Innovative Exposure on Real Photo Paper

A Dazzling Effect for Selected Images

Brand-Name Paper with a Metallic Sheen

Durable Silicone Seal

At WhiteWall, the real photo print is exposed using the latest laser technology and developed traditionally. Fuji Crystal Pearl paper is particularly suited for images with intense colour and high contrast. The bright areas shimmer most dynamically. For large formats or for viewing up close, acrylic-mounted ultraHD photo prints on Fuji Crystal Pearl are striking in their outstanding picture quality. The finest details are reproduced realistically with precise contours and clear contrasts. The exposure process takes full advantage of all the information contained in the image file in order to produce the amazingly realistic look.

Traditional Photo Print vs. ultraHD Photo Print

The composition of ultraHD Fuji Crystal Pearl Prints

Whitewall uses 2mm of light, shatterproof acrylic glass to mount the photo print on Fuji Crystal Pearl. The sturdy aluminium Dibond backing provides additional stability. Brilliant acrylic glass adds physical depth to the picture and intensifies the colour. The image will look especially vivid and elegant with a photo print on Fuji Crystal Pearl paper.

1. Glossy acrylic glass, 2 mm thick
2. Photo print with shimmering look & silicone sealant
3. Sturdy aluminium Dibond backing

The Aluminium Dibond

The acrylic photo has a backing consisting of a 3mm thick composite material consisting of two aluminium layers and a polyethylene core. The backing ensures long-lasting stability. The low weight of aluminium allows for easy picture hanging.

1. Aluminium layer
2. Black synthetic core
3. Aluminium layer
4. White backing

Acrylic ultraHD Metallic Print: Hanging Hardware For Any Size

Whitewall hanging systems ensure reliable hanging of all formats and sizes. The matching appropriate wall-mounts on the back are adjusted to the size and included in the price.
