

FREEDOM LEG 3.0

All new 3rd generation Freedom Leg

Your weight is comfortably transferred to the back of the thigh

The slight bend in the knee lifts the foot off the ground while keeping the hips level maintaining your body symmetry

Custom Aluminum Side Rails transfer your weight down to the ground.

Upper and lower straps work together to stabilize and support lower leg

The base height is adjusted so the foot is elevated off the ground providing 100% non-weight bearing support

Custom non-slip rubber base is compatible with boot or cast
