

Pharma Systems Anesthesia/Respiratory Filters

Introducing the Pharma Systems anesthesia filter - a bi-directional bacterial/viral filter that protects against cross contamination, TB and COVID-19; protecting your anesthesia systems and patients.

Your personnel are also protected by the electrostatic filter (that grabs and holds particles so nothing goes airborne when you disconnect).

The filter is available with or without an HME and also with an angled or straight connection. It makes it very convenient if you are adding an HME to your circuit.

Please inquire for a catalog and price list.

Thank you and available anytime.

Most Commonly Used

The anesthesia filter most commonly used for shorter cases (usually 3 hours or less) is often the 7056 (straight); which costs \$1.85 each. That's the one without the HME. Comes in boxes of 100.

The most commonly used HME filter is the 6131 (angled) and costs \$2.85 each. This one is perfect if the facility is currently adding an HME filter to their circuit. It can be used for all cases. Also offered in boxes of 100.

Both are available straight or angled.
