Artificial Intelligence Committee, for example, promotes official and meaningful engagement across both the public and private sectors.¹⁸⁸² Committee membership included the Minister of Telecommunications and the Information Society as chair along with representatives from the Telecommunications Regulation and Control Agency, public institutions, private entities, various government levels, and civil society.

In developing the Strategy for the Promotion of the Ethical and Responsible Development and Use of Artificial Intelligence, the Ministry of Telecommunications and the Information Society facilitated a workshop with representatives from public institutions, industry, academia, and civil society to discuss key strategic priorities.¹⁸⁸³ The Ministry completed a public consultation for the proposed Strategy, inviting all members of the public to provide comments.¹⁸⁸⁴

Center for AI and Digital Policy

Following the recommendation to consolidate the proposed AI bills into a single legislative proposal, the Permanent Specialized Commission on Education, Culture, Science, Technology, Innovation, and Ancestral Knowledge held a National Assembly meeting to discuss the key ethical and technical principles for regulating AI.¹⁸⁸⁵ Various technical and ethical experts from UNESCO, the European Union Intellectual Property Office, and the Latin American Faculty of Social Sciences were invited to share their expertise.

Data Protection

The Constitution of Ecuador recognizes the right to personal data protection under Article 66(19), stating that individuals have the right to the protection of personal data and access to information concerning themselves.¹⁸⁸⁶ The protection of personal data and data subject rights was further expanded and institutionalized with the Organic Law on the Protection of Personal Data enacted in 2021.¹⁸⁸⁷ The law sets out data security obligations, introduces data subject rights similar to the EU GDPR, defines lawful processing conditions, and establishes clear rules for obtaining valid consent from data subjects. The personal data protection law also created the Superintendent of Personal Data Protection (*Superintendente de Protección de Datos Personales*, SPDP) as the data protection authority.¹⁸⁸⁸ The Superintendent and the office of the Superintendency have administrative, technical, and financial autonomy and the authority to investigate and sanction data protection violations. The Presidency issued the Regulation to the Personal Data Protection Organic Law in

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

2023 to clarify procedures for exercising data rights, reporting security breaches, designating Data Protection Officers, and regulating cross-border data transfers.¹⁸⁸⁹

The Superintendency of Personal Data Protection is not a member of the Global Privacy Assembly (GPA) and thus ineligible to sponsor GPA resolutions.¹⁸⁹⁰ As a member of the Iberoamerican Network for Data Protection (*Red Iberoamericana de Protección de Datos*, RedIPD),¹⁸⁹¹ however, Ecuador is party to the Iberoamerican Standards, which call for transparency in the use of personal data, including in decision-making.¹⁸⁹² The Iberoamerican Network also provides guidance for ensuring the responsible use of data in developing and deploying AI systems and protecting rights from the impact of automated decisions.¹⁸⁹³

Algorithmic Transparency

The Artificial Intelligence Landscape Assessment conducted by the Ministry of Telecommunications and UNDP reported that algorithmic transparency is “virtually nonexistent,” as there are no public records of algorithms in use, nor legal support ensuring the right to explanations for automated decisions.¹⁸⁹⁴ The Personal Data Protection Law does not require entities to explain how their algorithms function.¹⁸⁹⁵

AI and Crime Mitigation

The Inter-American Development Bank (IDB) supports governments in Chile, Ecuador, and Peru in deploying advanced AI programs to investigate complex organized-crime networks.¹⁸⁹⁶ The intergovernmental institution, which offers both financial and technical support to address development challenges—cites the cost of crime in the region (3.4 percent of GDP annually) and its impact on public safety as key drivers for adopting AI to address this challenge. Recognizing concerns about privacy and transparency related to the use of AI, IDB leverages its fAIRLAC+ platform—a partnership between the public and private sectors, civil society and academic institutions—to ensure that individual rights are upheld.¹⁸⁹⁷

Additionally, EL PACCTO 2.0 is a cooperation between the European Union and Latin American and Caribbean countries (EU-LAC) promoting the use of AI to fight against transnational organized crime with a focus on crimes involving AI.¹⁸⁹⁸ The joint initiative advances national, regional, and international standards while ensuring coherence with legal frameworks, including the Council of Europe Framework Convention on AI and the European Union AI Act.¹⁸⁹⁹

Privacy and Surveillance

The National Assembly expanded state surveillance and data interception powers with the approval of the Organic Intelligence Law in 2025.¹⁹⁰⁰ The law raised concerns and criticisms in the National Assembly and by civil society because of the potential impact on fundamental rights. Civil society groups and digital rights advocates warned that the law may undermine privacy guarantees and conflict with existing data protection principles, especially in the context of AI-driven monitoring systems.¹⁹⁰¹

AI in Education

To address learning gaps caused by the COVID-19 pandemic among Ecuadorian higher education students, the Ministry of Higher Education, Science, Technology and Innovation, with support from World Bank, is providing AI-assisted academic support in math.¹⁹⁰² The platform reached over 14,000 learners across 400 course modules and delivered adaptive, personalized instruction at scale. Results were significant: student mastery increased from 25 percent to nearly 69 percent within sixteen weeks, which researchers estimated as equivalent to a full year of schooling. Despite these achievements, limited internet connectivity, unequal access to devices, and resistance from some educators and learners remain key barriers to large-scale adoption.

Environmental Impact of AI

Ecuador is the world's first country to grant constitutional rights to nature.¹⁹⁰³ The Constitution of 2008 states that Nature or *Pachamama* “has the right to exist, persist, maintain and regenerate its vital cycles, structure, functions and its processes in evolution.”¹⁹⁰⁴ Ecuador reinforced these rights in 2017 by enacting the Organic Environmental Code, which established a unified regulatory framework for environmental governance.¹⁹⁰⁵ The Code is based on environmental law principles and establishes rules for impact assessments, permitting, sanctions, and monitoring to safeguard biodiversity as a public interest.

The proposed Organic Law for the Regulation and Promotion of Artificial Intelligence includes provisions for ensuring that AI development upholds environmental sustainability.¹⁹⁰⁶ The proposal calls for clear environmental

standards to reduce carbon footprints, minimize negative ecological impacts, and promote the development and adoption of clean, sustainable technologies.

Lethal Autonomous Weapons

Ecuador has consistently positioned itself as a strong advocate for the regulation of lethal autonomous weapons systems (LAWS), emphasizing the need to maintain human oversight in decisions about the use of force.¹⁹⁰⁷ As a state party to the Convention on Certain Conventional Weapons (CCW), Ecuador focuses on humanitarian concerns to prevent misuse and protect human rights.¹⁹⁰⁸ At the 79th UN General Assembly First Committee, Ecuador co-sponsored and voted in favor of Draft Resolution L.77, which underscores the risks autonomous weapons pose to global security and stresses the crucial role of humans in their deployment.¹⁹⁰⁹ The resolution also calls for urgent negotiations toward a legally binding framework and scheduled informal consultations in 2025 to ensure a comprehensive discussion of potential regulatory measures. Ecuador's support for international oversight extends to previous resolutions.¹⁹¹⁰

Ecuador's statements repeatedly emphasize that human responsibility, accountability, and compliance with international law must guide any adoption or deployment of these technologies. At the 2023 CCW Group of Governmental Experts (GGE) on LAWS, for example, Ecuador clarified that negotiations for a binding international instrument are a top priority.¹⁹¹¹ The country views regulation as essential to mitigate the risks these systems pose under international humanitarian law and human rights law. Earlier, during the Sixth Review Conference of the CCW in 2021, Ecuador highlighted the need to move from debate to concrete rules,

stressing that binding regulations are necessary to address ethical concerns and the potential dehumanization of warfare.¹⁹¹²

Ecuador has called for robust legal frameworks, reinforced human oversight, and collaborative international action to ensure autonomous weapons are governed responsibly across multiple UN and CCW forums, reflecting the country's commitment to ethical, lawful, and stable security practices.¹⁹¹³

AI Literacy

Ecuador, in collaboration with the United Arab Emirates, launched a program in August 2025 offering scholarships for 10,000 young people aged 18 to 29 to train in AI.¹⁹¹⁴ The fully online training covers AI fundamentals, prompt engineering, chatbots, AI for productivity, and creative applications. This initiative was developed together with the Secretariat of Higher Education, Science, Technology, and Innovation; the Ministry of Telecommunications and the Information Society; and the Ministry of Education.

Human Rights

Ecuador is classified as Partly Free by Freedom House, with an overall score of 65/100.¹⁹¹⁵ While the country maintains an electoral system with competitive presidential and legislative elections, political violence and corruption are increasingly affecting the functioning of its institutions and the safety of citizens. In 2023–2024, Daniel Noboa won a runoff election amid high levels of political violence, including the assassination of several candidates. Electoral management bodies generally function independently, though accusations of politicization and irregularities persist.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

OECD / G20 AI Principles

Ecuador's efforts in developing AI governance have been broadly consistent with internationally promoted, human-centered AI principles, even though Ecuador is not a member of OECD, the G20, or the Global Partnership on AI (GPAI).¹⁹¹⁶ Ecuador has not committed to the OECD AI Principles.¹⁹¹⁷ The government's AI initiatives and the national Digital Observatory (*Observatorio Ecuador Digital*) reference responsible public-sector AI, signaling explicit alignment with trustworthiness, human rights, transparency, and accountability in national guidance and capacity-building efforts.¹⁹¹⁸

Council of Europe AI Treaty

Ecuador is neither a member of the Council of Europe nor a signatory to the Council of Europe Framework Convention on Artificial Intelligence.¹⁹¹⁹ The Council of Europe's Committee of Ministers granted Ecuador observer status on the Committee on AI (CAI) in 2025. Although Ecuador will be eligible to assent to the Framework Convention only after ratification, observer status allows the country to participate in relevant CAI discussions.¹⁹²⁰

UNESCO Recommendation on AI Ethics

UNESCO has been active in facilitating ethical AI dialogue in Ecuador, with efforts explicitly framed around the Recommendation on the Ethics of Artificial Intelligence.¹⁹²¹ Experts from UNESCO also contributed to the discussion around the effort to draft a single legislative AI proposal that consolidates AI bills.¹⁹²²

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

UNESCO and the Ministry of Telecommunications and the Information Society (MINTEL) held the first Extraordinary Session of MINTEL's AI Committee to advance Ecuador's progress on the Readiness Assessment Methodology (RAM),¹⁹²³ which is still in process.¹⁹²⁴ Experts discussed ethical principles for the responsible and transparent adoption of AI, ensuring alignment with national priorities and human rights.

Evaluation

Ecuador is in the process of drafting a comprehensive national regulatory framework to govern the development and deployment of AI. Early drafts and policy initiatives suggest alignment with the EU AI Act and GDPR and with leading global standards such as the OECD AI Principles and UNESCO Recommendations on the Ethics of AI. The relevant ministries have taken steps to engage diverse stakeholders in AI policy development, and national AI initiatives are publicly available through the country's online Digital Observatory. However, gaps remain in ensuring algorithmic transparency and contestability of automated decisions.

Organized crime continues to exert a significant impact on Ecuador, prompting its government to explore AI for surveillance and crime prevention. Yet, the documented harms of AI in law enforcement—such as wrongful incarceration and biased policing resulting from discriminatory and spurious outputs—underscores the need for strong safeguards.¹⁹²⁵ These risks are further compounded by Ecuador's increasing political instability and governance challenges. Continuous monitoring is warranted to assess whether adequate safeguard and oversight mechanisms will be implemented to uphold fundamental rights and ethical AI principles.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Egypt

In 2025, Egypt issued Executive Regulations to enact the 2020 Personal Data Protection Law and issued the Second Edition of the National AI Strategy. The country also completed the UNESCO Readiness Assessment Methodology (RAM) and published the report.

National AI Strategy

The Egyptian Cabinet approved the formation of a National Council for Artificial Intelligence (NCAI) tasked with “outlining, implementing and governing the AI strategy in close coordination with the concerned experts and entities”¹⁹²⁶ in November 2019. The Technical Committee of the National Council for Artificial Intelligence composed of representatives from all relevant government entities and independent experts in the field released the first National AI Strategy in 2021.¹⁹²⁷ On this occasion, the President of the Arab Republic of Egypt, Abdel Fattah Al-Sisi, stated, “We strongly believe that as emerging technologies create opportunities, they also pose challenges that we should be prepared for. Thus, we aim, through the National AI Strategy, to open the door to dialogue with stakeholders and promote international cooperation to exchange views on the best practices for developing and using AI to build the common good.”¹⁹²⁸

The Second Edition of the National AI Strategy for 2025–2030¹⁹²⁹ emphasizes that the main objective of the NCAI is to prepare, formalize, approve, and govern the implementation of Egypt’s National AI Strategy. The six strategic objectives are to:

- Ensure ethical and responsible AI use by establishing a comprehensive AI regulatory system, activating the ethical framework, and put a nucleus for a clear regulatory body, actively contributing to global efforts and playing an active role in AI different international fora.
- Enhance quality of life and sectoral efficiency through AI applications.
- Ensure data accessibility and sharing by developing frameworks for national data governance and strengthening life cycle management of domestic data.

¹⁹²⁹ National Council for Artificial Intelligence, *Egypt National Artificial Intelligence Strategy, Second Edition (2025–2030)* (Jan. 2025), https://ai.gov.eg/SynchedFiles/en/Resources/AIstrategy_English_16-1-2025-1.pdf

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

- Build a robust scalable AI infrastructure and cloud services, innovate business models, and create a good digital foundation for the development of the AI industry with the support of infrastructure development.
- Create a healthy AI ecosystem by supporting local startups, small and medium enterprises, and innovation efforts, and strengthening the investment of venture capital institutions in Egypt.
- Strengthen the quantity and quality of local AI talents and experts.¹⁹³⁰

Egypt's newly announced AI Strategy encourages the responsible use of AI tools and the protection of data, yet recent events signal risks to enforcement. The Surveillance Law of 2025, which allows AI analysis of personal communications, appears incompatible with the principles of fairness, transparency, and privacy protection outlined in the National AI Strategy. Experts note that the law could undercut Egypt's pledge to the ethical and responsible use of AI.¹⁹³¹

The National Strategy created Key Performance Indicators (KPIs) to assess the status of ethical AI in Egypt. These include establishing a dedicated track within NCAI for AI Ethics, publishing Guidelines for Responsible and Ethical Development of AI, creating a set of rules and regulations for responsible AI use, and developing Ethics in AI/Technology courses as part of university computing degrees.¹⁹³² The adoption of the Egyptian Charter for Responsible AI in February 2023, which offers “actionable insights and policies for decision makers in government, academia, industry, and civil society,”¹⁹³³ marks progress on these KPIs. Egypt's efforts were also witnessed in establishing AI Faculties at Egyptian universities and teaching AI ethics in computer science faculties.¹⁹³⁴

The first National Strategy was implemented in a phased approach. The first phase (2020–2022) focused domestically on responding to market needs with AI talent and proving the value of AI through pilot projects within government. Internationally, the first phase centered active participation in international organizations on topics such as AI Ethics, AI for SDGs, and the impact of AI on labor markets and education.”¹⁹³⁵ In the second phase (2023–2026), the emphasis has been on expanding AI into additional sectors. The government intends to establish a

Center for AI and Digital Policy

“paperless, collaborative, and smart” government.¹⁹³⁶ Egypt signed a Memorandum of Understanding (MoU) with Thales, a French technology solutions company to integrate AI solutions to governmental services and to build AI capacity.¹⁹³⁷ Priority initiatives included raising public awareness about AI, supervising the domestic data lifecycle and fostering AI expertise. Egypt’s progress in this phase aligns with the OECD AI Principles.¹⁹³⁸

Egypt is actively working to bring the perspective of developing countries to international discussions, thereby helping to narrow the AI knowledge and development gap between developed and developing countries.¹⁹³⁹ In 2019, Egypt participated in the drafting of the UNESCO Recommendation on the Ethics of AI, serving as the Ad Hoc Expert Group’s vice-chair.¹⁹⁴⁰

Regional AI Governance Collaboration

Egypt is also positioning itself as a regional leader in the AI and digital policy world. In 2019, Egypt hosted the third session of the African Union (AU) Specialized Technical Committee on Communication and Information Technologies. This meeting was crowned by the adoption of the Sharm El Sheikh Declaration, which recognized and reaffirmed the necessity for a coherent African Digital Transformation Strategy “to guide a common, coordinated response to reap the benefits of the Fourth Industrial Revolution.”¹⁹⁴¹ Egypt hosted the first-ever DSC MENA 24 AI conference. This conference aimed to gain actionable insights into the international AI landscape through in-depth sessions on generative AI, natural language processing, computer vision, data engineering, cloud data, and AI applications in healthcare.¹⁹⁴²

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Egypt also helped create the AU African Working Group on AI, a group tasked with drafting a continent-wide AI strategy.¹⁹⁴³ This strategy aspires to create a common stance on AI issues, areas of priority, and the role of AI in vital sectors as well as ensure “the governance of AI and the protection and availability of data and developing AI regulations.” The strategy also aims to position the African voice at the center of international fora and to “bridge the digital divide between developed [States] and African countries.”¹⁹⁴⁴ Such active engagement culminated in Egypt being elected Chair of the African AI Working Group.¹⁹⁴⁵ In February 2021, Egypt hosted the first meeting of the African AI Working Group, which led to the issuance of the Common Africa Position Paper on the Priority Areas of Africa towards AI, followed by the second meeting, which was also hosted by Egypt in December 2022.¹⁹⁴⁶ Overall, the meetings of African Working Group on AI aimed to craft an African AI strategy in line with African Agenda 2063.¹⁹⁴⁷

Egypt also chairs the Arab League’s AI Working Group¹⁹⁴⁸ and has remained a regional and global player in AI. In 2025, the Minister of Communication and Information Technology, Amr Tallat delivered a keynote address during the opening of the Arab Dialogue Circle on Artificial Intelligence in the Arab World: Innovative Technologies and Ethical Challenges (ADCAI2025).¹⁹⁴⁹ The Minister also participated in the Ministerial Roundtable of the Global Partnership on Artificial Intelligence (GPAI) members and interested countries held at the headquarters of the French Ministry for Europe and Foreign Affairs, on the sidelines of the AI Action

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Summit in Paris France, where he highlighted Egypt's active engagement in international forums addressing AI-related issues.¹⁹⁵⁰

Public Participation

The Ministry for Communications and Information Technology launched a website under the National Council for Artificial Intelligence¹⁹⁵¹ that allows the public to easily access the National Strategy, I news, details about AI events, projects, and capacity-building programs, and information about AI partnerships with governments, international organizations, private sector companies, and academia. The AI Platform also includes a page where researchers can submit academic articles.

Egypt has promoted several public events to build internal AI capacity, such as training for citizens on how to build AI apps, hackathons and discuss the future of AI in Egypt. However, spaces dedicated to feedback and active contribution are more reserved to strategic partnerships with private companies and experts.

In line with the second National Artificial Intelligence Strategy (2025–2030), Egypt announced that Cairo will host the AI Everything Middle East & Africa (MEA) 2026 Forum. The event organized by GITEX Global in collaboration with the Ministry of Communications and Information Technology (MCIT) and the Information Technology Industry Development Agency (ITIDA), will convene representatives from over 60 countries, including government officials, private-sector leaders, investors, and academic institutions. The theme spans digital governance, financial technology, healthcare innovation, cybersecurity, and sustainable cloud infrastructure, thereby connecting Egypt's domestic development agenda to regional and global AI ecosystems. In addition to a ministerial-level summit, the program includes start-up exhibitions, investor matchmaking sessions, and youth-oriented capacity-building tracks designed to promote skill development and entrepreneurship in the field of artificial intelligence.

Data Protection

The Egyptian Constitution protects citizens' rights to privacy under Article 57.¹⁹⁵² Egypt passed Law No. 151 on the Personal Data Protection Law (PDPL) in

¹⁹⁵⁰ Ministry of Communications and Information Technology, *ICT Minister Participates in GPAI Ministerial Roundtable* (Feb. 10, 2025), https://mcit.gov.eg/en/Media_Center/Press_Room/Press_Releases/68219

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

July 2020.¹⁹⁵³ The Minister of Communications and Information Technology publicized a draft Executive Regulation of the PDPL in June 2022.¹⁹⁵⁴ The Executive Regulation¹⁹⁵⁵ implementing the PDPL and operationalizing the national data protection authority were released in November 2025 and will be implemented through 2026.

The PDPL was drafted following the example of the European General Data Protection Regulation (GDPR). Article 2 of the PDPL provides for data subject rights such as the right to erasure, the right to be informed, the right to access, and the right to rectification and to object.¹⁹⁵⁶ The PDPL also enshrines principles applicable to the collection, storage and processing of personal data. These principles are (1) Data minimization; (2) Accuracy and security; (3) Lawfulness, and (4) Storage limitation. The PDPL foresees financial sanctions in the event of violations regarding the protection of personal data.

The PDPL created the Personal Data Protection Center (PDPC) as the “competent regulatory authority responsible for overseeing, enforcing, and developing Egypt’s data protection framework.”¹⁹⁵⁷ The PDPC will set and apply decisions, regulations, and measures in relation to data protection and foresee an adequate mechanism for law enforcement. The Center is meant to be an independent authority that operates under the Ministry of Communications and Information Technology.¹⁹⁵⁸

In January 2025, Egypt amended the Criminal Procedure Code to expand surveillance of personal communications.¹⁹⁵⁹ The law allows monitoring of phone calls, emails, and social media. Civil society groups raised concerns about the lack of transparency and accountability in AI-powered surveillance systems. Experts noted that the law may present conflicts with Egypt’s commitments to ethical AI

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

governance, including transparency (Metric Q9) and fairness (Metric Q8). However, Egypt adopted its first National Open Data Policy in June 2025 to drive digital transformation.¹⁹⁶⁰

At a conference on the challenges to the right to privacy given the rapid development of artificial intelligence in July 2022, the Minister of Social Solidarity Nevine El-Qabbaj stated that “artificial intelligence has breached all limits, even our mental privacy.”¹⁹⁶¹

The Personal Data Protection Center is not a member of the Global Privacy Assembly (GPA).¹⁹⁶² Egypt has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,¹⁹⁶³ the 2020 GPA Resolution on AI Accountability,¹⁹⁶⁴ the 2022 GPA Resolution on Facial Recognition Technology,¹⁹⁶⁵ or the 2023 GPA Resolution on Generative AI.¹⁹⁶⁶

Algorithmic Transparency

The PDPL does not refer to algorithmic transparency. However, the principles of “transparency and explainability,” including the right of the user to know “when he or she is interacting with an AI system and not a human being” are enshrined in the Egyptian Charter for Responsible AI.¹⁹⁶⁷ The Charter also emphasizes that: “Developers of AI systems should always strive to provide transparent and explainable AI solutions. The degree of explainability required will vary according

to the application domain and project requirements, but project sponsors must be clear on the potential tradeoff between the accuracy/quality and explainability of any given model. When in doubt, developers should opt for simpler models with higher degrees of explainability, without compromising the minimum desired quality and accuracy.”

Biometric Recognition

Egypt is increasingly adopting biometric technologies for security and surveillance. A deal between the Arab Organization for Industrialization and Idemia, a leading biometric company, hired the latter to produce biometric devices including facial recognition systems in Egypt.¹⁹⁶⁸ The Egyptian government agreed with Idemia in early 2020 to build a digital ID system for Egypt Post “backed by fingerprint biometrics and citizen IDs.”¹⁹⁶⁹ In 2021, Fingo, another organization specializing in biometrics, announced a partnership with Egypt to develop a vein-based recognition system for the country’s national ID program.¹⁹⁷⁰

On the sidelines of the COP27 hosted in Sharm El-Sheikh, the Egyptian government signed an MoU with the US-based company, Honeywell International Inc, to “run a pilot model in Sharm El-Sheikh by transforming the new building of the South Sinai Governorate General Assembly and Sharm El-Shaikh Hospital into sustainable smart buildings relying on modern technologies, especially artificial intelligence and data analytics.”¹⁹⁷¹ This agreement came as the second deal after Egypt contracted Honeywell in 2019 to provide city-wide public safety, security and surveillance system for the new administrative capital, which, according to a press release by the company, will “integrate advanced Internet of Things (IoT) software and [...] also connect video feeds from more than 6,000 IP cameras over a futureproof wireless network, and run sophisticated video analytics to monitor

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

crowds and traffic congestion, detect incidents of theft, observe suspicious people or objects, and trigger automated alarms in emergency situations.”¹⁹⁷²

These deals were concluded in a legal vacuum even though biometric systems could adversely impact several human rights, including the right to freedom of expression, the right to assembly, and the right to privacy.¹⁹⁷³

A January 2025 surveillance law allows direct monitoring of an individual citizen’s personal communications via mobile communications, voice, email, and social networking, as well as the use of biometric tracking technologies. The law has been criticized for its limited accountability and transparency, as well as the potential for automated decision-making without citizen oversight. Egypt’s approach to biometric tracking under this law may conflict with its commitment to Algorithmic Transparency (Metric Q9) and Fairness & Accountability (Metric Q8) under the AIDV Index.¹⁹⁷⁴

The law includes provisions that could expand the use of biometric recognition tools in public areas, increasing risks of AI misuse. Experts warn that, if unchecked, such policies could restrict civil rights and reduce transparency, making it harder to manage AI’s ethical implications and posing serious risks to civil liberties if not properly regulated.¹⁹⁷⁵

EdTech

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including Egypt, for children’s education during the pandemic. Based on technical and policy analysis of 163 EdTech products, Human Rights Watch found that governments’ endorsements of the majority of these online learning platforms put at risk or directly violated children’s rights.¹⁹⁷⁶

This is the case, for example, of the EdTech product “Edmodo” used in Egypt, which, according to Human Rights Watch, can collect Android Advertising IDs that enable advertisers to track children over time and across different apps installed on their devices for advertising purposes. Edmodo also allows shadow profiling by accessing contacts’ details and photos, if saved on the phone. Additionally, an Education and skills push elevated to a national priority under Presidential direction could consider AI use as compulsory in pre-university education.¹⁹⁷⁷

Environmental Impact of AI

Egypt’s 2021 National AI Strategy highlights the use of AI technology to mitigate the environmental cost of agriculture in the AI for Development (AI4D) pillar.¹⁹⁷⁸ However, the strategy does not address the environmental cost or resources required to develop and deploy AI systems. The Egyptian Charter for Responsible AI requires the environmental impact of Government AI projects to be weighed in “a thorough impact assessment to ensure maximum benefit from the technology, while respecting the guidelines of responsible and ethical AI development.”¹⁹⁷⁹

The Second Edition of the National Strategy promotes sustainable AI development by encouraging green computing practices and energy-efficient data centers. Egypt also aims to use AI to support environmental monitoring and conservation in sectors like energy, agriculture, and water management.¹⁹⁸⁰

The African Union Continental Artificial Intelligence Strategy to which Egypt contributed identifies emissions and resource demands among the risks of using and developing AI systems.¹⁹⁸¹ The Strategy identifies environmental protection as a priority area to apply AI technology but also calls for countries to center sustainability through innovations such as green data centers in developing technology.¹⁹⁸²

Lethal Autonomous Weapons

While Egypt has signed the Convention on Conventional Weapons (CCW), it has not yet ratified the Convention.¹⁹⁸³ However, Egypt has been actively participating in CCW meetings on killer robots since 2014.¹⁹⁸⁴ Bassem Yehia Hassan Kassem Hassan, a representative of Egypt, speaking on behalf of the Arab Group, stated that the presence of weapons of mass destruction and their modernization are a grave threat to international security and development, and that international community must develop norms and rules to encourage responsible behavior and increase cooperation to reach concrete progress in dealing with threats posed by lethal autonomous weapons and the use of artificial intelligence in armaments.¹⁹⁸⁵

On numerous occasions, Egypt has warned that these weapon systems may have “possible ramifications on the value of human lives [and] the calculation of the cost of war,”¹⁹⁸⁶ and thus, there must be “specific prohibitions on acquisition, research and development, testing, deployment, transfer, and use [of these systems].”¹⁹⁸⁷ Egypt has called for a moratorium on lethal autonomous weapons systems until a ban is achieved, supporting “a legally binding instrument against the development and manufacture of such weapon systems [...] as well as the regulation of existing systems that fall within [the CCW] mandate.”¹⁹⁸⁸

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

At the 78th UN General Assembly First Committee in 2023, Egypt voted in favor¹⁹⁸⁹ of resolution L.56¹⁹⁹⁰ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. Egypt also voted in favor of Resolution L.77 on lethal autonomous weapons systems in 2024.¹⁹⁹¹ The resolution, supported by 161 states, raises concerns about the “negative consequences and impact of autonomous weapon systems on global security and regional and international stability” and stresses the “the importance of the role of humans in the use of force to ensure responsibility and accountability and for States to comply with international law.”¹⁹⁹²

AI Literacy

Egypt has adopted a structured approach to AI literacy under its broader Digital Egypt agenda and the Second National Artificial Intelligence Strategy (2025–2030). The strategy identifies “human capital development and AI literacy” as one of six pillars, aiming for an informed, capable, and ethically aware workforce to support national AI deployment.¹⁹⁹³ The Ministry of Communications and Information Technology (MCIT), through its Applied Innovation Centre (AIC) and the Information Technology Institute (ITI), has launched several national programs targeting students, civil servants, and professionals.

To address the growing importance of AI in the public sector, the program trains public officials in understanding algorithmic systems, data governance, and ethical risk assessment. Complementing this initiative, the AI Summer School Initiative provides early-career researchers with exposure to machine learning and

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

data analytics.¹⁹⁹⁴ At the institutional level, Egypt’s National Council for Artificial Intelligence (NCAI) coordinates AI literacy programs across ministries, ensuring alignment with the Responsible AI Charter (2023) and the UNESCO Recommendation on the Ethics of Artificial Intelligence (2021). This coordination ensures that literacy initiatives incorporate awareness of AI’s ethical, societal, and regulatory dimensions.

To expand digital inclusion, the Digital Egypt Cubs Initiative trains students aged 12–17 in foundational AI concepts, programming, and ethics. The Digital Egypt Pioneers Initiative extends this framework by providing professional certification and employment pathways for youth in AI-related fields. Together, these initiatives integrate AI literacy across Egypt’s digital-skills ecosystem.¹⁹⁹⁵

Human Rights

Egypt has endorsed the Universal Declaration of Human Rights. However, the Freedom in the World report ranks Egypt as “Not Free” with a score of 18/100 for 2025.¹⁹⁹⁶ The report cites the authoritarian rule of President Abdel Fattah al-Sisi and the lack of meaningful political opposition given the prosecution and imprisonment of dissenters and general restriction of civil liberties such as freedoms of the press, assembly, and expression. Criminalization of dissent, harassment, and surveillance for internet users as well as restrictions to access led to the “Not Free” ranking and 28/100 score on the Freedom on the Net report.¹⁹⁹⁷

In March 2021, 31 UN member states penned a joint declaration, supported by numerous NGOs, strongly condemning human rights abuses in Egypt. The declaration highlighted constraints on citizens’ freedom of expression, as well as their ability to voice political opposition and to peacefully assemble.¹⁹⁹⁸

Egypt is criticized by international human rights organizations and civil society for state surveillance on citizens’ communications and censorship on content online.¹⁹⁹⁹ Enactment of the Anti-Cyber Crime Law aimed to ensure online safety,

security and fraud; however, in practice the regulation can be used for surveillance due to vague definitions and language.²⁰⁰⁰ Moreover, Egypt's collaboration with private software and technology solution companies such as Idemia and Thales has been criticized for the lack of transparency and accountability.²⁰⁰¹

In late 2021, Egypt launched the National Human Rights Strategy.²⁰⁰² On this occasion, President Abdel-Fattah El-Sisi declared 2022 as the year of civil society.²⁰⁰³ The Human Rights Strategy is based on three axes: a) Constitutional Guarantees for Enhancing Human Rights Respect and Protection, b) Egypt's International and Regional Human Rights Obligations, and 3) Sustainable Development Strategy: Egypt Vision 2030. While the Strategy tackled all human rights, particularly political rights, it did not address the positive/adverse impact of technology on these rights or the human rights implications of artificial intelligence. The Strategy referred only to the use of technology to enhance human rights under the "Right to Litigation and Strengthening Guarantees for a Fair Trial."²⁰⁰⁴

In February 2023, Egypt released the Egyptian Charter on Responsible AI. The Charter builds on the OECD AI Principles and UNESCO Recommendation on the Ethics of AI.²⁰⁰⁵ The Charter recognizes the significant risks AI might pose, such as bias, data drift, lack of transparency, lack of legal responsibility, and lack of fairness and equality. Therefore, it introduces guidelines and best practices for assessing AI systems trustworthiness with the aim to protect human rights and ensure the responsible, transparent, and fair use of the technology. For example, on the human-centeredness principle, the Charter stresses that "[t]he primary goal of using

AI in Government is the well-being of citizens, including combating poverty, hunger, inequality, illiteracy, and corruption; achieving prosperity and inclusion.”²⁰⁰⁶

OECD / G20 AI Principles

Although Egypt is not an OECD member, the country contributed to the drafting of the OECD Recommendations on Responsible Use of AI²⁰⁰⁷ and was the first Arab and African country to endorse and translate the OECD AI Principles into Arabic.²⁰⁰⁸ Egypt also has collaborated with the Global Partnership on AI (GPAI) as an observer and took part in the Ministerial Roundtable of the GPAI²⁰⁰⁹ at the AI Action Summit in Paris in 2025, where the ICT Minister presented the main principles of the Second Edition of the National AI Strategy 2025–2030.

As reported by the OECD in the 2021 State of Implementation of the OECD Principles report, Egypt has set up a governing body (the National Council for AI) to oversee the implementation of its AI strategy.²⁰¹⁰ This is a concrete first step toward fulfilling the OECD recommendation of ensuring “a policy environment that will open the way to deployment of trustworthy AI systems.”

Egypt has also taken steps toward fulfilling three of the four other OECD recommendations. The creation of both the AI Platform and the new Egyptian Center of Excellence,²⁰¹¹ a government group that will work with private or academic partners to deliver AI projects on behalf of beneficiaries, help to “foster accessible AI ecosystems with digital infrastructure and technologies and mechanisms to share data and knowledge.” Empowering “people with the skills for AI and support workers for a fair transition” will be accomplished through enrollments in the newly created “Faculties of AI” at eight public and private Egyptian universities.²⁰¹² Egypt’s cooperation “across borders and sectors to progress on responsible stewardship of

trustworthy AI” is evidenced by its participation in and leadership of international AI committees.

The Charter on Responsible AI purports to demonstrate how the country will interpret and implement the OECD AI Principles of human-centeredness, transparency and explainability, fairness, accountability, security and safety.²⁰¹³

Council of Europe AI Treaty

Egypt did not participate in the negotiations for the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law, which opened for signature by member and non-member countries in September 2024.²⁰¹⁴ Egypt has not signed the Council of Europe AI Treaty.²⁰¹⁵

UNESCO Recommendation on AI Ethics

Egypt endorsed the UNESCO Recommendation on AI Ethics²⁰¹⁶ and took an active part in its drafting.²⁰¹⁷ Egypt embedded most of the principles adopted in the UNESCO Recommendations on AI Ethics in its Charter for Responsible AI, albeit no concrete implementation has taken place so far. The Charter draws on the guidelines developed by UNESCO and other organizations by translating these recommendations into steps “to help ensure the responsible development, deployment, management, and use of AI systems in the country.”²⁰¹⁸ Although the Charter recognizes the principle of “human-centered AI,” it does not acknowledge that “Respect, protection and promotion of human rights and fundamental freedoms” lie at the heart of Ethical AI.

Egypt completed a comprehensive AI Readiness Assessment²⁰¹⁹ in partnership with UNESCO, using UNESCO’s Readiness Assessment Methodology

(RAM).²⁰²⁰ The initiative, jointly conducted by the UNESCO Regional Office for Egypt and Sudan and the Ministry of Communications and Information Technology (MCIT), identified priority areas for development, including the need to enhance computing infrastructure, promote ethical innovation, and strengthen regulatory oversight and public accountability mechanisms.²⁰²¹ The report also acknowledges Egypt's leadership in regional AI governance, notably through its chairmanship of both the African Union and Arab League AI working groups. The assessment also emphasized that the transition from assessment to implementation will determine the country's long-term success in ensuring ethical and inclusive AI.

Evaluation

Egypt has been a leading voice in the African and Arab world to foster the regulation of AI. The country chaired African and Arab working groups on the topic and actively participated in the drafting of the UNESCO Recommendation on the Ethics of AI. Nationally, key milestones include the adoption of the Egyptian Charter on Responsible AI and the launch of the Second Edition of the National AI Strategy for 2025–2030. The second edition of the Strategy reflects Egypt's commitment to developing AI Policy to ensure that Egypt implements responsible, ethical AI in a sustainable manner, in line with international standards, in pursuit of the mission to lead the region in AI for development.

Despite developing AI policies in line with international standards, authoritarian government practices and human rights violations undermine implementation of these principles. Surveillance and a lack of supporting institutions continue to undermine democratic principles and rights around public participation, data protection, and civil liberties.

Estonia

In 2025, Estonia designated authorities for the protection of fundamental rights under the EU AI Act and launched the AI Leap Initiative to incorporate AI literacy into secondary- and vocational-school curriculum.

National AI Strategy

The Estonian Cabinet adopted the first National AI Strategy in July 2019.²⁰²² The Government Chief Information Officer Office, based in the Ministry of Economic Affairs and Communications, was tasked with steering the AI Strategy. The first National AI Strategy built on a May 2019 report of Estonia's AI Taskforce.²⁰²³ The actions detailed in the first AI Strategy were designed to advance the adoption of AI solutions in both the private and public sectors, to increase AI capacities and research and development, and to develop the legal environment to facilitate AI. The first AI Strategy committed to the establishment of a steering group, comprised of government representatives and other stakeholders, to monitor the implementation of the AI Strategy. In addition, the e-Estonia Council was tasked with considering the strategy's implementation annually. The first AI Strategy was conceived as a short-term strategy, intended to apply up until 2021. By adopting a short-term strategy, Estonia intends to gain insight and develop a long-term strategy in response to the experience gained. Estonia aims to monitor the development of the short-term action plan and keep the European Union informed of developments.

In spite of Estonia's national digital adviser initially proposing the adoption of a law granting legal personality to AI, Estonia's AI Taskforce concluded that no substantial legal changes were currently required to address the issues presented by AI.²⁰²⁴ The Taskforce Report maintained, "Both now and in the foreseeable future, kratts are and will be human tools, meaning that they perform tasks determined by humans and express the intention of humans directly or indirectly." Accordingly, the AI Taskforce Report clarified that the "actions" of AI are attributable to the relevant state body or private party that uses the AI solution.²⁰²⁵ Minor changes recommended

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

include the removal of obsolete laws and providing additional clarity to facilitate the use of AI. Estonia's Chief Information Officer stated that Estonia wants to "build on the EU framework, not to start creating and arguing" for a separate Estonian framework.²⁰²⁶

Neither the first AI Strategy nor the AI Taskforce Report provided significant detail on questions related to the ethics of artificial intelligence. Reference was, however, made to guidance provided by the European Commission for the development and implementation of trustworthy artificial intelligence.²⁰²⁷ The Taskforce Report acknowledged that "trustworthy artificial intelligence must be guided by the principles of human rights, positive rights, and values, thus ensuring the ethics dimension and objective."²⁰²⁸ The Report recognized the relevance of the EU Charter of Fundamental Rights and referred to the following rights as central according to the Commission guidance on AI: the right to human dignity, the right to freedom, respect of the principles of democracy and the state, based on the rule of law, right to equality, non-discrimination, and acknowledgement of minorities, and civil rights.

To ensure that the development and use of AI is ethical, the Taskforce Report emphasized the importance of ensuring that AI is human-centric; that rights, ethics principles, and values are fundamental; and that AI may bring unintended consequences. The first AI Strategy referenced the EU guidelines that identify the importance of the following values: human agency, technical reliability, privacy and data management, transparency, non-discrimination, social and environmental well-being, and responsibility.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Estonian Cabinet adopted the Artificial Intelligence Strategy (2022–2023) as a continuation of Estonia’s first national AI strategy (2019–2021).²⁰²⁹ This AI strategy was carried out in line with the objectives laid out by the European Commission in its Coordinated Plan on Artificial Intelligence. Estonia’s AI Task Force is working to update the national AI strategy and explained the 203 edition will continue until completion.²⁰³⁰

Nordic-Baltic Cooperation on AI

As for the international landscape, the Estonian minister responsible for digital development signed the 2018 declaration on “AI in the Nordic-Baltic region” establishing a collaborative framework on “developing ethical and transparent guidelines, standards, principles and values to guide when and how AI applications should be used” and “on the objective that infrastructure, hardware, software and data, all of which are central to the use of AI, are based on standards, enabling interoperability, privacy, security, trust, good usability, and portability.”²⁰³¹

The ministerial declaration Digital North 2.0²⁰³² builds on the common priorities of the Nordic-Baltic countries, and follows the previous ministerial declaration, Digital North 2017–2020. The countries created a Council of Ministers for Digitalization (MR-DIGITAL) “to promote work with digitalisation, co-ordinate efforts, and follow up on the goals of the declaration.”²⁰³³

In November 2021, the Nordic and Baltic ministers for digitalization released another joint statement announcing a focus on digital inclusion, striving to implement measures to make digital services more accessible to all Estonian inhabitants and ensuring that those who do not possess the necessary level of skills get the opportunity to acquire them.²⁰³⁴

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Nordic and Baltic ministers for digitalization issued a common statement in 2022 on the importance of cooperation on digital security in the Nordic-Baltic region following the COVID-19 pandemic and the war in Ukraine. In their common statement, the ministers stressed that this “rapid transformation has challenged everyone to adapt to new, digital ways of doing business, learning and accessing public authorities.” The ministers declared that they “have committed to ensuring that our region maintains its position as a leader in digitalisation, and that everyone in the region benefit from digitalisation regardless of age, wealth, education or level of digital skills. One important factor that helps ensure a strong level of digitalisation in the region is the trust citizens put in digital services from the public sector – be it at regional, national or local level. In order to keep up this high level of trust, we need to continue our efforts to make our digital public services human centric and accessible. [...] Robust and secure digital services, safeguarding users' privacy and ensuring that personal data are stored and processed in a trustworthy way, are crucial to the citizens' sustained trust in digital services.”²⁰³⁵

The Secretary of the Nordic Council of Ministers published a report in May 2024 presenting the fundamental characteristics of the digitalization of their national public administrations from a legal perspective. The report discusses the impact of proposed EU regulations on AI, such as the AI Act, and their implications for national legislations within the Nordic-Baltic countries. It underscores the need for harmonized legal frameworks that support AI innovation while safeguarding fundamental rights and public trust.²⁰³⁶ The Nordic Ministers of Digitalisation adopted a Declaration to promote participation of persons with disabilities through inclusive, fair and accessible artificial intelligence in 2025.²⁰³⁷

EU Digital Services Act

As an EU member state, Estonia shall apply the EU Digital Services Act (DSA).²⁰³⁸ The DSA regulates online intermediaries and platforms. The main

Center for AI and Digital Policy

objective of the DSA is to prevent illegal and harmful activities online and the spread of disinformation. The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Signatories to the DSA also commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data, as part of the 2022 DSA mitigation measure Strengthened Code of Practice on Disinformation.²⁰³⁹

As part of its obligations under the DSA, Estonia was required to designate a Digital Services Coordinator (DSC) by February 17, 2024.²⁰⁴⁰ Although Estonia designated the Consumer Protection and Technical Regulatory Authority (*Tarbijakaitse ja Tehnilise Järelevalve Amet*) as the DSC after the deadline, the country is now in compliance with the act.²⁰⁴¹

EU AI Act

As an EU member State, Estonia is bound by the EU AI Act²⁰⁴² and obligated to designate authorities to oversee the implementation and enforcement of the act. The EU AI Act is a risk-based market regulation that supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI.

Estonia has designated the Data Protection Inspectorate, the Commission for Gender Equality and Equal Treatment, and the Consumer Protection and Technical Regulatory Authority to protect and supervise fundamental rights in line with Article

77 of the EU AI Act.²⁰⁴³ While the institutions are not surveillance authorities, they have powers to access documents that providers and deployers are obligated to keep and to be informed by the market surveillance authority of serious incidents related to High Risk AI systems.

Public Participation

In 2018, the Estonian government brought together an expert group to participate in a cross-sectional coordination project on AI.²⁰⁴⁴ The three tasks of this expert group were to develop the so-called Estonian artificial intelligence action plan; prepare draft legislation to ensure clarity in the Estonian judicial area and organize the necessary supervision; notify the public about the implementation of kratts and introduce possible options.

Participants in the group included representatives from state authorities, the private sector, universities, and sectoral experts. The report collected data through interviews, including with company representatives involved in the development of AI and ICT representatives from universities. Working groups (in the fields of law, education, and the public sector) were also created.²⁰⁴⁵ The e-estonia website states, “In these debates, technical and legal expertise goes a long way. But the discussion must also involve the public. Honest, meaningful debate requires that dreamy utopias be balanced with open discussions about AI’s controversial attributes and threats. Only this can create user-friendly legislation that’s equipped to reduce legal nightmares in the long-term.”²⁰⁴⁶

Documents relating to the AI Strategy are accessible on the internet. The website Krattid provides links to the National Artificial Intelligence Strategy, the Report of Estonia's AI Taskforce, the Vision Paper on #KrattAI: The Next Stage of Digital Public Services in #eEstonia, and the #KrattAI Roadmap for 2020.²⁰⁴⁷

The Krattid website was updated with the new AI Strategy (2022–2023) and the new #KrattAI Roadmap for 2021–2022 in 2022. A separate website, the Electronic Information System (EIS),²⁰⁴⁸ enables anyone to follow ongoing

legislative procedures, search for documents in the information system, take part in public consultations and comment on a document under inter-agency coordination. The EIS is a working environment for inter-agency coordination, submission of documents to the government and the parliament, and public consultation. In addition to national documents, draft European Union legislation and other documents related to the European Union decision-making process are available in the EIS.

The Ministry of Economic Affairs and Communications published the new national AI strategy (2022–2023) for public consultation for two weeks in 2021. Although the deadline was tight, the public had the opportunity to supplement and comment on the Action Plan.

