

# SONOSTAR™ ULTRASOUND

Wireless Point-of-Care Ultrasound

## Advanced ultrasound imaging technology with wireless connectivity for easy portability and clear image view.

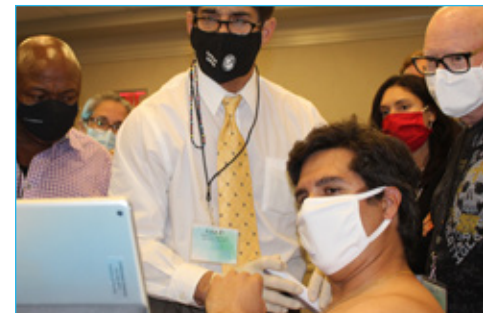

The SonoStar™ wireless ultrasound system is compact and convenient for most clinical settings. Developed for easy mobility from room-to-room or on-the-go for various off-site locations. The advanced digital imaging technology is simple to use and features a robust application compatible with many operating systems to produce a clear image.

- Compact and lightweight color doppler ultrasound system
- Wireless connectivity to linear probe with 192 elements and a frequency of 7.5 MHz
- Tablet and carrying case with charging accessories included
- Intelligent terminal platform with storage, communication and printing functionality

*SonoStar™ Linear Probe shown wirelessly connected to iPad 7 with simulated screen. Also compatible with Windows, Android and iOS phones, tablets and computers.*

A cost effective medical visualization tool that is valuable for clinical evaluations to improve diagnostic confidence while minimizing complications.
