

Workers' Comp TENS/EMS Program

Introducing a truly outstanding wireless TENS/EMS device to Workers' Comp patients with multiple easy-to-use modes. The long-lasting electrodes attach to the appropriate conductive garment and automatically pair without the need for any programming.

We ship to the patient's residence and provide all instruction, follow-up and trouble-shooting.

The net practice revenue is around \$450 per patient through a compliant management service program with all billing and collection managed by us.