Bürokratt,²⁰⁴⁹ an AI-powered virtual assistant designed by the Estonian government with civil society consultations, saw a significant expansion of its capabilities in January 2024. The government designed the assistant to simplify interactions with government services and promoted public awareness campaigns to increase its adoption among civil society. The government integrated public information in Bürokratt to allow the system to answer questions and find public information. The State Information Systems Authority (*Riigi Infosüsteemi Amet*) has asked citizens to help test the model by asking questions related to public needs such as social issues, pensions, employment, or citizens and provide feedback on the accuracy of the answers.²⁰⁵⁰

Data Protection

Since Estonia is an EU Member State, the General Data Protection Regulation (GDPR)²⁰⁵¹ is directly applicable in Estonia and to Estonians. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market.” Estonia’s Personal Data Protection Act (PDPA)²⁰⁵² and the Personal Data Protection Implementation Act (Implementation Act) were adopted in December 2018 and February 2019 respectively to align Estonian law with the GDPR. They entered into force in January 2019 and March 2019 respectively.

Artificial Intelligence and Democratic Values 2026
Center for AI and Digital Policy

The PDPA also transposed the EU Data Protection Law Enforcement Directive (LED),²⁰⁵³ which “protects citizens' fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes. It will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”²⁰⁵⁴ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.²⁰⁵⁵ The European Data Protection Board (EDPB), of which Estonia is a member, stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED).²⁰⁵⁶

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

Estonia is also a member of the Council of Europe and ratified the Council of Europe's Convention 108+ for the protection of individuals with regard to the processing of personal data.²⁰⁵⁷

The Data Protection Inspectorate²⁰⁵⁸ is the national supervisory authority in Estonia. Despite being a member of the Global Privacy Assembly (GPA) since 2006, the Inspectorate has not endorsed the 2018 GPA Declaration on Ethics and Data

Algorithmic Transparency

Estonia is subject to the GDPR and Convention 108+. Estonians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.²⁰⁶³ The 2020 Recommendation of the Council of Europe Committee of Ministers clarifies that the right to algorithmic transparency extends to contestation,²⁰⁶⁴ including “an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines.”²⁰⁶⁵

Estonia’s Ministry of Justice announced plans in 2020 to draft legislation addressing high-risk algorithmic systems that will require the creators of AI (both public and private) to provide transparency regarding when AI communicates with an individual, processes an individual’s data, or makes a decision on the basis of the individual’s data.²⁰⁶⁶ However, as of 2025, the legislation has not been drafted.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Estonia's National AI Strategy for 2022–2023, which is currently being updated for the 2024–2026 period, underscores the importance of transparency in AI systems. The strategy outlines measures to ensure that AI applications, including algorithms used in public services, are transparent, accountable, and aligned with ethical standards.²⁰⁶⁷ Estonia demonstrated a commitment to transparency by creating public repositories for open-source AI components. The Kratid repository,²⁰⁶⁸ for example, is open source to provide visibility into the AI components that have been developed or used by the public sector.

Digitization of Public Services

According to Estonia's Digital Decade Country Report of 2025,²⁰⁶⁹ the country is committed to increasing efficiency of public services in line with the Estonian Digital Agenda 2030²⁰⁷⁰ and the National AI strategy. Indeed, 93% of Estonian internet users were reported to use the internet to interact with public services. In light of its commitment to e-government, Estonia emphasizes the use of AI for government services. Indeed, *KrattAI* refers to “the vision of how digital public services should work in the age of artificial intelligence”; or more specifically, *KrattAI* is described as an “interoperable network of AI applications, which enable citizens to use public services with virtual assistants through voice-based interaction.”²⁰⁷¹

The Estonian government makes use of automated decision-making in many different contexts.²⁰⁷² For example, the Tax and Customs Board uses automated decision-making to facilitate tax refunds following the submission of an online

The report of Estonia's AI Taskforce defined 'kratt' as being “a practical application that uses artificial intelligence and that fulfils a specific function.”

²⁰⁷² See also *#KrattAI Roadmap for 2020* (2020), https://f98cc689-5814-47ec-86b3-db505a7c3978.filesusr.com/ugd/7df26f_19625e00a7b84900b99e952b1ce7d21a.pdf

income tax return. Other examples include the use of tachographs on lorries and automated speed checks on motorways to issue cautionary fines and the use of automated decision-making for the determination of a child's school on the basis of their registered residence.²⁰⁷³ There has been international coverage of Estonia's ambitious plans for AI in the public sector – including on the issue of “Robot Judges.”²⁰⁷⁴ The Estonian court system embraces digitalization and started an e-File system in 2005. The use of AI to tackle an immense backlog of cases has been considered, including the adoption of projects that can make “autonomous decisions within more common court procedures/tasks that would otherwise occupy judges and lawyers alike for hours.”²⁰⁷⁵

The government has also launched an AI-based digital assistant (*Bürokratt*) with the aim to efficiently deliver public services and simplify communication with the State.²⁰⁷⁶ Bürokratt is an interoperable network of public and private sector AI solutions, which from the user's point of view, act as a single channel for public services and information.²⁰⁷⁷ According to the International Research Centre on Artificial Intelligence (IRCAI), operating under UNESCO, “all the aspects regarding KrattAI are fully transparent—starting from business strategy and roadmap to the technology side: architecture, technical solutions—which is Open Source and available to all users.”²⁰⁷⁸ Open source AI components are also used for the Kratid website.²⁰⁷⁹

The Estonian government provides a data tracker tool accessible through the state portal (eesti.ee) that enables anyone with an eID to keep track of which institutions have accessed their data and for what purposes.²⁰⁸⁰ As pointed out on the e-estonia website, transparency is “fundamental to foster trust in the effective functioning of the whole system.” Information is also provided regarding automated processing although Algorithm Watch states that it “is not always clear if data is used

Center for AI and Digital Policy

as a part of an automatic process or viewed by an official.”²⁰⁸¹ In spite of the ambition of this tool, the Estonian Human Rights Center argue that the data provided is variable depending on the service and at times not detailed enough.

To assist transparency and understanding, the Estonian Human Rights Center suggests that visual depictions of data use should be provided.²⁰⁸² Similarly, Algorithm Watch states that the current tool does not provide a “clear understanding of what profiling is done by the state, which data is collected, how it is used, and for what purpose.”²⁰⁸³ “It is a duty of a country based on the rule of law to have foresight and prevent serious interferences with fundamental rights by means of setting out a relevant legislative framework,” said Kai Härmand at the time Deputy Secretary General on Legal Policy at the Ministry of Justice.

Environmental Impact

Estonia, a nation with a highly digitized public sector, recognizes the potential environmental consequences of its digital infrastructure. To address these concerns, the Estonian government adopted the Digital Agenda 2030 in 2021.²⁰⁸⁴ This long-term strategy aims to establish a “green digital government” by prioritizing environmentally responsible solutions and minimizing the ecological impact of digital services. To achieve these objectives, the Estonian Ministry of Economic Affairs and Communications commissioned a report to analyze the environmental footprint of Estonia's digital society comprehensively. The report assessed several variables, including the life cycle of ICT equipment, the energy consumption of ICT equipment, data centres and cloud services, software solutions, and digital trash across 12 public institutions and four local governments. Results demonstrate that ICT-related activities contribute to significant emissions: The total impact of the workstation equipment (laptops, desktop PCs and monitors) life cycle of all Estonian state agencies is 26,000 t CO₂e—roughly the the annual environmental impact of

5,000 households. The report stressed “the need for emerging technologies to be developed with principles of sustainability in mind.”²⁰⁸⁵

Lethal Autonomous Weapons

In a 2019 meeting of the Group of Governmental Experts on Lethal Autonomous Weapons Systems, Estonia expressed the view that “humans must retain ultimate control and responsibility in relation to the use of force in armed conflict” and “humans must exercise such control over a weapon system as may be necessary to ensure that the weapon system operates consistently with international law.”²⁰⁸⁶

Estonia was one of the 70 countries that endorsed a joint statement on autonomous weapons systems at the 2022 United Nations General Assembly. The joint statement urged “the international community to further their understanding and address these risks and challenges by adopting appropriate rules and measures, such as principles, good practices, limitations and constraints. We are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”²⁰⁸⁷

In February 2023, Estonia participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Estonia endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.²⁰⁸⁸ In this joint call, States “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” Estonia also endorsed the resulting Political

Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.²⁰⁸⁹

At the 78th UN General Assembly First Committee in 2023, Estonia voted in favor²⁰⁹⁰ of resolution L.56²⁰⁹¹ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

Estonia’s Ministry of Defence developed its first Defence AI Strategy in 2025 to guide the use of AI in logistics, cybersecurity, and military decision-support to promote responsible, interoperable AI aligned with NATO and EU standards.²⁰⁹²

Human Rights

Estonia is a member of the European Union and the Council of Europe and is, accordingly, committed to the upholding of the Charter of Fundamental Rights and the European Convention on Human Rights. Estonia ratified the Universal Declaration on Human Rights and has acceded to international human rights treaties, such as the International Covenant on Civil and Political Rights. The Estonian Constitution also grants fundamental rights to citizens.

In Freedom House’s 2025 Country Report, Estonia’s ranking rose from 95/100 in 2024 to 96/100.²⁰⁹³ The 2025 report explains that “Estonia’s democratic institutions are generally strong, and both political rights and civil liberties are widely respected. However, more than 5 percent of the population remains stateless and cannot participate in national elections. Corruption is a persistent challenge, as is discrimination against ethnic Russians, Roma, LGBT+ people, and others. Far-right and Euroskeptic forces have become increasingly vocal in Estonian politics in recent years.”

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers reminded

member states that their obligations to the Convention for the Protection of Human Rights and Fundamental Freedoms “stands throughout the continuous processes of technological advancement and digital transformation that European societies are experiencing,” meaning “member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimizing possible adverse effects.”²⁰⁹⁴

In a 2018 report, the Commissioner for Human Rights of the Council of Europe urged the Estonian authorities to give careful consideration “to the ethical, legal and human rights implications of using robots and artificial intelligence in the care of older persons” given Estonia’s strong focus on digitalization, new technologies, and AI.²⁰⁹⁵

OECD / G20 AI Principles

Estonia endorsed the OECD Principles on Artificial Intelligence, agreeing to “promote the use of AI that is innovative and trustworthy and that respects human rights and democratic values.”²⁰⁹⁶

Council of Europe AI Treaty

Estonia contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy, and the Rule of Law.²⁰⁹⁷ The European Union on behalf of all members on September 5, 2024; however, Estonia has not signed individually.²⁰⁹⁸

UNESCO Recommendation on AI Ethics

Estonia has endorsed the UNESCO Recommendations on AI, the first ever global agreement on the ethics of AI.²⁰⁹⁹ No available records explicitly address implementation of the recommendation, though Estonia's efforts to align with the EU AI Act and participation in negotiations of the Council of Europe Framework Convention on AI demonstrate the country's attention to the Recommendations. Estonia has not initiated the UNESCO Readiness Assessment Methodology (RAM) process, a tool designed to assist countries in implementing the Recommendation.²¹⁰⁰

Evaluation

As a member of the European Union and the Council of Europe, Estonia is committed to the protection of human rights, ethics in AI, and algorithmic transparency. Estonia has also endorsed the OECD AI Principles and the UNESCO Recommendation on the Ethics of AI, and is party to the Council of Europe Framework Convention on AI through the EU signature. At regional level, Estonia has signed the Declaration of Collaboration on AI in the Nordic-Baltic Region which includes a commitment "to develop ethical and transparent guidelines, standards, norms and principles that can be employed as a steering mechanism to guide AI programmes."²¹⁰¹

By contrast, Estonia's first AI Strategy did not consider the issues of ethics and human rights in significant depth. Nevertheless, Estonia opted for a short-term strategy in order to be able to adapt it to a rapidly evolving AI landscape. Based on Estonia's experience as a leading country in the world regarding the use of data²¹⁰² and e-governance, its second national AI strategy, although still wary of "proactive over-regulation in a rapidly evolving area" and of "creating unnecessary obstacles," includes the bases for an ethical framework and provides for specific actions in this regard.

Reflective of this approach is Estonia's Prime Minister Kaja Kallas' statement: "We are already using artificial intelligence in our operations and services, but we see there is a huge potential to make our services more convenient for the people." "But at the same time, we are a rule-of-law country and every individual's

privacy is a very important matter for us.”²¹⁰³ This is a similar position that Estonia defended with regard to the draft EU AI Act. “We welcome the proposed AI Act because we have long supported the idea that European-wide harmonized regulation ensures a common market, and minimizing risks increases acceptance of AI technologies,” said Mr. Velsberg, the Estonian Government Chief Data Officer. Estonia shall establish a national supervisory mechanism as part of implementation of the AI Act. Thus far, only fundamental rights protection authorities have been officially designated.

Ethiopia

In 2025, Ethiopia deepened international cooperation and partnerships for developing and governing artificial intelligence through support for the Africa Declaration on Artificial Intelligence and the BRICS Leaders' Statement on the Global Governance of Artificial Intelligence.

National AI Strategy

Ethiopia's Council of Ministers created the Artificial Intelligence Institute²¹⁰⁴ to develop a National AI Strategy in 2022. After three years of consultations with key stakeholders, the Council approved the National AI Policy in 2024.²¹⁰⁵ The policy creates a framework to leverage AI for economic growth, social development, and national security through data management, human capital development, infrastructure development, and ethical considerations.²¹⁰⁶ Key areas of alignment with international standards include a human-centric approach, transparency and explainability, ethical AI development, inclusivity and non-discrimination, human rights protection, and regulatory frameworks. The AI policy charges the AI Institute with monitoring and implementing the AI Policy.

African Union

As a member of the African Union (AU), Ethiopia is committed to advancing the formulation and implementation of human-centered AI policies, in alignment with the goals of the AU digital transformation strategy²¹⁰⁷ and the Continental Data Policy Framework.²¹⁰⁸

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Continental AI Strategy was adopted in 2024 during the 45th Ordinary Session of the African Union Executive Council in Accra, Ghana,²¹⁰⁹ following endorsement by African ministers.²¹¹⁰ The Strategy calls for unified national approaches among AU Member States for inclusive and responsible AI development. The AU envisions a prosperous Africa where responsible and African-centric AI is pivotal in the inclusive growth and socio-economic development of Africans, positioning the continent as a key player in the global AI landscape.²¹¹¹ The Union seeks to achieve this by leveraging AI to accelerate socio-economic development and promote African cultural renaissance in line with the AU Agenda 2063²¹¹² and Sustainable Development Goals.²¹¹³ The Strategy was supported both technically and financially by UNESCO, ensuring that the African Union's approach to AI regulation and innovation aligned with the UNESCO Recommendation on the Ethics of Artificial Intelligence.²¹¹⁴

Along with the development of the Continental AI Strategy, the African Union engaged with other international regulatory frameworks on AI in 2024. In April 2024, African Union senior officials met in Addis Ababa with the G7 Presidency to strengthen collaboration on AI.²¹¹⁵ Among other discussions, the meeting highlighted the plans for the Italian G7 Presidency alongside the United Nations Development Programme (UNDP) to co-design an AI Hub for Sustainable Development with African leaders in 2024. The Italian delegation explained, "The AI Hub aims to be a catalyzer for systemic change and accelerate the achievement of the Sustainable Development Goals. The benefits of an AI empowered Africa will have a positive impact not just within the African continent but across the world."²¹¹⁶

Ethiopia further committed to aligning governance frameworks with the African Union Continental AI Strategy by endorsing the Africa Declaration on

Artificial Intelligence.²¹¹⁷ The Declaration centers objectives to leverage AI to advance African economies, industries, and societies “to position Africa as a global leader in ethical, trustworthy, and inclusive AI adoption” through intergovernmental and regional cooperation on AI governance, development, and capacity building.

BRICS

Ethiopia, together with Iran, Egypt, Saudi Arabia and the United Arab Emirates, officially joined China, Russia, India, Brazil and South Africa as a new BRICS member in a 2023 vote. Russian President Putin who took over the rotating chairmanship of BRICS in January 2024 said that the bloc seeks “strengthening multilateralism for equitable global development and security.”²¹¹⁸ Egypt, Ethiopia, Iran, and the UAE participated in their first BRICS summit in 2024.²¹¹⁹

At the most recent BRICS Summit in 2025, Ethiopia endorsed the Leaders’ Statement on the Global Governance of Artificial Intelligence.²¹²⁰ The statement emphasized digital and governance sovereignty to protect workers and citizens while emphasizing the leading role for the United Nations in facilitating discussions on how to leverage AI technology for the Sustainable Development Goals (SDGs).

BRICS also elaborated on the Digital Economy Working Group proposed in a concept note at the 2023 BRICS Summit,²¹²¹ aiming to develop digital education cooperative mechanisms. Deepening technological cooperation through this Working Group may also encourage future BRICS cooperation on AI.

In January 2024, China also called for the development of a BRICS AI Development Cooperation Center to be constructed in China. This announcement was followed by the release in February 2024, of the AI Governance International Evaluation Index, which evaluates BRICS’ AI development in contrast to G7 countries.²¹²²

Center for AI and Digital Policy

Data Protection

The 1995 Constitution of the Federal Democratic Republic of Ethiopia establishes a fundamental right to privacy.

Ethiopia made a significant stride in data protection with the enactment of the Personal Data Protection Proclamation in July 2024.²¹²³ This comprehensive law replaces Ethiopia’s fragmented regulatory framework and empowers individuals by granting them rights over their personal data, such as access, rectification, erasure, and objection to processing. The proclamation also imposes stringent obligations on organizations handling personal data, including implementing robust security measures, obtaining informed consent, and ensuring transparency. The Proclamation emphasizes data localization and regulates cross-border data transfers, emphasizing “sovereignty of data” to keep Ethiopian citizen data within national borders.²¹²⁴ Rules allow personal data transfers outside of Ethiopia only to countries with similar data protection standards.

The Proclamation charges the Ministry of Technology and Innovation with formulating policies and strategies on personal data and the Ethiopian Communications Authority with enforcing the Proclamation, including investigating complaints and imposing fines.²¹²⁵ The Communications Authority responsibility builds on the Communication Services Proclamation,²¹²⁶ which establishes the Communication Authority’s responsibility to promote data privacy. The Authority’s Consumers Rights and Protection Directive No. 832/2021 explicitly defines personal data as any information relating to an identified or identifiable natural person leading to identify such person, directly or indirectly in particular by reference to an identifier such as a name, an identification number, location data, telephone number, traffic and billing data, and other personal information in the context of

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Telecommunications Services.²¹²⁷ The Ethiopian Communications Authority is not a member of the Global Privacy Assembly (GPA).²¹²⁸

The right to privacy is further reinforced in several legal instruments, including the Criminal Code of the Federal Democratic Republic of Ethiopia (Proclamation No. 414/2004), the Civil Code of the Empire of Ethiopia (Proclamation No. 165/1960), the Freedom of the Mass Media and Access to Information Proclamation (No. 590/2008), and the recently enacted Media Proclamation No. 1238/2021. The Media Proclamation of 2021 repealed portions of the Mass Media & Access to Information Proclamation specifically related to mass media.²¹²⁹

The Digital ID Proclamation²¹³⁰ was enacted in 2023 with the view to adopt a comprehensive legal framework for the regulation of the national digital identification system. The Proclamation provides the rules for collecting, processing, transferring, disclosing, modifying, and overall management of personal data of registrants. “Personal Data” for the said Proclamation means the biometric and demographic data collected with the 'digital identification system [Article (2)(17)]. Interestingly, according to Article 17(1) of the Proclamation, the owner of the personal data is the registrant, and they shall give their data to the registrar upon their consent for processing, transferring, disclosing, and modifying.

Ethiopia has not signed the African Union’s Convention on Cyber Security and Personal Data Protection,²¹³¹ known as the Malabo Convention,²¹³² which entered into force in June 2023.²¹³³

Center for AI and Digital Policy

Algorithmic Transparency

Ethiopia has introduced initial safeguards for automated decision-making through Art. 31 Personal Data Protection Proclamation No. 1321/2024, which recognizes individuals' right to object to decisions made solely by automated means.²¹³⁴ The National AI Policy builds on these rights with ethical principles emphasizing transparency, explainability, and accountability in the use of AI systems.²¹³⁵ However, Ethiopia has yet to adopt comprehensive AI legislation or regulatory guidance on algorithmic accountability that outlines enforcement mechanisms and technical standards.

Biometric Identification

Ethiopia is currently implementing a Digital ID Program,²¹³⁶ Fayda, as part of the Digital Ethiopia 2025 Strategy. Given the ongoing civil war, there are fears that the Digital ID Program could reinforce discrimination against ethnic minorities.²¹³⁷ The Digital ID Proclamation 1284/2023²¹³⁸ instigated the Fayda program. Over 200 key stakeholders representing Federal ministries and government agencies, regional governments, civil society organizations, local human rights organizations, and international institutions participated in a 2022 consultation on the National Identity Program (NIP).²¹³⁹

The government has taken several initiatives to promote Fayda. Fayda is the main identification credential for all civil servants²¹⁴⁰ and biometric ID serves as the

official student ID across educational institutions,²¹⁴¹ working with UNICEF to support digital ID registration for children.²¹⁴²

Although government officials told parliament in November 2023 that digital ID registration is not mandatory and that people can continue to use their analogue Kebele ID card, the digital ID became mandatory for all transactions with financial institutions²¹⁴³ and access to public services in 2024.²¹⁴⁴

The program is being implemented with \$350 million funding from the World Bank's International Development Association (IDA), from which \$10 million was disbursed as of August 2024.²¹⁴⁵ The program's goal is for 90 million Ethiopians and legal residents to hold the Fayda digital ID by January 2029.²¹⁴⁶ As of August 2024, Fayda has seen 8.2 million registrations. The Personal Data Protection Proclamation is an important step to safeguard data and digital privacy as this digital ID registration increases.

Ethiopia is also rolling out the Fayda program to the country's refugee population, currently focus on 77,000 refugees living in Addis Ababa.²¹⁴⁷ The program's goal is to extend digital ID access to the over 1 million refugees in Ethiopia, primarily individuals from South Sudan, Somalia, Eritrea, and Sudan. This digital ID expansion is supported in partnership with the National ID Program (NIDP) and UNHCR, the UN Refugee Agency. Access to this ID card will help refugees engage in financial transactions, enroll in schools, and obtain SIM cards.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Environmental Impact of AI

Ethiopia supports the African Union Continental AI Strategy, which emphasizes sustainable development. However, Ethiopia has not indicated specific policies or projects to curb the emissions and other environmental impacts of AI systems and infrastructure.

Lethal Autonomous Weapons

Ethiopia has not acceded to the Convention on Certain Conventional Weapons (CCW) nor to any of its Protocols.²¹⁴⁸ The country has a mixed voting record in the UN on resolutions related to Lethal Autonomous Weapons Systems (LAWS). However, the country was party to a working paper submitted on behalf of the Non-Aligned Movement and other Parties to the CCW to the GGE on LAWS, which stated that “a strengthened and reinforced multilateral approach, with new legally-binding provisions for addressing the humanitarian and international security challenges posed by emerging technologies in the area of LAWS, is vital. There is an urgent need to pursue a legally-binding instrument on LAWS.”²¹⁴⁹

At the 79th UN General Assembly First Committee in November 2024, Ethiopia voted in favor of Resolution L.77²¹⁵⁰ on autonomous weapons systems, in coherence with its vote in favor of Resolution L.56²¹⁵¹ in 2023.²¹⁵² Ethiopia did not contribute to the Secretary General report on LAWS²¹⁵³ mandated by Resolution L.56. Resolution L.77 emphasizes the urgency of addressing the challenges and concerns outlined in the report as well as the necessity to make the process as inclusive and participative as possible. Ethiopia was among only 6 member states to

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

abstain²¹⁵⁴ from voting Resolution L.43²¹⁵⁵ on Artificial intelligence in the military domain and its implications for international peace and security in 2025.

AI Literacy

Ethiopia's National AI Policy commits to broad-based AI literacy and to building institutional capacity for oversight. It mandates activities to “increase the AI awareness of the society” and to build citizens' ability to use AI through practice-oriented education, alongside lifelong learning and short-/medium-term training programs to expand a skilled talent pool.²¹⁵⁶

Human Rights

Ethiopia has supported or is party to a number of international and regional human rights instruments, including the Universal Declaration of Human Rights, the International Covenant on Civil and Political Rights,²¹⁵⁷ the Convention of the Rights of the Child,²¹⁵⁸ and the African Charter on Rights and Welfare of the Child.²¹⁵⁹ These human rights instruments ratified by Ethiopia form an 'integral part' of the laws of the country, according to Article 9 of its Constitution.

The human rights landscape in Ethiopia is marked by significant challenges, as reflected in the Freedom House 2025 Freedom in the World report, which assigns Ethiopia a score of 18/100.²¹⁶⁰ The “Not Free” classification comes from a lack of political rights and civil liberties given ongoing political, social, and ethnic tensions. This score underscores the urgent need for reform and accountability in the country, particularly around political repression, ethnic tensions and violence, media freedom, and restrictions on humanitarian aid. The ongoing conflict in Amhara and Oromia along with the declaration of the state of emergency between august 2023 and June

2024 resulted, according to the Office of the High Commissioner for Human Rights, in “actions by security forces in violation of Ethiopia’s international human rights obligations.”²¹⁶¹ Human Rights Watch reports²¹⁶² that both parties have committed war crimes and abuses resulting in serious civilian losses as well as destruction of health facilities in Amhara.

OECD / G20 AI Principles

Ethiopia is not listed among the countries that have formally endorsed the OECD AI Principles and G20 AI Guidelines.²¹⁶³ However, as a member of the African Union, which became a permanent member of the G20 in 2023,²¹⁶⁴ Ethiopia participates in emerging global dialogues on responsible AI governance.

Council of Europe AI Treaty

Ethiopia has not signed the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.²¹⁶⁵

UNESCO Recommendation on AI Ethics

As a member of UNESCO, Ethiopia along with 192 other member states, adopted the UNESCO Recommendation on the Ethics of AI, the first global standard on the ethics of AI.²¹⁶⁶

The Deputy General Director, Research and Development Cluster, from the Ethiopian Artificial Intelligence Institute participated in the June 2024 UNESCO-Eastern Africa Sub-Regional Forum on Artificial Intelligence (EARFAI). EARFAI focused on the potential for AI to benefit sustainable development and societal change in Eastern Africa, including discussions on the landscape of AI

Center for AI and Digital Policy

governance.²¹⁶⁷ A major theme of EARFAI involved discussions of implementation of UNESCO's Recommendation in Eastern African states.

The Readiness Assessment Methodology (RAM) is a tool to guide Member States in identifying institutional and regulatory gaps that may inhibit development of an AI ecosystem aligned with the Recommendation. The RAM is currently in process in Ethiopia.²¹⁶⁸

Evaluation

Ethiopia has initiated the development of a governance framework for AI, as outlined in its National AI Policy. The strategy aims to establish regulatory measures that align with international standards. However, the framework lacks comprehensive regulations to ensure accountability and transparency in AI applications and an effective organized roadmap for implementation. These gaps present risks related to misuse and ethical concerns. For example, while the National AI Strategy and AU Continental Strategy include commitments to fairness, accountability, and transparency, implementation of these ethical guidelines remains inconsistent, with limited mechanisms to monitor AI systems for bias or discrimination.

Ethiopia is beginning to address issues of privacy, data protection, and individual rights in the digital landscape. For example, the Ethiopian Communications Authority is charged with enforcing the data protection proclamation. However, legal frameworks are still evolving, and there is a pressing need to strengthen laws that safeguard citizens' rights in the face of increasing surveillance and data collection. Fears remain that the Digital ID Program holds the potential to become a tool of mass surveillance in a country with a historically challenging human rights landscape.

Ethiopia's progress in AI is noteworthy. Nevertheless, significant challenges remain in governance, ethical implementation, capacity building, public engagement, and the protection of digital rights.

Center for AI and Digital Policy

Finland

In 2025, Finland passed legislation designating supervisory authorities for implementation of the EU AI Act and released a proposal on regulatory sandboxes and an AI registry aligned to the second phase of AI Act implementation. The ethical recommendations for AI in education released in 2025 align with the UNESCO Recommendation and OECD AI Principles around digital competence.

National AI Strategy

In 2017, Finland was among the first countries to develop a national AI strategy, establishing proposed target dates and allocating public funds in furtherance of the country's AI-related business objectives. The vision put forth by the national strategy is that “In another five years time, artificial intelligence will be an active part of every Finn's daily life. Finland will make use of artificial intelligence boldly in all areas of society—from health care to the manufacturing industry—ethically and openly. Finland will be a safe and democratic society that produces the world's best services in the age of artificial intelligence. Finland will be a good place for citizens to live and a rewarding place for companies to develop and grow. Artificial intelligence will reform work as well as create wellbeing through growth and productivity.”²¹⁶⁹ The AI strategy demonstrated Finland's objectives to: (1) enhance business competitiveness using AI, (2) ensure top-level expertise and attract top experts, (3) provide the world's best public services, and (4) make Finland a front runner in the age of AI.²¹⁷⁰

To that end, in May 2017, Finland's Minister of Economic Affairs launched Finland's AI Programme,²¹⁷¹ an operational program designed for “turning Finland into a leading country in the application of artificial intelligence.” The Programme

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

focused on three areas: an efficient public sector, a well-functioning society, and a competitive business and industry sector.²¹⁷²

The Minister of Economic Affairs appointed a steering committee, which included representatives from the public, private, and research sectors, and charged the steering committee with publishing a report containing its recommendations regarding the operationalization of Finland's AI Programme. Within the steering committee, the Minister of Economic Affairs established four subgroups focused on four (4) key areas: (1) expertise and innovations; (2) data and platform economy; (3) transformation of work and society; and (4) ethics. The steering committee published three reports. The first, released in 2017, included recommendations to facilitate Finland's objective to adopt and benefit from AI.²¹⁷³ The second report examined (1) the impact of artificial intelligence on growth and employment; (2) labor market dynamics in a technological revolution; (3) learning and skills in a transition; and (4) good application of artificial intelligence technology and ethics.²¹⁷⁴ The subgroup identified three key "values of a good artificial intelligence society"—transparency, responsibility, and extensive societal benefits—and stresses that "humans [must] assume ultimate legal and moral responsibility for the decisions."²¹⁷⁵

The third report detailed the steering committee's policy recommendations for Finland's AI Programme,²¹⁷⁶ setting forth the contours of Finland's vision of a country that, by 2025, "is competitive and able to attract talent and has the most relevantly educated population and where citizens are well-informed and independent."²¹⁷⁷

²¹⁷² Ministry of Economic Affairs and Employment, *Leading the Way into the Age of Artificial Intelligence: Final Report of Finland's Artificial Intelligence Programme* (Jun. 12, 2019), https://julkaisut.valtioneuvosto.fi/bitstream/handle/10024/161688/41_19_Leading%20the%20way%20into%20the%20age%20of%20artificial%20intelligence.pdf

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Nordic-Baltic and Nordic Cooperation on AI

As for the regional landscape, the Finnish Minister in charge of digitalization signed the declaration on “AI in the Nordic-Baltic region” in 2018, establishing a collaborative framework on “developing ethical and transparent guidelines, standards, principles and values to guide when and how AI applications should be used” and “on the objective that infrastructure, hardware, software and data, all of which are central to the use of AI, are based on standards, enabling interoperability, privacy, security, trust, good usability, and portability. In 2024, a proposal for a shared vision for Nordic AI was discussed by high-level decision-makers from the private and public sectors with Nordic and Baltic ministers in Copenhagen, where the vision outlined was for large-scale AI adoption, with tangible benefits for both citizens and businesses.”²¹⁷⁸

The ministerial declaration Digital North 2.0²¹⁷⁹ builds on the common priorities of the Nordic-Baltic countries, and follows the previous ministerial declaration, Digital North 2017-2020. “In order to promote work with digitalisation, co-ordinate efforts, and follow up on the goals of the declaration, a council of ministers for digitalisation (MR-DIGITAL) was established in 2017. The aim is to promote development in three areas: (1) Increase mobility and integration in the Nordic and Baltic region by building a common area for cross-border digital services; (2) Promote green economic growth and development in the Nordic-Baltic region through data-driven innovation and a fair data economy for efficient sharing and re-use of data; and (3) Promote Nordic-Baltic leadership in the EU/EEA and globally in a sustainable and inclusive digital transformation of our societies.”²¹⁸⁰

In November 2021, the Nordic and Baltic ministers for digitalization released another joint statement announcing a focus on digital inclusion, striving to implement measures to make digital services more accessible to all Finnish inhabitants and ensuring that those who do not possess the necessary level of skills get the opportunity to acquire them.²¹⁸¹

The Nordic and Baltic ministers of digitalization issued a common statement on the importance of cooperation on digital security in the Nordic-Baltic region in

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

September 2022, following the COVID-19 pandemic and the war in Ukraine. In their common statement, the ministers stressed that this “rapid transformation has challenged everyone to adapt to new, digital ways of doing business, learning and accessing public authorities.” The ministers declared that they “have committed to ensuring that our region maintains its position as a leader in digitalisation, and that everyone in the region benefit from digitalisation regardless of age, wealth, education or level of digital skills. One important factor that helps ensure a strong level of digitalisation in the region is the trust citizens put in digital services from the public sector—be it at regional, national or local level. In order to keep up this high level of trust, we need to continue our efforts to make our digital public services human centric and accessible. [...] Robust and secure digital services, safeguarding users' privacy and ensuring that personal data are stored and processed in a trustworthy way, are crucial to the citizens' sustained trust in digital services.”²¹⁸²

As part of its action plan for Vision 2030 (2021–2024), the Nordic Council of Ministers also identified innovation, digital integration, the safe use of artificial intelligence, data development and open data, education and digitalization as key objectives.²¹⁸³ A new initiative for research collaboration on ethical and responsible use of AI was documented in March 2024 as a discussion paper.²¹⁸⁴ There are suggestions for a regional funding scheme and to identify instruments and thematic scoping relevant to Nordic research funders. Further, the suggested Nordic initiative not just understands the consequences and potential of AI in Nordic societies (Nordic value added, EU AI Act, data biases, cross-cutting strategic priorities) but uses thematic calls to “identify, amplify and fully capitalize on Nordic strengths and provide grounds for transfer of knowledge and lessons learned between sectors.”

A Finnish-Estonian Declaration introduced in February 2025 emphasized AI, digitalization, and media literacy as essential civic skills.²¹⁸⁵ The declaration aligns

with OECD's digital competence goals, supporting AI-driven education, and upholding the UN's recognition of information access as a fundamental right.

Digital Services Act

As an EU member state, Finland shall apply the EU Digital Services Act (DSA).²¹⁸⁶ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation.

The Finnish Transport and Communications Agency, Traficom, is the DSA main supervisor.²¹⁸⁷ The Consumer Ombudsman and the Data Protection Ombudsman supervise specific other obligations. The Finnish authorities received a total of 78 complaints under the DSA in 2024.²¹⁸⁸

Signatories also commit to reducing the risk of online harms under the 2022 Strengthened Code of Practice on Disinformation,²¹⁸⁹ which counts as a mitigation measure under the DSA. Actions include demonetizing the dissemination of disinformation, ensuring the transparency of political advertising, empowering users, enhancing the cooperation with fact-checkers, and providing researchers with better access to data.

EU AI Act

As an EU member State, Finland is bound by the EU AI Act,²¹⁹⁰ which entered into force on August 1, 2024.²¹⁹¹ The EU AI Act is a risk-based market regulation

²¹⁸⁶ EUR-Lex, *Regulation (EU) 2022/2065 of the European Parliament and of the Council of 19 October 2022 on a Single Market for Digital Services and amending Directive 2000/31/EC (Digital Services Act)* (Oct. 21, 2022), <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A32022R2065>

that supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy, and ethical AI. Finland has appointed members to the European AI Board and identified 8 authorities protecting fundamental rights under the act.²¹⁹² A Working Group on national implementation with a charge through June 2026 drafted national legislation to implement the act and determine necessary actions.²¹⁹³ A law designating ministries and agencies as supervisory authorities according to applications²¹⁹⁴ entered into force at the start of 2026.²¹⁹⁵ Another proposal sandboxes and a national register underwent public consultation in 2025.²¹⁹⁶

The Finnish Data Protection Authority is one of the market surveillance authorities for high-risk systems, though the Finnish Transport and Communications Agency (Traficom) will act as the single point of contact.²¹⁹⁷

Public Participation

Finland's longstanding and broad commitment to an open democracy has traditionally been given expression by extensive consultation with established groups.²¹⁹⁸ The Finnish Constitution also states that "democracy entails the right of the individual to participate in and influence the development of society and his or her living conditions." Provisions on consultation and participation are given further weight in various laws and guidelines including the Act on the Openness of Government Activities.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In 2024, the Finnish government requested an opinion on the draft of the government's proposal for legislation on the implementation of the artificial intelligence regulation.²¹⁹⁹ The draft seeks to advance the implementation of the EU's artificial intelligence regulation, regarding the supervision of certain artificial intelligence systems. The proposed law sets the competent market surveillance authorities and the authorities with the competence to receive and process notifications. The bill also proposed the amendment of the law on the market control of certain products (Law 1137/2016) to include within its scope.

Data Protection

Since Finland is an EU Member State, the General Data Protection Regulation (GDPR)²²⁰⁰ is directly applicable in Finland and to Finnish people. The aim of the GDPR is to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market.”²²⁰¹ The Finnish Data Protection Act supplements the GDPR.²²⁰²

Regarding the activities of law enforcement authorities, Finland transposed the EU Data Protection Law Enforcement Directive (LED)²²⁰³ through the Act on the Processing of Personal Data in Criminal Cases and in connection with Maintaining National Security, which entered into force on January 1, 2019, along with the Data

Protection Act. The LED “will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”²²⁰⁴ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.²²⁰⁵

Finland is also a member of the Council of Europe and ratified the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.²²⁰⁶

The Data Protection Ombudsman is the national supervisory authority charged with overseeing compliance with data protection legislation and safeguards the rights and freedoms of individuals with regard to the processing of their personal data.²²⁰⁷ The Ombudsman has made numerous important decisions,²²⁰⁸ including with administrative fines amounting to several hundred thousand Euros.²²⁰⁹ The institutional mission of the Data Protection Ombudsman is expected to be broadened in alignment with the draft proposal for the Finnish EU AI Act national regulation. The recent attributions encompass supervisory authority over prohibited AI systems, as well as numerous high-risk AI systems, addressing sensitive areas such as biometrics, law enforcement, migration, education, and employment.

Concerning this aspect, the Finnish Data Protection Ombudsman and current EDPB chair, Anu Talus, asserted the importance of the cooperation between authorities for the EU AI Act Enforcement, pointing out that “the debate on artificial intelligence in particular continued to be intense and is being even more so in 2024. It is important to ensure that cooperation between authorities in the enforcement of the EU’s AI Act is smooth at both national and European level.”²²¹⁰

Despite being a member of the Global Privacy Assembly (GPA) since 2002, the Data Protection Ombudsman has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,²²¹¹ 2020 GPA Resolution on AI Accountability,²²¹² 2022 GPA Resolution on Facial Recognition Technology,²²¹³ or 2023 GPA Resolution on Generative AI.²²¹⁴

Algorithmic Transparency

Finland is subject to the GDPR-like Finnish Law and Convention 108+. Finns have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.²²¹⁵ Per a 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems, those rights ought to extend to the ability to contest a decision with adverse effects.²²¹⁶ In 2023, OECD recognized Finland and Helsinki for the Open AI Register of AI Systems use in the public sector as an example of OECD AI Principle 1.3 on transparency and explainability.²²¹⁷

Finland, through the European Centre for Algorithmic Transparency (ECAT),²²¹⁸ has been actively participating in supporting and enforcing these

standards, with particular emphasis on monitoring algorithmic impact across various sectors, from social media to public administration. The EU's DSA Implementing Regulation standardizes the format, content, and reporting periods for transparency reports, and providers will begin to collect data according to the Implementing Regulation as of July 1, 2025, with the first harmonized reports due at the beginning of 2026.²²¹⁹

Digitization of Public Services

In 2020, Finland launched a National Artificial Intelligence Programme—Aurora AI, a decentralized open network and data-based model for smart public services and applications.²²²⁰ However, core components and production of the service ended on December 31, 2023, owing to limited usage.²²²¹

In September 2020, the city of Helsinki launched an AI registry in beta version to detail how city government uses algorithms to deliver services. The registry includes training datasets, “a description of how an algorithm is used, how humans utilize the prediction, and how algorithms were assessed for potential bias or risks” as well as a contact person responsible for deployment so citizens can provide feedback.²²²² The city of Helsinki describes its AI register as “a window into the artificial intelligence systems used by the City of Helsinki. Through the register, you can get acquainted with the quick overviews of the city’s artificial intelligence systems or examine their more detailed information based on your own interests. You can also give feedback and thus participate in building human-centred AI in Helsinki.”²²²³ The city of Helsinki’s public register for algorithmic transparency has eight use cases on the website, a majority of which are chatbots.²²²⁴

In 2022, a new research project, Civic Agency in AI also started with the aim to help the public sector ensure that their AI tools are transparent, accountable, and

Center for AI and Digital Policy

equitable. Its purpose is to develop best practices and recommendations regarding AI governance.²²²⁵

In May 2023, general legislation on automatic decision-making in public administration entered into force, with an 18-month transition period.²²²⁶ The legislation requires authorities to provide appropriate information about the use of an automated decision-making procedure. The legislation allows automated decision-making on administrative matters in so far as making a decision on the matter in question does not require individual consideration. Concerns exist with regard to its compatibility with Article 22(1) GDPR which provides for the right of the data subject not to be subject to a decision solely based on automated processing.

On the basis of this law, in October 2023, the Finnish Immigration Service adopted a decision to introduce automated decision making for students' first residence permits. One condition for the use of automated decision is that "the residence permit can be granted according to the application, and the matter does not require more extensive holistic deliberation."²²²⁷

AI and Children

Finland and UNICEF have been collaborating to create internationally applicable policy guidance for the use and development of AI for children. The Ministry for Foreign Affairs supports the project, where practices are developed for the planning of safe and inclusive AI solutions that take the rights of the child into account.²²²⁸

Facial Recognition

According to news reports, Finland's National Bureau of Investigation has acknowledged using facial recognition technology in connection with certain law

enforcement activities.²²²⁹ After initially denying the use of facial recognition technology in media questioning, officials from the National Bureau of Investigation acknowledged that four members of the Child Exploitation Investigation Unit had conducted 120 searches of the Clearview AI system in 2019–2020.

The Deputy Data Protection Ombudsman issued a note to the National Bureau of Investigation regarding the controversial use of Clearview AI facial recognition technology. In September 2021, the Deputy Data Protection Ombudsman warned the National Bureau of Investigation that police officers had used a facial recognition technology system without first verifying that it complied with data security or data protection laws.²²³⁰

A Digital Travel Credentials biometric pilot funded by the European Union for border checks was launched in August 2023 at the Helsinki-Vantaa airport.²²³¹ Finland also began work on a national digital identity wallet in April 2024, in line with the EU regulation that introduces the European Digital Identity (EUDI) Wallet.²²³² Biometric data via facial recognition technologies are processed under the GDPR and the EU AI Act.²²³³

The Ministry of the Interior proposed amending the regulation on biometric data, including facial images, stored in the registers of the police and the Finnish Immigration Service to aid in crime prevention.²²³⁴ The draft proposes to amend the provisions of the Police Personal Data Act, the Immigration Administration Personal Data Act, and the Aliens Act on the processing of biometric data to allow for the use of personal data beyond their original processing purpose. These amendments extend to biometric data of citizens of foreign nations. Public comments raised concerns over the potential for mass surveillance, especially real-time facial recognition, and

the use of personal data beyond the original, consented purpose.²²³⁵ The proposal passed to Parliament in September 2025.²²³⁶

Environmental Impact of AI

In November 2020, Finland launched its Artificial Intelligence 4.0 strategy, where the objective is to be a frontrunner in both green and digital transitions.²²³⁷ According to an interim report²²³⁸ issued in December 2021, Finland plans to be carbon neutral by 2035. Finland also plans to reinforce the EU's Green Deal,²²³⁹ which considers AI data centers significant consumers of energy²²⁴⁰ and the challenge to European energy grids with the war in Ukraine.²²⁴¹ One of the four proposals in the Interim Report of the Artificial Intelligence 4.0 Programme published in December 2021 focuses on "Nature smartness and digital technology" to lead to the "triple victory of sustainable development": economic, ecological and social benefits.²²⁴² In February 2024, the prime minister, Petteri Orpo reiterated that

Finland reiterated support for a two-tier approach to an international treaty on LAWS in the submission to the UN General Secretary's report.²²⁴⁹ Like a working paper Finland submitted with others to the 2022 Chair of the Group of Governmental Experts (GGE) on emerging technologies in the area of LAWS,²²⁵⁰ the proposal suggests prohibitions and regulations to (1) prohibit autonomous weapons systems that operate with no human involvement and outside a human-responsible chain of command and (2) regulate the development and use of all other weapons systems having autonomous features or functions to ensure their compliance with the rules and principles of international law. Finland also supported the 2024 resolution for the high-level agenda on the general and complete disarmament of lethal autonomous weapons systems.²²⁵¹

In February 2023, Finland participated in the 2023 REAIM Summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. Finland endorsed a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain²²⁵² and the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.²²⁵³ Finland also endorsed the Paris Declaration at the AI Action Summit, pledging to “not authorise the decision of life and death to be made by an autonomous weapon system” and “not develop, deploy, or use systems incapable of being used in accordance with [International Humanitarian Law].”²²⁵⁴

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

A new act on the export of dual-use items entered into force on September 1, 2024 to harmonize Finnish regulations with the EU Export Control Regulation.²²⁵⁵ The list applies to software and technology.²²⁵⁶ This Act can be extended to AI-based systems as per the EU AI Act, which states (Item 24), “Nonetheless, if an AI system developed, placed on the market, put into service, or used for military, defense, or national security purposes is used outside those temporarily or permanently for other purposes, for example, civilian or humanitarian purposes, law enforcement, or public security purposes, such a system would fall within the scope of this Regulation.”²²⁵⁷ However, the regulation, also mentions (Item 24) “An AI system placed on the market for civilian or law enforcement purposes which is used with or without modification for military, defense or national security purposes should not fall within the scope of this Regulation, regardless of the type of entity carrying out those activities.”

AI Literacy

The Ministry of Education and Culture developed a Recommendation on AI with plans for AI literacy, legal and ethical issues.²²⁵⁸ The Recommendation identifies competencies students can develop through AI literacy education and the safe use of AI tools in learning. The recommendations also aim to encourage equal opportunities for education and training educators. The University of Helsinki’s free Elements of AI course is internationally recognized and has been translated into a number of languages.²²⁵⁹

Human Rights

As one of the signatories to the Universal Declaration of Human Rights and several international human rights treaties and conventions,²²⁶⁰ Finland is committed

to protecting human rights, civil liberties, and political rights. Under Finnish law, these rights are guaranteed and subject to the rule of law as interpreted by an independent judiciary.

