

Serres Suction System

Optimize Your Surgical Fluid Management

- Specifically designed for low and medium volume cases.
- Disposable suction bags. Integrated bacterial filter and overflow protection (automatically closes when in contact with fluids). 1000, 2000 and 3000cc bags are available.
- Solidifying agent available separately or pre-inserted.
- Reusable suction cannisters. Adapters are available for most existing brackets.
- Cannisters are often used individually, but up to 6 can be connected into one chain.
- A variety of connectors, valves, brackets, etc. are available for the ultimate in efficiency, **safety** and cost.
- 2/3 of all cases may be considered low-volume surgical cases - producing less than 2 cannisters of fluid waste. Medium-volume will generate 2 to 4 cannisters of waste.
- We will complement/not replace your Neptune (or other self-contained) System.
- You may be overutilizing your high-volume system or using somewhat outdated traditional cannisters.
- Streamline and simplify your fluid collection and disposal workflow. Also, bags are packaged for very efficient storage.
- No Backorder! Now may be a perfect time to modernize.
