

# FIND GREATER HEALING POWER

ALPHA2ACTIVE™ is the ONLY system to offer:

- isolated and concentrated A2M (6X greater)
- a patented and proprietary filtration process
- a biomarker screening with FACT™  
(Fibronectin-Aggrecan Complex Test)

## Are you a Candidate?

Research has identified that the “pain protein”, Fibronectin-Aggrecan Complex (FAC), is a biomarker associated with painful inflammation. A simple screening test looks for a high presence of FAC, which can indicate the existence of destructive enzymes in the joint or disc space.

Ask your provider about FACT™ and see if you are a good candidate for the ALPHA2ACTIVE™ Therapy.

## FIND OUT MORE

Talk with your provider today to learn more about the patented ALPHA2ACTIVE™ Therapy and to see if you are a candidate.

Previously known as APIC™ A2M

Product distributed by CAREstream America

# ARE YOU STILL SUFFERING FROM PAIN?

Start a path to pain relief with the patented ALPHA2ACTIVE™ Therapy

ALPHA2 ACTIVE™

# DO YOU EVER WONDER WHY YOUR JOINT OR BACK PAIN TREATMENT IS NOT ALWAYS ENOUGH?

Your current treatment may only be controlling your joint or back pain symptoms. Though most patients find that these types of treatments offer temporary relief, they may not be addressing the underlying source for their joint or back pain.

## Early Treatment = Better Recovery

For patients suffering from joint or back pain, the **ALPHA2ACTIVE™** Therapy is an exciting advancement in orthopedic science resulting from years of research.

**ALPHA2ACTIVE™** isolates and concentrates the A2M (alpha-2-macroglobulin) molecule that is naturally found in your body. Early treatments with this miracle molecule may delay the need for more aggressive and costly procedures, including surgery.

## What is Alpha-2-Macroglobulin?

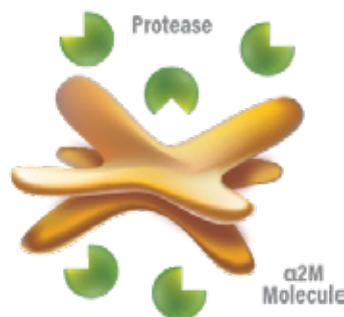

Alpha-2-macroglobulin (A2M) is a naturally occurring molecule that is produced by your liver and found in your blood. When administered in concentrated doses, it acts as a powerful protector against cartilage breakdown. The A2M molecule attaches to and removes the destructive enzymes which are known to damage cartilage cells and tissues in the joint or disc space.

## How does ALPHA2ACTIVE™ work?

For the majority of patients in pain, their arthritic joint or disc space house more destructive enzymes than the body can handle. While the A2M molecule is our body's own defense mechanism, it is unable to enter the joint or disc space in high enough quantities due to its large size and complex structure. As a result, it is necessary to inject additional concentrated A2M into the affected area to help restore balance and pain relief.

An injection of concentrated A2M, derived from your own blood and placed directly into your joint or disc space, may provide the necessary amount of A2M molecules to bind and remove those destructive enzymes.

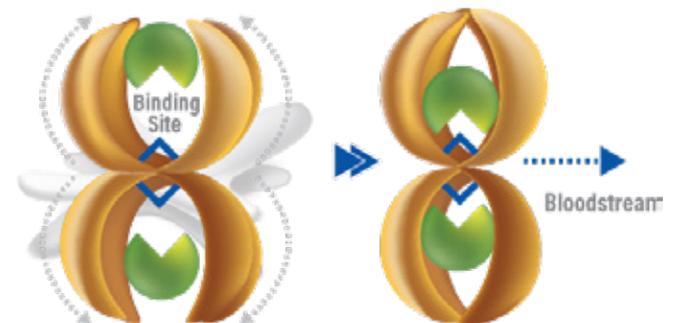

CONCENTRATED  $\alpha$ 2M  
INJECTED AT JOINT SITE

A2M has two binding sites that capture enzymes (E) like a venus flytrap.

HARMFUL ENZYMES  
CAPTURED BY  $\alpha$ 2M

BONDED  $\alpha$ 2M & PROTEASE  
EXCRETED FROM SYSTEM

Once captured, the bound A2M and enzyme are eliminated from the joint or disc space through your body's natural processes.