Freedom House gave Finland a top score (100/100) in the 2025 Freedom in the World Report for political rights and civil liberties, observing that “Finland’s parliamentary system features free and fair elections and robust multiparty competition. Corruption is not a significant problem, and freedoms of speech, religion, and association are respected. The judiciary is independent under the constitution and in practice.”²²⁶¹

Finland’s Ministry for Foreign Affairs’ use of the AI-assisted tool, OpenEval, to share information about evaluations related to development policy reflects the Ministry’s desire to “be a frontrunner in the appropriate use of artificial intelligence.”²²⁶² The application reflects the Council of Europe advice to member states that their human-rights commitments require them to “ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated.”²²⁶³

OECD / G20 AI Principles

Finland is a long-time member of the OECD and has adopted OECD AI Principles,²²⁶⁴ committing “to uphold international standards that aim to ensure AI systems are designed to be robust, safe, fair and trustworthy.”²²⁶⁵

The OECD recognizes Finland’s progress implementing principle 1.3 transparency and explainability (in Helsinki), and for promoting international research collaboration.²²⁶⁶ Finland was also among the first countries to have a National AI Strategy.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Council of Europe AI Treaty

Finland contributed as a Council of Europe Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy, and the Rule of Law.²²⁶⁷ The European Commission signed on behalf of the members of the European Union (including Finland) on September 5, 2024.²²⁶⁸ Finland has not signed independently.²²⁶⁹

UNESCO Recommendation on AI Ethics

Finland has endorsed the UNESCO Recommendations on AI, the first ever global agreement on the ethics of AI.²²⁷⁰ Finland has not yet initiated the Readiness Assessment Methodology (RAM).

Finland has taken other steps to implement the UNESCO Recommendation. For example, The Finnish National Agency for Education (*Opetushallitus*) ethical principles for AI in education draws from the UNESCO Recommendation and the organization's guidance on AI in education.²²⁷¹

The Finnish National Commission for UNESCO “act[s] as liaison between UNESCO and national authorities,” serving as an advisory body to the Ministry of Education and Culture and the Government.²²⁷² The

Evaluation

Finland remains one of the most digital countries in the EU in 2025. In the national AI strategy, one of the first in the world, Finland adopted an approach based on its vision of “a good artificial intelligence society.” Risks posed by AI do not occupy center stage in the strategy, but Finland has tried to develop best practices

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

and hands-on solutions for ensuring trustworthy AI by design. The capital, Helsinki, is the first city to have developed and adopted an AI register to foster trust in AI and ensure the best service to citizens.

Finland benefits from strong European and national data protection frameworks and the EU AI Act. Finland has identified authorities responsible for enforcing the EU AI Act and legislation to implement the next phase of the Act is pending. The Data Inspectorate's reprimand of police for the use of Clearview technology reflects the authority's independence. However, the introduction of a new law authorizing automated decisions in administration raises questions regarding its compatibility with data subjects' rights not to be subjected to automated decision making enshrined in the GDPR.

Finland has also worked closely with UNICEF to develop internationally applicable policy guidance for the use AI by children and used international models from UNESCO and OECD to develop recommendations for ethical AI use in education, including AI literacy competencies. The country has endorsed both the OECD AI Principles and the UNESCO Recommendation on the Ethics of AI. These international standards align with many of Finland's actions related to AI governance, even when they are not explicitly referenced. Finland has yet to take independent action on the Council of Europe Framework Convention on Artificial Intelligence.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

France

In 2025, France launched a new phase of the National AI Strategy and facilitated collaboration on AI governance as the host of the AI Action Summit. France also designated a single point of contact and the market surveillance and competent authorities who will implement and enforce the EU AI Act.

National AI Strategy

France's national Strategy on Artificial Intelligence entitled "AI for Humanity" aims to make France a world leader in AI. "AI will raise a lot of issues in ethics, in politics, it will question our democracy and our collective preferences," stated French President Emmanuel Macron in 2018.²²⁷³ He continued: "If you want to manage your own choice of society, your choice of civilization, you have to be able to be an acting part of this AI revolution."²²⁷⁴ The Ministry of Economy, Finance, and Industrial, Energy, and Digital Sovereignty (*Ministère de l'Économie, des Finances et de la Souveraineté industrielle, énergétique et numérique*) oversees the national AI strategy.

France's AI strategy sets out four objectives: (1) Reinforcing the AI ecosystem to attract the very best talent, (2) Developing an open data policy, especially in sectors where France already has the potential for excellence, such as healthcare, (3) Creating a regulatory and financial framework favoring the emergence of "AI champions," and (4) Promoting AI regulation and ethics to ensure to high standard and acceptability for citizens. This high standard includes supporting human sciences research on the ethics of AI use, making all algorithms used by the State public, including admission to higher education, and encouraging AI's openness to diversity.

The second phase of the national AI strategy launched in 2022 focused on priority areas such as trusted AI and generative AI.²²⁷⁵ The government initiated the third phase dedicated to "Make France an AI Powerhouse" at the AI Action Summit

Center for AI and Digital Policy

in 2025.²²⁷⁶ This phase emphasizes strategic infrastructure and widespread AI adoption across various sectors while building trust through AI Cafés to encourage democratic discourse about AI and establishment of the National Institute for AI Evaluation and Security (*l'Institut National pour l'Évaluation et la Sécurité de l'Intelligence Artificielle*, INESIA).²²⁷⁷

The national AI strategy built on a report by Cedric Villani, a French mathematician and member of parliament, who dedicated a chapter to ethical considerations and included proposals to open the “black box,” implement ethics by design, and set up an AI Ethics Committee.²²⁷⁸ The strategy also referenced report by the Strategy department under the Prime Minister and national data protection authority (*Commission nationale de l'informatique et des libertés*, CNIL).²²⁷⁹

The National Coordinator for AI, tasked with the implementation of the national AI strategy, works with all administrations, centers and research laboratories dedicated to AI.²²⁸⁰

National Pilot Committee for Digital Ethics

With regard to AI regulation and ethics (objective 4 of the National AI Strategy), in July 2019, the Prime Minister asked the French National Consultative Committee on Bioethics (CCNE) to launch a pilot initiative dedicated to Digital Ethics. The National Pilot Committee for Digital Ethics (NPCDE), created in December 2019, “shall submit initial contributions on the ethics of digital sciences, technologies, uses and innovations and determine relevant equilibria for the organization of public debate on digital ethics and artificial intelligence.” It is also tasked with maintaining ethical oversight and to raise awareness, inform and assist

Center for AI and Digital Policy

individuals, companies, administrations, institutions, etc., in their decision-making process.²²⁸¹ The committee has been seized by the Prime Minister to give opinions on the ethical issues concerning three specific topics of digital applications using in particular machine learning: 1) Conversational agents (chatbots); 2) Autonomous cars; and 3) Medical diagnosis and health AI.

However, civil society groups such as Access Now have objected to government studies that simply propose ethical guidelines rather than hard law. Access Now explains, “[t]here is solid and creative thinking in the advisory paper that informed the strategy around the ethical and regulatory challenges posed by AI, but at the moment the proposed solutions largely involve the creation of groups to study them rather than the proposal of new or modified norms.”²²⁸² “France’s AI strategy generally cleaves to the ‘ethics’ framework and makes scant reference to hard legal constraints on AI development.” AccessNow notes that the “Villani report is considerably more detailed about the ethical and legal challenges posed by AI.” While some civil society organizations oppose the need for the NPCDE, they continue to work towards their objectives and convened a conference with the European Research Consortium for Informatics and Mathematics (ERCIM) Ethics Working Group to discuss digital technology ethics and connected technologies in October 2022.²²⁸³

In September 2023, the Prime Minister launched a new Committee on generative AI.²²⁸⁴ Its aim is to make concrete recommendations to adapt French AI strategy. Among the members are Joëlle Barral from Google, Yann le Cun from Meta and Arthur Mensch and Cedric O, both involved with Mistral AI. Concerns about a possible conflict of interests and influence on the French position regarding the draft EU AI Act have been raised.²²⁸⁵

EU Digital Services Act

As an EU member state, France shall apply the EU Digital Services Act (DSA).²²⁸⁶ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation. The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs and targeted advertising to minors based on profiling. Arcom, France's regulatory authority for audiovisual and digital communication, or *le régulateur de la communication audiovisuelle et numérique*,²²⁸⁷ is the digital services coordinator charged with overseeing the EU Digital Services Act.²²⁸⁸

EU AI Act

As an EU member State, France is bound by the EU AI Act,²²⁸⁹ a risk-based market regulation that supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy, and ethical AI. France designated authorities responsible for enforcing the AI Act in 2025. According to a draft designation, the Directorate-General for Competition, Consumer Affairs, and Fraud Control (*Direction Générale de la concurrence, de la Consommation et de la Répression des Fraudes*, DGCCRF) will coordinate market-surveillance authorities and act as the single point of contact. The Directorate-General for Enterprise (*Direction générale des Entreprises*, DGE) will represent France in the European AI Committee.²²⁹⁰ Existing regulators CNIL (data

protection), Arcom (audiovisual), ANSSI (cybersecurity), and PEReN (digital regulation) will serve as competent authorities in applicable sectors.²²⁹¹

Public Participation

The Villani report, which has been a key source of inspiration for France’s national strategy, relied on the work of multiple stakeholders but not the public at large. The data protection authority (CNIL) relied on extensive public outreach to inform the report on “the ethical matters raised by algorithms and artificial intelligence” that also informed the strategy. More than 3,000 people took part in 45 debates and events, organized by 60 partners, including research centers, public institutions, trade unions, think tanks, and companies.²²⁹²

A 2020 survey by the European consumer organization BEUC found that more than 80% of those polled in France were familiar with Artificial Intelligence. Over 50% of respondents agreed that companies use AI to manipulate consumer decisions.²²⁹³ BEUC also reported that there is little trust over authorities to exert effective control over organizations and companies using AI. More than 60% of respondents in France said users should be able to say “no” to automated decision-making.

Public engagement has increased. Open consultations around AI to Serve the Public Good? ahead of the AI Action Summit engaged over 10,000 citizens and 200 experts who “clearly expressed a strong demand for robust governance of emerging AI technologies at the national and international level.”²²⁹⁴

Data Protection

The right to the protection of personal data falls within the scope of application of the right to respect for private life,²²⁹⁵ which is constitutionally protected.²²⁹⁶ The 1978 French Data Protection Act, which was amended in 2018 to adapt it to both the GDPR and the LED,²²⁹⁷ further delineates these protections. The National Commission of Data and Rights (*Commission Nationale de l'Informatique et des Libertés*, CNIL) is the independent administrative authority for data protection with jurisdiction over ministers, public authorities, and private and public company directors.²²⁹⁸

Since France is an EU Member State, the General Data Protection Regulation (GDPR)²²⁹⁹ is directly applicable in France and to French people. The aim of the GDPR is to “strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in different national systems and unnecessary administrative burdens.”²³⁰⁰

The EU Data Protection Law Enforcement Directive (LED)²³⁰¹ “will in particular ensure that the personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”²³⁰² The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.²³⁰³ The EU Charter of Fundamental Rights more generally

provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

France is a member of the Council of Europe and ratified COE Convention 108+ for the protection of individuals with regard to the processing of personal data.²³⁰⁴

The CNIL has been a member of the Global Privacy Assembly (GPA) since 2002.²³⁰⁵ The commission’s work contributed to the Declaration on Ethics and Data Protection in AI, which was later adopted by the Global Privacy Assembly with CNIL’s sponsorship.²³⁰⁶ The CNIL did not endorse the 2020 GPA Resolution on AI Accountability²³⁰⁷ but co-sponsored the 2022 GPA Resolution on Facial Recognition Technology²³⁰⁸ and the 2023 GPA Resolution on Generative AI.²³⁰⁹

Algorithmic Transparency

Following the assassination in October 2020 of history professor Samuel Paty, the Secretary of State for the Digital Transition and Electronic Communications, Cédric O, reiterated the importance of algorithmic transparency. He wrote in a blog post “the opacity of the functioning of (social media) algorithms and their moderation is a societal and democratic aberration.” He added “it is also essential that full transparency be observed vis a vis the public authorities as regards

Center for AI and Digital Policy

the principles governing in detail the choices made by their moderation algorithms, whether it is about online hatred or dissemination of false information.”²³¹⁰

France is subject to the GDPR and Convention 108+ which both provide for a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.²³¹¹ These rights, including the right and access to contest automated decisions with adverse consequences to fundamental rights, align with the 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems.²³¹²

France has continued to advance concrete measures for algorithmic transparency. The CNIL’s Recommendations on AI and GDPR advised that organizations inform individuals when their personal data may be used to train AI models and ensure rights such as access and erasure remain effective.²³¹³ The data protection agency’s recommendations on the development of AI systems further clarified that models trained on personal data fall under the GDPR and encouraged documentation and governance measures to strengthen transparency.²³¹⁴

AI Oversight

The French data protection authority (CNIL) has published several papers on AI, including a 2018 report on the ethical issues raised by AI.²³¹⁵ This report set out two founding principles—fairness and vigilance—six recommendations, and six concerns. Following this report, a joint 2020 paper by the CNIL and the Defender of Rights detailed concerns around the transparency obligations of those responsible for AI systems.²³¹⁶

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The CNIL imposed a €20 million fine on Clearview AI for unlawful use of facial recognition technology.²³¹⁷ In April 2023, the French DPA considered that the company had not complied with the order and consequently imposed an overdue penalty payment of €5,200,000 on Clearview AI.²³¹⁸

In January 2023, the CNIL created an AI Department (AID) to improve the authority's understanding of the risks posed by AI systems, prepare for EU AI Act enforcement, and develop further relationships within the AI ecosystem.²³¹⁹

Generative AI was one of the key topics in the 2023 action plan. The CNIL's work on Generative AI was supported by the AID²³²⁰ and the Digital Innovation Laboratory (LINC), which released a study to better understand the functioning and risks of generative AI.²³²¹ The CNIL issued initial recommendations on the development of AI systems in April 2024 following a public consultation. The recommendations seek to support AI ecosystem players in complying with the GDPR, focusing on the purpose of data processing, data retention, and data minimization.²³²² A second public consultation focusing on the legal basis of legitimate interest to develop AI systems, data subject rights, and safe development of AI systems closed on October 1, 2024.²³²³ The CNIL's finalized recommendations offer practical guidance to ensure compliance with the GDPR during the development phase of AI systems regarding AI model training, data annotation, and secure system development.²³²⁴

Use of AI in Public Administration

The CNIL selected four AI projects aimed at improving public services for incubation in its sandbox in 2023. One project led by the French employment agency (France Travail) is to equip job agents with AI conversational assistants to help them offer a personalized path adapted to the needs of job seekers.²³²⁵ Another project, the “Albert” project of the DINUM (interministerial directorate for digital affairs), is aimed at civil servants. The Albert project would assist civil servants in the search for information and formulating specific responses to users. The project is based on an open language model and considered a potential “lever for the deployment of AI in administrations.”

The CNIL published the results of its AI sandbox for public services in 2025.²³²⁶ The organization recommended, among other measures, the principle of data minimization, meaningful human intervention, transparency of AI systems to users, and the assessment and mitigation of potential bias that could lead to discrimination.

Mass Surveillance

Facial recognition technology (FRT) processes sensitive personal data prohibited, at least in principle, by the GDPR and the French data protection law, subject to exceptions such as individual’s consent or important public interest. In the latter case, FRT can be authorized by a Decree of the Conseil d’État informed by an opinion from the CNIL

FRT has long been used in France on a voluntary basis with regard to passport control in airports, bank security, and has also been tested in several colleges. The deployment of an FRT-based ID program, Alicem,²³²⁷ was scheduled for November 2019, despite a very critical opinion from the CNIL. Deployment was delayed after a group of NGOs appealed to the Conseil d’État requesting the annulment of the decree that authorized Alicem. In early November 2019, the Conseil d’État dismissed the appeal.²³²⁸

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The CNIL published guidance on the use of facial recognition in 2019.²³²⁹ The document, primarily directed at public authorities in France that want to experiment with facial recognition, presents the technical, legal and ethical elements that need to be considered. After recalling that facial recognition, experimental or not, must comply with the GDPR and the LED, the CNIL sets out three general requirements: (1) facial recognition can only be used if there is an established need to implement an authentication mechanism that ensures a high level of reliability, and there are no other less intrusive means that would be appropriate; (2) the experimental use of facial recognition must respect the rights of individuals (including consent and control, transparency and security); and (3) the use of facial recognition on an experimental basis must have a precise timeline and be based on a rigorous methodology setting out the objectives pursued and the criteria for success.

In December 2019, the Observatoire des Libertés Numériques²³³⁰ and 80 organizations signed an open letter calling on the French Government and Parliament to ban any present and future use of facial recognition for security and surveillance purposes.²³³¹ In 2020, the administrative tribunal of Marseille rendered a decision on facial recognition that ruled illegal a decision by the South-East Region of France (Provence-Alpes-Côte d’Azur) to test facial recognition at the entrance of two High schools.²³³² Following an analysis from the CNIL,²³³³ the court ruled that there was no opportunity for free and informed consent and also that there were other, less intrusive means to manage entrance to high schools.²³³⁴ This was the first decision

ever by a court applying the General Data Protection Regulation (GDPR) to Facial Recognition Technologies (FRTs).²³³⁵

In November 2023, investigative media Disclose revealed that in 2015, law enforcement secretly acquired surveillance video image analysis software from the Israeli company Briefcam. For eight years, the Ministry of the Interior concealed the use of this tool, which enables facial recognition. According to Disclose, the algorithmic video-surveillance option was unlawfully used by municipal police forces across the nation.²³³⁶ The Grenoble administrative court ruled in 2025 that the deployment of Briefcam’s algorithmic video surveillance technology in Moirans, Isère is unlawful, following a 3-year legal challenge by civil rights organization La Quadrature du Net.²³³⁷

Despite rulings about facial recognition and GDPR, many experiments took place leading up to the Paris Games in 2024 as companies positioned themselves for a share of seven-billion euro market.²³³⁸ In May 2023, the French Government enacted the Olympic law legitimizing automated algorithmic image processing at the Olympic Games²³³⁹ as an experiment until March 31, 2025.²³⁴⁰ An automated surveillance system was put in place to detect “suspect” behavior or objects. According to Human Rights Watch, “the surveillance provision of the proposed bill would constitute a serious threat to civic freedoms and democratic principles.” Human Rights Watch also cited the European Data Protection Board and European Data Protection Supervisor stance that “biometric surveillance stifles people’s reasonable expectation of anonymity in public spaces and reduces their will and ability to exercise their civic freedoms, for fear of being identified, profiled or even

Center for AI and Digital Policy

wrongly persecuted.”²³⁴¹ La Quadrature du Net also launched a campaign against biometric surveillance.²³⁴² For its part, the CNIL identified the use of augmented cameras in the framework of the Olympic games as a priority topic for investigation in 2024.²³⁴³

French MPs unsuccessfully challenged the law before the French Constitutional Council. The French Constitutional Council noted that facial recognition will not be used and the AI-camera system was set for a legitimate purpose and only temporarily. As long as the necessary safeguards are put into place, there is no reason to invalidate the law at this stage.²³⁴⁴

Enforcement against facial recognition technology tightened in 2025 with the recognition that untargeted extraction of facial images for recognition databases is prohibited by principle.²³⁴⁵ Real-time biometric identification systems can only be deployed under strict temporal and geographic limits, requiring judicial or administrative authorization, mainly for locating missing persons or counterterrorism purposes. Still, the French government launched a working group in May 2025 to legalize controlled real-time facial recognition use, particularly for criminal investigations, emphasizing high regulatory scrutiny.²³⁴⁶

Environmental Impact of AI

France’s AI Strategy includes raising international awareness about the environmental impact of AI, promoting research to make AI infrastructure “more environmentally friendly,” and making ecological data open to the public among its

key objectives.²³⁴⁷ At the AI Action Summit in Paris, France spearheaded the launch of the Coalition for Environmentally Sustainable AI, alongside the UN Environmental Programme (UNEP) and the International Telecommunication Union (ITU) aimed at aligning AI development with Sustainable Development Goals (SDGs) and mitigating AI's environmental footprint.²³⁴⁸

The launch of the first global observatory dedicated to AI energy consumption and sustainability marks progress toward implementing France's goals. The observatory emerged from a partnership between International Energy Agency (IEA) and a coalition of 36 experts including scientists, companies, and institutions catalyzed by France's Ministry of Ecological Transition and the National Institute for Research in Digital Science and Technology (INRIA).²³⁴⁹ The observatory aims to optimize data center energy use, better forecast energy needs, and promote innovations for carbon reduction.²³⁵⁰

Lethal Autonomous Weapons

President Macron declared in an interview that he is “dead against” the deployment of lethal autonomous weapons: “You always need responsibility and assertion of responsibility.”²³⁵¹ In the submission to the UN Secretary General 2024 report on member States' views on lethal autonomous weapons systems (LAWS), France emphasized support for a two-tier approach to address the challenges of LAWS. France advocates for the prohibition of fully autonomous lethal systems that are inherently indiscriminate and supports regulation of partially autonomous systems to ensure compliance with International Humanitarian Law (IHL) while maintaining human control and accountability.²³⁵² The Paris Declaration on

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Maintaining Human Control in AI-Enabled Weapon Systems released during the AI Action Summit in Paris reiterates this position, explicitly stating France’s commitment to retaining meaningful human involvement in decisions where lethal force may be used and calling for international norms upholding this principle.²³⁵³

France has continually advocated for human oversight and the need for an international framework to guide constraints on the use of LAWS in the UN and international summits such as REAIM. For example, France endorsed a joint statement to the UN General Assembly in 2022, committing to “upholding and strengthening compliance with International Law, in particular International Humanitarian Law (IHL), including through maintaining human responsibility and accountability in the use of force.”²³⁵⁴ France also voted in favor of resolution L.56²³⁵⁵ on autonomous weapons systems, along with 163 other states.

Following the international summit on the Responsible application of Artificial Intelligence in the Military domain hosted by the Netherlands (REAIM 2023), France agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.²³⁵⁶ France also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy.²³⁵⁷ France contributed to the 2024-2025 REAIM Summit outcomes, which reaffirm the imperative to keep humans “in the loop” and prevent proliferation of autonomous weapons contrary to international peace and security.”²³⁵⁸

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI Literacy

France's national AI strategy emphasizes human development and digital skills key components across the three phases. However, the strategy emphasizes the development of AI experts and programs rather than inclusion and democratic participation. A report on National Strategy for Digital Inclusion notes plans for a Grand Beginners skills course with a certification platform,²³⁵⁹ aligned with the objectives to develop Digital Skills for Citizens and Digital Skills for the Labor Force.²³⁶⁰

Human Rights

In France, human rights are understood as the fundamental freedoms and protections guaranteed to all individuals based on the principles of "liberty, equality and fraternity" (liberté, égalité, fraternité). These rights are enshrined in key legal documents such as the Declaration of the Rights of Man and of the Citizen²³⁶¹ and the French Constitution.²³⁶² France is also subject to the Charter of Fundamental Rights of the European Union²³⁶³ and the Council of Europe Convention for the Protection of Human Rights (1950).²³⁶⁴ As part of the EU, France upholds human rights standards related to dignity, freedoms, equality, solidarity, citizenship, and justice.

France is also a signatory to many international human rights treaties and conventions. France typically ranks among the top nations in the world for the protection of human rights and transparency. Freedom House ranked France "Free" in 2025 with a score of 89/100, given the country's democratic processes and generally strong protections for civil liberties and political rights.²³⁶⁵

The French Ombudsman and the CNIL have “both, in their own area of expertise, voiced their concerns regarding the impact of algorithmic systems on fundamental rights.”²³⁶⁶ Following a joint expert seminar in May 2020, they called for a collective mobilization to prevent and address discriminatory biases of algorithms.²³⁶⁷ The report called on the government and relevant actors to take appropriate measures to avoid algorithms that replicate and amplify discrimination.²³⁶⁸ In particular, the Ombudsman recommended to: i) support research to develop studies to measure, and methods to prevent bias; ii) reinforce information, transparency and explainability requirements with regard to algorithms; and iii) perform impact assessments to anticipate discriminatory effects of algorithms.²³⁶⁹

In April 2022, the French National Consultative Commission on Human Rights also adopted an opinion on the impact of artificial intelligence on fundamental rights. The consultative Commission recommends prohibiting certain uses of AI that are considered too prejudicial to fundamental rights, such as social scoring or remote biometric identification of people in public spaces and places accessible to the public.²³⁷⁰

AI Safety Summit

In November 2023, France participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²³⁷¹ France thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth,

sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.

France hosted the third iteration of the AI Safety Summit, rebranded as the AI Action Summit.²³⁷² The AI Action Summit emphasized moving from principles to implementation, complementing the EU AI Act rollout with international coordination on AI safety and accountability and a Joint Statement on Data Governance for AI Systems by data protection authorities reaffirming human-rights-based data governance, transparency, and accountability commitments.²³⁷³ More than 60 nations endorsed the resulting Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet.²³⁷⁴

OECD / G20 AI Principles

France endorsed the OECD and the G20 AI Principles.²³⁷⁵

In 2020, France and Canada, and a dozen other countries announced the Global Partnership on Artificial Intelligence (GPAI) to “support the responsible and human-centric development and use of AI in a manner consistent with human rights, fundamental freedoms, and our shared democratic values.”²³⁷⁶

The OECD praised France for its commitment to following OECD recommendations on public administration by publishing a guide for public administrations on the responsible use of algorithms in the public sector.

During a 2023 interview, President Emmanuel Macron stated, “The G7 and the Organisation for Economic Co-operation and Development (OECD), which

includes 38 countries, would be a ‘good platform’ to develop global regulation” on artificial intelligence and other technology.²³⁷⁷

Council of Europe AI Treaty

France contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law.²³⁷⁸ The European Commission signed this first legally binding international AI treaty on behalf of EU Member States.²³⁷⁹ France has not acted independently to sign or ratify the treaty.²³⁸⁰

UNESCO Recommendation on AI Ethics

France endorsed the 2021 UNESCO Recommendation on AI Ethics, the first ever global agreement on the ethics of AI.²³⁸¹ France’s attention to the environmental impact of AI and the need for capacity building in digital and AI literacy for citizens and civil servants mark some progress toward implementing the recommendations, as does the proposed governance plan related to the EU AI Act and the founding of INESIA to monitor AI security. France is not implementing or preparing the UNESCO Readiness Assessment Methodology (RAM), a tool to facilitate implementation of the AI ethics recommendations by helping countries identify gaps in their AI governance and infrastructure.²³⁸²

Evaluation

France continues as a leader in national AI policies. France has endorsed the OECD/G20 AI Principles and contributed to the creation of the Global Partnership on AI. French authorities in charge of human rights, data protection and ethics are

actively involved in AI policy and have published practical guidance regarding facial recognition and algorithmic transparency. France anticipated the entry into force of the EU AI Act by creating a dedicated AI unit with its data protection authority and has since taken steps to clarify reporting and enforcement of the EU AI Act.

However, citizens, civil society, and authorities continue to debate France's approach to the use of AI by law enforcement authorities and for security purposes and the potential negative impact on fundamental rights. France successfully advocated for a national security exemption in both the EU AI Act and the Council of Europe Framework Convention on AI, human rights, democracy and the rule of law. France also played a key role in imposing a separate and lighter regime for GPAI models under the EU AI Act.

Germany

In 2025, Germany centralized AI policy under the new Federal Ministry for Digital Transformation and Government Modernisation. The first Digital Minister framed the Ministry's mission around digital sovereignty, regulatory simplification, and local business competitiveness.

National AI Strategy

The German government published an initial national AI strategy in November 2018.²³⁸³ The three main goals are 1) “to make Germany and Europe a leading centre for AI and thus help safeguard Germany's competitiveness in the future,” 2) to ensure “a responsible development and use of AI which serves the good of society,” and 3) to “integrate AI in society in ethical, legal, cultural and institutional terms in the context of a broad societal dialogue and active political measures.” Germany updated the AI Strategy²³⁸⁴ to respond to a new AI principles and frameworks developed between 2018 and 2020. The updated Strategy also included a discussion on how AI can help with “pandemic control” or environmental and climate protection.

The Federal Ministry of Education and Research (*Bundesministerium für Bildung und Forschung*) launched an Action Plan²³⁸⁵ to implement the AI Strategy in 2023. The Federal Ministry of Research, Technology and Space (*Bundesministerium für Forschung, Technologie und Raumfahrt*) now oversees the AI Action Plan. The AI Action Plan outlines targeted initiatives to “ensure that Germany remains a leading AI nation” through the Made in Germany motto.²³⁸⁶ The

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

High-Tech Agenda Germany²³⁸⁷ furthers the Made in Germany motto through the AI initiative, which centers emphasizes AI as one of 5 key technologies that will help Germany “become a leading technology nation again.”²³⁸⁸ The new Federal Ministry for Digital Transformation and Government Modernisation established in 2025 has extensive power and consolidates responsibilities, including over artificial intelligence, that were formerly divided among six departments.²³⁸⁹ The new Ministry is charged with implementing the binding political agenda of the coalition government agreement, which emphasizes digital sovereignty, GPU infrastructure, and innovation-friendly EU AI Act implementation.²³⁹⁰

Still, AI ethics is a core component of the ongoing AI Strategy.²³⁹¹ The German government further emphasizes transparency for the development of AI to ensure the protection of civil rights and maintain trust in businesses and institutions. The AI Strategy suggests that “government agencies or private-sector auditing institutions” should “verify algorithmic decision-making in order to prevent improper use, discrimination and negative impacts on society.”

Germany launched several projects to implement its National AI Strategy. According to the OECD, there are approximately 29 initiatives on AI across several topics and institutions²³⁹² ranging from the ethical guidelines to initiatives that foster fruitful business environments. Three specifically focus on ethical questions related to AI. First, the Ethical Guidelines for Automated and Connected Driving set out 20 ethical principles for autonomous and semi-autonomous vehicles.²³⁹³ This was among the first guidelines worldwide to establish ethical principles for connected vehicular traffic. The Ethical Guidelines led to an action plan and the “creation of

ethical rules for self-driving cars” that was adopted by the Federal Government.²³⁹⁴ Second, the German AI Observatory forecasts and assesses AI technologies’ impact on society. The AI Observatory also develops regulatory frameworks that help deal with the rapidly changing labor market to ensure that social aspects of these changes are not neglected.²³⁹⁵ Finally, the Federal Ministry for Economic Cooperation and Development’s Development Cooperation initiative FAIR Forward²³⁹⁶ aims to promote a more “open, inclusive and sustainable approach to AI on an international level” by “working together with five partner countries: Ghana, Rwanda, South Africa, Uganda and India.” Several projects underway in partner countries work to Strengthen Technical Know-How on AI, Remove Entry Barriers to AI, and Develop Policy Frameworks ready for AI.

Further, the Federal Ministry for Economic Affairs and Energy launched a Regulatory Sandbox initiative in 2018. This initiative, although not specifically dedicated to AI, focuses on “testing innovation and regulation which enable digital innovations to be tested under real-life conditions and experience to be gathered.”²³⁹⁷

In response to the European Commission’s White Paper on AI,²³⁹⁸ Germany called for tighter regulation of AI on the EU level in 2020. The German government stated it welcomes new regulations but wants more specific definitions and stricter requirements for data storage, more focus on information security and more elaborate definitions of when human supervision is needed.²³⁹⁹

Data Ethics Commission

In 2018, the German federal government established a Data Ethics Commission to “build on scientific and technical expertise in developing ethical guidelines for the protection of the individual, the preservation of social cohesion, and the safeguarding and promotion of prosperity in the information age.”²⁴⁰⁰ In 2020, the Commission recommended to the German parliament that sustainability, justice and solidarity, democracy, security, privacy, self-determination and human dignity should be the ethical and legal principles that guide the regulation of AI.²⁴⁰¹ The Data Ethics Commission suggested a risk-based approach to the regulation of AI, which distinguishes five levels of criticality in a “criticality pyramid” and respective measures in its risk-adapted regulatory system for the use of algorithmic systems. The Commission also recommended the establishment of “*ex ante* approval mechanisms and continuous supervision by oversight bodies.”²⁴⁰²

The German consumer organization federation *Verbraucherzentrale Bundesverband* (vzbv) favored the creation of the Commission and strongly supported the recommendations, as did the main German industry body *Bundesverband der Deutschen Industrie* (BDI).²⁴⁰³ The vzbv further emphasized that the aim of Automated Decision Making (ADM) regulation must be to ensure compliance with existing laws. Toward that goal, “it must be possible for supervisory authorities to scrutinise and verify the legality of ADM systems and their compliance with existing laws so that they can impose penalties if the law is infringed.”²⁴⁰⁴ Vzbv also noted it is “important to ensure consumers’ self-determination when making decisions, to strengthen consumers’ confidence in ADM systems by creating transparency and to foster competition and innovation.”

EU Digital Services Act

As an EU member state, Germany shall apply the EU Digital Services Act (DSA).²⁴⁰⁵ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation. The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs. The DSA also bans targeted advertising to minors based on profiling.

Through the 2022 Strengthened Code of Practice on Disinformation,²⁴⁰⁶ which counts as a mitigation measure under the DSA, signatories commit to take action in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.

EU AI Act

As an EU member State, Germany is bound by the EU AI Act.²⁴⁰⁷ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI. The first provisions of the AI Act entered into force on August 1, 2024.²⁴⁰⁸ Germany missed the August 2025 deadline to designate competent authorities but released a draft bill to designate authorities in late 2025. The draft AI Market Surveillance and Innovation Promotion Act²⁴⁰⁹ would designate the Federal Network Agency (*Bundesnetzagentur*) as the central market surveillance and

notifying authority, providing a one-stop shop for businesses. The Agency launched an AI Service Desk to guide businesses through compliance requirements.²⁴¹⁰

The Digital Minister established in 2025 expressed disagreements with the EU AI Act in its current form, seeing it as “overloaded and too complex,” and wanting to make it more “innovation-friendly”²⁴¹¹ by loosening the rules. He noted, “You should regulate when you have a market, when you have products,” otherwise “companies develop elsewhere.”²⁴¹²

Public Participation

Germany’s national AI strategy points out that the 2019 data strategy is based on “broad public consultation and a host of expert discussions,” though participation in developing and updating its AI strategy was primarily limited to “experts in expert forums.”²⁴¹³

One initiative, Platform for Self-Learning Systems (*Plattform Lernende Systeme*),²⁴¹⁴ sometimes known as Platform for AI, focuses on fostering dialogue between stakeholders including civil society, government, and business on the topic of self-learning systems. The Platform also aims to “shape self-learning systems to ensure positive, fair and responsible social coexistence” as well as strengthen skills for developing and using self-learning systems. The IT Security, Privacy, Legal and Ethical Framework working group has published several papers on AI security and ethical issues.²⁴¹⁵

To inform the public about AI policy, the German government created a website ([KI-Strategie-Deutschland.de](https://www.ki-strategie-deutschland.de)) to provide information on AI strategy

implementation and new policy developments.²⁴¹⁶ *Plattform Lernende Systeme* also offers a map that shows AI developments across Germany by region.²⁴¹⁷

Germany's federal parliament also set up the Study Commission on Artificial Intelligence, Social Responsibility, and Economic, Social, and Ecological Potential, which comprised equal numbers of parliamentary representatives and experts.²⁴¹⁸ The Commission's aim was to develop recommendations on AI and examine its impact on "our value systems, fundamental and human rights, and [its] benefits for society and the economy." Some of their meetings were broadcast on parliamentary television or could be attended in person. After two years of work, the Study Commission presented its final report to the federal parliament (*Bundestag*) on October 28, 2020. The Commission's findings were then debated in the *Bundestag*.²⁴¹⁹

Germany's Federal Ministry for Digital and State Modernization opened consultation on a draft federal law implementing the EU AI Act, the AI Market Surveillance and Innovation Promotion Act,²⁴²⁰ in 2025. The Ministry published a spreadsheet with more than 50 responses to the call for comments, along with individual files for additional comments received outside the consultation period. The Cabinet approved the government draft in February 2026.

Data Protection

Since Germany is an EU Member State, the General Data Protection Regulation (GDPR)²⁴²¹ is directly applicable in Germany and to Germans. The aim of the GDPR is to "strengthen individuals' fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market. A single law will also do away with the current fragmentation in

different national systems and unnecessary administrative burdens.”²⁴²² The GDPR entered into force in May 2016 and has applied since May 2018.

The activities of law enforcement authorities have been addressed at the EU level by the EU Data Protection Law Enforcement Directive (LED).²⁴²³ The directive ensures that the “personal data of victims, witnesses, and suspects of crime are duly protected and will facilitate cross-border cooperation in the fight against crime and terrorism.”²⁴²⁴ The LED prohibits any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.²⁴²⁵

Germany’s Federal Data Protection Act (*Bundesdatenschutzgesetz*, BDSG) was designed to bring the German privacy law on par with the GDPR and the LED. It is usually referred to as the “BDSG-new” since it replaced the former BDSG.²⁴²⁶ The German Federal Cabinet approved the Draft Law²⁴²⁷ to amend the BDSG in February 2024. After the legislative body’s (*Bundesrat*) opinion, the Draft Law was discussed by the Federal Parliament (*Bundestag*).²⁴²⁸ The Draft Law would institutionalize a committee of Independent German Federal and State Data Protection Supervisory Authorities (Data Protection Conference—DSK), whose decisions would be legally non-binding. No updates on further action on the BDSG-new are available.

Informationsfreiheit) is the national data protection authority for Germany. The Federal Commissioner is, however, in charge of only federal government authorities and private telecoms and postal services.²⁴²⁹ Any other private entity and all other authorities in Germany are regulated by the relevant state DPA. Bavaria has two DPAs, one responsible for the private sector and one for the public sector.²⁴³⁰ In other states, such as Hessian,²⁴³¹ one authority is responsible for all data protection supervision and enforcement in the state. The Federal Data Protection Commissioner serves as the joint representative of the German data protection authorities within the European Data Protection Board.²⁴³²

The Digital Minister established in 2025 championed simplification and centralization of the data protection supervisory authority over the various data protection commissioners at the federal and state levels.²⁴³³ The Minister explained that making Germany attractive to businesses “requires consistent data protection and data security. [...] however, data protection must not become an innovation brake, because we also have to be able to try digital business models.”²⁴³⁴

In addition to the BDSG-new, there are various sector-specific data protection regulations, such as those governing financial and energy industries. For example, the Telecommunications Telemedia Data Protection Act (TTDSG) set to be enforced in 2023, contains regulations about cookie management and Personal Information Management Systems.²⁴³⁵ The name of the regulation was changed to Telecommunications Digital Services Data Protection Act (TDDDG) in 2024 as a part of the introduction of the Digital Services Act. The contents are essentially

identical.²⁴³⁶ Further, the German Civil Code Article 327q is intended to protect user privacy in cases where a consumer gives their personal data to access a service.²⁴³⁷

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

Germany is also a member of the Council of Europe and ratified the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.²⁴³⁸ The German Federal Council introduced a draft law in July 2024 to protect personal rights from deepfakes under criminal law. The draft law addresses privacy concerns related to deepfake technologies and provides coverage for individuals whose rights to privacy are violated.²⁴³⁹

The Federal Data Protection Commissioner is a member of the Global Privacy Assembly since 2002. It co-sponsored the 2018 GPA Declaration on Ethics and Data Protection in AI²⁴⁴⁰ and the 2023 GPA Resolution on Generative AI.²⁴⁴¹ The Federal Data Protection Commissioner also sponsored the 2020 GPA Resolution on AI Accountability.²⁴⁴² However, the Federal Data Protection Commissioner did not endorse the 2022 GPA Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology.²⁴⁴³ Several State

DPA are members of the Global Privacy Assembly but none of them has endorsed GPA's AI-related resolutions.²⁴⁴⁴

AI Oversight

The Federal Data Protection Commissioner is also one of the members of the committee of Independent German Federal and State Data Protection Supervisory Authorities (Data Protection Conference—DSK). The DSK published a position paper in May 2024, ensuring that the member data protection authorities are prepared to be the designated national supervisory authority under the EU AI Act.²⁴⁴⁵ In the following days, the DSK published guidelines for implementing and using AI systems in compliance with the EU's data protection regulations.²⁴⁴⁶ The guidelines aim to clarify uncertainties in the use of AI systems and provide pre-implementation and implementation guidance with compliance requirements. However, the proposed AI Market Surveillance and Innovation Promotion Act, which would designate the Federal Network Agency as lead AI oversight authority under the EU AI Act,²⁴⁴⁷ reflects the new Digital Minister's stance against distributed authority. All 17 data protection authorities from every state (two from Bayern) immediately opposed the proposal, citing concerns over fundamental rights and the possible unconstitutionality of supervisory power from the federal agency on the uses of AI by state authorities.²⁴⁴⁸

The Federal Data Protection Commissioner is a member of the G7-Roundtable of the data protection and privacy authorities. The Roundtable issued the

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Statement on Generative AI²⁴⁴⁹ in 2023, the Statement on the Role of Data Protection Authorities in Fostering Trustworthy AI,²⁴⁵⁰ and the Statement on AI and Children²⁴⁵¹ in 2024. The Federal Data Protection Commissioner played a significant role in the statements.²⁴⁵²

The G7 Data Protection Authorities (DPAs) adopted a statement on AI governance in October 2024. They pointed out the critical role of DPAs in the realm of AI, emphasizing the need for protecting the right to privacy and data protection more than ever. The adopted statement “calls on policymakers and regulators for approaches that recognise the critical role of the DPAs in ensuring that AI technologies are developed and deployed responsibly and in identifying and addressing AI issues at their source.” The statement emphasized that “DPAs apply a human-centred lens to their mandate and have vast experience with data-driven processing and in operationalising many data protection overarching principles that can be transposed into broader AI governance frameworks, in particular fairness, accountability, transparency, and security.”²⁴⁵³

In 2021, numerous German DPAs launched a collective investigation on the use by German companies of third-party providers outside the EU and their compliance with the 2020 European Court of Justice’s *Schrems II* decision regarding international data transfers. The Court has made clear that DPAs shall intervene to suspend or prohibit transfers which do not match the *Schrems II* criteria.²⁴⁵⁴

The Hamburg Commissioner for Data Protection and Freedom of Information published an advisory in June 2024 on Meta’s new privacy policy,

planned AI model training protocol, and the utilization conditions of users' personal data from social media applications. The Hamburg Commissioner provided helpful information on users' options and what they can do, Meta's new privacy policy's aims and goals, and what happens next.²⁴⁵⁵ Furthermore, the BayLDA published guidelines regarding the application of the GDPR and other legal requirements to the processing of personal data by AI systems. The BayLDA also expressed its opinion on the significant role and responsibility of data protection supervisory authorities in the field of AI supervision.²⁴⁵⁶

The German Institute for Human Rights, founded in 2001 by the German Bundestag (Parliament) as an independent national institution, works to ensure the observation and promotion of human rights by the German government in Germany and abroad.²⁴⁵⁷ The Institute published an interview on protecting human rights when applying AI in the context of elderly care in 2019²⁴⁵⁸ and has emphasized the importance of assessing and preventing the human rights risks of Artificial Intelligence in 2021,²⁴⁵⁹ though the Institute has not indicated that it sees a sustained oversight of AI-related human rights infringements as a priority.

The Federal Ministry of the Interior and Community is creating the Advisory Center for AI (BeKI) as a central point for contacting and coordinating for AI projects at the federal level. BeKI is still under development²⁴⁶⁰ and aims to ensure a coordinated approach, advise on the legal, ethical, and technical topics for responsible and transparent use of AI, and transform administrative processes sustainably.²⁴⁶¹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The State Commissioner for Data Protection in Lower Saxony announced the establishment of the Office for AI under his authority in 2024. The new unit will support the use of AI technologies in relation to data protection laws, serve as a competence center for AI-related questions, and collaborate with other relevant authorities. The Commissioner Lehmke pointed out: “The establishment of the staff unit is an important step to proactively meet the challenges that AI brings with it, to ensure the protection of personal data in an increasingly digitalized world, and at the same time to accompany the opportunities of technical development.” The unit also aims to devise safeguards for the implementation and evaluation of AI, evaluate the potential hazards of AI-based systems, provide assistance for research, promote awareness among various stakeholders, and conclusively ensure the implementation of AI in accordance with data protection regulations.²⁴⁶²

Algorithmic Transparency

Germany is subject to the GDPR and Convention 108+. Germans have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.²⁴⁶³ In line with a 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems,²⁴⁶⁴ these rights include requirements on transparency, accountability, and effective remedies.

The Ministry of Education and Research started a funding priority for AI R&D projects on explainability and transparency in 2019. The Ministry stated that improving explainability and transparency are two of the Federal government’s central research goals.²⁴⁶⁵ Funding is “aimed at collaborative projects between science and industry in an interdisciplinary composition.”²⁴⁶⁶ The German consumer

Center for AI and Digital Policy

organization vzbv emphasized in 2019 that the aim of automated decision-making regulation must be to ensure compliance with existing laws.²⁴⁶⁷

The German Data Ethics Commission sees auditability, explainability, and redress possibilities as crucial for algorithm safety.²⁴⁶⁸ However, even though Germany has had a significant impact on the drafting of the EU AI Act and its transparency regulations, AlgorithmWatch has noted that Germany (and specifically its Ministry of the Interior) has in recent years tried to water down transparency obligations for AI systems in the AI Act, most notably with regard to exemptions for AI use in “law enforcement, migration, asylum and border control,” including remote biometric identification systems.²⁴⁶⁹

According to AlgorithmWatch,²⁴⁷⁰ the data protection agencies of the federal government and eight German federal states stated that greater transparency in the implementation of algorithms in the administration was indispensable for the protection of fundamental rights.²⁴⁷¹ The agencies demanded that if automated systems are used in the public sector, it is crucial that processes are intelligible and can be audited and controlled. In addition, public administration officials must be able to provide an explanation of the logic of the systems used and the consequences of their use. Self-learning systems must also be accompanied by technical tools to analyze and explain their methods. An audit trail should be created, and the software code should be made available to the administration and, if possible, to the public. According to the position paper, there need to be mechanisms for citizens to demand redress or reversal of decisions, and the processes must not be discriminating. In cases where there is a high risk for citizens, there needs to be a risk assessment done before deployment. Very sensitive systems should require authorization by a public agency that has yet to be created.

