

Serres Surgical Fluid Management

Optimize, Modernize and Minimize Cost

- Disposable suction bags. Integrated bacterial filter and overflow protection - 1000, 2000 and 3000ml.
- Reusable suction cannisters.
Adapters are available for most existing brackets.
- Specifically designed for low and medium-volume cases. 2/3 of all cases may be considered low-volume surgical cases - producing less than 2 bags of fluid waste. Medium-volume will generate 2 to 4 bags of waste.
- Will complement/not replace your larger system.
- Solidifying agent available separately or pre-inserted; if desired.
- Cannisters are often used individually, but up to 6 can be connected into one chain.
- Introducing the Nemo Disposal System - where the sealed suction bag is flushed in 20 seconds and then safely disposed of. Fully closed. Compelling cost savings.
- The Serres Suction Bags are DEHP-free (which eliminates the risk of exposure to your patients). Serres Bags, too, contain 58% less plastic than other solutions and will save you up to 88% of the space on hand for storage. Disposal is also optimized. Adding up all of the above offers a real decrease in environmental impact.
- Significantly Improve Your Workflow
