

Tropocells PRP

Tropocells PRP eliminates all red blood cells, minimizes neutrophils and yields a high concentration of monocytes and lymphocytes; delivering a highly purified platelet concentration to optimize the natural healing process.

Tropocells PRP provides the benefits of both leukocyte-rich and leukocyte-poor PRP for the ideal treatment of all tissue types with one very simple system. Red blood cells and neutrophils are toxic to cartilage while monocytes and lymphocytes stimulate the growth factors responsible for tendon and bone proliferation.

Requires, for most applications, only 11ml of blood and 10 minutes of centrifugation.

1.6 billion platelets can be customized to up to an 8x concentration.

Injection site pain and flare-ups are minimized for greater patient comfort.