One of the State DPAs, the Berlin Commissioner for Data Protection and Freedom of Information (BlnBDI), rendered a decision reasserting the importance of algorithmic transparency. In May 2023, the Berlin Data Protection Authority fined a

Berlin-based bank € 300,000. The Bank used an online form to request various data about the applicant's income, occupation and personal details for a credit card application. Based on the information requested and additional data from external sources, the bank's algorithm rejected the customer's application without any justification. The algorithm is based on criteria and rules previously defined by the bank. Since the client had a good credit rating and a regular high income, he doubted the automated rejection and complained to the Berlin data protection commissioner. The lack of transparency regarding the automated decision led to the imposition of a fine by the State DPA.²⁴⁷²

Mannheim, in collaboration with eight other cities across Europe and with the help of Eurocities' Digital Forum, adopted an algorithm register, the Algorithmic Transparency Standard in January 2023.²⁴⁷³ The aim is to provide more information for residents about the use of algorithm by municipalities and their impact. The register includes a range of information such as the type and purpose of an algorithm, the department using the algorithm, the geographical area and domain it relates to and a risk category. It also includes details on the data source and training data, any bias and mitigation, and human oversight. This initiative builds on similar algorithm registers launched in Amsterdam and Helsinki.²⁴⁷⁴ The Federal Ministry of the Interior and Community opened the AI Opportunity Market²⁴⁷⁵ in 2025. The AI Opportunity Market offers an overview of existing and planned AI systems in the German federal, state, and local governments. According to the Ministry website, the AI Opportunity Market "already meets many of the transparency requirements' set out in the EU AI Act."²⁴⁷⁶

The German Institution for Standardization (DIN) issued the DIN SPEC 92001-3 in 2023 as a guide for appropriate approaches and methods to enhance explainability throughout the life cycle of AI systems. The guide describes quality criteria, which promote explainable AI, for all types of AI systems and for all sectors. These criteria form the specific requirements for explainability and provide proof of technical operation correctness, allowing organizations to embed transparency

principles in their AI-based applications. The guide is the outcome of the CERTIFIED AI project, which was financed by the Ministry of Economic Affairs, Industry, Climate Protection and Energy of the State of North Rhine-Westphalia.²⁴⁷⁷

The Federal Office for Information Security (BSI) published a whitepaper on transparency of AI systems in 2024. In the whitepaper, the BSI highlighted the importance of transparency for AI system's trustworthiness and defined transparency in the context of AI systems for different stakeholders. The definition has been made in a technology-neutral and future-proof manner and covers the entire ecosystem related to AI, considering transparency beyond the actual system. The whitepaper also enumerates the transparency requirements of EU AI Act and examines the opportunities and risks of transparent AI systems.²⁴⁷⁸

The Federal Ministry for Digital and Transport (BMDV) and Federal Ministry of the Interior and Community (BMI) issued the AI guidelines in June 2024. The guidelines outline the framework for utilizing AI within the BMDV and BMI. It has been emphasized that the BMDV "use and design AI systems in such a way that results, modes of operation, decision-making principles and paths are presented as comprehensibly as possible for all those involved (explainable AI). This enables people to consciously acknowledge the results of AI, take responsibility for them and intervene if necessary. We make the use of AI recognizable." Furthermore, transparency regarding existing data, AI literacy, and broad participation opportunities in the AI environment are promoted.²⁴⁷⁹ The BMI elucidated the manner and rationale for the utilization of AI, as well as their guiding principles regarding its application.²⁴⁸⁰

Facial Recognition

German governments have launched several projects on facial recognition technology, but these have been met with considerable public resistance. In 2017, Hamburg police deployed facial recognition technology in the wake of the G20 protests, which led to a three-year legal battle involving the Hamburg DPA and

Center for AI and Digital Policy

several courts that ended with the police deleting its biometric database in 2020.²⁴⁸¹ In 2018, the German Ministry of the Interior deployed facial recognition technology at a large train station in Berlin, sparking opposition from civil society.²⁴⁸² There was further outcry in 2020, when *Der Spiegel* reported that Germany planned to set up cameras capable of identifying people at 134 train stations and 14 airports.²⁴⁸³ In 2021, Germany's incoming coalition government said it would exclude biometric recognition in public spaces as well as automated state scoring systems by AI.²⁴⁸⁴ A January 2023 study showed that German citizens, when asked about facial recognition technology, generally "call for strong regulations to address associated risks," although citizens' trust in the government is correlated with their attitudes towards facial recognition technology.²⁴⁸⁵

In late 2022 and early 2023, Germany made clear the country's reservations on the AI Act, although the position seems to mesh well with the Act's general approach.²⁴⁸⁶ The German government favored a total ban on remote biometric identification technology in 2021 as per its coalition agreement²⁴⁸⁷ while, in 2023, it only supported a ban on *real-time* biometric recognition identification and would allow ex-post identification systems.²⁴⁸⁸ The German Data Protection Conference (DSK) released a resolution on the use of facial recognition systems by health authorities in 2024 that reiterated Germany's resolve to uphold a ban on facial

recognition in public spaces. The DSK asserts that the use of automated facial recognition—if permissible at all—must be absolutely necessary for the protection of high-ranking legal interests and must be subject to appropriate conditions depending on the deployment scenario and the level of intrusion. The legal basis for its use must include sufficient safeguards for fundamental rights and additional protective mechanisms.²⁴⁸⁹

The European Data Protection Board (EDPB) produced guidelines on the use of facial recognition technologies in law enforcement in 2022.²⁴⁹⁰ The EDPB stresses that facial recognition tools should only be used in strict compliance with the Law Enforcement Directive (LED). Moreover, such tools should only be used if necessary and proportionate, as laid down in the Charter of Fundamental Rights.”²⁴⁹¹ After public consultation, the EDPB adopted guidelines for the use of facial recognition technologies in 2023. In version 2.0, practical examples and guidance were provided regarding facial recognition scenarios.²⁴⁹²

In 2024, the EDPB urged airline companies and airport operators to opt for less intrusive ways to streamline passenger flows, when possible. In the view of the EDPB Chair, “individuals should have maximum control over their own biometric data.”²⁴⁹³

In 2024, after a terrorist attack in Solingen, the Federal Government presented two draft bills, the so-called “security package,” to tighten security measures. The first draft bill, which aims to enhance internal security and the asylum system, empowers the Federal Office for Migration and Refugees to utilize biometric data to ascertain the identity of asylum seekers that do not carry IDs by comparing

biometrics with publicly accessible data from the Internet.²⁴⁹⁴ The second draft bill, which aims to improve the fight against terrorism, allows the use of biometric comparison for facial recognition to identify suspects easier.²⁴⁹⁵ The security package has been subjected to serious criticism.²⁴⁹⁶ The two draft bills were terminated with the end of the 20th legislative period. The Federal Ministry of the Interior of the new federal government, however, reportedly wants to renew these proposals in new draft legislation in 2025.²⁴⁹⁷ Digital rights organizations have strongly criticized the renewed effort, stating that the measures will “enable total surveillance of public space.”²⁴⁹⁸

Predictive Policing

The German police has launched several projects using AI to assist in predictive policing both on the federal and state level. The Federal Crime Agency has used risk scoring for “militant Salafists”²⁴⁹⁹ while several state police forces have deployed PRECOBS, an anti-burglary system, with varying success. The police of Baden-Württemberg, for instance, started a pilot project with PRECOBS in 2015²⁵⁰⁰ that was ended in 2019 “due to data quality issues.”²⁵⁰¹ North Rhine-Westphalia developed and tested the predictive policing tool SKALA from 2015 to 2018.²⁵⁰² In late 2022, Germany’s Constitutional Court started a legal review of surveillance software deployed by police in the state of Hesse since 2017. The software, dubbed ‘Hessendata’, is based on the US company Palantir’s Gotham program and its use has been met with public criticism.²⁵⁰³ In the case, the court found that provisions in

Center for AI and Digital Policy

the laws of the states of Hesse and Hamburg, which enable the police to process data by matching data from various databases and to carry out automatic data analysis, were unconstitutional.²⁵⁰⁴

In the EU AI Act negotiations, Germany called for a ban on systems that would replace human judges in crime and recidivism risk assessment as well, but it also pushed for exemptions for law enforcement in other areas.²⁵⁰⁵

According to Germany's "security package," the Federal Criminal Police Office and the Federal Police will be able to compare biometric data with online sources and evaluate large volumes of data using AI. AI-based analysis can be used to establish connections between information held by law enforcement and the Internet, which is often used for predictive policing. The authority granted to law enforcement could be utilized in the event of a "particularly serious" crime suspicion.²⁵⁰⁶ The widely criticized draft has not yet been enacted into law.

Environmental Impact of AI

The German Federal Government has acknowledged the importance of developing AI that is sustainable for the planet. In the 2020 update of Germany's Artificial Intelligence Strategy, the Federal Government says that it "will work to encourage that the technology is designed to be both energy and resource-efficient and is used as an instrument for environmental conservation. Direct and indirect environmental impacts will also be taken into account in all of this, so as to include rebound effects and shifting of environmental problems."²⁵⁰⁷ There are currently no policies that explicitly refer to both AI and sustainability. However, in April 2024, the G7 Ministers of Climate, Energy, and the Environment committed to "promote and share emerging transformative capacity using artificial intelligence and machine learning to improve the complementary use of remote and in situ environmental data

for climate, energy and environment decision making” in the Climate, Energy and Environment Ministers’ Meeting Communiqué.²⁵⁰⁸

The German Federal Ministry for Economic Cooperation (BMZ) and Development and the United Nations Development Programme (UNDP) announced a new platform designed to help ensure that responsible artificial intelligence is used for sustainable development in October 2024.²⁵⁰⁹ The platform includes a list of five Sustainable Development Goals (SDG) as well as a way for participants to submit proposals for their initiatives. The initiatives should meet three criteria: (1) the initiative should be international, regional, or global, (2) the initiative should demonstrate its impact of its ability to achieve significant impact, and (3) at least one of the initiatives main goals should be to achieving one of the SDG in a developing country.²⁵¹⁰

Lethal Autonomous Weapons

The German government’s 2018 coalition agreement stated that it “rejects autonomous weapon systems devoid of human control” and called for a global ban.²⁵¹¹ Also in 2018, in cooperation with the French government, the German government published a joint statement on Lethal Autonomous Weapons at the Meeting of the Group of Governmental Experts on Lethal Autonomous Weapons Systems (LAWS). They wrote, “At the heart of our proposal is the recommendation for a political declaration, which should affirm that State parties share the conviction that humans should continue to be able to make ultimate decisions with regard to the use of lethal force and should continue to exert sufficient control over lethal weapons systems they use.”²⁵¹²

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In 2019, the then-Foreign Minister of Germany, Heiko Maas, reasserted the German position as being in favor of a total ban on Lethal Autonomous Weapons Systems,²⁵¹³ and the Foreign Ministry organized a virtual forum on LAWS in 2020 to move closer to a “collective normative framework.”²⁵¹⁴ Observers have argued, however, that the 2021 German coalition agreement is “ambivalent about legally binding action on autonomous weapons” and that it merely “rejects” these systems instead of pushing for regulation.²⁵¹⁵

The German government’s 2021 coalition agreement states, “We reject lethal autonomous weapon systems that are completely removed from human control. We actively promote their international outlawing. We want the peaceful use of space and cyberspace. For weapons technology developments in biotech, hypersonics, space, cyber and AI, we will take early arms control initiatives. We want to contribute to strengthening norms for responsible state behavior in cyberspace.”²⁵¹⁶

In October 2022, Germany was one of 70 states that endorsed a joint statement on autonomous weapons systems at the United Nations General Assembly. The statement called for the recognition of the dangers of autonomous weapons systems, acknowledged the need for human oversight and accountability, and emphasized the importance of an international framework of rules and constraints.²⁵¹⁷ In this joint statement, States declared that they “are committed to upholding and strengthening compliance with International Law, in particular International Humanitarian Law, including through maintaining human responsibility and accountability in the use of force.”²⁵¹⁸

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

At the 78th UN General Assembly First Committee in 2023, Germany voted in favor²⁵¹⁹ of resolution L.56²⁵²⁰ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems. Germany’s submission reiterated support for “a legally binding instrument in the framework of the Group of Governmental Experts that prohibits the development, fielding or deployment of lethal autonomous weapons systems that cannot comply with international humanitarian law and are ipso facto prohibited.” Germany also supported “a set of regulations of weapons systems with autonomous functions, to ensure that human control is retained at all times [and] the creation of an additional protocol to the Convention on Certain Conventional Weapons that entails the prohibition of lethal autonomous weapons systems operating outside of human control and a responsible chain of command.”²⁵²¹

Germany supported of Draft Resolution L.77 on lethal autonomous weapons systems at the 79th UN General Assembly First Committee. The resolution raises concerns about the “negative consequences and impact of autonomous weapon systems on global security and regional and international stability” and stresses “the importance of the role of humans in the use of force to ensure responsibility and accountability and for States to comply with international law.”²⁵²²

Germany also co-facilitated the Pact for the Future adopted by UN Member States in September 2024 that provides concrete measures to ensure a world that is safer, more peaceful, sustainable, and inclusive for the generations to come.²⁵²³ As per the provisions of the Pact, the Member States have taken the decision to “advance with urgency discussions on lethal autonomous weapons systems through the Group of Governmental Experts on Emerging Technologies in the Area of Lethal Autonomous Weapons Systems with the aim to develop an instrument, without

Center for AI and Digital Policy

prejudging its nature, and other possible measures to address emerging technologies in the area of lethal autonomous weapons systems, recognizing that international humanitarian law continues to apply fully to all weapons systems, including the potential development and use of lethal autonomous weapons systems.”²⁵²⁴

Germany participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands in February 2023. At the end of the Summit, Germany, together with other countries, agreed on a joint call for action²⁵²⁵ on the responsible development, deployment and use of artificial intelligence in the military domain to “stress the paramount importance of the responsible use of AI in the military domain, employed in full accordance with international legal obligations and in a way that does not undermine international security, stability and accountability.” Germany also endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.²⁵²⁶

The second REAIM summit took place in Seoul on September 9–10, 2024. The REAIM Blueprint for Action was the outcome document for the summit. The blueprint encourages states, industry, civil society, and regional and international organizations to recognize and affirm the impact of AI applications on the military domain, especially on international peace and security. The blueprint exhorts stakeholders to implement ethical and human-centric AI applications while considering national and international laws. The importance of maintaining a global and regional dialogue and fostering active participation among stakeholders has been emphasized. Germany is one of the supporting countries for this blueprint.²⁵²⁷

AI Literacy

Germany’s AI Action Plan recognizes education, skills, and public awareness as prerequisites for responsible innovation.²⁵²⁸ Most of these initiatives have centered on

building expertise in AI research and STEM, although some, including the Data Literacy Toolbox, focus on more general literacy skills, which would facilitate participation in policymaking related to digital and AI concerns.

Human Rights

According to Freedom House, Germany is one of the top countries in the world for the protection of political rights and civil liberties, receiving a score of 95/100²⁵²⁹ and a ranking as “Free” in 2025. Freedom House reports that, “Germany is a representative democracy with a vibrant political culture and civil society. Political rights and civil liberties are largely upheld by law and in practice.”

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers reminded member States of commitment to “ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction” and that “member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms, which are universal, indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”²⁵³⁰

AI Safety Summit

In November 2023, Germany participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²⁵³¹ Germany thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed,

developed, deployed, and used in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

Germany participated in the AI Seoul Summit in May 2024, which built on the AI Safety Summit hosted by the UK at Bletchley Park.²⁵³²

OECD / G20 AI Principles

Germany is a member of the OECD and endorsed the OECD and the G20 AI Principles.²⁵³³ In 2020, Germany joined 14 other countries to announce the Global Partnership on Artificial Intelligence to “support and accompany the responsible use of AI on the basis of human rights, fundamental freedoms, inclusion, diversity, innovation, economic growth and the common good, as well as to achieve the United Nations Sustainable Development Goals (SDGs).”²⁵³⁴

In 2021, the OECD noted several examples of Germany’s implementation of the OECD AI Principles, including guidelines for trustworthy AI that are largely in line with the OECD AI Principles (Germany’s Data Ethics Commission ethics recommendations), the establishment of a dedicated body to coordinate and evaluate AI strategies, and the development of partnerships between public and private research organizations.²⁵³⁵ The OECD’s 2024 review noted Germany’s strong research base and public investment in AI infrastructure, as well as the ethical focus reflected in the Data Ethics Commission’s recommendations. Persistent challenges include fragmented AI governance, limited AI adoption by small and medium-sized enterprises, and skills shortages.²⁵³⁶

Council of Europe AI Treaty

Germany contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy and the Rule of Law.²⁵³⁷ On September 2024, the EU signed this first legally binding international AI treaty on behalf of its members, including Germany. Germany has not taken independent action to sign or ratify the treaty.²⁵³⁸

UNESCO Recommendation on AI Ethics

Germany is a signatory to the UNESCO Recommendation on the Ethics of Artificial Intelligence. While its AI plan was published before the development of the UNESCO Recommendation, the German UNESCO Commission released a report in 2022 which showed that Germany “has taken important steps to regulate AI in a way that corresponds to human rights and the public good,” although more work is needed in some areas.²⁵³⁹

The German Bundestag held discussions over the UNESCO Recommendation on the Ethics of AI in 2022. However, no action has followed despite the discussions proposing action within 4 years of the release of the UNESCO Recommendation.²⁵⁴⁰

UNESCO has provided Member States with the Readiness Assessment Methodology (RAM) to help countries assess how prepared they are to implement UNESCO’s Recommendation on AI Ethics. The RAM uses both quantitative and qualitative questions to assess a country’s readiness. Germany has not yet implemented the RAM.²⁵⁴¹ However, the country responded to a UNESCO survey reporting on progress implementing the Recommendations in 2025.²⁵⁴²

Evaluation

Germany's national AI strategy emphasizes AI ethics, and Germany has called for regulating AI at EU level. However, while generally in favor of regulation and transparency, the German position on the risks of AI systems (particularly on biometric identification and predictive policing) is difficult to pin down, as different ministries, coalition members, and state governments may have different priorities and opinions.²⁵⁴³ The same could be said about the regulation of GPAI models. Germany has made progress to establish a national supervisory mechanism to take the protection of human rights seriously. However, the draft law appointment of the Federal Network Agency and emphasis on innovation-friendly regulation raises concerns in this regard, as articulated by federal and state data protection agencies.

Germany has progressed on implementing the UNESCO Recommendation on the Ethics of AI and OECD AI Principles, through actions such as the establishment of the Data Ethics Commission. The data protection authorities have also demonstrated a willingness to challenge companies in violation of data protection. However, the lack of clarity on sanctions and even applications across the federated agencies remains a challenge.

Center for AI and Digital Policy

Ghana

In 2025, Ghana official launched the National AI Strategy 2025–2030 and turned toward implementation through initiatives in education, training, and governance. Drafts of an updated Data Protection Bill and other technology-related bills would establish a legal framework to protect citizens from well-known risks of AI and other emerging technologies.

National AI Strategy

Ghana’s Ministry of Communication, Digital Technology and Innovations (MoCDTI) officially established a national framework for ethical, inclusive, and transparent AI governance with the launch of the National Artificial Intelligence Strategy 2025–2033.²⁵⁴⁴ The Strategy, which was developed in 2022 with the support of The Future Society, GIZ FAIR Forward, and Smart Africa,²⁵⁴⁵ sets eight priority pillars: education and skills, data governance, digital infrastructure, applied research, sectoral AI adoption, ecosystem coordination, youth employment, and public-sector innovation, aligned with UNESCO’s Recommendation on the Ethics of AI. The strategy emphasizes ethical AI practices, international collaboration, AI adoption in key sectors, skills development, and the establishment of a Natural Language Processing Centre of Excellence to promote local language integration.²⁵⁴⁶ The Strategy is expected to ensure better conditions for the development and use of this innovative technology for the benefit of citizens.

Flagship programmes such as the One Million Coders Ghana initiative²⁵⁴⁷ and a legislative package including the draft Data Protection Bill and Emerging Technologies Bill²⁵⁴⁸ mark early activation of the Strategy. Minister Samuel Nartey George unveiled Ghana’s plan to become Africa’s leading AI hub by 2028,

emphasizing AI innovation, digital transformation, and public-private collaboration.²⁵⁴⁹ Ghana's Ministry of Communications, Digital Technology, and Innovation signed an MoU with MTN at the Mobile World Congress in Barcelona, focusing on training youth in AI, cybersecurity, and data governance.²⁵⁵⁰

The Ministry of Communications and Digitalization, through the Data Protection Commission (DPC), launched the UNESCO Readiness Methodology (RAM) in October 2024 to help guide AI governance and development.²⁵⁵¹

Regional AI Governance Collaboration

As member of the African Union (AU), Ghana is working to align with the AU Digital Transformation Strategy²⁵⁵² as well as the Artificial Intelligence Continental Strategy for Africa. Ghana's Ministry of Communications and Digitalization participated in a consultative workshop organized by the AU High-Level Panel on Emerging Technologies (APET).²⁵⁵³ The APET discussions aimed at gathering input about “myths, challenges, and benefits of Artificial Intelligence (AI) in Africa,” urging African countries to invest in AI literacy, cooperate internationally for AI innovation, enhance data protection, invest in infrastructure, and review policy implementation frameworks governing AI.

The AU finalized the Artificial Intelligence Continental Strategy for Africa²⁵⁵⁴ at its 45th Ordinary Session in Accra, Ghana, in July 2024. The AU introduced the African Digital Compact (ADC)²⁵⁵⁵ in the same session as an initiative to leverage digital technologies and promote inclusivity in the drive for sustainable development and innovation across the continent. The ADC, aligned with Africa's

Agenda 2063²⁵⁵⁶ and the UN Global Digital Compact,²⁵⁵⁷ calls for collaborative efforts from governments, businesses, and civil society to bridge digital divides and secure digital rights, fostering a resilient, digitally empowered Africa. With major AU policy developments taking place in Accra itself, Ghana could see a renewed push towards AU's Digital Transformation Strategy.²⁵⁵⁸

Public Participation

Stakeholder engagement for public policies is an established practice in Ghana, led by the Ministry of Communication, Digital Technology and Innovation (MoCDTI). Annual budgets support the planning sessions to formulation of new policies.²⁵⁵⁹ Stakeholder engagements took place for Ghana's Digital Economy Policy at the Accra Digital Centre in November 2022.²⁵⁶⁰ Minister Ursula Owusu-Ekuful highlighted the significance of the ministerial consultation as a means to ensure inclusiveness and comprehensiveness of the policy, covering data governance, emerging tech and regulation, data classification, data sharing and open data.²⁵⁶¹

In October 2025, the MoCDTI launched a nationwide public consultation on a package of draft digital governance bills, including the Emerging Technologies Bill, Data Protection Bill, and Cybersecurity (Amendment) Bill. Draft texts and public comment forms were published on the MoCDTI portal and submission deadlines extended to mid-November 2025 to invite feedback from civil society, academia, and the private sector.²⁵⁶² The Misinformation, Disinformation and Hate Speech Bill further introduces transparency and human rights safeguards in

algorithmic content moderation, risk assessments, and fact-checking requirements, reinforcing participatory oversight of digital systems.

The National AI Strategy is the result of the collaborative efforts of Ghana's Ministry of Communications and Digitalisation, Ghana's Data Protection Commission, GIZ FAIR Forward,²⁵⁶³ Smart Africa²⁵⁶⁴ and The Future Society.²⁵⁶⁵ In total, the strategy is based on 40+ local stakeholder consultations, in-depth AI policy landscape mapping, and SWOT Analysis of Ghana's AI ecosystem, and 4 high-level public sector consultation workshops to iterate the mission and vision, recommendations and action plan, and a detailed booklet of AI use cases across key sectors.²⁵⁶⁶

For example, in May 2022, The Future Society co-led a stakeholder consultation workshop in Ghana to support the development of Ghana's AI strategy.²⁵⁶⁷ The workshop sessions addressed AI governance and frameworks, policies, implementation plans, SWOT, local AI ecosystems, AI ethical guidelines and recommendations for the establishment of program offices to drive implementation. The Future Society together with Ghana's Data Protection Commission, GIZ FAIR Forward, and Smart Africa held the third high-level public sector consultation workshop in August 2022 with representatives from private and public sector, academia, and civil society, to discuss the establishment of precautionary guardrails for AI across sectors.

As a member of the African Union, Ghana also took part in the planning for the Continental Artificial Intelligence Strategy.²⁵⁶⁸ The document, in section 2.4.1, AI Governance and Regulation, cites the need for a multi-tiered governance approach to ensure transparency and accountability of the systems used and developed in Africa. Such an approach would include open public consultations comprising various sectors.

Center for AI and Digital Policy

The MoCD, in partnership with Smart Africa, held a workshop aimed at finalizing Ghana's National Data Strategy in June 2024.²⁵⁶⁹ Supported by the Data Protection Commission and the GIZ, the workshop brought together experts and government officials to align on strategic objectives for data governance, infrastructure, and capacity building. A collaborative approach was recognized as vital for empowering regulatory bodies, fostering partnerships across sectors, and ensuring effective data management and compliance to enhance AI integration and cybersecurity.

While stakeholder inputs have been gathered in the past for the National AI Strategy in Ghana, not all policies are publicly accessible through government sources. Increasing transparency by making these contributions available could strengthen public trust and engagement in AI policy development.

Data Protection

Ghana enacted the Data Protection Act in 2012.²⁵⁷⁰ Section 41 of the Data Protection Act provides for the right of the data subject to object for decisions that significantly affect him to not be based solely on automated processing of personal data. The Data Protection Act establishes the Data Protection Commission,²⁵⁷¹ which is an independent statutory body in charge of enforcing the Data Protection Act and protecting data subjects' rights.

The Data Protection Commission and GIZ supported a workshop to finalize the National Data Strategy in June 2024, in partnership with the Ministry of Communication and Digitization (now MoCDTI) and Smart Africa.²⁵⁷² Key discussions among the experts and government officials centered on updating the legal framework to keep pace with technological advancements, enhancing technical infrastructure, improving data privacy and protection, and fostering inclusivity in data use, including the promotion of AI and cloud services.

The MoCDTI inaugurated a new Governing Board of the Data Protection Commission in 2025.²⁵⁷³ Chaired by digital rights expert Teki Akuetteh, the Board is

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

tasked with developing a National Data Governance Framework to advance Ghana's digital economy and AI goals. In October 2025, MoCDTI launched a public consultation on the Data Protection Bill 2025,²⁵⁷⁴ proposing to repeal and replace the 2012 Act with a new Data Protection Authority, codify transparency in automated decision-making, require data protection impact assessments for AI systems, and strengthen cross-border data transfer and localization rules. The draft Data Protection Bill would strengthen enforcement mechanisms and citizens' rights in relation to AI systems, automated decision-making, and cross-border data transfers.

Ghana ratified (in 2019) the African Union Convention on Cyber Security and Personal Data Protection (Malabo Convention).²⁵⁷⁵ The Convention, drafted in 2011 and adopted in 2014 is an initial step to the establishment of a regulatory framework for data protection in the African region.²⁵⁷⁶ The agreement emphasized that each country is to develop its own legislative framework, observing the African Charter on Human and People's Rights, respecting privacy and freedoms while enhancing the promotion and development of ICT.²⁵⁷⁷

Despite being a member of the Global Privacy Assembly since 2014, the Data Protection Commission has not endorsed the 2018 GPA resolution on AI and Ethics,²⁵⁷⁸ the 2020 GPA Resolution on AI and Accountability,²⁵⁷⁹ the 2022

Resolution on Facial Recognition Technology,²⁵⁸⁰ or the 2023 GPA Resolution on Generative AI.²⁵⁸¹

Algorithmic Transparency

The widespread use of social media and online tools in African countries makes regulating algorithmic transparency critical to protect against misuse.²⁵⁸² The Data Protection Act of 2012 establishes the principle of “fair and transparent processing of a data subject’s personal data”²⁵⁸³ and provides that subjects need to be informed by the data processor when a decision has been made by automated means. Section 17 of the DPA sets out principles that data controllers must follow when processing personal data. Section 17 (f) provides for openness as a principle for processing personal data. This section could be interpreted as including algorithmic transparency, but it would need confirmation either by the Data Protection Commission or by court. The Malabo Convention does not explicitly provide for algorithmic transparency. Both data protection regimes could more explicitly include algorithmic transparency to ensure that individuals are informed about how algorithms influence decisions that affect them.

The draft Data Protection Bill 2025²⁵⁸⁴ lays out specific rights in relation to automated decisions, including the right to opt-out of fully automated decisions and to request a review of automated decisions. Under Application of Emerging Technologies,²⁵⁸⁵ the bill also requires that “Technology-driven decisions impacting data subjects shall be explainable, contestable, and subject to human oversight to prevent bias and harm.” The bill would also require mandatory data protection impact

assessments prior to launch for “any service that utilises personal data to provide tailored experiences.”

The Emerging Technologies Bill 2025 released by the Ministry of Communication, Digital Technology and Innovations (MoCDTI) for public comment proposes standards for accountability, human oversight, and explainability in automated decision-making.²⁵⁸⁶ MoCDTI also introduced the Misinformation, Disinformation and Hate Speech (MDHI) Bill 2025, requiring human rights due diligence for algorithmic content moderation, annual risk assessments, and transparency obligations for media institutions.²⁵⁸⁷ Together, these draft laws represent Ghana's first effort to codify algorithmic transparency and redress mechanisms, aligned with the governance and ethics pillar of the National AI Strategy 2025–2033.²⁵⁸⁸

A study by International Telecommunications Society (ITS) on the use of artificial intelligence in the Fintech industry of Ghana and three other African countries found gender bias in financial services decisions. A lack of algorithmic transparency and explainability were areas of concern, contributing to the inability to make institutions accountable for biased decisions.²⁵⁸⁹

Facial Recognition

Practices of surveillance and use of facial recognition are of concern in the country. Ghana's National Service Scheme has implemented facial recognition in its registration process to prevent fraud and identity thefts in the receipt of payments to public employees. The deployment, which included testing, staff training sessions, and public awareness, has achieved its desired outcome according to government reports.²⁵⁹⁰

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

A 2023 report reveals that the government has increased its possession of surveillance technologies. Ghana is implementing the Integrated National Security Communications Enhancement Network (ALPHA) project, a safe city project, which will incorporate the use of facial recognition CCTV cameras.²⁵⁹¹ The project is valued at approximately \$184 million, involving multiple international companies, primarily incorporating facial recognition AI from Huawei and biometric systems requiring citizen data.²⁵⁹² Concerns exist that the Ghanaian government will use this technology to identify and target citizens expressing dissenting viewpoints, with reported cases of harassment and detention of individuals expressing dissent in violation of international human rights law.²⁵⁹³

Minister Samuel Nartey George announced in March 2026 that Ghana's SIM re-registration exercise will introduce a liveness test requiring individuals to undergo facial recognition to verify their identity, citing widespread use of fraudulent Ghana Cards in the first phase of registration.²⁵⁹⁴

Credit Scoring

In 2019, Algorithm Watch found citizen scoring mechanisms in Ghana by the National Identification Authority. The investigation identified six biometric databases owned by public authorities that provide citizen scores, including credit reference scores issued by the Credit Reference Bureau.²⁵⁹⁵

According to a report by the Bank of Ghana, it initiated discussions with credit bureaus to introduce credit scoring as a complement to the credit reports already offered by these bureaus in 2023. This initiative followed the introduction of the Ghana Card, which serves as a distinct identifier for individuals with credit information. The goal was to facilitate the implementation of the credit scoring

system by ensuring that financial institutions update existing credit information with new details from the Ghana Card.²⁵⁹⁶

Ghana's Vice President, Dr. Mahamudu Bawumia, launched the initiative known as myCreditScore in November 2024.²⁵⁹⁷ Thus, the country is the second on the African continent to have such a system, the first being South Africa. Within the government, the initiative is viewed with favor and any discussions about possible harms are dismissed as criticism from the opposition.²⁵⁹⁸ Additionally, several financial institutions have made significant progress in updating their existing credit information with the new Ghana Card data. This effort, combined with the integration of credit bureaus with the National Identification Authority (NIA) database, is anticipated to provide a strong foundation for the introduction of the credit scoring regime in the Ghanaian credit market.²⁵⁹⁹

The Bank of Ghana formally approved credit bureaus to implement credit scoring in 2025. MyCredit Score Limited and Dun & Bradstreet Credit Bureau Limited rolled out their scoring products. The Bank of Ghana stated it would continue to oversee and monitor scoring methodologies to ensure the system remains fair and consumer interests are protected.²⁶⁰⁰ Concerns about algorithmic transparency in the credit scoring system have been raised by users, who note that the basis for individual credit score ratings is not disclosed, limiting individuals' ability to understand or contest decisions affecting their access to credit.²⁶⁰¹

Biometrics

Ghanaian Police Service has adopted biometric devices as part of a digitization strategy with the objective to “dramatically improve policing in

Ghana.”²⁶⁰² The police uses biometrics to check wanted individuals against the National Identification Authority’s (NIA) database. The process started in 2017 with the issuing of the new Ghana card, aimed to centralize the identity management systems.²⁶⁰³ The NIA biometric database amounts to 17 million records, including Ghana ID card, car registration, and insurance information, allowing for identification in real time with biometric devices. The NIA National Identity System employs three biometric technologies for identification: unique fingerprints represented as digitized templates, facial templates depicted as digitized color photos of the cardholder, and iris recognition.²⁶⁰⁴ The Minister of Interior commissioned a new governing board for the NIA in May 2025, calling on members to deepen oversight, strengthen public trust, and accelerate the delivery of secure and inclusive identity services.²⁶⁰⁵

A report by Privacy International identified practices of surveillance in Ghana during the phase of emergency response to the COVID pandemic.²⁶⁰⁶ The PanaBIOS app endorsed by the African Union and deployed by the Ghanaian border enforcement, used algorithms to track and trace individuals that might pose a health threat.

The Ghanaian government announced in January 2024 that government employees who had not registered with the Ghana Card system would have their salaries frozen as of March. According to presidential correspondent Charles Takyi-Boadu, the initiative assumed that any citizen who did not register was deceased and freezing salaries would eliminate “ghost registrations” from the payroll.²⁶⁰⁷

Groups such as the People's National Convention (PNC), Great Consolidated Popular Party (GCPP), and Election Watch Ghana held demonstrations calling on the

Electoral Commission of Ghana (EC) to be more transparent about biometric voter registration and the delivery of device kits to all political parties in the country after cases of the disappearance and destruction of several of these devices were reported.²⁶⁰⁸ The following month, Deputy Minister for Foreign Affairs and Regional Integration Kwaku Ampratwum-Sarpong announced that a new model of digital passport would be introduced in the country, with an electronic chip that has a biometric identifier, which would be used to authenticate the holder's identity.²⁶⁰⁹ President Akufo-Addo officially launched the chip-embedded biometric passport compliant with ICAO regulations on December 2, 2024.

Ghana launched the blockchain-based digital platform CitizenApp Data Interoperability System (CADIS) in October 2024 to facilitate access to digital government services. Identity verification is done through the Ghana Card and the citizen's phone number. Information such as biometric passport applications is available for consultation on the app.²⁶¹⁰ The mobile app was designed by the government to improve access to public services in Ghana, described as "Ghana's Roadmap to Intelligent Governance."²⁶¹¹ Notably, this shift resonates with earlier initiatives, such as Ghana's adoption of biometrics for driver's licenses and vehicle registration.²⁶¹²

The Minister of Communication, Digital Technology and Innovation announced a new legislative framework to link SIM cards to the Ghana Card national digital ID in 2025.²⁶¹³ The new framework involves biometric SIM registration and a Centralized Equipment Identity Register linked to the NIA database. The new

framework aiming to combat mobile money fraud was operationalized through a mandatory facial recognition liveness test announced in March 2026. The Minister of Interior activated a biometric passenger monitoring system in February 2026 at Ghana's borders, designed to strengthen national security and facilitate trade under the African Continental Free Trade Area, replacing manual border checks with intelligence-driven biometric technology.²⁶¹⁴

Generative AI was linked to over a third of new biometric fraud cases in Africa in 2024, with deepfake videos increasing sevenfold in the second half of the year.²⁶¹⁵ The rise of AI-driven digital identity fraud presents both challenges and investment opportunities in Ghana, with companies securing significant venture funding to counter these threats.

EdTech

Ghana was a subject of a study by Human Rights Watch about the use of government-endorsed Ed Tech tools for online learning during the COVID-19 pandemic across 49 countries.²⁶¹⁶ The findings show that the government of Ghana endorsed platforms that have the capability to identify, tag, and track users, including children. Further, learning apps endorsed by Ghana tracked and collected data from children and teachers for advertising and revenue purpose, transmitting data to AdTech companies. For Ghana, the apps in this category were Edmodo and Ghana Electronic Library. Ghana was one of only nine countries that disclosed in their privacy policies that they collected and used children's data for "behavioral advertising purposes."

The Cyber Security Authority issued the National Child Online Protection Framework in October 2024,²⁶¹⁷ outlining plans to address threats children face in the digital space including cyberbullying, harassment, and online exploitation, and announcing the development of guidelines for the removal of child abuse materials and reporting procedures.

In the same month, the Ministry of Education introduced a new Senior High School curriculum focused on competencies, character development, and Ghanaian

identity, requiring the retraining of 68,000 teachers to deliver the programme to 1.4 million students, with subsidized AI support from AWS and Anthropic.²⁶¹⁸ Ghana is preparing for a national rollout in October 2025, with several African countries expressing interest in replicating the model.

UNICEF launched the Learning Pioneers Programme in 2024, a two-year initiative in which six countries, including Ghana, are partnering with the Office of Innovation Learning Innovation Hub “to pilot and accelerate digital learning tools to address the learning crisis and shape the future of learning.” Under the slogan “Map, Match, and Make it Happen,” the countries will be mapping, testing, and developing scalable EdTech tools.²⁶¹⁹

Environmental Impact of AI

Ghana responded to the global call to action to end poverty, protect the earth’s environment and climate, and ensure that people everywhere can enjoy peace and prosperity, captured in 17 UN Sustainable Development Goals.²⁶²⁰ According to the 2025 Voluntary National Review, Ghana has made progress toward SDG 12 on responsible consumption and production and SDG 13 on climate action, while acknowledging significant challenges remain before the 2030 deadline.²⁶²¹ Notably, the environmental impact of Artificial Intelligence, including energy consumption and its carbon footprint poses further challenges to achieve these goals. While academic research purports that Artificial Intelligence can help the Ghanaian Government plan for a renewable energy future,²⁶²² the research also acknowledges that AI poses risks to the environment.

Lethal Autonomous Weapons

Ghana has not acceded to the Convention on Certain Conventional Weapons (CCW).²⁶²³ However, the country has participated in several CCW meetings since 2014.²⁶²⁴ In a statement to the 2016 CCW informal meeting of experts on LAWS, Ghana called for the “promotion and preservation of human dignity for humanity as a whole [...] In our view, fully automated lethal systems must be proscribed before they are fully developed.”²⁶²⁵

Ghana is a member of the African Group within the United Nations, which supports the negotiation of a legally binding instrument on autonomous weapons systems. The African Group issued a statement in 2021 CCW calling attention to the “ethical, legal, moral and technical questions” in the use of autonomous weapons systems and urging concrete policy recommendations, including prohibitions and regulations.²⁶²⁶

At the 78th UN General Assembly First Committee in 2023, Ghana voted in favor²⁶²⁷ of resolution L.56²⁶²⁸ on autonomous weapons systems, along with 163 other states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

At the 79th Session of the First Committee in 2024, Ghana voted in favor of resolution L.77 on lethal autonomous weapon systems.²⁶²⁹ At the thematic debate, Ghana's delegation stated that LAWS “raise serious humanitarian, legal, and ethical

Center for AI and Digital Policy

questions, which must be addressed through clear regulations,”²⁶³⁰ aligning with the joint call of the UN Secretary-General and the ICRC for new prohibitions and restrictions on autonomous weapons. The resolution was formally adopted by the UN General Assembly on December 2, 2024 as Resolution 79/62, with 166 votes in favor.²⁶³¹ While the earlier resolution recognized potential risks of these systems, L.77 emphasizes the urgency of addressing the challenges posed by lethal autonomous weapons systems (LAWS), highlighting the need for a comprehensive approach to address diverse perspectives related to these systems. The resolution includes specific calls for action, such as convening open informal consultations in 2025 and inviting participation from various stakeholders, including civil society and the scientific community.

AI Literacy

Ghana's Digital Economy Policy 2024 identifies digital skills as a core strategic pillar, integrating digital literacy into the national education curriculum and setting a target to train at least one million citizens in basic digital literacy through community-based programmes and digital centers.²⁶³² President Mahama launched the One Million Coders Ghana Programme in May 2025²⁶³³ as a flagship pillar of the National AI Strategy 2025–2033, with a focus on youth and women. The program includes modules on ethical AI, data protection, and responsible innovation delivered through public universities and regional innovation hubs. The program complements MoCDTI's public consultation efforts by fostering an informed citizenry capable of engaging in AI governance discussions.²⁶³⁴ A three-day Ministerial Bootcamp on AI run in partnership with UNDP aimed to equip Ministers and senior officials with foundational AI knowledge, including ethical implications and public service delivery applications. The bootcamp aligned with preparations to submit the National AI Strategy to Parliament.²⁶³⁵

Ghana's inclusive AI literacy efforts extend to gender equity. The Ministry of Communication's Ms. Geek programme aims to increase gender diversity in STEM, while Ghana Tech Lab supports women's enrollment in AI training programmes.²⁶³⁶ In 2025, Heritors Labs and GIZ FAIR Forward published the Ghana Artificial Intelligence Practitioners' Guide, providing a multi-stakeholder framework for responsible AI adoption and a dedicated section on ethical AI governance for government, civil society, and the private sector.²⁶³⁷

The 2025 UNDP Human Development Report, launched in Accra in July 2025, found that more than 70% of Ghanaian respondents expressed optimism that AI will improve their productivity, while underscoring the urgency of closing digital access gaps to ensure AI benefits reach all segments of Ghanaian society, particularly youth and underserved populations.²⁶³⁸

Human Rights

Ghana is a signatory of the Universal Declaration of Human Rights (UDHR) and has enshrined the key provisions of the UDHR in its Constitution. The 1992 Constitution of Ghana²⁶³⁹ provides for the protection of fundamental human rights and freedoms. The UDHR provides for the right to privacy under Article 12. The right to privacy is guaranteed under Article 18 of the Constitution: "No person shall be subjected to interference with the privacy of his home, property, correspondence or communication except in accordance with law and as may be necessary in a free and democratic society for public safety or economic well-being of the country, for the protection of health or morals, for the prevention of disorder or crime or for the protection of rights and freedoms of others."

Ghana is a party to the African Charter on Human and Peoples' Rights. In its 2019 Declaration of Principles on Freedom of Expression and Access to Information in Africa, the African Commission on Human and Peoples' Rights (ACHPR), in

charge of interpreting the Charter,²⁶⁴⁰ called on states to ensure that the “development, use and application of AI, algorithms and other similar technologies by internet intermediaries are compatible with international human rights law and standards, and do not infringe on the rights to freedom of expression, access to information and other human rights.”²⁶⁴¹

The ACHPR adopted Resolution 473 in February 2021, having recognized that emerging technologies such as AI have a bearing on the enjoyment of human rights under the African Charter.²⁶⁴² The ACHPR called on state parties to ensure that the development and use of AI and other emerging technologies is compatible with the rights and duties in the African Charter and other regional and international human rights instruments to uphold human dignity, privacy, equality, non-discrimination, inclusion, diversity, safety, fairness, transparency, accountability, and economic development.

The Special Rapporteur on Freedom of Expression and Access to Information in Africa recalled in 2022 that, with Resolution 473, the Commission, “observed that whilst making government services and information digital enhances transparency and accessibility and artificial intelligence allows for a number of benefits in the society, it has to be accompanied by human rights considerations and a bridging of the digital divide.” The Special Rapporteur also declared that “State Parties are encouraged to develop domestic legal frameworks regulating AI and e-governance; ensure these technologies are developed and used transparently; and ensure that imported AI and e-governance systems align with the African Charter.”²⁶⁴³ The

Center for AI and Digital Policy

ACHPR opened a call for inputs in April to its study mandated by Resolution 473 on AI, robotics, and emerging technologies' human rights impacts.²⁶⁴⁴

Freedom House's 2025 Freedom in the World report²⁶⁴⁵ rates Ghana as "Free" with a score of 80/100. Ghana is rated "Partly Free" with a score of 65/100 on the Freedom on the Net report.²⁶⁴⁶ According to Freedom House, Ghanaian political rights and civil liberties are backed by a stable democracy, with competitive multi-party elections since 1992 and peaceful transfer of power between the two major political parties. Discrimination against women persists, and LGBT+ people face widespread discrimination, intimidation, and violence. Areas of weakness concern judicial independence and the rule of law. Corruption also poses challenges to the effective performance of the government. The Freedom House report also highlights political violence as a growing concern.

OECD / G20 AI Principles

Ghana is not a member of the OECD and has not officially endorsed the OECD principles.²⁶⁴⁷ However, Ghana is a member of the African Union, which joined the G20 in 2023 and endorsed the G20 AI Principles.²⁶⁴⁸ Ghana is not a member of the Global Partnership on Artificial Intelligence (GPAI).²⁶⁴⁹

Ghana is a member of the OECD Development Centre since 2015, collaborating with members and non-member countries in policy to improve living conditions in developing and emerging economies.²⁶⁵⁰ In the development of Ghana's national AI strategy, the government of Ghana and The Future Society

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Ghana has initiated the RAM process²⁶⁵⁷ but has not yet implemented the UNESCO Ethical Impact Assessment tool.

Evaluation

Ghana has made significant progress toward ethical AI governance by endorsing the Continental AI strategy, launching a national steering committee to oversee AI readiness, and advancing data governance reforms including the 2025 Data Protection Bill. Ghana formalized the National AI Strategy in May 2025 and contributed to the development of the Continental AI Strategy for Africa, which was finalized in 2024. The Continental Strategy informs national implementation. The country has taken the first step to meaningfully implement the UNESCO Recommendation on the Ethics of AI with the initiation of RAM.

Efforts are underway to establish partnerships to further the digital strategy. While public addresses emphasize the importance of public participation and transparent policymaking, these principles are primarily showcased at events involving international partners, with limited practical engagement of Ghanaian citizens.

Ghana benefits from an independent Data Protection Commission and developed its own data protection legal framework and ratified the Malabo Convention. Amid the rapid deployment of AI in the country, the proposed amendments in the Data Protection Bill 2025 would add transparency and accountability. The regulation of practices of biometrics identification, facial recognition, and individual scoring is essential to realize the benefits of AI for the Ghanaian society.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Greece

In 2025, Greece continued efforts to implement the Blueprint for AI Transformation and designated rights-protecting authorities under the EU AI Act. The country also ratified the Council of Europe Convention 108+.

