WHAT IS TENS?

T.E.N.S stands for Transcutaneous Electrical Nerve Stimulation. For the past Thirty years, doctors have been prescribing TENS as an effective way to reduce or even eliminate pain. The iTENS communicates with your nerve endings to suppress pain via two theories:

- Gate Control Theory - overriding the nerve pain signals before they reach the brain
- Endorphin release theory - releasing the body's own natural pain fighting chemicals called endorphins.

DIGITAL HIGH VOLT PULSED GALVANIC STIMULATOR

Digital Galvanic Stimulation is most useful in acute injuries associated with major tissue trauma with bleeding or swelling. In contrast to TENS or IFC units, which apply alternating current, Galvanic Stimulators apply direct current. Direct current creates an electrical field over the treated area that, theoretically, changes blood flow and moves fluid. The positive pad behaves like ice, causing reduced circulation to the area under the pad and reduction in swelling. The negative pad behaves like heat, causing increased circulation, reportedly speeding healing.
