

basalte | DALI bridge

intuitive and seamless

say goodbye to complex light configuration

Simplify and speed up the integration of DALI lights with our **compact DALI bridge**. Experience an intuitive approach of lighting control and say goodbye to time-consuming, complex light configuration.

sleek design

DIN rail mountable

> ensuring an easy installation

2 DALI buses to control up to 128 lights

> two lines with maximum 64 devices per line
> each line supports 16 light groups

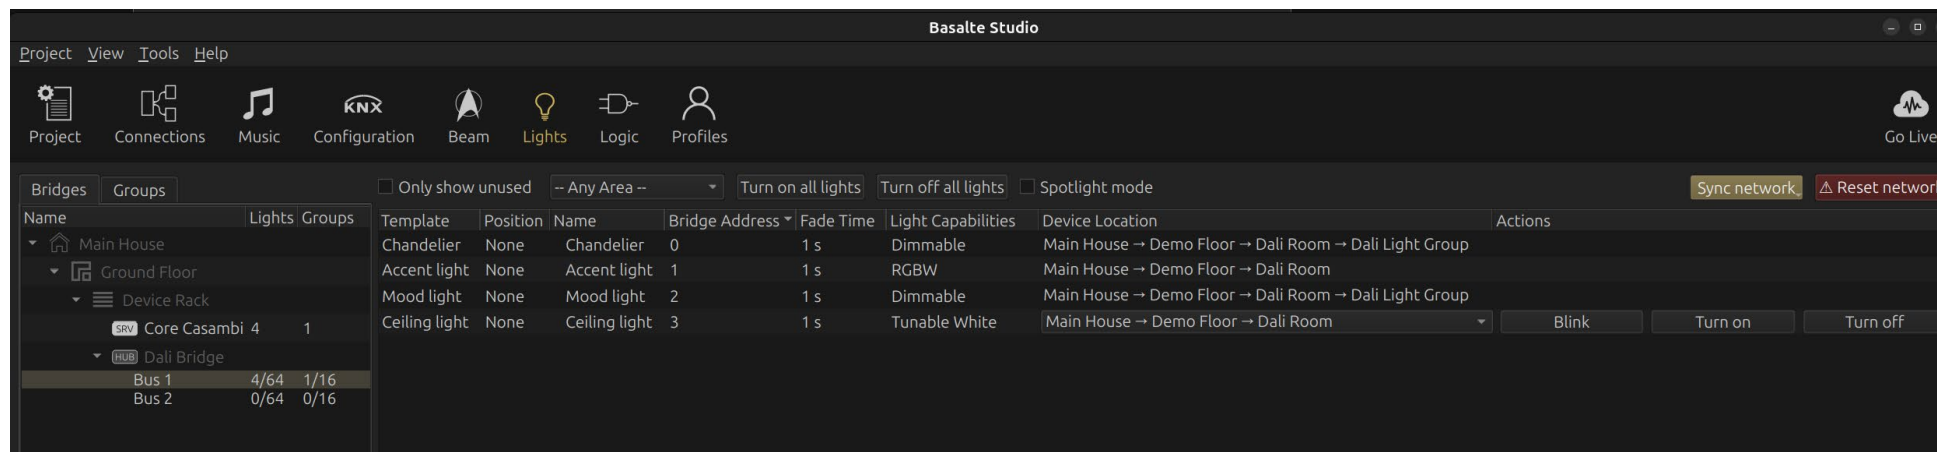

PoE powered

> requiring just a single network cable for power and communication

supports DT8

> to easily control tunable white and RGB(W) fixtures

fast and easy setup

Easily control your DALI configuration in the 'Lights' panel in Basalte Studio. You configure your DALI bridge in no time in four simple steps.

- step 1 - add the DALI bridges and discover them in your project
- step 2 - synchronise your DALI lights
- step 3 - assign parameters like a room and light name
- step 4 - create room scenes

user-friendly preparation

offline configuration

Configure your DALI lights upfront without a network connection and activate the project once ready. 'Spotlight mode' helps you to easily identify each light once you're on site.

live configuration on-site

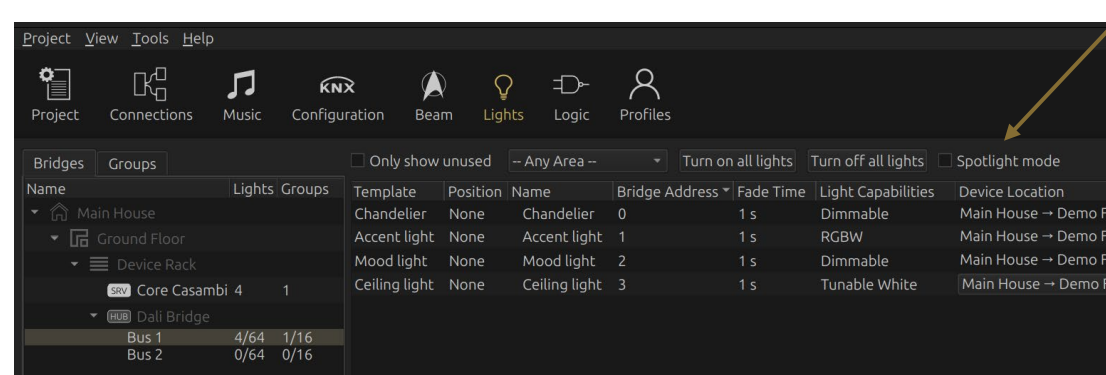

Synchronise your DALI lights while having a live connection with the DALI bus. Now you are ready to further configure the lights.

spotlight mode

"Spotlight mode is quick, elegant and it makes finding and linking lights fun."

- Wietse Ghijs, R&D manager software at Basalte

With 'spotlight mode' **you find and link lights effortlessly and fast.** Quickly navigate with the arrow keys on your keyboard, spot the right light and immediately link it to the right room. Super-efficient and intuitive.