National AI Strategy

Greece created A High Level Advisory Committee for Artificial Intelligence in October 2023 to develop a national AI strategy.²⁶⁵⁸ The Committee published the Blueprint for Greece's AI Transformation that envisions a comprehensive plan to leverage AI to foster economic growth, enhance public services, and reinforce democratic values, while establishing safeguards for national security and resilience.²⁶⁵⁹ Priority areas also include preparing citizens for the AI transition, promoting quality healthcare for all, enhancing access to and the quality of education, enriching cultural heritage, and mitigating and adapting to climate change.²⁶⁶⁰

The AI Blueprint promotes principles and values including respect for human dignity, human flourishing, pluralism, participation, transparency, oversight, adaptability and international multilateral cooperation.²⁶⁶¹ To advance its leadership in AI governance and ethics, the AI Blueprint proposes launching a Global AI Forum to increase AI literacy, convene high-level meetings on AI ethics and policy, and track the impact of AI on democratic processes globally.²⁶⁶² The AI Blueprint proposes establishing new regulatory agencies: the National AI Supervisory Authority as an independent oversight body aligned with the EU AI Act mandates, a Chief AI Strategy Officer for planning the AI Strategy, and a Data and AI Office for data curation, data governance, and AI implementation.²⁶⁶³ The Blueprint also proposes transforming the Data Protection Authority into the Data Protection and Access to Information Authority to reconcile GDPR mandates for the right to personal data protection and the right to freedom of expression, noting “Data Controllers or AI providers/deployers would not be able to use data protection as a pretext to refuse access to crucial data.”²⁶⁶⁴

EU Digital Services Act

As an EU member state, Greece is fully and directly bound by the EU Digital Services Act.²⁶⁶⁵ The Greek Parliament adopted Law 5099/2024 for the implementation of the EU Digital Services Act in Greece in April 2024.²⁶⁶⁶ The law designates the Hellenic Telecommunications and Post Commission (EETT) as the Digital Services Coordinator. The National Council for Radio and Television (NCRTV) and the Hellenic Data Protection Authority (HDPa) are the competent authorities responsible for supervising intermediary service providers and enforcing the DSA in Greece.²⁶⁶⁷

EU AI Act

As part of implementing the EU AI Act, Greece has designated four existing national authorities to collectively supervise the protection of fundamental rights in relation to high-risk AI systems. The entities include the:²⁶⁶⁸

- Hellenic Data Protection Authority
- Greek Ombudsman
- Hellenic Authority for Communication Security and Privacy
- National Commission for Human Rights.

While the AI Blueprint proposes a National AI Supervisory Authority as the independent supervisory authority and for national and EU level coordination on AI, the office has not yet been officially announced as the designated market surveillance authority despite the EU AI Act deadline of August 2, 2025.²⁶⁶⁹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Public Participation

Members in the High-Level Advisory Committee on Artificial Intelligence that drafted Greece's AI Blueprint were predominantly academics from universities and research centers, with a few from the private and public sectors.²⁶⁷⁰ The Committee engaged in interviews with stakeholders from various sectors, including government and state officials, researchers and stakeholders in education and research, representatives from the private sector, and international experts.²⁶⁷¹

Public policies are generally accessible online through the relevant ministries and government agencies or ISOKRATIS Legal Information Bank.²⁶⁷²

Data Protection

Greece has progressively aligned its data protection framework with European standards, embedding personal data rights into both constitutional and legislative instruments. Article 9A of the Greek Constitution establishes the protection of personal data as a fundamental right.²⁶⁷³ Prior to the EU GDPR, Greece enforced Law 2472/1997, which implemented Directive 95/46/EC and introduced foundational rules around consent, data minimization, and supervisory oversight.²⁶⁷⁴ With the enactment of Law 4624/2019, Greece formally supplemented the GDPR, incorporating sector-specific provisions and further clarifying the mandate of the Hellenic Data Protection Authority (Hellenic DPA).²⁶⁷⁵

The Hellenic DPA is a member of the Global Privacy Assembly (GPA).²⁶⁷⁶ The Hellenic DPA did not co-sponsor the resolutions and declarations related to AI and facial technology, however.²⁶⁷⁷

Algorithmic Transparency

The GDPR and Greek Law No. 4624 establish algorithmic transparency as a legal right in Greece.²⁶⁷⁸ Greece's ratification of Council of Europe Convention 108+ in 2025 clarified the extent of those rights.²⁶⁷⁹ Greek citizens have the right to receive meaningful information about the logic involved in automated processing, and the right to contest a decision made solely by an algorithm that has a significant impact on them. This includes the right to obtain human intervention and challenge an automated conclusion. The Convention 108 + also ensures that citizens' views are taken into consideration, and they can obtain information about the logic behind the automated processing.

Law 4961/2022 explicitly addressed challenges posed by AI with the first dedicated legal framework addressing AI, algorithmic transparency, and emerging technologies.²⁶⁸⁰ This law requires public entities to register the AI systems they deploy and perform algorithmic impact assessments (AIAs) for high-risk systems, especially those involving automated decision-making or profiling. Private companies using AI for personalization or prediction must also disclose key information about system operation, legal basis, and potential biases.

The AI Blueprint recommends transforming the Data Protection Authority into a Data Protection and Access to Information Authority to enhance algorithmic

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

transparency rights.²⁶⁸¹ The proposed consolidated authority would ensure that access to data is not blocked by privacy claims by Data controllers and AI providers and deployers.²⁶⁸²

Clearview AI

The Hellenic DPA imposed a €20 million fine on Clearview AI, a facial recognition technology company that builds biometric profiles by scraping publicly available images from websites, including social media platforms without consent in 2022. The ruling cited unlawful processing of biometric data, lack of transparency, and failure to comply with data subject rights.²⁶⁸³ The Hellenic DPA found that the company violated “the principles of lawfulness and transparency (art. 5 paragraphs 1(a) and (2), 6, 9 GDPR) and its obligations under Articles 12, 14, 15 and 27 of the GDPR.” The Hellenic DPA ordered the company to delete all biometric data of individuals in Greece and cease further processing operations within national territory.

AI in Border Control

The Hellenic DPA imposed an administrative fine of €175,000 on the Ministry of Migration and Asylum in 2024 for failing to cooperate fully with the Authority and for submitting impact assessments deemed “substantially incomplete and limited in scope.”²⁶⁸⁴ The Hellenic DPA received multiple inquiries in 2022—including from the European Parliament Committee on Civil Liberties, Justice and Home Affairs; UNHCR Greece; and civil society organizations—regarding the use of the Hyperion and Centaur systems in reception and accommodation facilities for asylum seekers. The Centaur system is an “integrated digital system for managing electronic and physical security,” while Hyperion is an integrated entry-exit control system that uses an RFID reader and fingerprint for two-factor authentication. Both involve processing personal and biometric data and violated protections related to transparency and consent.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI Literacy

Greece's AI Blueprint identifies improving AI literacy as a priority area to prepare citizens for the AI transition. As part of this mission, the Blueprint describes “introducing AI and its associated disciplines, including topics on the ethical use of AI, to the educational curriculum, starting at the primary level; introducing reskilling and upskilling programs for the general population; improving AI literacy and spreading its empowerment opportunities across the Greek population; strengthening Greece’s AI innovation potential.”²⁶⁸⁵

To carry out this strategy, the AI Blueprint proposes an AI Center of Excellence: a new graduate school and research center focusing on AI research, ethics, philosophy, social sciences, and executive education.²⁶⁸⁶ It also proposes actions for lifelong learning, professional training, and vocational education to develop and support AI skills and talent and workforce.²⁶⁸⁷

Environmental Impact of AI

The EU Energy Efficiency Directive (2023/1791) introduces an obligation for the monitoring and reporting of the energy performance of large data centers (>500 kW).²⁶⁸⁸ While the EU AI Act promotes standards and voluntary codes of conduct to improve energy efficiency,²⁶⁸⁹ the limited focus overlooks the broader environmental impacts of AI’s lifecycle, including intensive water use and the destructive extraction of rare earth minerals.²⁶⁹⁰

At the national level, Greece’s AI Blueprint addresses some of these gaps by including appended guidelines on the responsible development and use of AI,

²⁶⁸⁵ High-Level Advisory Committee on Artificial Intelligence, *A Blueprint for Greece’s AI Transformation*, p. 10 (Nov. 2024), https://foresight.gov.gr/wp-content/uploads/2024/11/Blueprint_GREECES_AI_TRANSFORMATION.pdf

²⁶⁹⁰ UNEP, *AI Has an Environmental Problem. Here’s What the World Can Do about That* (Sept. 21, 2024), <https://www.unep.org/news-and-stories/story/ai-has-environmental-problem-heres-what-world-can-do-about>

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

highlighting environmental sustainability as a key consideration.²⁶⁹¹ The guidance extends beyond reducing carbon footprint to encompass responsible sourcing of materials, reducing electronic waste, and promoting recycling and reuse practices. However, government entities have yet to adopt formal regulation or legislation to hold developers or deployers accountable to these guidelines.

Lethal Autonomous Weapons

Greece has actively engaged in international discussions regarding lethal autonomous weapons systems (LAWS). Greece supports the UN General Assembly Resolution 78/241, which emphasized the urgent need to address the challenges posed by autonomous weapons systems.²⁶⁹² In comments to the UN Secretary-General for the report on Member States' views, Greece supported a two-tier system of prohibitions and restrictions of LAWS and noted “compliance with fundamental principles and requirements of international humanitarian law, such as, the principles and requirements of target distinction, proportionality and precautions at the evolving of environment of a battlefield raises serious concerns.”²⁶⁹³

Greece's position at the UN and Convention on Certain Conventional Weapons (CCW) Group of Governmental Experts (GGE) on LAWS underscores the importance of meaningful human control over the use of force and the necessity for accountability in military operations involving AI technologies.²⁶⁹⁴

Human Rights

Greece is a member of the United Nations and has ratified the Universal Declaration of Human Rights.²⁶⁹⁵ Freedom House rates Greece as “Free” with a score

²⁶⁹¹ High-Level Advisory Committee on Artificial Intelligence, *A Blueprint for Greece's AI Transformation*, p. 147 (Nov. 2024), https://foresight.gov.gr/wp-content/uploads/2024/11/Blueprint_GREECES_AI_TRANSFORMATION.pdf

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

of 85 of 100, commending the country's parliamentary democracy supported by active political competition and largely upheld civil liberties.²⁶⁹⁶ However, persistent challenges remain, including corruption, government surveillance, discrimination against immigrants and religious and ethnic minority groups, and poor conditions for irregular migrants and asylum seekers.

Greece's approach to artificial intelligence governance emphasizes protecting human rights and democratic values. The country's AI strategy includes principles such as inclusive growth, respect for the rule of law, human rights, and democratic values, as well as transparency, explainability, robustness, security, safety, and accountability.²⁶⁹⁷

OECD / G20 AI Principles

As a member state of OECD, Greece is an adherent of the OECD AI Principles.²⁶⁹⁸ Greece's AI Blueprint reflects many of these principles.

Council of Europe AI Treaty

Greece is party to the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law through its membership in the European Union,²⁶⁹⁹ which endorsed the treaty on September 5, 2024.²⁷⁰⁰ Endorsement signals a commitment to align national AI policies with the standards outlined in the treaty, however Greece has not acted independently to endorse or ratify the treaty.²⁷⁰¹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

UNESCO Recommendation on AI Ethics

As a member state of UNESCO, Greece endorses the UNESCO Recommendation on the Ethics of Artificial Intelligence.²⁷⁰² The guiding principles in Greece’s AI Blueprint—human dignity, oversight, adaptability, and pluralism—and four domains of action—innovation and entrepreneurship, education and research, regulatory framework, public sector transformation—align with the Recommendation.²⁷⁰³ However, these have not been implemented. Greece has not completed the UNESCO Readiness Assessment Methodology (RAM).²⁷⁰⁴

Evaluation

Greece’s AI strategy and data protection regulations generally uphold fundamental rights, democratic values, and the rule of law. In addition to meeting EU-level obligations on AI and data protection, Greece’s national AI strategy and international commitments—such as adherence to the OECD AI Principles, the Council of Europe AI Treaty, and the UNESCO Recommendation on the Ethics of AI—reinforce a rights-based, democratic, and human-centric approach to AI governance. The decisions issued by the Hellenic Data Protection Authority demonstrate its effectiveness as an oversight body, ensuring compliance with data protection regulations and safeguarding individuals’ fundamental rights.

AI governance is still nascent, given the recency of the AI Blueprint. Implementing the UNESCO RAM could provide the country “detailed and comprehensive insights into different dimensions of AI readiness”²⁷⁰⁵ that could enhance Greece’s ability to identify systematic institutional and regulatory gaps in its AI ecosystem. The RAM and further legislation could also provide the opportunity for greater public participation in AI governance.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Hong Kong

In 2025, Hong Kong's Digital Policy Office updated the Ethical Artificial Intelligence Framework and issued guidance on Generative AI. The Privacy Commission released guidelines on Generative AI for employees and joined 19 other data privacy authorities in a joint statement on data governance frameworks for privacy-protecting AI.

National AI Strategy

Hong Kong is making significant advances in AI development and policy implementation through the issuance of guidelines, policies, and AI technology applications across sectors. Although this special administrative region²⁷⁰⁶ largely controlled by China does not have a national strategy for the regulation of AI, several sectoral and overall guidelines exist, along with more reforms underway to guide organizations in adopting accountable and ethical AI models and processes.

A 2021 Guideline on Ethical Development and Use of AI issued by the Office of the Privacy Commissioner for Personal Data (PCPD) aims to guide organizations in their adherence to personal data and privacy requirements.²⁷⁰⁷ In 2022, the Government Chief Information Officer (now Digital Policy Office) expanded the seven original principles to twelve and categorized them into Performance and Generalized Principles.²⁷⁰⁸ Performance Principles include (1) Transparency and Interpretability and (2) Reliability, Robustness, and Security while Generalized Principles are: (1) Fairness, (2) Diversity and Inclusion, (3) Human Oversight, (4) Lawfulness and Compliance, (5) Data Privacy, (6) Safety, (7) Accountability, (8) Beneficial AI, (9) Cooperation and Openness and (10) Sustainability and Just Transition.

Since the Hong Kong government officially merged the Government Chief Information Office and the Efficiency Office to create the Digital Policy Office

²⁷⁰⁶ Referred to as the Hong Kong Special Administrative Region (HKSAR).

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

(DPO) in 2024,²⁷⁰⁹ the ethical principles were updated again, to Version 1.4.²⁷¹⁰ The updated ethical principles include more detailed for the AI governance mechanism. The updated mechanism takes a three-prong defense approach. 1) Project Team, responsible for AI application development, risk evaluation, execution of actions to mitigate identified risks and documentation of AI Impact Assessments; 2) Project Steering Committee (PSC) and Project Assurance Team (PAT), responsible for ensuring project quality, defining acceptance criteria for AI applications, providing independent review, and approving AI applications; and 3) IT Board, or Chief Information Officer (CIO) if no IT Board is in place, with optional support by an Ethical AI Committee, which may consist of external advisors.

The DPO commissioned the Hong Kong Generative AI Research and Development Center (HKGAI) to research and formulate guidelines on generative AI for developers, service providers, and service users.²⁷¹¹ The guidelines released in 2025 provides an introduction to Generative AI and lays out the technical limitations, dimensions of governance, and key principles for the governance of the technology. The final section details practical guidelines for each of Technology Developers, Service Providers, and Service Users, who are charged to be “proactive stewards of benevolent AI.”

Sectoral initiatives are also relevant. The Hong Kong Monetary Authority (HKMA) issued guidelines on consumer protection in the use of AI in customer-facing applications in August 2024 to protect against user harms from hallucination and incomplete results from GenAI.²⁷¹² However, in its circular, the HKMA acknowledges that adoption of GenAI in the banking sector is still at “an early stage, with most of the current applications focusing on improving banks’ operational efficiency. Nonetheless, the ability of GenAI in content-creation means that GenAI could be more extensively adopted by the banking sector in customer-facing activities.” The guidelines build on the 2019 HKMA guidelines on consumer

Center for AI and Digital Policy

protection and adds requirements.²⁷¹³ These include defining the scope, policies, using a human-in-the-loop approach, ensuring fairness, providing opt-out mechanisms, disclosing AI models' limitations, and abiding by Hong Kong's privacy regulations.

The HKMA is also taking steps to promote the use of AI for detecting suspicious activities by financial institutions. In September 2024, the HKMA released a circular on the Use of Artificial Intelligence for Monitoring of Suspicious Activities outlining several initiatives that the authority was undertaking to promote AI use.²⁷¹⁴ This includes an experience sharing forum, fintech sandbox,²⁷¹⁵ and guidance from the HKMA on innovating.

Hong Kong's technology development sector, specifically AI, is seeing increased integration with mainland China. In her 2021 policy address, the Chief Executive of Hong Kong, Carrie Lam stated that "the developments of Hong Kong and our country are closely related. Only by leveraging the Central Government's policies in support of Hong Kong can we give full play to our unique strengths, which will, in turn, bring continuous impetus to our economy."²⁷¹⁶ This, coupled with the passage of the Hong Kong National Security Law in 2020 by China's top legislature,²⁷¹⁷ cast some doubts on the future of the One Country, Two Systems model for the governance of Hong Kong.²⁷¹⁸

Public Participation

Hong Kong does not have a structured process for public participation in the development of AI policy; however, government organizations have included citizen engagement in some significant AI-related developments. For instance, in July 2024,

the Hong Kong Commerce and Economic Development Bureau began a two-month public consultation on required legal amendments to protect copyrights in the training and use of AI models.²⁷¹⁹ Contributions were accepted through various channels, including written submissions, briefing sessions, and a public forum. After the consultation process ended in February 2025, the Bureau published a document summarizing the public views and the Bureau's response. The document also presented agenda for the next steps on AI and copyright, including the future formulation of Guidelines on Copyright Issues Relating to Generative AI and the need to amend the Copyright Ordinance to include a text and data mining exception.²⁷²⁰

Hong Kong's Department of Justice (DoJ) established the Consultation Group on LawTech Development to promote AI-driven legal solutions and document automation in 2025.²⁷²¹ The Consultation Group will provide advice and assistance to the DoJ regarding the promotion and development of law tech in Hong Kong.

Data Protection

Hong Kong passed the Personal Data (Privacy) Ordinance (PDPO) in 1995, which instilled a principles-based approach to data privacy and established the Office of the Privacy Commissioner for Personal Data (PCPD) as an independent data privacy regulator.

The PDPO saw amendments in 2012²⁷²² and 2021²⁷²³ to address direct marketing and criminalize doxxing, respectively. The anti-doxxing amendments allow the PCPD to conduct investigations without a warrant, press charges independently, force content to be taken down, and charge non-compliant internet

platforms, raising concerns that the amendment will be used to restrict dissenting opinions.²⁷²⁴ The PCPD reported more than 1400 notices to remove messages on digital platforms in 2021–2022 and a man sentenced to eight months in prison.²⁷²⁵ The efforts continued in 2025, with a number of reported investigations and sentences.²⁷²⁶

The PDPO applies to both private and public data usage. However, it allows for specific exemptions for criminal investigations, the performance of judicial functions, security and defense, and emergency situations.²⁷²⁷ In the context of the recent Hong Kong National Security Law and associated protests, the broader implications of these exemptions on human rights are less clear. For example, police can request content be taken down or have online platforms provide information about users.²⁷²⁸

The PCPD released checklists and guidelines in 2025 to guide organizations on data protection related to artificial intelligence. The Checklist on Guidelines for the Use of Generative AI by Employees advises organizations to define permissible AI uses under the PDPO.²⁷²⁹ The Guide to Getting Started with Anonymization enhanced data de-identification standards.²⁷³⁰ The Chief Executive also proposed a review of laws to facilitate cross-border data flows with mainland China while

safeguarding PDPO standards.²⁷³¹ This signaled legal modernization and regional integration for Hong Kong.

The PCPD has been an active participant in international discussions on data protection, algorithmic transparency, and many other key issues in the use of AI, especially in the General Privacy Assembly (GPA). The PCPD was a signatory to the GPA 2018 Declaration on Ethics and Data Protection in Artificial Intelligence,²⁷³² sponsored the 2020 Resolution on Accountability in the Development and Use of Artificial Intelligence,²⁷³³ and co-sponsored the 2023 Resolution on Generative AI.²⁷³⁴ The PCPD did not endorse the 2022 Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology.²⁷³⁵ Hong Kong joined nineteen other national data protection authorities in signing the Joint Statement on Building Trustworthy Data Governance Frameworks, reaffirming privacy-by-design, following the GPA conference in 2025.²⁷³⁶

Algorithmic Transparency

The AI Guidance presented by the PCPD makes several recommendations to increase transparency around the use of AI, including “putting in controls that allow

human oversight and intervention of the operations of the relevant AI system.”²⁷³⁷ Similarly, the guidelines for banks using AI from the Hong Kong Monetary Authority push banks to hold leadership accountable for AI decision-making, to ensure results from AI systems are explainable and auditable, and to provide transparency to consumers on the use of AI.²⁷³⁸ These recommendations align with established principles such as the OECD AI Principles, and similar recommendations in the proposed EU AI Act; however, the recommendations are advisory and non-binding.

The PCPD published the Artificial Intelligence: Model Personal Data Protection Framework in 2024.²⁷³⁹ The Framework provides a set of practical and detailed recommendations for local enterprises through a risk-based approach, offering key principles such as human oversight, data privacy, fairness, transparency, interpretability, reliability, robustness, and security to guide the procurement, implementation, and use of AI systems. The Generative Artificial Intelligence Technical and Application Guideline builds on this foundation by broadening the principle of transparency in generative AI.²⁷⁴⁰ The Guideline requires that stakeholders maintain transparency across all stages of the AI system life cycle, from data collection and model development to deployment, usage, and maintenance, including through documentation of training data, disclosure of system capabilities and limitations, and traceability of outputs. The Guideline also discourages opaque or black box operations by promoting the use of explainable AI techniques.

Data Scraping

The PCPD and international data protection and privacy counterparts released a follow-up joint statement laying out expectations for industry related to data scraping and privacy in 2024.²⁷⁴¹ The initial statement in August 2023

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

established that “[social media companies] and other websites are responsible for protecting personal information from unlawful scraping.”²⁷⁴² The follow-up, which incorporates feedback from engagement with companies such as Alphabet (YouTube), X Corp (formerly Twitter), and Meta Platforms (Facebook, Instagram, WhatsApp), adds that organizations must “comply with privacy and data protection laws when using personal information, including from their own platforms, to develop AI large language models.”²⁷⁴³ The April 2025 Hong Kong Generative Artificial Intelligence Technical and Application Guideline²⁷⁴³ builds on this foundation by broadening the principle of transparency in generative AI. It requires that stakeholders maintain transparency across all stages of the AI system life cycle, from data collection and model development to deployment, usage, and maintenance, including through documentation of training data, disclosure of system capabilities and limitations, and traceability of outputs. The Guideline also discourages opaque or “black box” operations by promoting the use of explainable AI techniques.”²⁷⁴⁴ Generative models”; must regularly review and update privacy protection measures to keep pace with technological advances; and ensure that permissible data scraping, such as that for research, “is done lawfully and following strict contractual terms.”²⁷⁴⁴

Data scraping generally involves the automated extraction of data from the web. Data protection authorities are seeing increasing incidents involving data scraping, particularly from social media companies and the operators of other websites that host publicly accessible data. Scraped personal information can be exploited for targeted cyberattacks, identity fraud, monitoring, profiling and surveillance purposes, unauthorized political or intelligence gathering purposes, unwanted direct marketing or spam.

Facial Recognition

Hong Kong has long-standing concerns about AI surveillance, especially in relation to mainland China and the preservation of democracy in Hong Kong. During the 2019 anti-government protests, Hong Kong Chief Executive Carrie Lam invoked

²⁷⁴² Regulatory Supervision Information Commissioner’s Office of the United Kingdom, *Joint Statement on Data Scraping and the Protection of Privacy* (Aug. 24, 2023), <https://ico.org.uk/media2/migrated/4026232/joint-statement-data-scraping-202308.pdf>

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

the Emergency Regulations Ordinance, which gives the chief executive the power to “make any regulations whatsoever which [they] may consider desirable in the public interest,”²⁷⁴⁵ to ban the use of face masks. The ban aimed at preventing protestors from hiding their identities.²⁷⁴⁶ Hong Kong’s Court of Final Appeal largely upheld the application of the Emergency Regulations Ordinance for the facemask ban.²⁷⁴⁷

Hong Kong has also been a strong proponent of the use of technology in public spaces, laying out its future plans through the Hong Kong Smart Cities Blueprint 2.0, published.²⁷⁴⁸ These plans include the use of the StayHomeSafe mobile app and companion tracking bracelet, whose use was required for all new entrants into Hong Kong.²⁷⁴⁹ The blueprint and associated initiatives outline many plans such as the increased rollout of public wifi and contact tracing for COVID, as well as funding for robotic patrols of airport terminals and a new LawTech Fund.

Despite the clear potential upside in the Smart City Blueprint, there is no mention of potential concerns, such as data privacy, algorithmic bias, or the potential violation of human rights in the documents rolling out these new initiatives. Furthermore, there was no significant public engagement, despite concerns about negative impacts.²⁷⁵⁰ The rollout of new technology in public places, the Hong Kong National Security Law, and the development and use of facial recognition technology by local companies all threaten the increased use of AI for surveillance purposes in Hong Kong.²⁷⁵¹

In July 2024, Hong Kong's security chief, Chris Tang, informed local media that the police aim to install 2,000 new surveillance cameras and plan to incorporate

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

facial recognition technology, with the potential for AI-assisted suspect tracking.²⁷⁵² However, it remains unclear whether Hong Kong will implement continuous live facial recognition scanning of public spaces or if it will limit facial recognition to retrospective analysis of footage following a crime or upon legal authorization. Some experts have expressed concern that Hong Kong may be moving closer to mainland China's pervasive surveillance practices.

Hong Kong launched a facial recognition pilot at the Chung Ying Street checkpoint in December 2024 to support future tourism development and simplify the process of crossing borders.²⁷⁵³ The Hong Kong Police Force commissioned an independent consultancy to conduct a Privacy Impact Assessment for the use of facial recognition technology in the 'e-Corridor' system at the checkpoint. Legal advice was also sought to ensure compliance with privacy regulations and public notices inform individuals of ongoing CCTV surveillance. Additionally, Security Risk Assessments and independent audits were conducted to evaluate the system's security and data protection measures.²⁷⁵⁴

Environmental Impact of AI

The Hong Kong Special Administrative Region has considered the environmental impact of AI. The Twelve Ethical AI Principles include "Sustainability and Just Transition." Any AI development should ensure that there are mitigation strategies in place to address potential impacts on society and the environment.²⁷⁵⁵ The framework specifically acknowledges that AI can have an impact on planet preservation and cites examples of using AI to optimize power usage and reduce carbon footprint. Although no dedicated AI environmental impact assessment framework exists, the Digital Policy Office's 2025 Guideline encourages energy-efficient data processing and carbon footprint monitoring in government AI

projects.²⁷⁵⁶ Policies such as the Green Data Centre Guidelines issued by the Office of the Government Chief Information Officer seek to address the challenges expanded AI infrastructure poses on ambitions for carbon neutrality.²⁷⁵⁷ Strategic efforts, including the Hydrogen Development Strategy 2024 and the Climate Action Plan 2050's target to increase renewable energy to 7.5-10% of the electricity mix by 2035, also aim to expand renewable energy use, ensuring AI growth aligns with broader climate objectives.²⁷⁵⁸

Lethal Autonomous Weapons

Given Hong Kong's status as a Special Administrative Region of China, policies and regulations formulated by the Chinese government, including those related to lethal autonomous weapons systems (LAWS), have the potential to influence Hong Kong's stance and policies on these matters.²⁷⁵⁹ Hong Kong is not a signatory to international treaties such as the Convention on Certain Conventional Weapons (CCW) but adheres to the CCW provisions through China's ratification.³⁰

AI Literacy

Hong Kong mounted its most ambitious AI literacy campaign in 2025, combining government funding exceeding HK\$4 billion with public-private partnerships targeting students, teachers, workers, and the public. The Education Bureau mandated 10–14 hours of AI education for all junior secondary level students (Junior Secondary Level) as part of the ICT curriculum implemented since 2023/24.²⁷⁶⁰ The bureau aimed for 82% implementation across schools by June 2025 with a target of 95% by year-end. Teacher professional development programs targeting over 1,000 secondary ICT teachers and Microsoft Hong Kong's Partners in

Center for AI and Digital Policy

Learning Program 5.0 reached 450+ schools (70% participation), providing capacity-building for educators who could facilitate public understanding of AI governance issues, though no formal metrics on educator capacity to influence policy discussions have been established. The private-public partnership under the Just Start campaign set an ambitious goal to teach AI skills to 1 million people in Hong Kong.²⁷⁶¹ More than 30 organizations including Google, Microsoft, and Meta, and the government introduced the AI-Q Test, Hong Kong's first free, open-access AI self-assessment tool enabling personalized learning recommendations.

Human Rights

As a special administrative region of China, Hong Kong has not ratified the United Nations Universal Declaration of Human Rights (UDHR) but is protected by the convention through China's endorsement.²⁷⁶² The UN International Covenant on Economic, Social, and Cultural Rights (ICESCR) and UN International Covenant on Civil and Political Rights (ICCPR) apply to Hong Kong.²⁷⁶³

These human rights conventions are also complemented by other articles that protect the rights of citizens, including the Hong Kong Bill of Rights²⁷⁶⁴ and the Basic Law.²⁷⁶⁵ One of the key provisions in Article 30 of the Personal Data (Privacy) Ordinance protects citizens' right to privacy and clearly identifies principles to be adhered to in the use of personal data.²⁷⁶⁶ The key regulatory bodies responsible for monitoring human rights implementation in Hong Kong include the Constitutional and Mainland Affairs Bureau (CMAB), the Equal Opportunities Commission (EOC), and the Office of the Privacy Commissioner for Personal Data, Hong Kong. These agencies are tasked with overseeing compliance with human rights standards and

investigating violations, including issues concerning freedom of speech, assembly, and privacy.²⁷⁶⁷

The Legislative Council of the Hong Kong Special Administrative Region adopted the Safeguarding National Security Bill in March of 2024.²⁷⁶⁸ The Article 23 National Security Law criminalizes secession, subversion, terrorism, and collusion with foreign forces, marking a significant step in the tightening of political and civil rights.²⁷⁶⁹ Amnesty International has raised concerns that the implementation of Article 23 and the tightening restrictions freedoms of expression, association, and assembly will lead to the prosecution of individuals expressing dissenting views against the government.²⁷⁷⁰

The Freedom House 2025 Report ranks Hong Kong as “Partly Free” with a total score of 40/100.²⁷⁷¹ Political rights and civil liberties are scored very low on the report because of the prevalence of pro-Beijing interests in the country’s political system and the limitations on freedom and autonomy because of political interventions from mainland China. Civil-society organizations continued to face restricted operating space under the Safeguarding National Security Ordinance (2024). Reports by Amnesty International²⁷⁷² and Human Rights Watch²⁷⁷³ documented expanded surveillance and constraints on expression, de facto limiting public participation in AI policy dialogue and rights-impact assessments.

Center for AI and Digital Policy

OECD / G20 AI Principles

Hong Kong is not a member of the OECD or the G20 and has not endorsed the OECD / G20 AI Principles.²⁷⁷⁴

Despite no official endorsement, Hong Kong's approach to AI governance such as the ethical framework includes many of the OECD's principles and implementation recommendations.²⁷⁷⁵ Limitations, such as insufficient human capacity and incomplete alignment with human rights and democratic values, notably due to the use of facial recognition for surveillance purposes, undermine the region's implementation of the OECD Principles.

Council of Europe AI Treaty

Neither Hong Kong nor China have signed the Council of Europe AI treaty.²⁷⁷⁶ Hong Kong and China also did not participate in the negotiations, which began in 2022, with input from 68 international representatives from civil society, academia, industry, and other international organizations was gathered.²⁷⁷⁷

UNESCO Recommendation on AI Ethics

As a member of UNESCO, Hong Kong adopted the Recommendation on the Ethics of Artificial Intelligence in November 2021.²⁷⁷⁸ The AI Literacy initiatives to improve understanding of AI align with UNESCO's Education and Research policy action for implementing the Recommendation.²⁷⁷⁹ Hong Kong's Ethical AI

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Framework includes an Application Impact Assessment.²⁷⁸⁰ UNESCO offers a related Ethical Impact Assessment tool to implement the Recommendation.²⁷⁸¹

Hong Kong has not stated a plan or participated independently in UNESCO's Readiness Assessment Methodology (RAM) for artificial intelligence.²⁷⁸² Hong Kong's AI policies align with those of mainland China. China has not yet engaged in the RAM process and has not publicly indicated plans to do so.

Evaluation

Hong Kong has made significant progress in Artificial Intelligence policy, publishing frameworks and principles to enhance personal data privacy protection, to embed ethical considerations into the AI life cycle, and ensure consumer protection. Establishing the Digital Policy Office marked a development that brought with it the creation of an ethical framework in AI, as well as the establishment as an institution to monitor its development., although it could be safe to link this special administrative region with some of China's AI efforts and achievements due to the administrative relationship.

Hong Kong has not been a signatory to the OECD AI Principles; however, it has proposed and implemented similar principles and guidelines and endorsed the UNESCO Recommendation on the Ethics of AI. The leading role played by Hong Kong through the PCPD-sponsored resolution on greater accountability in the development and use of AI to the Global Privacy Assembly (GPA) shows that the region has the potential to play a prominent role in key global AI policy development and implementation. Hong Kong's policies around AI literacy, including children and students, support ethical AI initiatives in line with public engagement. However, as in other areas, public participation in policymaking is still limited

Irrespective of its complicated relationship with mainland China, especially as it relates to surveillance and data protection issues, there is some effort by the government to regulate and promote ethical AI development and use in the country. More effort is needed by the government to adopt a comprehensive national AI strategy that promotes democratic values and human rights, as well as alignment with international commitments to AI principles.

²⁷⁸⁰ Digital Policy Office, *Ethical Artificial Intelligence Framework* (Version 2.0) (Dec. 2025), https://www.digitalpolicy.gov.hk/en/our_work/data_governance/policies_standards/ethical_ai_framework/doc/Ethical_AI_Framework_en.pdf

Hungary

In 2025, Hungary passed a national AI Act to implement the EU AI Act and designated the supervisory and market surveillance authorities to align with the legislation. Hungary also published a Renewed AI Strategy to explicitly align with the OECD AI Principles, UNESCO Recommendation on AI Ethics, and Hiroshima Process.

National AI Strategy

The Hungarian government developed a National Artificial Intelligence Strategy through the Artificial Intelligence Coalition (*Mesterséges Intelligencia Koalíció*) and over 1000 experts. The Strategy aims to identify “fundamental principles, technological focus areas, and projects” necessary to “prepare Hungarian society and the Hungarian economy for the fact that this technology is coming, this technology is already here, and that we must do our best to use it.”²⁷⁸³ The Strategy centers on expanding AI applications and use. Two of the six foundation pillars²⁷⁸⁴—“Regulatory and ethical framework” for “Reliable, regulated use” and “Education, competence development and societal preparedness,” or “Focusing on human competencies”—address the need for governance structures and protections against the negative impacts of AI technology. The document sets goals to 2030 and outlines an action plan extending up to 2025.²⁷⁸⁵ The AI Strategy is, however, considered as a living document due to rapid technological developments and experience gathered through the spread of applications.

The Renewed AI Strategy released in 2025 updates the original 2020 Strategy to align with EU AI Act standards. The revised Strategy integrates economic, social, and ethical priorities, explicitly aligning with OECD principles, the UNESCO Recommendation on the Ethics of Artificial Intelligence, and the G7 Hiroshima AI Process.²⁷⁸⁶ The new strategy maintains the focus on AI applications to both improve

lives and ensure Hungary's competitive advantage in AI industries, as well as human development.²⁷⁸⁷

The Strategy requires a whole-of-government effort that brings together different government ministries under the leadership of the newly appointed Government Commissioner for AI.²⁷⁸⁸ Implementing the Strategy and achieving its "AI goals" is also at the heart of the mandate of the new AI supervisory authority established within the Ministry of Economy.²⁷⁸⁹ This effort will also be supported by AI Coalition teams supporting the relevant ministries, as well as a Multisectoral Committee of Artificial Intelligence and a Scientific Committee of experts. While these positions are not fully independent, their designation marks a concrete step toward centralized AI oversight capacity.²⁷⁹⁰ A Government Resolution assigned ministries and the Government Commissioner for AI a variety of tasks to strengthen AI development across the country to operationalize the Strategy.²⁷⁹¹

EU Digital Services Act

As an EU member state, Hungary shall apply the EU Digital Services Act (DSA).²⁷⁹² The DSA regulates online intermediaries and platforms. The main objective is to prevent illegal and harmful activities online and the spread of disinformation.

EU AI Act

As an EU member State, Hungary is bound by the EU AI Act.²⁷⁹³ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI. The EU AI Act entered into force on August 1, 2024.

Hungary's National AI Act (Act LXXV) entered into force in December 2025,²⁷⁹⁴ signaling progress to implement the EU AI Act. The Act follows the AI Strategy to include a Legal and Ethical Code for high-risk AI applications in the public sector.²⁷⁹⁵ The Code mandates transparency, documentation, and independent audits, embedding accountability directly into government AI systems.²⁷⁹⁶

The Hungarian AI Act also designates authorities for overseeing the European AI Act and AI development more generally.²⁷⁹⁷ The National Artificial Intelligence Council will serve as an advisory body to government, academia, and businesses. The Government Commissioner for AI will coordinate efforts across ministerial bodies and chair the AI Council.²⁷⁹⁸ An office created under the Ministry of Economy will serve as the market surveillance authority and single point of

contact while the National Accreditation Authority (NAH) will serve as the notifying authority.²⁷⁹⁹

Public Participation

Hungary's AI Strategy was developed in cooperation with the Hungarian Artificial Intelligence Coalition.²⁸⁰⁰ The coalition was established in October 2018 to offer a community and forum for all stakeholders in the Hungarian AI ecosystem who wish to make an active contribution to the development of the Hungarian AI environment and skills.

Hungary's AI strategy also explicitly refers to public engagement activities. Hungary established an internet platform for its citizens to get trained, get exposure to the ongoing events in the AI sector, and engage with country-wide policy developments. The Hungarian government aims to get the best of artificial intelligence in terms of high-value economic return while countering possible adverse effects of the technology through increased public awareness and public participation. The National AI Strategy emphasizes that public engagement is a key aspect of the exercise of fundamental rights and a robust and inclusive business environment. For this reason, the Hungarian AI Strategy prioritizes the need to raise awareness of the use of artificial intelligence, its pragmatic and business applications as well as its projected impact on various sectors through an action plan entitled The AI Challenge. The Challenge aspires to train 100,000 people in the fundamentals of AI using domestically generated online course materials. The Action Plan also aims to raise 1 million people's awareness through interactive exhibitions, a website, and online professional content.²⁸⁰¹

During the development of the 2025 Renewed AI Strategy, Hungary continued to host stakeholder dialogues and cross-sector discussions, which represents efforts toward open policymaking and civic inclusion.²⁸⁰² However, the engagement emphasized expert and government input over popular participation.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In November 2023, the Prime Minister's Cabinet Office invited feedback and input from the general public, stakeholders, and experts on the draft of the Law on the Digital State and Certain Rules for the Provision of Digital Services or “Digital Citizenship Law.” The scheme will enable personal identification for the use of state and market services, electronic signature, and payment of public utility bills. A trial period will start in April 2024. The scheme will be optional. It has been developed in line with the EU’s new Electronic Identification, Authentication and Trust Services (eIDAS) regulatory framework.²⁸⁰³

In September of 2024, an AI Summit was held in Budapest inviting participation from leaders of industry, government, and academia, highlighting Hungary’s determination to use AI as a catalyst for transformative change across multiple sectors.²⁸⁰⁴

Data Protection

Since Hungary is an EU Member State, the GDPR²⁸⁰⁵ is directly applicable in Hungary and to Hungarians. The activities of Hungarian law enforcement are regulated by the EU Data Protection Law Enforcement Directive (LED), which protects the personal data of victims, witnesses, and suspects of crime.²⁸⁰⁶ The LED prohibits decisions based solely on automated processing, unless it is provided by law, and prohibits profiling that results in discrimination.²⁸⁰⁷

The Hungarian Act CXII of 2011 on the Right of Informational Self-Determination and on Freedom of Information (Data Protection Act) was amended on July 26, 2018, to supplement the GDPR and implement the LED Directive.²⁸⁰⁸ The National Authority for Data Protection and Freedom of Information (*Nemzeti Adatvédelmi és Információszabadság Hatóság*, NAIH)²⁸⁰⁹ is the national supervisory authority in charge of enforcing both the GDPR and the LED. The Authority is also entrusted with duties in connection with the Schengen Information System (SIS), the Customs Information System (CIS), Europol, Eurodac, and the Visa Information System (VIS). The NAIH represents Hungary in the European Data Protection Board.

The NAIH issues annual reports on its enforcement activity.²⁸¹⁰ The NAIH annual report covering 2023 noted 8,672 new cases, which marked a substantial rise by more than 1,300. At a conference for data protection officers in 2024,²⁸¹¹ Professor Attila Péterfalvi highlighted “the positive experiences of the transparency procedures regarded as a novelty of 2023” and “several decisions in which the Authority took a stand concerning issues with long-term effects, including the resolution containing statements related to the use of artificial intelligence, and the decision concerning paparazzi activities affecting former public figures.”

Hungary is also a member of the Council of Europe and has signed and ratified²⁸¹² the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.²⁸¹³

The NAIH is a member of the Global Privacy Assembly since 2002. The Authority endorsed the 2018 GPA Resolution on AI and Ethics,²⁸¹⁴ but did not co-sponsor the 2020 GPA Resolution on AI and Accountability,²⁸¹⁵ the 2022 GPA

Resolution on Principles and Expectations for the Appropriate Use of Personal Information in Facial Recognition Technology²⁸¹⁶ or the 2023 GPA Resolution on Generative AI.²⁸¹⁷

Algorithmic Transparency

Ambassador Harry Alex Rusz, Permanent Representative of Hungary to the Council of Europe, deposited the instrument of ratification of Convention 108+ in the presence of Deputy Secretary General Bjørn Berge in August 2023.²⁸¹⁸ Convention 108+ aims to modernize and improve the Convention 108, the only binding international instrument with global relevance in this field. In addition, Hungary is subject to the GDPR. Hungarians have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.²⁸¹⁹

The right to contest an automatic decision that adversely impacts on fundamental rights in these documents aligns with the 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems. The Recommendation clarified that “Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines.”²⁸²⁰

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Hungary's Legal and Ethical Code for high-risk AI applications in the public sector in the Renewed AI Strategy and AI Act further enshrine these rights.²⁸²¹ The Code mandates transparency, documentation, and independent audits, embedding accountability directly into government AI systems.²⁸²²

AI Oversight

The Hungarian Competition Authority launched an investigation against Microsoft's European services subsidiary, Microsoft Ireland Operations Limited, in July 2023 for possible unfair practices against Hungarian consumers in its so-called "new Bing service." The integration of an artificial intelligence-based chat feature similar to ChatGPT in Microsoft's Bing search system instigated the investigation. The feature uses machine learning to answer questions in the search interface and the model learns from the content, data, and information shared by users. The investigation focuses on whether Microsoft adequately informs users about features of its search engine, particularly concerning the AI-based chat feature. The concerns raised include contradictory policies and inadequate information about the service, such as its reliability, data management practices, and language accessibility.²⁸²³

The market analysis investigated the use of AI in data collection, advertising practices, and consumer interactions, raising concerns about transparency, consumer privacy and susceptibility to manipulation. In the decision, the competition authority called on Microsoft to provide more up-to-date and transparent information to consumers on AI solutions.²⁸²⁴ This case prefigures the role that the Hungarian market surveillance authority identified for the EU AI Act could play in ensuring respect for fundamental rights.²⁸²⁵

²⁸²⁵ Nemzeti Jogszabálytár, *Government's Decision 1301/2024 (IX.30.) regarding the implementation of the EU Artificial Intelligence Regulation [a mesterséges intelligenciáról szóló*

The Hungarian media regulator issued a statement on the result of a study assessing the impact of online platforms' algorithms on Hungarian users. Among the regulator's conclusions were the need for more algorithmic transparency and human oversight in these platforms.²⁸²⁶ The Hungarian data protection authority (NAIH), it is taking part in a project aimed at helping European DPAs assess complex AI algorithms to effectively enforce data subject rights.²⁸²⁷

Emotion Recognition

The NAIH presented a case in the 2023 annual report where it imposed the highest fine to date of ca. EUR 670,000 (HUF 250 million). The case involved the personal data processing of a bank (acting as a data controller) which automatically analyzed the recorded audio of customer service calls. The bank used the results of the analysis to determine which customers should be called back. The emotional state of the caller was analyzed using an AI-based speech signal processing software that automatically analyzed the call based on a list of keywords and the emotional state of the caller. The software then established a ranking of the calls serving as a recommendation as to which caller should be called back as a priority.

During the procedure before the Authority, it appeared that for years the bank had failed to provide to the data subjects proper notice and the right to object. The Authority emphasized that the only lawful legal basis for the processing activity of emotions-based voice analysis can only be the freely given, informed consent of the data subjects.

The NAIH also highlighted that although the bank had carried out a data protection impact assessment (DPIA) and identified that the processing is of high risk to the data subjects, capable of profiling and scoring, the DPIA had failed to present substantial solutions to address these risks.

The legitimate interest test performed by the bank had failed to consider proportionality, the interests of the data subjects, it merely established that the data processing is necessary to achieve the purposes it pursues.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Authority, in addition to imposing a record fine,²⁸²⁸ obliged the bank to cease the analysis of emotions from voice analysis. The Authority highlighted that “artificial intelligence is generally difficult to understand and monitor due to the way it works, and even new technologies pose particular privacy risks. This is one of the reasons why the use of artificial intelligence in data management requires special attention, not only on paper but also in practice.”²⁸²⁹

Facial Recognition

A project called Szitakötő (dragonfly) was planned in 2016 to deploy 35,000 cameras with facial recognition capabilities in Budapest, and across the country.²⁸³⁰ Facial data of all residents of and visitors to Hungary are stored in a database that can be accessed by Hungarian law enforcement authorities. Hungary’s 35,000 CCTV cameras operate as part of a single centralised searchable system, and its biometric databases have been connected, allowing the police to identify any citizen from their face. The Hungarian Secret Services and police have already made use of the system, resulting in 6000 matches, 250 stop-and-searches, and 4 arrests as of 2021.²⁸³¹

Hungary’s data protection authority, the NAIH, investigated and fined a Hungarian municipality (Siófok) in 2022 for installing AI facial-recognition software within a 39-camera CCTV network. The NAIH found that this kind of data processing was unlawful and imposed a fine of HUF 500,000 (EUR 1,250) on the technical service provider partially owned by China. The investigation further revealed a lack of cooperation agreement between the municipality and the police regarding joint control of the CCTV network and the inadequate data security measures in place.²⁸³²

The Hungarian Parliament adopted three legislative amendments introducing stricter regulations on public demonstrations related to LGBTQAI+ issues and

Center for AI and Digital Policy

expanding the scope of biometric surveillance measures.²⁸³³ Amendments related to the Facial Image Analysis Register and System passed within 24 hours and without public debate. Together, the amendments significantly expanded the use of facial recognition technology in Hungary, including in the context of minor infractions and peaceful assemblies, such as Budapest Pride.

The EU AI Act prohibits the use of “real-time remote biometric identification systems in publicly accessible spaces for the purpose of law enforcement” unless strictly necessary in specific, exhaustive situations.²⁸³⁴ The European Parliament provides “three exhaustively listed and narrowly defined situations.”²⁸³⁵ A joint open letter sent by 51 human and digital rights groups urged the European Commission to take action against this set of laws that aim to criminalize LGBTQIA+ demonstrations and expand the use of biometric surveillance to identify protesters.²⁸³⁶

Lethal Autonomous Weapons

Hungary has consistently acknowledged that lethal autonomous weapons systems warrant “substantial consideration” and supported continuing diplomatic talks addressing concerns and for an international treaty. Hungary was one of the 70 states that endorsed a joint statement on autonomous weapons systems at the UN General Assembly calling for recognition of the dangers of autonomous weapons systems, the need for human oversight and accountability, and the importance of an international framework of rules and constraints.²⁸³⁷ Hungary cosponsored Resolution L.56²⁸³⁸ on autonomous weapons systems in 2023 and voted in favor of

Draft Resolution L.77 on lethal autonomous weapons systems.²⁸³⁹ The Chair's Summary of the 2024 Vienna conference Humanity at the Crossroads: Autonomous Weapons Systems and the Challenge of Regulation,²⁸⁴⁰ which Hungary endorsed was included in the Secretary-General report resulting from Resolution L.56.²⁸⁴¹

Hungary also supported the joint call to action on the responsible development, deployment and use of AI in the military domain in the February 2023 REAIM Summit²⁸⁴² and endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy in November 2023.²⁸⁴³

AI Literacy

The EU AI Act mandates that organizations providing or using AI systems ensure their staff and users have sufficient knowledge and understanding of AI's opportunities and risks.²⁸⁴⁴ Hungary's National AI Strategy identifies education and competence around AI skills as essential for achieving the objectives and preparing the workforce. However, details about specific programs are not available.

Hungary amended the Act on Higher Education to require higher education institutions to undertake a comprehensive review of their internal regulations.²⁸⁴⁵ The guideline aims to ensure the responsible and well-regulated integration of AI tools and technologies to ensure students are adequately prepared for the challenges and opportunities of the digital age.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Human Rights

According to the 2025 Freedom House Freedom in the World report, Hungary is “partly free” with an overall score of 65/100, showing no change compared to the previous two years.²⁸⁴⁶ According to the report, Prime Minister Viktor Orbán’s Alliance of Young Democrats–Hungarian Civic Union (Fidesz) party has consolidated power since being elected in 2010. Through Constitutional and legal changes, the Fidesz party controls independent institutions, including the judiciary, and has laws that limit freedom of expression and operations for journalists, universities, and nongovernmental organizations (NGOs) with oppositional views. Anti-immigrant anti-LGBT+ policies limit the rights of people in those groups in particular. Similar concerns were raised by the 2022 UN Human Rights Council’s Periodic Review of Hungary.²⁸⁴⁷

These findings also correspond to those of Human Rights Watch, which has cast shadow on the independence of the Hungarian data protection authority following citizens’ complaints related to the 2022 elections. Investigations found that data collected by the state for administering public services, such as registering for the COVID vaccine, administering tax benefits, and mandatory membership in professional associations, was repurposed to spread Fidesz’s campaign messages. Combined with the weakening of the political institutions responsible for safeguarding people’s right to privacy and guaranteeing an even political playing field, this misuse of data has raised serious human rights concerns.²⁸⁴⁸ NAIH’s president, Attila Peterfalvi, concluded, “We are convinced that the activity of our Authority is fully compliant with the requirements the applicable international and EU law as well as the Hungarian Constitution, governing the full independence of the Authority. To date, no statement refuting this conviction of ours has been made by an authoritative forum in this regard.”²⁸⁴⁹

Prime Minister Viktor Orbán enacted the controversial Defense of National Sovereignty Act, provides for the creation of a National Sovereignty Defense Office with broadly defined and extensive powers to investigate and report on any activity

suspected of serving foreign interests. Rights defenders have expressed fear that the law will empower authorities to target anyone critical of the government.²⁸⁵⁰ The European Commission is referring Hungary to the Court of Justice over its Defense of Sovereignty law, which it argues violates EU laws and fundamental rights, including privacy, freedom of expression, freedom of association, and protections under EU data and market laws.²⁸⁵¹

Another concerning case is the Pegasus Affair.²⁸⁵² Investigations conducted by international journalists and Direkt36²⁸⁵³, a Hungarian investigative journalism channel, confirmed that around 300 persons in Hungary were potentially targeted by Pegasus, an Israeli cybersecurity tool that hacks mobile phones to monitor phone calls as well access data including emails and photos. Hungarian authorities initially denied or did not confirm their involvement and use of Pegasus until Lajos Kósa, Fidesz MP and Chair of the Hungarian Parliament's Committee on Defense and Law Enforcement, admitted that the Interior Ministry had bought and used Pegasus.²⁸⁵⁴ He argued that it was used lawfully upon authorization by the judiciary and/or the Minister of Justice. NAIH's report²⁸⁵⁵ found that all the hundreds of cases investigated met the required legal criteria (risk for national security, legal

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

authorization).²⁸⁵⁶ The Authority reportedly will file a criminal complaint against those who uncovered the mass surveillance for possibly mishandling data.²⁸⁵⁷

The EU Court of Justice found²⁸⁵⁸ that Hungary's 2025 laws expanding the scope of biometric surveillance and introducing stricter regulations on public demonstrations related to LGBTQAI+ issues violate the Charter of Fundamental Rights.²⁸⁵⁹ The Charter protects freedom of expression, including the right to publicly affirm one's sexual orientation; safeguards the right to peaceful assembly and association; prohibits discrimination based on sexual orientation; and recognizes the inviolability of human dignity. By effectively banning LGBTQI+ demonstrations and qualifying participation in banned demonstrations as infractions, the new laws violate the Charter. The use of facial recognition technology to identify participants in these demonstrations violates the EU AI Act.²⁸⁶⁰ Moreover, Article 2 of the Treaty on European Union commits all member states to uphold the EU's foundational values, including human dignity, freedom, democracy and respect for human rights. Hungary's Pride ban and associated surveillance measures could be seen as evidence of violations of this Treaty.²⁸⁶¹

OECD / G20 AI Principles

As part of the G20 and as a member to the OECD, Hungary has endorsed the OECD AI Principles and G20 AI Guidelines. According to the 2021 OECD report on the State of implementation of the OECD AI Principles, the Hungarian national AI strategy exhibits features aligned with the OECD AI Principles such as the adoption

of ethical guidelines.²⁸⁶² The Renewed AI Strategy reaffirms the Principles.²⁸⁶³ While Hungary has made partial progress by beginning to incorporate principles such as human rights and accountability into its policy framework, full implementation of these principles has not yet been achieved.

Council of Europe AI Treaty

The European Union signed the AI treaty on behalf of its 27 member states, including Hungary. Hungary has not yet taken action at the country level.²⁸⁶⁴

UNESCO Recommendation on AI Ethics

As a UNESCO member, Hungary endorsed the UNESCO Recommendation on the Ethics of AI. Hungary's Renewed AI Strategy includes ethics frameworks,²⁸⁶⁵ but institutional implementation is still in its early stages. Current efforts focus more on building structures than on enforcement. The Strategy includes references to the need for capacity-building and AI education, though no specific program has been introduced. Hungary has not begun the UNESCO Readiness Assessment Methodology (RAM).²⁸⁶⁶

Evaluation

Hungary has adopted the OECD/G20 AI Guidelines, the UNESCO Recommendation on the Ethics of AI, a comprehensive National AI Strategy, and AI ethical Guidelines. The national AI Act passed in 2025 combined with an updated AI Strategy demonstrate a focus on stronger transparency and growing institutional capacity through new governance structures and ethical safeguards. The country also benefits from a strong data protection legal regime and the right to algorithmic

transparency. Still, the country's human rights record and surveillance practices raise concerns about the autocratic turn of the government. Questions about the independence of the data protection authority have surfaced, and there are similar concerns about the AI supervisory authority, which will be headed by a Government Commission for AI reporting directly to the Prime Minister.²⁸⁶⁷

²⁸⁶⁷ Nemzeti Jogszabálytár, *Government Decision 1028/2025 (II.24.) on the appointment and responsibilities of the Government Commissioner for Artificial Intelligence* (Feb. 25, 2025), <https://njt.hu/jogszabaly/2025-1028-30-22.0>

India

In 2025, India made significant strides toward implementing principles for human-centered AI and digital policies by finalizing the AI Governance Guidelines, enacting the Digital Personal Data Protection Act and related rules, and completing consultations for the UNESCO RAM report.

National AI Strategy

Recognizing the potential of AI to transform and advance its economy, the government of India has initiated and implemented multiple strategies to address research, development, innovation, governance, standards setting, and accountability of AI.

The Indian Ministry of Commerce set up a Task Force on Artificial Intelligence to kick start the use of AI for India's Economic Transformation.²⁸⁶⁸ In 2018, the Task Force issued a benchmark report that has played a key role in setting forth India's vision regarding AI: "While there is a strong consensus that Artificial Intelligence will be a game-changer and a key factor in economic development, there is a concurrent need to arrive at frameworks that will promote its deployment taking all social factors into account." The Mission consists in (1) Leveraging AI for economic benefits; (2) Creating policy and legal framework to accelerate AI deployment; and (3) Formulating concrete 5-year horizon recommendations for specific government, industry and research programs.

The finance minister mandated NITI Aayog, a policy think tank of the Government of India providing guidance and policy insights, to establish the National Program on AI. NITI Aayog delineated a National Strategy on Artificial Intelligence "premised on the proposition that India, given its strengths and characteristics, has the potential to position itself among leaders on the global AI map—with a unique brand of #AIforAll."²⁸⁶⁹ An accompanying 2020 paper addressed enforcement for Responsible AI for All.²⁸⁷⁰ NITI Aayog proposed an oversight body charged with managing principles for Responsible AI in India, promoting education and awareness, clarify responsible behavior, enabling access to Responsible AI tools and techniques, and coordinate with AI regulators to harmonize

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

policies across sectors. Another document proposed principles for the responsible management of AI systems: Safety and Reliability; Equality; Inclusivity and Non-discrimination; Privacy and Security; Transparency; Accountability; and Protection and Reinforcement of Positive Human Values.²⁸⁷¹

The Ministry of Electronics and Information Technology (MeitY) has led India's operational and regulatory AI agenda. Between 2019 and 2023, MeitY constituted four expert committees focused on platforms and data, sectoral missions, policy enablers including skilling, and legal/ethical issues. These committees produced recommendations on areas such as data governance, standards, and sectoral adaptation; however, many outcomes have been consultative or strategy-setting rather than direct regulation.²⁸⁷²

In 2023, MeitY—via the Principal Scientific Advisor's office—established seven working groups that produced the first IndiaAI Expert Group Report, forming the backbone of the IndiaAI Mission.²⁸⁷³ Major initiatives since 2023 include the launch of the Centre for Generative AI,²⁸⁷⁴ the AI for Skills and Capacity Building' program, and five regional AI research hubs.²⁸⁷⁵ The IndiaAI Mission and MeitY's AI Governance Guidelines set the regulatory and operational standard for AI oversight, with an emphasis on public consultation, risk management, and ethics.²⁸⁷⁶ Actual statutory oversight, however, remains pending, with many recommendations still awaiting full legal implementation.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Public Participation

The government of India has conducted several public consultations on AI policy. NITI Aayog requested public comments on its various #AIforAll documents.²⁸⁷⁷ In November 2020, the Software Freedom Law Center India (SFLC) wrote to the Chairperson of the Joint Parliamentary Committee regarding the Draft Personal Data Protection bill and asked the Committee to invite civil society organizations that “defend the rights of citizens in the digital space for consultation on the draft Data Protection Bill.”²⁸⁷⁸ The SFLC noted “core deficiencies in the draft bill “including the lack of surveillance reforms, wide exemptions and problems with the Data Protection Authority.”

India's commitment to public participation in AI governance has seen notable developments, particularly in structured engagement with stakeholders. The CyberGuard AI Hackathon, launched under IndiaAI's mission to democratize AI, demonstrates efforts to promote broader public engagement in AI development and policy formation.²⁸⁷⁹ MeitY conducted public consultations in 2025 on both the draft Digital Personal Data Protection Rules²⁸⁸⁰ and the Subcommittee on AI Governance and Guidelines Development's AI Governance report “to ensure that the governance mechanisms reflected India's aspirations.”²⁸⁸¹ UNESCO New Delhi's call for proposals for AI Readiness Assessment Methodology (RAM) further emphasized the push for multi-stakeholder consultation in AI governance.²⁸⁸²

However, significant gaps remain in public participation frameworks. Current engagement mechanisms primarily favor industry experts and technical stakeholders, with limited avenues for civil society organizations and affected communities to meaningfully influence AI governance decisions. This imbalance suggests a need for more inclusive participation mechanisms that extend beyond technical expertise to incorporate diverse public perspectives.

Data Protection

India's president assented to the Digital Personal Data Protection Bill (DPDP Act) in August 2023,²⁸⁸³ following a long process of consultations, revisions, and drafts beginning in 2017.²⁸⁸⁴ Initial provisions of the DPDP Act entered into force in November 2025,²⁸⁸⁵ along with the release of Digital Personal Data Protection Rules.²⁸⁸⁶ The Central Government also established the Data Protection Board of India (DPBI), the statutory authority mandated with the primary function of enforcement under the Act, in November 2025.²⁸⁸⁷

The DPDP Act introduces several key provisions while maintaining granting significant discretionary powers to the Central Government for exempting specific data processing activities and exemptions for government data processing.²⁸⁸⁸ The Act establishes data fiduciaries' obligations and data principals' rights, including consent requirements for processing data of children and persons with disabilities. However, critical rights such as data portability and the right to object to processing are notably absent. The Data Protection Board, when established, will function primarily as an adjudicator rather than a regulator, marking a distinct approach to enforcement in India's data protection framework.

India's data protection landscape has undergone significant transformation following the passage of the Digital Personal Data Protection (DPDP) Act. From January to March 2025, MeitY released the Draft Digital Personal Data Protection Rules for public consultation.²⁸⁸⁹ The rules provide detailed procedural guidance for implementing the Act, including provisions on the powers and functions of the yet-

to-be-fully-functional Data Protection Board of India (DPBI), consent management mechanisms, and cross-border data transfer regulations that are critical given the global nature of AI systems.

MeitY has Observer status in Global Privacy Assembly (GPA); thus, India has endorsed no relevant GPA resolutions.

Algorithmic Transparency

Prime Minister Modi addressed the issue of algorithmic transparency directly in October 2020.²⁸⁹⁰ Speaking at the Responsible AI for Social Empowerment (RAISE) summit, he declared, “It remains our collective responsibility to ensure trust in how AI is used. Algorithm Transparency is key to establishing this Trust. Equally important is accountability. We must protect the world against weaponization of AI by Non-State Actors.”

The DPDP Act does not explicitly and comprehensively provide for algorithmic transparency. However, Section 11 grants data subjects the right to obtain a summary of personal data being processed, descriptions of processing activities, and identities of other data fiduciaries or processors with whom data has been shared.²⁸⁹¹ The right is limited to summaries rather than full data or algorithmic logic disclosures, reflecting a balance between transparency and protection of proprietary processing logic. Credit scoring and other algorithmic decision-making systems, which sometimes depend on opaque or proprietary algorithms, must balance the conflict between preserving proprietary processing logic and meeting transparency requirements.²⁸⁹²

Growing concerns about automated decision-making systems has sparked some action. According to a recent analysis by Siddharth Yadav,²⁸⁹³ the government has recognized that individuals using online platforms are largely unaware of how algorithmic systems function or how they influence content distribution. To address this “control asymmetry,” India is moving toward mandating “white-box” rather than “black-box” explanations of algorithmic systems. While black-box descriptions merely provide high-level justifications for system outputs, white-box explanations

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

require companies to detail how their systems process and score inputs to arrive at specific outcomes. This shift is particularly significant for high-impact systems used in public sector decision-making and large social media platforms. Regulators have also begun mandating that social media platforms include tools in their user interfaces explaining how user actions are scored and used for content distribution. However, implementation challenges remain, particularly around balancing transparency requirements with commercial interests and technical complexity.

AI-Generated Content

The Election Commission of India (ECI) issued a directive in January 2025 mandating all political parties to disclose synthetic or AI-generated content in campaign materials.²⁸⁹⁴ The directive represented India's first electoral AI-transparency requirement to protect voters' access to authentic information and ensure accountability during political communications. The Commission later reinforced these provisions ahead of the Bihar state elections, expanding their application at the subnational level.

Ministry of Electronics and Information Technology (MeitY) issued draft amendments to the Information Technology Rules, in 2025 to introduce mandatory labelling of AI-generated images, audio, and video content.²⁸⁹⁵ The amendments establish user disclosure requirements and platform accountability for synthetic content, marking the first enforceable framework on AI-generated media in India.

Biometric Identity System

In 2009, India created UIDAI (Unique Identity Authority of India) and embarked on the creation of an ambitious digital biometric identity ecosystem, the Aadhaar identity system. This ecosystem utilizes AI and machine learning techniques throughout. To facilitate a fully digital, cashless society and economy, many open application programming interfaces or APIs are now associated with the Aadhaar ecosystem.

When these APIs are linked to services or data, including those utilizing AI, it is part of "The India Stack."²⁸⁹⁶ In 2019, to further address concerns of standardization of AI development, the Department of Telecommunications formed

an AI standardization committee to develop interface standards and design India's AI Stack, a framework designed to provide standards for all sectors addressing: data privacy, protection, federation, and minimization; defined data structures; interfaces and protocols; ethical standards; digital rights; and trustworthiness.²⁸⁹⁷ The committee released a report in 2020, and invited public comments on the design of India's AI Stack. The India Stack is the largest system of its kind in the world, and by extension, among the largest AI / Machine Learning based systems in the world.

The Aadhaar system, originally a voluntary pilot program, became mandatory overtime and was tied to many services, which eventually created substantive human rights and privacy issues.²⁸⁹⁸ However, a series of landmark rulings from the Supreme Court of India, culminating in the landmark *Aadhaar Privacy* judgment of 2018,²⁸⁹⁹ attempted to curtail the negative uses of the Aadhaar system although a significant national mandate for technological, procedural, and policy improvements remained.²⁹⁰⁰ Because of this, throughout India there is a strong impetus toward implementing mitigation for privacy and autonomy concerns in the Aadhaar system, the "India Stack", and in general, AI systems. This mandate includes public participation in, and understanding of, AI systems. Since the *Aadhaar* ruling, many improvements have been made regarding AI-based identity systems and services, the "India Stack." However, the use and implementation of Aadhaar with AI tends to fall within the gray-zone of the *Aadhaar Privacy* judgment of 2018 as it prohibits the use of Aadhaar by private entities and limits the use of Aadhaar by the Government towards providing subsidies, benefits and services. In this regard, the Attorney General for India later issued a guiding opinion²⁹⁰¹ in 2019, the Aadhaar Act was further amended²⁹⁰² to make the statute comply with the *Aadhaar* judgment.²⁹⁰³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Another concern regarding the constitutional validity of the Aadhaar statute has also arisen as it was passed as a “money bill.”²⁹⁰⁴ However, privacy concerns remain and this area needs to be observed in the future. In addition, application of the GDPR in Europe renewed the focus on implementation of privacy and data protection features within India as well.

In January 2022, the Ministry of Electronics and Information Technology proposed a new model of “Federated Digital Identities” under which a citizen’s multiple digital IDs — from PAN and Aadhaar to driving license and passport numbers could be interlinked, stored, and accessed via one unique ID envisaged under India Digital Ecosystem Architecture 2.0.²⁹⁰⁵

Facial Recognition

As part of its series of publications on Responsible Artificial Intelligence (RAI), NITI Aayog published a case study for adopting a framework on facial recognition technology, seeking public comments.²⁹⁰⁶ The objective of this case study was to determine how the “governments can adhere to its stated objective of responsible and safe deployment of AI and algorithmic systems.”²⁹⁰⁷ Key recommendations include establishing liability for misuse, creating an independent ethical oversight body, and enforcing transparency for FRT deployments, particularly to address concerns over privacy and misuse.²⁹⁰⁸

In 2022, the European Center for Not-for-Profit Law (ECNL), the International Network of Civil Liberties Organizations (INCLO) and Privacy International (PI) joined together to conduct a broad survey of COVID-19 surveillance measures, such as facial recognition, adopted in 15 countries, including India. The organizations investigated negative impacts of surveillance technology and measures employed during the pandemic on activist movements and organizations.²⁹⁰⁹ The report shows that “surveillance technologies had and continue

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

to have very serious implications for the enjoyment of human rights—and for civic space more broadly.”²⁹¹⁰

EdTech

In May 2022, Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including India, for children’s education during the pandemic.²⁹¹¹ Based on technical and policy analysis of several EdTech products used in India, Human Rights Watch found that India’s endorsement of the majority of these online learning platforms put at risk or directly violated children’s rights. Some EdTech products targeted children with behavioral advertising. Many more EdTech products sent children’s data to AdTech companies that specialize in behavioral advertising or whose algorithms determine what children see online.

Environmental Impact of AI

As one of the fastest-growing economies and home to a diverse range of ecosystems, India faces the unique challenge of balancing development aspirations with environmental concerns to bear. Integration of AI into various sectors has reshaped how societies address environmental challenges and pursue sustainable development. Research papers touching on the impact of AI focus on AI applications on environment conservation rather than the environmental impact of AI.²⁹¹²

The India AI Governance Guidelines may redirect with focus by embedding sustainability under a pillar and proposing institutional bodies such as the AI Governance Group and the AI Safety Institute.²⁹¹³ However, the proposed Secretariat and environmental-impact metrics have yet to be implemented.

Lethal Autonomous Weapons

A policy brief on India’s position on Lethal Autonomous Weapons Systems (LAWS) notes the country’s support for “flexible, voluntary commitments that enshrine human accountability and compliance with [international humanitarian law]

norms in military AI.”²⁹¹⁴ India has participated in the Group of Governmental Experts (GGE) on LAWS in the Convention on Certain Conventional Weapons (CCW) and has asserted the CCW as the appropriate forum for discussions on LAWS.²⁹¹⁵ At the 78th UN General Assembly First Committee in 2023, India was one of 5 states that voted against²⁹¹⁶ resolution L.56²⁹¹⁷ on autonomous weapons systems, which was supported by 164 states. The Resolution emphasized the “urgent need for the international community to address the challenges and concerns raised by autonomous weapons systems,” and mandated the UN Secretary-General to prepare a report reflecting the views of member and observer states on autonomous weapons systems.

The Indian Army has been steadily embracing emerging and disruptive technologies to transform itself from a manpower-intensive to a technology-enabled force to meet future security challenges.²⁹¹⁸ India’s Defence Research and Development Organization (DRDO) has been involved in the R&D of Direct Energy Weapons, gun-mounted remotely operated vehicles, nuclear weapons (Agni-V), and swarm-based self-healing minefields. The indigenous R&D of Robots for armed forces was a crucial part of lethal autonomous weapons systems under the program of Prime Minister Narendra Modi’s “Make in India.”²⁹¹⁹ Recent collaborations, particularly with the U.S. and other strategic allies, are also enhancing India’s AI defense ecosystem, focusing on autonomous weaponry and battlefield data integration. These initiatives illustrate India’s commitment to becoming a significant player in South Asia’s autonomous weapons landscape, though the ethical challenges surrounding these technologies continue to be an area of debate.²⁹²⁰

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI Literacy

India's policy landscape in 2025 marks an increasingly systematic national focus on AI literacy, moving beyond earlier fragmented digital-skills initiatives and localized consultations toward structured and benchmarked programming. The Ministry of Electronics and Information Technology (MeitY) and the All India Council for Technical Education (AICTE) launched the AI for Skills and Capacity Building program to embed AI ethics, technical capability, and policy awareness into higher-education curricula nationwide.²⁹²¹ The IndiaAI–Meta Centre for Generative AI, established at IIT Jodhpur, developed open-source learning modules and educator resources to enhance both technical proficiency and civic understanding of AI's broader societal impact.²⁹²² Five regional hubs extended this programming beyond metropolitan centers, offering training for teachers, government officials, and community leaders in under-represented regions.

Human Rights

India was among the original 48 countries that voted in favor of the Universal Declaration of Human Rights in 1948. Freedom House classified India as “Partly Free” with a score of 63/100 in the 2025 Freedom in the World Report.²⁹²³ The ratings for political rights and civil liberties have steadily declined in recent years because of harassment of journalists, nongovernmental organizations (NGOs), and other government critics. Digital surveillance accounts for the decline as well.

Internet shutdowns remain a significant concern, with frequent use by both state and national governments under the Temporary Suspension of Telecom Services Rules, particularly in response to protests and sensitive events. These suspensions, often justified as maintaining public order, have led to allegations of misuse, with instances cited where shutdowns were imposed to prevent activities like exam cheating. This has prompted criticism from digital rights groups like the Internet Freedom Foundation, who argue that shutdowns should adhere more closely to strict guidelines and safeguards under the law.²⁹²⁴

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Quad Group

In September 2021, the Quad Group, India, United States, Australia, and Japan, released the “quad principles on Technology Design, Development, Governance and Use,” centered on a commitment to shared democratic values and respect for universal human rights. The principles identified are: 1) Support of universal values, such as freedom of expression, privacy, autonomy, agency, and dignity of individuals; 2) Building trust, integrity and resilience; and 3) Fostering healthy competition and international collaboration to advance the frontier of science and technology.²⁹²⁵

India and the United States launched the US-India initiative on Critical and Emerging Technology (iCET) to foster closer industrial cooperation in strategic and defense technologies, notably in the areas of artificial intelligence, quantum computing, semiconductors and 5G.²⁹²⁶ iCET deepened the US-India relationship as leaders committed to a shared vision of fostering an open, accessible, and secure technology ecosystem, based on mutual trust and confidence. India’s collaboration with the United States in the Indo-Pacific for “development, stability, and prosperity” through major initiatives including artificial intelligence continues as part of the Quad.²⁹²⁷ By collaborating on cutting-edge research and innovations in areas such as artificial intelligence, robotics, communications, and sensing through this Quad AI-ENGAGE effort, researchers collaborating across the diverse environments in Australia, India, Japan, and the U.S. can help transform agricultural approaches to empower farmers everywhere to increase yield and resilience.²⁹²⁸

BRICS

At the 2023 BRICS Summit, India, China, Russia, Brazil and South Africa accepted Iran, Ethiopia, Egypt, Saudi Arabia and the United Arab Emirates, as new

BRICS members.²⁹²⁹ Chinese President Xi Jinping announced that “BRICS countries have agreed to launch the AI Study Group of the BRICS Institute of Future Networks at an early date.”²⁹³⁰ During its 16th Summit in October 2024, the leaders adopted the Kazan Declaration and welcomed its new members attending their first Summit. The declaration seeks to strengthen multilateralism for just global development and security. India’s PM called upon BRICS to proactively push for global governance reforms. Recalling the Voice of Global South Summits hosted by India during its G-20 Presidency, he stressed that the group must give priority to the concerns of the Global South.²⁹³¹

AI Safety Summit

In November 2023, India participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²⁹³² India thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.” India also participated in the AI Seoul Summit, the second AI Safety Summit co-hosted by the Republic of Korea and the United Kingdom. The AI Seoul Summit reinforced international commitment to safe AI development and added ‘innovation’ and ‘inclusivity’ to its agenda.²⁹³³

India attended the third AI Safety Summit, rebranded as the AI Action Summit, in Paris.²⁹³⁴ Ahead of the Summit, India Co-Chaired a working group on AI

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

governance with France. The working group mapped AI governance fields as well as technical needs to provide guidance for further action, especially within the UN.²⁹³⁵ The map reiterated common principles for trustworthy AI, aligned with those in the OECD AI Principles and UNESCO Recommendation on the Ethics of AI, as the key to addressing AI governance. Other conclusions emanate from these principles on a global scale, including linguistic and cultural diversity, market structure, and access; “enablers for progress” such as public infrastructure and capacity-building; and the need to anticipate the social consequences of AI developments, such as their impact on the future of work.

OECD / G20 AI Principles

As a G20 member, India endorsed the G20 AI Principles at the 2019 G20 Leaders’ Summit in Japan. India held the Presidency of the G20 from December 1, 2022, to November 30, 2023. The 43 Heads of Delegations, the largest ever in G20, participated in the final New Delhi Summit in September 2023.²⁹³⁶ India stated that the “G20 Presidency would be a watershed moment in her history as it seeks to play an important role by finding pragmatic global solutions for the wellbeing of all, and in doing so, manifest the true spirit of ‘Vasudhaiva Kutumbakam’ or the ‘World is One Family.’”²⁹³⁷

The New Dehli Summit led G20 leaders to expressly “reaffirm [their] commitment to G20 AI Principles (2019).” In the New Dehli Declaration G20 leaders also asserted, “It is our endeavour to leverage AI for the public good by solving challenges in a responsible, inclusive and human-centric manner, while protecting people’s rights and safety. To ensure responsible AI development, deployment and use, the protection of human rights, transparency and explainability, fairness, accountability, regulation, safety, appropriate human oversight, ethics, biases, privacy, and data protection must be addressed. To unlock the full potential of AI, equitably share its benefits and mitigate risks, we will work together to promote international cooperation and further discussions on international governance for AI.”²⁹³⁸

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

A 2023 OECD study acknowledged that India is providing guidance for developers and operators on how to implement the principles.²⁹³⁹ India took further strides in AI policy and governance by hosting the Global IndiaAI Summit in July 2024, bringing together AI experts and industry leaders to discuss responsible AI use and development. Key themes included AI accessibility, infrastructure readiness, and safe, ethical AI applications across sectors.²⁹⁴⁰ India's AI Governance Guidelines introduced in 2025 align with OECD/G20 AI principles.²⁹⁴¹

India is a founding member of the Global Partnership on Artificial Intelligence (GPAI), an international initiative to support responsible and human-centric development and use of AI.²⁹⁴² The GPAI New Delhi Declaration in 2024 announced an integrated partnership with OECD, where members of both organizations would participate on equal footing in a “collaborative endeavor to harness the potential of human0centric, safe, secure, and trustworthy AI for the good of all.”²⁹⁴³

Council of Europe AI Treaty

India has not signed the Council of Europe's AI Framework Convention, the first legally binding international treaty on artificial intelligence.²⁹⁴⁴ The Convention's emphasis on human rights, democracy, and rule of law provides important benchmarks for evaluating India's evolving AI policies. However, India will be able to accede to the treaty only after it enters into force.²⁹⁴⁵

Center for AI and Digital Policy

UNESCO Recommendation on AI Ethics

India has been a member of UNESCO since its inception in 1946 and endorsed the UNESCO Recommendation on AI Ethics. UNESCO's 2022 report on the State of the Education in India urged the country to implement ethical AI in the education system as India is one of the biggest contributors to AI development.²⁹⁴⁶

IndiaAI, under the Ministry of Electronics and IT (MeitY), launched the CyberGuard AI Hackathon in October 2024 as part of its mission to democratize AI, promote India's AI leadership, and ensure ethical AI use.

India completed the UNESCO Readiness Assessment Methodology (RAM) report,²⁹⁴⁷ a tool to support the effective implementation of the Recommendation.²⁹⁴⁸ UNESCO and MeitY conducted five consultations through the first half of 2025 to prepare the RAM to guide India's roadmap for AI ethics. The final consultation centered three key takeaways: Ethics must be built into AI development to ensure safety, fairness, and inclusivity; India should tailor global best practices to the local context; and upskilling as non-negotiable to prepare India's workforce.²⁹⁴⁹ The report was published in early 2026.²⁹⁵⁰

Evaluation

India has reaffirmed its endorsement of both the G20 AI Principles and the UNESCO Recommendation on the Ethics of Artificial Intelligence, embedding their values of fairness, transparency, and accountability in emerging domestic frameworks such as the AI Governance Guidelines and recently enacted Digital Personal Data Protection Act. The consultations in 2025 to complete the UNESCO RAM represent further progress toward implementing these international frameworks.

Declines in human rights protection in India and the non-committal position of India on the regulation or prohibition of lethal autonomous weapons raise

significant concerns in view of the expanded use of the Aadhaar system among others. India's overall position remains transitional: demonstrating strong normative commitment to ethical AI domestically and internationally while being constrained by institutional and legislative gaps in implementation."

Indonesia

In 2025, Indonesia drafted a National AI Roadmap and Ethics Guidelines for public consultation pending harmonization and presidential decree. The constitutional court also ruled that AI-generated images breach the honesty of elections.

National AI Strategy

Indonesia published the National Strategy for Artificial Intelligence (*STRANAS KA*) in August 2020.²⁹⁵¹ *STRANAS KA* focused on advancing the Indonesian economy through leadership in AI,²⁹⁵² intended to implement the development strategy known as Vision Indonesia 2024 and complementing Making Indonesia 4.0, a government-sponsored program to promote the automation of the Indonesian society.²⁹⁵³ The strategy identifies four key focus areas: (1) Ethics and Policy, (2) Talent Development, (3) Infrastructure and Data, and (4) Industrial Research and Innovation. In the focus area of Ethics and Policy, the goals include implementing data sharing ethics, establishing a Data Ethics Board, and strengthening laws to crack down on the abuse of technology and the misuse of data privacy.

The Center for Digital Society (CfDS) UGM, in collaboration with Google and KORIKA, took action by opening a platform for discussions on artificial intelligence and developing the capacity of digital talent in December 2023.²⁹⁵⁴ The Minister of Communication and Informatics (*Menteri Komunikasi dan Informatika*)

Center for AI and Digital Policy

issued a Circular Letter with guidelines for AI ethics in the same month.²⁹⁵⁵ The Circular Letter included principles aligned with human rights and transparency as well as responsibilities such as ensuring the use of artificial intelligence improves innovation and problem-solving and protecting the public, specifically by preventing racism and protecting humanity from automatic decisions.

Indonesia built on this progress in 2025 with the Ministry of Communication and Digital Affairs (*Kementerian Komunikasi dan Digital*, KomDigi; previous Ministry of Communication and Informatics, KomInfo) release of National Artificial Intelligence Roadmap White Paper and Concept of Artificial Intelligence Guidelines.²⁹⁵⁶ The documents will serve as the basis for regulatory/policy strategies and to strengthen the AI ethics policy in the 2023 Circular Letter.

Pancasila Values

The National Strategy states that Indonesian AI policy should be based on Pancasila values, the foundation of the Indonesian government.²⁹⁵⁷ Pancasila is a philosophical theory comprising five principles—Belief in the One True God, A fair-minded and civilized humanity, Unity of Indonesia, Democracy (from the people) led by Wisdom of consultation [of the] representatives [of the people], and (Social justice for every person in Indonesia. The AI Strategy sets out the importance of establishing public trust through transparency, social and ecological welfare, robustness and technical safety, diversity, justice, and non-discrimination, amongst others. The Strategy emphasizes the importance of AI being reliable, safe, open, and accountable. Synergy between stakeholders is also mentioned to ensure that the policy is relevant and helpful.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Public Participation

The Agency for the Assessment and Application of Technology (BPPT), since transformed into the National Research and Innovation Agency (*Badan Riset dan Inovasi Nasional*, BRIN) coordinated the development of the National AI Strategy with help from a “wide variety of public and private sector organizations” who “contributed to the plan including government ministries, universities, industry associations, and national telecom providers.”²⁹⁵⁸ The Institute for Policy Research and Advocacy (ELSAM) held a public discussion titled Preparing Responsible and Trustworthy AI Regulation for Indonesia in July 2024, where recommendations were presented to the Ministry of Communication and Information Technology.²⁹⁵⁹

The Jakarta Smart City initiative also encouraged community participation and government responsiveness through social media, public figures, and a public reporting system. Further, the “management of community complaints was conducted with effective coordination between the Jakarta Smart City team and various government departments.”²⁹⁶⁰ In August 2023, the Ministry of Communication and Information began the third phase in the implementation of the PDP Law by releasing a Draft Government Regulation on Personal Data Protection (RPP PDP) as a derivative regulation from the 2022 PDP Law, requesting public input.²⁹⁶¹ Deputy Minister Nezar Patria highlighted the evolving dynamics of personal data protection in light of technological advancements, underscoring the critical role of public involvement in refining the RPP PDP.

The Ministry of Communication and Digital Affairs (KomDigi) opened public consultation on the National AI Roadmap White Paper and draft Ethics Guidelines.²⁹⁶² The white paper was developed by a 443-member task force with

representatives from government, industry, academia, and civil society. In its call for comments the Ministry states that “Through this mechanism, the government seeks to present regulations that are grounded not only in technical and economic considerations, but also in ethical values, culture, and the broader public interest.” The white paper seeks to address implementation gaps, but is pending issuance as a presidential regulation, which would give it legal force.²⁹⁶³ This engagement follows the government plan for “industry, academics, NGOs, and the wider community to contribute to the development of policies that will optimize the benefits of AI while mitigating the risks of utilizing AI technology.”²⁹⁶⁴

Data Protection

Indonesia’s Personal Data Protection Law (PDP Law) came into force in 2022.²⁹⁶⁵ The law references the EU GDPR and enshrines the Data Subject’s right to object to automatic profiling activities. PDP Law exempts the financial services sector and imposes stricter requirements on broad record-keeping obligations and unique provisions on facial recognition technology and special categories of data (e.g., children’s data, personal financial data).²⁹⁶⁶

The PDP Law provides for the establishment of a Data Protection Authority (DPA) to “implement the PDP Law and report to the Indonesian President, which will create the institution within the Executive branch of the government. The Indonesian DPA will have four key functions: (i) policy, strategy, and guidance formulation; (ii) supervision of the implementation of the PDP Law; (iii) administrative law enforcement against violations; and (iv) facilitating out-of-court dispute resolution.”²⁹⁶⁷ However, no Data Protection Authority has been named as of 2025.

²⁹⁶⁷ Ibid

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The Indonesian data protection regime comprises several other laws such as the Law regarding Electronic Information and Transactions (EIT Law) and its implementing regulations.²⁹⁶⁸

Indonesia has no data protection authority to represent the country on the Global Privacy Assembly.²⁹⁶⁹

Algorithmic Transparency

Indonesia's PDP Law provides data subjects with the right to opt out of profiling and automated decision making.²⁹⁷⁰ The 2023 Ministry of Communications and Informatics (KomInfo) Circular Letter instructs business actors and electronic system organizers to "provide information related to the development of Artificial-Intelligence-based technology to prevent negative impacts and losses from the resulting technology on users." This requirement and others tied to data privacy and transparency provide a basic transparency but do not yet rise to the level of providing a base for redress or correction.

AI Oversight

As part of the Personal Data Protection Law (PDP Law), Indonesia is to create a Data Protection Authority (DPA); however, the Ministry of Communication and Digital Affairs (KomDigi) remains responsible for overseeing data protection regulation in the meantime. In June 2025, the Ministry of Communication and Digital (Komdigi) explained that work on the implementing regulations for the PDP Law is still ongoing, both regarding the establishment of a PDP supervisory body and the more detailed technical rules for implementation.²⁹⁷¹ However, certain sectors have their own authorities to ensure compliance with the regulatory regime. For example, the Indonesian Financial Services Authority (FSA) has the authority to act as the regulator of data privacy in the capital markets sector and for banks' customer data privacy issues.²⁹⁷²

Center for AI and Digital Policy

The National Human Rights Commission of Indonesia, Komnas HAM aims to “improve the protection and enforcement of human rights in order to develop the whole Indonesian human person and the ability to participate in various fields of life.”²⁹⁷³ Komnas HAM is an independent institution established in 1993 by Presidential Decree. The Law Number 39 of 1999 provided for its “existence, purpose, function, membership, principles, completeness, duties and authority.” While the 1999 law does not explicitly mention AI technologies, Komnas HAM's broad mandate enables it to address human rights issues arising from AI deployment. In recent years, Komnas HAM has engaged in discussions and initiatives concerning the human rights implications of AI, reflecting its commitment to adapting its oversight to emerging technological challenges. Komnas HAM carries out studies, research, counseling, monitoring, and mediation of human rights.²⁹⁷⁴ Komnas HAM has also the authority to conduct investigations into human rights violations and supervise regional and central governmental policies.

AI Ethics and Data Business Requirement

Pursuant to the Ministry of Communications and Informatics (KomInfo) Regulation, any company having a line of business developing artificial intelligence-based programs must establish and implement an internal policy on Artificial Intelligence Ethics and Data.²⁹⁷⁵ This regulation requires companies to align their internal policies with Indonesia's National Strategy on Artificial Intelligence 2020–2045 and ethical guidelines set forth by KomInfo. These policies emphasize transparency, accountability, and compliance with international standards like the UNESCO Recommendations on AI Ethics. The Minister of Communication and Informatics Circular letter No. 9 offers further guidance on ethical values and principles for business actors, public electronic system operators, and private electronic system operators involved in AI-based programming.²⁹⁷⁶

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Deputy Minister of KomInfo Nezar Patrias suggested industries implement five strategic steps to respond to artificial intelligence (AI) developments: 1) implement responsible and strategic leadership, 2) collaborate between sectors, 3) build and embed ethical AI frameworks, 4) integrate tools and methods to detect problems as part of continual review, and 5) ensure that the use of AI will not replace the capacity and role of humans.²⁹⁷⁷ Building on the National AI Strategy 2020–2045 and the recently amended Electronic Information and Transactions Law (EIT Law), these regulations will provide specific mandates for businesses to enforce internal policies on AI ethics. The regulations will also introduce a monitoring mechanism to ensure compliance, taking cues from the UNESCO AI Readiness Assessment Methodology.²⁹⁷⁸

Smart Cities

In a bid to solve Jakarta's traffic gridlocks, flooding, and waste management, the city has turned to AI. The Indonesian government launched the Jakarta Smart City (JSC) initiative.²⁹⁷⁹ Built on six pillars, the program uses AI to tackle the city's governance, people, living, mobility, economy, and environmental issues. The Smart City initiative encourages public comment to promote transparency of the local government's work and better public services.

There are currently 98 smart cities and 416 smart districts planned under Indonesia's 100 Smart Cities Plan. In 2019, President Widodo announced a new capital on the island of Borneo, to replace Jakarta. It is planned to be a smart city that will "rely heavily on sustainable smart city systems, cleantech and infrastructure run by emerging technologies such as 5G, AI and IoT (Internet of Things)." ²⁹⁸⁰

Indonesia began addressing gaps in the legal framework and monitoring mechanisms in the development of smart cities by exploring legislative frameworks for smart city governance and independent monitoring. Telkom Indonesia partnered

Center for AI and Digital Policy

with NEC to deploy AI-driven smart city solutions focusing on public safety, energy efficiency, and infrastructure management. This collaboration marks a key step toward establishing a resilient and scalable model for future smart cities across the country.

Despite these advancements, Indonesia's smart city projects struggle to balance environmental sustainability and technological growth. The development of Nusantara and other initiatives has drawn criticism over deforestation and biodiversity loss.²⁹⁸¹ Addressing these concerns will require a careful approach to urban expansion while preserving natural resources.

In December 2023, European defense technology company Thales and the Indonesian new capital city authority have signed a memorandum of understanding (MOU) “for strategic cooperation” regarding a smart city in Nusantara. The MOU says they “will strengthen the cooperation between the two parties in the development of smart city concepts, including digital identity, traffic management of unmanned aircraft systems, cybersecurity and data centers.”²⁹⁸²

AI in Public Administration

Many Indonesian national and regional government-related entities recognize the adoption of AI in their policies as well as solutions. The Indonesian Ministry of Health in its 2021–2024 Digital Transformation Strategy in the Health Sector recognizes the use of AI in its plan to enable big data analytics in medical sectors. The strategy is now supported by ministerial regulation that provides legal ground for the strategy's implementation. The digital strategy includes the integration of AI-powered diagnostic tools aimed at improving patient outcomes in rural areas. The Digital Health Transformation Strategy (DHTS) 2025–2029 focused on integrating health data systems, developing health service applications, and fostering a robust health technology ecosystem.²⁹⁸³ The SATUSEHAT platform, which consolidates various health service applications into a single system to enable seamless data exchange among healthcare providers, marks progress implementing the strategy to improve patient care while streamlining administrative processes.

The Indonesian Train Agency/Kereta Api Indonesia, a state-owned enterprise, has rolled out a facial recognition system to support passenger verification

system. Kereta Api Indonesia (KAI) has also partnered with Telkom Indonesia to implement a predictive maintenance system across its rail network. This system uses AI-powered sensors and machine learning models to analyze real-time data on train operations, enabling proactive identification of faults and reducing service disruptions.

EdTech and Children Tracking

According to a 2022 Human Rights Watch report, several EdTech apps—including Rumah Belajar, Quipper, Ruangguru, and Kelas Pintar—collect children’s advertising IDs, tagging and identifying their devices for advertising purposes during the COVID-19 pandemic.²⁹⁸⁴ Kelas Pintar collected children’s International Mobile Equipment Identity (IMEI) numbers and granted access to children’s contact data to third-party companies. Rumah Belajar, a government-built platform, disclosed in its privacy policy that it collects and uses students’ data for behavioral advertising, and has shared children’s data with AdTech companies. Additionally, Rumah Belajar, Ruangguru, and Sekolah.mu collected precise location data, tracking children’s whereabouts. Ruangguru and Sekolah.mu collected Wi-Fi SSID revealing names of connected Wi-Fi routers. Third-party SDKs were embedded in Kelas Pintar, Quipper, Ruangguru, Rumah Belajar, Sekolah.mu, and Zenius enabled continuous tracking of children’s activities.

Environmental Impact of AI

KomInfo’s Circular Letter on Artificial Intelligence Ethics, emphasizes that the implementation of Artificial Intelligence should carefully consider the impact on humans, the environment, and other living things, to achieve sustainability and social welfare.²⁹⁸⁵ However, official regulation to enforce protections for people and the planet have yet to be developed. The National Artificial Intelligence Roadmap White Paper released for consultation in 2025 represents a step toward official policy.²⁹⁸⁶

Lethal Autonomous Weapons

Indonesia maintains a consistent, cautious stance on Lethal Autonomous Weapons Systems (LAWS), emphasizing the necessity of meaningful human control (MHC) over the use of force. Indonesia has consistently reiterated support for the urgent negotiation of a legally binding instrument with prohibitions and regulations on LAWS at the 79th UN General Assembly First Committee in October 2024.²⁹⁸⁷ Indonesia's statement urged precaution in the use of AI in nuclear command, control, and communications systems. The statement stressed the need to uphold international law across the lifecycle of AI technologies broadly and maintained "the essential role of the human element in ensuring accountability and responsibility at all levels, be it at the state, corporate, or individual levels, in the design, development, and use of AI in the military domain."

Indonesia also participated in an international summit on the responsible application of artificial intelligence in the military domain hosted by the Netherlands. At the end of the Summit, Indonesia, together with other countries, agreed on a joint call for action on the responsible development, deployment and use of artificial intelligence in the military domain.²⁹⁸⁸

Domestically, the TNI considers AI an "unavoidable" necessity for defense modernization but is proceeding with high caution regarding lethal applications.²⁹⁸⁹ The Ministry of Defense decided in December 2024 to cautiously adopt AI in the Armed Forces' main weapon systems for 2025 while citing concerns over the unreliability of AI-powered systems in achieving accurate target acquisition and avoiding civilian casualties. The TNI Commander has indicated a push to modernize war doctrine to integrate AI-based drone technology (e.g., swarm drones), while stressing that the ultimate execution of lethal missions must remain under human command and control.²⁹⁹⁰

AI Literacy

Public consultations as Indonesia conducted UNESCO Readiness Assessment Methodology (RAM) identified low public knowledge of AI risks such as the potential to reinforce bias and discrimination and a digital talent gap.²⁹⁹¹ Capacity-building was a key recommendation. In response, the Ministry of Primary and Secondary Education developed coding and AI curriculum for the 2025–2026 school year aligned with the Ministry of Communication and Digital Affairs efforts on digital literacy.²⁹⁹² The curriculum, which is currently optional, focuses on addressing the talent gap, specifically in competition with India. Still, Minister Abdul Mu'ti centered responsible and ethical use with his statement that “Mastering technology is essential, even necessary. But its use must be directed toward positive and meaningful activities for the benefit of society.”

Human Rights

Indonesia has ratified the Universal Declaration of Human Rights. According to Freedom House, Indonesia is “Partly Free,” with a total score of 56/100.²⁹⁹³ Freedom House reports that “Indonesia has made impressive democratic gains since the fall of an authoritarian regime in 1998, enjoying significant political and media pluralism and undergoing multiple, peaceful transfers of power. Significant challenges persist, including systemic corruption, discrimination and violence against minority groups, conflict in Papua, and the politicized use of defamation and blasphemy laws.”²⁹⁹⁴

The Indonesian Constitutional Court prohibited the use of AI-generated images in elections to uphold the honesty principle following a 2025 constitutional complaint.²⁹⁹⁵ The complaint argued that AI was used to manipulate and generate

misleading images in the electoral context, undermining the rule of law and the right to information as a voter.²⁹⁹⁶

AI Safety Summit

In November 2023, Indonesia participated in the first AI Safety Summit and endorsed the Bletchley Declaration.²⁹⁹⁷ Indonesia thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

Indonesia participated in the AI Action Summit in Paris. During the summit, Indonesia, along with 57 other countries, signed the “Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet,” emphasizing principles such as accessibility, transparency, and international cooperation in AI development.²⁹⁹⁸

OECD / G20 AI Principles

Indonesia is a member of the G20 and endorsed the G20 AI Principles, which draw from the OECD AI Principles.²⁹⁹⁹ The Indonesia National AI Strategy addresses several OECD AI principles.³⁰⁰⁰

Indonesia hosted the G20 in 2022, following the Italian presidency in 2021, and preceding the Indian presidency in 2023. The 17th G20 Heads of State and

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

government, academia, civil society, and the private sector. The report highlights key policy recommendations that can mitigate these challenges. The recommendations include the creation of a National AI Agency for coherent governance, comprehensive regulations in line with global standards, and capacity building initiatives to ensure access to AI resources equitably, especially beyond urban centers.

The Ministry of Communication and Digital Affairs (KomDigi) advanced UNESCO implementation—especially in the areas of international cooperation, human rights, and democratic values—through a Joint AI Policy Dialogue Country Report in partnership with the UK Department for Science, Innovation and Technology.³⁰⁰⁷ The report identified six priority areas for policy development that KomDigi will use to frame concrete, nationally aligned AI policy recommendations.

Evaluation

Indonesia has endorsed the G20 AI Principles and the UNESCO Recommendation on the Ethics of AI, developed a national AI strategy, and became the first Southeast Asian country to complete the UNESCO AI Readiness Assessment. These developments provide a foundation for formulating inclusive and ethical AI policy and regulations.

KomInfo's Circular Letter on ethical guidelines was pivotal in emphasizing the ethics of AI and its impact on humans, the environment, and living beings. The government plans to introduce more comprehensive AI regulations, including the creation of a supervisory authority and efforts to promote AI ethics within the private sector—both key steps toward ensuring trustworthy AI. Completion of the RAM led to progress on developing these national regulations and related policies and regulations to prepare citizens for the integration of AI technology. In parallel, Indonesia is exploring legislative frameworks for smart city governance and independent oversight.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Iran

In 2025, Iran launched a nationwide free AI education initiative and established the National Artificial Intelligence Organization (NAIO) to guide AI governance. Iran furthered testing on AI-guided missiles and drones while limiting participation in efforts in the UN toward a treaty regulating lethal autonomous weapons systems (LAWS).

National AI Strategy

Iran's Supreme Council of the Cultural Revolution (SCCR) adopted the National AI Document of the Islamic Republic of Iran (NAID) in 2024.³⁰⁰⁸ The NAID describes its development as a significant step toward advancing the components of an "Islamic-Iranian modern civilization," enhancing the quality of governance, and strengthening scientific and research foundations in support of national progress and regional and global engagement. The document frames artificial intelligence as a strategic technology for economic competitiveness, governance modernization, and national security.

The NAID sets out policy directions for developing responsible and value-based AI aligned with constitutional principles and Islamic ethics.³⁰⁰⁹ It emphasizes protection of human dignity, justice, privacy, and national sovereignty, and calls for preventing unlawful profiling and social harm. The NAID calls for the prevention of the misuse of AI for domination and highlights the need to strengthen human relationships and avoid social isolation in the development of AI.

Seven strategic objectives are identified in the NAID:

- development of specialized AI human capital,
- expansion of legal, data, network, and computing infrastructure;
- growth in scientific output and regional research leadership;
- promotion of innovation with economic impact;
- strengthening economic competitiveness;
- international cooperation with priority for aligned countries;
- use of AI to enhance governance, social justice, and national security.

The NAID calls for legal rules addressing liability and accountability of autonomous systems, standards for AI system safety, reform of intellectual property rules for AI-generated outputs, and creation of sandboxes.³⁰¹⁰ It also identifies

³⁰⁰⁸ Supreme Council of the Cultural Revolution, *National AI Document of the Islamic Republic of Iran* (Jun. 18, 2024), <https://rc.majlis.ir/fa/law/show/1811432>

³⁰⁰⁹ Ibid

³⁰¹⁰ Ibid

priority sectors for deployment, including education, healthcare, government services, defense and security, industry and energy, agriculture, Persian language technologies, judicial services, and media governance.

The NAID establishes a National AI Steering Council responsible for directing and overseeing implementation and provides for the creation of a National AI Organization (NAIO) as an independent body. The NAIO formed the presidency of Ebrahim Raisi³⁰¹¹ and was tasked with organizing and developing the national AI ecosystem and serving as the secretariat of the National AI Steering Council. The administration that took over after Raisi's death, however, did not support the establishment of an independent AI organization.³⁰¹² The Cabinet subsequently suspended the NAIO and transferred AI coordination functions to the Task Force for the Development of AI Technology and Applications (AI Task Force), which operates under the Office of the President.³⁰¹³

The AI Task Force³⁰¹⁴ is chaired by the President or the First Vice President and includes the Vice President for Science, Technology and Knowledge-Based Economy; the Ministers of Science, Education, Communications and Information Technology, Industry, Defense, Health, and Intelligence; the Chief of the Armed Forces General Staff; the Head of the Planning and Budget Organization; the Head of the Administrative and Recruitment Affairs Organization; the Secretary of the Supreme Council of the Cultural Revolution (SCCR); the Secretary of the Supreme Council of Cyberspace; the Head of the Innovation and Prosperity Fund; and two AI specialists selected from academia or industry.

The 2022 Strategic Document on Cyberspace, adopted by the Supreme Council of Cyberspace, designates the Vice Presidency for Science, Technology to

develop the governance framework for the deployment of emerging digital technologies, including AI.³⁰¹⁵ The cyberspace strategy document places responsibility for national data governance and smart government design with the Ministry of Communications and Information Technology.

AI Legislation

The first legislative measure addressing AI in Iran was adopted in June 2024 through the Seventh Five-Year Development Plan Law (2024–2027).³⁰¹⁶ The provision requires the Government to take the necessary legal measures to implement a National AI Development Program to support of “the development of a transformative, trustworthy, and sustainable AI ecosystem, and for the purpose of establishing frameworks and mechanisms for multi actors interaction, providing technical, social, ethical, and legal infrastructure, and promoting awareness of the functions of artificial intelligence in various fields and its potential risks.” The AI Task Force responded by preparing a draft of the National AI Development plan in August 2025.³⁰¹⁷ The draft was released for public consultation.³⁰¹⁸

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

In October 2024, Parliament introduced a National AI Bill.³⁰¹⁹ The bill focused on strengthening national AI capacity, including development of foundational models, infrastructure expansion, and reducing technological dependency. The AI Bill did not provide detailed safeguards on fundamental rights, accountability, transparency, data protection, or public participation. The bill states that it was introduced in line with the National AI Document and proposed institutional arrangements that overlapped with structures previously established by the Supreme Council of the Cultural Revolution (SCCR). The bill envisaged the creation of a National AI Organization and a National AI Steering Council under presidential control and oversight, not as independent bodies.

During parliamentary consideration, the SCCR requested withdrawal of the bill on the grounds of inconsistency and institutional duplication.³⁰²⁰ Parliament did not remove the bill from its agenda and approved the relevant provisions.³⁰²¹ Bills adopted by Parliament must be vetted by the Guardian Council. At the time of writing, no final approval or publication of the National AI Bill in the Official Gazette has been reported.

Public Participation

Iran does not have an institutionalized mechanism for public participation in law-making or policy development. Draft laws and policies are typically prepared within government bodies or parliamentary committees without a formal process for public consultation or comment before adoption. Bills are reviewed in parliamentary committees and plenary sessions, where experts may occasionally be invited to

Center for AI and Digital Policy

provide input. However, this ad hoc consultation does not constitute a formal or transparent mechanism for public or stakeholder participation. The government purports to support public inclusion in AI policy frameworks. However, evidence of this participation outside government institutions is difficult to access from abroad.

The Strategic Document of the Islamic Republic of Iran in Cyberspace refers to stakeholder participation in cyber governance as one the values.³⁰²² Also, prior to its final adoption, the draft National AI Document was made publicly available, and a call for input was issued inviting experts to submit comments and proposed revisions through the Supreme Council of the Cultural Revolution's (SCCR) online consultation platform.³⁰²³ However, the NAID was adopted through SCCR internal procedures, with no reference to public calls for comment, engagement with civil society, or publication of draft texts for review, indicating a top-down adoption process.³⁰²⁴

A public call for comments on the draft National AI Development Program was announced in August 2025 following a review by the Specialized Committee of the government AI Task Force. The call invited experts and stakeholders to submit their views. The announcement was reported by several news agencies. However, as of November 2025, no public update has been released regarding the outcome of this consultation process.³⁰²⁵

Data Protection

Iran has not yet adopted a comprehensive personal data protection law. A draft personal data bill prepared in 2018–2019 under the Ministry of Communications was not submitted to the parliament.³⁰²⁶ A subsequent parliamentary proposal introduced in 2020–2021 was set aside following the change in administration. In 2024, official sources indicated that the government was preparing a Personal Data Protection and Preservation Bill. As of November 2025, the draft text had not been finalized for submission to Parliament or made public.³⁰²⁷ The legal framework for privacy derives from a combination of other laws and regulations dealing with data protection alongside additional issues. Such legislation includes the Law on Publication and Access to Data 2009,³⁰²⁸ the Electronic Commerce Law 2004,³⁰²⁹ and the Cybercrime Law 2009.³⁰³⁰

Executive Guidelines for Improving the Protection of User Privacy³⁰³¹ adopted by the Supreme Council of Cyberspace (SCC) in 2024 established, for the first time in a unified instrument, a set of user privacy protections applicable to private and public online platforms and digital service providers operating in Iran. The Guidelines set out obligations relating to transparency, consent, data minimization, confidentiality, deletion rights, and enforcement. The guidelines form the first part of a broader Document on Policies and Obligations about Data Protection.

The Guidelines³⁰³² require that users be informed of the methods and purposes of data collection and that consent be obtained. Users must be notified whether data is collected directly or through other systems. The purpose of processing must be specified, and any new use of personal data requires renewed consent. Users must also be informed which data elements are mandatory and which

are optional. Data collection, processing, and storage must be limited to what is necessary for the performance of legal duties or legitimate business purposes and must remain proportionate to the purpose communicated to, and accepted by, the user. Data enabling the identification or tracking of individuals must be encrypted to support confidentiality and security. Users also have a right to deletion. Requests for deletion, including the closure of accounts and removal of associated records, must be implemented without delay.

Despite these protections, Article 667 of the Code of Criminal Procedure,³⁰³³ traffic data and user data mandates that, once deleted from platforms, data must be transferred to offline data support bases separate from public communication networks for six months before they are deleted. Enforcement measures include the non-renewal of licenses for service providers and platforms that fail to comply. In cases where non-compliance results in a violation of privacy, civil and criminal liability may attach to responsible entities. The implementation timeline establishes a two-month period for compliance with rules governing new data collection; a three-month period for bringing previously collected data into conformity with transparency, consent, and minimization requirements; and a one-month period to integrate identity verification mechanisms of the Civil Registration Organization to prevent redundant collection of identity data, subject to the operationalization of the System for Reliable Identity in the Country's Cyberspace.

The Iranian Communications Regulatory Authority has access to a web application known as SIAM, which allows for the remote manipulation of cellular connections. This application is part of Iran's data restriction. SIAM is a computerized system that operates in the background of Iranian cellular networks, giving SIAM operators a wide range of options for remotely executing commands to modify, interrupt, and monitor customers' phone use. These tools may reveal the data links in a crawl, decrypt phone calls, trace the movements of people or large groups, and generate complete metadata summaries of who spoke to whom and when.³⁰³⁴

In 2024, Article 75 of the Seventh Development Plan Law³⁰³⁵ established a Lifestyle Monitoring System to be implemented by the Ministry of Culture and Islamic Guidance in coordination with the Statistical Center of Iran and the Islamic Republic of Iran Broadcasting. The system is intended to collect statistical data on a continuous basis to support processing and analysis in the study of lifestyle trends and identification of socio-cultural developments. Government agencies, public

Center for AI and Digital Policy

service providers, and private entities, including digital platforms handling user data, are required to transmit relevant data to the System on an ongoing basis. The Law does not include specific provisions concerning the protection of personal data within this framework.

Iran has no representation with the Global Privacy Assembly (GPA).³⁰³⁶ Iran has endorsed no GPA resolutions.

Algorithmic Transparency

The government of Iran has not adopted legislation that mandates algorithmic transparency. The UN High Commissioner for Human Rights report in 2025 observed expanded use of AI-based facial recognition for Hijab Law enforcement with no transparency about accuracy or bias mitigation. Citizens lack mechanisms to appeal AI-generated decisions.³⁰³⁷

Freedom of Internet and Digital Rights

Over the past decade and a half, Iran has gradually institutionalized a state-managed model of internet governance through legislation, regulatory bodies, and infrastructure development.

Following the disputed 2009 presidential election and the Green Movement protests, authorities expanded online filtering and strengthened centralized oversight of digital content. The Computer Crimes Act (2009)³⁰³⁸ established the Committee for Determining Instances of Criminal Content, whose decisions became binding on internet service providers. Filtering was implemented through domain blocking, IP blocking, and keyword-based restrictions, targeting social media platforms, messaging applications, news outlets, and political content.

In parallel, The Fifth Development Plan (2011–2015) provided the legal basis for establishing the National Information Network (NIN), a domestically managed internet infrastructure project.³⁰³⁹ Mandated under Article 46 of the Plan and further

Center for AI and Digital Policy

specified in the Supreme Council of Cyberspace's 2017 Explanation of the Requirements of the NIN³⁰⁴⁰ and 2020 Comprehensive Plan and Architecture of the NIN" (NIN Architecture Plan), the framework was defined as a nationally controlled system for routing and hosting internet traffic.³⁰⁴¹

Official documents describe the NIN as consisting of three layers: infrastructure (including domestic routing systems, data centers, and state-controlled international gateways), services (such as search engines, messaging platforms, cloud services, and e-government applications), and content (locally hosted digital media and digital services). Within this structure, filtering and traffic management operate alongside localization policies. By routing traffic through centralized gateways and promoting domestically hosted alternatives, authorities can restrict access to international platforms while maintaining internal services. Pricing policies further differentiate between domestic and international traffic, making access to global services more costly than use of platforms hosted within the NIN.

The 2020 NIN Architecture Plan set a target of allocating 70 percent of traffic to domestic services and 30 percent to international traffic, and called for charging two to three times higher tariffs for access to the global network compared to domestic NIN services. In December 2023, fixed and mobile internet tariffs increased by 34%, with officials stating that the increase applied only to international traffic.³⁰⁴²

In November 2019, during nationwide protests, authorities imposed a ten-days nationwide internet shutdown.³⁰⁴³ International connectivity was largely suspended, while many domestic banking and government services operating within the NIN remained accessible. At the time, officials stated that the blackout

³⁰⁴³ ARTICLE 19, *Iran: Tightening the Net 2020, After Blood and Shutdowns* (Sept. 2020), <https://www.article19.org/ttn-iran-november-shutdown/>

demonstrated the operational capacity of the NIN and served as a test of its functionality under crisis conditions.³⁰⁴⁴

After the protests that began in September 2022, widely known as the Women, Life, Freedom movement, additional access restrictions were imposed. Instagram and WhatsApp were blocked, mobile data disruptions were reported in multiple provinces, and bandwidth management measures were applied during periods of unrest.³⁰⁴⁵

Despite these restrictions, Iranian internet users continued to bypass controls through VPNs and other circumvention technologies, sustaining access to blocked platforms. In response, restricting access to these tools became part of broader efforts to limit connectivity to the global internet.³⁰⁴⁶ Beyond technical blocking of VPN protocols and related IP ranges, the Supreme Council of Cyberspace adopted a resolution on February 19, 2024, prohibiting the use of VPNs and introducing a formal regulatory basis for restricting circumvention tools.

Policy discussions have also included a tiered internet system,³⁰⁴⁷ granting selected groups, such as academics and officials, access to international websites, while restricting the general population to domestic platforms within NIN.³⁰⁴⁸ This

government-controlled network is designed to isolate Iranians from global information and confine them to the tightly monitored NIN.³⁰⁴⁹

Authorities implemented the Telecommunication Company of Iran (TCI), which is run by the ICT Ministry, to control internet traffic flowing in and out of the country.³⁰⁵⁰ While the Islamic Revolutionary Guard Corps (IRGC), a security force, previously held a majority stake in the Telecommunication Company of Iran (TCI), the IRGC withdrew from the telecommunications sector in October 2018, selling its shares in TCI and the Mobile Telecommunication Company of Iran (MCI). However, TCI's dominance over Iran's internet infrastructure still facilitates extensive monitoring of online activities.³⁰⁵¹

U.S. sanctions reinstated and expanded in 2018 have had indirect effects on internet access in Iran.³⁰⁵² Compliance risks associated with primary and secondary sanctions have led many technology companies to limit services to Iranian users,³⁰⁵³ contributing to reduced access to international digital tools and greater reliance on domestic infrastructure, including the NIN.

To mitigate sanctions-related constraints, the U.S. Treasury's Office of Foreign Assets Control (OFAC) issued General License D-1 (2014)³⁰⁵⁴ and D-2 (2022),³⁰⁵⁵ authorizing the provision of certain personal communications tools and services to Iran, including messaging apps, VPNs, satellite internet hardware, and related cloud services, without a specific license. However, compliance risks and financial restrictions continue to limit practical access to these tools.³⁰⁵⁶

Digital ID (National Smart Card)

Iran implemented digital IDs as part of the e-government program.³⁰⁵⁷ The Unique Identification is a real-time digital authentication solution developed by the Iranian start-up UID to enhance security and efficiency in identity verification through AI-based identity authentication, liveness detection, and offline password-less digital ID storage.³⁰⁵⁸ Integration of the digital ID platform stems from an agreement Iran's Law Enforcement Forces signed with the firm.³⁰⁵⁹ The digital ID platform obtains 5 to 15-second selfie videos that then run through an ID liveness detection algorithm to verify user identity against an original image registered with Iran's Civil Registration Organization. The system is expected to connect with national security and internet access programs such as the NIN, embedding surveillance into daily life.

Iran's Executive Council of Information Technology built a digital platform as part of its ongoing e-government initiatives.³⁰⁶⁰ The platform plays a central role in accessing public services, including e-government and e-health, effectively making digital identification mandatory for all citizens engaging with government services. After pilots with the Ministry of Agriculture and the Ministry of Culture and Islamic Guidance, the Council announced the addition of the Ministry of Cooperatives Labor and Social Welfare, the Ministry of Economic Affairs and Finance, the Iranian Health Insurance Organization, the Ministry of Welfare and Social Security, and the Central Insurance of Iran to the platform for the next phase of the digital government.

Facial Recognition

Iran has increasingly incorporated biometric tools, surveillance technologies, and facial recognition into the law enforcement system for border control and citizen

Center for AI and Digital Policy

surveillance.³⁰⁶¹ Iran's banking sector is adopting biometric methods and requires customers to provide their smart identity for many banking transactions. Iranian officials have also announced plans that would require citizens to verify their identity using the smart identity card to access the internet.³⁰⁶²

The Chief Commander of the Iranian Police stated that individuals breaching hijab rules had been identified using advanced technological systems and referred to judicial authorities.³⁰⁶³ Public evidence does not confirm the large-scale deployment of AI-based facial recognition; past enforcement practices suggest reliance on CCTV, license plate recognition, and manual review.³⁰⁶⁴ Reports indicate that since around 2015, authorities have supported the domestic development and procurement of facial recognition and image-processing tools, though the extent of operational deployment remains unclear.³⁰⁶⁵

According to the UN Independent International Fact-Finding Mission on the Islamic Republic of Iran, in its March 2025 report, authorities used aerial drones in April 2024 in Tehran and southern Iran to monitor hijab compliance in public spaces. The report also states that facial recognition software was reportedly installed at the entrance of Amirkabir University to monitor women students. Earlier, in April 2023, the Chief Commander of the Law Enforcement Forces announced the expanded use of "smart technologies" to address alleged hijab violations.³⁰⁶⁶ The 2023 draft "Hijab and Chastity" bill likewise emphasized the creation and strengthening of intelligent identification systems using fixed and mobile cameras and artificial intelligence.³⁰⁶⁷ The proposed legislation consolidated and intensified hijab enforcement by introducing higher fines, extended prison terms, and restrictions on employment and education for violations. Although the bill was adopted by Parliament, it was not

promulgated. In May 2025, the Supreme National Security Council directed that the law be suspended, and it has not entered into force.³⁰⁶⁸

EdTech and Children Tracking

Human Rights Watch published a global investigative report on the education technology (EdTech) endorsed by 49 governments, including Iran, for children's education during the pandemic in 2022. Based on technical and policy analysis of the Shad App, owned and provided by Iran, Human Rights Watch found that the government endorsement of this online learning platform put at risk and directly violated children's rights. The app provided access to education for 50% teachers and 25% students. The enrollment was lower in less developed regions of Iran.³⁰⁶⁹

The report states that "Teachers in Iran told Human Rights Watch that the government compelled those in public schools to use Shad, an app built by Iran's Education Ministry for online learning during Covid-19. One teacher said: "The principal called and said that if I do not install the Shad app, I would be recorded as absent. The authorities do not accept teaching in Telegram and WhatsApp. Students have also been told that if you are not in this app, your score will not be approved and will not be sent to the [school]." In October 2021, the Iranian government reported more than 18 million active users of Shad. Technical analysis of Shad's code by Human Rights Watch found that the app can collect children's precise location data, the time of their current location, the child's last known location, their Wi-Fi SSID, IP address, the child's contacts, and any saved photos of their contacts.

Environmental Impact of AI

Iranian authorities increasingly promoted artificial intelligence as a tool for environmental protection, particularly in drought monitoring, air-pollution forecasting, and natural-hazard prediction.³⁰⁷⁰ The Department of Environment (DoE) announced the use of AI-powered systems for dust-storm early warnings and industrial-pollution monitoring. However, Iran has not adopted any national framework addressing the environmental footprint of AI systems themselves, including the energy use of data centers, the carbon impact of high-performance computing, or electronic-waste management for AI hardware. As of late 2025, no

environmental audits or sustainability assessments of large-scale AI infrastructure or the National Artificial Intelligence Organization (NAIO) have been made public.³⁰⁷¹

Lethal Autonomous Weapons

The Iranian military is interested in the development of AI and Autonomous Weapon systems in the pursuit of force-multiplying asymmetric warfare capabilities. At the Human Rights Council in May 2013, Iran expressed interest in opening multilateral talks on lethal autonomous weapons systems. However, Iran has not commented on the concerns raised by removing human control from the use of force or supported proposals to negotiate a new international ban treaty. Iran is not a party to the Convention on Conventional Weapons (CCW) but attended CCW meetings on killer robots in 2016 and 2018–2019.³⁰⁷²

Iran was one of eight states that abstained from voting³⁰⁷³ on resolution L.56.³⁰⁷⁴ on autonomous weapons systems during the 78th UN General Assembly in 2023. Iran did not respond to the Note Verbale in February 2024 to find a common definition of “lethal autonomous weapons” and to discuss the concepts of human control, meaningful human control, appropriate human judgment, and human involvement.³⁰⁷⁵

The Chief Commander of Iran's Islamic Revolution Guards Corps (IRGC) stated in July 2022 that the country achieved the AI technology required to direct drones and ballistic missiles while under sanction.³⁰⁷⁶ Shortly after this interview, another IRGC commander verified that “Iran has inflicted a decisive blow on the enemy and changed the region’s balance with the strategy of active resistance” through the collaboration of universities and military departments on AI

technology.³⁰⁷⁷ The IRGC also tested AI-guided missiles launched from drones during naval exercises in the Gulf of Oman in 2025,³⁰⁷⁸ despite US State Department efforts to hinder Iranian missile procurement.³⁰⁷⁹ The US argued that there is “horrific impact of Iran’s provision of missiles and unmanned aerial vehicles (UAVs) to designated terrorist organizations and militant proxies that directly threaten the security of Israel and our Gulf partners.” The US provided evidence of components and debris from lethal Iranian-made drones recovered from Ukraine and other locations.³⁰⁸⁰

AI Literacy

The Vice Presidency for Science and Technology, in partnership with the Ministry of Education, launched the Iran Digital initiative, a nationwide AI literacy and capacity-building program aimed at two million students and 200,000 teachers. The curriculum integrates AI ethics, digital citizenship, and gamified learning modules. The program launched in early 2025 marks Iran’s first structured national effort to promote AI awareness aligned with the UNESCO Recommendation on the Ethics of Artificial Intelligence.³⁰⁸¹

Human Rights

Iran has supported the Universal Declaration of Human Rights since 1948.³⁰⁸² Still, the country imposes broad restrictions on expression and privacy. The 2025 Office of the United Nations High Commissioner for Human Rights (OHCHR) report confirmed intensified AI-driven surveillance and ongoing rights concerns.”³⁰⁸³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Freedom House classified Iran as “Not Free” with a rating of 11/100 in 2025.³⁰⁸⁴ Among the key developments explaining Iran’s score, Freedom House highlighted the violent crackdown to the protests in more than 100 cities beginning in September 2022 “following the death of Mahsa Amini, a 22-year-old Kurdish woman who had been arrested and beaten by the so-called morality police in Tehran for allegedly not wearing her hijab properly.” Nearly 500 people had been confirmed dead by year’s end, and an estimated 14,000 people were arrested, including those who voiced support for the movement.³⁰⁸⁵ The protests and crackdown marked escalation of already limited political and civil rights.³⁰⁸⁶

According to a 2023 Human Rights Watch report, internet freedom remains highly restricted and State-aligned cyber operations spread disinformation and manipulated the online space. Iran and its judicial system have shown little inclination to curb or confront serious human rights violations perpetrated by Iranian security agencies. The country’s security and intelligence apparatus, in partnership with Iran’s judiciary, harshly crack down on any form of dissent, including through excessive and lethal force against protesters.³⁰⁸⁷

The Iranian authorities’ suppression of protests is the latest in a cycle of attacks against people who are voicing concerns. The cycle of attacks started between December 2017 and January 2018.³⁰⁸⁸ According to Press TV, in an open letter that was signed by 227 of Iran’s 290 members of Parliament, the MPs ask for demonstrators to be taught a “good lesson” as a means of discouraging such individuals who challenge the authority of the Iranian government.³⁰⁸⁹

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

OECD / G20 Principles

Iran has neither endorsed the OECD AI Principles,³⁰⁹⁰ nor implemented norms and standards for AI aligned with the OECD AI Principles.

Council of Europe AI Treaty

Iran is neither a member nor an observer of the Council of Europe and therefore ineligible to sign the Framework Convention on Artificial Intelligence and Human Rights, Democracy, and the Rule of Law.³⁰⁹¹

UNESCO Recommendation on AI Ethics

Iran is one of signatories to the UNESCO Recommendation on AI Ethics, which aims to deliver the advantages of technology while reducing associated human rights risks.³⁰⁹² Iran's free AI education initiative marks progress on the Education policy action to implement the Recommendation.³⁰⁹³ Iran has not initiated the UNESCO Readiness Assessment Methodology (RAM).³⁰⁹⁴

Evaluation

Iran has adopted the National AI Document as its primary AI policy framework. The document refers to value-based principles such as human dignity, justice, privacy, and national sovereignty. However, it lacks clear mechanisms for transparency, independent oversight, and public accountability. Parliament has also initiated legislative efforts to establish a legal framework for AI through the introduction of a national AI bill. Institutional arrangements remain unstable, however, as coordination of AI policy has shifted among different government bodies.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Although official policy documents recognize principles related to the protection of personal data and privacy, Iran has not enacted a comprehensive data protection law. At the same time, the government is expanding biometric identification, facial recognition, and national monitoring systems. Iran is also engaged in the race for developing lethal autonomous weapons while not participating in international efforts to regulate their use.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Ireland

In 2025, Ireland named the national competent authorities and single point of contact charged with enforcing and overseeing the EU AI Act. Ireland's Data Protection Commission fined and reprimanded the Department of Public Service for unlawful use of facial recognition in public cards after concluding a nearly 4-year investigation.

National AI Strategy

Ireland's national enterprise strategy, the Economic Recovery Plan and Enterprise 2025 Renewed, set out Ireland's ambition to be at the frontier of disruptive technologies, including AI. In 2019, Ireland published the Future Jobs Ireland Plan, which included a commitment to develop Ireland's national AI strategy and create a Top Team on Standards for AI to focus on increasing Ireland's AI development and assisting AI enterprises.³⁰⁹⁵ Ireland's Department of Enterprise, Trade, and Employment (DETE), since 2025 known as the Department of Enterprise, Tourism and Employment,³⁰⁹⁶ published the national AI strategy AI—Here for Good in 2021.³⁰⁹⁷ The DETE released a Refresh to the National AI Strategy in 2024.³⁰⁹⁸ The Refresh reflects the substantial advancements in AI technology and regulation since the original strategy released in 2021, including the rise of generative AI and the EU AI Act.

The updated strategy furthers the aim to “ensure a responsible, rights-respecting and inclusive approach to developing, applying and adopting AI.”³⁰⁹⁹ The strategy is part of the vision to make Ireland an international leader in “using AI to the benefit of our population” and recognizes transparency and accountability as necessary principles to achieve this vision. Since the launch of the initial strategy, Ireland focused building an ecosystem for “low-risk adoption of trustworthy AI by businesses,” including strong governance. The strategy asserts “The proportionate,

³⁰⁹⁹ Ibid, p. 7

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

risk-based approach taken in the EU AI Act is the right one, and it will protect individuals' safety and fundamental rights while promoting innovation." Actions to achieve the strategy cross three main areas:³¹⁰⁰

- Building public trust in AI through the AI Advisory Council, implementation of EU AI Act, and participation in international AI governance forums;
- Leveraging AI for economic and societal benefit, which includes supporting business in adopting AI and assisting AI startups as well as using trustworthy AI in the public sector
- Enablers for AI, including "embedding AI and digital skills across the education and skills infrastructure and developing high-level AI skills."

The refreshed strategy builds from a 2023 development report providing details on implementation of tasks under each of the strands in the 2021 strategy as either "complete" or "in progress."³¹⁰¹ The report offers an overview of upcoming planned actions for continued implementation. Strands 1 and 2 of AI—Here for Good are aimed at "building public trust in AI." Strand 1 seeks to build public trust in AI through public awareness programs and research and grants to develop AI applications for societal good and sustainability, including health and climate change. Strand 2 addresses the need for a "robust governance framework to safeguard against [AI] risks and underpin public trust in AI." It establishes three pillars that Ireland will use to ensure a strong AI governance framework: 1) "an agile and appropriate framework," 2) "active promotion of ethics guidance and frameworks," and 3) "a robust system of standards and certification."

In July 2023, the National Standards Authority of Ireland, as part of the National Strategy, issued its Artificial Intelligence (AI) Standards & Assurance Roadmap. The Roadmap is based on the work of the Top Team on Standards for AI and input from experts from across the Irish AI community, including academia; business, information technology industry, SMEs, and legal experts. It is expected that this Roadmap will support the standardization of the development and use of AI in the country.³¹⁰²

Ireland's Department of Enterprise, Trade, and Employment (DETE) (now Department of Enterprise, Tourism and Employment)³¹⁰³ spearheads Ireland's national AI policy. The policy charges strategic actions to various Irish agencies,

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

including the Department of Environment, Climate and Communications, the Department of Justice, the National Standards Authority of Ireland, and the Department of Children, Equality, Disability, Integration, and Youth. It has also established the Top Team on Standards for AI to develop certification schemes and codes of conduct to address AI at different stages of development.

The government announced plans to update the National Digital and AI Strategy in 2025 and held public consultations on the same.³¹⁰⁴ The updated strategy integrates AI to the digital strategy in line with the EU Digital Decade and digital Compass and accelerate the integration of AI into public service delivery. The update will reflect insights from the annual reports on implementation of the original strategy.³¹⁰⁵

EU Digital Services Act

As an EU member state, Ireland shall apply the EU Digital Services Act (DSA).³¹⁰⁶ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation. The DSA also bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs and targeted advertising to minors based on profiling.

In the 2023 implementation report of the national digital Strategy,³¹⁰⁷ Ireland announced the creation of the Competition and Consumer Protection Commission (CCPC) as the competent authority for registration and compliance of data intermediation services. The Department of the Taoiseach also announced the establishment of the Central Statistics Office (CSO) as the competent body for assisting public sector bodies which opt to share “protected data.”³¹⁰⁸ These agencies form part of the government's attempt to comply with the 2024 Digital Services Bill adopted in line with the EU Digital Services Act that came into force in February

2024.³¹⁰⁹ These developments are expected to align Ireland’s data privacy regulations with international standards and show the country’s commitment to “enforcing digital regulation seriously”, although it is not clear at the moment how these two agencies will work together and with the pre-existing Irish Data Protection Commission (DPC).³¹¹⁰

EU AI Act

As an EU member State, Ireland is bound by the EU AI Act.³¹¹¹ The EU AI Act is a risk-based market regulation which supports the objective of promoting a human-centric approach to AI and making the EU a global leader in the development of secure, trustworthy and ethical AI. Ireland became one of the first EU countries to appoint national authorities responsible for enforcing the new EU AI Act in September 2025.³¹¹² The country appointed 15 government bodies as national competent authorities to oversee AI safety and fairness in their respect sectors, working together with a single contact point in the government. The General Scheme of the Regulation of Artificial Intelligence published in early 2026 clarifies that the AI Office of Ireland, *Oifig Intleachta Shaorga na hÉireann*, will serve as the single point of contact and coordinate AI rules and encourage safe AI use.³¹¹³

Public Participation

To receive engagement and input in the development of its National AI Strategy, Ireland held a public consultation process from October 16 to November 7, 2019, which was open to all stakeholders and interested parties. This consultation aimed to “better understand the views of the public on the opportunities, enablers

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

and challenges for AI in Ireland and to gather views on key areas and issues that should be addressed by the strategy.”³¹¹⁴

Strand 1 of AI—Here for Good, AI and Society, asserts that Ireland “must also prioritize measures to raise awareness about AI.” To that end, Ireland plans to appoint an “AI ambassador to promote awareness among the public and businesses of the potential that AI offers.” This AI ambassador is expected to engage with the public, lead a “national conversation around the role of AI” with an emphasis on “an ethical and compliant approach,” and champion AI as a positive force for Ireland. Ireland published a call for Expression of Interest for the AI Ambassador position on October 26, 2021, and applications were due November 12, 2021.³¹¹⁵ In May 2022, Dr. Patricia Scanlon was appointed to serve as Ireland’s first AI Ambassador. During the drafting phase of the new digital strategy, Harnessing Digital—The Digital Ireland Framework, no public consultation announcement occurred, removing the public’s ability to offer feedback.

Ireland planned to convene a Youth Assembly on AI to discuss young people’s views of AI’s “benefits, risks and impacts on different groups in society.” University College Cork (UCC) currently hosts The Elements of AI, a massive open online course (MOOC) made available to all EU member states. Ireland plans to use Elements of AI, which is freely available, “to deliver AI education to at least 1% of the population. As part of the Ireland’s AI—Here for Good, young Irish people were asked for their thoughts on AI and its potential applications. The inaugural National Youth Assembly on Artificial Intelligence was held at Trinity College Dublin on October 12, 2022, with 43 young people aged 13 to 23.”³¹¹⁶

In June 2024, Ireland’s Department of Enterprise, Trade and Employment requested public opinion on the national approach to the EU AI Act’s implementation,³¹¹⁷ receiving input from citizens, researchers, and companies.³¹¹⁸ The Oireachtas Joint Committee on Artificial Intelligence held hearings on Artificial

Intelligence and the State, providing the opportunity for further dialogue on AI governance.³¹¹⁹

Data Protection

The European Union's General Data Protection Regulation (GDPR)³¹²⁰ is directly applicable in Ireland and to Irish people. The GDPR aims to “strengthen individuals’ fundamental rights in the digital age and facilitate business by clarifying rules for companies and public bodies in the digital single market.”³¹²¹ Personal data use by law enforcement authorities is regulated by the EU’s Data Protection Law Enforcement Directive (LED),³¹²² which protects citizens’ fundamental right to data protection whenever personal data is used by criminal law enforcement authorities for law enforcement purposes.³¹²³ The LED provides for the prohibition of any decision based solely on automated processing, unless it is provided by law, and of profiling that results in discrimination.³¹²⁴

The 2018 Irish Data Protection Act³¹²⁵ supplements the GDPR and implements the LED in Irish law. The Data Protection Act designated the Data Protection Commission (*An Coimisiún um Chosaint Sonraí*, DPC) as Ireland's national independent supervisory authority responsible for upholding the data protection rights of individuals. The DPC is charged with monitoring the application of the GDPR, including its transparency and automated decision-making provisions, and other Irish and EU regulatory frameworks and directives.

Center for AI and Digital Policy

The EU Charter of Fundamental Rights more generally provides that EU citizens have the right to protection of their personal data. Article 8 of the Charter states that: “Everyone has the right to the protection of personal data concerning him or her. Such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law.”

Ireland is also a member of the Council of Europe and has signed but not yet ratified³¹²⁶ the Council of Europe’s Convention 108+ for the protection of individuals with regard to the processing of personal data.³¹²⁷

The Irish DPA is a member of the Global Privacy Assembly (GPA) since 2002. Although the DPA endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,³¹²⁸ it did not co-sponsor the 2020 GPA Resolution on AI Accountability,³¹²⁹ the 2022 GPA Resolution on Facial Recognition Technology³¹³⁰ or the 2023 GPA Resolution on Generative AI.³¹³¹

AI Oversight

Ireland’s DPC has faced criticism from members of the European Parliament for failing to enforce the GDPR by choosing to bring a legal proceeding in the *Schrems II* case instead of deciding on its own, issuing only one GDPR sanction out of thousands of complaints, and failing to reach a draft decision on any case referred to Ireland in 2018. The European Parliament passed a resolution in 2021 expressing concern with the slow pace of the Irish DPC and calling for faster investigations to

show EU citizens that “data protection is an enforceable right.”³¹³² The European Parliament then supported a call for the European Commission to open an infringement procedure against the DPC.³¹³³ A Commission defended the Irish Data Protection Commissioner by stating that “there is no proof that the DPC didn’t follow the Irish data protection rules or that the cooperation mechanism wasn’t employed correctly.”³¹³⁴ Complex cases, especially those involving disputed issues such as WhatsApp, may take a long time. As a result, the European Commission refused to comment on or initiate infringement proceedings against a DPA for its views on a particular subject.

In December 2022, the EDPB overturned a previous draft decision by the DPC that took the view that Meta’s bypass of the GDPR was legal and the EDPB requested changes in a DPC decision on WhatsApp, as well as further investigations into the core violations of WhatsApp. The following month, the DPC adapted its limited decision, but refused to investigate other matters, as ordered by the EDPB. According to noyb, “the DPC threatens to bring a lawsuit against its European partners.”³¹³⁵

In September 2023, after an *ex officio* investigation started in 2021, the DPC concluded that TikTok failed to secure compliance regarding user policies for children as required by the GDPR.³¹³⁶

The DPC launched its 2023 Annual Report³¹³⁷ in May 2024, highlighting 19 final decisions that resulted in administrative fines totaling €1.55 billion.

In March 2023, the DPC announced its participation in the European Data Protection Board’s 2024 Coordinated Enforcement Framework (CEF), in accordance with Article 15 of the GDPR. In a fact-finding exercise, the DPC will send questionnaires to 30 data controllers in the public and private sectors to gather

insights into how organizations apply the Right of Access Guidelines on data subject rights³¹³⁸ for an EU-wide report.³¹³⁹

In September 2024, the DPC announced a Cross-Border statutory inquiry into Google Ireland Limited (Google) under Section 110 of the Data Protection Act 2018, about whether Google has complied with any obligations that it may have had to undertake an assessment prior to engaging in the processing of the personal data of EU/EEA data subjects associated with the development Pathways Language Model 2 (PaLM 2), its foundational AI model.³¹⁴⁰

In September 2024, the DPC fined Meta €91 million following an inquiry launched in April 2019 after Meta Platforms Ireland Limited (MPIL) notified the DPC that it had inadvertently stored passwords of social media users in ‘plaintext’ on its internal systems, without cryptographic protection or encryption.³¹⁴¹

The DPC announced its final decision to levy administrative fines totaling €310 million on LinkedIn in October 2024 after an inquiry that examined the site’s processing of personal data for the purposes of behavioral analysis and targeted advertising of users who have created LinkedIn profiles (members). With concerns related to the lawfulness, fairness and transparency of this processing, the decision includes a reprimand and an order for LinkedIn to bring its processing into compliance.³¹⁴²

Algorithmic Transparency

Although it has not yet ratified the Protocol amending the Convention 108 which provides for algorithmic transparency, Ireland is subject to the GDPR. Irish people have a general right to obtain access to information about automated decision-making and to the factors and logic of an algorithm.³¹⁴³

The 2020 Recommendation of the Council of Europe Committee of Ministers on human rights impacts of algorithm systems³¹⁴⁴ specifically emphasizes requirements on transparency, accountability and effective remedies. The Recommendation provides that “Contestation should include an opportunity to be heard, a thorough review of the decision and the possibility to obtain a non-automated decision. This right may not be waived, and should be affordable and easily enforceable before, during and after deployment, including through the provision of easily accessible contact points and hotlines.”³¹⁴⁵

Although Ireland has not created its own AI ethical guidelines, its National AI Strategy incorporates the seven requirements of the EU High-Level Expert Group (EU HLEG) on AI’s Ethics Guidelines for Trustworthy AI. UCC’s Insight Centre currently hosts an online version of EU HLEG’s Assessment List for Trustworthy AI, as an accessible checklist for adhering to the seven requirements of the Ethics Guidelines for Trustworthy AI. The Top Team on Standards for AI is tasked with developing codes of conduct that address explainability and transparency.

Transparency is an important part of Ireland’s national AI strategy. Ireland views transparency as an essential component of accountability and trust in AI. Strand 1 of AI—Here for Good states that “AI must be developed and used with trust, transparency and accountability” and that Ireland is committed to ensuring that AI systems are “trustworthy, fair and inclusive.”

Transparency remains an important part of Ireland’s Harnessing Digital - The Digital Ireland Framework by continuing the implementation of Ireland’s Data Sharing and Governance Act, which is designed to protect citizen’s privacy by establishing a prescriptive framework in legislation for governance, oversight, and transparency of data processing within the Public Service. In July 2024, the Data Protection Commission issued guidance, centered on the right to be informed (transparency) of Articles 13 and 14 of the GDPR³¹⁴⁶, for organizations employing AI systems, highlighting risks of personal data processing by AI, including Large Language Models (LLMs), in compliance with GDPR.³¹⁴⁷

Center for AI and Digital Policy

Public Services Card Facial Recognition Controversy

In March 2013, the Department of Employment Affairs and Social Protection (DEASP), Ireland's national social security office, implemented facial image matching software to minimize fraud and errors of the Public Services Card's (PSC) social security applicant identity verification. The Irish Council for Civil Liberties (ICCL), an independent non-profit in Ireland, has criticized the PSC for collecting and storing more data than necessary, increasing the risk of a security breach through its collection of sensitive biometric data, forcing economically vulnerable people to exchange their private data for access to services to which they are legally entitled, and contradicting Ireland's position on privacy at the EU.³¹⁴⁸ DEASP has not published their facial image matching software's accuracy and while continuing to use the software despite being under investigation by the Irish Data Protection Commissioner since October 2017. Human Rights Watch has documented reports of eligible applicants being denied social security support due to documentation requirements or objections to the PSC for privacy reasons.³¹⁴⁹

In June 2023, the ICCL released a copy of a Data Protection Impact Assessment (DPIA) conducted in 2021 on the upgrade of facial matching software for the PSC.³¹⁵⁰ The document was obtained through a Freedom of Information Request. The assessment revealed significant issues with the use of FRT by the DEASP, including lack of valid legal foundation under the GDPR for the creation and use of a biometric database; lack of transparency about what data was collected and how it was used; and lack of adequate guardrails for the retention of sensitive personal data.³¹⁵¹ It appears that this DPIA report is not publicly available on the DEASP website.

An ICCL press release in June 2023³¹⁵² found that a Data Protection Impact Assessment (DPIA) of a facial matching software upgrade for the Public Services Card (PSC) in 2021 failed to identify any legal basis under Article 9 GDPR for the

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

creation of a biometric photo and template database of 3.2 million cardholders. This DPIA reveals for the first time that the Department of Social Protection has known that its biometric processing of personal data arising from the PSC project is illegal and reported that cardholders were not directly informed about the biometric processing during face-to-face interviews for the same. Olga Cronin, Surveillance and Human Rights Policy Officer, ICCL, says: “The Department has been building a national biometric database without a relevant legal basis and without transparency. It continues to collect people’s biometric information in exchange for services they are legally entitled to. This must stop. This processing is unnecessary, disproportionate, and presents a risk to people’s fundamental rights.”

The DPC concluded the investigation into the use of facial matching technology by the Department of Social Protection in June 2025, after nearly 4 years. The DPC found the Department infringed on the GDPR and issued a reprimand, administrative fines totaling €550,000, and an order requiring the Department to cease processing of biometric data under the program without a valid lawful basis.

3153

Facial Recognition in Law Enforcement

A proposal to equip the Garda with police facial recognition technology (FRT) to enhance their surveillance powers was made by the Minister of Justice in May of 2022.³¹⁵⁴ In conjunction with AI and other surveillance capabilities, this FRT system aims to enable the fast identification of criminals from CCTV footage.

Police FRT is used as a method of widespread monitoring to track and identify individuals without the need for reasonable suspicion. FRT’s widespread use runs the risk of damaging effects by altering how people interact in public and online settings. While public safety and national security concerns take precedence over individual privacy, the intrusions caused by police FRT surveillance are excessive and unjustified.

In January 2024, the International Justice Clinic (IJC) submitted comments³¹⁵⁵ on Ireland’s General Scheme of the Garda Síochána (Recording

³¹⁵³ Data Protection Commission, *DPC Announces Conclusion of Investigation into Use of Facial Matching Technology in Connection with the Public Services Card by the Department of Social Protection* (Jun 12, 2025), <https://www.dataprotection.ie/en/news-media/press-releases/dpc-announces-conclusion-investigation-use-facial-matching-technology-connection-public-services>

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Devices) (Amendment) Bill 2023 to the Joint Committee on Justice at the Houses of the Oireachtas (Irish Parliament). “The Bill grants the Garda Síochána (Irish police) the power to use facial recognition technology on any past images or video that they have legally accessed for (1) crime investigation and prevention and (2) national security, so long as it is not used on live feeds. This facial recognition technology is a powerful tool that automatically extracts unique identifiers from individuals’ faces recorded by data and matches them with identifiers on a watch list.”

According to the IJC, “post” or retrospective use of facial recognition technology equally causes a formidable impact on fundamental human rights as “live” identification. When facial recognition technology is used on data recorded in a publicly accessible place, “it causes people to experience fear that they might be identified in the future [...] especially in the case of the indefinite retention and use of images or video for facial identification.” Post use still has the potential to limit people’s ability to freely participate in a public protest or move in a publicly accessible place.

In February 2024, the Joint Oireachtas Committee on Justice published its pre- legislative scrutiny report on the Draft General Scheme of the Garda Síochána (Recording Devices) (Amendment) Bill 2023³¹⁵⁶, following concerns raised by the Data Protection Commission, Irish Council for Civil Liberties, Digital Rights Ireland, the Law Society of Ireland, amongst others. The report highlights deficiencies in the general scheme of the bill, emphasizes the rationale for introducing FRT should be published; and calls on An Garda Síochána and the Department of Justice to urgently clarify how FRT is intended to be used and what imagery and reference databases are intended to be used.³¹⁵⁷

Over-policing is already an issue in communities with marginalized groups, and this technology has the potential to exacerbate the problem through racial and minority ethnic profiling and the disruption of people's lives. The Garda's use of technologies such as CCTV, ANPR, drones, and body worn cameras are already being scrutinized.³¹⁵⁸

Center for AI and Digital Policy

Environmental Impact of AI

Ireland is actively addressing the environmental impact of artificial intelligence (AI) through a combination of national strategies, regulatory frameworks, and industry initiatives. The National AI Strategy, *AI—Here for Good*, specifically emphasizes AI for Societal Good and Sustainability, including applications for environmental and climate action. Ireland's Climate Action Plan 2019 highlights AI's role in managing energy use and balancing the grid. However, sustainable development is essential, given AI's own energy demands. Ireland encourages data centers to adopt circular economy principles, aligning with EU Ecodesign Regulation standards to minimize environmental impact.³¹⁵⁹ In a report to the Government, Ireland's AI Advisory Council recommended the establishment of an "AI Energy Council" to ensure necessary measures are taken to rapidly develop clean energy capacity, while transitioning from fossil fuels and winning public trust. The Council noted that the public should be reassured that data centers will never be allowed to "blackout" homes, and that the goal is to minimise "blacking out" data centers.³¹⁶⁰

Lethal Autonomous Weapons

Ireland is a High Contracting Party to the Convention on Certain Conventional Weapons (CCW) and has been an active participant in CCW discussions related to lethal autonomous weapons systems (LAWS). According to Human Rights Watch, Ireland has expressed interest in multilateral talks on LAWS in the UN since at least 2013 and has participated in every CCW meeting on LAWS between 2014 and 2019.³¹⁶¹ In 2019, Ireland joined the other High Contracting Parties to the CCW to adopt 11 guiding principles for addressing challenges to international humanitarian law posed by LAWS.³¹⁶² Ireland also joined eight other CCW parties in finding that the 11 guiding principles were a "useful and valuable starting point" and calling for the development of a "normative and operational

Center for AI and Digital Policy

framework” for ensuring human control of LAWS.³¹⁶³ Ireland also participated in the Responsible AI in the Military Domain Summit (REAIM 2023) in the Netherlands. Ireland agreed to the joint call to action on the responsible development, deployment and use of AI in the military domain³¹⁶⁴ and endorsed the resulting Political Declaration on Responsible Military Use of AI and Autonomy issued in November 2023.³¹⁶⁵

Ireland has consistently contributed to discussions on LAWS in the United States. In 2022, Ireland joined 69 other countries on a joint statement urging the international community to address the risks and challenges of autonomous weapons by “adopting appropriate rules and measures, such as principles, good practices, limitations and constraints” to uphold International Law, “including through maintaining human responsibility and accountability in the use of force.”³¹⁶⁶

Ireland’s contribution³¹⁶⁷ to the UN Secretary-General report³¹⁶⁸ resulting from 2023 resolution³¹⁶⁹ highlights a series of risks requiring urgent and comprehensive multilateral action and moves to action by offering definitions of terms for an agreement and identifying functional characteristics of LAW that “pose legal, humanitarian and ethical concerns.”³¹⁷⁰ Ireland reiterated that “AWS that

cannot be used in accordance with IHL [...] are *de facto* already prohibited under international law. However, new rules, and guidelines are needed to clarify how IHL applies to AWS.”³¹⁷¹ Later in 2024, on endorsing draft Resolution L.77 on Lethal Autonomous Weapons Systems,³¹⁷² Ireland’s Deputy Permanent Representative to the Conference of Disarmament, expressed concern over the widespread use of explosive weapons and stressed that “any use of military force must comply with international humanitarian law, particularly the principles of distinction and proportionality.”³¹⁷³

Ireland delivered a statement to the First Committee of the 80th UN General Assembly calling for urgent progress on a legally binding instrument on autonomous weapons systems.³¹⁷⁴ Ireland agreed with other States that the “rolling text” of the Chair of the Group of Governmental Experts (GGE) of the Convention on Certain Conventional Weapons (CCW) provides a sufficient basis to fulfil its mandate and proceed to negotiations on an instrument on autonomous weapons systems.

AI Literacy

Ireland’s National AI Strategy includes education and skills development as a critical component of a people-centered, trustworthy, and ethical AI ecosystem.³¹⁷⁵ Initiatives such as the AI in Education project³¹⁷⁶ and the GenAI Policy Framework³¹⁷⁷

[library.unoda.org/General_Assembly_First_Committee_-Seventy-Ninth_session_\(2024\)/78-241-Ireland-EN.pdf](https://library.unoda.org/General_Assembly_First_Committee_-Seventy-Ninth_session_(2024)/78-241-Ireland-EN.pdf)

Center for AI and Digital Policy

by the National Forum for the Enhancement of Teaching and Learning reflect this commitment.³¹⁷⁸ The National Forum also includes resources and guidelines for teachers and learners, including open courses that align with national professional development requirements. Yet, as noted by the Ombudsman for Children’s Office,³¹⁷⁹ implementation remains fragmented. AI literacy is largely embedded within broader digital-skills policies, and no standardized national curriculum ensures that all citizens, especially children and vulnerable groups, acquire the competencies to navigate algorithmic systems.

Human Rights

According to Freedom House, Ireland is “free,” with high scores for political rights and civil liberties (97/100).³¹⁸⁰ The report highlights the stability of Ireland’s democracy but notes discrimination against nomadic Irish Travellers, immigrants, and asylum seekers.

Ireland has endorsed the Universal Declaration of Human Rights and ratified seven of the nine core international human rights instruments,³¹⁸¹ along with the European Convention on Human Rights.³¹⁸² Strand 1 of Ireland’s national AI strategy commits to “making human rights and ethical principles a key focus” of its national AI strategy, although it largely focuses on AI R&D that can improve access and inclusion, such as AI tools that help people with impaired hearing through real-time live captioning.

In a 2020 Recommendation to member States on the human rights impacts of algorithmic systems, the Council of Europe Committee of Ministers reminded Member States that their commitment to “ensuring the rights and freedoms enshrined in the Convention for the Protection of Human Rights and Fundamental Freedoms to everyone within their jurisdiction” required that “member States must ensure that any design, development and ongoing deployment of algorithmic systems occur in compliance with human rights and fundamental freedoms which are universal,

indivisible, inter-dependent and interrelated, with a view to amplifying positive effects and preventing or minimising possible adverse effects.”³¹⁸³

AI Safety Summit

In November 2023, Ireland participated in the first AI Safety Summit and endorsed the Bletchley Declaration.³¹⁸⁴ Ireland thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.”

OECD / G20 AI Principles

Ireland is a member of the OECD and endorsed the OECD AI Principles in May 2019. Ireland is also a member of the Global Partnership on Artificial Intelligence (GPAI), joining as part of the national AI strategy to establish an “agile and appropriate” AI governance and regulatory environment.³¹⁸⁵

According to its National AI Strategy, Ireland’s AI policies are “underpinned by [Ireland’s] engagement” with AI policy processes at the EU, UN, and OECD. Ireland’s Department of Public Expenditure, NDP Delivery & Reform issued Guidelines for the Responsible Use of AI in the Public Service,³¹⁸⁶ setting out practical steps for human oversight, risk management, and accountability. These guidelines demonstrate continued implementation of the OECD AI Principles in Ireland’s public sector.

Center for AI and Digital Policy

Council of Europe AI Treaty

Ireland contributed as a Council of Europe and EU Member State in the negotiations of the Council of Europe Framework Convention on Artificial Intelligence and Human Rights, Democracy and the Rule of Law. The European Union signed on behalf of the 27 member states when the treaty opened for signature on September 5, 2024.³¹⁸⁷ Ireland has not taken individual action on the treaty, however.³¹⁸⁸

UNESCO Recommendation on AI Ethics

Ireland is among the 193 countries that endorsed the UNESCO Recommendation on AI, the first ever global agreement on the ethics of AI.³¹⁸⁹ In its National AI Strategy, issued a few months before the UNESCO Recommendation, Ireland already explicitly acknowledges the UNESCO Recommendation which is a positive sign that it will take the necessary measures to implement it. However, Ireland's Progress Report on implementation of the National AI Strategy³¹⁹⁰ confirms the endorsement but provides no details on the implementation of the UNESCO recommendations on the Ethics of AI. Ireland has not begun the process of completing the UNESCO Readiness Assessment Methodology (RAM).³¹⁹¹

Evaluation

Ireland has endorsed the OECD AI Principles and the UNESCO Recommendation on AI Ethics. Ireland has also established and actively updated a national AI strategy to address trust and transparency issues and improve AI competitiveness.³¹⁹² Issues concerning the positions adopted by the Irish data

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

protection authority, in contradiction with those of other national data protection authorities in the EU or the European Data Protection Board have largely been resolved. As the European home of many large tech companies, Ireland has the opportunity to model implementation of the GDPR and EU AI Act. Ratifying Convention 108+ is one way to demonstrate a commitment to upholding common principles. The recent facial recognition amendment, which included a list of situations where police could use FRT including for offenses such as rioting and violent disorder, adds to the list of concerns. The EU AI Act does not cover the use of AI for national security purposes.

Ireland's Data Protection Commission has issued guidelines centered on the right to be informed under the GDPR and demanded comprehensive safeguards in the deployment of facial recognition technology. Moreover, the DPC has been holding technology companies accountable for their compliance with the GDPR. Ireland is introducing additional measures to align with the EU AI Act, including establishing an AI Advisory Council and designating national public authorities to provide independent oversight.

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Israel

In 2025, Israel released a new AI Program with plans to promote AI literacy and capacity-building as well as guidance for AI policies and oversight.

National AI Strategy

On 18 December 2023, Israel launched the National AI Program 2024,³¹⁹³ part of a multi-year program to tackle “the challenge of developing a long-term AI strategy in a fast-evolving world. The Program sets a clear path for the future while maintaining flexibility in the face of rapid technological and regulatory shifts.”³¹⁹⁴ with a three-fold emphasis on 1) developing a cohesive, holistic, long-term, government strategy for sustained growth in AI; 2) fostering an enabling pro-innovation environment to promote AI adoption within the private and public sectors; and 3) enhancing the facilities and resources available for research and development activities. The program explicitly refers to a risk-based approach to AI regulation that “should be contextualized, weighing potential risks and benefits within specific use cases, compatible with the OECD Trustworthy AI Principles.”³¹⁹⁵

The 2024 AI Program focuses on responsible AI innovation, which is human-centric, non-discriminatory, reliable, safe, accountable, and transparent.³¹⁹⁶ Sector-specific regulation is encouraged along with a risk-based approach and multi-stakeholder consultation. The 2025 program stresses establishing AI regulatory frameworks is one of the key actions under the program as part of the objective to promote “responsible innovation.”³¹⁹⁷

Israel realized the first of the national regulatory frameworks in 2023 through coordination between the Ministry of Innovation, Science, and Technology and the Office of Legal Counsel and Legislative Affairs (Economic Law Department) under the Ministry of Justice.³¹⁹⁸ Like the National AI Program, the AI Regulation and Ethics adopts the OECD AI Principles. The regulation recommends a risk-based,

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

sectoral approach using “soft” regulatory tools and consistent with “existing regulatory approach of leading countries and international organizations.”³¹⁹⁹ The policy also aims to foster private-public cooperation.

An AI Policy Coordination Center serving as an “expert-based inter-agency body” will advise sectoral leaders and government; promote horizontal implementation; facilitate discussions across government, industry academia, and civil society; and lead representation in international organizations.³²⁰⁰ The Center will establish consultation forums to facilitate ongoing discussions and knowledge-sharing among various stakeholders, including industry, academia, civil society organizations,³²⁰¹ and the government. The Center is tasked with broad responsibilities but does not have decision-making authority. Operating as a centralized governmental hub for AI regulation, it lacks significant enforcement powers.³²⁰²

Israel’s Prime Minister’s Office also established and named a National Artificial Intelligence Directorate³²⁰³ to position Israel as a global leader in AI by formulating and implementing a national AI strategy and serving as a central hub for promoting innovation, regulation, infrastructure, and research, while strengthening Israel’s international standing. Personally initiated and led by the Prime Minister, the Directorate will provide professional guidance to government ministries and auxiliary units on regulatory matters, oversee the development of advanced AI infrastructure, including energy and research complexes, and sovereign supercomputing capabilities, and coordinate international cooperation in the AI field.

Public Participation

The initial release of the draft regulatory and ethics policy in October 2022 was followed by a phase of consultation with an explicit request for public comment.³²⁰⁴

³¹⁹⁹ Ministry of Innovation, Science, and Technology, *Responsible Innovation: Israel’s Policy on Artificial Intelligence Regulation and Ethics*, p. 3 (Dec. 2023), https://www.gov.il/BlobFolder/policy/ai_2023/en/Israels%20AI%20Policy%202023.pdf

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

The policy draft also called for the establishment, within the Ministry of Innovation, Science and Technology, of a forum for public participation to discuss the development of AI regulations and oversight. Following this call for public participation, the Israeli Democracy Institute provided comments, covered by the media,³²⁰⁵ on the government's plan to regulate AI.³²⁰⁶ The Israeli Democracy Institute argued that the suggested AI soft regulation, self-regulation, and ethical principles are insufficient. Instead, the government should design enforceable laws that clearly define "red lines" to avoid Israel becoming the backyard of AI-related experiments. The Israeli Democracy Institute also advocated for an approach that includes human right protection and risk-based frameworks and is embedded in a combination of horizontal and sector-specific regulations.

The second phase of the National AI Program³²⁰⁷ includes focus areas such as AI Integration in the Public Sector and Local Authorities, Preserving Israel's Leadership in AI Research, Expanding Human Capital in the Industry, Access to Data and Information, and Encouraging Transformative High-Tech Ventures. Moreover, in September 2024, the Ministry of Innovation, Science, and Technology issued a public call to form a national expert forum on artificial intelligence.³²⁰⁸ The Ministry of Innovation, Science and Technology completed the establishment of the National Expert Forum on AI in February 2025.³²⁰⁹

The 2025 National Program for Artificial Intelligence moves public participation in AI policy beyond one-off consultations into more structured, ongoing engagement.³²¹⁰ The Program mandates a permanent regulators' coordination forum and a public multi-stakeholder consultation forum (industry, academia, civil society)

Center for AI and Digital Policy

under the Governmental Knowledge and Coordination Center. The Program also deepens expert participation through the national AI expert forum and a scientific advisory committee, along with explicitly linking public preparedness to broad AI literacy initiatives.

The government invited written comments from stakeholders and the general public on a draft Guide to Risk Management and Responsible Use of AI Tools in the Public Sector,³²¹¹ during two months in summer 2025.³²¹² In parallel, the Ministry of Innovation, Science and Technology through the SynerGAI initiative convened open events and conferences and thematic meetings (e.g., on AI and mental health), designed to bring regulators, experts, industry and civil society into the same room.³²¹³

Data Protection

Complementary laws govern data protection in Israel: legal texts and guidelines: (1) the 1992 Basic Law: Human Dignity and Liberty according to which the right for privacy is a constitutional right;³²¹⁴ (2) the 1981 Privacy Protection Law (PPL)³²¹⁵ and subsequent regulations,³²¹⁶ such as Israel's 2017 Data Security

Regulation;³²¹⁷ and (3) the guidelines of the Israeli Privacy Protection Authority.³²¹⁸ Chapter 1 of the PPL covers privacy generally, while Chapter 2 concerns data in storage and sets out various registration, purpose-limitation, transparency and security requirements, as well as individual rights of access and rectification.³²¹⁹ Other Chapters address procedural and enforcement matters as well as the disclosure or sharing of information by public bodies and liabilities for the publication of privacy-infringing material in newspapers.

In 2011, The European Commission determined that Israel satisfied the “adequacy requirement” according to the European Directive 95/46. In 2024, the European Commission decided to extend its adequacy decision as it concluded that “Israel continues to provide an adequate level of protection for personal data transferred from the EU.”³²²⁰ The Israeli Ministry of Justice proposed updates of the PPL, due to the major gap between GDPR and Israeli Law. In 2021, the Israeli Ministry of Justice announced approval of updates to the Privacy Protection Law. The amendments include significant new administrative enforcement powers for the Privacy Protection Authority, including the authority to impose financial sanctions, updating technological and social definitions, and reducing the bureaucratic burden on organizations' obligation to register databases.³²²¹

In January 2022, the Israeli government introduced a substantial amendment to the PPL, Bill No. 14, aimed to align the PPL with the EU GDPR at least in part.³²²² The Israeli Parliament approved the Amendment No. 13 (previously known as Amendment no. 14), which is the most comprehensive amendment to the law since 1996. The amendment came into effect in August 2025. The amendment introduces for the first time the mandatory appointment of Data Protection Officers, significantly expands the PPA's powers, establishes various tools for effective

enforcement of the PPL, and allows courts to award statutory damages without proof of damage up to an amount of NIS 10,000.³²²³

Israel's Privacy Protection Authority (PPA) is the primary regulator for matters relating to privacy and data security.³²²⁴ The PPA sits within the Israeli Ministry of Justice and is headed by the Registrar of Databases. The PPA regulates and enforces data protection across all sectors, private and public, according to the provisions of the Privacy Protection Law.

In July 2022,³²²⁵ the PPA presented their interpretation of section 11 of the PPL which enshrines the right to information. The PPA's interpretation covers AI-based decision-making systems. In August 2022,³²²⁶ the PPA covered telemedicine (or 'telehealth') services, including AI-based diagnostic services. In August 2022, the PPA issued a detailed report³²²⁷ about DeepFake technologies and privacy. According to the PPA, "unauthorized distribution of an image or video forged using the Deepfake technology—which displays degrading or demeaning content relating to a person's private life and could be perceived in public as authentic - constitutes a violation of the Privacy Protection Act."

The PPA has been a member of the Global Privacy Assembly (GPA) since 2009. The PPA has not endorsed the 2018 GPA Declaration on Ethics and Data Protection in Artificial Intelligence,³²²⁸ the 2020 GPA Resolution on AI

Algorithmic Transparency

In its 2022 interpretation of section 11 of the PPL on the right to information, the PPA clarified that this provision applies to AI-based systems.

The topic of algorithmic transparency had already been raised by the Knesset's Research and Information Center's June 2018 research document that was prepared for the first discussion on the government's readiness for artificial intelligence that month.³²³² Since then, algorithmic transparency has regularly been mentioned in policy documents and debates. Algorithmic transparency is also mentioned in the draft policy and regulatory policy.

The PPA's draft directive, Application of Privacy Protection Law Provisions to Artificial Intelligence Systems, published April 30, 2025, introduces requirements for organizations using AI to disclose when users interact with AI systems and to explain what data is processed and how, identifying processing purposes, specifying data recipients, and stating retention periods for user data.³²³³

AI and Medical Data

In 2018, Israel's Prime Minister announced the establishment of a \$300 million initiative to make Israel's large pool of de-identified clinical data available to researchers, entrepreneurs, and medical institutions to develop new treatments and personalized medicine among other goals. "With all records in a common format, AI systems – using machine learning algorithms – will be able to parse the data, seeking

correlations in conditions and treatments to discern which treatments are likely to be most effective” said the Director of the Israel Ministry of Health.³²³⁴

The initiative currently includes the “Mosaic” (*Psifas*) project, a personalized medicine health project, for creating a national information infrastructure for health research in the field of genetics and medical information. Another project is Timna, a national platform for conducting big data research in health data, intended to serve the research community in the health system, academia and Israeli industry.³²³⁵

In April 2023, the Medical Technologies, Information and Research Division and the Digital Health Division at the Ministry of Health, published guiding principles for the development of machine learning based technologies.³²³⁶ These ten guiding principles are intended to facilitate the development and utilization of safe, efficient, and high-quality medical devices incorporating artificial intelligence and machine learning. The principles place particular emphasis on addressing challenges unique to machine learning, including bias prevention, overfitting prevention, transparency, data reliability, privacy, and information security.

A proposed Medical Information Mobilization Law will give people more control and will allow them to mobilize medical data to health organizations of their choice in a clear and easy way to ensure therapeutic continuity, better diagnosis, and personalized treatment.³²³⁷

The Ministry of Health published and called for review of Key Principles for Evaluating AI-Driven Interventional Trials following the launch of the Central Committee for Clinical Trials using Digital Medical Devices (CDT).³²³⁸ The document presents a comprehensive set of questions for analyzing requests for interventional clinical trials using AI-based tools, with the aim of creating a comprehensive and efficient working tool to assist the Helsinki committees (the Israeli equivalent of IRBs) in the discussion and approval process of requests for clinical trials using these advanced technologies.

COVID-19 Tracking Controversy

Beginning with emergency measures taken in March 2020, the Israeli police used mobile-phone location data and AI techniques to attempt to determine whether those in quarantine were indeed staying in quarantine. A month after the tracking was authorized, the parliamentary committee in charge of overseeing the practice halted the mobile phone tracking. The Committee argued that the harm done to privacy outweighed the benefits of the tracking.³²³⁹

Israel then turned to Shin Bet, the Israeli Security Agency, to monitor the general population and track potential Covid patients and their contacts.³²⁴⁰ This action was criticized by human rights activists³²⁴¹, as well as medical associations³²⁴².

On 26 April 2020, Israel's Supreme Court banned the intelligence agency from tracing the phone location of those who may be infected with Covid-19, until new laws are passed.³²⁴³ “The state's choice to use its preventative security service for monitoring those who wish it no harm, without their consent, raises great difficulties and a suitable alternative [...] must be found,” the court said.³²⁴⁴ The Association for Civil Rights in Israel, one of the groups which brought the court challenge, welcomed the decision, saying: “Israel must not be the sole democracy which operates its secret security service to monitor its citizens, even in the fight against the coronavirus.”³²⁴⁵ In July, Israel’s parliament voted to allow the country’s Internal Security agency to track the contact relations of Israeli cell phone users for

the rest of the year amid a resurgence in new cases.³²⁴⁶ Human rights organizations renewed their objections.³²⁴⁷

In August 2020 it was revealed that only four percent of those sent for isolation by the intelligence system were actually sick.³²⁴⁸ In a September 2020 opinion, the PPA also objected to the use of the Israeli Internal Security Service location tracking tool.³²⁴⁹ The PPA said that the measure cannot be justified, and that use would adversely impact the public's trust in public authorities. The PPA also questioned the effectiveness of the location tracking tool. In January 2021, the government received an automatic extension to the expired law to continue tracking - due to the elections at that time. In March 2021, the Supreme Court clarified that the Knesset is not in charge of supervising the tracking tool or limiting its use. In the same month, elections were also held. The same month, a week after the elections to the 24th Knesset and before its inauguration, the Foreign Affairs and Security Committee refused to continue using the tracking tool.³²⁵⁰

Social Ranking

Following a proposal to use scoring technologies for Israelis who may be infected with COVID-19, in April 2020, the PPA also published a review on the use of technologies for the social ranking of citizens to achieve social and governmental goals, and the impact of this on the right to privacy.³²⁵¹ The April 2020 review indicated that social ranking systems have increased in an era of Big Data and are present in Israel in forms such as the credit data rating system or a potential future AI-based system aimed to rate an individual's likelihood of contracting COVID-19. Specifically, the review outlined that such a system, which would process location,

medical, and personal data, would constitute a serious violation of the privacy of citizens and should be avoided as far as possible and, where it cannot be avoided, it must be compliant with data protection law.

Facial Recognition

Facial recognition in Israel is implemented in border control and Israel has a biometric database of face photos and fingerprints of citizens and residents, as well as foreigners accessing Israel. A biometric database was enacted in law in 2009.³²⁵² The law provides the basis for the Israeli national ID-Card. The database includes biometric face-photos and voluntarily supplied fingerprints. According to the biometric database law, the information can be used for severe crime enforcement and for state security tasks. In May 2020, the Israeli State Comptroller reported that the data of about 4.5 million Israeli drivers' licenses, including facial pictures, are not sufficiently protected from misuse or outside hacking. Various public reports have documented Israel's use of facial recognition in Gaza, including the Israeli security forces' extensive gathering of Palestinian biometric data without consent and using facial recognition to build a large database for mass surveillance. The facial recognition program, which is run by Israel's military intelligence unit, including the cyber-intelligence division Unit 8200, relies on technology from Corsight, a private Israeli company that also uses Google Photos to pick faces out of crowds and grainy drone footage.³²⁵³

Still, Israel's military has invested tens of millions of dollars to upgrade West Bank checkpoints with AnyVision facial recognition technology to verify Palestinian workers' identities and ease their entry into Israel. The new system, which began rolling out late 2018, drew criticism about the role the controversial technology plays in Israel's military control over Palestinians.³²⁵⁴

Microsoft, which was part of a group that had invested \$74 million in AnyVision, hired a team of lawyers to audit the Israeli firm and determine whether AnyVision's technology applications complied with Microsoft's ethical principles against using facial recognition for mass surveillance. In March 2020, Microsoft said

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

it was pulling investments from AnyVision although the outcomes of the audit did not substantiate claims that the startup's technology was used unethically.³²⁵⁵

In 2021, the Washington Post released further information on the program.³²⁵⁶ The initiative involves a smartphone technology called Blue Wolf that captures photos of Palestinians' faces and matches them to an image database. The phone app flashes in different colors to alert soldiers if a person is to be detained, arrested or left alone. To create the database, in 2020 soldiers photographed Palestinians, including children and the elderly. The total number of people photographed is unclear. The Israeli military has also installed face-scanning cameras in the divided city of Hebron to assist soldiers at checkpoints to identify Palestinians before they present their ID cards. A wider network of closed-circuit television cameras provides real-time monitoring of the population and can sometimes see into private homes.

A new security tool was also under development: body cameras with facial recognition technology to enable police to scan crowds and detect suspects in real time, even if their faces are obscured.³²⁵⁷ In April 2022, the then minister of justice Gideon Sa'ar opposed the police initiative to operate facial recognition cameras in public spaces.³²⁵⁸ In February 2023, the issues of using a biometric photo system were removed from the draft law, which regards the police and the "Special Photographic Systems."³²⁵⁹

Israel's cabinet approved of Operation Gideon's Chariots, a plan that includes the use of facial recognition technology to screen Palestinians before moving them to a designated zone with food and supplies, in May 2025, as the country expanded the military offensive in Gaza.³²⁶⁰

AI and Warfare

According to New York Times, Israel used an AI-equipped, remotely operated gun to kill an Iranian nuclear scientist.³²⁶¹ The Israeli system used AI to correct for more than a second and a half of input delay, allowing the system's operator to fire the gun at a moving target while stationed more than 1,000 miles away.

In a statement released by the Israel Defense Forces on November 2, 2023, the unit revealed its deployment of an AI target-creation platform called Habsora (the Gospel) in the Gaza-Israel conflict.³²⁶² The system leverages AI to generate targets at a fast pace using an algorithm that extracts intelligence data from a wide range of sources, and proposes target recommendations to researchers, which are presumably approved by human authorities.

On December 10, 2023, the Association for Civil Rights in Israel, sent a legal correspondence³²⁶³ to the Chief Military Prosecutor requesting an assessment of the system and its utilization of AI in determining attack targets, while evaluating its compliance with both Israeli and international legal obligations. The association also sought clarification on potential biases that could result in erroneous targeting, posing risks to innocent civilians. In addition to the legal correspondence, the association filed a freedom of information request regarding the use of the system.³²⁶⁴ The freedom of information request is a right emanating from the Freedom of Information Law of 1998, which grants Israeli citizens, residents, and registered corporations, the legal right to access government agency records, except those exempted by law.

The request aimed to unveil all pertinent information about the Habsora system that could be shared with the public. The association sought documents outlining the ethical rules governing the system's usage, as well as information regarding the associated operational procedures. Questions regarding the predictive capabilities of the algorithm and the level of accuracy achieved by the system were

also raised. Further inquiries involved obtaining information on the system's transparency to operators, protocols for handling system failures, the extent of human oversight available to operators, and the traceability of system operations. The association further requested details on how the system's activity could be explained to affected parties and sought information about any external audits conducted on the system and the decisions made based on these audits. According to news reports by the Guardian, Israel's bombing campaign in Gaza has used an AI-powered database system called Lavender to identify up to 37,000 potential targets based on their apparent links to Hamas.³²⁶⁵

The UN published the Report of the Special Committee to Investigate Israeli Practices Affecting the Human Rights of the Palestinian People and Other Arabs of the Occupied Territories in September 2024. The report raised concerns about the reliance on the artificial intelligence-assisted targeting that accelerates decision-making to such an extent that soldiers authorize strikes in a matter of seconds. The accelerated decision-making results in an indiscriminate loss of life, which violates international humanitarian law.³²⁶⁶

The Israeli Ministry of Defense (IMOD) announced in 2025 the establishment of the AI and Autonomy Administration, which aims to centralize and advance AI and autonomous capabilities within the country's defense establishment.³²⁶⁷

Environmental Impact of AI

Israel's National AI Program provides a clear direction for promoting sustainability. The section under responsible innovation highlights the government's strategy for promoting growth, sustainable development, and Israeli leadership in innovation. It further promotes the public sector use of AI to unlock the potential of AI technologies, highlighting societal benefits such as bridging equality divides, improving health, education, mobility and employment, and enhancing environmental sustainability.³²⁶⁸ In addition, Israel participated and adopted the UN

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

General Assembly Resolution on ‘Seizing the opportunities of safe, secure, and trustworthy artificial intelligence systems for sustainable development,’ which, among others, promotes the access to and design, development, deployment, and use of safe, secure and trustworthy artificial intelligence systems to achieve sustainable development in its three dimensions – economic, social and environmental.³²⁶⁹

Lethal Autonomous Weapons

Israel is a High Contracting Party to the UN’s Convention on Certain Conventional Weapons (CCW) protocol. Israel has presented objections to the distinctions accorded to lethal autonomous weapons systems (LAWS) in the CCW and the accompanying calls for prohibition. Israel is known to be at the forefront of developing lethal autonomous weapons, including both the Iron Dome defense system³²⁷⁰ and the Harop suicide drone.³²⁷¹

The Israeli mission to the GGE on LAWS of the Convention on Certain Conventional Weapons clarified Israel’s position in August 2019.³²⁷² In August 2020, Israel expressed further views on the Eleven Guiding Principles Adopted by the Group of Government Experts concerning lethal autonomous weapons systems. Israel’s view is that “the law of armed conflict, or international humanitarian law (IHL), applies to the potential development and use of emerging technologies in the area of LAWS; that human judgment will always be an integral part of any process regarding emerging technologies in the area of LAWS, and will be applied during their life-cycle; and that humans will always be responsible for the use of LAWS.” Moreover, in Israel’s view, “besides the potential risks that may be associated with LAWS, there are also operational advantages to the use of LAWS as well as clear advantages from the humanitarian perspective.”³²⁷³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

Israel abstained from voting on a resolution on LAWS in 2023 that called on the Secretary-General to collect stakeholders' views in a report.³²⁷⁴ Israel's contribution to the Secretary-General's Report³²⁷⁵ reiterated the view that existing international law and international humanitarian law (IHL) "provides a sufficient legal framework for any future use of lethal autonomous weapons systems in the context of armed conflicts." Still, the contribution warns against conflating rules of IHL with other "legal or practical aspects." As an example, the statement notes "there is no requirement under international law that refers to human control in the context of using weapons. Human control is not an end in and of itself, but rather, it may be a relevant concept in the implementation of various obligations under international humanitarian law in different circumstances."³²⁷⁶

Israel was among the nations at the Paris AI Action Summit in February 2025 that abstained from endorsing the Paris Declaration on Maintaining Human Control in AI-Enabled Weapons.³²⁷⁷

AI Literacy

Israel's 2025 National Program for Artificial Intelligence identifies AI literacy and capacity-building as core enablers of both democratic input and effective oversight.³²⁷⁸ Two main avenues of action include "monitoring of government ministries' preparation for AI impacts" and "promoting public literacy and responsible use of AI." The Program mandates large-scale public-facing literacy efforts, including an "AI for Every Child" extracurricular course offered nationwide, AI-focused extracurricular tracks for under-served communities, teaching training, and free online AI-literacy courses for adults via Campus IL. The Program also plans for capacity-building for public entities charged with AI oversight. For example, the Governmental Knowledge and Coordination Center for AI is tasked with training and advising regulators, running a permanent regulators' forum and a public multi-

stakeholder consultation forum, and supporting ministries in mapping AI use, risks, and legal implications.

These institutional measures are complemented in 2025 by the government's Guide to Risk Management and Responsible Use of AI Tools in the Public Sector, published as a public-consultation draft and explicitly framed as a practical training and governance tool for ministries and regulators seeking to deploy AI in a trustworthy way.³²⁷⁹

Human Rights

Israel is a signatory to many international human rights treaties and conventions and ranks as “Free” with a score of 73/100 in the Freedom House 2025 Freedom in the World Report.³²⁸⁰ The ranking reflects the nation's institutions adhering to a respect for political rights and civil liberties. This score represents a decline compared to the country's 2024 and 2023 scores. Freedom House explained the decline from 2024 in part “because access to large areas of the country had been restricted since late 2023 due to cross-border shelling and other security concerns, and many civilians remained displaced from their homes.”

Freedom House ranks the Gaza Strip and West Bank separately from Israel. The 2025 Freedom in the World report classifies Gaza as “Not Free” with a score of 2/100³²⁸¹ and the West Bank as “Not Free” with a score of 22/100.³²⁸²

The OECD AI Incidents Monitor classified the Israeli Military's development of a ChatGPT-like surveillance AI to analyze intercepted Palestinian communications as an AI Hazard in 2025 and stated that the use of such a system could lead to violations of human rights or a breach of obligations under applicable law intended to protect fundamental rights.³²⁸³

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

AI Safety Summit

Israel participated in the first AI Safety Summit in 2023 and endorsed the Bletchley Declaration.³²⁸⁴ Israel thus committed to participate in international cooperation efforts on AI “to promote inclusive economic growth, sustainable development and innovation, to protect human rights and fundamental freedoms, and to foster public trust and confidence in AI systems to fully realise their potential.” Endorsing parties affirmed that for the good of all, AI should be designed, developed, deployed, and used, in a manner that is safe, in such a way as to be human-centric, trustworthy and responsible.” Israel did not participate at the AI Seoul Summit, which was held in May 2024.³²⁸⁵ Israel did participate in the Paris AI Action Summit in February 2025. Israel abstained from endorsing the Paris Declaration on Maintaining Human Control in AI-Enabled Weapons³²⁸⁶ and the Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet.³²⁸⁷

OECD / G20 AI Principles

Israel has endorsed the OECD AI Principles. Israeli Government Decision 212³²⁸⁸ from August 2021 instructs lawmakers to consider, among other things, the OECD principles as part of the promotion of the national policy in the field of AI. Israel’s National AI Program references a risk-based approach to AI regulation compatible with the OECD Trustworthy Principles, weighing potential risks and benefits within specific use cases.³²⁸⁹ The policy on AI regulation and ethics, which

Center for AI and Digital Policy

outlines common policy principles and practical recommendations to address challenges and foster responsible AI innovation, suggests adopting a common set of ethical AI principles based on the OECD AI Principles.³²⁹⁰

Israel joined the Global Partnership on Artificial Intelligence (GPAI) in 2021.³²⁹¹ All GPAI Members reached a consensus in July 2024 to sign the New Delhi Ministerial Declaration formalizing an integrated partnership with the OECD to advance human-centric, safe, secure, and trustworthy AI.³²⁹²

Council of Europe AI Treaty

Israel contributed to the negotiations of the Council of Europe Framework Convention on AI, Human Rights, Democracy, and the Rule of Law.³²⁹³ Israel signed the Framework Convention when it opened on September 5, 2024.³²⁹⁴ Israel has not ratified the treaty. Signatories commit, once the treaty is enforced, to ensuring that activities throughout the AI lifecycle comply with fundamental principles, including human dignity, equality, respect for privacy, transparency, accountability, reliability, and safe innovation.³²⁹⁵

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

UNESCO Recommendation on AI Ethics

Israel is not a member of UNESCO and did not endorse the UNESCO Recommendations on the Ethics of AI.³²⁹⁶ Israel has not taken affirmative action to implement the UNESCO Readiness Assessment Methodology (RAM).³²⁹⁷

Evaluation

Israel benefits from a well-established legal regime for data protection but has thus far adopted a different approach to its AI policy, privileging soft regulation and self-regulation. While Israel has long been a leader in AI research and development, the government is still slowly developing AI oversight. The use of an AI-based tracking system for sensitive medical conditions by the internal security agency is of concern. Also troubling is the use of facial recognition technology without clear legal basis. Israel's reluctance to endorse limits on lethal autonomous weapons is particularly problematic in view of the Gaza-Israel conflict. Of critical concern has been the widespread use of AI to identify individuals suspected of being associated with Hamas via the Lavender and Where's Daddy systems. Both systems are used in conjunction to identify targets for surveillance to ultimately mark them for bombing upon returning to the surveilled location.³²⁹⁸ Red lines and safeguards with respect to the use of AI in warfare are urgently needed.

Italy

In 2025, Italy enacted a national regulatory framework for AI, becoming the first European nation to take this step to implement the EU AI Act. Italy's Data Protection Authority also furthered enforcement actions against AI companies including OpenAI and Replika to provide more robust protections for children.

National AI Strategy

Italy began developing a national AI strategy in 2019 with an expert group under the Italian Ministry of Economic Development (MISE).³²⁹⁹ The final Proposals resulted from a public consultation³³⁰⁰ and a background paper providing initial guiding principles and policy recommendations.³³⁰¹ The Italian government then issued a national AI strategy, the Strategic Programme on Artificial Intelligence 2022–2024,³³⁰² jointly developed by the MISE, the Ministry of Education, University and Research, and the Ministry of Technological Innovation and Digital Transition. The Strategic Programme argues that “Italy should position itself as the defender of AI for good, so not as an end in itself, but as desirable to the extent that it can contribute to the well-being of human beings and to sustainable development in economic, social, and environmental context” and centers Italian contributions to defining a European AI strategy and a “new relationship between human beings and machines, whereby technology increases human capabilities and becomes a key instrument in drafting a new social contract, oriented towards sustainable development.”³³⁰³

The Strategic Programme recognizes that the Italian AI ecosystem has vast potential not fully exploited. The current Italian context and international position call for a national AI strategy characterised by the need to build on the positive

³²⁹⁹ Ministry of Economic Development, *Proposal for a National Artificial Intelligence Strategy [Proposte per una strategia nazionale per l'intelligenza artificiale]* (Jul. 2020), https://www.mise.gov.it/images/stories/documenti/Proposte_per_una_Strategia_italiana_AI.pdf

³³⁰³ Ibid, p. 8

Artificial Intelligence and Democratic Values 2026

Center for AI and Digital Policy

elements of its ecosystem while focusing on reforms and investments on specific areas of weakness. To that end, the Strategic Programme identifies 5 guiding principles: “Italy’s AI is a European AI; Italy will be a global research and innovation hub for AI; Italy’s AI will be human centred, trustworthy and sustainable; Italian companies will become leaders of AI based research, development and innovation; Italy’s public administrations will govern with AI and will govern AI.”³³⁰⁴

The Agency for Digital Italy (*Agenzia per l'Italia Digitale*, AgiD) and the Department for Digital Transformation of the Council of Ministers updated the Strategic Programme with the Italian Strategy for Artificial Intelligence for 2024–2026.³³⁰⁵ The strategy was drafted by a committee of fourteen experts and “reflects the government's commitment to creating an environment in which AI can develop in a safe, ethical and inclusive manner, maximizing benefits and minimizing potential adverse effects.”

The Italian government progressed toward achieving the strategy by approving the first national framework implementing the EU AI Act to regulate the development, adoption, and governance of AI systems.³³⁰⁶ The law aims to promote the opportunities of AI to enhance citizens’ quality of life by promoting transparent, safe, and responsible AI use in a human-centric framework while supervising potential economic, social, and fundamental rights impacts. The law builds on general principles rooted in fundamental rights, such as explainability, fairness, accuracy, non-discrimination, and data protection.

Digital Italy 2026

As part of the Next Generation EU, the European Union’s landmark instrument for recovery from the coronavirus pandemic, Italy’s Department for Digital Transformation introduced a digital strategy that aims to meet the digital objectives and initiatives identified in its National Recovery and Resilience Plan (PNRR).³³⁰⁷ Digital Italy 2026 identifies several priority investment areas, including Data and interoperability; Digital services and digital citizenship; Digitization of public administrations; and Basic digital competency. Digital Italy 2026 is

complemented by an Operational Plan that details its lines of action and provides key targets for 2025.³³⁰⁸

Digital Italy 2026 comprises three-year goals with deadlines for each investment area and reform axis. These largely adhere to the European Commission's 2030 Digital Compass.³³⁰⁹ By 2026, Italy aims to have:

- 70% of the population using digital ID
- 75% of the population achieving basic digital competency
- 75% of public services operating on the cloud
- 80% of essential public services available online
- 100% of families having broadband access.

EU Digital Services Act

As an EU member state, Italy shall apply the EU Digital Services Act (DSA).³³¹⁰ The DSA regulates online intermediaries and platforms. Its main objective is to prevent illegal and harmful activities online and the spread of disinformation. The DSA bans targeted advertising based on a person's sexual orientation, religion, ethnicity, or political beliefs and targeted advertising to minors based on profiling.

Signatories also commit to the 2022 Strengthened Code of Practice on Disinformation,³³¹¹ which counts as a mitigation measure under the DSA. The Code of Practice requires companies to act in several domains, such as demonetizing the dissemination of disinformation; ensuring the transparency of political advertising; empowering users; enhancing the cooperation with fact-checkers; and providing researchers with better access to data.
